Clean Water Financing

Proposed Priority System, Intended Use Plan and Project Priority List for Federal Fiscal Year 2002

New Jersey Department of Environmental Protection
Environmental Regulation
Division of Water Quality
Municipal Finance and Construction Element

January 2001

New Jersey Department of Environmental Protection Mission Statement

Vision: The Department of Environmental Protection is committed to providing a high quality of life for the residents of New Jersey.

Mission: To assist the residents of New Jersey in preserving, sustaining, protecting and enhancing the environment to ensure the integration of high environmental quality, public health and economic vitality.

We will accomplish our mission in partnership with the general public, business, environmental community and all levels of government by:

- Developing and integrating an environmental master plan to assist the Department and our partners in decision-making through increased availability of resource data on the Geographic Information System.
- Defining and publishing reasonable, clear and predictable scientifically-based standards.
- Achieving the Department's goals in a manner that encourages compliance and innovation.
- Employing a decision-making process that is open, comprehensive, timely, predictable and efficient.
- Providing residents and visitors with affordable access to safe and clean open space, historic and natural resources.
- Assuring that pollution is prevented in the most efficient and practical way possible.
- Assuring that the best technology is planned and applied to achieve long-term goals.
- Assuring that non-treatable wastes are isolated, managed and controlled.
- Enhancing environmental awareness and stewardship through education and communication.
- Fostering a work environment that attracts and retains dedicated and talented people.
- ♦ Committing to an ongoing evaluation of the Department's progress toward achieving our mission.

State of New Jersey

Christine Todd Whitman Governor

Department of Environmental Protection

Robert C. Shinn, Jr. Commissioner

January 12, 2001

Dear Interested Party:

The Department of Environmental Protection (DEP) is forwarding the FFY2002 Priority System, Intended Use Plan and Project Priority List proposal for your review and comments. The DEP's FFY2002 document is consistent with the policies adopted by the State and approved by USEPA in the final FFY2001 Priority Sysem document. The FFY2002 proposal identifies the schedule for the 2002 Financing Program. To participate, sponsors of eligible clean water projects will be required to submit a commitment letter and planning documentation on or before October 1, 2001 and design documents and loan application on or before March 4, 2002. In addition, the FFY2002 proposal continues to consider a wide variety of nonpoint source pollution projects eligible for financing, such as projects that involve land acquisition and conservation, landfill closure and construction, remedial action activities and well sealing.

A summary project description and project ranking worksheet has been prepared for each listed project, and is available for your review at any of the identified Library Information Centers (refer to the listing in the Priority System for these locations). The Proposed FFY2002 Priority System, Intended Use Plan and Project Priority List will be the subject of a public hearing to be held on March 7, 2001. A copy of the public hearing notice and location is also included in this package for your information. Please note that comments received (or postmarked) on or before March 21, 2001, will be reflected in the DEP's Response Document. If you require any further assistance, please contact the following:

Project Specific - North:	Stanley Cach	(609) 292-6894
Project Specific - South:	Gautam Patel	(609) 984-6840
Payment Procedures:	Eugene Chebra	(609) 633-1208
Environmental Reviews:	Theresa Fenton	(609) 292-3859

We look forward to your comments on this proposal document and working with you on your water quality improvement projects.

Sincerely,

Naemaer & Akuja

Narinder K. Ahuja, P.E., P.P., Director Division of Water Quality

Robert C. Shinn, Jr. Commissioner

PUBLIC HEARING NOTICE FOR THE PROPOSED FFY2002 PRIORITY SYSTEM, INTENDED USE PLAN AND PROJECT PRIORITY LIST

A public hearing regarding New Jersey's Proposed FFY2002 Priority System document will be held on March 7, 2001. The Municipal Finance and Construction Element (MF&CE) in the Division of Water Quality is developing the Proposed FFY2002 Priority System document as part of the administration of the clean water state revolving fund (CWSRF) program, which is authorized and subsidized in part through the federal Clean Water Act and its amendments.

The hearing on the Proposed FFY2002 Priority System document will be held in the NJ Environmental Infrastructure Trust's offices on March 7, 2001, commencing at 2:00 p.m. and concluding at the end of testimony or 4:00 p.m., whichever is earlier. The Trust's office (Tel. # 609-219-8600) is located at 3131 Princeton Pike, Building 6, Suite 201, in Lawrenceville (see attached map - Exit 8A, I-95). Presentations may be made orally or in writing; if written testimony is prepared, please limit any oral presentation to a summary of the text. The period for submitting written comments on the proposal will close March 21, 2001 (all comments must be postmarked by that date). All comments submitted in accordance with the deadline given above will be considered in the preparation of the final FFY2001 Priority System document.

In order to better manage the large volume of environmental infrastructure projects being processed, the Department and the Trust are proposing to change the project document submittal deadlines and eliminate the second chance option in FFY2002 and future years. The schedule for the FFY2002 Financing Program is as follows:

Commitment Letter and Planning Documents Design Documents and Loan Application Loan Award October 1, 2001 March 4, 2002 November 2002

For questions regarding this notice, please contact Theresa Fenton, Chief, Bureau of Program Development and Technical Services, MF&CE, at (609) 292-3859. Applicants are encouraged to attend a preplanning meeting with representatives from the applicable Engineering Bureau in the Municipal Finance and Construction Element as identified below.

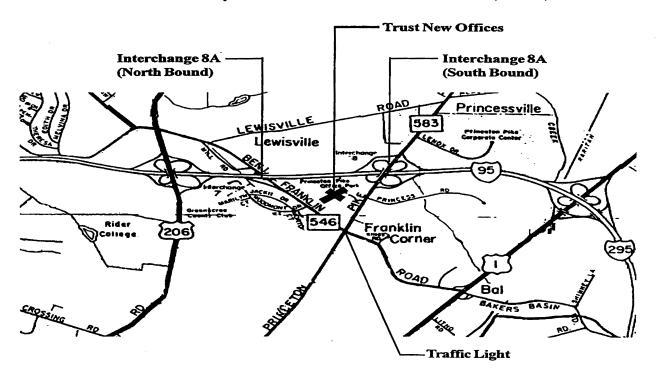

NORTH (Projects in all counties north of, and including Middlesex, Somerset and Hunterdon), call:

Stanley V. Cach, Jr., P.E., Chief, Bureau of Engineering North (609) 292-6894 SOUTH (Projects in all counties south of, and including Monmouth and Mercer), call: Gautam Patel, Chief, Bureau of Engineering South (609) 984-6840

Thank you, in advance, for your input.

Naturdee L. Kuya Narinder K. Ahuja, P.E., P.P., Director Division of Water Quality

The New Jersey Environmental Infrastructure Trust (NJEIT)

From the west, Pennsylvania, or the north (via Route 31): Take Interstate 95 North to Exit 8A (*Princeton Pike South/East*). Turn left at the traffic light, and make the first left into Princeton Pike Office Park (Executive Park Plaza), Building #6 (2nd building on left).

From NJ Turnpike: Take Exit 9 to Route 1 South (see below) OR Exit 7A to I-195 West to I-295 North (see below).

From the east, north, or south (via Route 1 or via Interstate 295N): Take Interstate 95 South to Exit 8A (*Princeton Pike South*). Make a right into the Princeton Pike Office Park (Executive Park Plaza), Building #6 (2nd building on left).

PRIORITY SYSTEM

-Clean Water Financing-Proposed Priority System, Intended Use Plan, and Project Priority List for Federal Fiscal Year 2002 (FFY2002)

OVERVIEW*

The Water Quality Act of 1987, which amended the Clean Water Act (CWA), required states to establish a Clean Water State Revolving Fund (CWSRF) program to qualify for federal capitalization grants to provide financial assistance for the construction of projects to maintain and improve water quality. The CWSRF program is to be self-perpetuating, whereby loan repayments are used to finance future project needs. New Jersey's CWSRF program was established in 1988 and is administered by the Environmental Infrastructure Financing Program (EIFP). The EIFP also administers New Jersey's Drinking Water SRF (DWSRF) under the Safe Drinking Water Act; its priorities and policies are established in a separate Priority System document for drinking water projects. Under the clean water component of the EIFP, approximately \$1.7 billion has been awarded through 288 loan actions throughout the state. As of December 1, 2000, 156 of the 288 loan actions have been closed out; 132 loans are currently active totalling approximately \$550 million.

The New Jersey Department of Environmental Protection (DEP) and the New Jersey Environmental Infrastructure Trust (Trust) expanded the existing eligible categories for nonpoint source (NPS) pollution abatement measures in an effort to help communities identify and address this type of pollution. Amendments to the EIFP's regulations were adopted that identify the new eligible areas and specify the requirements for projects to receive financial assistance. The broader categories include funding for such areas as landfills (for closure activities and new cell construction), land acquisition and conservation, remedial action activities and well sealing. Both landfill closure and new cell construction projects were eligible for the first time in 2000. Financing for the other nonpoint source areas commenced in 2001. As in the past, the DEP and the Trust are continuing to allocate a minimum of \$10 million in program funds to promote financing for stormwater and other NPS management projects.

The DEP annually develops a Proposed Priority System, Intended Use Plan, and Project Priority List as required by federal and state law. After the public has had an opportunity to comment on the DEP's proposal document, the DEP submits a final "Priority System, Intended Use Plan, Project Priority List and Response Document" to USEPA for approval. The Priority System describes the ranking methodology for the municipal water pollution control projects that are eligible for state financial assistance under the EIFP. The ranking system continues to give higher priority to projects that address discharges of raw, dilute, or improperly treated sewage during rain events to the state's waters, including projects to abate combined sewer overflows (CSOs) and projects which reduce infiltration and inflow (I/I) from sanitary sewer systems that overflow. CSO abatement projects are very costly and frequently located in urban areas, making the affordability of CSO abatement projects a serious concern. Discharges from combined sewer systems impair water uses and can cause beach and shellfish bed closures. Projects to remediate overflows of sanitary sewage contribute to water

^{*} Please note that a list of acronyms and "short" names used in this document appears on page 20 of this document.

quality improvements which, in turn, result in improvements to the health, safety, aesthetic value, and recreational attributes of the state's waters. The Priority System also details the state's policies governing the award of federal grants under the Construction Grants Program; the policies are the same as those adopted in the final FFY2001 PS document.

The Intended Use Plan (IUP) provides information on the state's policies governing the clean water component of the EIFP as well as the state's plan to channel all federal funds allotted to the state under the CWA and available to the CWSRF in FFY2002, including deobligated construction grant funds (as may be available) to the DEP-administered Wastewater Treatment Fund (Fund). Together, the DEP and the Trust administer the Financing Program, a low-cost loan program. The Fund loan provides half of the individual project's allowable project cost interest-free and the Trust loan provides the remaining half of the project's allowable cost, through the issuance of bonds secured with CWSRF funds, at market rates. The List identifies projects targetted for financial assistance from the CWSRF in State Fiscal Year 2003 (SFY2003). The Proposed FFY2002 PS document is generally in conformance with the FFY2001 PS document. Also included in this document is a section entitled "Sewage Infrastructure Improvement Act (SIIA) Grants Program" that discusses the availability of planning and design grants for CSO abatement and projects which address interconnections and cross-connections of sanitary and stormwater sewer systems.

The DEP's Priority System for FFY2002 includes two items which impact the financial relationship between the CWSRF and the DWSRF. The first item allows the EIFP to extend the coverage scheme that results in AAA ratings for the Trust bonds issued to support clean water projects to the drinking water projects, also known as cross-collateralization. The second item involves the DEP's proposal to transfer funds between the CWSRF and the DWSRF (up to the amount allowed by the federal Safe Drinking Water Act) to provide greater flexibility to the Financing Program to address clean water or drinking water needs in the state. More details on these relationships can be found in section A. of the IUP.

Although federal funds were provided to the CWSRF in FFY2001, the receipt of additional federal funding in FFY2002 and beyond continues to be uncertain since the CWA has not been reauthorized. Loan repayments and state bond proceeds continue to be available to address existing and future wastewater treatment needs in the state. If the CWA is reauthorized as anticipated and/or funds are appropriated, New Jersey will receive necessary additional federal funding to supplement existing monies, which will allow the state to address more fully its significant water quality improvement needs. Several legislative initiatives to reauthorize the CWA and to provide funding for wastewater projects and other water quality improvements have been proposed. It is not expected that the CWA reauthorization or applicable federal guidance will necessitate significant changes to the CWSRF and the state's FFY2002 PS document. As such, the DEP issued this document to maintain the financing program schedule. To the extent that the reauthorization requires substantial revisions to the program, the DEP will provide additional public participation opportunities regarding such revisions.

PRIORITY SYSTEM

I. Project Priority List — General Information

Placement on the Project Priority List for clean water projects is the first prerequisite to be considered eligible for financial assistance under the EIFP. The applicant has the responsibility of submitting all the required application material in a timely manner.

The List presents the estimated total eligible building costs under the appropriate project category. The figure under the "Total Eligible Project Cost" includes the estimated total eligible building costs; the related costs for construction services (i.e., administrative, legal, engineering, inspection, one year start-up services, etc.); the allowance for planning and/or design; three percent for the recipient's administrative costs; and a five percent contingency cost. The figure under the "Total State Amount" column represents 100 percent of the estimated total eligible project costs. Justified revised costs submitted by project sponsors in response to the public hearing/public participation program were included on the final FFY2002 List.

Any significant revisions to the List during the fiscal year will be subject to a public hearing. The DEP does not, however, consider the following revisions to the List to be significant:

- 1. Bypassing (i.e., deferring the funding of) a project to a future fiscal year if all requirements (including commitment to and compliance with the project document submittal schedule) of the CWSRF are not satisfied on schedule.
- 2. Increases or decreases in allowable project costs that may change the fundable range of the List.
- 3. The addition of a project or projects to the fundable range as a result of their qualifying under the Public Health Hazard (PHH) bypass criteria.
- 4. The revision of the fundable range of the List as a result of a change in (1) the allocation that New Jersey receives (if any), (2) the state's contribution to the CWSRF, and/or (3) the total amount of monies made available for clean water projects from the EIFP.
- 5. The revision of the fundable range of the List as a result of ensuring the proper dollar amount is obligated to eligible project categories if limitations are included under the CWA's reauthorization.

II. Ranking Methodology

The DEP ranks all projects according to the total number of ranking points each project receives and subsequently places the projects on the List according to their ranking. The projects with the higher number of points rank above those with lesser points. Projects receive points from five categories. They are: Approved Watershed Plan, Project Discharge Type, Water Use/Water Quality, State Planning Commission, and Population. The categories are consistent with the ranking methodology of the FFY2001 PS document, with the addition of new point assignments for the expanded areas of NPS pollution management project types, and are discussed in sections A through E below.

A. Approved Watershed Plan Points

Watershed planning can achieve cost-effective and environmentally sound water quality improvement within the watershed. To provide an incentive for project sponsors to complete watershed planning and to promote construction of identified point and nonpoint source management projects, a project that is part of a DEP-approved watershed management plan receives 200 ranking points.

B. Project Discharge Type Points

All projects receive ranking points based on project discharge type. Projects qualify for one discharge type representing the major scope of the project. If a project has aspects that can be described by more than one type, the project may be broken into separate projects. Table IA and IB below shows the project discharge types and their ranking points.

Table IA. Ranking Points Related to Project Discharge Type for Wastewater Treatment Facilities

Project Discharge Type	Description	Points
Combined Sewer Overflow (CSO)	Correction of combined sewer systems and discharge points. Includes relocation or consolidation of discharge points and construction of facilities or purchase of equipment to remove solids and floatables.	250
Overflowing Sewers via Infiltration/Inflow (I/I) Correction	Correction of overloaded conveyance systems that experience intermittent overflows, resulting in discharges of raw or inadequately treated sewage. Projects include rehabilitation, repair, and/or replacement of the conveyance system. Also includes I/C abatement projects that address documented water quality impairments.	250
Inadequate Secondary Treatment	Upgrade of a treatment facility or elimination of an existing facility and connection to an alternative treatment facility to meet secondary treatment levels. Also includes I/I correction within the conveyance system, if cost-effective, to allow the treatment plant to meet secondary treatment levels.	200
Sludge Treatment/Disposal Facilities	Construction of sludge management facilities such as those for dewatering, land application, composting, and incinerator repair/improvements; includes wastewater and water supply sludges.	100
New Systems	Construction of facilities to provide collection and/or conveyance, on-site management, treatment plants, and septage treatment for new flows. Also includes projects that involve the reuse of wastewater.	50

Table IA. Ranking Points Related to Project Discharge Type for Wastewater Treatment Facilities

Project Discharge Type	Description	Points
Overloaded Sewers via Infiltration/Inflow (I/I) Correction	Correction of overloaded conveyance systems that do not experience intermittent overflows as well as correction of I/Cs. Includes rehabilitation, repair, or replacement, as appropriate for the system. Elimination of excess flows allows greater treatment system capacity and operational reliability.	50
Advanced/More Stringent Wastewater Treatment Facilities	Upgrade of secondary facilities for advanced wastewater treatment.	25

Table IB. Ranking Points Related to Project Type for Stormwater and Nonpoint Source Pollution Management

Project Type	Description	Points
Landfill Closure, Land Acquisition and Conservation and Well Sealing	Construction of measures to prevent and control pollutants from entering groundwater at non-operating municipal landfill sites and for wells (drinking and monitoring). Also included in this category are land acquisition and conservation projects that are associated with water quality benefits.	100
Landfill Construction and Remedial Action Activities	Construction of facilities to collect, convey and/or treat leachate and runoff from new publicly owned landfill cells or from sites that are known to contain contaminated or hazardous materials.	75
Stormwater Management and other NPS activities	Construction or rehabilitation of stormwater basins, sewer systems and storm drains, extension of outfall pipes, purchase of maintenance equipment (such as street sweepers, acquatic weed harvesters and skimmer boats). Also included in this category are projects that stabilize streambanks, restore lakes or address runoff from salt storage facilities and the implementation of measures to reduce and/or control runoff from agricultural cropland activities and to address pollution concerns associated with manure runoff and feedlot operations.	25

C. Water Use/Water Quality Points

Points are assigned for water uses (present and potential) and for existing water quality conditions to projects that improve discharges which adversely impact surface waters. The assignment of points for "public nuisance" are given to on-site system projects where failures have been identified. Table II below shows the breakdown of the ranking points for water use; in general, the highest values are given for projects that discharge to water bodies with potable, recreational, and fishing uses.

Table II. Ranking Points Related to Water Use (Existing and Potential)

Water Use Public Potable Water Supply		Basis/Description	Points
		Public and nonpublic community surface supply for water companies or municipalities based on NJ Statewide Water Supply Master Plan.	200
	Trout	State freshwater bodies designated for trout production or maintenance by the NJ Water Quality Standards (NJAC 7:9B).	75
Fishing	Non-trout	State freshwater classifications not designated trout production or maintenance by <i>NJAC</i> 7:9B (see Trout description above), including all Delaware River freshwater zones above mile-point 85 as defined by the Delaware River Basin Commission.	25
	Shellfish	State water bodies that are designated as shellfish growing waters by <i>NJAC</i> 7:12.	125
	ecreation nary Contact")	Waters with bathing areas monitored routinely as public beaches as well as the Delaware River upstream from Trenton.	125
Public Nuisance		Indirect water use impacts; applies to areas with identified on-site wastewater treatment system failures.	50
A	griculture	Surface water for agricultural use, such as irrigation and farm ponds, based on DEP diversion permit (permits required for >70 gal/min diversion).	25
	Industry	Surface water known to be used for industrial use such as cooling.	25

Table III shows the points given for not meeting or marginally meeting certain water quality parameters. The points reflect the impact the parameters have on meeting the state's goal to protect and enhance surface water resources, quality criteria, and designated water uses. The magnitude of the contribution that municipal sewerage facilities have on each of the conditions is reflected in the points awarded under these categories. Dissolved oxygen and fecal coliform have the highest points because of their direct impact on the fishable/swimmable water use, coupled with the fact that municipal treatment facilities are a major cause of contravening water quality standards.

Nutrients reflect the presence of phosphorus/phosphates and nitrates/nitrites in a water body. Nutrients were given lower points because although they may cause conditions that interfere with many water uses, the resulting conditions will usually not significantly affect the established water use of the site.

Points were given to nutrients only if the surface waters involved significantly impact potable water reservoirs, surface water impoundments or lakes, public bathing areas or shellfish growing waters.

Points for toxics indicate the relative magnitude of ammonia, metals, pesticides, and organic chemicals in the water body. Toxics were also given lower points since in most cases the significant contributions of toxic substances come from industrial sources and are not significantly abated by municipal treatment facilities. While NPS pollution also contributes to toxicity levels, the project types most likely to involve higher levels of toxic contaminants (such as landfills and contaminated sites) receive higher ranking than other NPS management projects in the project type category (see Table IB). In the case of the toxicity of ammonia, municipal facilities are usually the main source, but the most significant impact is associated with streams designated for trout production/maintenance, which already receive a high number of points under the water use category.

Table III. Ranking Points Related to Water Quality

Water Quality		Points for Water Quality that		
		Meet	Marginally Meet	Do Not Meet
		the Water Quality Standard*		
Parameter	Dissolved Oxygen	0	50	100
	Fecal Coliform	0	50	100
Parameter Category	Nutrients	0	25	50
	Toxics	0	25	50

^{*}The Water Quality Standard for the applicable parameter or category.

D. State Planning Commission Points

어취

The DEP seeks to coordinate and enhance the State Planning Commission's (SPC's) efforts to implement the State Development and Redevelopment Plan. The DEP assigns ranking points to projects in municipalities the SPC has approved under the Center Designation Process. The DEP gives points to distressed municipalities and multi-jurisdictional centers as outlined in Table IV. For a project serving more than one municipality, the SPC points will be included for ranking purposes if the designated center, distressed municipality, or multi-jurisdictional center is a significant component of the overall project. For further information regarding the State Development and Redevelopment Plan, contact the NJ Office of State Planning, Department of Community Affairs, 33 West State Street, 4th floor, PO Box 204; Trenton NJ 08625-0204 or call (609) 292-71-56.

Table IV. Ranking Points Related to State Planning Commission Approvals

Planning Area	Community Type	Points
1	Urban Centers	7.5
1	Regional Centers and Towns	5.0
	Existing Designated Regional Centers and Towns	7.5
2	Planned Regional Centers	5.0
	Existing and Planned Villages	2.5
_	Existing Regional Centers and Towns	7.5
3	Existing Villages	2.5
A Q. 5	Existing Regional Centers	7.5
4 & 5	Towns and Existing Villages	2.5
Not Applicable	Distressed Municipality for which the municipality has an endorsed Strategic Revitalization Plan.	10
Not Applicable	Multi-Jurisdictional Center where two or more municipalities have decided to prepare a joint plan for approval as a designated center.	1 3

E. Population Points

Projects are also assigned points based on the population of the project area. One point is given for every million people living in the project area on a year-round basis. Thus, if projects have the same number of ranking points after having received all eligible points, population points become the tie breaker, with higher priority given to the project serving the higher population.

F. Public Health Hazard (PHH) Projects

In instances where project conditions are determined to constitute a PHH by the Commissioner of the DEP in consultation with the Commissioner of the Department of Health, the project will receive funding priority over other projects on the List. The review procedure involves a survey of the extent of wastewater problems such as: incidences of sewage-borne disease, contaminated wells, and homes or buildings with sewage back-up. Details of the PHH procedure are available in the FFY96 PS document and are incorporated in the FFY2001 PS document by reference. Copies of the FFY96 PS document may be requested by calling the Bureau of Program Development and Technical Services at (609) 292-3859.

III. Construction Grants Program

The delegation of authority for the Federal Construction Grants Program from the U.S. Environmental Protection Agency to the New Jersey Department of Environmental Protection expired on June 30, 2000. As of July 1, 2000, USEPA Region II has assumed full responsibility for the program. Any questions on outstanding Federal Construction Grants projects or issues should be directed to Mr. Michael Hajducek, P.E., USEPA Region II, Water Programs Branch, 290 Broadway, New York, New York 10007, 212-637-3858.

INTENDED USE PLAN

This Intended Use Plan (IUP) provides information on funds available through the EIFP to provide financial assistance for clean water projects in SFY2003. The IUP identifies state policies governing loan awards and includes information on the following:

- 1. The list of projects to be used for funding purposes.
- 2. The long and short-term goals of the state's program.
- 3. The programmatic activities to be supported with the anticipated funds.
- 4. The timing and use of such funds.
- 5. The criteria and method of distribution of the funds.
- 6. Provisions for interim reporting (as required by the Regional Administrator at the time of a capitalization grant award).

Programmatic requirements imposed by the Water Quality Act of 1987 include 1 through 5 below. It is anticipated that these provisions will be maintained in a subsequent federal reauthorization act or federal policy. If substantial changes in the Act necessitate the DEP's revision of the FFY2002 PS document, additional public participation efforts will be conducted.

- 1. The schedule of state capitalization grant payments, jointly agreed upon by the Administrator of the EPA and each state, is based upon the state's IUP.
- 2. States are required to deposit in the CWSRF, from state monies, an amount equal to at least 20 percent of the total amount of all capitalization grants which are made to the state.
- 3. The fund created with federal capitalization grants can only be used to provide assistance for (a) the construction of publicly owned treatment works, (b) the implementation of a NPS (nonpoint source) management program, which includes construction financing of stormwater/NPS management facilities, and (c) the development and implementation of an estuary conservation and management plan. Although CWSRF loans may only be provided for publicly owned systems, if a government unit assumes ownership of a wastewater treatment system previously privately owned, a loan may be provided under the authority of section 603(c) of the federal CWA. A state may also deem the public ownership requirement as being met for small/on-site systems if adequate inspections and operations are ensured through the establishment of a septic management district or use of service easements. Privately owned stormwater/NPS management projects may also qualify for CWSRF

- loans provided the project is sponsored by the local government unit.
- 4. Monies in the CWSRF may be used to provide loans at or below market interest rate, for terms not greater than 20 years (after completion of construction). Repayments must begin no later than one year after completion of the project and must be credited to the CWSRF (principal and interest) for Title VI purposes. The recipient of a loan must establish a dedicated source of repayments. The CWA also authorized the use of federal CWSRF monies to refinance local debt obligations, provide guarantees, or purchase insurance.
- 5. Through FFY94, states were required to reserve the greater of \$100,000 or one percent of their annual allotment for the development and implementation of NPS management programs. This reserve may be re-enacted or otherwise modified for FFY2002 as a result of reauthorization of the CWA or subsequent federal guidance.

A. Financial Relationships between the CWSRF and the DWSRF

Section 302 of the amendments to the federal Safe Drinking Water Act (which established the DWSRF Program) includes authorization for states to transfer up to 33 percent of the DWSRF capitalization grants made to a state from the DWSRF to the CWSRF or an equivalent amount from the CWSRF to the DWSRF. This transfer is at the Governor's discretion and cannot occur until at least one year after the state has received its first DWSRF capitalization grant. In New Jersey, the first DWSRF capitalization grant was awarded by USEPA on September 18, 1998.

For FFY2002, the DEP reserves the right to transfer the maximum amount allowed by federal law or policy (and any sums eligible for, but not transferred, in FFY2001) from CWSRF loan repayments to the DWSRF. The ability of the state to transfer funds in FFY2002 is uncertain at this time since current federal legislation prohibits transfers after September 30, 2001.

In addition to the potential transfer of funds between the CWSRF and DWSRF, the EIFP is continuing its policy to cross-collateralize the DWSRF with the CWSRF. This feature results in significant savings to project sponsors and, in particular, the drinking water project sponsors since there is a large source of revenue available to cover possible loan defaults. Under the EPA-approved procedures associated with cross-collateralization, a temporary transfer of funds between the two SRFs may occur as may be necessary to cover the default of a loan repayment or other financial obligation. The EIFP would take steps to collect any obligations resulting in a loan default and reimburse the appropriate drinking water or clean water account.

B. Document Submittal Schedules

In order to better manage the large volume of environmental infrastructure projects being processed, the DEP and the Trust have changed the traditional project document submittal deadlines and eliminated the second chance option in FFY2001 and future years. All local government units that have a project or projects listed or eligible for listing on the FFY2002 List must commit to the following schedule to be considered for FFY2002 funding by October 1, 2001. The commitment is made in writing to the **Assistant Director**, **Municipal Finance and Construction Element** (MF&CE) with a copy to the Executive Director, New Jersey Environmental Infrastructure Trust. However, prior to the submission of a commitment letter, all applicants are encouraged to attend a

pre-planning meeting with the appropriate engineering bureau within the Municipal Finance and Construction Element.

2002 Loan Program

Activity	Deadline
Commitment Letter and Planning Documents	October 1, 2001
Design Documents and Loan Application	March 4, 2002
Loan Award	November 2002

For construction projects, the planning and design documents must consist of:

- 1. A complete project report.
- 2. The environmental assessment report done at the appropriate level, which is determined by the DEP.
- 3. Complete cultural resources survey documentation.
- 4. Long-term sludge management plan for projects involving a treatment plant upgrade or expansion.
- 5. Documentation of completed public participation activities.
- 6. The results of preliminary coordination activities with lead agencies regarding environmental and permit concerns.
- 7. Proof of a final NJPDES permit or a Discharge Allocation Certificate. Therefore, all final effluent conditions will be known and agreed upon when planning documents are submitted.
- 8. For I/C projects, the Final Map, and related information, required under *N.J.A.C.* 7:22A-4.3 (earlier submittals are encouraged).
- 9. Plans and specifications for the project, including appropriate environmental mitigation/restoration components.

For land acquisition and conservation projects, the planning and design must consist of:

- 1. An identification of the parcels (lot and block, and a tax map) and the appraised (or estimated fair market value) and the estimated purchase price for each parcel.
- 2. A description of the water quality benefit to be achieved. Identify the water bodies in the vicinity, important aquifer recharge areas, etc. Provide a description of the nature and extent of vegetation for each parcel.
- 3. A map (with dimensions of at least 22 by 36 inches) that identifies the area (acreage or square feet) as well as the location of surface water bodies, the location and extent of coastal and freshwater wetlands, tidelands and floodplains, areas of steep slopes, paved and unpaved roadways, easements, rights-of-way, existing buildings, etc. Note any other issue of environmental significance for the parcel(s), such as the existence of dunes or beaches, the location of endangered or threatened animals or plants, cultural/historic resources, etc.
 - 4. An 8.5x11 inch map of the municipality, generally outlining the location of the parcel(s).
- 5. An identification of the proposed uses for each parcel. Under the EIFP, only passive uses are allowed. Where joint Green Acres funding is being pursued, and active recreation activities,

clearing, parking lots, etc. are proposed, indicate the location and extent of these activities.

- 6. Identify what public participation has or will occur.
- 7. A copy of the appraisal(s) of the parcel(s). For a parcel with an estimated value of less than \$250,000, the local government unit must obtain at least one appraisal. For a parcel with an estimated land value of \$250,000 or more, at least two appraisals must be obtained. This activity should be closely coordinated with the Green Acres appraisal staff since the value that Green Acres staff determines to be appropriate will form the basis for the project's allowable cost. Project sponsors must use the list of appraisers approved by Green Acres.
- 8. A preliminary assessment or site assessment for the parcel(s). If a preliminary assessment report or site assessment prepared under the Technical Requirements for Site Remediation, N.J.A.C. 7:26E, identifies potential contamination of the land to be acquired, a letter of no further action issued by the Department under N.J.A.C. 7:26C-2.6 is also required.
- 9. A statement from the local government unit pledging to comply with the loan conditions and identifying the actions the local government unit will take to ensure that the applicable restrictions will be incorporated in the deed for the parcel(s) and will apply in perpetuity.

In addition, project sponosors should be aware that, in general, a purchase agreement that identifies the purchase price and the schedule for the actual acquisition of the land executed by the project sponsor and the landowner(s) must be submitted to the DEP before DEP will approve the land acquisition for financing.

Projects with unacceptable planning documentation will be bypassed (moved to the next funding period). If the local government unit does not commit to the document submittal schedule, the DEP will interpret this as a decision to not pursue funding in FFY2002/SFY2003 and will result in a "BEYOND 2002" designation under the estimated state certification date column on the Priority List.

C. Loan Awards

Loan awards for new projects will be made in FFY2002/SFY2003 for up to 100 percent of the allowable project costs to cover the low bid building costs and other allowable project costs that are identified in the program rules at *N.J.A.C.* 7:22-3, 4, and 5. The loan term will generally be 20 years but can not exceed the useful life of the facility. The initial loan amount will be limited to the certified project cost, which may reflect (1) the estimated allowable project cost based on the project sponsor's loan application or (2) the low bid building cost. The adjustment to provide funding based on the low bid building cost will be made only after all project-related contracts have been awarded.

Adjustments to provide warranted loan increases for differing site conditions will be made only after all allowable project costs have been incurred. Consideration will be given to providing warranted loan increases, subject to: the DEP's and the Trust's approval, legislative approval in the form of an appropriations bill(s) providing such monies, and the availability of funds. Any dollar changes in cost estimates for projects on the List may result in the DEP requesting the municipality to provide a third party concurrence on the cost change. Should cost underruns occur after a low bid building cost adjustment and the completion of construction, budget line item changes may be approved for allowable cost overruns. In these cases, administrative/legal/fiscal costs will not be subject to the three percent limit as specified in the rules. A greater amount could be approved should sufficient funds remain and if sufficient justification and documentation for the higher costs are submitted and

approved. If a recipient receives DEP approval to reduce the project scope through the elimination of a contract (or portion thereof), the eligible project cost (and therefore the financial assistance amount) will be reduced through the DEP's and the Trust's "deobligation." The amount to be deobligated will be equal to the estimated cost of the scope of work included in the original loan award.

Local government units are required to meet the technical, administrative and environmental provisions of the rules of the DEP and the Trust (*N.J.A.C.* 7:22-3, 4, 5, 8, 9 and 10). Disbursement and loan repayment provisions must also be consistent with the rules.

Planning and design costs alone are not directly eligible for financial assistance from the EIFP. However, an allowance to assist in defraying planning and design expenses will be included in the financial assistance agreement for the construction of the project, if state funding for planning and design has not otherwise been awarded, such as through the Sewage Infrastructure Improvement Act Grants Program.

Financial assistance will only be awarded to a distinct project segment that will result, in itself, in an operable treatment works (i.e., not relying on award of funds for additional portions of the project). Financial assistance awards will not be made to projects that are under an enforcement action unless a federal or state court-sanctioned order or state administrative order (only accepted in certain cases) specifying a compliance schedule has been established. A copy of the judicial or administrative order will be required at the time of submittal of the project application.

All wastewater treatment projects must be sized in accordance with a cost-effectiveness analysis to accommodate existing needs as well as 20-year reserve capacity. The recipient's financial assistance will generally be limited to the cost of the project with a capacity based upon flow records and flows anticipated prior to the date of initiation of operation as established in the Fund loan agreement. However, the program's rules at *N.J.A.C.* 7:22-4.36 allow the borrower to apply for a market rate Trust loan to cover incremental costs related to 20-year reserve capacity.

D. Preaward Approvals

Eligible projects can qualify to receive preaward approvals if the requirements of the rules (*N.J.A.C.* 7:22-3.32 and 4.32) are met. This is a significant difference from the federal grants program, since project sponsors may maintain the eligibility of project costs incurred prior to the execution of formal state agreements. However, to maintain the eligibility of such costs, project planning (including the issuance and expiration of an Environmental Assessment prepared by the DEP), design and contract documents must be reviewed and approved by the Municipal Finance and Construction Element (including issuance of authorization to advertise and award contracts for which reimbursement is sought). Further, all permits and approvals for the construction of the project must be secured. Note that the receipt of state disbursements for building costs incurred prior to the award of a CWSRF loan from the DEP may not be fully disbursed upon award. As a direct result of federal policy which classifies these costs as "refinanced," reimbursement for these costs may be limited. States can only draw cash up to 5 percent of its grant amount or in equal amounts over the number of quarters over which the state can receive capitalization grant payments (which will generally be eight quarters).

E. Socially and Economically Disadvantaged (SED) Business Participation

Project sponsors should be aware that a goal of not less than 10 percent of the costs for construction, materials or services for a project must be awarded to small business concerns owned and controlled by SED individuals as defined in the Small Business Act (15 *U.S.C.* 637(a) and (d)) and any rules promulgated pursuant thereto. The DEP and the Trust have adopted the SED rules (at *N.J.A.C.* 7:22-9), that identify the SED utilization requirements that project sponsors will have to meet.

F. Stormwater/Nonpoint Source (NPS) Management Projects

Because of the increasing water quality concerns related to stormwater runoff, the DEP and the Trust have expanded the scope of the Financing Program to include construction costs for a wide variety of stormwater/NPS management projects. The EIFP will allocate a minimum of \$10 million in clean water funds to this category in FFY2002. The DEP's general view, after consultation with local and regional planners and stormwater managers, is that expensive structural retrofits should not be implemented before completion of regional analysis and planning. Thus, if the project will impact the capacity, hydrology, or hydraulics of existing stormwater management facilities, systems, or downstream waterbodies, a watershed management plan appropriate to the project's location should be prepared. Watershed management planning, a key component of the watershed approach, assesses the overall needs of an area to ensure that proposed projects will improve/maintain water quality in a costeffective manner. Watershed management planning differs from the individual project planning which is site-specific and which is a routine requirement of funding under the EIFP. Although the EIFP does not fund watershed management planning, the EIFP does provide an allowance for a project's site-specific planning and design. The allowance is based on a percentage of the building costs. Stormwater/NPS management projects must support efforts to achieve and/or maintain water quality, compatible with designated uses of the water body.

The stormwater/NPS management projects that are eligible for EIFP loans includes both new or modifications of stormwater management systems, facilities, basins, or other stormwater/NPS management facilities (including land aquisition to site the eligible facilities).

Stormwater/NPS management projects also include, but are not limited to: installation of packed media filters, replacement of existing storm drains with newer designs that incorporate features to remove solids, floatables, oil and grease and/or other pollutants; purchase or replacement of equipment to reduce solids and/or floatables, such as netting on outfalls and skimmer boats; purchase of maintenance equipment, such as street sweepers, leaf collection equipment and aquatic weed harvesters; rehabilitation of tide gates and existing basins or other stormwater systems, including pump stations; extension and/or stabilization of outfall points; implementation/construction of systems that will result in water quality benefits, such as salt storage structures/runoff control systems, feedlot manure/runoff control systems, and streambank/lake stabilization/restoration projects which are consistent with habitat protection.

Landfill Closure and Construction - The Financing Program also includes landfill closure and landfill construction projects under eligible NPS projects. The DEP recognizes that landfills are a major pollution concern and are identified as a nonpoint source of pollution in the state's Stormwater and NPS Program Plan developed under Section 319 of the Clean Water Act. In general, eligible

landfill closure activities include such items as landfill capping systems, leachate collection, storage and treatment systems, side slope seepage prevention and controls, gas condensate systems and other activities. Financing for landfill construction projects is generally limited to those project elements that prevent, reduce or control the generation of leachate or are required for the collection, storage and treatment of leachate. Elements of a landfill construction project that may be financed include landfill liner systems, leachate removal or collection systems and related maintenance equipment, toe-drains and cut-off walls, leachate sampling facilities and equipment, leachate storage facilities (lagoons, tanks, tank covers and aeration systems), leachate evaporation systems and others. In addition to leachate controls, other eligible elements include barge shelters, containment booms, litter fences and other means to prevent municipal solid waste from blowing off the landfill site and polluting surface waters. Before any landfill closure or construction project is approved under the Financing Program, the project sponsor must submit and receive all applicable permits and approvals from the DEP's Division of Solid and Hazardous Waste.

In FFY2001, the Financing Program added the water quality aspects of land acquisition and conservation, remedial action activities and well sealing to the list of eligible NPS projects as described below:

Land Acquisition and Conservation - Land acquisition and conservation can complement other water quality initiatives in various ways, such as by reducing the encroachment of impervious land cover into environmentally sensitive areas. Buffer areas in and around stream corridors are particularly important to filter pollutants/sediments from surface waters and stormwater runoff. Land acquisition can be through purchase (fee simple) or easement. As a condition of financing, the project sponsor must agree to protect the land from incompatible uses that would adversely impact water quality, such as development of the site and/or other increases in impervious land cover.

Remedial Action Activities - The cleanup of hazardous waste sites and other contaminated sites is critical to preventing further contamination of groundwaters in the State. Spill cleanups, brownfield restoration and hazardous waste site cleanups at publicly owned facilities are some examples of the activities that are eligible through the Financing Program. Treatment of contaminated groundwater qualifies for financing if the treated water is returned to the environment. Treatment solely to provide a safe drinking water supply is ineligible for CWSRF financing, but may be eligible for DWSRF financing.

Well Sealing - The proper sealing of unused monitoring and water supply wells is also important to protect groundwaters in the State. Municipalities and other public entities can sponsor projects through the Financing Program to properly fill, seal and abandon wells in accordance with N.J.A.C. 7:9-9.

Further details on the procedural requirements for the new project areas can be found in N.J.A.C. 7:22, the Financing Program rules.

G. Combined Sewer Overflows (CSOs); Interconnections/Cross-Connections (I/Cs)

In 1988, the New Jersey Legislature passed a bill to establish comprehensive requirements for (1) controlling combined sewer overflows (CSOs) throughout the state, (2) managing stormwater needs in

the four coastal counties of Atlantic, Cape May, Monmouth, and Ocean, and (3) establishing a grant program to promote planning and design of necessary facilities. Since CSO facilities are wastewater treatment facilities as defined under section 212 of the CWA, construction of CSO facilities is readily accommodated within the existing CWSRF program.

Although it is expected that a number of the affected municipalities in the coastal counties will pursue planning grants under the I/C aspects of the SIIA funding program (if available), there may be cases in which immediate correction of I/Cs may be appropriate. This type of project is generally included in the I/I Correction category for funding under the EIFP. I/C abatement projects eligible for placement on the List include projects located throughout the state having a need to eliminate or abate an I/C between a sanitary and stormwater sewer system.

H. Short-Term and Long-Term Goals; Miscellaneous Items

The short-term goal of New Jersey's financing program is to provide funding to needed, high-ranked water quality improvement projects. The long-term goal of the program is to establish a sound, self-sufficient, self-perpetuating financing program to assist communities with the financial burden of providing costly wastewater treatment and stormwater/nonpoint source management facilities to meet on-going water quality improvement/maintenance needs of the state.

As provided for in the January 1988 Initial Guidance for State Revolving Funds, a state that has deposited monies in a dedicated revolving fund after March 7, 1985 and prior to receiving a capitalization grant, may credit these monies toward the match, binding commitments, and equivalency requirements. Since many of the projects certified by the DEP do not use CWSRF funds and qualify under the criteria to bank monies toward the specific requirements, at least a portion of the state monies may be requested to be qualified as bankable to satisfy the CWSRF's match, binding commitment, and equivalency requirements.

In recognition that modifications to the IUP may occur, the DEP may provide updates of the IUP to the USEPA and will submit an Annual Report representing the actual use of the CWSRF funds to the USEPA in accordance with the requirements of the Water Quality Act of 1987 and Agency guidance.

In accordance with the USEPA Policy on Fees Charged on Assistance Provided Under the SRF Programs, states must disclose information regarding the assessment and use of any fees associated with SRF activities that are passed on to the program participants. In New Jersey, each SRF project is financed with two loans, one from the NJDEP which utilizes federal SRF capitalization grants and one from the NJ Environmental Infrastructure Trust, which utilizes bond proceeds from the Trust bond sale. The NJDEP loan issued at 0% interest has no fees associated with it. The Trust's loan is issued at the same market interest rate as the Trust obtains from sale of its bonds. Rather than bonding for all of the eligible closing costs associated with each financing, the Trust charges the borrowers a one-time surcharge of up to 0.4% of the principal Trust loan amount to partially cover the costs associated with that particular year's bond sale. These issuance costs include such activities as: bond counsel, financial advisor, rating agencies, printing and publishing of the Notice of sale, the Preliminary Official Statement, the Official Statement, and other costs related to the Trust's bond sale. In addition, the Trust charges an annual administrative fee of up to 0.3% of the Trust's bond principal loan amount to cover the balance of the closing cost and the annual operating expenses associated with

the operations of the Trust and the on-going costs associated with the Loan Servicer and Trustees. The Trust Annual Fee is not included in the principal amount of the loan. Fees collected by the trust are held in an account outside of the SRF. In State FY2001, the Trust anticipates collecting administrative fees associated with the SRF program of approximately \$2 million.

FFY2002 Financing Program Schedule for Clean Water Projects		
Date	Action	
March 21, 2001	Public hearing on Proposed FFY2002 PS document.	
March 28, 2001	 Close of comment period. Project Health Hazard (PHH) bypass requests due. 	
As soon as possible (but before October 1, 2001)	Prospective applicants attend a preplanning meeting with DEP - MF&CE representatives.	
October 1, 2001	FFY2002 applicants submit commitment letter, all planning documents (i.e., project reports) to DEP, including final NJPDES permit or, in the case of an I/C project, a Final Map.	
(on or before) January 15, 2002	DEP/Trust submits list of projects (based on Priority System ranking methodology) to Legislature for forthcoming State Fiscal Year.	
March 4, 2002	FFY2002 applicants submit design and complete loan application.	
(on or before) May 15, 2002	Financial Plan for State Fiscal Year 2003 submitted by DEP/Trust to Legislature.	
July 1, 2002	 Legislature acts on Financial Plan. DEP/Trust transmit draft loan agreements to qualifying applicants. 	
(on or about) September 15, 2002	 Trust financial transactions completed. Execute DEP/Trust loan agreements in escrow. 	
November 2002	DEP/Trust loan closing with FFY2002 sponsors.	

SEWAGE INFRASTRUCTURE IMPROVEMENT ACT GRANTS PROGRAM

Introduction

The Sewage Infrastructure Improvement Act (SIIA), *N.J.S.A.* 58:25-23, was passed by the New Jersey State Legislature on August 3, 1988, to address both point and nonpoint source (NPS) pollution. The SIIA set comprehensive requirements applicable to the DEP and the affected municipalities/public entities regarding combined sewer overflow (CSO) abatement and

stormwater management. The SIIA also established a fund known as the Municipal Stormwater Management and CSO Abatement Assistance Fund and appropriated \$33.5 million for it. In addition, the DEP may use funds available under the Stormwater Management and CSO Abatement Bond Act of 1989 for SIIA purposes as well. The DEP has adopted rules to implement CSO Planning and Design Grant aspects at *N.J.A.C.* 7:22A-6 and I/C Abatement Planning and Design Grant aspects at *N.J.A.C.* 7:22A-7.

The SIIA grant program for planning and design activities is independent of the EIFP, which is strictly a loan program. Inclusion in this document of this discussion and the SIIA application deadlines (February 7, 2002, for the planning and design of CSO construction projects and December 15, 2002, for the planning of I/C construction projects) takes advantage of the wide public circulation of the Priority System. While planning and design may be completed through the award of grants under the SIIA, the construction of needed facilities may be financed through loans awarded under the EIFP.

Sections I and II provide more information on the specific requirements of the SIIA relating to CSOs and stormwater management and explain the interrelationship of the funding programs available under the SIIA and the EIFP.

I. CSO Abatement

The SIIA requires all public entities operating CSO systems in NJ to provide DEP-approved CSO abatement measures. The SIIA funding program authorizes the DEP to give grants to municipalities and other public entities controlling or operating CSOs. The grants provide up to 90 percent of the funds needed to complete planning and design of necessary CSO abatement facilities. In view of the limited funds available for CSOs, CSO abatement projects eligible under the SIIA Grants Program were limited to those which addressed the elimination of dry weather overflows and the reduction of solids and floatables in CSOs during wet weather events.

The DEP annually provides public notice of deadlines for submittal of SIIA planning and design grant applications and has done so since FFY92. The grant application deadline is February 7, 2002, for the planning or design of CSO abatement projects.

II. Stormwater Management

The SIIA requires stormwater mapping and implementation of NPS pollution controls by all municipalities with stormwater sewer systems discharging into the salt waters of Atlantic, Cape May, Monmouth, and Ocean Counties. The maps must identify the locations of the stormwater and sanitary sewer systems, all I/Cs, and indicate whether the cross-connections have received permits from the DEP. The 94 affected municipalities must also periodically monitor water quality at the outfall lines of their stormwater sewers (*N.J.A.C.* 7:22A-4).

Because the SIIA requirements for stormwater mapping and NPS pollution control requires a considerable amount of work, the DEP is implementing the program in several phases. The phases and their requirements are: Phase I, preliminary maps; Phase II, final maps; and Phase III, NPS pollution correction. Phases I and II are administered by the Office of Environmental

Planning in the DEP. In addition to these phases, grants for the planning and design of I/C abatement facilities are also available based on the final maps. The I/C planning and design grant aspects of the SIIA are administered by the MF&CE. The deadline for grant applications for I/C planning is December 15, 2002.

In Phase I, which is now complete, municipalities developed inventory and preliminary maps of their stormwater sewer systems; the DEP allocated \$1.045 million for Phase I. The rules requiring the preliminary maps are at *N.J.A.C.* 7:22A-1, 2, and 3.

Phase II sets requirements and provides grant funds to municipalities for developing detailed final maps of their stormwater/sanitary sewer systems to locate I/Cs and for monitoring discharges to salt waters. The DEP has signed grant agreements with the eligible municipalities for Phase II final mapping. The rules setting final map and monitoring requirements are at N.J.A.C. 7:22A-1, 2, and 4. The final maps must be generated within one year after receiving the grants for them, and the monitoring of discharges to salt water must be completed over a three-year period. Subsequent investigative monitoring activities in conformance with monitoring requirements will enable municipalities to verify and update annually the final maps.

Phase III, a future phase of the program, will involve the implementation of NPS pollution controls where monitoring indicates significant sources of NPS pollution. Municipalities will be required to abate significant NPS pollution which, based on mapping and monitoring efforts, are adversely impacting surface waters. It should be noted that DEP is currently preparing rules to establish guidelines for the preparation of regional stormwater management plans, which is a major step toward implementation of NPS controls needed not only in coastal areas, but throughout the state.

APPENDIX A:

- 1) Sample Commitment Letter
- 2) Project Status/Cost Update Form

Prior to the submission of a commitment letter, all applicants are encouraged to attend a preplanning meeting with the appropriate engineering bureau within the Municipal Finance and Construction Element.

-Clean Water Financing-SAMPLE COMMITMENT LETTER FOR FFY2002/SFY2003 SCHEDULE

(This letter, on official stationary, must be received or postmarked by October 1, 2001 to be given consideration by the Department of Environmental Protection and the New Jersey Environmental Infrastructure Trust for inclusion in the 2002 Financing Program.)

Nicholas G. Binder, P.E., P.P., Assistant Director Municipal Finance and Construction Element Division of Water Quality New Jersey Department of Environmental Protection PO Box 425 Trenton, New Jersey 08625-0425 Dear Mr. Binder: Subject: Project No. (Project Name) (Project Sponsor) (County) In accordance with the provisions of the Federal Fiscal Year 2002 (FFY2002) Priority System document and N.J.A.C. 7:22-3.7 (a), I, authorized representative for the above-referenced project, do hereby commit to meet the project document submittal deadlines identified below and the financial application deadline to be established by the Trust and the State for participation in the 2002 Financing Program. Planning Documents October 1, 2001 Design Documents and Loan Application March 4, 2002

A pre-planning meeting for this project was held on _____ (insert date of meeting) with representatives from the Municipal Finance and Construction Element to discuss

program requirements and schedules.

I understand that failure to comply with the submittal requirements and deadlines will result in the project being deemed ineligible for the 2002 Financing Program.

Enclosed please find a project status/cost update form including proposed modifications to the information presented in the Priority List.

Very truly yours,
(Authorized Representative)

Enclosure

c: New Jersey Environmental Infrastructure Trust PO Box 440 Trenton, NJ 08625-0440

NOTE: If a project sponsor fails to submit this commitment letter by October 1, 2001, the sponsor's project remains on the Project Priority List and is eligible for future funding based on that year's Priority System.

-Clean Water Financing-FFY2002 PROJECT STATUS/COST UPDATE

The following FFY2002 Project Status/Cost Update Form must be used to update information on currently ranked projects or to propose new projects for inclusion on the FFY2002 Project Priority List. Please complete the form according to the instructions below, and include estimated building costs for each category of project need. All costs should be updated to March 2002. Those applicants who desire to update project status/costs, but do not want to commit to meeting the project submittal deadlines, should submit the Project Status/Cost Update Form with an appropriate cover letter.

- Section A: 1) The project sponsor must be the entity which will assure proper operation and maintenance of the facilities or equipment to be constructed, rehabilitated or purchased.
 - 2) For existing projects listed on the FFY2001 Project Priority List, write the number listed. For unlisted projects, write "NEW" in the space provided.
 - 3) For existing projects listed on the FFY2001 Project Priority List, write the name listed. If this name is to be changed, write "change to", and then the new name. For new projects, write a short descriptive title in the space provided.
 - 4-7) Write the address of the agency stated on Line #1.
 - 8-9) Write the name and telephone number of the responsible official of the agency stated on Line #1.
 - 10-11) Write the name and telephone number of the consulting engineer for the project.
- Section B: Write a <u>brief</u> description of the project in the space provided; for example upgrade and expand the existing sewage treatment plant, new gravity interceptor, I/I reduction program, stormwater basin rehabilitation, etc. Also, if a Public Health Hazard Bypass is being sought, so indicate.
- Section C: Eligible Category
- Category 1- For projects which currently do not meet secondary treatment standards or the repair/expansion of existing facilities to provide secondary treatment.

 Secondary treatment provides a 30-day average effluent quality of 30 mg/l or less for both SS and BOD with 85 percent removal of these pollutants. Also, projects which will provide facilities to reuse wastewater or treat sludge or septage are included in this category.
- Category 2- Applies to treatment facilities to upgrade to meet effluent limitations (30 day average) for BOD and SS less than 30 mg/L, or provide for the removal of

- ammonia, nitrogen, phosphorus or other pollutants, or to provide stringent disinfection by means of coagulation or filtration facilities.
- Category 3A- Applies to projects which will reduce infiltration/inflow using "minor" rehabilitation procedures such as grouting/lining of existing sewers, installation of watertight manholes, replacement of short stretches of sewer, etc.

 Interconnection/Cross-Connection abatement projects will typically be included in this category.
- Category 3B- Involves the replacement of existing pipes or manholes. This is done where pipes and manholes have lost their structural integrity or where an increase in pipe size or change in alignment is needed.
- Category 4A- For the construction of collection sewers to service areas currently using on-site systems of wastewater treatment and disposal. Such sewers consist of the common collection sewers, within a publicly owned treatment system, which are primarily installed to receive wastewater directly from facilities which convey wastewater from individual systems.
- Category 4B- A sewer which is designed to intercept wastewater from a final point in one or more collection systems or from an existing major discharge of raw or inadequately treated wastewater for transport to a treatment facility, another interceptor, or another municipality.
- Category 5- Applies to projects to correct overflow conditions in combined sewer systems and repair/rehabilitation of combined sewer lines. Such systems concurrently transport wastewater and storm and/or tidal flows.
- Category 6- Applies to projects which address problems caused by runoff discharged via separate stormwater sewer systems and may include the installation of packed media filters, replacement of existing storm drains with newer designs that incorporate features to remove solids, floatables, oil and grease and/or other pollutants; purchase or replacement of equipment to reduce solids and/or floatables, such as netting on outfalls and skimmer boats; purchase of maintenance equipment, such as street sweepers, leaf collection equipment, low-application rate salt spreaders and aquatic weed harvesters; rehabilitation of tide gates and existing basins or other stormwater systems, including pump stations; extension and/or stabilization of outfall points; and salt storage structures/ runoff control systems.
- Category 7- Applies to projects to address nonpoint source pollution from such activities as cropland and animal agriculture (such as feedlot manure/runoff control systems), as well as silviculture and urban runoff, where stormwater runoff is not transported via a separate storm sewer. Also included in this category are the water quality aspects of municipal landfill closure and construction projects, land acquisition and conservation projects, remedial action activities, well sealing, streambank/lake stabilization/restoration projects which are consistent with habitat protection and those projects identified in category 6 above where the municipal storm sewer system is not permitted as a point source.

Building Costs - Costs related to the erection, acquisition, alteration, remodeling, improvement or extension of treatment works. These costs are exclusive of the architectural/engineering costs defined below.

Architectural/Engineering (A/E) Costs - Costs of consulting services to be incurred during the construction phase of the project, generally estimated at 12% of building costs. These costs are exclusive of planning and design costs.

In addition to the building and A/E costs above, a project's estimated allowable cost will include 3% of building costs for the recipient's administration, 5% for unanticipated cost increases and a planning and design allowance

Basis of Cost: State the source used to estimate the building costs. For example, engineer's estimate, updated 201 Facilities Plan, Project Report, etc.

Section D: NEW PROJECTS ONLY- Complete the project narrative form as follows -

- 1) Project Name as for Section A, Line 3.
- 2) Service Area indicate all areas, or portions thereof, in which the proposed wastewater treatment facilities will operate. If possible, provide a map (USGS scale) of the service area.
- 3) Existing Population state the best available local estimate and indicate source of information; otherwise, current State Data Center estimates should be used.
- 4) Need for Project justify the need for the project in relation to its effect(s) on existing water use and water quality (refer to the Ranking Methodology section of the Priority System). For projects involving treatment plants, provide the following information, based on the most recent four month period:
 - a) NJPDES Permit Number
 - b) Flow Design and Existing
 - c) Effluent Levels of BOD and SS (mg/l and percent removal)
- 5) Project Description: provide a brief, but thorough, description of the proposed project, including major components and treatment units, sewer lengths, sludge practices, etc.

For additional information or assistance, contact: Scott L. Shymon FY2002 Project Priority List Coordinator (609) 292-3859 Send completed forms to: Nicholas G. Binder, P.E., P.P., Assistant Director Municipal Finance and Construction Element Division of Water Quality PO Box 425 Trenton, NJ 08625-0425

Service Area

Rahway City

Need for Project

The applicant operates a thirty-five (35) million gallons per day (MGD) water pollution control facility which was constructed in 1976 and conveyance facilities (including combined sewers). During storm events the lower portion of the Rahway River receives overflows from five (5) separate points owned and operated by member municipalities. Studies indicate that an appreciable impact (lower dissolved oxygen, high fecal coliform and nutrient concentration and toxics pollutants) is experienced only during local storms when flows from the river's upper reaches are low. Storms of high intensity and long duration will wash out the pollutant loadings from the discharges within a period of less than twelve hours and thereby have less of an impact. Primary contact recreation and shellfish harvesting are adversely impacted.

Project Description

The proposed project includes a combination of in-system storage and overflow disinfection to maximize capacity of the combined sewer system and minimize water quality impacts.

HOPATCONG BOROUGH 340488-03 COLLECTION SYSTEM, STP EXPANSION

County

SUSSEX

Existing Population

15,500

Need for Project

This project is necessary to protect the waters of Lake Hopatcong (FW2-TM), a potable water supply source. Wastewater treatment methods in Hopatcong Borough consist of individual on-site systems. There are reported septic system failures which have been determined to adversely affect fishable (trout) and primary contact recreation uses of the lake. Water quality does not meet standards for dissolved oxygen and nutrients and marginally meet standards for fecal coliform and toxics. The project is needed to eliminate septic systems in the densely developed portion of the watershed which have a high failure rate.

Project Description

The proposed project includes the installation of a collection and conveyance system, as well as a 1.3 MGD expansion of the Musconetcong Sewerage Authority's STP which will treat the new flows from the Borough of Hopatcong. The collection system includes approximately 227,000 feet of gravity, 154,000 linear feet of low pressure sewers, ten (10) pumping stations and 34,000 feet of force mains. The system will also contain a siphon crossing the Musconetcong River adjacent to the Hopatcong State Park property. Approximately 1,729 homes will be connected to grinder pumps which the Borough proposes to install, maintain and operate.

PENNSAUKEN TOWNSHIP 340349-03 CSO ABATEMENT

County

CAMDEN

Existing Population

34,740

Service Area

Township of Pennsauken

Need for Project

A portion of Pennsauken Township is served by combined storm and sanitary sewers. During high intensity rainfalls, the capacity of the system is exceeded resulting in sanitary sewer overflows into homes, streets and waterways. The existing situation results in sewage discharges to the Back Channel of the Delaware River near the Cooper River. Public water supply, shellfish, agricultural and industrial water uses are adversely impacted. Water quality in the area of the discharge marginally meets standards for dissolved oxygen, nutrients and toxics.

Project Description

The project involves the construction of a large diameter storm sewer along Browning Avenue from Route 130/Madison Avenue to the Delaware River to prevent flow from entering the combined sewer system and the Camden City system, stormwater detention facilities to detain stormwater prior to its entering the combined system, the separation of the sanitary and storm sewer systems in portions of the Township and the enlargement of the existing storm sewer system to handle a greater capacity.

MUSCONETCONG SA 340384-05 STP IMPROVEMENTS

County

SUSSEX

Existing Population

33,400

Need for Project

The proposed project will provide treatment capabilities at MSA's STP for flows from the Hopatcong/Jefferson service areas. On-site systems in the Borough of Hopatcong and Jefferson Township are failing due to unsuitable soils and impacting Lake Hopatcong. Water quality currently does not meet standards for dissolved oxygen, fecal coliform, and nutrients, and only marginally meets standards for toxics. During drought emergencies, the lake is used to supplement potable water supplies serving the heavily populated areas of northeast New Jersey. The lake is also used for trout fishing and primary contact recreation.

Musconetcong SA (NJ0027821)	2.275	0.873	98.7	2.54	98.1	3.09

Project Description

The proposed project includes a 2.1 mgd STP expansion, an extension of the MSA interceptor into Jefferson Township and the extension of existing interceptors in Stanhope into the Borough of Hopatcong. In addition, sanitary sewer systems will be constructed in the Borough of Hopatcong and Jefferson Township concurrently with the STP expansion.

BRIDGEWATER TOWNSHIP 340638-04 I/I CORRECTION - OVERFLOW

County

SOMERSET

Existing Population

12,200

Service Area

Township of Bridgewater

Need for Project

Excessive infiltration in the North Branch trunk sewer results in raw sewage overflows into the North Branch Raritan River, which is classified as FW-2, nontrout and supplies industrial process water. These overflows have contributed to high levels of fecal coliform, bacteria, and nutrients which exceed water quality standards. Toxic levels marginally meet standards. The Bridgewater Township sewerage system overflows occur upstream of an intake to the Elizabethtown Water Company.

Project Description

The rehabilitation of the trunk sewers will require grouting and slip-lining the existing pipe. The exact nature and scope of work to be performed will be further defined when a sewer system evaluation survey is completed.

RARITAN BOROUGH

340781-04

I/I CORRECTION - OVERFLOW

County

SOMERSET

Existing Population

5,990

Service Area

Raritan Borough

Need for Project

Many of the sewers in the Borough of Raritan are at least 75 years old and have never been rehabilitated. The infiltration/inflow (I/I) resulting from sewer pipe decay is estimated at 40-50 percent of the total flow from the Borough. This condition results in raw sewage overflows which adversely impact the Raritan River by contributing to the elevated nutrient and bacteriological levels in the River, which is classified as FW2-NT. Toxic levels marginally meet existing standards. The River is used as an industrial water supply and as a potable water supply for the Elizabethtown Water Company.

Project Description

The project will include rehabilitating a portion of the existing 20 miles of sewers or replacing that which is beyond repair. It may also be necessary to replace some of the undersized sewers with larger ones. This rehabilitation work will eliminate the sewage overflows from this system and reduce excessive flow into the Somerset-Raritan Valley Sewerage Authority (SRVSA) plant.

JEFFERSON TOWNSHIP

340747-05

COLLECTION SYSTEM/INDIVIDUAL SYSTEMS

County

MORRIS

Existing Population

8,690

Service Area

Jefferson Township (Musconetcong River Basin)

Need for Project

Existing on-site systems are failing and may eventually lead to serious health hazards throughout this part of the Township. The failures are occurring because of certain soils limitations: shallow depth to bedrock, high water tables and steep slopes. Repairs have been attempted but with few successful results. A large number of on-site systems border Lake Hopatcong (FW2-TM), a potable water supply, and Lake Shawnee (FW2-TM). These waters are fishable (trout) and primary recreation quality. This portion of Jefferson Township contains two package sewage treatment plants servicing the Consolidated School and the Stanlick School. These systems provide secondary treatment and discharge into tributaries of Lake Hopatcong and Lake Shawnee, respectively. Water quality marginally meets standards for fecal coliform and toxics. Nutrient and D.O. levels violate existing standards.

Sewage Treatment	Flow (mgd)		Effluent			
Plant (STP) Name			Reported BOD		Reported SS	
(NJPDES #)	Design	Present	8	mg/l	8-	mg/l
Consolidated School Secondary (NJ0021091)	0.0075	0.01156	97.8	4.35	96.2	4.85
Stanlick School Secondary (NJ0021105)	0.013	0.00138	99.4	1.6	99.1	4.75

If the plan to connect into the Musconetcong Sewer Authority (MSA) is implemented, these two sewage treatment plants will also connect into the MSA.

Project Description

This project includes the construction of a collection system for the Musconetcong River Basin portion of Jefferson which may also include an interceptor, pump station, and force main. Also, a septic system management plan will be recommended for the remaining portion of the Township.

Service Area

Oradell Borough

Need for Project

The Borough of Oradell sewer collection system is subject to excessive infiltration/inflow. Peak flows surcharge several manhole covers, with the raw sewage overflow impacting upon the main intake canal of the Hackensack Water Company. Water quality standards are marginally acceptable for DO, fecal coliform, nutrients, and toxics.

Project Description

Minor rehabilitation techniques are proposed to correct the infiltration/inflow problem and eliminate the raw sewage overflows.

Service Area

Awosting STP area of West Milford Township

Need for Project

The Awosting STP service area is subject to excessive infiltration/inflow (I/I), as demonstrated in a May 1997 I/I Evaluation Study Project Report. The Awosting STP is permitted for an average daily flow of 45,000 gallons per day (GPD), but peak conditions can result in total system flows up to 1,000,000 GPD. This has resulted in sewage overflows near the plant and direct discharge into the Wanaque River, which flows into the Monksville Reservoir, a potable water supply source and a trout fishery. DEP has issued a Treatment Works Approval authorizing the construction and operation of a temporary wet weather treatment system to address the overflow situation. Additionally, the Authority has recently executed an Administrative Consent Order with DEP that mandates the implementation of Phase 1 of the correction project in accordance with an established compliance schedule.

Project Description

The proposed project represents the first of a three-phase project for the implementation of I/I correction measures to eliminate all existing overflows. The proposed project includes replacement of approximately 4000 LF of both 8" gravity and 2" low-pressure sewer and replacement of 56 home service laterals.

Need for Project

Due to system capacity limitations, combined sewage surcharges and overflows into SE2 and FW2-NT waters. This results in excessive solids and bacteria levels, and floating sewage during wet and dry weather conditions.

Project Description

Elimination of dry weather overflows in combined and separate sewer systems, and repairs to tide gates, would be the first order of priority to mitigate the impact on the receiving streams. Secondly, there is a need to provide more sewage capacity to handle peak flows, which might require diversion of stream sewage flows to interceptors with available capacity, or parallel sewers, to relieve downstream surcharging and overflows. Any recommended improvements to the combined sewer regulators in Fort Lee, Hackensack and Ridgefield Park will be a part of the overall project.

STP, INTERCEPTOR, & COLLECTION SYSTEM

County

BERGEN

Existing Population

13,000

Service Area

Borough of Oakland

Need for Project

The area is currently served by septic systems and some small package treatment plants. As treatment requirements increase from Level 4 to Level 5, the plants will be unable to meet their effluent requirements. Ground and surface waters (Ramapo River, FW2-NT), are used for recreation as well as a potable water source, and are being degraded by the failure of existing disposal facilities.

Project Description

The proposed project includes the construction of a wastewater treatment plant, interceptor sewer and collection system. The proposed interceptor sewer and collection system will convey all flows from the six (6) wastewater treatment plants (that will be abandoned) to the proposed wastewater treatment plant.

SPARTA TOWNSHIP

340495-03

STP UPGRADES, ON-SITE REHABILITATION

County

SUSSEX

Existing Population

14,320

Service Area

The study area consists of that portion of Sparta Township (48%) which is situated within the Upper Wallkill River Basin. On-site rehabilitation in conjunction with a Septic System Management District would consider the entire Township as a service area during implementation.

Need for Project

All existing point source discharges must be addressed. Should these discharges remain in existence, they must be upgraded to meet the effluent limitations needed to protect existing water quality. In cases of discharge to the Wallkill River (FW2-TM) (Plaza and H.S. #1 and #2 plants), advanced wastewater treatment will be required to diminish any impacts to Franklin Pond, a downstream potable water source for Franklin Borough. Primary contact recreation is also adversely impacted by these discharges. The Wallkill river marginally meets standards for fecal coliform, nutrients and toxics. In addition, the failure rate for individual septic systems is averaging about 3% per year. Many of the existing systems (e.g., cesspool) cannot meet the minimum requirements for subsurface disposal and must be replaced.

Sewage Treatment	Flow		Effluent

Board of Ed H.S. Plant #1 (NJ0027073)	.022	.005	98.6	4.14	97	1.44
Board of Ed H.S.Plant #2 (NJ0027081)	.027	.008	87.6	4.2	98	2.56

Project Description

A likely alternative for wastewater disposal in Sparta Township is on-site rehabilitation in conjunction with initiation of septic management district planning. Therefore, the major scope of work for this project would include the upgrading of all existing point source discharges to acceptable treatment levels. This would preclude development of any future point source discharges in Sparta Township for the 20 year planning period.

County

HUDSON

Existing Population

266,460

Service Area

Jersey City, Kearny, Secaucus

Need for Project

The combined sewer overflows in the planning area discharge to the Hackensack and Hudson Rivers, and Upper New York Bay. The designated uses for these waters include secondary contact recreation, propagation and maintenance of fish and wildlife populations, the migration of anadromous fish, industrial water supply and other reasonable uses. The water quality is defined as poor due to the presence of high concentrations of indicator organisms such as fecal coliforms and toxic substances, and the observation of depressed levels of dissolved oxygen. The unsatisfactory water quality has been attributed to high pollutant loadings from inadequately treated municipal and industrial effluents, combined sewer overflows and non-point sources.

Project Description

The proposed project includes construction of in-line and end-of-pipe netting facilities to remove solids and floatables from 17 combined overflow points. In addition, several tide gates will be rehabilitated.

ELIZABETH CITY 340942-03 CSO ABATEMENT

County

UNION

Existing Population

110,000

Service Area

City of Elizabeth

Need for Project

The City of Elizabeth owns and operates several combined sewer overflows. The overflows discharge to the Elizabeth River, Arthur Kill, Newark Bay, Great Ditch and Peripheral Ditch. The discharges adversely impact non-trout fishing and industrial water uses. Water quality does not meet standards for fecal coliform, nutrients and toxics.

Project Description

The proposed project will eliminate the discharge of solids/floatables larger than 1/2-inch in diameter from the City's 18 combined sewer overflow points as required by the NJPDES permit. In several cases, it is cost effective to construct multiple facilities for each CSO site in order to reduce the size of the facilities and accommodate the split flow from individual regulators. A total of 18 different sites are recommended for construction of solids/floatables controls and include 2 sites of sewer separation, 16 for inline netting facilities.

Need for Project

MCUA's existing wastewater treatment plant requires future expansion particularly for treating maximum daily and peak hourly flows. The Authority has initiated work on plant expansion in order to be able to treat current and future projected flows to assure compliance with its NJPDES permit limitations.

Sewage Treatment	Flow		Effluent			
Plant (STP) Name	(mgd)		Report	ted BOD	Repor	rted SS
(NJPDES #)	Design	Present	8	mg/l	*	mg/l
Edward J. Patten	120	115	91.9	16.1	92.0	18.5

Project Description

In order to treat the projected increase in service area flows, capacity expansion is necessary to increase the rated capacity of the plant to 180 mgd. Additional facilities include new final settling tanks, new aerated grit chambers, modification of the existing grit chambers, new primary settling tanks and associated pipe galleries. These improvements will improve the efficiency and maintainability of the plant. Other improvements include modifications to the existing UNOX tanks, conversion of the existing aerobic digesters into UNOX tanks, and upgrading and replacement of existing obsolete instrumentation and control systems.

The plant currently uses chlorine for disinfection. In order to eliminate the chlorine residuals, an ozone disinfection system was piloted and was demonstrated to be viable and suitable for implementation.

CSO ABATEMENT

County

HUDSON

Existing Population

194,440

Service Area

Guttenberg, Hoboken, Union City, Weehawken, West New York (HCUA Planning Area III)

Need for Project

The combined sewer overflows in the planning area discharge to the Hudson River. The designated water uses for the Hudson River include secondary contact recreation, propagation and maintenance of fish and wildlife populations, the migration of anadromous fish, industrial water supply and other reasonable uses. The water quality has been defined as poor due to the presence of high concentrations of indicator organisms such as fecal coliforms and toxic substances, and the observation of depressed levels of dissolved oxygen. The unsatisfactory water quality has been attributed to the continuous diversion of dry and wet weather sanitary sewer flows to the river. The combined sewer system, which is 100+ years old, contains collapsing sewer lines, and regulators and tide gates that are deteriorated and stuck. This condition has resulted in diversions of sewage flows to the river and intrusion of tidal flows into the system and treatment works.

Project Description

The construction of in-line storage facilities utilizing existing sewers is planned for Hoboken. In West New York, the construction of swirl concentrators is proposed. Studies indicate that facilities to abate pollution in Union City and Weehawken would not be cost effective.

Although this project has not been formally adopted by HCUA, studies indicate that this work is the most cost effective solution to pollution abatement.

The rehabilitation of tide gates and regulation in Hoboken, Weehawken and Union City has been funded under Marine CSO funds. However, the major portion of the project in this planning area has not been funded.

Need for Project

Due to system capacity limitations, combined sewage surcharges and overflows into the Hudson River, this results in excessive solids and bacteria levels, and floating sewage during wet and dry weather conditions. The designated water uses for the Hudson River include secondary contact recreation, propagation and maintenance of fish and wildlife populations, industrial water supply and other reasonable uses. The water quality has been defined as poor due to the presence of high concentrations of indicator organisms such as fecal coliforms and toxic substances, and the observation of depressed levels of dissolved oxygen. The unsatisfactory water quality has been attributed to the continuous diversion of dry and wet weather sanitary sewer flows to the river.

Project Description

Elimination of dry weather overflows, expansion of conveyance capacity of sewer system to handle peak flows, and removal of solids/floatable greater than 0.5 inches during wet weather flows. The work includes modification of regulators and interceptors to increase conveyance capacity during peak flows, new force main from 18th Street pumping station to treatment plant, new parallel syphon from the 11th Street to the treatment plant, new regulators and/or outfall with solid removal devices, new CSO outfall from 18th Street pumping station and upgrade of 11th, 18th, and Baldwin Avenue pumping stations.

I/I CORRECTION - OVERFLOW

County

UNION

Existing Population

58,190

Service Area

The planning area includes the City of Linden and the Borough of Roselle

Need for Project

The Authority is required to complete a rehabilitation program to eliminate discharge points 003 and 004, and a sewer separation program to eliminate discharge points 001 and 002 as per the Part IIIb Special Conditions of the existing grant No. C340299-01. These discharges affect the quality of the Rahway River (SE-3). Fishable non-trout and industrial water uses are presently impacted due to fecal coliform, toxics, and DO (marginal) levels being unacceptable.

Project Description

The project is for the construction of relief sewers to enable the LRSA to eliminate discharge points 003 and 004 in the City of Linden. Elimination of these discharge points will improve water quality in the receiving stream. The alignment of relief sewers falls within the Wheeler Park Easement. This project requires the approval from Green Acres.

RIDGEWOOD VILLAGE 340639-05 I/I CORRECTION - OVERFLOW

County

BERGEN

Existing Population

24,860

Service Area

Village of Ridgewood

Need for Project

An Infiltration/Inflow (I/I) analysis has been completed which documents the existence of excessive I/I within the service area. An additional study will be undertaken to further define the quantity of excessive I/I that can be cost-effectively removed from this system. This project is needed to eliminate periodic overflow, causing discharge of untreated sewage into the HoHoKus and Diamond Brooks (FW2-NT, previously FW-2) which is adversely affecting the quality of these waterways, and posing a potential public health problem. The brooks have fishing and industrial uses. The affected waterways do not meet standards for fecal coliform and toxics, and marginally meets the dissolved oxygen standard.

Project Description

The proposed project will consist of 820 feet of gravity sewers and 8,400 feet of force main. Three pumping stations will be modified - Ridgewood Lawns P.S.; Bellair Road P.S. and Andover P.S. These mechanical improvements will enable the pump stations to handle additional sewage flows previously bypassed. These improvements are currently being designed.

1,350,000

Service Area

East Newark, Harrison, Kearny, Newark, Paterson

Need for Project

Wastewater generated in the PVSC service area is treated at its secondary treatment facility located in the City of Newark. During significant rain events, the PVSC interceptor sewers, adjacent to the Passaic River, overflow into this watercourse resulting in the violation of Water Quality Standards for dissolved oxygen, fecal coliform. High levels of toxics are also experienced. The Passaic River in the project area is classified as SE-2 and SE-3. Currently, the river is used for nontrout fishing and industrial water use. This study will determine the extent of the impacts on the Passaic River resulting from combined sewer overflows and develop solutions to those detrimental impacts documented during the study.

Project Description

The first phase of the combined sewer overflow facility plan for the PVSC District has been completed. Phase II of the facility plan will include detailed analysis and design of alternative control measures. Control alternatives analyzed in Phase I included best management practices, minor regulator modifications, inline storage, offline storage, swiss and helical bond regulators, and instream aeration. Alternative evaluation during the second phase of the facility plan will include the computer analysis and final plan selection. The first phase of the facility plan showed that the major loadings to the Lower Passaic River originated from the Upper Passaic and Saddle Rivers and stormwater runoff in non-CSO areas. The selected plan will provide a solution of the impaired water use (industrial water use and non-trout fishing) which result from CSO's.

Service Area

47 municipalities in parts of Bergen, Essex, Hudson and Passaic Counties

Need for Project

Seven communities served by PVSC have combined sewer systems. The communities with combined systems include: The Cities of Newark, Paterson, Bayonne and Jersey City, the towns of Harrison and Kearney, and the Borough of East Newark. During wet weather events more than 300mgd of combined flows are directed to the Passaic River and Newark Bay without treatment due to the limited treatment capacity at the PVSC facility. Pvsc proposes to nearly double its existing treatment capacity to increase its overall pollutant removal capabilities. The existing discharge is to Newark Bay near Delancey Street, which adversely impacts shellfish and industrial water uses. Water quality does not meet standards for dissolved oxygen, fecal coliform, nutrients and toxics. The PVSC wastewater treatment facility provides secondary treatment of influent wastewater for monthly average flows of approximately 245 mgd to 328 mgd with annual average TSS and BOD loadings of 203 mg/l and 250 mg/l, respectively. Maximum weekly flows are approximately 350 mgd. Effluent quality for TSS and BOD average 22 mg/l and 20 mg/l, respectively.

Project Description

The proposed project involves improvements to the head end facilities (reinforce headworks screens and grit chambers), new fine screening facilities in the primary effluent channel, rehabilitation of the existing final clarifiers, effluent pumping station improvements, secondary grit modifications and dewatering capacity improvements. The project should expand treatment capabilities from 368 mgd to 700 mgd monthly average flows.

City of Newark

Need for Project

The City of Newark must construct improvements to its combined sewer system to comply with General Permit conditions regarding elimination of dry weather overflows and discharge of floatables equal to, or greater than, one-half inch (1/2") diameter.

Project Description

This project consists of the construction of combined sewer overflow control facilities and may include one or more of the following activities: regulator modifications, screening and netting technologies and flow containment.

PATERSON CITY 340926-01 CSO ABATEMENT

County

PASSAIC

Existing Population

138,000

Service Area

Paterson

Need for Project

As part of their NJPDES permit, the City of Paterson must undertake design and construction of solids/floatable control facilities at its combined sewer overflow discharge locations. Overflows from the city discharge into the Passaic River and, in one area, to the Molly Ann Brook. They are a public nuisance due to floatables and unacceptable fecal coliform levels. Water quality does not meet standards for nutrients, and the level of toxics is only marginally acceptable. The discharges adversely impact the non-trout fishing and industrial uses of the Passaic River.

Project Description

The proposed project includes work at 28 discharge points. 11 discharge points will have end-of-pipe or in-line nets or romag screens alone or in combination with nets or static bar screens. Eight discharge points will be seperated; two of these discharge points have numerous internal overflow points and will also have screens at some of those points. 5 discharge points will be abandoned, and two will be diverted. Two discharge points have undecided resolution.

Need for Project

The MCUA treatment plant currently discharges its treated effluent into the Raritan Bay (SE-1) through a submerged outfall constructed in 1958. Despite the initiation of secondary treatment in 1978, this discharge, acting in conjunction with various other discharges, serves to degrade the water quality of the Bay. Fecal coliform and toxics standards are in violation while DO levels are marginally acceptable. This water quality degradation ultimately limits the use of the Bay for its intended uses of shellfish harvesting and primary contact recreation.

Project Description

This project entails the construction of an extended outfall to discharge to the Raritan Bay. The point of discharge will be determined to maximum diffusion and dilution. When this project is constructed, the Bay should be able to be utilized for its intended uses.

SUSSEX COUNTY MUA (POCHUCK)

340503-03

STP, PUMPING STATION, FORCE MAIN,

County

SUSSEX

Existing Population

11,930

Service Area

The study area delineated as the Pochuck River Basin consists of a large section (62%) of Vernon Township and a portion (3%) of Hardyston Township.

Need for Project

Vernon Township is experiencing an increasing number of septic system failures. Furthermore, a number of existing systems have been found to be inadequate with regard to design and/or construction deficiencies. As evidenced by a local enforcement issue in the Barry Lakes area of Vernon, this situation has the potential of becoming a public health problem. In addition, there are two existing package plants. Both STP flows average below their design capacity, however, substantial flow variations to the plants can impact water quality. Water quality concerns include frequent fecal coliform violations, as well as marginal levels of dissolved oxygen, nutrients, and toxics, and the resultant impact upon the fishing, recreational and agricultural water uses of the Wallkill River (trout waters).

Vernon Twp. School Board	0.035	.00811	97	14	97	4.6	

Project Description

Assistance to SCMUA for this project would provide for the design and construction of adequate wastewater disposal facilities for the Pochuck Basin. The treatment alternatives are many and varied due to the clustered lakeside communities and relative distances and terrain between them. Options would include but not be limited to: regional as well as decentralized treatment, dual systems, low pressure sewers (w/grinder pump or STEP system), cluster systems, and on-site rehabilitation. This will result in a new conveyance/treatment system to eliminate the septic failures.

MEDFORD LAKES BOROUGH 340463-06 STP UPGRADE

County

BURLINGTON

Existing Population

5,000

Service Area

Medford Lakes Borough, portions of Medford Township

Need for Project

The Rancocas Creek and the lakes in the headwaters of the Haynes Creek are classified as FW2-NT nontrout waters with primary contact recreational uses. The existing water quality does not meet standards for fecal coliform, nutrients and toxics and marginally meets standards for dissolved oxygen. The effluent from the existing wastewater treatment facilities have exceeded the assimilative capacity of the stream and the facilities do not afford the degree of treatment to safely accommodate the current and future population within the service area. The project is needed to provide advanced wastewater treatment in order to comply with the Borough's NJPDES permit and ACO requirements. The following is the existing inventory of the wastewater facilities:

Sewage Treatment	Flow		Flow			美國聯議	
Plant (STP) Name	(mgd)		Report	ed BOD	Repor	rted SS	
(NJPDES #)	Design	Present	*	mg/I	* 10	mg/I	
Medford Lakes Borough (NJ0021326)	0.55	0.41	89.7	19.3	95.6	5.1	

Project Description

The proposed project consists of the construction of a new "Bardenpho" treatment process (biological treatment for BOD, SS and nutrient removal) combined with rapid sand filters for effluent polishing and the demolition of existing Imhoff tanks, trickling filter and slow sand filter.

The ultimate sludge disposal will be incorporated into the county-wide sludge management facility.

WARREN CO-PAULINSKILL/BLAIRSTOWN 340453-03

STP, INTERCEPTOR, PUMPING STATION

County

WARREN

Existing Population

4,890

Service Area

Blairstown Township

Need for Project

Portions of Blairstown have documented septic failure which may eventually lead to health problems. It was determined that the fecal coliform count violates the water quality standards and marginally meets standards for nutrients and toxics. At present, there are two privately owned and operated STP's in the study area. At the time the regional facilities become available the existing plants will tie into it. North Warren Regional High School is occasionally in noncompliance with their NJPDES permit requirements, which indicates inadequate secondary treatment. Primary contact recreation and agricultural water use are adversely impacted. This project is proposed in order to meet the stringent requirements established for the receiving waters.

JEFFERSON TOWNSHIP (ROCKAWAY)

340747-04

COLLECTION SYSTEM

County

MORRIS

Existing Population

7,870

Service Area

Jefferson Township (Rockaway River Basin)

Need for Project

Some of the on-site systems that exist in the Rockaway River Basin of Jefferson Township have documented repeated failures. Most of the systems are failing due to shallow depth to bedrock, high water tables and steep slopes. Rehabilitation has been attempted on some systems but the results have been generally unsuccessful. Trout fishing and primary contact recreation uses of Russia Brook (FW2-TM) are adversely impacted due to the unacceptable levels of nutrients and marginally acceptable levels of toxics and fecal coliform. These facilities may pose serious health hazards in the future for the township if not corrected.

Project Description

This project includes the design and construction of a local wastewater system for the Rockaway River Basin portion of Jefferson Township. The recommended wastewater management plan for this portion of Jefferson Township consists of two major parts: 1) centralized sewer service for Cozy Lake, Lake Swannanoa and White Pine Lake area in the Rockaway Basin and 2) Septic Management for the remaining portions.

Service Area

Riverton Borough

Need for Project

The existing STP was constructed in the early 1950's and is becoming obsolete. The Borough's STP discharges to the Delaware River and impacts potable water, fishable-nontrout and agricultural water uses. Water quality marginally meets standards for dissolved oxygen and fecal coliform.

COLLECTION SYSTEM, INTERCEPTOR

County

MONMOUTH

Existing Population

1,920

Service Area

Howell Township

Need for Project

The Freewood Acres section of Howell Township is currently relying on on-site septic disposal systems for the treatment of wastewater. Many of these existing systems provide inadequate treatment, which has resulted in the degradation of Aldrich Lake. Aldrich Lake experiences high fecal coliform, toxics, and nutrients concentrations. Consequently, trout fishing, primary contact recreation, and farming are impacted.

Project Description

Preliminary investigations indicate that a collection system will need to be constructed in the planning area. The collection system will be connected via an interceptor into the Manasquan River Regional Sewerage Authority conveyance system for treatment and disposal.

Township of Ocean

Need for Project

The existing treatment facility was constructed in the 1960s and expanded in the 1980s and is in need of various repairs, modifications, and replacement of existing equipment and structures. All the proposed improvements to the treatment facility will ensure proper treatment of sewage, which is discharged to the Atlantic Ocean. A trunk sewer requires relining because of hydrogen sulfide corrosion and two thirty year old pump stations need to be replaced because of wet well deterioration.

Project Description

The proposed project involves treatment plant improvements including rehabilitation of the gravity sludge thickener, the final settling tanks, and two digesters, construction of an additional primary settling tank and a new grit removal system. The project also includes relining of a 24" trunk sewer and replacement of two pump stations.

Service Area

Jefferson Township

Need for Project

The need for the development of a wastewater management plan for the Township of Jefferson has resulted from problems being experienced with existing on-site disposal systems. These systems are adversely affecting fishable trout and primary contact recreation waters, and the limited ability of four small treatment plants to provide adequate treatment. Fecal coliform and toxics levels are marginally acceptable and nutrients levels are totally unacceptable. Also, the sludge generated is being stored in an old tank on-site at the White Rock Lake STP, which is an unsatisfactory sludge disposal method. The receiving stream is a tributary of Mitt Pond which ultimately flows in the Boonton reservoir. High and Middle School discharges to Russia Brook (FW2-TM).

White Rock Lake (AWT) (NJ0026867)	0.155	0.0621	98.7	6.375	95.7	5.0

Project Description

Jefferson Township performed a 201 Study for portions of Jefferson which lie both in the Rockaway Basin and Upper Musconetcong Basin (See C340747-05 for description of the Musconetcong plan). The proposed plan for Rockaway consists of expansion and upgrading of the existing White Rock Lake STP to 250,000 gpd and using the oxidation ditch process. Wastewater from the Cozy Lake, Lake Swannomoa and the White Rock Lake areas would be treated there. The proposed facility would include a pumping station, force main, interceptor and collection system.

STP UPGRADE

County

BURLINGTON

Existing Population

3,150

Service Area

Wrightstown

Need for Project

The 0.2 mgd treatment plant in Wrightstown must be upgraded to meet required water quality standards; the plant will also be expanded. The treatment plant discharges to North Run, thence to Crosswicks Creek. The waters do not meet water quality standards for dissolved oxygen, fecal coliform, or nutrients, and levels of toxics are only marginally acceptable. Thus, use of these waters for non-trout fishing and agriculture are adversely impacted.

Sewage Treatment		low	Effluent

Diamond Hill Development

Need for Project

The existing facilities at the Diamond Hill Sewer Company (NJ0028592), which serves the Diamond Hill Development, is inadequately treating sewage and has been doing so for a few decades. The discharge is to Hances Brook, which is classified as FW2-Trout Production Category One waters. The private owner of the sewer company would not make the necessary repairs to the facilities, so Mansfield Township is evaluating whether or not to takeover the Diamond Hill Sewer Company.

LONG BRANCH SA 340336-03 CONVEYANCE FACILITIES, GRIT HANDLING

County

MONMOUTH

Existing Population

30,000

Service Area

City of Long Branch, Borough of West Long Branch (small portion)

Need for Project

The Long Branch Sewerage Authority is confronted with two wastewater treatment problems. The first problem is the insufficient useable capacity of the existing Joline Avenue Ocean Outfall (capacity 13 mgd). Under normal operation, the existing gravity sewer and outfall pumping station (capacity 8.5 mgd) provide adequate discharge capacity for the treated effluent. However, under emergency and peak flow conditions, an added capacity was formerly provided by a 14 inch force main connected to the North Broadway Ocean Outfall. In June of 1978, a coastal storm completely destroyed the North Broadway Outfall. Without replacement of the lost effluent capacity and with flows in excess of 8.5 mgd, the treatment units are at times overtopped, discharging partially treated wastewater. The second problem stems from the increased amount of grit and sand reaching the plant since the plant was designed. The grit and sand have caused extensive downtime to the primary settling tanks and, in addition, have caused excessive wear on the equipment. The overflow condition coupled with the inadequate secondary treatment caused by the extensive downtime of the primary settling tanks has a negative impact upon the intended uses (i.e, shellfish harvesting and recreation) of the coastal waters (SC) in this area.

Sewage Treatment Flow		Effluent				
Plant (STP) Name	(mgd)		Reported BOD		Reported SS	
(NJPDES #)	Design	Present	*	mg/l	. 8	mg/l
Long Branch SA (NJ0024783)	5.4	4.6	94.3	12.7	94.2	12

Project Description

The project proposes to solve the effluent capacity problem by the construction of 3,500 feet of 20 inch force main between the existing treatment plant and the Joline Avenue Ocean Outfall. The force main will be used for emergency or peak flows in excess of the capacity of the Joline Ave. effluent facilities. Some modifications of the existing pumping facilities at the treatment plant will also be required. This scheme will allow the full 13 mgd capacity of the Joline Ave. Ocean Outfall to be utilized. The excessive grit and sand problem will be corrected by the construction of an appropriate grit removal facility. The completion of these projects will insure adequate secondary wastewater treatment within the Long Branch SA service area.

County

BERGEN

Existing Population

491,140

Service Area

The BCUA currently serves 46 municipalities.

Need for Project

The effluent from the BCUA treatment plant is discharged into the Hackensack River classified as SE waters, which is a tidal estuary below the Oradell Reservoir dam. Water quality in the Hackensack River violates standards for dissolved oxygen, fecal coliform and toxics. In addition, the NJDEP has indicated that the tidal Hackensack River is "water quality limited". Therefore, better than secondary treatment will be required for continued discharging into the Hackensack River.

BCUA (NJ0020028)	75	77.3	95.5	7.05	86.6	22.3

Project Description

BCUA has developed a facilities plan to identify and evaluate the most cost-effective system to meet the desired water quality standards. Considered for implementation was upgrading the BCUA treatment plant to Level 3 and continue discharging into Hackensack River versus remaining at present treatment capabilities and constructing a trunk line discharging into the Hudson River. The Hudson River discharge was recommended as most cost effective.

NORTH BERGEN MUA 340399-20 STP UPGRADE

County

HUDSON

Existing Population 35,070

Service Area

North Bergen

Need for Project

The Township of North Bergen-Central WWTF will be required to meet "Level 3" treatment. The plant discharges to the Cromakill Creek Tributary-Hackensack River (SE-2). DO and fecal coliform levels are unacceptable and toxics marginally acceptable. The existing STP is also in need of extensive rehabilitation. The receiving waterway has industrial water uses as well as freshwater fishery (non-trout) uses.

STP IMPROVEMENTS

County

MERCER

Existing Population

95,420

Service Area

Hamilton Township, Washington Township, 31% of West Windsor Township

Need for Project

The effluent from the existing treatment plant is not meeting water quality standards for ammonia, required under the NJPDES permit conditions. The Hamilton Township facility discharges into Crosswicks Creek (FW2-NT) classified as fishable, non-trout which also has agricultural and industrial uses; this water body does not meet standards for fecal coliform and nutrients and is marginally acceptable for dissolved oxygen.

EVESHAM MUA (WOODSTREAM) 340463-05 STP, INTERCEPTOR

County

BURLINGTON

Existing Population

28,670

Service Area

Evesham Township (Woodstream)

Need for Project

The South Branch of the Pennsauken Creek is classified as FW2-NT nontrout waters with industrial water use. The existing water quality is voilated for fecal coliform and toxics with marginal violation of dissolved oxygen. The effluent from the existing wastewater treatment facilities have exceeded the assimilative capacity of the stream and the facilities do not afford the degree of treatment to safely accommodate the current and future population within the Project Area. The following is the existing inventory of the wastewater facilities:

Sewage Treatment	Flow (mgd)		Effluent			
Plant (STP) Name			Reported BOD		Reported SS	
(NJPDES #)	Design	Present	*	mg/I	*	mg/l
Woodstream (NJ0024040)	1.25	0.91	96.8	10.9	99.1	3.3

Project Description

This project is to provide a cost effective regional sewerage system for the Southwest Branch Rancocas Creek drainage basin. Implementation of the project will accomplish the attainment of water quality in area streams, the prevention of health hazards and the protection of the environment. Presently, the facility planning effort is evaluating the various alternatives which will accommodate the required levels of treatment necessary to alleviate the pollution problem. The alternatives which can be implemented are land disposal, discharge to the confluence of the Southwest Branch or discharge at the present location. The ultimate sludge disposal will be incorporated into the on-going countywide sludge and septage management plan recommendations.

Need for Project

NJDEP interpretation of their current Anti-Degradation Policy has resulted in proposed (draft) NJPDES permit effluent limitations which are beyond the treatment capabilities of the SCMUA Upper Wallkill Water Pollution Control Facilities (NJ0053350). This plant, which was planned, designed and constructed under the Federal Grants program, is a 2.5 mgd advanced secondary activated sludge facility which discharges to the Wallkill River (FW-2TM). The discharge adversely impacts freshwater (trout), agricultural and industrial water uses. Water quality does not meet standards for fecal coliform and marginally meets standards for nutrients. Sludge disposal is accomplished on-site via composting.

	Flow (mgd)		Effluent		
STP (level of treatment)	Design	Present	BOD Reported	SS Reported	
			% - mg/l	% - mg/l	
Upper Wallkill STP NJ0053350	2.5	1.072	97.63 - 6.2*	97.88 - 6*	

^{*} Effluent levels achieved by utilizing entire 2.5 mgd capacity for increased aeration and secondary clarification at current flow rate.

Project Description

To meet NJPDES effluent limitations at the permitted flow of 2.5 mgd, the proposed project consists of construction modifications to upgrade existing treatment capabilities. This may include increased process aeration and clarification unit(s), and the addition of multi-media filtration. Evaluation and selection of treatment alternatives is to be addressed in the Project Report.

MEDFORD TOWNSHIP 340463-04 STP UPGRADE

County

BURLINGTON

Existing Population

20,270

Service Area

Medford Township

Need for Project

The existing wastewater treatment plant that was constructed in the late 60's and early 70's is obsolete with regard to current technology and NJPDES permit requirements. As a result, the project proposes to upgrade and expand the existing plant from 1.75 MGD to 2.5 MGD. The discharge to the southwest branch of the Rancocas Creek impacts nontrout fishing uses. The water quality standards are marginally met for dissolved oxygen and are not met for fecal coliform and toxics. The proposed project will provide capacity for the existing and future house connections. The following is the existing inventory of the wastewater facilities:

Sewage Treatment	The state of	TOW	Effluent			
Plant (STP) Name	(mgd)		Reported BOD		Reported SS	
(NJPDES #)	Design	Present	8	mg/I	•	mg/l
Medford Township (Secondary) (NJ0026832)	1.75	1.25	91.35	7.6	95.5	6.39

Project Description

The proposed project will consist of construction of the upgrade and expansion of the existing Medford Township STP, infiltration/inflow correction, sewer system rehabilitation, new interceptors and related appurtenances. The ultimate sludge disposal will be incorporated into the county-wide sludge management facilities.

Borough of Fort Lee

Need for Project

The combined sewer in the Bluff Road area of the Borough contributes to overflow discharges to the Hudson River during periods of significant rainfall when the treatment facility exceeds capacity.

Project Description

The proposed project is for Phase I of a five-phase rehabilitation program for the Borough's combined stormwater and sewer system. Phase I will result in the elimination of the combined system throughout an eight-block area , a drainage area of approximately 61 acres.

GLOUCESTER CO UA (GIBBSTOWN) 340526-06 STP UPGRADE, SLUDGE MANAGEMENT

County

GLOUCESTER

Existing Population

5,310

Service Area

Gibbstown - Greenwich Township

Need for Project

The Gibbstown plant is discharging to Wiggins Pond, a tributary of the Delaware River. The effluent is not in compliance with the permit requirements. Due to the stringent effluent limitations as established by the Department, discontinuation of the discharge to Wiggins Pond has become necessary. Wiggins Pond (SE-2) is a non-trout stream with severe violations of fecal coliform and marginal violations of D.O. and toxics. Wiggins Pond supports industrial water use. Also, there exists a major problem due to the presence of high-strength chemical wastes. The plant also receives intermittent discharges of slaughtering wastes from a local butchery. The combined effect of these wastes tend to upset the biological processes.

COLLECTION SYSTEM

County

SALEM

Existing Population

3,100

Service Area

Sections of both Alloway and Quinton Townships

Need for Project

The on-site septic systems in the proposed service area are malfunctioning and causing groundwater degradation. The area borders Elkington Lake and Laurel Lake as well as Alloway Lake and Alloway Creek. The existing systems are impacting fishable (non-trout), recreational, industrial and agricultural uses of these waterbodies.

Project Description

The proposed project consists of the construction of force mains, gravity sewers and pumping stations. The collected wastewater either will be conveyed to the Salem treatment plant or to a newly erected treatment plant within the service area which will be a part of this project.

WYCKOFF TOWNSHIP

340738-03

COLLECTION SYSTEM, INTERCEPTOR

County

BERGEN

Existing Population

1,900

Service Area

Township of Wyckoff

Need for Project

The area is served by on-site septic systems. The majority of these systems do not function satisfactorily, primarily due to poor soil conditions and the age of the individual systems. Health records along with on-site inspections and surveys indicate failing septics are contributing to the degradation of HoHoKus Brook (FW2-NT), consequently impacting fishable non-trout and industrial uses. Water quality in the area does not meet standards for fecal coliform and toxics.

Project Description

Project is currently in the design stage and will involve construction of 71,600 linear feet of lateral sewer and interceptors to replace septic systems. This project, along with C340739-02 (collection system, P.S.) and C340482-02 (pump station, force main, and interceptor) provides an integrated collection system for the Township. Flows will be conveyed to the Northeast Bergen County Utilities Authority interceptor sewer.

DELAWARE TOWNSHIP MUA 340917-01 STP IMPROVEMENTS

County

HUNTERDON

Existing Population

1,000

Service Area

Seargentsville (including light business district)

Need for Project

The Delaware Township MUA is facing an Administrative Consent Order for compliance with the July 1, 1988 deadlines for meeting effluent limits stipulated under the Clean Water Act. An existing treatment facility must be upgraded to meet NJPDES permit limitations; an increase in treatment capacity is also being considered. The Delaware Township MUA also plans to rehabilitate portions of the existing sewer system.

The treatment plant discharges into the Wickecheoke Creek in the Delaware River Basin. This water body is a trout fishery with agricultural water uses; water quality standards for fecal coliform are not being met, while those for toxics are only marginally acceptable.

Service Area

Portions of North Bergen (Area III)

Need for Project

North Bergen Area III is serviced by the Woodcliff STP. A portion of this district is currently unsewered and contains malfunctioning septic systems. Sanitary connections have been made to an existing storm water system resulting in discharge of untreated sewage to the Hudson River. This discharge impacts industrial water use and freshwater-nontrout uses, as well as contributing to fecal coliform violations. The Hillcrest pumping station contains an overflow and requires rehabilitation.

Project Description

A new sanitary sewer collection system will be constructed to convey flows from the unsewered areas. The illegal connections will be corrected and the flow collected for treatment. Sewage will be transported to the Woodcliff STP or to a neighboring facility for treatment. The Hillcrest Pumping Station will also be rehabilitated.

Service Area

Parts of Bergen, Essex, Hudson and Passaic Counties

Need for Project

The Passaic Valley Sewerage Commissioners are investigating improvements to their STP, NJPDES No. NJ0021016. The high strength Zimpro sidestream is returned to the activated sludge treatment plant which leads to instability in the activated sludge process. Other improvements are needed to the the sludge processing equipment.

Project Description

The proposed project includes an anaerobic treatment system for the high strength Zimpro sidestream, methane gas recovery and electrical generation facility and various improvements to the sludge processing equipment.

Need for Project

PVSC operates a 230 mgd secondary sewage treatment plant which produces 945,000 dry pounds/day of sludge which is currently dewatered and shipped to Texas. This interim sludge disposal alternative was implemented by the PVSC in order to enable the PVSC to cease the ocean dumping of sewage sludge as mandated by federal and state legislation. However, this practice is costly and its future availability is uncertain.

Project Description

The proposed project would provide a long-term method for the disposal of sewage sludge. A Step 1 grant was awarded in January 1977 for a land-based sludge management study which recommended the implementation of a sludge disposal scheme consisting of a belt filter press for dewatering and incineration. The Sludge Management Plan dated June 1989 recommended a fluidized bed incinerator be constructed as a long-term plan. The PVSC will be required to appropriately update the Sludge Management Plan to ensure that adequate consideration of beneficial reuse alternatives has been included, as required by the Department's White Paper on Beneficial Use of Sewage Sludge, issued in November 1990.

Need for Project

JMEUC operates a 75 mgd secondary sewage treatment plant which produces 35 dry tons per day of anaerobically digested sludge which is currently dewatered and shipped to Pennsylvania to be landfilled. This interim sludge disposal alternative was implemented by the JMEUC in order to enable the Authority to cease the ocean dumping of sewage sludge as mandated by federal and state legislation. However, this practice is costly and its future availability is uncertain.

Project Description

The proposed project would provide a long-term method for the disposal of sewage sludge. A Step 1 grant was awarded in 1977 for a land-based sludge management study. The "Land-Based Sludge Management Facilities Plan Update" dated March 1989 recommended construction of a multiple hearth incinerator with a hot water generator, Venturi scrubber, impingement plate after cooler, wet electrostatic precipitator, induced draft fan, regenerative after burner and a pneumatic dry ash system as the most costeffective alternative. The JMEUC present plans are to abandon the original idea of sludge incineration and to pursue a beneficial reuse alternative utilizing a sludge drying process.

Need for Project

Improvements to the STP are needed to ensure operational reliability and component integrity. Certain process equipment must be replaced or improved.

Project Description

The proposed project includes installation of a new coarse-screenings conveyor, a new fine-screenings conveyor, a new grit conveyor, four new grit-collector drives and construction of a central container-storage area. A cover and gas mixing system will be installed on the largest sludge storage tank. Structural repairs to the walkways above the water surface are planned as well as inspection and repairs to the scraper. The existing center feed well baffles will be modified to improve distribution of flow and settling. New perimeter baffles are planned to improve settling and retard the spillsge of pin-floc. The centrifuges are planned to be replaced with gravity-belt thickeners and related supporting equipment. The driven generators will be replaced with new clean-burn engines to meet current air discharge regulations. The sizes will be increased to meet the anticipated increase in production of digester gas due to tank mixing upgrades. A series of isolation valves in the pipe gallery will be replaced with motorized valves controlled by a computer program that can be tailored to process demands.

Need for Project

BCUA operates a 94 mgd secondary sewage treatment plant which produces 35 dry tons/day of anaerobically digested liquid sludge which is currently dewatered by Spectroserv, Inc. in the Town of Kearny and shipped to Pennslyvania to be landfilled. This interim sludge disposal alternative was implemented by the BCUA in order to enable the Authority to cease the ocean dumping of sewage sludge as mandated by federal and state legislation. However, this practice is costly and its future availability is uncertain.

Project Description

The BCUA has modified its Sludge Management Plan to include beneficial reuse of the sludge.

The modified plan calls for the chemical stabilization of the sludge and use of the product as final cover of the landfills in the Meadowlands area.

As required by the Judicial Consent Decree, the BCUA is required to pursue its original plan of incineration until such time as the beneficial use plan is approved.

Need for Project

Existing sludge and scum treatment facilities are not adequate to handle the entire volumes of sludge and scum generated at CCMUA's STPs. The CCMUA relies on outside entities to manage sludge and scum treatment and disposal. Planning studies conducted by CCMUA recommended the construction of a 100 dry ton/day in-vessel composting facility. However, the project was split in two phases. Phase 1, which will provide sludge treatment facilities to handle 50 dry tons/day, is presently under construction (Project No. S34070805). Phase 2 (to increase capacity to 100 dry tons/day) is included in this project.

Project Description

The proposed project consists of the construction of a second series of Ashbrook-Simon-Hartley tunnel bioreactors which would increase the CCMUA's sludge management capabilities from 50 dry tons/day to 100 dry tons/day. The facilities will also include a process/curing area and a compost storage building. In addition, the project consists of modifications to the CCMUA's 10 dry ton/day incinerator in Gloucester Township to permit it to burn scum resulting from operations at the Delaware No. 1 WPCF.

Need for Project

Burlington County needs to cap the remaining 28 acres of its closed 54 acre landfill in order to control and manage leachate generation, gas production, and stormwater runoff.

Project Description

The project will include the installation of a final cap consisting of a geomembrane liner, drainage layer, and topsoil. The County will also install a landfill gas extraction system that will be connected to the existing gas flares and, then eventually, to a landfill gas-to-energy facility.

Need for Project

The Leachate Treatment Plant (LTP) expansion and upgrade is necessary to provide treatment and capacity for the wastewater to be generated through operation of the county co-composting facility. The existing LTP currently treats leachate and sanitary wastewater from the county landfill and associated support facilities at the county Resource Recovery Facilities Complex. In accordance with NJPDES Permit No. NJ0055395 issued October 23, 1991 which provides the discharge requirements for the LTP, expansion of the hydraulic design capacity of the plant from 50,000 gpd to 130,000 gpd average daily flow (ADF) on a monthly basis will allow for the treatment of wastewater to be generated from the previously funded co-composting facility operations (approximately 56,000 gpd - monthly ADF, Project No. S340818-03). Permitted capacity was increased from 28,000 gpd to 130,000 gpd (monthly ADF) under NJPDES No. NJ0055395.

Project Description

Expansion of the facility may include physical-chemical treatment units, biological and physiochemical treatment units, rapid sand filtration, ultraviolet disinfection and a wastewater heating system.

Service Area

County of Mercer

Need for Project

The County plans to purchase land for water quality protection. Preservation and conservation of land is important to help protect and maintain water quality in the project area. In general, the loss of open space is known to have adverse water quality impacts that result from increases in impervious cover, loss of recharge areas or buffer zones and undesirable changes in historic stormwater drainage patterns.

Project Description

The proposed project is for the purchase of land including the Bear Brook Greenway, Hamilton/Trenton Marsh, Baldpate Mountain, Mercer County Park Northwest Connector, and Washington Township Greenbelt to preserve open space and to protect water quality.

Need for Project

The project is designed to improve the operation of the treatment plant's backwash system. The proposed improvements will enhance the settling characteristics of the backwash residuals, minimize the amount of return water to the head of the plant, and improve overall treated water quality.

Project Description

The project consists of modifications to the existing backwash water pumping facilities and a new 800,000-gallon steel backwash water equalization tank, piping, valves, instrumentation and appurtenances.

Need for Project

RVSA operates a 35 mgd secondary sewage treatment plant which produces 11 dry tons/day of gravity thickened and anaerobically digested sludge which is currently dewatered and shipped to Ohio for land reclamation. This interim sludge disposal alternative was implemented by the RVSA in order to enable the Authority to cease the ocean dumping of sewage sludge as mandated by federal and state legislation. However, this practice is costly and its future availability is uncertain.

Project Description

The proposed project would provide a long-term method for the disposal of sewage sludge. A Step 1 grant was awarded in 1979 for a land-based sludge management study, which recommended to implement a sludge disposal scheme consisting of dewatering and thermal reduction. The Sludge Management Plan dated May 22, 1991 recommended pelletization in Pennsylvania. The RVSA will be required to appropriately update the Sludge Management Plan to ensure that adequate consideration of beneficial reuse alternatives has been included, as required by the Department's White Paper on Beneficial Use of Sewage Sludge, issued in November 1990.

Need for Project

Three municipal and several institutional sewage treatment plants are operating in Atlantic County within three planning areas. The majority of the treatment plants dispose of their sludge through incineration at the ACUA City Island Facility.

Project Description

The project is to upgrade the existing sludge incinerator's heat recovery after-burner unit. The project objective is to maintain consistent compliance with local, state and federal standards while increasing the burning capacity and reducing the after-burner fuel demand.

ATLANTIC COUNTY UA 340405-04 SLUDGE MANAGEMENT

County

ATLANTIC

Existing Population

163,667

Service Area

Several Municipalities in Atlantic County and Mercer County

Need for Project

The Authority has several goals for this project. First, to diversify the Authority's method (by providing a back-up for the existing sludge incinerators) and increase capacity for the disposal of municipal wastewater sludge. The second goal relates to the Interdistrict Agreement by which the ACUA is required to accept up to 19,000 tons per year of compostable material from Mercer County. Finally, to meet the Authority's recycling goals, large source separated generations of food waste within the county will be directed to the proposed facility.

Project Description

The Authority is planning to construct an Enclosed Composting Facility at the Environmental Park Site in Egg Harbor Township. The facility will process the following selective waste streams: food waste, municipal wastewater sludge, vegetative waste and clean wood waste. These selective waste streams will produce a compost which can be used as a soil amendment. The proposed facility has an array of unique features to avoid the pitfalls of other composting facilities which have been forced to close due to mechanical and odor control problems. An integrated building ventilation system, including a biofilter for odor control will be constructed. The facility will be totally enclosed and designed to handle 159 wet tons per day.

Need for Project

Sussex County needs to cap the remaining uncapped 8.5 acres of the County's landfill in order to control and manage leachate generation, gas production, and stormwater runoff.

Project Description

The project will include the installation of a final cap consisting of the final grading of the solid waste, a 12 inch sand layer (for methane gas venting), an impermeable membrane, a 12 inch sand drainage layer, a 12 inch final cover, a stormwater diversion and drainage system, and a landfill gas extraction system.

Boonton Town, Boonton Township, Denville, Dover, Jefferson (48%), Kinnelon (32%), Mine Hill (65%), Randolph (78%), Rockaway Borough, Rockaway Township, Roxbury, Victory Gardens, Wharton

Need for Project

Rockaway Valley Regional Sewerage Authority has recently signed a 15 year service contract (5 year breakout option) with Wayne Township for incinerating RVRSA's sludge at Wayne Township's incinerators at the cost of \$45 per 1000 gallons. Prior to this arrangement, the RVRSA was hauling sludge to Kinsley's Landfill in Gloucester County. There appears to be available capacity within the Wayne Township's incinerators which are physically located within 7 miles of RVRSA treatment plant.

Project Description

The RVRSA prepared a facilities plan for sludge disposal. The plan shows that invessel composting is cost-effective. However, after recent development of negotiations with Par-Troy and Wayne and subsequent contract with Wayne Township, incinerating at Wayne now appears most cost-effective option available for RVRSA. It was recommended that the RVRSA continue to dispose of its sludge at the Wayne Township's incinerators on a interim basis and pursue long term sludge disposal option. The precise disposal alternative will be determined by the on-going study.

Service Area

Parsippany Troy Hills, Mountain Lakes Borough, East Hanover Township

Need for Project

This project is required to provide an additional sludge blending tank and grit removal equipment including belt filter press for dewatering with associated piping and pumping equipment. It should be noted that the present facilities for handling sludge waste generated from other sewage treatment plants are inadequate. The project is necessary to insure that additional sludge facilities for existing and future development is in conformance with approved facilities plan.

Project Description

Parsippany-Troy Hills has completed an NJDEP approved facilities plan which recommends construction of facilities that include an additional sludge blending tank, grit removal equipment and belt filter press for dewatering with associated piping and pumping equipment.

Service Area

Township of Gloucester

Need for Project

The Township plans to purchase the Lake Mathilde and Country Oaks land parcels for water quality protection. The preservation and conservation of land is important to help protect and maintain water quality in the project area. In general, the loss of open space is known to have adverse water quality impacts that result from increases in impervious cover, loss of recharge areas or buffer zones and undesirable changes in historic stormwater drainage patterns.

Project Description

The proposed project is for the purchase of land including 81 acres of the Lake Mathilde parcel and the Country Oaks parcel to preserve open space and to protect water quality.

Cape May County MUA - Wildwood/Lower Region and CMCMUA - Seven Mile/Middle Region

Need for Project

The project is required to provide sludge/septage treatment and disposal for the Cape May County MUA - Wildwood/Lower Regional and Seven Mile/Middle Regional Wastewater Systems.

Project Description

The project is the second phase of the Cape May County MUA - County-wide enclosed vessel mechanical composting system. This component is planned to service combined primary and secondary belt filter press dewatered sludge from the 14.18 mgd Wildwood/Lower Regional WWTF and the 7.67 mgd Seven Mile/Middle Region WWTF. The septage treatment facilities will be incorporated into the CMCMUA Seven Mile/Middle Regional WWTF.

SLUDGE MANAGEMENT IMPROVEMENTS

County

MERCER

Existing Population

50,000

Service Area

Princeton Borough, Princeton Township, South Brunswick Township, West Windsor Township, Hopewell Borough, and Pennington Borough

Need for Project

The project has dual purposes - cost savings and environmental improvements. The objective of the project is to greatly reduce energy (natural gas) consumption and decrease air pollutant emissions. The rising cost of fuel requires modifications to be made to the incinerator and its air pollution control train to reduce fuel usage. The project will also result in significantly "cleaner" air emissions.

Project Description

The project includes improvements to the existing sludge dewatering facilities, incinerator, and incinerator air pollution control equipment. The project will include replacement of existing belt filter presses with new dewatering equipment; addition of burners to incinerators; addition of new induced-draft fan, scrubbers, wet electrostatic precipitator, and recuperative afterburners to incinerator air pollution control process train.

WANAQUE VALLEY REG SA 340390-05 SLUDGE/SEPTAGE TREATMENT/DISPOSAL

County

PASSAIC

Existing Population

47,760

Service Area

The Wanaque Valley Regional Sewerage Authority's (WVRSA) Water Pollution Control Facility includes the service areas of Wanaque, Ringwood, and West Milford.

Need for Project

Growth, for this region, is expected to outpace other areas of New Jersey due to the long-awaited extension of Route 287, linking several major arteries of the metropolitan area. For this reason, land acquisition for an approximate 2.0 MGD expansion of the facility was initiated in 1988.

Infiltration and inflow have had negative effects on the existing facility's past performance. Rehabilitation of the I/I is crucial in optimizing the facility's performance.

The sludge produced by the WVRSA's Water Pollution Control Facility is being transported off-site to the TBRSA's incinerator. The incinerator authority charges disposal fees by the gallon, resulting in excessive sludge disposal costs.

There are no facilities within WVRSA's service area accepting septage wastes at this time. The TBRSA's facility is currently identified as disposal site for septage generated in the WVRSA's service. As with sludge, continued treatment capacity for the area's septage wastes is not assured at the TBRSA facility, and disposal costs are high.

The WVRSA is required by the regulations promulgated under PL 92-500 and by the USEPA to develop a long term sludge management plan that is the most cost-effective, environmentally sound and implementable solution to the disposal problem.

Project Description

The WVRSA can reduce the excessive sludge disposal costs with the addition of a sludge thickening system. Although incineration of dewatered or thickened sludge is the most cost-effective and promising alternative at this time as plant capacity increases, invessel composting becomes most cost effective and is preferred.

In addition, acceptance of septage at the local treatment plants rather than directly at the incinerator facility will reduce homeowner's disposal costs. The selected plan, soon to be completed, will provide a long term sludge management system that will accommodate the quantity of sludge generated within the WVRSA and PRBRSA regions.

Service Area

This project will serve various areas throughout the Township such as Ludlum Road, Arbor Road, Riverlawn Drive, Riverdale Drive, and Hoffman Grove area.

Need for Project

Many areas of the Township presently served by on-site systems have exhibited problems and/or malfunctions as evidenced by foul odors and numerous homeowner complaints, thus causing a public nuisance. As determined by the soil conservation service, these areas correspond to soils with severe limitations for on-site disposal.

Project Description

This project is for the construction of a sanitary sewer collection system within problem areas of the Township. All of the areas will tie into existing transmission lines for ultimate disposal at the Mountain View treatment plant.

Need for Project

The City of Linden Sanitary Landfill is currently operating under an ACO. The City has submitted a revised Closure Plan to the Department in accordance with the Amended ACO requirements, which include final landfill capping, a stormwater management system, and methane gas management system. Proper closure of the Linden Landfill will minimize the amount of leachate generated and will also minimize adverse impacts from uncontrolled runoff.

Project Description

The proposed landfill cover includes a synthetic plastic liner to prevent percolating rainwater from coming into contact with waste. The proposed stormwater collection and conveyance system will direct runoff into a detention basin before discharging to surface waters. The proposed project also includes a methane gas collection system.

Evesham Township

Need for Project

The Township's former landfill is generating leachate, which is causing surface and groundwater impacts in an area containing the headwaters of two drainage basins. A capping system is needed to reduce infiltration, which will subsequently minimize further leachate generation and migration.

Project Description

The proposed project will include the construction of a capping system consisting of an impervious clay cap, a sand drainage layer, a vegetative layer, a ground/surface water monitoring system, and drainage improvements. The entire landfill will be re-contoured to remove waste around the perimeter and to establish appropriate cross slope grades.

SLUDGE MANAGEMENT

County

BURLINGTON

Existing Population

26,590

Service Area

Mount Holly, Eastampton, Lumberton, Hainesport, part of Westampton

Need for Project

This is a sludge management project. The Mount Holly Sewerage Authority Wastewater Treatment Plant has been expanded and upgraded from 2.0 mgd to 5.0 mgd flow under USEPA/State project no. C340251 grant. The (201) Facilities Plan recommended that ultimate sludge disposal would be to a licensed landfill.

Subsequent to the completion of this original facilities plan and the initiation of construction of the plant expansion, the State of New Jersey enacted new laws relative to the treatment and disposal of sludge. Accordingly, the Mount Holly Sewerage Authority was required to prepare a sludge management plan in accordance with the current state guidelines for the preparation of sludge management plans.

Project Description

The project consists of construction of sludge management facilities at the existing Mount Holly SA Sewage Treatment Plant site. This is a short term solution only.

The ultimate sludge disposal will be incorporated into the on-going county-wide sludge and septage management plan recommendations. Mt. Holly will subsequently become a contingency back-up facility for sludge/septage treatment.

This project will serve existing and new development along the Major Road area of the Township.

Need for Project

Approximately 36 homes are served by on-site systems, a significant portion of which have exhibited problems and/or malfunctions, thus causing a public nuisance. The Soil Conservation Service has determined that the Major Road area corresponds to soils with severe limitations for on-site disposal systems. South Brunswick Township will apply under the Public Health Hazard Bypass provisions of the priority system.

Project Description

The proposed project is for the construction of approximately 4,500 feet of ten inch sewer line and 1,450 feet of eight inch sewer line. The project also calls for the reconstruction of approximately 834 feet of the existing "Town Center Sewer". Approximately 31 of the existing properties could make gravity connection to the sewer line and the other 5 homes would have to utilize small grinder pumps to tie into the proposed project.

ROXBURY TOWNSHIP 343002-01 LAND ACQUISITION

County

MORRIS

Existing Population

20,429

Service Area

Township of Roxbury

Need for Project

The Mooney Mountain Meadows tract represents the largest vacant tract remaining in Roxbury Township. This property protects drinking water quality by providing direct recharge for two municipal wells. The land also provides significant ground and surface water recharge for the South Branch of the Raritan River. The propoerty is under extreme development pressure.

Project Description

The proposed project includes the purchase of about 164 acres in the Mooney Mountain Meadows tract to preserve open space and to protect water quality.

MANCHESTER TWP 340650-03

COLLECTION SYSTEM

County

OCEAN

Existing Population

15,400

Service Area

Parts of Manchester Township

Need for Project

The tremendous rate of growth in the planning area, coupled with an increasing number of septic tanks, has placed a severe strain on the very permeable sandy soils to adequately treat the domestic wastes. Because of a generally high groundwater table and the high percentage of septic system failures, pollution of the groundwater is suspected. The pollution to surface water in the planning area has already been documented in the Ocean County Areawide Water Quality Management Plan. The continuation of current septic tank problems poses a potential threat to the groundwater in the region. Therefore, a proper sewage disposal system is necessary.

Project Description

Based upon economic, environmental and engineering aspects, the construction of the following collection system has been recommended: Summit Park, 13,282 feet of gravity sewers; Savannah Acres, Low pressure/grinder pump system with 17,085 feet of 2" PVC low-pressure piping; Cedar Glen Homes, 16,000 feet of gravity sewers; Richard and Whitney Estates, 1½" and 2" low-pressure sewers; Cedar Glen West, 3,900 feet of 8" and 15" gravity sewers; a pumping station; and 8,700 feet of 6" force main. The flow from the area will be conveyed to the Ocean County Utilities Authority's Central Plant for treatment and disposal.

Need for Project

Some of the septic systems of the Township are malfunctioning and thus causing potential environmental or health hazard situations and creating a public nuisance.

Project Description

This project involves construction of a new sewerage system to serve twenty-two (22) homes in the Rocky Lane/Columbia Road area of Basking Ridge. The system will consist of all gravity sewers with the exception of two properties which will require pumping to a pressure sewer. The wastewater will be conveyed to the 1.2 MGD capacity treatment plant.

Franklin Township

Need for Project

The project area in Franklin Township consists of Franklinville, Malaga, and Newfield, which are existing developments served by individual on-lot systems. There is public nuisance associated with these on-site disposal systems in the area.

Project Description

The selected plan of the GCUA Facilities Plan calls for the complete regionalization of the proposed sewer collection systems for Franklin Township and the Borough of Newfield with an interceptor system to convey wastewater to the Landis Sewerage Authority Plant for treatment and ultimate disposal. The selected plan basically involves the construction of three pump stations, interceptors, and force mains to convey the wastewater to the Landis SA plant.

Service Area

Township of Readington

Need for Project

Open lands still remaining in Readington serve as water quality protection for the headwaters of vital tributaries to the North and South Branches to the Raritan River. The preservation and conservation of land is important to help protect and maintain water quality in the project area. In general, the loss of open space is known to have adverse water quality impacts that result from increases in impervious cover, loss of recharge areas or buffer zones and undesirable changes in historic stormwater drainage patterns.

Project Description

The proposed project is for the purchase of land including parcels in the Raritan Basin Management Area to preserve open space and to protect water quality.

VERNON TWP

340745-02

ALTERNATIVE WASTEWATER SYSTEM

County

SUSSEX

Existing Population

11,080

Service Area

The service area consists of the portion (62%) of Vernon Township which lies in the Pochuck Basin.

Need for Project

Vernon Township is comprised of clusters of lakeside communities (including Barry Lakes) that have developed from seasonal vacation homes to year-round dwellings. This fact, coupled with the restrictions of small, undersized lots located on soils with severe limitations for on-site systems, has resulted in an overburdening of the soil stratum. This has led to an increasing number of septic system failures which previously had functioned satisfactorily. In addition, a number of existing systems are known to be inadequate through design and/or installation deficiencies. This situation poses public health as well as nuisance problems to the Township. The needs of Vernon Township as identified under the Sussex County Step I Study (C340503-01) are to be resolved on a local level through this project.

Project Description

This project would implement the wastewater management recommendations of the Sussex County-Pochuck Facilities Plan on a local level. Collection, low pressure, and/or cluster systems may be involved in this project. On-site rehabilitation in conjunction with the establishment of a septic management district(s) may also be a viable alternative. The construction of this project should satisfy the wastewater needs of Vernon Township, as well as maintaining water quality and safeguarding the public health.

Need for Project

This project is necessary for the construction of a sewer extension. This is the second phase of the Borough's collection system project. The first phase (75,130 l.f.) has already been constructed. In several instances, septic systems have been malfunctioning, creating potential health hazard situations and a public nuisance.

Project Description

This project involves the construction of 4251 linear feet of collector and interceptor sewer and a pump station, which will convey wastewater to the proposed Wanaque Valley Regional Sewerage Authority treatment plant (0.68 MGD capacity). The planning work for the collection system needs to be addressed.

MAHWAH TOWNSHIP

340592-03

COLLECTION SYSTEM, INTERCEPTOR

County

BERGEN

Existing Population

10,480

Service Area

Township of Mahwah (Portion)

Need for Project

The area is currently served by septic systems; failures appear to be contributing to the pollution of groundwater, a potable water source. This could result in health problems in the community. The project would also convey wastewater from package plants in the Township. The water quality in the area marginally meets standards for fecal coliform and nutrients.

Project Description

The project involves construction of a collection system and interceptor to serve the Fardale Section of Mahwah Township. The wastewater will be conveyed through the Northwest Bergen County Utilities Authority interceptors and then to the treatment plant in Waldwick. The project report has not been submitted by the Township.

Service Area

Township of Montgomery

Need for Project

The Township plans to purchase a parcel that borders the Fox Brook. The preservation and conservation of land is important to help protect and maintain water quality in the project area. In general, the loss of open space is known to have adverse water quality impacts that result from increases in impervious cover, loss of recharge areas or buffer zones and undesirable changes in historic stormwater drainage patterns.

Project Description

The proposed project includes the purchase of land bordering Fox Brook to preserve open space and to protect water quality.

Wantage Township

Need for Project

The entire Township of Wantage is currently using on-site wastewater disposal. However, in several areas there are failing systems which qualify as a public nuisance.

Project Description

The Sussex County Municipal Utilities Authority is developing a complete wastewater treatment system which includes upgrading of the Sussex Borough STP. The Sussex Borough STP may be available to serve new systems within Wantage Township. This project includes the design and construction of a local collection system and possible upgrading of existing on-site systems for the Wantage Township area, pending submittal and approval of the Sussex County Municipal Utilities Authority-Lower Wallkill 201 Facilities Plan (No. C340573-01).

UPPER SADDLE RIVER, BOROUGH OF 340909-01

COLLECTION SYSTEM, INTERCEPTOR

County

BERGEN

Existing Population

7,840

Service Area

Southwest portion of Upper Saddle River

Need for Project

Sanitary sewers from the commercial buildings in the southwest portion of Upper Saddle River drain into the Ramsey Brook Interceptor. The Ramsey Brook Interceptor was not originally designed to handle flow from the southwest portion of Upper Saddle River. As a result, the line runs near capacity with some surcharging. Continuing commercial development in this area necessitates an alternate drainage source. Construction of a sanitary sewer collection system, which would drain into the northwest Bergen Interceptor, to serve both the expanding commercial and residential (currently served by septic system) communities in the southwest portion of Upper Saddle River has been proposed.

Project Description

Construction of a sanitary sewer collection system and interceptor. The sewer system would contain 9800 linear feet of 8-inch and 1000 linear feet of 10-inch diameter sanitary sewers.

Service Area

Village of Crosswicks and certain areas of Chesterfield Township

Need for Project

The draft Township Master Plan has been developed to implement a Transfer of Development Rights (TDR) program to preserve agricultural lands in the Township. This program requires establishing a high density receving zone which requires public sewerage service. The Village of Crosswicks is in need of sanitary services to eliminate existing individual on-site disposal system problems.

Project Description

The proposed project consists of a collection system, trunk sewer, and three pumping stations to serve the Village of Crosswicks and receiving zone which will be developed to implement a TDR program. Wastewater treatment will be provided either by the Wagner Youth Correction Facility or by construction of a new STP.

PUMP STATION, FORCE MAIN

County

OCEAN

Existing Population

6,460

Service Area

Pine Lake Park area of Manchester Township

Need for Project

The tremendous rate of growth in the area, coupled with an increasing number of septic tanks, has placed a severe strain on the very permeable sandy soils to adequately treat the domestic wastewater. Because of a generally high groundwater table and the high percentage of septic system failures, pollution of the groundwater and surface water is suspected. Also, the current septic tank problems pose a potential threat to the health of local residents. Therefore, a proper sewage disposal system is necessary.

Project Description

The project is for the construction of three pump stations and approximately 35 miles of force mains and gravity sewers with diameters ranging from 8 inches to 24 inches. The wastewater will be conveyed to the existing 42-inch diameter Union Branch Interceptor owned and operated by the Ocean County Utilities Authority (OCUA). The wastewater will be treated at the OCUA's Central Plant located in Bayville for secondary treatment with effluent disposal to the Atlantic Ocean.

NEW INTERCEPTOR SEWERS/COLLECTION SYSTEM

County

BERGEN

Existing Population

6,120

Service Area

Borough of Carlstadt

Need for Project

There are malfunctioning and inadequate on-site systems which cause a public nuisance in unsewered areas of Carlstadt. Additionally, a portion of Carlstadt's sewered flows are currently conveyed to the Rutherford/Carlstadt's Joint Meeting STP for treatment prior to dis- charge to Berry's Creek (FW2-NT/SE-2). This plant has been under a court order on consent to be abandoned in favor of regional treatment by the Bergen County Utilities Authority (BCUA). Existing water quality violates standards for dissolved oxygen, fecal coliform, and toxics.

Project Description

The facilities plan has evaluated alternative methods for the diversion of all or part of the flow from the Joint Meeting plant to the BCUA regional treatment facilities. The plan also identifies additional sanitary facilities needed to collect sewage in developed and developing areas of Carlstadt.

Service Area

Milford Borough, Holland Township

Need for Project

There is serious I/I existing in the sanitary sewer lines in Holland Township, which is causing noncompliance with the suspended solids limitations of the NJPDES permit during periods of excessive rain. In addition, the Milford Borough Sewer Utility, which is classified as a Category D facility, does not have the capability of handling septage and must plan for accepting the septage generated in its service area. Furthermore, alternatives to the treatment plant's current method of disposing of liquid sludge at a Pennsylvania landfill must be evaluated since it is on a short term basis.

Project Description

This project will be classified as a complete wastewater treatment system which includes Holland Township and Milford Borough. The Facilities Plan will develop alternatives for sludge disposal, and evaluate a septic management district. Also, an I/I and cost effectiveness analysis will be performed to determine the extent of excessive I/I in the system.

COLLECTION SYSTEM, STP

County

OCEAN

Existing Population

6,010

Service Area

Plumsted Township (includes New Egypt, Archers Corner, Archertown, Brindletown and Colliers Mill areas)

Need for Project

A study performed for the service area has determined that overflowing and malfunctioning septic systems, poor soils and high density housing conditions exist in the planning area. A septic system survey found 81 percent of the residents in Plumsted Township are affected by malfunctioning on-site systems. The existing school sewage plant also needs improvement to meet treatment criteria and a new school is proposed which will need a larger capacity treatment facility.

Project Description

The proposed project includes the construction of a municipal collection system and a 210,000 GPD treatment plant to be located on Bight Road and discharge to Crosswicks Creek. The New Egypt School treatment plant will be eliminated. The collection system will include the downtown area of New Egypt and will include pumping stations, force mains, gravity sewers and related appurtenances as necessary. The sludge disposal method will be incorporated into the Ocean County sludge management plan.

Service Area

Township of Plumsted

Need for Project

The Township plans to purchase land in aquifer recharge areas that are critical to local and regional water quality. Preservation and conservation of land is important to help protect and maintain water quality in the project area. In general, the loss of open space is known to have adverse water quality impacts that result from increases in impervious cover, loss of recharge areas or buffer zones and undesirable changes in historic stormwater drainage patterns.

Project Description

The proposed project includes the purchase of land to preserve open space and to protect water quality.

ALTERNATE WASTEWATER SYSTEM

County

BERGEN

Existing Population

6,000

Service Area

Mahwah Township (unsewered portion)

Need for Project

Facilities planning in Mahwah Township has identified areas of low density development which will remain unsewered for the planning period. However, areas of soils with limitations to on-site disposal exist, and on-site systems continue to fail in these areas. These malfunctions are considered to be public nuisances and must be addressed. It is, therefore, necessary to create a management program to address the correction of malfunctioning systems in unsewered areas.

Project Description

This project is still in the planning stages and the specifics of the septic management program to be adopted by the Township have not yet been determined. However, at a minimum, the program must provide for inspections of systems every three years.

Service Area

The study area is delineated as the entire drainage basin (nearly 110 miles) of the Paulinskill River in Sussex County and includes the Newton and Branchville/Frankford areas. The service area for this Phase II - Branchville/Frankford project consists of Branchville Borough and Frankford Township.

Need for Project

The service area is a clustered community which currently relies on on-site septic disposal systems for the treatment of wastewater. Many of these systems appear inadequate and are a public nuisance to the community. An on-going planning study was conducted under the Sussex County-Paulinskill planning grant (C340449-01), to determine the nature, severity, and extent of the wastewater disposal problems for the impacted areas.

Project Description

The proposed project includes the construction of a conveyance system, STP improvements and other measures which may be necessary to provide adequate wastewater treatment and disposal for the service area.

Service Area

Township of Fairfield

Need for Project

The municipal landfill in Fairfield is generating leachate, which is impacting surface and ground water. The site adjoins a waterway known as Rattlesnake Gut, which flows directly into the Cohansey River. A capping system is needed to prevent further leachate impacts.

Project Description

The proposed project includes construction of fill and an impervious cap to prevent infiltration. Since the site adjoins an intermittent waterway, it may be necessary to remove some of the landfill adjacent to the stream for wetlands reclamation and buffering.

COLLECTION SYSTEM

County

CAMDEN

Existing Population

5,550

Service Area

Berlin Township

Need for Project

At present there is no sewer service to the residents of Berlin Township. Well-drained, sandy soils and a shallow groundwater table increase the possibility of contamination to ground waters by individual septic tank disposal systems. In addition, contamination of the head waters of the Great Egg Harbor River (PL and FW2-NT) and nitrogen contamination of wells has been attributed to septic tank sources in Berlin Township. The systems are also creating a public nuisance.

Project Description

The proposed project consists of the construction of a new collection system of approximately 138,774 linear feet and four pumping stations. The collection system will connect to the regional CCMUA pumping station.

Need for Project

The Borough plans to purchase land including sites along the Palisades and Grand Cove Marina for water quality protection. Preservation and conservation of land is important to help protect and maintain water quality in the project area. In general, the loss of open space is known to have adverse water quality impacts that result from increases in impervious cover, loss of recharge areas or buffer zones and undesirable changes in historic stormwater drainage patterns.

Project Description

The proposed project is for the purchase of land including sites along the Palisades and Grand Cove Marina to preserve open space and to protect water quality.

COLLECTION SYSTEM

County

WARREN

Existing Population

4,890

Service Area

Blairstown

Need for Project

Presently Blairstown Township has failing on-site wastewater disposal systems. There are documented failures in parts of the Township that may eventually pose health problems in the future. There are no public wastewater collection and treatment facilities in the study area but there are currently two privately owned and operated wastewater treatment plants: Blair Academy and N. Warren Regional High School

Project Description

This project (C340568-02) includes the construction of a collection system for the Village of Blairstown area. The sewage will be conveyed to and treated at the propoised regional STP.

DENVILLE TOWNSHIP

340466-03

COLLECTION SYSTEM, PUMP STATION, FORCE MAIN

County

MORRIS

Existing Population

4,500

Service Area

A segment of Denville Township.

Need for Project

The use of on-site systems is the primary method of wastewater disposal in the Township, however, it is causing a public nuisance. The on-site systems exhibit a high rate of malfunctions, which correspond to soils with severe limitations for on-site disposal as determined by the Soil Conservation Service.

Project Description

This project is for the first segment of sewering the entire Township. This segment is for the construction of approximately 68,000 L.F. of 8-inch to 14-inch gravity sewers, 2 pump stations and approximately 12,000 L.F. of 6-inch and 10-inch force main. Wastewater from the Township will be conveyed to the existing Rockaway Valley Regional Sewage Authority Treatment Plant for ultimate disposal.

HAMMONTON TOWN

340927-03

COLLECTION SYSTEM

County

ATLANTIC

Existing Population

2,700

Service Area

Southwest/Southeast portions of Hammonton

Need for Project

Residents in the area have expressed problems with failing septic systems and individual potable water supply well contamination. This project will also assist residents who have lost the use of their land due to the septic nitrate regulations of the Pinelands Commission. The increased amount of customers will assist the sewer user base and help to reduce the overall user cost for everyone on line.

Project Description

The project consists of replacement of existing sewer interceptors and the construction of new interceptors, pump station, force mains and sewer collection mains. Although the projects are not contiguous, the type of work and benefits derived will be similar.

The Southeast Hammonton area will consist of the placement of a 12" sanitary sewer trunk line within the rights-of-way of Thirteenth Street, Egg Harbor Road and Fourteenth Street. Eight (8) inch collector sewer lines will be installed within the remaining roadways of this project area.

The Southeast Hammonton area will consist of the placement of a 12 inch sanitary sewer trunk line within Park Avenue, easement areas, Grand Street and through a portion of the Fox Chase Development. A 10" line will be installed along Ninth Street and a portion of Tenth Street. The remaining streets in this area will be serviced with an 8 inch sanitary sewer. It is also anticipated that an upgrade of the existing pump station located on Park Avenue will have to be completed or a new station installed on Grand Street at the low point to service this area.

COLLECTION SYSTEM, INTERCEPTOR

County

BERGEN

Existing Population

2,350

Service Area

Portion of the Township of Mahwah

Need for Project

The area is currently served by septic systems; failures appear to be contributing to the pollution of groundwater, a potable water source, however this has yet to be documented. This could result in health problems in the community. The project would also convey wastewater from package plants in the Township.

Project Description

The project involves construction of collection system to serve Craigmere and Oak Hills sections of Mahwah Township. The wastewater will be conveyed through the Northwest Bergen County Sewer Authority interceptors and then to the treatment plant in Waldwick. The facilities plan work has not been submitted by the Township.

WEST PATERSON BOROUGH 340778-03

COLLECTION SYSTEM

County

PASSAIC

Existing Population

2,200

Service Area

Southeast section of the Borough of West Paterson

Need for Project

The Southeast section of the Borough of West Paterson has malfunctioning septic systems which have been creating a public nuisance and are a potential health hazard.

Project Description

The proposed project consists of the construction of a wastewater collection system including a small pump-station to convey a portion of the flow. The proposed sewer extensions will be connected to existing sewers at various locations. All sewage flows within this area will be conveyed to the Passaic Valley Sewerage Commissioners' wastewater treatment plant, located in Newark, for treatment and disposal.

340838-01

ALTERNATIVE WASTEWATER SYSTEM

County

BURLINGTON

Existing Population

2,100

Service Area

Highly dispersed areas of Evesham Township including the Marlton Lakes area.

Need for Project

The Marlton Lakes area of Evesham Township has experienced on-site disposal problems for the past seven years. Monitoring of potable water wells has shown high nitrate readings and the lake has shown indications of eutrophication from elevated nitrate levels. Approximately 850 developed properties exist in the southern two thirds of the Township, with about 40% concentrated in the Marlton Lakes area. A review of the more concentrated areas of development shows that on-site systems are located on Lakewood and Evesboro soils that have severe limitations for septic systems due to high permeability. Many homes in the highly dispersed areas of the Township have also experienced on-site disposal problems. In the northern portions of the Township, outside of the existing sewer service areas, many homes experiencing problems are located on Kresson and Marlton soils, having severe limitation for on-site disposal due to poor permeability.

Project Description

The recommended plan for wastewater management for southern Evesham Township has been divided into two regions based primarily on the need for wastewater management and population density:

- o Marlton Lakes Community: Small Diameter/STEP sewer system with centralized wastewater treatment utilizing the Carrousel process followed by effluent disposal in a series of Rapid Infiltration basins.
- o Remainder of Southern Evesham Township: Privately owned publicly managed septic system management district entailing periodic septic tank pump-out and septic system inspection. Pump-out and maintenance/repair costs would be the responsibility of the owner.

Service Area

Ocean Acres Area of Stafford Township

Need for Project

The area residents are using individual on-site septic systems for wastewater disposal which pose a pollution threat to the groundwater and to public health. The area is in a Regional Growth Area of the Pinelands Commission and is identified as an area to be sewered in the Pinelands Infrastructure Master Plan with an allowable development of approximately 1,800 residential lots.

Project Description

The project is for the construction of approximately 20 miles of gravity sewers and force mains, 4 pump stations, and the associated manholes and house laterals which will collect and convey about 0.5 mgd projected ultimate wasteflow via the existing Manahawkin Interceptor to the Ocean County Utilities Authority's Southern Water Pollution Control Facilities located in West Creek.

KINNELON BOROUGH

340487-02

COLLECTION SYSTEM

County

MORRIS

Existing Population

1,700

Service Area

A portion of the Borough of Kinnelon

Need for Project

The Borough has proposed the construction of a collection system for a small area of the Borough where on-site disposal systems have been experiencing problems and have malfunctioned. Water quality standards are currently marginally meeting fecal coliform and nutrients.

Project Description

It is anticipated that this project will be for the construction of one pump station, force main, and approximately 48,000 L.F. of gravity sewer. The Borough of Kinnelon has become a member of the Pequannock River Basin Regional Sewerage Authority (PRBRSA) (January 1, 1991). The project would connect to a PRBRSA interceptor at the Butler/Kinnelon boundary and all wastewater would be discharged to the Pequannock-Lincoln Park-Fairfield Sewerage Authority for treatment.

HOPE TOWNSHIP

340872-01

INTERCEPTOR SEWERS

County

WARREN

Existing Population

1,660

Service Area

The study area for this project consists of Hope Township within the Pequest Basin.

Need for Project

The majority of the township is currently using cesspools as a means of on-site wastewater disposal. Failures of these systems have created potential health hazards. In the Silver Lake area, the water table is high and wells are shallow. Cesspools and septic systems have been a public nuisance through surface failures and groundwater pollution. The septic malfunctions have been threatening the health and welfare of the local residents. Because of the existing small lot size, soil limitations and lack of adequate planning for runoff management, there is significant potential for future environmental and health problems within the community as well as problems of the degradation of water quality in Silver Lake.

Project Description

This project is still in early stage of planning and proposes small diameter gravity system connected to a community-based leaching field as an alternative solution to malfunctioning septic systems. Also included is a sub-surface drainage system to be installed to collect and divert high, seasonal groundwater and run-off to protect the disposal bed from flooding.

PEQUANNOCK TOWNSHIP 340480-06

COLLECTION SYSTEM

County

MORRIS

Existing Population

1,340

Service Area

Pequannock Township

Need for Project

The project is needed to improve existing wastewater treatment practices through the elimination of approximately 490 on-site disposal systems in a residential/commercial area and replacing them with a sanitary sewer system. The soils in this service area are classified by the Soil Conservation Service as severely limiting for on-site disposal. The average housing stock in this area is in excess of 35 years and health surveys have indicated an incidence of septic system malfunctions and shallow aquifer contamination. The proposed sewer system will provide the transmission facilities to convey the wastewater to the Pequannock, Lincoln Park and Fairfield Park Sewerage Authority (TBSA) facilities for ultimate treatment.

Project Description

This Phase IV project will be an extension of the Phase III sanitary sewer system and will include the residential area known as the "Village" and the commercial areas on Route 23.

WASHINGTON TOWNSHIP 340930-01 COLLECTION SYSTEM

County

GLOUCESTER

Existing Population

1,310

Service Area

Washington Township

Need for Project

Failure of on-site sewage disposal systems within the Gardendale and Grenlock areas of Washington Township have created a public nuisance. Project is necessary to eliminate failing septic systems and to construct a sanitary sewer collection system to service several of the older developments within Washington Township.

Project Description

Construction of extensions to the existing sanitary sewer collection system. The extension to the Grenloch area collection system will consist of approximately 9,895 linear feet (L.F.) of gravity main, 1,750 LF of 4" force main, 1 pump station and all appurtenances along Park Avenue, Lake Avenue, Central Avenue, Edgewater Avenue, Milburn Avenue, Arbutus Avenue and Woodbury-Turnersville Road.

The extension to the East Gardendale area collection system will consist of approximately 10,940 LF of 8" gravity main and all other appurtenances. The extension will include McKinley Avenue, Garfield Avenue, Myrtle Avenue, Spruce Street, Chestnut Street, Lucust Street, Pine Street, Copper Street, Hilbert Drive and Forrest Street.

The extension to the Wilson Road area collection system will consist of approximately 2,890 LF of 8" gravity main and all appurtenances. The Wilson Road area extension will include West End Avenue, Salem Avenue, Glen Avenue, Wilson Road and Woodbury-Turnersville Road.

All new flows are to be conveyed to and treated at the Gloucester County Utilities Treatment Plant.

MANCHESTER TOWNSHIP 340650-06

PUMP STATION, FORCE MAIN

County

OCEAN

Existing Population

1,280

Service Area

Holly Oaks/Knollwoods area of the Manchester Township

Need for Project

The tremendous rate of growth in the area, coupled with an increasing number of septic tanks, has placed a severe strain on the very permeable sandy soils to adequately treat the domestic wastewater. Because of a generally high groundwater table and the high percentage of septic system failures, pollution of the groundwater and surface water is suspected. Also, the current septic tank problems pose a potential threat to the health oflocal residents. Therefore, a proper sewage disposal system is necessary.

Project Description

The project is for the construction of two pump stations and approximately 8 miles of force mains and gravity sewers with diameters ranging from 6 inches to 12 inches. The wastewater will be conveyed to the existing 42-inch diameter Union Branch Interceptor owned and operated by the Ocean County Utilities Authority (OCUA). The wastewater will be treated at the OCUA's Central Plant located in Bayville for secondary treatment with effluent disposal to the Atlantic Ocean.

Need for Project

This project is proposed for the elimination of malfunctioning septic systems. Existing water quality in the area does not meet standards for dissolved oxygen and fecal coliform and marginally meets standards for nutrient and toxics.

Project Description

According to the 201 Facilities Plan for the Middle South Branch of the Raritan River, collection systems were proposed for Sand Hill Road, Sunny Hills Estates, Old Craton Road, Raritan Gardens, Broad Acres and Ridge Road areas, individual & mound systems for the Deerpath Village and Southridge areas, and a STEP system for Bridgeview Estates. The septic tank effluent from the effluent collectors and STEP System will be treated at the Raritan Township MUA.

Strathmere Section of Upper Township

Need for Project

This project is proposed for the elimination of public nuisance associated with ground and surface water pollution possibly resulting from malfunctioning individual on-site wastewater treatment systems. The Strathmere section of Upper Township is a recreational island community characterized by high summer population densities and high groundwater levels.

Project Description

Upper Township proposes the planning, design and construction of a new sanitary sewage collection and interceptor system for the elimination of the existing improperly operating on-site systems. Wastes collected in this system will be pumped into the Avalon system for transmission to the proposed 7.67 mgd Seven Mile/Middle regional treatment facility. The collection and treatment of wastes generated by the Strathmere section of Upper Township were included in the Seven Mile/Middle regional plans.

COLLECTION SYSTEM

County

MORRIS

Existing Population

860

Service Area

Pequannock Township

Need for Project

The project is needed to improve existing wastewater treatment practices through the elimination of on-site disposal systems in a residential/commercial area and replacing them with a sanitary sewer system as well as for future growth. The soils in this service area are classified by the Soil Conservation Service as severely limiting for on-site disposal. The average housing stock in this area is in excess of 35 years and health surveys have indicated an incidence of septic system malfunctions and shallow aquifer contamination.

Project Description

This Phase III project will be an extension of the Phase I sanitary sewer system and will include the residential area between Greenwood Avenue and Pequannock Avenue and the commercial properties along the southern portion of Route 23. The proposed sewer system will provide the transmission facilities to convey the wastewater to the Pequannock, Lincoln Park and Fairfield Park Sewerage Authority (TBSA) facilities for ultimate treatment.

Service Area

Village of Vincentown

Need for Project

The Village of Vincentown is primarily a residential area currently using individual on-site wastewater treatment disposal systems. A survey report was made by the Burlington County Health Department, which showed that many of the systems are having serious problems.

Project Description

The topography of the area to be served (Village of Vincentown) is not steep sloped, but with gently sloping grades. The major obstacles are three small streams, which will be crossed by hanging insulated pipes on the existing bridges. 11,200 L.F. 8 inch san. sewer pipe and 3800 L.F. force main will be installed. The project also entails 230 laterals, 44 manholes, and pavement restoration.

COLLECTION SYSTEM

County

ATLANTIC

Existing Population

800

Service Area

South Egg Harbor City

Need for Project

The present disposal system for the area is a septic system, which is failing and may pose a threat to health and may also contaminate surface and groundwaters.

The Pinelands Commission has recently adopted a new ordinance that affects this area. The zoning of the South Egg Harbor City Section of the Township reflects this change and conforms to the Pinelands comprehensive management plan.

Project Description

The proposed sanitary sewer extension project consists of approximately 60,000 linear feet of 8-inch, 10-inch, or 12-inch diameter gravity sanitary sewer lines to service the existing population of the area. The system is designed to consist of 231 unsewered dwelling units (@ 3.5 persons per dwelling unit).

Two pumping stations will also be necessary. One is planned to be located along Pittsburg Avenue, the other along Bella Donna Street.

The wastewater flow from this area will be conveyed via the ACUA Pomona Pump Station to the ACUA Coastal Plant for secondary treatment, with effluent discharge to the Atlantic Ocean.

Barton's Lake and Fawn Lake Villages in Shamong Township

Need for Project

The Fawn Lake and Barton's Lake areas of Shamong Township have been experiencing onsite disposal problems for the past ten years. Barton's Lake Village is a development of 77 homes adjacent to Indian Mills Lake. This development is experiencing failures due to high groundwater and soil constraints.

The Fawn Lake Village is a mobile home park with approximately 114 units, served by combined septic systems. Problems experienced in the development appear to be associated with undersized systems and soil constraints. The Fawn Lake Village is adjacent to Springers Brook, a tributary of the Mullica River.

Project Description

The facilities plan indicates that two septic tank effluent collection systems, which will convey partially treated wastewater to two community leachfields, will be the most cost-effective solutions for the two problem areas.

Service Area

Silver Lake Area of Clayton

Need for Project

There are 105 homes within the proposed service area (Silver Lake) which have experienced problems and/or failures with their individual disposal systems. This situation has created a public nuisance.

Project Description

The proposed project is for the construction of collector sewers for the Silver Lake service area to the existing 8" gravity system on Bernard Street. The wastewater will be conveyed via an existing Gloucester County Utilities Authority interceptor to the regional plant in Paulsboro for treatment.

Service Area

Borough of Buena

Need for Project

A high water table and poor soil conditions contribute to the failure of the existing on-site systems. Continued reliance on inadequate systems may degrade groundwater quality in the area. In addition, the potential for ponding septage and other problems associated with system failure may create a public health problem.

Project Description

The project report will evaluate all feasible collection and on-site treatment alternatives in order to determine the most cost-effective and environmentally acceptable alternative to treat wastewater in those areas of Buena which are presently unsewered.

Service Area

Pequannock Township - Pequannock Avenue from Newark-Pompton Turnpike to Route 23 and a portion of Madison Street

Need for Project

The project is needed to improve existing wastewater treatment practices through the elimination of on-site disposal systems which serve a residential area of 61 units and replacing them with a sanitary sewer system. The soils in this service area are classified by the Soil Conservation Service as severely limiting for on-site disposal. The average housing stock in this area is in excess of 50 years and health surveys have indicated an incidence of septic system malfunctions and shallow aquifer contamination.

Project Description

The proposed project includes the construction of approximately 320 linear feet of 8-inch diameter PVC sewer main and 2,825 linear feet of 10-inch diameter sewer main and all necessary appurtenances to serve 61 properties. Also included in the project is a culvert crossing and the crossing of the City of Newark's twin water supply aqueducts. The proposed sewer system will provide the transmission facilities to convey the wastewater to the Pequannock, Lincoln Park and Fairfield Park Sewerage Authority (TBSA) facilities for treatment.

A storm drainage system is necessary to alleviate problems caused by flooding during storm events. A collection system is needed to service existing problem areas.

Project Description

The proposed project includes construction of a storm drainage system consisting of interconnected inlets with perforated pipe discharges into strategically placed detention basins. An 8" PVC gravity collection system will be constructed to connect to existing lines.

Need for Project

The Cohansey Aquifer from which the Cape May Water Utility draws its potable water is experiencing salt water intrusion. To prolong the life of the Cohansey Aquifer and to meet summer water needs, the City is proposing to derive 1.4 MGD of brackish water from the Atlantic City 800-feet deep sand aquifer and build a desalination facility employing a reverse osmosis process.

Project Description

The desalination facility will generate 1.0 MGD of potable water, 0.4 MGD of concentrate and 1,000 gpd of sanitary wastewater. The conveyance facilities is included in this project and involves the construction of two force mains. One force main will be 2-inch diameter, 2,300 feet long and will carry sanitary waste, membrane wash water and water from floor drains to the West Cape May Borough's sewer system where it will flow to the Cape May County MUA's STP for treatment and disposal in the Atlantic Ocean. The second force main will be 6-inch diameter, 2,700 feet long and will be designed to carry 0.4 MGD of desalination concentrate to the Cape Island Creek.

Avalon Borough

Need for Project

Infiltration/Inflow (I/I) studies conducted have revealed that the Borough Sanitary Sewer System is possibly subject to excessive I/I. Sanitary sewer lines are in excess of 80 years old. The leaking joints have caused sinkhole problems, accelerated street deterioration and excessive infiltration/inflow. Additional work is needed on the stormwater sewer system as well.

Project Description

The Borough proposes to replace the existing deteriorated sanitary sewer lines, service laterals and storm sewer lines including: refurbishing approximately 500 sanitary sewer manholes, relining the influent sewer line at the 23rd Street Pump Station, replacing sanitary lines on Heron Drive, Pelican Drive and the Business District, replacing storm lines in the Business District and replace/relocate 11th Street Pump Station and stormwater outfall.

COLLECTION SYSTEM

County

PASSAIC

Existing Population

8,060

Service Area

Bloomingdale

Need for Project

Some of the septic systems in the township are malfunctioning and causing potential environmental or health hazard situations and creating a public nuisance.

Project Description

This project involves construction of new sewerage system facilities including interceptors, pump stations, force mains, and collection systems and/or other alternatives for wastewater disposal problems in the areas of Morse Lake, Union Avenue, Hillside Drive and Vreeland Avenue. The wastewater would be conveyed to the Butler Bloomingdale Sewage treatment plant, which is to be upgraded and expanded to 2.5 MGD. The facilities plan work for the collection system project is currently under review.

Need for Project

A sewer system evaluation survey performed by the Millville Wastewater Utility (MWU) found that their 100 year old collection sytem has various structural, maintenance and excessive I/I problems. Repair and/or replacement is urgently needed.

Project Description

The project involves the rehabilitation of the Columbia Avenue force main, the Marlyn, Westwood Terrace, Rt. 49, Rieck Avenue main extension, the Rt. 47, Orange Street, Gorton Road main upgrade, the Ireland Avenue Pump Station Replacement and the hydraulic main upgrade from Ireland Avenue to the West Side Pump station.

(C) - Contracted for Septage Disposal

Need for Project

This project will provide the necessary septage receiving facilities to ensure the proper treatment and disposal of septage from MCUA's designated septage service area. The project will provide clean-up facilities for any spills during unloading and will enable all septage haulers to utilize the disposal site. Operations at the plant will be greatly improved and the waiting period which haulers are frequently subject to will be eliminated. This will reduce the illegal disposal of septage.

Project Description

The new receiving facilities will consist of a paved receiving area for septage trucks, a piping and walkway structure, a quality control and receiving station, and new septage pumps installed in the existing grit chamber control building basement. The receiving station will be designed to adequately handle up to 120,000 gallons of septage per day.

Borough of Bound Brook, East Brunswick Sewerage Authority, Township of Edison, Franklin Township Sewerage Authority, Township of Greenbrook, Borough of Highland Park, Borough of Metuchen, Borough of Middlesex, Monroe Township, City of New Brunswick, Borough of Milltown, Township of North Brunswick, Township of Piscataway, Borough of North Plainfield, Borough of Watchung, Township of Scotch Plains, City of Plainfield, Borough of South Bound Brook, Township of South Brunswick, Borough of South Plainfield, Borough of South River, Borough of Spotswood, Borough of Dunellen, Borough of Fanwood

Need for Project

Design capacities of sewer systems constructed prior to the use of secondary treatment methods did not set strict limits on the volume of infiltration and inflow within sanitary sewers since treatment costs were not greatly affected by these extraneous flows. In recent times, however, construction costs of conveyance facilities coupled with rising treatment costs associated with secondary treatment methods have resulted in efforts to eliminate infiltration and inflow in areas where it is proven to be cost-effective.

Project Description

The proposed project is for an Infiltration/Inflow correction program for the MCUA existing sewer systems which currently serve 26 municipalities and 10 direct industries encompassing approximately 350 square miles of densely populated and highly industrialized areas.

MT HOLLY SA

340817-02

SEPTAGE TREATMENT & DISPOSAL

County

BURLINGTON

Existing Population

358,290

Service Area

Several Municipalities in New Jersey

Need for Project

The State of New Jersey has mandated that all septic tank wastes (septage) be banned from disposal in unlined landfills as of March 15, 1985. Subsequently, as there are no adequate landfills in the County, an agreement has been reached between Burlington County and the Mount Holly Sewerage Authority in which the latter would act as the lead agency to dispose of the County's septage on an interim basis. However, the Authority's facility is not designed to accept septage and the septage management plan concluded that treatment plant modifications are necessary.

Since there are no adequate means of septage disposal in the County, initial investigations indicate that septage is being dumped illegally and, in all likelihood, is resulting in localized surface and ground water degradation.

Project Description

The proposed project will treat and dispose of all the septage generated in the County on a short term basis at relatively minor costs. The county-wide sludge/septage study (C340818-01) will plan for septage disposal on a long-term basis. The latter study may conclude that the Authority should dispose of septage also for the long-term. The plans and specifications recently submitted will provide for the following:

- 1. Screening and Grit Removal Equipment
- 2. Comminutor
- 3. Aerated Holding Tanks
- 4. Chlorination Equipment
- 5. Pumps
- 6. Odor Control
- 7. Prefabricated Structure

PARSIPPANY-TROY HILLS TWP 340806-03 SEPTAGE TREATMENT/DISPOSAL

County

MORRIS

Existing Population

257,370

Service Area

Boonton Town, Boonton Township, Denville Township, Dover Town, East Hanover Township, Hanover Township, Mine Hill Township, Montville Township, Mountain Lakes Borough, Mount Arlington Borough, Mount Olive Township, Netcong Borough, Parsippany-Troy Hills Township, Randolph Township, Rockaway Borough, Rockaway Township, Roxbury Township, Victory Gardens Borough, Washington Township, Wharton Borough, Florham Park Borough

Need for Project

Disposal of septage in unlined landfills was prohibited effective March 15, 1985 to prevent the danger of groundwater contamination. An alternative disposal method is to use existing treatment facilities. Therefore, the municipalities indicated above have been assigned to the Parsippany-Troy Hills treatment plant as designated in Appendix A of the Statewide Septage Management Plan. The project is necessary to insure that septage disposal for existing and future development is in conformance with said plan.

The Township of Parsippany-Troy Hills is in the last stages of completing the construction of a 16 mgd advanced wastewater treatment facility. The present septage handling facilities were adequate to handle the flows from just the immediate service area but they are not adequate to handle the quantity and quality of wastes directed to this facility by the Department.

It is the intent of this project to develop and implement a comprehensive plan to evaluate the capability of the treatment facility to accept additional septage wastes and to recommend necessary modifications be constructed.

Project Description

Parsippany-Troy Hills Wastewater Treatment Plant will have responsibility of treating an estimated 54,000 GPD of septage. In order to handle these wastes, Parsippany-Troy Hills has completed an NJDEP approved septage management plan which recommends construction of facilities that include the truck receiving area, gravel trap, coarse bar screens, holding tank, and associated appurtenances.

SEWER REHABILITATION

County

ATLANTIC

Existing Population

163,667

Service Area

The municipalities of Absecon, Atlantic City, Brigantine, Egg Harbor City, Egg Harbor Township, Galloway, Hamilton, Linwood, Longport, Margate, Northfield, Pleasantville, Somers Point and Ventnor.

Need for Project

The roofs on five of ACUA's pump stations are in very poor condition and subject to serious leaks and most be replaced or damage will occur to both the structure and the equipment and could severely effect the flow of influent within the system. Also, due to the excessive wear caused by natural sand, emergency repairs were required on some sections of ACUA's force mains. ACUA intends to investigate its force mains to locate other areas of excessive wear.

Project Description

The proposed project includes the upgrade and repair of five of ACUA's pump stations. ACUA also proposes to repair/replace approximately 5000 linear feet of the existing 30-inch Ventnor/Margate force main.

Service Area

Clayton Borough, Deptford Twp., Glassboro Borough, Mantua Twp., Monroe Twp., National Park Borough, Paulsboro Borough, Washington Twp., Wenonah Borough, W. Deptford Twp., Westville Borough, Woodbury City, and Woodbury Hts Borough

Need for Project

The Gloucester County Utilities Authority (GCUA) is presently disposing of sludge by incineration. The design capacity of the GCUA incinerator is inadequate to handle the 15 tons of sludge (dry weight basis) produced at the GCUA Regional Plant. As a result, the Authority proposes to add another fluidized bed to the existing incinerator in order to increase its design capacity.

The approved (201) Facilities Plan for the GCUA consolidated region calls for static pile composing as a long term sludge management alternative. Therefore, the Authority may be required to amend the facilities plan, should they intend to employ incineration as the most cost effective, environmentally sound and implementable long term sludge management alternative.

Project Description

The project will consist of the addition of a fluidized bed to the existing incinerator of the GCUA Regional Plant for disposal of all the sludges produced in the GCUA-consolidated region.

Service Area

Bedminster Township, Bernards Township, Bernardsville Borough, Branchburg Township, Bridgewater Township, Far Hills Borough, Hillsborough Township, Manville Borough, Millstone Borough, Montgomery Township, Peapack Gladstone Borough, Raritan Borough, Rocky Hill Borough, Somerville Borough, Warren Township

Need for Project

Disposing of septage in unlined landfills was banned on March 15, 1985 pursuant to amendments of the Solid Waste Management Act to prevent the danger of groundwater contamination. An alternative disposal method is the utilization of existing treatment facilities. Therefore, the municipalities indicated above have been assigned to the Somerset-Raritan Valley SA treatment plant as designated in Appendix A of the Statewide Septage Management Plan. The present facilities at SRVSA for handling septage wastes are inadequate to handle the quantity and quality of wastes proposed to be accepted. This project is necessary to ensure that septage disposal for existing and future development is in conformance with said plan.

Project Description

This project is for the construction of septage facilities at the SRVSA plant so that it may dispose of the septage generated in Somerset County. The septage management plan recommends that the design capacity of the septage receiving station at the SRVSA plant be 28,000 gallons per day. In addition, the plan is addressing management and implementation considerations. The septage plan will provide SRVSA with a septage treatment and disposal method that will enable the Authority to accept all the wastes from its designated areas while also meeting its discharge requirements.

WOODBRIDGE TOWNSHIP 340433-04

I/I CORRECTION

County

MIDDLESEX

Existing Population

69,830

Service Area

Woodbridge Township, Sewaren and Keasby sections

Need for Project

The sewer systems in the Sewaren and Keasby sections, constructed prior to the use of secondary treatment methods, did not set strict limits on the volume of infiltration and inflow within sanitary sewers since treatment costs were not greatly affected by these extraneous flows. In recent years, however, the construction costs of conveyance facilities, coupled with rising treatment costs associated with secondary treatment methods, have resulted in efforts to eliminate infiltration and inflow in areas where it is proven to be cost-effective.

Project Description

The proposed project is an Infiltration/Inflow Correction program for Woodbridge's existing sewer system within the Sewaren and Keasby sections. The Sewaren sewer system serves Avenel, Port Reading, Sewaren, and Woodbridge proper. Its drainage area encompasses 6,090 acres and contains 89.9 miles of sanitary sewer. The Woodbridge Interceptor (approximately parallel to the Woodbridge River) serves a majority of the system. The Keasby sewerage system serves Fords, Hopelawn, and Keasby. Its drainage area encompasses 2,389 acres and contains 30.2 miles of sanitary sewer.

Service Area

City of Plainfield, Township of Scotch Plains, Borough of South Plainfield, Borough of Watchung and Borough of Fanwood

Need for Project

The interceptor segment has experienced occasional surcharging and overflows which have caused a sewer connection ban to be imposed upon the service area. The project will alleviate the surcharging interceptor.

Project Description

The existing 42 inch diameter interceptor segment (approximately 2,600 linear feet) will be paralled by a new 42 inch diameter segment. Both pipelines will remain in operation to provide the required capacity.

SEPTAGE TREATMENT/DISPOSAL

County

SALEM

Existing Population

56,880

Service Area

Allowlay Township, Carney's Point Township, Elmer Borough, Elsinboro Township, Lower Alloways Creek Township, Mannington Township, Oldmans Township, Pennsville Township, Pilesgrove Township, Pittsgrove Township, Quinton Township, Salem City, Upper Pittsgrove Township

Need for Project

Approximately 30 percent of County residents employ on-lot individual septic systems to treat their wastewater. Currently, numerous problems exist with these systems as a result of their installation in inappropriate soils and due to inadequate design. This situation leads to nuisance conditions, possibility of public health problems, and localized groundwater quality degradation.

The problems in Salem County are further aggravated by the lack of adequate facilities to accept and properly dispose of septage pumpouts. The State of New Jersey mandated that septage be banned from all but lined landfills with leachate control effective March 15, 1985. There are no such facilities in the planning area. It is presumed that a good deal of illegal septage dumping is occurring in the County and that surface and groundwater quality degradation may result.

Project Description

The planning for this project is to provide two basic responses to the problem outlined above. The first response is to plan for the adequate treatment and disposal for all the septage generated within the County. The second is to develop an overall management system of the County where on-lot systems currently exist. These solutions would involve the application and innovation of advanced technologies to resolve these problems. The facilities plan will consist of the following components:

- 1. County-wide Septage Disposal Plan
- 2. On-lot Septic Tank Management Plan
- 3. Environmental Analysis
- 4. Full-scale Public Participation Program.

Implementation of the selected plan will resolve the problem indicated above in a cost-effective, environmentally sound manner.

Need for Project

A sewer system evaluation survey recently performed by Elson T. Killam Associates for the Passaic Valley Sewerage Commissioners' service area found excessive Infiltration/Inflow (I/I) in this municipality's sewer system. Raw sewage overflows were reported to have occurred on area streets.

Project Description

An Infiltration/Inflow (I/I) correction program, which will consist of grouting, slip lining, and repairing/replacing structurally damaged pipes and manholes, will be undertaken to remove the identified excessive I/I.

PUMP STATION, FORCE MAIN

County

CAMDEN

Existing Population

53,800

Service Area

The area north of the N.J. State Highway Route 42 in Gloucester Township

Need for Project

The existing pump station and force main are operating near its capacity and require frequent maintenance. The pump station's present locations does not allow for expansion due to environmental constraints and limitations of existing property. The project will allow for future development within the service area and provide emergency backup power. Other improvements to the existing service will also be provided.

Project Description

The project consists of construction of a pump station and associated force main. The proposed pump station will include three (3) submersible pumps within a concrete wetwell. An emergency generator will provide backup power to run the station during periods of electrical outages. A bar screen, odor control and possibly chemical injection to reduce Hydrogen Sulfide generation will be included in the improvements. A building with associated heating, ventilation and electrical work will house the bar screen, generator and controls. All necessary site work and access will also be included. Once the proposed pump station is completed, the existing pump station will have to be dismantled and abandoned. Since the existing pump station site does not have sufficient space, the authority will need to acquire the property located across the N.J. State Highway 168 (Black Horse Pike).

County

BERGEN

Existing Population

50,550

Service Area

Allendale Borough, Franklin Lakes Borough, HoHoKus Borough, Mahwah Township, Midland Park Borough, Ramsey Borough, Saddle River Borough, Upper Saddle River Borough, Waldwick Borough, Wyckoff Township

Need for Project

Although the unsewered areas are included in the Planning Area for Northwest Bergen County Utilities Authority, there is presently no formal provision to treat septage from these areas. Septage from NWBCUA is presently being taken by informal agreement to Bergen County Utilities Authority treatment plant. The distance to this facility creates a climate for illegal dumping. The lack of a long term formal arrangement with Bergen County is unacceptable, and the lack of quality assurance is unacceptable.

Project Description

This project will provide for the construction of septage handling facilities to receive all septage generated within the planning area for treatment at the Northwest Bergen treatment plant. The septage facilities will provide for quality assurance to prevent treatment plant upset, and will provide odor control. The construction of septage facilities in conjunction with the initiation of a voucher system for tracking septage from "cradle to grave" will assure control, collection, disposal, and treatment of septage wastes from approximately 50,000 people in the planning area, thereby eliminating present unacceptable trucking and disposal of septage.

Service Area

Township of Wayne

Need for Project

This project is for the minor rehabilitation of the Township's existing sewer system. A sewer system evaluation survey concluded that approximately 1.5 million gallons per day (MGD) of excessive Infiltration/Inflow could be removed from the system cost-effectively. This project would ensure the removal of the 1.5 MGD by the accomplishment of this rehabilitation work.

Project Description

The proposed Phase I project (C340393-06) is to rehabilitate portions of the existing sewer system in the area of Pines Lake and Packanack Lake. The work for Phase I includes inversion lining of 3,160 linear feet (LF) of sewer pipe, replacement of approximately 5,130 LF of sewer pipe, grouting and air testing, and rehabilitation of 11 manholes. Phase II investigations (C340393-07) will be required to eliminate all excessive infiltration/inflow for other portions of the existing sewer system.

County

MONMOUTH

Existing Population

43,910

Service Area

Neptune Township, Avon-By-The-Sea Borough, Bradley Beach Borough, Ocean Grove Camp Meeting Association

Need for Project

The infiltration/inflow analysis has found that the system is subject to excessive infiltration/inflow (I/I).

Project Description

The project will consist of an I/I correction program that is found to be cost-effective during the Sewer System Evaluation Survey. Common methods of rehabilitation are 1) grouting of joints and cracked pipes; 2) slip-lining of select reaches of sewer; and 3) total replacement of select reaches of sewer. The proposed I/I correction project will not have an appreciable effect on the treatment plant's ability to meet the established effluent limitations.

WEST ORANGE TOWNSHIP 340865-01

INTERCEPTOR SEWERS

County

ESSEX

Existing Population

39,110

Service Area

West Orange Township

Need for Project

The existing sewerage system in West Orange has inadequate capacity to allow for future growth potential. New interceptors and appurtenances are required to provide the needed reserve capacity for both planned and proposed sewer connections. The Township of West Orange is included within the sewer service area of the Essex/Union Joint Meeting. Since this project will have no direct impact upon existing water quality, only discharge category points for new systems can be justified.

Project Description

Proposed is the construction of new interceptors consisting of both gravity sewers and pump station/force main and appurtenances to provide additional capacity for the First and Second Mountain areas of West Orange and Livingston. An old interceptor line (PS/FM and Gravity) is also proposed for replacement as part of a major sewer system rehabilitation effort.

Cherry Hill Township

Need for Project

To remove aging septic systems and replace them with sanitary sewer extensions and to rehabilitate aging pump stations.

Project Description

The Township of Cherry Hill plans to extend their sanitary sewers to reach several remaining unsewered sections of the Township. The various extensions are spread throughout the Township. The project will consist of gravity sewer mains, several force mains, house connections, all restorations and appurtenances. Also, the Peppermill Pump Station and Batesville Pump Station will be rehabilitated. The project may include the elimination of the School Lane Pump Station and connection by gravity sewer to an existing Camden County MUA interceptor. The Peppermill Pump Station has an existing peak flow rate of 0.13 mgd, and the Batesville Pump Station has an existing flow rate of 0.52 mgd. Each pump station will have their wetwells and pumps replaced along with related electrical services.

Service Area

City of Orange

Need for Project

A sewer system evaluation survey recently performed by Killam Associates for the City of Orange recommended that the combined sanitary/storm sewer systems should be eliminated by internally sealing the overflow weirs in the combination sanitary/storm sewer manholes. In conjunction with sealing the overflows, a program of sewer pipe rehabilitation should be undertaken to reduce infiltration and sewer surcharging conditions.

Project Description

A phased program of sewer system rehabilitation to eliminate sanitary sewer overflows to the Wigwam Brook is being undertaken by the City. The first phase of this program will include sealing the overflow weirs in 21 combination sanitary/storm sewer manholes, replacement of approximately 250 linear feet of 15" and 18" sewer pipe, and sealing underdrain access openings in 20 manholes. The second phase includes replacing approximately 245 linear feet of sewer pipe and slip lining approximately 830 linear feet of pipe. The third phase includes eliminating a bend in the interceptor sewer by constructing a new manhole.

STP IMPROVEMENT, COLLECTION SYSTEM

County

BURLINGTON

Existing Population

31,340

Service Area

Portions of Pemberton Township including areas designated as regional growth within the Pinelands

Need for Project

The implementation of the upgrading of the Pemberton Township Municipal Utilities Authority Wastewater Treatment System will serve to enhance the groundwater quality in those area which are presently serviced by on-site septic systems. The properly planned expansion of the system will protect the environment from improper discharges to the groundwater and surface water. The upgrading of the existing facilities at the Authority's STP will be necessary to maintain the high level of treatment required for discharge into the North Branch of the Rancocas Creek in accordance with NJPDES permit No. NJ0024821. The existing plant is over twenty (20) years old is in need of rehabilitation and replacement of equipment. In the event that the collection system is enlarged the treatment plant capacity will have to expand to meet the demand.

Project Description

The proposed project includes the construction of a regional collection system and repair/replacement of various treatment units to improve treatment capabilities at the Pemberton Township MUA's STP.

Service Area

Awosting STP area of West Milford Township

Need for Project

The Awosting STP service area is subject to excessive infiltration/ inflow (I/I), as demonstrated in the May 1997 I/I Evaluation Study Project Report. The Awosting STP is permitted for an average daily flow of 45,000 gallons per day (GPD), but peak conditions can result in total system flows up to 1,000,000 GPD. This has resulted in sewage overflows near the plant and direct discharge into the Wanaque River, which flows into the Monksville Reservoir, a potable water supply source and a trout fishery. DEP has issued a Treatment Works Approval authorizing the construction and operation of temporary wet weather treatment system to address the overflow situation. Additionally, the Authority has recently executed a Consent Order with DEP that mandates the implementation of the Phase 1 project in accordance with an established compliance schedule.

Project Description

The proposed project represents phases 2 and 3 of a three-phase project for the implementation of I/I correction measures to eliminate all existing overflows. This may include the cost-effective replacement of defective and/or leaking sewers, as well as standard sewer system rehabilitation measures.

340769-02

I/I CORRECTION

County

BERGEN

Existing Population

25,090

Service Area

Borough of Carlstadt and portions of Rutherford and East Rutherford

Need for Project

The Bergen County Utilities Authority conducted an Infiltration/Inflow (I/I) analysis and sewer system evaluation survey which concluded that excessive I/I existed in the sewer system. The correction of this I/I will be cost-effective and result in the improved operation of a 13.8 MGD pump station used for the conveyance of sewage from the Joint Meeting STP to the Bergen County Utilities Authority system. Water Quality violations are currently experienced for dissolved oxygen, fecal coliform, and toxics standards due to the raw discharges of the existing Triboro Joint Meeting Treatment plant into the Hacken-sack River (SE-2).

Project Description

The project will consist of rehabilitation work to remove a portion of the excessive I/I. The rehabilitation project may include repair and/or grouting of sewers and joints, sealing manholes, repair/replacement of defective manhole covers and other standard rehabilitation measures. This project will also eliminate sewerage system overflows.

I/I CORRECTION

County

BERGEN

Existing Population

21,380

Service Area

Edgewater, Cliffside Park (portion), Fort Lee (portion)

Need for Project

To eliminate the excessive infiltration and inflow to extend the useful life of the sewer.

Project Description

There are approximately 25 miles of existing sewers in the Borough. The Edgewater STP presently has an influent rate of 3.3 mgd, of which 0.37 mgd has been identified as possibly being excessive. The sewer system evaluation survey program is currently in the process of identifying and verifying those areas which are susceptible to the excessive I/I. I/I correction as determined to be cost effective will follow.

I/I CORRECTION & SEWER PUMP

County

UNION

Existing Population

21,370

Service Area

Township of Hillside

Need for Project

The existing collection system serving the Township is very old, and is subject to an extreme amount of I/I. Rehabilitation of the entire sanitary sewer system is necessary to remove 650,000 gpd of I/I to prevent overflows from the existing collection system and back-ups into residential and industrial establishments.

Project Description

This proposed project will be for an I/I correction program to eliminate the portion of I/I that is excessive and detrimental to the existing collection system. In some cases minor replacement may be necessary. Also proposed is the major rehabilitation of an existing sewage pumping station.

CARTERET BOROUGH 340939-01 I/I CORRECTION

County

MIDDLESEX

Existing Population

19,270

Service Area

Borough of Carteret

Need for Project

Having an old sewer system, the rate of infiltration/inflow (I/I) during storm events in Carteret is very high. Carteret's main pumping station receives flow far greater than its pumping capacity at such times. This project will relieve the load on the pumping station and ultimately on the Middlesex County Utilities Authority treatment plant.

In general, the structural integrity of the existing 5 pumping stations, sewer lines and manholes is in question. They need to be replaced, upgraded and/or rehabilitated. At some locations sewer lines need to be upsized to eliminate hydraulic overloading and overflows from manholes during peak flows.

Project Description

The proposed project includes an I/I correction program consisting of grouting, lining, and repairing/replacing structurally damaged pipes and manholes. In addition, 5 pumping stations will be upgraded and an interceptor may be increased in size.

DUMONT BOROUGH 340922-01

SEWER REHABILITATION

County

BERGEN

Existing Population

17,710

Service Area

Dumont

Need for Project

The existing Sanitary Sewer System serves the Borough of Dumont and is approximately 65 years old. Treatment of the wastewater collected is provided by the Bergen County Utilities Authority at the Little Ferry Treatment Plant. Field investigations and existing records available at the Department of Public Works of the Borough of Dumont reveal that the condition of the sanitary sewer system is substandard. There are many sections of this mostly clay pipe system that have been troublesome, resulting in frequent blockages and requiring significant efforts and time by the Department of Public Works to clear the lines. These blockages and problems are caused mainly by undersized piping, cracking of pipes, root intrusion, offset joints and inadequate slopes.

The purpose of the program to rehabilitate the Sanitary Sewer System is to correct these problem areas and also to decrease the amount of infiltration into the system.

Project Description

The areas of the system requiring rehabilitation were selected based on the problems incurred as recorded in the Department of Public Works files and past field investigations.

The proposed scope of work will be carried out in four (4) phases over a 4-year period. The first phase will cover the southwest quadrant of the Borough where the system connects up with Bergen County Utilities Authority's System; the second phase will cover the northwest quandrant; the third phase, the southwest quadrant; and the fourth and final phase, the northeast quadrant.

WARREN CO LOPAT SA 340580-04 I/I CORRECTION

County

WARREN

Existing Population

15,420

Service Area

The Warren County-Lopatcong Creek Sewerage Authority is retaining a spot on the Priority List for rehabilitation of the local collection systems within their 201 Facilities Planning Area. The planning area lies in the Delaware Watershed and includes Alpha Borough and Lopatcong, Pohatcong, Harmony and Greenwich Townships.

Need for Project

Sanitary collection systems currently serve Alpha, Lopatcong, and Pohatcong. The existing Phillipsburg plant (NJ0024716) presently treats domestic and industrial waste from the above municipalities. Constructed in 1950 - 1951 with a design capacity of 3.5 MGD, the plant provides secondary treatment by means of an activated sludge process. Present flows average slightly over 2.1 MGD, but peak conditions can result in flows over 6.0 MGD which lead to a by-pass of the plant and direct discharge of untreated effluent into the Lopatcong Creek, FW2-TM (tributary to Delaware River). There also are known cross connection between the storm and sanitary sewerage systems. These raw discharges result in frequent violations of fecal coliform standards, and marginal degradation from nutrient and toxic impacts. An I/I analysis included in the facilities plan concluded infiltration to be non-excessive, but recommended a Sewer System Evaluation Survey (SSES @ \$26,000) to study the removal of excessive inflow and the elimination of the system by-passes.

Project Description

The proposed SSES will refine the conclusions of the I/I analysis and make recommendations for I/I correction. The project will allow for the construction and implementation of the cost effective rehabilitation measures. This will result in the abatement of the raw sewage by-pass problem presently experienced both in the collection systems and at the plant.

Need for Project

Equipment at the Township's treatment plant and three pump stations have reached their useful life and need to be replaced.

Project Description

The proposed project includes the replacement of equipment at the Township's treatment plant and three pump stations. Work includes new plant equipment and systems and sewer and maintenance equipment. A jet-vac truck and an equipment van will be purchased. Pumps will be replaced in 3 pumping stations.

Need for Project

An infiltration/inflow (I/I) analysis has concluded that excessive I/I exists in the sewer system. Additional studies will define this excess quantity and propose an I/I correction program to eliminate a portion of the excessive I/I.

Project Description

This project is for the I/I correction of the Township's sewer system. The project involves grouting of manholes, raising and resetting manhole frames and covers, internal pressure grouting of sewer joints, excavation and removal of 2 storm sewer connections, repair of one service connection, and elimination of sump pumps, roof leaders and yard drains. This I/I correction project does not affect the treatment system.

LITTLE FALLS MUA 340716-04 I/I CORRECTION

County

PASSAIC

Existing Population

12,220

Service Area

Township of Little Falls

Need for Project

The Little Falls Collection System consists of approximately 120,000 linear feet of pipe in size from six to eighteen inches diameter. Eighty-nine percent of pipe is clay tile, ten percent is asbestos cement, and one percent is cast iron pipe. Interviews with the plant operator indicate that sewers in the western section of Little Falls surcharge and overflow during periods of heavy rain and high Passaic River levels. Overflows also occur at the Hopson Street Pumping Station, which receives sewage flow from the easterly section of Little Falls.

Project Description

This proposed project consists of a sewer system evaluation study utilizing manhole inspection, rainfall simulation, and T.V. inspection and the minor rehabilitation of the Township's existing sewer system to eliminate the portion of the I/I that is excessive.

Need for Project

To eliminate excessive inflow into the sewer system.

Project Description

The Ajax Terrace sewage treatment plant has a sewer configuration 50 miles in length with a dry weather flow of 0.94 mgd. The infiltration has been determined to be nonexcessive. However, excessive inflow does exist since the plant flow records indicated that the wet weather flows were as much as 4 times greater than the dry weather flows. Inflow investigation is presently underway to identify the locations, magnitudes, and causes of this inflow problem. It is expected that a sewer system evaluation survey and I/I correction program will follow.

SEWAGE TREATMENT & DISPOSAL

County

WARREN

Existing Population

11,990

Service Area

Hackettstown Town, Independence Township

Need for Project

Disposing of septage in unlined landfills was prohibited as of March 15, 1985 to prevent degradation of groundwater quality. An alterna- tive disposal method is the utilization of existing treatment facili- ties. Therefore, the municipalities indicated above have been assign- ed to the Hackettstown Municipal Utilities Authority treatment plant as designated in Appendix A of the Statewide Septage Management Plan. This project is necessary to ensure that septage disposal for existing and future development is in conformance with said plan.

It should also be noted that the present facilities for handling septage wastes generated within the above service area are inadequate to handle the quantity and quality of wastes proposed to be accepted.

Project Description

A septage management plan has already been approved by the NJDEP. The facility plan recommends the construction of additional septage handling facilities at the HMUA wastewater treatment plant. The proposed facilities consist of a receiving station, receiving chamber, holding tank, pumping station, piping, valves and miscellaneous equipment to provide the capability of diverting septage at a controlled rate to the primary digester or the division box upstream of the primary clarifier.

Need for Project

The FPSA owns and operates a collection system, ranging from 1 to 33 years old and interceptor sewers dating back to 1964. During periods of high groundwater or wet weather, the FPSA STP experiences high flows. Peak flows have exceeded 5 MGD.

Project Description

The proposed project consists of a flow monitoring program leading to an I/I reduction program consisting of repair and/or replacement to eliminate excessive quantities of I/I.

WATERFORD TOWNSHIP MUA 340163-01 COLLECTION SYSTEM

County

CAMDEN

Existing Population

10,940

Service Area

Waterford Township

Need for Project

The proposed service area is currently using on-site systems. The area is in the Pinelands regional growth area; the Pinelands management plan promotes sewers in the growth area due to higher densities and water quality issues.

Project Description

The proposed project includes installation of sewer mains, force main and one pump stations. The proposed force main will connect to an existing sewer main which then pumps into the CCMUA regional system.

I/I CORRECTION

County

MIDDLESEX

Existing Population

10,500

Service Area

Borough of Sayreville (Morgan and Melrose Sections)

Need for Project

The sewer systems in the Morgan and Melrose sections of Sayreville Borough constructed prior to the use of secondary treatment methods did not set strict limits on the volume of infiltration and inflow within sanitary sewers since treatment costs were not greatly affected by these extraneous flows. However, in recent years, the construction costs of conveyance facilities, coupled with rising treatment costs associated with secondary treatment methods, have resulted in efforts to eliminate infiltration and inflow in areas where it is proven to be cost-effective.

Project Description

The proposed project is to provide I/I correction for Sayreville's existing system.

I/I CORRECTION

County

ATLANTIC

Existing Population

9,880

Service Area

The service area consists of the City of Brigantine. It is located north of Atlantic City on an island in Reeds Bay.

Need for Project

The City of Brigantine has a wastewater collection system which consists of approximately 187,300 linear feet of pipe. A total of 121,912 linear feet is subject to excessive infiltration. The amount of infiltration that can be cost effectively removed with sewer system rehabilitation is approximately 138,200 gpd.

Project Description

An infiltration/inflow study will be performed on the sanitary sewer system within the City of Brigantine. The proposed project includes the televising and inspection of approximately 150,000 LF of sanitary sewer main. Spot repairs of leaky joints will also be included.

County

MIDDLESEX

Existing Population

7,840

Service Area

City of South Amboy

Need for Project

The sewer systems in the City of South Amboy, constructed prior to the use of secondary treatment methods, did not set strict limits on the volume of infiltration and inflow within sanitary sewers since treatment costs were not greatly affected by these extraneous flows. However, in recent years, the construction costs of conveyance facilities, coupled with rising treatment costs associated with secondary treatment methods, have resulted in efforts to eliminate infiltration and inflow in areas where it is proven to be cost-effective.

Project Description

The proposed project is to provide I/I correction for South Amboy's existing sewer system.

COLLECTION SYSTEM

County

ATLANTIC

Existing Population

7,700

Service Area

The service area is bounded by the Atlantic City Expressway to the North, the Egg Harbor Township boundary to the East, West Jersey Avenue to the South and the Hamilton Mall area to the West.

Need for Project

The project is necessary to provide sewer service to the areas of the Township which are not presently sewered in order to prevent future contamination of the ground water quality.

Project Description

The proposed project consists of the construction of a collection system within Hamilton Township. The flow will be conveyed through two pump stations and gravity sewers of PVC design ranging from 8-inch to 24-inch. The estimated design flow is 1.2 MGD. The wastewater will be treated at the Atlantic County Utilities Authority (ACUA) City Island Treatment Plant.

Service Area

Portions of the following sewer subsystems in the Township: Village South, Birchwood South and Birchwood North

Need for Project

An Infiltration/Inflow Analysis was performed in 1990 which indicated the major areas of I/I problems. These areas have excessive I/I which reduces the capacity of the Sewage Treatment Plant. The line in the Village South area is a major trunk line in a low lying area that is often flooded and has major infiltration problems. Sewage Treatment Plant improvements need to be carried out to improve plant operations and plant efficiency.

Project Description

The proposed project includes the replacement of approximately 30000 LF of 8", 10", 12" and 18" sanitary sewer, manholes, laterals and related appurtenances. The project will be segmented and the first segment will involve rehabilitation of Himmelein Road sewer and Christopher Mill Road force main. Also, proposed in this segment is the STP improvements which involve installation of grit removal system and sludge thickener cover.

Service Area

Borough of Barrington

Need for Project

The Borough of Barrington's sanitary sewer collection system is known to experience excessive amounts of infiltration and inflow. Municipal pump stations operate continuously during times of inclement weather and when the groundwater table is high.

Project Description

The proposed project is for an Infiltration/Inflow correction program to eliminate excessive I/I from the sewerage system.

Service Area

Borough of Bernardsville

Need for Project

Based on an infiltration/inflow analysis sponsored by the Somerset County Planning Board, the Upper Raritan Watershed Wastewater Facilities Plan recommends a Sewer System Evaluation Survey (SSES) be performed on the Bernardsville sewer system.

Project Description

The SSES will include a physical survey of the Bernardsville sewer system, including manhole inspections and flow inspection (measurement of sewage flows in isolated reaches of pipe), rainfall simulation and smoke testing, building inspection of units suspected of contributing inflow to the sanitary sewers, and television inspection. I/I cor- rection in accordance with the recommendations of the SSES will follow.

Service Area

Borough of Dunellen

Need for Project

The majority of the sanitary sewer system of Dunellen was installed around 1915. The system consists of vitrified clay pipe, which has been cracking and failing. Over the past four years, the Borough has had to replace or reline several thousand feet of trunk line at a cost of almost \$1 million.

Project Description

The proposed project consists of relining or replacing all the trunk lines in the Borough, upgrading and repair of Borough's pump station, upgrading and sealing manholes, and televising and clean remaining system.

HOPEWELL TOWNSHIP 340282-02 COLLECTION SYSTEM

County

MERCER

Existing Population

6,150

Service Area

The service area includes from Route 31 north of Woodsville Road to Dublin Road and east to an existing railroad right-of-way.

Need for Project

The Route 31 service area is severely constrained for individual subsurface disposal systems because of high groundwater tables and rock. The Pennytown site currently discharges all of its waste to a holding tank due to septic system failure.

Project Description

The proposed project includes the construction of gravity collection sewers, force mains and pump stations. The sewage will be conveyed to the Stony Brook Regional Sewerage Authority for treatment.

Need for Project

The existing pump station located at Jony Drive was built in 1969 and has exceeded its useful life. In addition, development of the Meadowlands Mills project requires additional sewer capacity in the project area. The Barell Avenue Pump Station requires a complete refurbishment of the existing equipment due to a substantial flow increase from the Meadowlands Mills project.

Project Description

The proposed project involves the construction of a new pump station located adjacent to the existing pump station on Jony Drive. The new pump station is planned to handle an average flow of 2.2 MGD with a peak flow of 6.4 MGD. The existing 18 inch force main was designed to handle this peak flow. The sewage is conveyed to Bergen County Utilities Authority for treatment and disposal. Also included in the project is the replacement of the existing pumps and equipment and other modifications as necessary to meet present day safety requirements in the Barell Avenue Pump Station.

Need for Project

The sanitary sewer lines are over 60 years old. Many leaking joints have caused sinkhole problems, accelerated street deterioration and results in excessive infiltration and inflow into the City's sewer system. The sewage has the potential to pollute surface water through exfiltration of the sanitary system combined with infiltration into the storm sewer system which discharges to the back bay.

Project Description

The proposed project involves reconstruction and replacement of sewer mains, manholes, and sewer laterals in a forty block area of the City.

Borough of Roseland

Need for Project

The excessive inflow and infiltration condition results in surcharging of the collection system. In addition, the excess flow is being directed to the Caldwell STP and these additional volumes result in higher treatment costs to the Borough of Roseland.

Project Description

The Borough has conducted preliminary field investigations and determined that several residential neighborhoods are experiencing significant inflow/infiltration problems. These impacted areas represent approximately twenty (20) percent of the utility users. The Borough will embark upon final studies to determine the exact location and magnitude of the problems. The rehabilitation work will include air testing and chemical grouting of approximately 8,000 linear feet of sanitary sewer.

I/I CORRECTION

County

MIDDLESEX

Existing Population

4,430

Service Area

Sayreville Borough

Need for Project

The southern and western portions of the Morgan Section of the Borough of Sayreville are presently served by a series of six municipal pump stations and one privately owned pump station which convey the wastewater flow to the Middlesex County Utilities Authority's secondary treatment facility. The gravity collection system downstream of the discharge of a major basin pumping station is subject to surcharge to the point of overflow during dry weather, peak flow periods. Anticipated growth in the area will additionally stress the already overloaded conveyance facilities.

Project Description

The proposed project calls for the construction of a gravity interceptor, regional pump station and force main, and the upgrading of four existing sub-regional pump stations. The wastewater flow will ultimately discharge directly to the Middlesex County Utilities Authority gravity sewer which runs parallel to the New York and Long Branch railroad.

Need for Project

The existing collection system is deteriorated with cracked pipes and open joints. Consequently, the infiltration/inflow (I/I) levels in the sewer system is possibly excessive.

Project Description

The proposed project consists of rehabilitation of the sewer system through the replacement of existing cracked pipes with PVC lines.

Portions of Cranbury Township

Need for Project

Cranbury Township Planning Board recently changed their zoning on the east of Route 130 to permit 100% warehouse development. This has caused a dramatic increase in growth on the east side of Route 130 during the past year. The installation of the proposed sanitary system would benefit future development in the area east of 130. By diverting all flows presently directed to the Village Area Pump Station from the east side of Route 130, the Village Area Pump Station and force mains will have sufficient capacity for all projected flows west 130.

Project Description

The proposed project includes installation two new pump stations, one at 1.75 MGD with 1700 LF of 12" force main, the second at 3.75 MGD with 4000 LF of 16" force main.

AVON-BY-THE-SEA BOROUGH 340335-01 SEWER REHABILITATION

County

MONMOUTH

Existing Population

2,350

Service Area

Avon-By-The-Sea

Need for Project

An economic study of flow level with sewer improvements versus Township of Neptune Sewerage Authority current charges for flow, indicates that flow levels may be in excess of contractual amounts. The excessive flow results in dilute flow into the treatment plant. This contributes to unwarranted costs and possible penalties for excessive flow. The original sewer system was constructed prior to 1920.

Project Description

The proposed project would reduce infiltration of groundwater into the existing sewer system and includes sleeving/lining of the sanitary sewers, grouting all connections to the trunk sewers, repairing and replacing manholes and the replacement of the deteriorated sewer on Lincoln Lane.

Borough of Chester

Need for Project

The only means of wastewater treatment/disposal in Borough is via septic systems. These systems are old and experiencing significant rate of failure resulting in pollution problems for the Borough and adjacent municipalities. Funding is necessary to provide treatment to eliminate these conditions.

Project Description

The Borough proposed the construction of a wastewater treatment facility (WWTF) to service the Borough. The project includes the required collection and conveyance system components to eliminate the failing septic-systems.

Service Area

Bay Head Borough

Need for Project

The Borough of Bay Head has an old sewerage collection system consisting of clay pipes and lead joints. Cracked pipes and weak joints lead to excessive infiltration/inflow to the existing sanitary sewers. During wet weather, the infiltration/inflow to the system peaks at 0.8 mgd. It is cost effective to perform I/I correction as compared to transporting and treating these extraneous flows at the Ocean County Utilities Authority Wastewater Treatment Facility.

Project Description

At present the project is in Phase II of SSES. This consists of preparatory cleaning and internal TV inspection of 15,281 linear feet and smoke testing of 29,005 linear feet of sewer line. Dye water flooding and dye tracing will be done at the conclusion of smoke testing. In addition, a pilot grouting program of the worst 10 lines will also be undertaken during this phase and the results so obtained will be used in the subsequent work in Phase 3, which will consist of the I/I correction of the remaining lines with excessive infiltration/inflow, grouting of 17 leaking manholes and utilizing manhole inserts to eliminate inflow in 47 manholes. The I/I correction program will remove extraneous flow from this sewer system.

STP INFLUENT PS, GRIT CHAMBER

County

CUMBERLAND

Existing Population

54,780

Service Area

City of Vineland, part of Franklin Township and part of Pittsgrove Township

Need for Project

Facility was previously upgraded under a federal Construction Grant as Project No. C340461-02-2 and TWA SO-8-86-6073 without grit and scum removal. Under existing conditions, the influent flow is pumped twice and this is inefficient. The project will result in one central pumping facility with grit/scum removal which will improve the operational reliability of downstream treatment units.

Project Description

Construction of four (4) 60-inch diameter open flight screw pumps (archimedes screw) for a design flow of 12.2 MGD and peak of 24.3 MGD. Each screw capacity will be 8.1 MGD, with one unit as standby. Due to the efficiency of the screw pump, estimated power savings would be \$10,000/yr. Metering will be by two Parshall flumes, chart recorded and mechanical barscreens. The grit/grease removal system will consist of a 3.2 x 36 meter grease removal channel and a 3.4 x 36 meter grit removal channel with the associated mechanical and aeration systems. A biofilter will be constructed to control odors from the proposed enclosed screw pumps as well as the headworks facility.

Need for Project

Sediment build up in many of the lakes and ponds in the County has lead to poor water quality, algae growth, mosquito breeding, odors and low oxygen levels. Many beach closings are attributable to stormwater runoff from coastal lakes. Deepening the lakes will improve habitat and increase assimilative capacity for nutrients and other pollutants.

Project Description

The proposed project includes establishment of a silt removal program including purchase of dredging equipment and implementation of other measures to restore lakes and ponds to their original storage capacity.

Hero's Island in Pennsuaken/Cherry Hill

Need for Project

Veteran's Island in the Cooper River is suffering serious erosion with its banks being washed away at a rapid rate causing silt build-up elsewhere in the river and effecting the overall quality of the river. The Island also acts as a natural barrier to erosion along a sensitive area of Cooper River Park. The Island's banks need to be restored and stabilized to stem erosion and reduce solids transportation.

Project Description

The proposed project includes a bank restoration and stabilization through bulkheading to provide for safe embankments and prevent further soil erosion.

Need for Project

Existing water quality of Haddon Lake has been degraded by undetained stormwater runoff from urbanized upstream drainage and runoff of nonpoint organic pollutants from the shoreline. Bank stabilization will create an in-line sedimentation basin for filtration of stormwater runoff and banks planted with wetland vegetation will filter nonpoint pollutant sources around the lake perimeter.

Project Description

The proposed project includes dredging of sediment from the lakebed coupled with rip rap stabilization of existing stormpipe outfalls and stabilization of eroded banks using a combination of bioengineering and structural improvements.

Trotters Lane Branch Drainage Area

Need for Project

The project is needed to relieve flooding in Morris Avenue and in the Kean College Dormatory area and to screen out debris from the stormwater prior to discharge in the Trotters Lane Branch of the Elizabeth River. The existing brick storm drain from the west side of Morris Avenue to the Elizabeth River is too small and needs to be replaced.

Project Description

The proposed project involves the replacement of the storm drain with an adequately sized concrete box culvert. The upstream end of the culvert will be equipped with a screen to collect debris.

Township of Union

Need for Project

The areas of the Township along the East Branch of the Rahway River are prone to flooding due to lack of adequate floodwalls. These same areas also lack stormwater drainage systems. Flooding and uncontrolled storm runoff result in more pollutants ultimately discharging into the River.

Project Description

The proposed project includes construction of a floodwall and earth dike along the eastern shore of the East Branch of the Rahway River adjacent to the Franklin Street, East Branch Street, and Muir Place areas of the Township. Construction of an interior drainage system, a local detention basin, and a stormwater pumping station at the detention basin outlet is also proposed to serve these areas.

Ewing Township

Need for Project

The Township needs to reduce flooding and reduce solids transportation. The project would reduce the sediment load to prevent creation of sediment islands and minimize the scour effect on stream banks.

Project Description

The proposed project will address the degradation of the water quality in a tributary to the Gold Run by stabilizing its banks and restoring the bed to its original configuration. The stream has many areas of severe erosion that are causing significant property damage. The stabilization is approximately 1300 feet in length and will restore the conveyance area to reduce erosive velocities.

Pemberton Township

Need for Project

Construction of a road salt storage building will provide an effective runoff control system for the prevention of ground and surface water contamination from storm event runoff. Presently, at the municipal complex, there is no protection from the weather for the Township's salt storage; road salt is stockpiled outdoors and exposed directly to rain and snowfall. Storm runoff from the salt storage site flows to a large freshwater wetland area located immediately adjacent to the municipal complex. Indoor storage of road salt will eliminate runoff saturated with road salt from draining into this wetland system.

Project Description

This project consists of construction of a salt storage building. The project will include on-site stormwater retention facilities. The building will also include apparatus for storage of road salt spreading equipment when not in use.

Need for Project

The Borough plans to inspect and map the storm sewer system to identify sensitive areas affected by the discharge of storm sewer flows and to locate any existing cross connections. This will enable the Borough to respond better to potential future hazardous material spills. In addition, storm sewer system cleaning and rehabilitation will improve water quality and reduce localized flooding.

Project Description

This project proposes to clean, TV inspect, and map the existing storm sewer system. Deteriorated catch basins and manholes will be rehabilitated, broken pipes replaced or repaired and any cross connections eliminated.

Service Area

Borough of Matawan

Need for Project

The Borough of Matawan is located in a relatively low lying area surrounding Lake Lefferts and Matawan Lake. Periodically, the Borough's storm sewers collect debris and contaminants which eventually pass through the storm sewer system and into the lakes and surrounding waterways. The Borough is concerned with the non-point source pollution problem and believes this problem can be reduced through better maitenance which will be enhanced by the use of "Jet Vac" equipment and certain specific improvements to the existing stormwater facilities.

Project Description

The proposed project involves the purchase of a Jet-Vac Truck to clean debris from the storm sewers and minimze adverse impacts on Lake Lefferts.

Service Area

Borough of Keyport

Need for Project

The Borough needs to remediate certain areas which experience flooding and properly maintain its stormwater sewers. The existing facilities adversely impact water quality in the Raritan Bay.

Project Description

The proposed project involves the construction of approximately 200 feet of reinforced concrete pipe (RCP) and two doghouse drainage structures to create a bypass system to divert stormwater runoff to a separate outfall on Broad Street. Also included in the project is the construction of approximately 800 feet of RCP to replace an existing storm system on Second Street, Waverly Street and Third Street and the purchase of a "Scavenge-Vac" to properly maintain the system.

Need for Project

The existing substandard stormwater systems are subject to failure during storm events causing flooding. The stormwater and sanitary flows co-mingle during flooding and are discharged to Mantua Creek.

Project Description

The proposed project includes construction of a new storm sewer system with uniform slopes between manholes and inlets to maintain an unobstructed flow, mininmize trapping of debris, eliminate flooding, and improve water quality. This will include construction of new inlets to replace existing undersized inlets for more efficient flow and improved ease of maintence.

Need for Project

The Borough has a known nonpoint source pollution problem which needs to be corrected. Several times a year beach closures occur which are primarily due to the debris and contaminants which collect in the storm sewer system. In addition, the North Street sanitary and storm sewer system contributes high levels of fecal coliform to Sandy Hook Bay.

Project Description

The proposed project involves (1) the rehabilitation of the North Street storm sewer and replacement of the old sanitary sewer system, as well as roadway repair, (2) the elimination of flooding in problem areas 3, 4, and 16 by installing properly sized storm sewers and check valves at the outfalls and (3) the purchase of a vacuum sweeper, leaf collector and Jet-Vac.

STORM SEWER REHABILITATION

County

CAPE MAY

Existing Population

4,480

Service Area

Cresse Avenue to 26th Street Beaches, City of Wildwood

Need for Project

The sand on the Wildwood beach has accreted approximately 1,700 feet since 1950, creating a beach front that is over a quarter mile from the Boardwalk to the water's edge. The existing outfall lines no longer extend far enough out into the ocean. Storm drain runoff, containing animal and bird excrement, washes back onto our bathing beaches. High fecal coliform counts, detected in the weekly sampling conducted by the Cape May County Health Department each summer, has confirmed unsafe condition and has resulted in beach closing. Ponding of this contaminated water occurs at the terminus of the outfall lines after each rain and the area must be plowed and leveled. The health and safety of the beach bathers have been imperiled and the beach closings produce a tremendous negative impact on tourism for many weeks thereafter.

Project Description

The ten (10) outfall lines will be retrenched, and pilings and cross-beams will be installed to support and contain the lines with 1,400 foot extensions. Trenches for the extensions will be dug during the low tide and the entire line will be re-covered with the accumulated sand.

LIBERTY TOWNSHIP

340165-01

STORMWATER/NPS MANAGEMENT

County

WARREN

Existing Population

2,493

Service Area

Liberty Township

Need for Project

Liberty Township is in need of a street sweeper. The purchase of this equipment will help the Township reduce the amount of debris that accumulates in the sewer system and, in turn, reduce solids/floatables from entering the waters of the Pequest Watershed.

Project Description

The proposed project involves the purchase of one street sweeper.

TETERBORO BOROUGH

340339-01

STORMWATER MANAGEMENT

County

BERGEN

Existing Population

20

Service Area

Teterboro Airport and West Riser Ditch Storm Drainage Systems

Need for Project

The existing pump station was built in 1950 to assist two smaller pump houses which date back to 1917. Currently all three pumps are in operation and the system is in need of repair.

Project Description

The proposed project is to extend the two existing 60-inch diameter storm trunk mains to a new pump house constructed with an emergency generator and a variable speed pumping system. Also included is the abandonment and demolition of the two 1917 pump houses and alterations associated with the riser ditch and bulkhead.
