Dr. E.L. Hoffman  
Dr. Paul H. Correll

Dr. Charles G. Boyer

Dentist

Dr. J. R. Gibbs

Oculist

Vacant

TO THE STATE BOARD OF CONTROL OF INSTITUTIONS AND AGENCIES.

LADIES AND GENTLEMEN:

In behalf of the Board of Managers of the New Jersey Reformatory for Women, I beg leave to submit our tenth annual report. Much water has gone over our dam during these ten short years - water that has furnished new aspirations for hundreds of the women of our State - water that has enabled our citizens to provide a place of help for those who make serious mistakes - water that has moved the wheels of progress in caring for those who have needed counsel, guidance and physical rehabilitation.

We feel that we may truly say "great oaks from little acorns grow." One has but to visit Clinton Farms and see "The Homestead" and Fielder Cottage and the farm group to realize our most humble beginnings. I believe you will say with us that much water has gone over our dam when you go through Paddock Hall and see the development of our hospital - the new maternity cottage named in honor of the benefactor of Clinton Farms - Mrs. Caroline Bayard Wittpenn - the Harriett Beacher Stowe Cottage, where we have housed our entire colored population - the new laundry and sewingroom - the new storehouse - the two new cottages for farm help - the well defined plan of landscape development - the water of ten years has created constructive power. We have much to be thankful for. We look forward to the ten years that are to come, feeling certain that the standards of Clinton Farms have but to be upheld in order to bring it to a degree of usefulness not dreamed of by its present Board of Managers.

Each year sees new interest in Clinton Farms manifested by others engaged in similar lines of work in some of our sister states. We have thus far been able to contribute not a little to those who come to visit us in an official capacity. The experiments of Clinton Farms are the sound practices of many another institution. Here, again, "the water coming over the dam of Clinton Farms" adds to the sum total of the development of places like our own.

During the year our Superintendent, Miss Grace M. Robson, made an important contribution on the subject of "Student Government" to Prison Leaflet, No. 66, issued by the National Committee on Prisons and Prison Labor. In a most interesting article, published during the year in The Survey (New York), under the title of "Where Girls Go Right", there was considerable favorable comment concerning the work of Clinton Farms.

From time to time there have been discussions in various quarters as to the desirability of paying a wage to those confined in our correctional institutions. Personally, I am in sympathy with the suggestion. Many of the women who come to Clinton Farms are utterly destitute. We turn them away in a like condition except for a meagre supply of new clothing. It is true that we seek and always find employment for them before they leave us - but what must be their innermost feeling upon going back into society - penniless? Others vastly more experienced than I, are competent to discuss this vital subject. I bring it to you, not as a new suggestion, but one which I hope may some day in the near future be satisfactorily worked out.

We have been sincere in our efforts to maintain Clinton Farms at a minimum of expense and we have only come to you with those requests which have been absolutely essential and needed long before your approval was sought. For your encouragement of our plans and the wise counsel of the individual members of your Board and Commissioner Lewis, we are once more deeply grateful. We assure you of our desire for the very fullest degree of co-operation.

Respectfully submitted,

CARROLL B. MERRITT,

President, Board of Managers

TREASURER'S REPORT

## TO THE STATE BOARD OF CONTROL OF INSTITUTIONS AND AGENCIES

In submitting our annual report this year, I would call your attention to the report of the previous year in which a complete resume of the Clinton Farms development was made. Therefore, in making a report of the fiscal year ending July 1, 1922, I have attempted to point out the high spots of progress and also call your attention to some of the disappointments, and, at the same time, make use of these two factors in outlining a constructive plan for the future.

Wherever we have strengthened our fighting lines either in added equipment or in more efficient organization and personnel, we are reporting real progress and in the same ratio our efficiency has decreased where cuts have been made in staff organization, because of lack of funds, and where valuable members have dropped out for one reason or another. The organization sustained a severe loss when Miss Katherine K. Murphy, Assistant Superintendent, resigned April 1st of this year to take up other work. Miss Murphy had carried a very important part in the affairs of Clinton Farms for over six years and her departure is strongly felt not only by all of her co-workers, but by all who came in contact with her.

Because of lack of funds it was impossible to maintain a teaching staff last winter, and our educational programme suffered. Had not the heads of the departments loyally shouldered part of this work in addition to their other duties, there would have been very little school work done during the year.

### SCHOOL

Each woman attended school two hours daily. One-half hour of this time being devoted to gymnasium, excepting a few who were excused by direction of Dr. Coleman because of physical unfitness. In the illiterate grades for white girls, there were two divisions - beginners and those more advanced in their study of English. In all this lower grade class work every effort was made to teach by giving the very simplest words and sentences about their own work or interests. This work was purely individual and no two members of the class advanced at the same time. There is need for a specially trained teacher to handle this group, and funds should be provided sufficient to give individual and special class work to these two groups.

The work in elementary sewing was given special stress in daily handwork classes. The classes were divided into small groups of six to eight pupils, and the class work outlines began with the very simplest lessons, advancing to the higher grading in which the more artistic stitches and patterns were undertaken. This work included samplers upon which damask hemming, plain hemming, applying lace and insertion, making plaits and tucks, etc., were done. Infant outfits were made as this class advanced sufficiently to undertake the actual garments. Tucking, lace, hemstitching and featherstitching adorned these little garments for the nursery, and the fact that they were contributing these dainty articles to the nursery added zest to the class room spirit.

The more advanced groups were given training in Arts and Crafts in which the more elaborate handwork was taken up. French hemstitching, double and single tatting and spider web, together with applique, catstitching, chain-stitching and weaving were taught in this class. Raffia and bead work were undertaken by some of the more ambitious members of this class. Designing, dyeing and stencil work was given to a few in this special class. At the Christmas season the different cottages divided into groups and made bibs, aprons, dresses, rompers, curtains and a variety of cloth dolls and toys for gifts to Caroline Bayard Wittpenn Cottage. A spirit of competition was aroused and the groups vied with each other in developing original ideas in toys and other articles, for the babies of our family. Many of the toys were made from scraps of materials from the sewing room. Many of the toys were crude, others were most artistic and unique. Recreation hours were used for this work for several weeks previous to Christmas, and Wittpenn Cottage was the center of all our Christmas activities. We are sure that this spirit is our dominating educational factor at Clinton Farms. Miss Page Whelpley has been leader in the Arts and Crafts, and it was through her effort and ability that the costumes were designed and made for both the Armistice Day Pageant and for the production of "Pinafore" this spring.

Cooking and waitress classes were continued throughout this year. Miss McKeon, the resident nurse, devoted two hours a week to classes in hygiene and home care of the sick. These two classes were made up of the lower grades who were mentally incapable of competing in the regular Red Cross course. Miss McKeon presented her subjects in a simple, direct way - using practical lessons in demonstrations instead of textbook work, and the class grasped and followed the course with increasing interest throughout the term. Direct reaction to this teaching was seen in the departments.

Through the Hunterdon Chapter of the American Red Cross we were enabled to have the regular Red Cross Home Nursing class continued this year. Fifteen were enrolled. Miss Eurith Trax, the Hunterdon County Health Nurse was the instructor. On April 27th, exercises were held at which time the entire class of fifteen were presented with their certificates. Music was the special feature of the programme. The officials of the Chapter were present. Mrs. Case, Mrs. Allen and Mrs. Dewey of Flemington, participated in the programme. Several members of the Clinton Auxiliary were also present.

The club organizations at Clinton Farms are given a special prominence in my reports, because I personally feel that if properly organized in Institutions for Women, the club activities could take almost first place in the educational programme for the adult offender. A voluntary club membership gives a stimulus, and an interest which it is very difficult and oftentimes almost impossible to arouse in a regular school programme.

By organizing clubs along different lines, you give opportunity for personal choice in line of study. You stimulate interest by group spirit, and almost any course of study can be consistently followed under such an organization. It is easy to get the co-operation of the entire staff in directing these activities by appealing to the special talents and making use of each in this work. It means development of leadership and familiarity with parliamentary order in staff as well as student-body. If the Institution is organized under a modified community plan, one can readily imagine the outlets for civic betterment which can develop under a group of club organizations. All this appeals to the adult, while regular class work, however interesting it is made, is too often an irksome task attempted in poor spirit. The Literary Club, the Glee Club and the

Athletic Club have continued to hold the same interest with the groups during the year. Through the combined force of these three clubs, a very beautiful Historical Pageant - "Liberty Enlightening the World" - was arranged and produced to celebrate Armistice Day. There were forty-four in the cast. The chorus work was done by the Glee Club. The drills, recitations and costumes were planned and arranged by the Literary Club and Athletic Club. In two weeks' time this was arranged, staged and produced, because the material for the pageant was collected from previous programmes of the clubs and it was, therefore, not difficult to bring this material together into one large production, after ten days of rehearsal.

"Pinafore" was given on April 18, 1922. The cast consisted of four of the teachers and the others were of the Student-body. The Glee Club spent the winter evenings in preparing for this performance. There is no doubt in the minds of those working with the groups, of the benefits derived from musical expression of this kind.

The addition of a Pathoscope machine increases our educational facilities. Educational films are used in connection with the other performances. We hope to make more use of this method in the coming school year.

The classroom work closed April 1st for all except the classes for illiterates. These classes are continued one hour every evening during the summer months, in charge of a student teacher.

The library was completely organized during this year. 1101 volumes of fiction, biography and travel are catalogued and indexed. About fifty books a week was the weekly average of circulation during the winter months. There is a greater demand for the books of Ethel M. Dell, Zane Grey, Robert W. Chambers, F. Marion Crawford and Charlotte Bronte. Many good books have been contributed to the Library this year through Mr. Merritt and Mr. Ennis, and through several of the clubs and welfare organizations. Complimentary subscriptions to the following magazines were secured by Mr. Merritt:

Harper's Magazine  
Atlantic Monthly  
World's Work  
Century Magazine  
Review of Reviews  
Scribner's Magazine  
Ohio Farmer

All these have greatly aided in placing the right kind of reading matter into the hands of the students as well as the staff organization. Miss Page Whelpley has shown special ability in library work and has been able to help the individuals to make proper use of the Library. Her time has been generously given in working up an active circulation of library books.

## FARM

Every effort has been made to cull out the poor producers in the dairy herd and to bring the herd up to a more profitable basis. The addition of U S S H Prince Fremesta Tehee, a registered sire purchased from the school at Vineland has added to the value of the dairy plant. 1000 one day old chicks added to the poultry plant this spring gives brighter prospects for the egg production of the coming year.

5000 asparagus roots and 3000 strawberry plants were planted this spring. All crops at this date show good condition and prospects are fair for a good general harvest. The truck garden includes almost every variety of vegetable grown in this vicinity. The field crops show an increased acreage. The small fruits and apples are in good condition. The peach orchard has been attacked by the yellow blight and many of the trees are destroyed. There will be a small yield this year.

## CHURCH

Rev. Charles J. Farron and the Rev. Thomas A. Conover have ministered to the religious needs of the institution faithfully during the year. Mr. Conover has secured speakers for each Sunday service, giving generously of his time to the duties incident to the Supervising Chaplain's work. Sixteen infants have been baptized during this year.

## ADDITIONS AND IMPROVEMENTS

During the year Caroline Bayard Wittpenn cottage was equipped and opened. This cottage provides for the housing of mothers and infants. When completed it will accomodate thirty mothers and thirty infants. At present there is room for fifteen mothers and fifteen infants. There are now twenty mothers and twenty-seven infants in this building. The additional wing and two porches should be provided immediately in order to properly care for this increasing population.

The equipment of the laundry and industrial room was completed this year and the plant ready for operation on July 1st. This will relieve the laundry burden so that we will be able to stress the training for commercial and hand laundry in our educational programme. The industrial room will give us further facilities for training in both hand sewing and power machine work on a small scale. Rug weaving will also be taught in this unit.

A small septic tank sewage disposal was installed to replace the cesspool near "The Homestead," which had been most unsatisfactory.

During the year a landscape map was prepared by Mr. Arthur Herrington, a landscape expert, and development of the plan was begun this spring. Grading was completed between the Chapel and Caroline Bayard Wittpenn Cottage, and the planting of trees and shrubbery begun. Cuts were made in the high embankments near the main entrance and planted. A roadway was laid out between the Chapel and Caroline Bayard Wittpenn Cottage, and around the laundry and storeroom. Trees were planted along these roadways. The plank bridge across the stream near "The Homestead" was replaced with one of cement and stone con-

struction, and a permanent stone bed laid for a road. Above the bridge a dam was built of concrete. After further excavating above the dam, we hope to develop a small pond of water which is to be the keynote of the landscaping in that section. Grading has already been done down to the edge of the pond.

A temporary screened porch was built at the end of Caroline Bayard Wittpenn Cottage, to provide a place for the infants during the hot summer months.

Early in the year an investigation of the heating plant and hot water system at Paddock Hall was made. The hot water heater was replaced by a larger one to correct this difficulty. It was found that the only solution to the heating problem was to give supplementary heat by some method. This was taken care of in the operating room section where the lack of heat was most felt, by attaching a line to the high pressure boiler operating the sterilizer plant and adding steam radiation when supplementary heat is needed.

Funds were appropriated for the addition of a piggery. This building is nearing completion and will house forty pigs in an up-to-date way. This addition has made possible the removal of the unsightly pig pens near the farm group, and a general cleaning up has been done in that section. The bull pen and sheep barns have been remodeled and repaired, and give well ventilated quarters to the herd sire and to the flock of sheep. Several improvements have been made in the poultry plant.

Two colonies were moved and built over into a brooder colony. Two other colonies were moved into the poultry group and fencing done. We will have adequate space for 500 pullets each year, with brooder colony to give care to the young chicks.

Additional pasture fence was built and the fences generally put into good condition.

A corrugated iron house was built to house the boiler used at the cannery. This will reduce the fire hazard at the dairy group to a large extent.

The fifteen ton scale installed in front of the storeroom gives a definite check on our farm production as well as materials and supplies, delivered in bulk at the institution.

#### HOSPITAL

Dr. A. H. Coleman gave so full an outline in the last report of the work undertaken in the hospital department, that I must call your attention to that and state that the outline has been continued throughout this year only on a more intensive plan if that is possible. All cases admitted to the Institution have passed through the hospital and remained there two weeks. Eighty-nine new cases were admitted for observation. Seventeen parole violators were returned and again passed through the observation period. Eight infants were admitted with the mothers, and sixteen infants were born after the mothers arrived at the institution. Of this number of births three were Caesarian births. It is of interest also to note from the statistical summary the general

increase in the work this year. There was an increase of 14% in the number of venereal cases treated. There were 3200 more daily treatments given this year under the supervision of the nurse. By a study of the statistical report one can easily observe the general medical condition and the number of surgical cases given attention, which only goes to show how closely the cases are followed and what a factor the hospital care is in the physical rehabilitation of the women. Only the most urgent surgical cases have had attention. There are many conditions existing which should be corrected by surgical work but all this will necessitate additional nursing staff before we can hope to correct these physical handicaps.

During the year the clinical room has been enlarged and a terazza floor has been laid. The exchange of the electric sterilizer for a high pressure steam plant has been a definite step in our progress.

Other items of equipment have been added from time to time and every move has marked a step forward toward the ideal plant. The transfer of the nursery from the hospital to the Caroline Bayard Wittpenn Cottage, the new cottage for mothers and babies has relieved the hospital of a heavy burden. This unit is classified under the hospital department and continues under the able direction of Dr. A. H. Coleman.

The complete system of records on all venereal cases and other work of the hospital, is a part of this department which is especially commended by all who come to study institutional record keeping. Visitors from other States have come to study the cases from the standpoint of treatments and have readily found the desired information.

#### MENTAL EXAMINATIONS

The following report in detail on Dr. Edgar A. Doll's work as Department psychologist, gives one a fair estimate of the mental age levels as shown by the mentality tests given.

Recalled before examination		6
Psychiatric examination		4
Individual examination		6
Examined for Glen Gardner		1
Mental age	6 yrs. (?)	1

Illiterate - not yet examined	2
Not examined	29
Individual without group test	3
Individual with group test	1
Individual and psychiatric	2

In concluding my report, I want to express my appreciation to the Board and to the members of my staff for the loyal support they have given to the problems' confronting us during the year, and to say that real progress has been made because of these combined efforts.

The purpose of Clinton Farms is to help those who have transgressed against the laws of our State, by teaching them the fundamentals of right living. Our course of training, therefore, resolves itself into the practical teaching of community civics, and around the needs of our little community we work out our system of teamwork to gain the best for the entire group, in restoration to health, a desire for right kind of knowledge, social life together, development of their love for beautiful and pleasant surroundings, ministering to their religious want, and stimulating a joy in industry and real thrift. Is not this a rounded life in any community, and are we not preparing offenders to fit into the larger community with like interests?

We believe that Clinton Farms has an eye single to the purpose, and each year sees it progress toward its goal.

Respectfully Submitted,

Grace M. Robson, Superintendent.
