#### SUBCHAPTER 1. DEFINITIONS

##### 16:47-1.1 Definitions

The following words and terms, when used in this Access Code, shall have the following meanings unless the context clearly indicates otherwise:

“Access application” means a document submitted to the Department to initiate the access permit process.

“Access classification” means an identification system for regulating access, based on function, environment, and traffic characteristics. The access classification system is applicable to all streets and highways within the State. A change in the function, surrounding environment, traffic characteristics, speed limit, or desirable typical section may be a basis for changing the access classification and associated access level.

“Access Code” means the State Highway Access Management Code adopted by the Commissioner pursuant to N.J.S.A. 27:7-91 and readopted, as required by Executive Order No. 66(1978).

“Access level” means the allowable turning movements to and from access points on a State highway segment based on the highway access classification.

“Access management plan” means a plan showing the design of access for every lot on a State highway segment developed jointly by the Department, the municipality in which the highway is located, and the county, if a county road intersects the segment.

“Access permit” means a permit issued by the Department for the construction, maintenance, and use of a driveway or public street or highway connecting to a State highway.

“Access point” means the location of the intersection of a highway or street or driveway with the highway.

“Access point offset” means the distance between the centerlines of access points on opposite sides of undivided highways and the distance between the centerlines of an access point and a median opening on a divided highway.

“Accessible principal arterial” means the classification category for a roadway that is part of an interconnected network of continuous routes serving transportation corridors with high traffic volumes and long trips, the primary function of which is to provide safe and efficient service for major traffic movements in which access is subordinate.

“Adjustment of access” means changes to an access point, in conjunction with the implementation of a highway improvement project, which result in changing the width of an access point by five feet (1.5 meters) or less, changing the

location of an access point by 10 feet (three meters) or less, moving an access point away from the centerline of the highway, or changing the elevation or profile of an access point.
