Report

To the Senate and General Assembly of the State of New Jersey:

As required by law, I herewith submit the annual report of the State Board of Education and accompanying documents. The time covered in this report, July 1, 1911, to June 30, 1912, marks the first year of the reorganization of the State Board of Education, and the Department of Education, under the new Commissioner. While much has been accomplished in carrying out the wishes of the 1911 legislature, much more remains to be done. Statistics have been gathered and are being tabulated with a view to carrying out the provisions of the law in regard to the children three years or more behind their grades, for whom special classes must be provided. A start has been made, notably in some of the larger cities. But aside from the lack of proper data throughout the State, regarding the number of children to be provided for, we are confronted with an almost absolute lack of teachers properly trained to carry out this work. Until increased facilities for training teachers are provided, this most important branch of our work will progress but slowly.

Another matter of vital importance is the lack of teachers fitted to teach the increasingly necessary branches of manual training, domestic science and agriculture.

New Jersey is foremost among the states in recognizing the vital importance of such teaching, and yet it provides at the present time practically nothing in the way of up to date preparation. Our two normal schools have no adequate facilities for such teaching, and cannot have until generous appropriations shall be made for that purpose.

In the question of Medical Inspection of public schools New Jersey has led all other states for the past two years. But the time has come when, in order to get the real benefit of this inspection, some plan must be outlined whereby proper supervision shall be exercised over the medical inspectors by a central authority. It has been

You Are Viewing an Archived Copy from the New Jersey State Library

estimated by careful computation that in 1911, in New Jersey, over 6,000,000 days' attendance were lost from sickness, expressing in cash investment a loss of over $3,000,000.00. With competent central supervision a very large percentage of this loss can be saved to the state, at a moderate cost.

The repeated efforts of the State Board of Education during the year ending June 30, 1912, to secure the prompt distribution according to law of school moneys, held in the state treasury, were of no avail, and the school year 1912-1913, opened with most of the districts in the state under the necessity of borrowing at 6 per cent. sufficient money to carry on their work. This condition has since then been partially remedied, owing to the Board's persistent efforts to have this wrong righted. Your careful consideration of this condition is respectfully solicited.

Following representations made to the last legislature of the urgent needs of the two normal schools, the School for the Deaf, and the Industrial School for Colored Youth at Bordentown, liberal appropriations were made, which have made it possible to remedy a few of the most glaring evils in the way of sanitary defects and danger from fire. Much more is needed however, along these lines, before this Board can feel satisfied that the lives and health of the pupils entrusted to its care are even moderately safeguarded. The statements from the individual institutions, accompanying this report, will give particulars of their present conditions and needs.

The reports of the Inspector of Buildings and Inspector of Accounts, who work under the supervision of this Board and whose reports are appended, will show the necessity for such officials and what they have accomplished during the past year.

Full detailed information covering the public school system of this state, with documents illustrating each phase of the work, is herewith presented.

W. G. SCHAUFFLER,
President State Board of Education.

Organizations of Teachers in the State

The following are the names of State-wide organizations of teachers with the names of their officers as of date June 30, 1912:

STATE TEACHERS' ASSOCIATION.

President—Superintendent George Morris, Bloomfield, New Jersey.
Secretary—Superintendent Charles B. Boyer, Atlantic City, New Jersey.

NEW JERSEY STATE COUNCIL OF EDUCATION.

President—Superintendent Ebenezer Mackey, Trenton, New Jersey.
Secretary—Superintendent J. Howard Hulsart, Dover, New Jersey.

NEW JERSEY HIGH SCHOOL SCIENCE TEACHERS' ASSOCIATION.

President—Professor F. T. Thompson, Rutgers College.
Secretary—Mr. J. Edwin Sinclair, Central High School, Newark, New Jersey.

NEW JERSEY HIGH SCHOOL TEACHERS' ASSOCIATION.

President—Principal Lindsey Best, Plainfield, New Jersey.
Secretary—Miss Cornelia MacMullan, State Normal School, Montclair, New Jersey.

ASSOCIATION OF TEACHERS OF ENGLISH OF NEW JERSEY.

President—Mr. J. Milnor Dorey, Trenton, New Jersey.
Vice President—Mr. W. Patterson Atkinson, Jersey City, New Jersey.
Secretary—Mr. Junius W. Stevens, Barring High School, Newark, New Jersey.

Business Organization of the Department of Public Instruction

In the supervision and direction of the large amount of energy necessary to carry out the requirements of the school law and its consequent provisions for the management and operation of the schools of the State it was found advisable to so arrange the working force centred in the Department of Public Instruction as to secure the highest possible efficiency based on a substantial and proven business system.

To accomplish this organization it was ascertained that the business of the Department would best be divided into three general divisions, viz:

(a) Educational Division.
(b) Law Division.
(c) Business Division.

with the Commissioner of Education at the head of the three divisions.

With the three general divisions thus established, each of the different classes of work under each division was assigned to its proper position under the general division, viz:

COMMISSIONER OF EDUCATION.

(*a*) *Educational Division*—Elementary Education. Secondary Education. Industrial Education. Courses of Study. Inspections. Examinations. Credentials. School and Teachers' Libraries.

(*b*) *Law Division*—Law. Construction of Statistics. Appeals. Hearings. Bonding Proceedings.

(*c*) *Business Division*—Blanks and Forms. Purchasing Department. Bookkeeping and Accounts. Annual Report. School Attendance. School Buildings. Transportation and Tuition. Appropriation. Business Efficiency. Manual Training Payments.

To place this business system in actual working order it was realized that the real worth of the whole system depended upon the

You Are Viewing an Archived Copy from the New Jersey State Library

completeness and articulation of its parts, and that the entire responsibility rests upon the Commissioner of Education to see that there is sane and expert service in the direction of each of the three different divisions of the work. It was also considered that the Commissioner, of necessity, must not be tied to the actual direction of detail or individual classes of work but must be the chief executive officer of the Department; free to be the general advisory and supervisory officer of the State Educational system. His duties preclude him from giving his personal attention to the many and varied classes of work coming before his attention, therefore responsible heads, acting for him, were selected to take charge of the general divisions of the office system.

(a) The law provided for an Assistant Commissioner to supervise Secondary Education; an Assistant Commissioner to supervise Elementary Education; an Assistant Commissioner to supervise Industrial Education; a Secretary of the State Board of Examiners; all of whom assist in the work of the Educational Division.

(b) The law provided for an Assistant Commissioner to hear all controversies and disputes which may arise under the school laws to take charge of the Law Division.

(c) The Business Division was placed in charge of the Chief Clerk of the Department.

The general system as applied to individuals caring for the business coming within the jurisdiction of the Department of Public Instruction is as follows, viz:

Calvin N. Kendall,
Commissioner of Education,
Secretary State Board of Education,
Chairman State Board of Examiners.

—a—

Albert B. Meredith,
Assistant Commissioner,
Supervisor of Secondary Education.

George A. Mirick,
Assistant Commissioner,
Supervisor of Elementary Education.

Thomas D. Sensor,
Secretary State Board of Examiners,
In charge of Certificates and Examinations,
Academic Credentials,

You Are Viewing an Archived Copy from the New Jersey State Library

—b—

J. Brognard Betts,
Deputy Commissioner of Education,
In charge of Law Decisions,
Construction of Statistics,
Appeals,
Hearings,
Bonding Proceedings.

Herbert N. Morse,
Chief Clerk of the Department,
In charge of Attendance and Registers,
Transportation and Tuition,
School Buildings,
Blanks and Forms,
Book-keeping and Accounts,
Apportionment of School Moneys,
Statistical and Annual Reports,
County Superintendents' Expense Account and Orders,
Manual Training Reports and Orders,
Purchasing Department,
Business Efficiency and Office System.

The personnel of the Department is

Miss Augusta Gilhuly, Stenographer and Clerk to the Commissioner.

(*a*) *Educational Division.*

Miss Louise Precht, Certificates and Examinations.
Miss Hattie Crisp, Credentials and Library Orders.
Miss Mildred Naar, Stenographer and Filing Clerk.
Miss Ella S. Ashton, Stenographer.

(*b*) *Law Division.*

Miss Grace Yates, Stenographer to the Deputy Commissioner and Mail Clerk.
Richard Porter, Stenographer and Clerk designated to act as Secretary of the State Board of Education.

(*c*) *Business Division.*

Miss M. B. Howell, Assistant Chief Clerk.
Miss Nellie Edwards, Accountant.
Miss Anna Jones, Accountant (Special).
Miss Edith Charles, Stenographer and Clerk.

School Register Examiners.

Miss Dorothy B. Nevius,
Miss Stella Burchell,
Miss Anna C. Birch,
Miss Mabel Potts.
Miss Mary H. Finger,
Miss Helen B. Goldy,
Miss Susan O. Scott,

Charles McDermott, Inspector of Buildings.
W. C. Hopkins, Inspector of Accounts.

H. K. Stevenson, Shipping Clerk.

Organization of the Departments

The law provides that the Commissioner of Education shall appoint four assistant commissioners of education, one of whom shall be designated to act in his place during his absence. It further provides that one of the assistants shall hear all controversies and disputes which may arise under the school law or the rules and regulations of the State Board of Education or of the Commissioner of Education.

To this position Mr. J. Brognard Betts, who had been for many years connected with the Department, was appointed.

Much centralization of power in the Department and in the State Board of Education, brought about in part by the large amount of state funds appropriated to the schools in the various counties, accounts in a measure, for the large and almost interminable number of questions presented to the Department for adjudication. To this important work Mr. Betts has brought a high degree of intelligence, because of his long familiarity with the laws of the state and the educational practice of the state. To this is appended a report from Mr. Betts, of some of the important activities which have come under his jurisdiction.

The Commissioner is also empowered to designate one of his assistants to act as "supervisor of secondary education."

To this position Mr. Albert B. Meredith, of Nutley, and for some years County Superintendent of Schools in Essex County, was appointed. Mr. Meredith had previously been a teacher in secondary schools, a graduate of Wesleyan College and a constant student of educational affairs, he possesses the scholarship and equipment necessary in this important position. He has submitted a report concerning the high schools of the state, and his work pertaining thereto. I have not deemed it necesarry to report otherwise upon the high schools, except to present statistical data.

The law further provides that the Commissioner shall designate one of his assistants to act as "supervisor of elementary education."

You Are Viewing an Archived Copy from the New Jersey State Library

To this position Mr. George A. Mirick, of Indianapolis, a graduate of Amherst College, was appointed. The Commissioner, from his association with Mr. Mirick, first in the schools of New Haven, where he was supervising principal, and later in Indianapolis, where he was assistant superintendent of schools, was thoroughly familiar with his qualifications for the position to which he was appointed. Mr. Mirick had previously taught in a New England normal school, and later was for some time superintendent of schools in a group of Massachusetts rural schools. In addition to this varied experience he had long been a student of industrial education.

He was asked to submit a report of his work, which is appended.

The law also provides that the Commissioner shall designate one of his assistants to act as "Supervisor of industrial education, including agriculture."

The filling of this position has been a matter of peculiar difficulty. The combination named in the statute, "industrial training including agriculture," is one which it is extremely difficult to find in one man. Much time and effort have been given to securing a well qualified man for this very important place. The demand for men to fill such positions is far in excess of the supply, as officials in other states than New Jersey have found. At the time this report is made no appointment has been made to this position.

In another part of this report a statement is made concerning the work of the State Board of Examiners, of which the Commissioner is Chairman ex-officio.

The work of the Department has been embarrassed by the inadequate accommodations available for its use. During the year the congestion was partly relieved by the transfer of a part of the office force from the State House proper to the so-called Green Building outside. This, however afforded only partial relief. The quarters in the State House and in the Green Building as well, are very much congested. The location of a part of the staff in another building is of course very inconvenient in the administration of the office.

It is pleasant to relate that the members of the office force have been faithful in the performance of their numerous and exacting duties, but some of them have worked under very adverse conditions.

It is imperative that additional and more convenient quarters be assigned to the Department, if it is to do with economy and efficiency the immense amount of work devolving upon it under the statutes.

ANNUAL STATISTICAL REPORT

OF THE

Commissioner of Education

FOR THE SCHOOL YEAR OF 1911-1912

BEGINNING JULY 1, 1911, AND ENDING JUNE 30, 1912.

An explanatory analysis of the statistics presented in the summary of statistics of this report for the school year beginning July 1st, 1911, and ending June 30th, 1912, is given for the information of those not familiar with the working detail of the public school system of the State of New Jersey. This grouping of the receipts and disbursements is for the purpose of showing the sources from which the several appropriations are derived and the purposes for which they were expended. Some items include moneys received from two or more sources. An explanation of the several appropriations and the purposes for which they may be used is given in another part of this report.

RECEIPTS.

No. 1. From the State.

(a)	Amount of State school tax	$5,526,220 09	
(b)	State appropriation	688,325 00	
(c)	School fund appropriation	200,000 00	
(d)	Railroad fund	2,543,984 39	
			$8,958,529 48

No. 2. Raised by the School Districts.

(e)	District tax for current expenses and other school purposes	$7,860,436 49	
(f)	Sale of district bonds	3,498,498 55	
(g)	Teachers' libraries	150 00	
(h)	School libraries and apparatus	4,321 40	
(i)	Due districts from other sources	457.333 15	
			11,820,739 59

You Are Viewing an Archived Copy from the New Jersey State Library

No. 3. Received from Other Sources.

(j)	Balance on hand at beginning of school year	$5,514,869 78	
(k)	Interest on surplus revenue	28,729 87	
(l)	Appropriated by counties for expenses of County Superintendents	7,350 00	
(m)	State Normal and Farnum Schools	105,786 83	
			5,656,736 48
	Total receipts for the year		$26,436,005 55

No. 1. (a) This includes the State School Tax.

(b) This includes the amounts appropriated for the expenses of the State Board of Education, the Department of Public Instruction, the salaries of County Superintendents, the maintenance of the State Normal School at Trenton, the State Normal School at Montclair, the School for the Deaf, the Industrial School for Colored Youth at Bordentown, the State aid for Manual Training, the State aid for Evening Schools for foreign-born residents, the State aid for the Summer School of Methods at Cape May, the expenses of the Teachers' Retirement Fund, the expenses of the State School Fund, the expenses of the State Board of Examiners, the expenses of Teachers' Institute, the State aid for School Libraries, the State aid for Teachers' Libraries, the cost of Legislative Manuals distributed to the schools and the State appropriation in reduction of the State School Tax.

(c) This includes the income of the State School Fund.

(d) This includes that portion of the Railroad Tax received by the State and appropriated to the support of the public school system.

No. 2 (e) The amount of District Tax for "Current Expenses and Other School Purposes" is raised in the township, borough and city taxing districts for local school purposes and is paid out by the school districts for the salaries of principals, teachers, medical inspectors; the purchase of fuel, text-books, school supplies; the payment of tuition for pupils attending schools in other districts with the consent of the board of education, school repairs, compensation of district clerks, of the custodian of school moneys, of truant officers; truant schools, insurance and the incidental expenses of the schools.

(f) Is the amount received from the sale of district bonds to be used for buildings, enlarging and refurnishing school buildings.

(g) Is the amount raised in a county for Teachers' Libraries.

You Are Viewing an Archived Copy from the New Jersey State Library

(h) Is the amount raised in school districts for School Libraries and Apparatus.

(i) Is the amount of money donated or received from other sources in the school districts.

No. 3 (j) This balance represents money in hand at the beginning of the school year, the larger part of which is necessary to pay the running expenses of the schools from the first of July until the receipt of the first school moneys after the schools have opened in September; also moneys in hand to pay maturing bills for the erection of new buildings; repairs and the refurnishing of old buildings.

(k) This is the amount received by the several counties from the interest of the Surplus Revenue Fund.

(l) Is the amount appropriated by the board of freeholders of the counties for the expenses of the county superintendents. Each county appropriates by law $350 but if the total amount appropriated in any county is not used, the balance lapses at the end of the year.

(m) Is the amount received for board and tuition at the State Normal, Model and Farnum Schools.

MONEYS FOR THE SUPPORT OF PUBLIC SCHOOLS ARE DERIVED FROM SIX SOURCES—INCOME OF STATE SCHOOL FUND, STATE FUND, STATE SCHOOL TAX, RAILROAD TAX, INTEREST OF SURPLUS REVENUE, AND LOCAL APPROPRIATIONS.

The proceeds of the sale of riparian lands owned by the State constitute the principal of the State School Fund. The income can be used only for the current expenses of the schools. The principal of the Fund is $5,327,314.16, and the income, amounting to $200,000, is apportioned annually among the counties by the Commissioner of Education on the basis of the aggregate number of days' attendance of all pupils in the public schools during the year preceding that for which the apportionment is made.

The State Fund is the moneys received by the State available for general State expenses, and the amount paid to the schools is such sum, not less than $100,000, as the Legislature includes in the annual appropriation bill. The money derived from this source is used to reduce the amount of the State School Tax and is apportioned among the several counties on the basis of their respective ratables. The appropriation for the year for which this report is made is $100,000.

The rate of the State School Tax, as fixed by law, is two and

You Are Viewing an Archived Copy from the New Jersey State Library

three-fourths mills, but this rate is decreased by the appropriation from the State Fund. The total amount of State School Tax was $5,526,220.09.

Ninety per cent. of the total amount of this tax raised in each county is returned to such county, and ten per cent. of the total amount constitutes the Reserve Fund, which is apportioned among the several counties in the discretion of the State Board of Education.

If all the taxable property in the State were assessed at its true value, the total amount of this tax should be distributed among the counties on the same basis as that used in the distribution of the income of the School Fund, and originally that was the basis, but, owing to the inequality in valuations, this was found to be unjust to the counties whose valuations were relatively high, and the present method, which probably is as equitable as any which can be devised, was adopted.

The State taxes for its own use what is designated as first class railroad property, which is composed of the franchise and all the main stem property of each railroad in the State. The proceeds of this tax, after deducting a sum equal to one-half of one per cent. of the total value of such property, is appropriated for the support of the public schools. The amount received from this source, after deducting the amounts appropriated for the expenses of the Department of Public Instruction, County Superintendents' salaries, support of State Educational Institutions, and evening schools for foreign-born residents, is apportioned by the State Comptroller among the counties on the basis of their respective ratables. The amount apportioned for the school year of 1911-1912 is $2,592,678.34.

The Surplus Revenue is the amount received by the State from the United States in 1836, when there was a surplus in the U. S. Treasury which was divided among the States. New Jersey received $764,670.44, and the Legislature divided said amount among the then existing counties. Union county was set off from Essex County in 1857 and did not receive any portion of this money. The law dividing this money among the counties provided that the principal should be kept securely invested. In six counties the principal has disappeared and it is impossible to discover what use was made of it. In the other fifteen counties the interest is used for public school purposes. The amount of interest is $28,713.71.

The total amount apportioned to a county from the income of

You Are Viewing an Archived Copy from the New Jersey State Library

the State School Fund, the State Fund, the State School Tax, the Railroad Tax and the interest of the Surplus Revenue, is apportioned among the several districts as follows:

First: $600 for the city superintendent or supervising principal.
Second: $500 for each teacher employed in a special class for blind or deaf children, or for children who are mentally three years or more below the normal.
Third: $400 for each assistant superintendent or supervisor and for each permanent teacher in a high school having a four years' course of study.
Fourth: $300 for each permanent teacher in a high school having a three years' course of study.
Fifth: $200 for each permanent teacher in any school except those above described.
Sixth: $80 for each temporary teacher and for each teacher in an evening school; provided, such teacher has been employed not less than four months.
Seventh: $25 for each pupil attending a high school in a district other than the one in which he resides and for whom a tuition fee is paid by the district in which he resides, and $5 for each pupil below the high school grade on like conditions
Eighth: Seventy-five per cent. of the amount paid by a district for the transportation of pupils to and from school.

Teachers in manual training classes, supported in part by a special appropriation by the State, are not included in the apportionment.

Ninth: The amount remaining of the total sum apportioned to a county is divided among the several districts on the basis of the total days' attendance of all pupils enrolled in the public schools.

The apportionment by the County Superintendent is based on the number of teachers employed, the total days' attendance and the sums paid for tuition and transportation of pupils during the year preceding that for which the apportionment is made.

The moneys received from the above sources cannot be used for the purchase of land, the erection or repair of school buildings, or for the purchase of furniture or other equipment. The sums needed for these purposes must be raised by local appropriations. The districts may also make local appropriations for current expenses. In township, town and borough school districts the amount of local appropriations for school purposes is fixed by the direct vote of the district. In a city school district the Board of Education submits its budget to the Board of School Estimate which is composed of two members of the Board of Education, two members of the Common Council or other body having power to make ap-

You Are Viewing an Archived Copy from the New Jersey State Library

propriations for municipal purposes, and the chief executive officer of the municipality. The Common Council or other body having the power to make appropriations, must raise for school purposes, the amount fixed by the Board of School Estimate.

RURAL SCHOOLS.

There are in the state 826 teachers in one-room school buildings or schools, and 377 in two-room buildings or schools. The number of these small schools is decreasing as consolidation of schools is being effected. The number of one-room schools has decreased during the year from 908 to 826.

The rural or country school presents numerous problems. Among them are the following:

1. The School Building or Plant. The buildings in many instances are old, unsanitary and unattractive. The grounds are often ill-kept and inadequate in size. The outbuildings in many instances are dilapidated and uncared for. Too often the whole plant is unsightly and ill-adapted for school purposes.

This briefly is the dark side of the picture, but these conditions are common enough to warrant mention.

On the other hand in many localities public sentiment has been aroused to the importance of improving the physical conditions of the rural school. Numerous attractive, well-appointed one-room buildings have been provided, either by building anew or by renovation of old buildings. There are, too, many ample and attractive school sites or grounds. In such communities the outbuildings are receiving increased care.

The illustrations which accompany this report present graphically some of the conditions herein related.

Consolidation of schools, alluded to elsewhere, is hastening, too slowly it is true, the improvement of the physical conditions of country schools. A country school, consolidated or unconsolidated, which is the secondary home of the children, should be one of the attractive places in the community.

The building should be convenient, clean and sanitary. The grounds should be ample enough so that there may be room for trees, shrubs and flowers, and space for a school garden. Of course there should be a playground, for girls on one side and for boys on the other.

The outbuildings should be well built, and carefully and daily looked after. The crime that has been committed against the morals of school children by means of neglected out-houses is enormous.

The building code adopted by the State Board of Education, the work of the Inspector of School Buildings and the judicious condemnation of outworn school houses will bring about better conditions.

Improved conditions, however, cannot come in all parts of the State at once. Too drastic attempts to revolutionize conditions will fail to accomplish the desired end.. Public opinion must be educated.

2. Equipment. The teacher should have an adequate supply of books for supplementary reading, reference works, maps, globes, material for hand work and busy work for primary children and tools for gardening. In the aggregate, these appliances for effective school work do not cost much. Teachers, and therefore children, must not be hindered in their work by a lack of these appliances.

You Are Viewing an Archived Copy from the New Jersey State Library

Nevertheless, many teachers and children are so hampered.

3. The Teacher. There are too many untrained and unskilled teachers in the rural schools; too many underpaid teachers.

The problem here is serious and it is difficult to see the way out. Even with better salaries, many teachers prefer conditions of urban or semi-urban life. The cities are constantly recruiting their corps of teachers from the strong teachers in the country districts; this is true of both elementary and high school teachers. The difficulty of securing a comfortable place in which to board is great in a few isolated rural sections. Failure on the part of some boards to provide adequate supplies, unattractive school buildings and grounds, are other factors which might be stated as bearing upon the reluctaance of some teachers to remain in the rural schools.

There are too many changes of teachers in these schools.

The rural school, consolidated or unconsolidated, needs a teacher who is in sympathy with rural life, who recognizes the many advantages or opportunities of country life—in a word, who understands it and who can adjust himself to it. In my judgment, the city-bred person finds it difficult to do this. The country-reared teacher, provided of course that he has the necessary training or equipment, will as a rule make the most sucessful teacher for these schools.

To provide means for such training and at a place relatively near to the homes of such possible teachers, and consequently at small expense to them, is a matter which should have the attention of the Department of Education, of the State Board of Education, and of all interested in the development of rural schools.

The time may come in the state when the rural school consolidated, will be in the midst of school grounds several acres in extent, with a house for the teacher or teachers, which could be rented at moderate cost. The land might be used for practical training in agriculture and the products could be sold or used under proper restrictions by the teachers, who might live on the premises the year around.

Such a plan would give stability to the office of the teacher in the rural school. It might be a means of making the school a more vital factor in the life of the community than most rural schools are at present.

4. The Course of Study. The course of study or the exercises of the school should be made up of those activities which the pupils will find most useful as a preparation for country life. Of course some of those pupils will go to college and technical schools, and ought to do so; some of them will go to the cities, and should do so; but this latter tendency is so great that there is no need to emphasize it.

The course of study should obviously be strong in the so-called fundamentals. Children in these schools should be given the fine resources which come from an acquaintance with and liking for books and music. It is to be borne in mind that in the comparative isolation of the country, it is necessary that men and women should have the taste and inclination to use those means of culture which have meant so much in the uplift of men and women everywhere.

The course of study should also provide for instruction in the practical arts of gardening, both flower and vegetable, in agriculture and animal hus-

You Are Viewing an Archived Copy from the New Jersey State Library

bandry, including poultry raising. To the girls should be offered instruction in domestic science and art, including gardening.

All of these subjects can be so taught as to reinforce the work in English, mathematics, and the other conventional work of the schools.

The rural high school should have in its courses, civics, in application to the life of the community, home and community hygiene, geography not only of foreign lands, but the geography of the neighborhood, and a good course in music. The laboratory might well be a laboratory of agricultural experiment, observation and instruction. The school should have the use of some land for demonstration purposes.

5. Supervision of Instruction. No schools need intelligent, constructive, sympathetic supervision and management more than the comparatively isolated school. More supervising principals are needed in the state and there should be more real, active supervision by some already in service. Where the area of the county is large, and the schools far apart, it is impossible for the County Superintendent to make more than two scattered visits a year to each school. He can do much by means of such visits, but the supervising principal, who is on the ground or near by, can do much more, provided of course that he is competent, and provided that he is in action.

The Assistant Commissioner in charge of Elementary Schools makes in his report some pertinent observations upon this subject.

Size of Schools.

There are in the state some schools which have too few pupils for effective work; on the other hand there are too many schools where the number of pupils is too large for effective work. The term "schools" as used here refers to a room taught by one teacher.

In the country schools, according to reports from County Superintendents, there are 26 schools each having an enrollment of fewer than ten pupils. The same reports indicate there are 373 schools having an enrollment of more than 45 pupils. In some of those schools the enrollment is as high as 60 or 70 pupils. Of course the individual child is better off as a rule, in a school of eight pupils than the child in the school of 60 pupils, but either extreme should be avoided wherever it is possible to avoid it.

In one state, at least, a school with fewer than 12 pupils must be consolidated with another school, subject to a few necessary exceptions.

The greatest evil lies in the unduly large schools. As a rule where a single teacher is called upon to instruct more than 45 pupils, some are liable to be neglected; where the number is more than 50 some are almost sure to be neglected.

The relation between school efficiency and the number of children taught by a single teacher, has not received the attention in this country which its importance warrants. Yet it should be said that some teachers with 45 children give more attention to the needs of individuals than other teachers give who have only 30 children to teach.

County Superintendents are alive to the importance of the consolidation of small schools and a division of the large ones.

They report, almost unanimously, that conditions in these respects are

You Are Viewing an Archived Copy from the New Jersey State Library

improving and that school officials increasingly realize the need of such improvement.

It should be said that in some counties in the state there are neither unduly small nor large schools. In a few counties the large schools are altogether too many. The erection of new buildings has been halted by the unfortunate three per cent. bond limit to which Mr. Betts alludes in his report and which should be repealed at the coming session of the Legislature.

In my opinion it may be necessary to withhold the state school moneys from some districts in the state where obstinate school boards, reflecting public sentiment, take no steps to remedy conditions of crowded schools although financially able to do so.

It is not proposed to allow a community to receive State money and to keep indefinitely 60 children in a room when land in sight of the school house is selling for a $100 an acre. This happens to be the condition, in at least, one district. Such a condition is a traversty on New Jersey's ideal of providing a "sound and efficient education."

It is to be remembered, as another has put it, "that the sum of our failures in education is measured by the number of our failures with individuals."

The rural school will in the future be a community center for social, recreative and intellectual purposes, not only for the young people of the neighborhood, but for the older ones as well. This sounds Utopian when one considers the meagerness of some of the present schools in the state in respect to size, conveniences and location. Nevertheless, the realization of this vision is not so far as it may seem, in view of what is being accomplished already in some of the more progressive rural sections of the State.

Much that is here said with reference to rural schools is applicable also to city schools. Factors determining school efficiency, anywhere, in both county and city are the school building or plant, courses of study, the teacher, quality of the equipment, active supervision, attendance, and the number of children taught by the individual teacher.

In each or all of these some rural schools surpass in efficiency some city schools.

CONSOLIDATION OF SCHOOLS.

There are two classes of school districts known respectively as "City School Districts" and "Township, Town and Borough School Districts." Any two districts in the latter class may consolidate and act as a single district. The law makes the following provision for the consolidation of schools:

When any such district desires to consolidate with an adjoining district the Board of Education petitions the County Superintendent to fix a date on which meetings of the legal voters of the districts it is proposed to consolidate, shall be held to vote on the question.

The County Superintendent notifies the Board of Education of each of the districts of the date selected and the District Clerk posts

You Are Viewing an Archived Copy from the New Jersey State Library

notices calling such meetings. The Board of Education must fix the place at which the meeting is to be held, and the time the polls will open. The districts vote separately, by ballot, and are not consolidated unless a majority of the votes cast in each of the districts are in the affirmative.

Consolidation of schools in New Jersey has not gone on as rapidly as in some other states, because the state is so largely urban in character. Nevertheless, in some sections consolidation of many schools has been effected. In some parts of the state where it is most needed, there is still much opposition to consolidation.

Parents frequently, and in many cases persistently, object to sending children, young children particularly, long distances from home. There is a further objection that the abandonment of the local school would damage the locality by removing the chief community center, and property would consequently depreciate in value. There is also the objection, sentimental in character, which attaches to the one-room country school.

However, public sentiment in the state as a whole is gradually becoming more favorable to the movement. Wherever old school buildings are condemned, the opposition to consolidation is likely to disappear, as Assistant Commissioner Mirick has pointed out in his report. About twenty-five buildings were condemned during the year.

The law enacted at the session of 1912, granting by the state 75 per cent. of the transportation expenses within a district, will promote consolidation.

To counteract opposition, it is necessary for county superintendents and other school officials to educate public opinion to the advantages of the consolidated school. These advantages are: better teachers, not only because they can be better paid, but also because strong teachers prefer to teach in a graded, consolidated school, rather than in the isolated one-room school; gradation of the school; a more diversified course of study, with industrial training, and the probability of better school equipment and apparatus for teaching.

Appreciative mention should be made of those county superintendents who have so persistently and earnestly advocated consolidation, sometimes successfully, sometimes unsuccessfully. In the reports of County Superintendents may be found the latest facts concerning the progress of consolidation.

TRAINING OF TEACHERS.

Approximately seventeen hundred teachers, new to the schools of the state, entered the schools during the year ending June 30th. This was a little more than thirteen per cent. of the total number of teachers employed. Of these, approximately seven hundred were employed to teach newly established schools made necessary by the growth of the state. One thousand were employed to take the places of teachers who retired from the service.

Of the seventeen hundred new teachers, approximately seven hundred were employed in the cities of the state, and one thousand in districts other than cities. Two hundred and seventy-seven were teachers in high schools; of these sixty were employed to teach various branches of industrial training, music, physical training, etc.

What facilities are provided in the state for the training of teachers?

First are the two Normal Schools, at Trenton and Montclair respectively, schools of widely recognized worth which have been of inestimable value to the State; secondly, the city training schools in Newark, Jersey City, Paterson, Elizabeth, Trenton and Camden, which have afforded efficient training for teachers in those cities.

The number of students graduating from the colleges of the state who became teachers in the public schools of the state is so small as to be almost a negligible quantity—not to exceed five young men who were graduated from the colleges of the state in June, 1912, became teachers in New Jersey or elsewhere.

From the two Normal Schools were graduated during the year 333 teachers. From the city Training Schools 234 were graduated.

The principals of the State Normal Schools state that these institutions are filled to their utmost capacity. They have been compelled to refuse admission to many applicants, qualified graduates of approved high schools throughout the state.

The city training schools are maintained to supply teachers for the respective systems in which they are located. Under the rules of the State Board, these teachers are not licensed to teach in other than the local schools. The purpose of the city training schools is not to train teachers for the state at large.

Through the co-operation of city and county superintendents information was collected concerning the education and training of the seventeen hundred new teachers who entered the schools of the state

You Are Viewing an Archived Copy from the New Jersey State Library

during the year ending June 30th. The following is a summary of this information:*

New teachers in rural schools	1006
New teachers in city schools	721
Total	1727
Graduates N. J. State Normal Schools.

Women Rural	19
City	23

It will be seen from the foregoing that more graduates from normal schools without the state, entered the schools than from normal schools of all kinds within the state. The 355 graduates of colleges, universities and technical schools were mostly from institutions without the state, because, as before pointed out, such institutions within the state supply very few teachers.

Inasmuch as the rules for the certification of teachers in high schools practically require graduation from college or the equivalent, it is seen that the 217 teachers of academic subjects in the high schools were mostly teachers from without the state.

It should be pointed out that the proximity of the state to New York and Philadelphia, in which are located numerous universities, colleges and technical institutions, makes it possible for large numbers of young men and women in the state to secure training in those cities. For the same reason, many graduates from such institutions, whether residents of the state or otherwise, naturally find their way into the schools of New Jersey. Large numbers of graduates from normal schools in New York, Pennsylvania and New England become teachers in the elementary schools of New Jersey.

Superintendents of schools and boards of education in the cities of the state, particularly in the northern part of the state, have for many years drawn heavily for teachers upon the normal schools elsewhere. Many of these teachers are rendering acceptable service in the schools of the state.

The above table shows that the state trains by means of its existing schools, not to exceed one-third of the new teachers required each year.

The only provision that has thus far been made for the training of teachers for high schools, is the High School Teachers' Course at the State Normal School at Trenton.

It is assumed that it is not necessary to make any argument to

You Are Viewing an Archived Copy from the New Jersey State Library

show the superiority of trained teachers. The work of the schools is so complex, and the demands upon them are so great, that it should be evident upon the slightest reflection that the schools cannot be expected to do the work the state has a right to expect, unless the supply of trained teachers is much larger than at present. The conclusion is obvious that additional facilities should be provided in the state for the training of New Jersey young women, graduates of its high schools, who if opportunities were provided would become trained teachers in the schools of the state.

At least two additional state normal schools should be provided at the earliest practicable time. One of these schools should be in the northern part of the state, and the other in the southern part.

It is hoped that the legislature of 1913 may be convinced of the need of making provision to meet this important need of the schools.

There is reason to believe that with such additional schools, located in sections of the state at present unprovided with state schools, hundred of young women, graduates of approved high schools, would eagerly avail themselves of the opportunity to attend such schools and become teachers in the state.

The school in the southern part of the state should, by means of its course of study and its allied practice schools, make a special effort to prepare teachers for the rural schools.

It should be stated, however, that these efforts will not succeed unless salaries in rural schools are made attractive to normal school graduates. Moreover, conditions of living in a few rural sections are such that other considerations than salary will have a bearing upon the question of the trained teacher going into those sections to teach.

In one of the normal schools of the state there should be a definite course for the training of teachers to teach agriculture.

In my judgment it is not advisable to offer specialized training in each of the various branches of industrial training in more than one school. For example, one school should offer training in agriculture, another in the various branches of domestic economy, cooking, sewing, etc. The Normal School at Trenton will add domestic science and cooking to its industrial courses in September, 1912. Duplication of plant and equipment would be expensive and unnecessary, particularly in view of the facilities afforded for such training in such nearby centers as New York and Philadelphia.

I believe that consideration should be given to the proposition already advanced, that there should be increased opportunities in the

You Are Viewing an Archived Copy from the New Jersey State Library

state for young men and young women to secure within the state, training for work in high schools. Wherever such a school is established or maintained, whether in connection with one of the normal schools or in connection with a college, or possibly as a new institution, it should be borne in mind that it must be an institution which will afford facilities both in its academic and professional departments, equal to the best that is provided anywhere. The training should consist, first, of academic work, in extent equal to a course of four years beyond that of a four-year approved high school. Secondly, courses in the theory of education, with special reference to high school work. Third, well regulated observation of good high school teaching. Fourth, practice teaching in carefully selected high schools; this practice teaching to be under the joint direction of the department of education of the institution, and local school authorities.

Thus far this discussion has pertained only to those who in the future will become teachers in the schools of the state; but teachers already in service should also be given consideration. Large numbers of these teachers are without any professional training. The scholarship of many of them is of a very moderate order. Other teachers with good scholarship and good professional training, desire to increase their equipment.

These teachers in service, whatever their academic or professional resources, should have the opportunity within the state to make these resources greater.

Such an opportunity is afforded by means of the summer school at Cape May. About one hundred and seventy-six teachers attended this school in July, 1911. It is the only summer school for regular teachers within the state. With the extension of the facilities of the school, with large financial support from the state, with the recognition of the work of the school in the certification of teachers, with the possible extension of the course from four weeks to six weeks, the usefulness of the school would be greatly increased.

The Cape May school is doing good work in the training of teachers in service. Nothing should interfere with its development. Additional facilities, however, by means of summer schools, should be provided by the State for the training and education of teachers in service.

Summer courses in academic subjects and in professional work should be established for intending teachers and for those in service as well, at some of the county seats and other centers in rural coun-

You Are Viewing an Archived Copy from the New Jersey State Library

ties which are remote from Cape May. Opportunities for such training might properly be given at the State Normal School at Trenton, where there are dormitory facilities, and where the equipment of the school would be at the disposal of the students.

The Rutgers College Experiment Station might well be utilized for summer school work in agriculture, and for instruction in allied subjects.

Of course many New Jersey teachers attend the summer schools carried on in New York and Philadelphia, and it is hoped that this will continue.

The suggestion has also been made that correspondence courses for teachers in both academic and professional subjects be conducted possibly under the auspices of the State Normal Schools. Teachers in remote rural sections of the State would by means of such courses have an opportunity to improve their scholarship and their professional outlook.

If the courses were established in connection with the normal schools, it would be necessary to provide means in those schools for conducting them.

The extension of opportunity to do summer school work within the state, by means of the development of the Cape May school and otherwise, is one of the educational needs of the state.

None of the recent tendencies in education in this country is more encouraging than the disposition of teachers to attend summer schools for their own improvement, which results later in the improvement of their pupils. Probably fifty thousand teachers in the country as a whole, attend summer schools each summer; and the number is rapidly increasing.

Plans for improving public schools will fail, if they neglect to take into account the efficiency of the teacher. Buildings, courses of study, organization of schools, are all secondary; the quality of the teacher is primary. The building up of schools will not go far unless teachers are well equipped. The State must provide means by which this equipment may be had.

The fact cannot be ignored that the number of teachers or would-be teachers in the State with slender academic scholarship is much too great. The results of the semi-annual examination of teachers reveal the truth of this statement. In the report of the State Board of Examiners published in another place, it is seen that in the December, 1911, examinations, out of 310 teachers taking the examination in

You Are Viewing an Archived Copy from the New Jersey State Library

reading, 144 failed; out of 346 taking the examination in spelling, 87 failed; out of 323 taking the examination in geography, 196 failed.

In the April, 1912, examination, out of 434 taking the examination in English grammar, 116 failed; out of 346 taking the examination in Arithmetic, 239 failed.

These results are discouraging if scholarship in ordinary subjects is a qualification on the part of those who would teach others. The questions were made out with great care, and were not difficult for young men and young women who were either teachers or who proposed to become such.

Glorification of the school teacher should not go so far as to make the way easy for poorly equipped candidates to succeed in becoming alleged teachers in the schools of the State.

Little will be gained, however, by finding fault. Constructively, the State should address itself to providing additional facilities for the education and training of teachers, both for teachers in service and for intending teachers. How this can be brought about is pointed out in the foregoing. The energies of all those interested in the improvement and development of the schools must be devoted to this problem.

SALARIES OF TEACHERS.

The total amount of salaries paid all the teachers in the state, including the amount paid to the Teachers' Retirement Fund, was $10,087,509.14, which was an increase of $821,339.56 over the preceding year. The average salary paid to women teachers in the primary schools was $670.65; to men teachers, $650.68.

The average salary paid elementary teachers in what are known as "grammar schools," grades 5-8, was, for men teachers, $889.10, and for women teachers $781.69. High school salaries for men were $1,436.41, and for women $944.39.

Information was collected in order that teachers might be classified according to the salaries they receive. The following is a summary of this information.

CLASSIFICATION OF TEACHERS IN DAY SCHOOLS BY SALARIES.

Total day school teachers		12,652

You Are Viewing an Archived Copy from the New Jersey State Library

From this summary it is seen that about 12 per cent. of the teachers of the state received for their services less than $500 a year, each, and that a total of 371 teachers received less than $400 a year each.

There is great variation of salaries in the state. In the territory contiguous to New York, and influenced to some extent by standards prevailing there, salaries are relatively good, or satisfactory. For example, in Jersey City the average salary for teachers in the elementary schools last year was $938.56. The average salary for teachers in the high schools in that city was $1,758.70.

Corresponding salaries in five other cities were as follows:

	Elementary Schools.	High Schools.
Englewood	$769 02	$1059 61
Newark	962 09	2080 00
Montclair	800 00	1330 55
East Orange	752 51	1286 20
Bayonne	832 62	1280 00

In some of the rural districts of the state, on the other hand, one is impressed with the meagerness of the salaries paid. In Burlington County the average salary of teachers in the elementary schools was $467.67; in the high schools, $800.00.

Corresponding salaries in five other counties were as follows:

	Elementary Schools.	High Schools.
Cumberland County (outside the City of Bridgeton)	$443 49	$705 00
Hunterdon County	474 00	701 00
Salem County (outside the City of Salem)	403 22	575 00
Sussex County	450 00	732 62
Warren County	401 68	713 00

In Salem County, outside of the city of Salem, only five teachers in the elementary schools received more than $500.00; ninety teachers received less than $500.00 each.

From these figures it will be seen that the question of teachers' salaries in some parts of the state is a serious one. 1495 teachers in the state received less than $500 a year.

There are four considerations bearing upon the salaries of teachers to which attention is called.

First: The well known fact of the high cost of living at the pres-

You Are Viewing an Archived Copy from the New Jersey State Library

ent time. A salary of $500 is by no means equal in its purchasing power to a salary of $500 ten years ago. It is not necessary to enlarge upon this fact, concerning which there has been so much public discussion, and upon which every intelligent person is well informed. It is a fact, however, which cannot be disregarded in any consideration of teachers' salaries; this I wish to emphasize.

Secondly: Teachers must have a greater amount of preparation for teaching than ever before; these demands are increasing. The state is making, and rightfully so, if the interests of the children are paramount, increased requirements both in scholarship and in professional training, of the persons who propose to teach in the public schools. For example, after September 1st, 1912, every teacher new to New Jersey schools must have at least a high school education of one year; after September, 1913, of two years; after September, 1914, of three years, and after September, 1915, of four years. This means increased expense on the part of intending teachers for the necessary preparatory training.

Third: Demands upon the schools are continually increasing, and therefore demands upon the teacher after she is in service, are increasing, for the teacher is the school.

The teacher should possess, if she is to do her work efficiently, good scholarship. She must have skill in the teaching of such subjects as penmanship, hand-work, music, drawing, and physical training. It is expected that she look after the health of her pupils. She must be able to manage, control, govern, or discipline a school; in New Jersey she is not allowed to make use of corporal punishment as an aid in these processes. She should be able to train her pupils in the art of self-government and self-control; in self-reliance; in habits of industry; in punctuality; in power to do their own thinking; in initiative; in unselfishness; in regard for others' rights; in respect for and practice of the truth; in politeness.

To these should be added the ability to train pupils how to study to use books, and to make the most of their time.

She should be able to adjust herself to the life or needs of the community. The best school work, all other things being equal, is done where the teacher is able to secure the co-operation of the parents of the children, and of the public at large—to say nothing of the members of the school board.

The teacher should have good command of English; she should be well read, and whatever degree of culture she may possess, so much the better for her pupils.

You Are Viewing an Archived Copy from the New Jersey State Library

Good, robust health is absolutely indispensable.

If she reads some of the many excellent books which are now appearing in such numbers upon various phases of education, it is well. Association of teachers demand some of her time and money and she may with profit be a subscriber to a good educational journal.

These are some, but not all, of the qualifications demanded of the teacher in the modern school. The bare emuneration of these qualifications is worth while, if for no other purpose than to call attention to the fact that under our complex social and industrial conditions a new type of teacher is demanded.

The compulsory education laws have forced into the schools large numbers of children from a very miscellaneous class of homes. But as another has put it, compulsory education laws do not create an appetite for study.

The problems that confront a teacher in the modern school are very complex in comparison with the old-time school, whose problem was comparatively simple. As a matter of fact, if the schools are to meet the requirements now made, and which are likely to be made, well equipped teachers, academically and professionally, skillful in power to control, or good teaching or training ability, and of power to adjust themselves to the varying wants of the community, are indispensable.

New conditions have forced great problems upon the schools, and in the solution of these problems the teacher is the most important factor. The teacher is of far greater importance than school houses, and of far greater importance than courses of study, so far as paper courses of study are concerned.

All of this has been said before. They are commonplace, and because they are commonplace, repetition is necessary.

Fourth: Another consideration bearing upon the question of teachers' salaries is often overlooked. It is this: The number of employments open to young women has greatly increased during the past score of years. Some of us can remember when young women looking about for employment found that such opportunities were limited. Teaching, sewing, millinery, about exhausted the list. Since that time the number of occupations open to women has very greatly increased. Every office building in our cities is filled with young women, doing various kinds of office work. In the State House at Trenton, for example, there are upwards of one hundred young women in the various offices. Many of these would have made

You Are Viewing an Archived Copy from the New Jersey State Library

good teachers. Many of them would have become teachers, had they lived under former economic conditions.

It would be easy to multiply illustrations, but the fact remains that a young woman of intelligence and education is not confined in her outlook for employment to two or three occupations.

In many of these avenues of employment a young woman is able to obtain a larger compensation than the public schools offer.

Young women graduates of our high schools are not unmindful of these facts.

The schools are liable to suffer in the future by the competition of the attractions of other employments, unless they offer greater inducements in salaries. In my judgment the State cannot expect, and has no right to expect, the kind of service the state—in other words, the children—should have, where teachers are paid, as so many of them are, salaries of less than $500 a year. This cannot be said with too much emphasis, bearing in mind the cost of living.

It should be pointed out, however, that in numerous instances teachers receiving small salaries are doing good work for their pupils. Nor is salary the last consideration in the minds of most teachers. Nevertheless, a teacher should be given a living wage. By the term "teacher" is meant one who has the ability to teach a school, and not merely the ability to "keep" a school. There is a vast difference in the two. According as the teacher has the one kind of ability or the other, are the children trained.

There are still other considerations which govern the attractiveness of teaching: Freedom from politics is one; attractive and convenient school buildings, with a sufficient supply of apparatus, is another; not too many children to teach is another; the ability to get a good boarding place is another; a school principal or superintendent who makes conditions such that a teacher can best develop her own individuality, is another.

During the past five years the amount of money expended for school buildings in the state increased 66 per cent. The increase in the amount of money paid to teachers in salaries was 63 per cent. Well ventilated, well lighted, commodious, attractive, sanitary school houses are a necessity, but well equipped teachers in those school houses are a greater necessity.

Have we quite waked up to this fact?

To sum up the matter, one of the most important needs in New Jersey in certain sections—not in all sections—is the question of providing adequate compensation for teachers, not so much in justice

You Are Viewing an Archived Copy from the New Jersey State Library

to teachers as in justice to children. I am convinced that in some districts the school officials are not paying the salaries which they can readily afford to pay, particularly in view of the fact that $200 is appropriated by the state for the salary of each elementary teacher.

Some states have adopted a minimum wage for teachers. While some objections may be advanced to the enactment of such a minimum wage law, yet I believe the time has come when the establishment of a minimum wage by statute should be seriously considered in New Jersey.

In the consideration of salaries, the qualifications of teachers should not be forgotten. The present rules of the State Board of Examiners provide for a gradual increase in the academic or scholastic equipment of persons who apply for certificates to teach in elementary schools. Allusion has already been made to the fact that after September, 1915, every teacher new to the schools of the state must have had a four years' course in a high school.

It is hoped that the time is not far distant when every applicant for a teachers' certificate shall have had, as a pre-requisite, some professional training.

MINIMUM COURSES OF STUDY.

The law provides that the Commissioner of Education may, with the advice and consent of the State Board of Education, prescribe a minimum course of study for elementary and high schools.

Of the factors which determine the efficiency of schools, the quality of the teacher is well recognized as being the most important. The course of study, however, is next in importance.

The law provides that the nature of alcoholic drinks and narcotics; and their effects upon the human system, shall be taught in the public schools. The teaching of reading, writing, arithmetic, English grammar, spelling and geography is also prescribed by the statutes.

In considering the various aspects of what the elementary schools of 1912 should teach, two facts may well be considered:

First, the character of the children who make up the enrollment of the 460,000 children in the public schools.

Secondly, the social and industrial conditions under which the children live, and in which later they will probably live as men and women.

You Are Viewing an Archived Copy from the New Jersey State Library

Pertaining to the first, many of the children in the schools of the state are foreign born, or are the children of parents who are foreign born. Large numbers of these children enter school without the ability to speak English. The standards of their home life are not always the recognized American standards.

In Newark, 31.8 per cent. of the population were born in foreign countries.

In Hoboken, of the total number of children enrolled in the public schools, 9,364, 1,327 were born in foreign countries.

In Perth Amboy, the total enrollment of school children for the year was 6,353. Of the pupils enrolled, 3,705, or 50 per cent. were born in this country, but of foreign parents; 1,034, or 16 per cent. were born in foreign countries; of these foreign pupils, the Slavs are most numerous.

Pertaining to the second, approximately three-fifths of the children and of the people in the state, live in cities or in what might be called city environment. Under city conditions there is little for boys to do in or about the homes. The word "chores," so full of meaning under old-time conditions, has practically disappeared from the vocabulary of the city boy.

There is little about the homes of either the poor or the well-to-do, which gives the boy training in self-reliance, application and industry, by means of working with his hands. In respect to systematic physical exercise, which is so much a part of his nature, he is stranded. Unless provided with shop and tools or with a playground, his resort is often the street or the alley.

The girls are somewhat better off, because there are various household duties still left for them to perform, provided the mothers insist or persist. Still, with ready-made clothing of all sorts, the public laundries, and canned food supplies, even a girl generally fails to receive the training in household arts which her mother had.

This is not the fault of parents. It is the result of changed social and industrial conditions; but nevertheless it is, in the main, hard on children.

Children in cities are effected, too, by the nervousness, the tension, and the excitement, which are found where large numbers of people live in a restricted territory. There may be a certain gain in quickness and alertness of mind, and in the variety of interests which children in cities acquire—provided these interests are wholesome—but the opinion is offered that the noise of the streets, the cheap and often vulgar amusements, the crowd, the display of gaudy printed mat-

You Are Viewing an Archived Copy from the New Jersey State Library

ter on the news stands, more than offset the gains of city life, at least so far as children are concerned.

Again, these conditions are not the fault of the parents. These, too, are the result of changed social and industrial conditions.

The relations of children to the father and mother are not what they once were. The father is away from home, at the shop, the factory, the office, or the store. Often he is not at home for the midday meal. Under old-time conditions his occupation was near or about the home. Various engagements may call him away from home in the evening.

Large numbers of mothers are also employed away from home during the day. The opportunities for social life and to attend various forms of entertainments, all of which are afforded by cities, make in many cases heavy demands upon their time and their interests.

Under former rural conditions, the boy was the companion of his father in the various activities of the latter. The girl was closer to her mother.

As these changed conditions have come about, there has grown up in too many homes—by no means in all—a certain indifference as to the responsibilities of parents in the right bringing-up of children, and a certain irreverence of children in their attitude toward their parents. Some of these results could be avoided if parents were more alive to the fact that under new social and industrial conditions it requires more skill and intelligence to be a good parent than before. Parenthetically, it requires more skill and intelligence to be a good teacher than before.

The child of to-day requires a different sort of school from the school of half a century ago. He needs a course of study adapted to his needs.

Again, children living in congested tenement house districts should be trained in the theory and art of elementary hygiene—particularly in the art.

In this discussion it is the city child that I have had particularly in mind. He is in the majority in New Jersey schools. The country child is of course no less important, even though he is in the minority.

Some of the changes alluded to in the foregoing, have affected the country boy and the country girl as well, but in a lesser degree than the city boy or girl. The multiplicity of books and periodicals, the telephone, the use of labor saving machinery, the eager craving for amusement, the desire to get to the city, have not been without

You Are Viewing an Archived Copy from the New Jersey State Library

their effect upon rural children. These changed conditions in New Jersey life and in American life have made necessary some modifications in the purpose of the school, as involved in the course of study, not to the end that so-called fads may consume the time of the pupils and the energies of the teacher, but rather to the end that schools shall meet new conditions and new needs.

Teachers cannot do everything for children, particularly in the limited time the latter are in school, which as a matter of fact does not exceed one hour out of six in the hours children are awake, taking the calendar year as a whole, even when they attend school all the time the schools are in session. Many of them are in school only three-fourths of the time, as a matter of fact. These facts are overlooked by critics of the results of the schools.

The schools, however, must recognize in their courses of study the fact that the old-time curriculum, good as it was, would not be adequate to meet the conditions of to-day, if the great object of public education is to train children for citizenship, not merely in terms of the state, but in terms of the home, the neighborhood, the town, the community.

In view of these conditions, it may be said that there are four main purposes to be borne in mind in the course of study. These four are:

1. Training the children in the attainment of skill in the use of the tools of knowledge. Here belongs reading. Dr. Wm. T. Harris used to say, "The mastery of the printed page is the greatest of all the arts taught in school."

This training gives the pupil an equipment by means of which he may go on to educate himself later, so far as education comes from books. By means of this training he is furnished a tool by which he may be able to acquire subsequent knowledge and information. He is given a trainng by means of which his life may be broadened by the inspiration which comes from reading the best literature in his language.

Pupils should be trained to use English, both spoken and written, with a reasonable degree of accuracy and correctness. They should be trained in the spelling of common words. They should be given skill in the essential processes of arithmetic.

To repeat, they should be given training in the use of these fundamental branches.

2. The second group of studies is made up of geography, history, civics, literature, music, and natural science. There is something of

You Are Viewing an Archived Copy from the New Jersey State Library

so-called practical value in geography and civics, provided the latter includes public housekeeping at home.

These are the subjects that have content. Properly taught, they afford discipline. They create both interest and taste; they broaden the sympathies, they enlarge vision, they promote tolerance, they furnish resources for life. In themselves they are worth while. Moreover, they furnish means by which leisure time may be used in a wholesome way.

It is not to be forgotten that people as a rule have more leisure than formerly. The growth of the vacation idea, the weekly half-holidays in cities, the shorter working day, the increased use of machine made goods, are tangible evidences of the truth of the statement. If additional evidence is wanted, observe the crowds of people coming from the vaudeville matinee even on Monday afternoons.

The value of these subjects is great in affording uplifting spiritual and intellectual and recreative resources. They are necessary in the enlargement of the life of the individual, and are advantageous to both poor and rich. They are in the best sense practical, if the work of the schools is to give a more abundant life.

3. A third group of school subjects, or rather exercises, is connected with the physical well being of the pupil. Lessons in hygiene, gymnastic exercises, play in the primary schools, games in the grammar school, the supervision of the school recess, the individual drinking cup, healthful and sanitary school conditions including good ventilation and light, and seats that fit the children, restricted home study—attention to all these is everywhere increasingly necessary, particularly in the crowds of the city.

4. Industrial training is the fourth purpose in the systematic work of schools. Training children to work with their hands at all stages of their progress through the schools, is an obligation forced upon the schools as manual activities have disappeared from home life.

Drawing, the various phases of hand work in primary schools, sewing, cooking, shop work, gardening, agricultural activities, all have their value as discipline, and have a direct relation to the usual and necessary activities of life.

Competently to work intelligently and productively with one's hands is not to be ignored in any discussion of educational values, whether from a psychological view or whether from the view of the demands of every day life.

The field of each and all of these four groups of school activities

You Are Viewing an Archived Copy from the New Jersey State Library

is to be measured, not by the needs of the few who go to college, or even to the high schools, but rather by the needs of the great mass of miscellaneous children who make up the enrollment of the schools, and whose education is as a rule confined to the first fourteen years of their life.

Overcrowding of courses of study may become a menace to a sound and efficient education, unless care is taken to make certain adjustments. What are these adjustments?

First, There should be elimination of superfluous details within the various subjects. There still may be in our courses of study too much obsolete arithmetic, too many facts in geography, too much mummified physiology, too many uncommon words in spelling, too much antiquated English grammar.

Secondly, There may well be more correlation or combination of subjects. History and geography, English with all subjects of the schools, arithmetic and drawing with industrial training, are cited as examples. Experience in some of the best schools of the state has abundantly demonstrated that this co-ordination is entirely practicable.

Third, Well educated and well trained teachers are better able to make a selection of essentials within subjects, and to establish correlation in subjects, than teachers whose scholarship is limited and whose pedagogical training has been neglected.

The teacher, after all, is the real course of study—to recite a commonplace—whatever the course of study may be on paper. Nothing could be more certain than that a poor teacher will produce unsatisfactory results, whether the subjects be few or many.

Fourth, All subjects should be so taught as to cause pupils to use their minds at all stages of their school work, in every recitation, in the preparation of lessons, in each exercise of the school. The good teacher realizes that subjects are a means of establishing habits of clear thinking, of self-reliance, of application and industry. This is discipline; this is education; this is training .

He knows that mere acquisition of a large body of facts, many of them unrelated, is not the purpose of education. It is the use that can be made of the information acquired, which determines whether it is worth while.

Fifth, The subjects taught in the school must be adapted to the capacity and intelligence of the children. This is emphatically the modern view, and its realization in school practice, wherever it is fully realized, is a great blessing to children. Forcing standards of

You Are Viewing an Archived Copy from the New Jersey State Library

men and women on children is one of the worst crimes in the educational calendar.

Books are of course necessary and useful as a means of education, as Mr. Lowell has so happily pointed out in his essay on "Books and Libraries." To train pupils how to use books economically and intelligently, as well as how to read, to use the table of contents and the index, is an essential in education.

Other recognized means of education are the school shop, the sewing room, free hand and mechanical drawing, the gymnasium, the garden and the farm. Still other means are the field excursion, the playground, the bank, the factory, the store, the museum, the library, and other community activities. Many of these supply first hand information which is more vital than some of the second-hand information furnished by the geography and the arithmetic.

It is believed that the foregoing, or similar considerations, should determine the content of courses of study in the best schools in New Jersey and elsewhere. Bearing upon our state conditions, it is believed that the interests of the elementary schools will be promoted by formulating minimum courses of study for such districts in the State as may choose to use such courses. Such courses as a matter of fact, would probably be used throughout the state, except in the large cities, where courses of study have been very carefully planned which are adapted to local needs or conditions. To compel cities to use courses which may be prepared by the Department, even though these be minimum courses, would in my judgment be unwise.

There is liable to be too much uniformity in the work of schools, which has a tendency to play havoc with the initiative of individual teachers or superintendents.

The plan therefore at present is to issue monographs upon the teaching of the several subjects in the elementary schools. The one on spelling was issued late in the year, and will be available for use throughout the state at the beginning of the new year in September.

The following is the foreword of this monograph:

> The statutes of the State require, and the public demands, that spelling be taught in the public schools.
>
> Intelligent persons realize that the faultless spelling of English words is an art difficult to attain, much more so for some persons than for others. Nevertheless, failure to spell correctly is commonly regarded as a sign of illiteracy.
>
> The purpose of this monograph is to offer constructive suggestions to teachers concerning the teaching of a subject in which there is so much pop-

You Are Viewing an Archived Copy from the New Jersey State Library

ular interest. It is believed that good teaching—not merely hearing lessons—will bring about good results in this, as well as in the other activities of the school.

Good teaching is dependent upon the size of classes, upon the number of words taught, upon the judicious selection of words, upon the manner of presentation to the class, or the plan of study with the teacher, upon the pupils' independent methods of study, and upon the method of testing or conducting a recitation; but above all, it is dependent upon the interest which is aroused.

Good teaching also involves the ability of the pupils to recognize symbols. Many pupils are poor spellers because they do not clearly see the forms of the words. Defective eye-sight may be the cause of this.

Spelling is sometimes taught in a perfunctory, mechanical way, with little variety or life in the instruction. Often the lesson is aimless and tediously monotonous. Such teaching is partly responsible for poor spelling. To arouse interest in spelling, to create a desire to excel, to relieve it of monotony, to make the instruction a real teaching process, and to bring variety into the exercises, should be the aim of the teacher.

This pamphlet is not a course of study, neither is it a plan for a teacher to follow closely in her daily work. It is a statement of general method in the field of spelling for the elementary grades.

Spelling is treated as one of the factors in word study. The way or method of teaching spelling is considered of greater importance than the number of words spelled, for good methods of teaching will assist the learner in the formation of good habits of thinking, with the result that what is learned will be the more intelligently and permanently possessed.

A beginning has been made in the preparation of monographs on the teaching of the following subjects: Agriculture, corn growing, arithmetic, penmanship, reading and English. These will be distributed to the teachers of the State during the coming school year. The ones on arithmetic, reading and English will have a minimum course of study for districts that choose to use them.

It is also planned to prepare monographs upon the teaching of geography and history, and one upon what the schools of the State can do to promote the health of children. The preparation of all these requires both time and thought, if the work is to be properly done.

Each monograph will attempt to set forth, or should set forth, the best theory and practice concerning the teaching of the subject under conisderation, for it will be accepted by thousands of teachers as authority. A large part of the purpose of all the monographs is to give teachers standards in their work.

It is important that the monographs and accompanying courses of study should reflect the best educational sentiment of the State. To this end a cooperation of some of the leading superintendents and

You Are Viewing an Archived Copy from the New Jersey State Library

teachers in the State, including those in the State Normal Schools, has been sought and the response has been very generous.

A pamphlet of 300 pages upon the observance of Arbor Day was issued in March and distributed to the schools of the State.

It is proposed also to issue monographs upon the teaching of the various subjects in the high school course of study. One upon the teaching of English is in course of preparation. Many English teachers in the State are giving assistance. Here, as well as in other directions, it is believed that only by securing the cooperation of the educational forces of the State can progress be made.

SUB-NORMAL CHILDREN.

The General Assembly of 1911 enacted the following:

"Each board of education in this State shall ascertain what children, if any, there are in the public schools who are three years or more below the normal. In each school district in this State in which there are ten or more children three years or more below the normal, the board of education thereof shall establish a special class or classes for their instruction; no class, however, to contain more than fifteen children. In each school district in this State where there are ten or more blind or deaf children who are not now cared for, or who cannot be cared for in an institution, a special class or classes shall be organized for their education; no such class, however, to contain more than fifteen pupils. Such classes shall be discontinued when proper provision is made for the care and education of such blind and deaf children by the State. The medical examiner of the district shall examine the children in special classes at least once in every three months."

(The Commissioner of Education shall, with the advice and consent of the State Board of Education).

"Prescribe such method as to him may seem best for use in ascertaining what children are three years or more below the normal."

The General Assembly of 1912 enacted the following:

The said County Superintendent of Schools shall, on or before the first day of April in each year, apportion to the several school districts of said county the State school moneys and the interest of the surplus revenue in the following manner:

"The sum of five hundred dollars for each teacher employed in a special class for the instruction of blind or deaf children or for children who are three years or more below the normal."

These laws laid upon the local school boards the obligation (a) to ascertain what children there are in the public schools who are three years or more below the normal, (b) to establish special

You Are Viewing an Archived Copy from the New Jersey State Library

classes for such children of not less than ten and not more than fifteen children, (c) to care for the blind and deaf children in similar special classes.

These laws laid upon the Commissioner of Education and the State Board of Education the obligation to prescribe a method for the use of local school boards in ascertaining what children are three years or more below the normal.

They laid upon the County Superintendent the obligation to apportion the sum of $500 for each teacher employed in one of these special classes.

It is believed that New Jersey is the only American commonwealth which has enacted legislation making definite provision for the instruction of sub-normal children.

The method to be employed in determining what children are three years or more below the normal was important.

It was finally decided to make use for this purpose of the so-called "grade and progress cards" prepared by Dr. Leonard P. Ayres, of the Russell Sage Foundation.

A circular was issued, and distributed throughout the state, which classified retarded children as follows:

Class A.—Miscellaneous.
Class B.—Incorrigibles.
Class C.—Mentally Subnormal.

Quoting from the circular:

"Class A.—This class of retarded children consists of (1) foreign-born children, who do not know the English language. The needs of these may be best met by putting them by themselves in schools of approximately 20 or 25 children to a teacher. The school may be ungraded and the requirements for promotion should be liberal and elastic, taking into account ability rather than graded courses of study.

(2) Children who have entered school late, or who have been irregular in attendance. The needs of these are met in the same way that the needs of foreign-born children are met, or by the help of a special teacher who can clear up for each one the special difficulties that retard. Such a special teacher would receive children from various rooms for short periods each day. This plan is adaptable to places where only a small room is available.

(3) Physical defectives. These children are some times mentally subnormal, but not always so. Their difficulty may be one of defective eyes, ears, vocal organs, or of enlarged adenoids and tonsils. Medical inspection should reveal the seat of difficulty with these children, and the inspection should result in effective measures for the removing or neutralizing of the difficulty.

You Are Viewing an Archived Copy from the New Jersey State Library

Class B.—This class of retarded children is made up of the habitually lawless. They are those whose influence is harmful to the moral health of the school. Under the laws here quoted, the only way to deal with these children is to remove them to a special school, where a course of instruction modified to meet their interests, and methods of control suited to their needs, may be established. Such a course of study should strongly emphasize manual training activites.

Class C.—This class consists of the mentally subnormal. The study so far given to this class of children has disclosed the subtlety and difficulty of the educational problems that they involve. The following description has been made by Supt. Johnstone and Dr. Goddard of the Vineland Training School, and has been used by Dr. Maxson, Superintendent of the Plainfield schools:

'Mentally subnormal children in the public schools exhibit certain common characteristics. The essential evidence of mental limitation is that the child is persistently unable to profit by the ordinary methods of instruction, as shown by lack of progress or failure of promotion through lack of capacity. After one, two or three years in school they are either not able to read at all, or they have a very small and scanty vocabulary. One of the most constant and striking peculiarities is the feebleness of the power of voluntary attention. The child is unable to fix his attention upon any exercise or subject for any length of time. The moment his teacher's direction is withdrawn, his attention ceases.

These children are easily fatigued by mental effort, and lose interest quickly. They are not observant. They are often markedly backward in number work. They are especially backward in any school exercise requiring judgment and reasoning power. *They may excel in memory exercises.* They usually associate and play with children younger than themselves. They have weak will-power. They are easily influenced and led by their associates. They are often wilful and disobedient, and liable to attacks of stubbornness and bad temper. The typical "incorrigible" of the primary grades is often a subnormal child of the excitable type.

The physical inferiority of these defective children is often plainly shown by the general appearance. There is often some evidence of defect in the face, figure, attitudes or movements.

Temporary backwardness in school work may be due to removable causes, such as defective vision, impaired hearing, adenoid growths in nose or throat, or as the result of unhappy home conditions, irregular habits, want of proper sleep, lack of suitable food, bad hygienic conditions, etc. Great care must always be used in order not to confound cases of permanent mental deficiency with cases of temporary backwardness in school work, due to the causes mentioned above.'

This description will be helpful in guiding the judgment of a teacher or supervisor in the study of individual pupils, but no child should be finally classed as mentally subnormal and be placed with mentally subnormal children for training, who has not been so classed by one who has had special training and experience in this field of study. Even then every judgment should be considered tentative, and any child should be returned to the regular

You Are Viewing an Archived Copy from the New Jersey State Library

school as soon as there are indications that he may be able to lead there a normal life.

In some of the large cities a department for the care of mentally subnormal children has already been created, and a person qualified to pass judgment upon the mental ability of children has been appointed as director. It is hoped that this policy will be adopted in other large cities.

In smaller cities the services of a competent person may be secured from a near-by city or from an institution for the study of this class of children.

The State Department of Public Instruction will be glad to advise with the school authorites of those communities which may be unable to secure the services of an expert."

After the enactment of the law apportioning $500 by the state for each teacher of children who are three years or more below the normal, the question arose as to what teachers were affected by this law. It was decided that it applied only to those who teach children who are *mentally* three years or more below the normal; that it did not apply to children who are three years or more below the grade, either by reason of irregular attendance, illness, or causes other than mental defects.

Some cities of the state had, before the legislation of 1911, made a beginning in the education of sub-normal children by means of special classes. The total number of classes which were in existence in the state, for sub-normal children during the year ending June 30th, was reported as 80.

Therefore a substantial beginning has been made in the organization of classes for such children. A large number of additional classes will be formed with the opening of the new school year in September.

In the rural districts of the state, where schools are scattered over large areas, and where the number of mentally defective children in a given district is much below the statutory requirement of ten, the education or care of such children is a serious problem. Additional legislation will probably be necessary if suitable provision is to be made for the needs of children in the smaller and more isolated districts.

The State Board of Education, on the recommendation of the State Board of Examiners, adopted the following rule for the certification of teachers of mentally defective children:

"An applicant for a special certificate to teach classes of pupils mentally defective shall be required to hold a State certificate other than a special certificate and shall be required to pass an examination in Elementary Manual

You Are Viewing an Archived Copy from the New Jersey State Library

Training for both boys and girls, and also in Psychology with special reference to pupils mentally defective, including recognized tests applied to pupils mentally defective. Courses in schools which aim to prepare teachers of pupils mentally defective and which have been approved by the Board of Examiners, will be accepted in lieu of such examinations.

"Special certificates will be granted to all teachers of classes of pupils mentally defective and of the blind and deaf, who have heretofore been appointed and are now employed by local school boards, upon the filing of the necessary evidence by the representatives of the local Board of Education."

Two important results not always recognized have followed the legal requirement that subnormal children be grouped in subnormal classes.

First, teachers have been led to realize the differences in children, which should be taken into account in courses of study, in discipline and in the organization of schools. Consideration of subnormal children has resulted in the consideration of *all* children, not merely in the mass, but as individuals. This alone has been a great gain.

Secondly, the withdrawal or elimination of the subnormal children from the regular classes relieves the teacher of a large burden. The presence in regular classes of such retarded or subnormal children is a great tax upon the energies and time of the teacher, and often greatly retards the progress of normal children. This too has been a great gain.

INDUSTRIAL TRAINING.

The development of industrial training is one of the important purposes of education in the state.

Most of the cities and larger towns of the state have made a beginning in this phase of education; some of them very substantial beginnings.

Newark and Jersey City have during the year completed and occupied very completely equipped technical high school buildings. Bayonne has established a vocational school; East Orange has added industrial courses to its high school courses; Passaic has made plans for a part time school in co-operation with some of the manufacturing interests of that city; Freehold has made plans for building a green-house for experimental work in plant growth and soil testing, in connection with proposed courses in what might be

You Are Viewing an Archived Copy from the New Jersey State Library

called agricultural botany; Elizabeth has materially extended its industrial courses, and this by no means completes the list. Some of the small towns and districts have also shown commendable enterprise in work of a similar character.

The amount of state aid given to various cities and districts for manual training has increased from $110,000.00 to $125,000.00 for the year ending June 30th.

The amount received by each district is appended to this report.

Sixty new teachers of vocational or industrial subjects were reported as having been employed during the year.

New Jersey is a promising field for the development of industrial training.

On the one hand, are the numerous and unusually varied manufacturing interests of the state; on the other are the agricultural resources, which are more considerable than most people realize. Their importance is enhanced by the unusually favorable position of the state in relation to good markets—the best, in fact, in the whole country.

It was the existence of these two important types of industry in the state that doubtless led to the provision for an assistant commissioner of industrial education, including agriculture.

There are three widely accepted departments of industrial education.

1. Training for girls in the household arts.
2. Training for boys in various industries allied to manufacturing and the trades.
3. Agricultural education.

The importance or the necessity of all this training is widely recognized for various reasons. Here are a few of them:

1. The tendency of people to go to the cities, with the consequent loss of rural population. The result is undue congestion of cities, and the rise in the cost of food products because the land is not made to produce what it might produce with more workers; more intelligent workers are needed, too, and education in agriculture would increase the number of such workers.

2. The scarcity of men and women, American born, who have the ability to work in the skilled manufacturing processes; more young people should be trained.

3. The reluctance of a large number of boys and girls upwards of fourteen years of age, to continue in school, because the traditional course of study is not related to the more practical affairs of life. They see no "use" in a bookish course of study, of language, mathematics and history. They leave school in large numbers, not because they must, but because they want

You Are Viewing an Archived Copy from the New Jersey State Library

to. They are bored by the conventional school. They are unfitted to enter a productive industry, although most of them must do something. They drift from one chance job to another; some of them, it is true, "come out all right," but many of them do not.

Industrial training schools, in which there would be a combination of industrial training and book work, would be a means of keeping a very considerable number of these boys and girls in school for a longer period. They would be trained not only for industrial efficiency, but for social efficiency. These boys ars not wayward boys or the girls worthless girls. They may become such unless education of the right kind is applied to their needs. In fact, potentially they are among the best of our future citizenship, if they have direction and training of the right sort.

The few industrial schools that have been established in the State and elsewhere, have, in a measure, demonstrated the truth of these theories.

4. Social workers, charity workers, settlement workers, truancy workers, judges in juvenile courts, are unanimous and positive in their conviction that industrial training is one of the most powerful means of saving many youth from being idlers, vagabonds and criminals. It is one of the agencies for saving their self-respect.

The means by which such training should be given is worthy of brief consideration. They are the means already employed to some extent in various places in the State.

Manual training courses are good; they are worth all they cost, and more than they cost.

In addition to these, should be schools of the vocational kind; the particular kind being determined in part at least, by the dominant and specialized industries or trades of the community, wherever it is practicable to relate the school training to industries.

Evening schools for workers in the trades and industries. Part-time schools, the young men or the young women being in school a part of the time and at work part of the time. Industrial all-day schools, in which, say one-half of the time is given to industrial training, including mechanical drawing. Trade schools. Agricultural winter high schools, the teachers being employed for the year of twelve months, spending the summer vacation on the farms, in order to adjust themselves to the industrial and social life of the community. Commercial schools or classes.

These are types of industrial schools which in time will become numerous.

Various administrative problems are involved. A scarcity of equipped teachers is one. The expense involved is another. Industrial education is not inexpensive.

The schools exist for the promotion of good citizenship, not for some of the young people, but for all of them. The State cannot afford to neglect or to leave out of account, the adolescent boy or girl of the type briefly described above.

These schools must multiply in number, if a sound and efficient education is to be given to all the children of the State.

It is questionable, however, whether any considerable number of communities will feel that they can afford to establish and maintain such schools. Experience of other states seems to point to the fact that after such a school

You Are Viewing an Archived Copy from the New Jersey State Library

is established, a building and equipment provided, that it is advisable and even necessary for the State, after approval of the work or courses give, to provide for one-half the cost of carrying on such a school. The State educationally, as well as otherwise, is a unit. Bearing this in mind, may it not be sound educational practice for New Jersey to aid and foster needed industrial education to this or a similar extent?

It is to be borne in mind that industrial training is still in a somewhat formative state in this country. No State, no community, has solved the many problems connected with it. That it will become, by steady evolution, a more vital part of public education, cannot be doubted.

EXAMINATION OF PUPILS IN THE HIGHEST GRADE OF THE ELEMENTARY SCHOOLS.

The General Assembly of 1911 enacted the following:

"The Commissioner of Education shall prescribe minimum examinations throughout the State for graduation from grammar schools and for admission to high schools and high school departments; confine such examinations to

**Only $125,000.00 was actually paid.

You Are Viewing an Archived Copy from the New Jersey State Library

arithmetic, writing, spelling, English grammar and composition, history and geography; prepare or cause to be prepared questions for the examinations; prescribe the times and places for holding them and the rules governing them; designate the persons to conduct them, and, if admissible, direct superintendents, principals and teachers of one district to conduct them in any other, such examinations shall be open to all children of the State, whether they attend public or private schools."

The purpose of this law was to test the ability of pupils in a certain grade in the conventional school subjects. Graduation from the elementary schools and promotion to the high schools was to be determined by the results of the tests.

Superintendents of schools, principals and teachers in the state quite generally doubted the wisdom of this law. They felt that it was not in accord with the spirit and practice of the best schools; that it unduly magnified the mere acquisition of knowledge; that it was liable to sacrifice the interests of the individual pupil; that it made little account of the virtues of industry, application, and the daily efforts of the pupil.

It was felt, too, that it would be difficult to apply the same standards for promotion to the high schools throughout the state, owing to the great difference in the schools in the various sections of the state, chiefly due to the difference in the efficiency of teachers.

It was believed, further, that the child of nervous, excitable temperament might be at a serious disadvantage, and that he (often she) would be deprived, however great his natural ability and previous application, of the advantages of the high school.

After protracted discussion of the matter, the following statute was enacted, which repealed the most questionable feature of the previous legislation, namely, that which made the examination the sole test of promotion to the high school.

"The Commissioner of Education shall ascertain the thoroughness and efficiency of any or all public schools, and of any or all grades in them, by such ways and means, tests and examinations, as to him may seem proper, whenever in his opinion or in that of the State Board of Education it is advisable to do so; prescribe during each school term and within sixty days prior to its expiration an examination in at least arithmetic, writing, spelling, English, history and geography, of the pupils in the highest grade in each elementary schools, provided that if in any school any of the said subjects is not taught in the highest grade, the examination shall be confined to such of said subjects as are taught or used; prepare or cause to be prepared questions for the examinations; prescribe the times and places for holding them and

You Are Viewing an Archived Copy from the New Jersey State Library

the rules governing them; select the superintendents, principals and teachers who shall conduct them, and who shall mark and file such papers and such reports as may be required in the Department of Public Instruction; report to the State Board of Education the results of all tests and examinations and such other information in regard thereto as it may require. Nothing herein contained shall impair the right of each district to prescribe its own rules for promotion."

Accordingly, examinations in the subjects mentioned in the statute were held in May and June, throughout the State. Two sets of examinations were necessary, owing to the fact that the schools close at different times in various sections of the State.

It is to be observed that the Commissioner, subject to the approval of the State Board of Education, has the power to ascertain by such ways and means as may seem to him proper, tests or examinations included, the efficiency of any system of schools in the state. This gives him large power, and power which he should have. It is believed that this provision meets with the general approval of the school men of the state.

Where school conditions are bad in respect to buildings, crowded school rooms, retardation of pupils, inadequate salaries and antiquated courses of study, the Department might well ascertain the efficiency or the inefficiency of such schools. Examinations in the subjects taught might be a part of such procedure, but there would be other determining factors as well.

The partial examination of a few small systems of the state has indeed already been made by the Assistant Commissioner in charge of Elementary Schools, and by the Assistant Commissioner in charge of Secondary Schools, each in his respective field. In such examinations the co-operation of school officials has been sought.

The following is an extract from the circular which was issued under date of April 29th, governing the examinations of pupils in the highest elementary grade.

"These examinations will be subject to the direction of the City or County Superintendents in their respective jurisdictions. Each City or County Superintendent will decide the time and order of the examinations in his jurisdiction in accordance with these schedules."

Geography.	Thursday,	June 13.	A.M.	Not to exceed 3 hrs.
Spelling.	Friday,	June 14.	A.M.	Not to exceed 1 hr.
Penmanship.	Friday,	June 14.	A.M.	Not to exceed 45 min.

USE OF TESTS.

The use that may be made of these tests in determining promotions to high school department is not prescribed by this department. It is not the purpose of these examinations to exclude other examinations in the same subjects or examinations in other subjects. If they are used as a factor in determining promotions, it is suggested that only a limited value be given them.

CHARACTER OF QUESTIONS.

Each examination will consist of two parts, Part I being made up of fifteen questions of the more conventional sort, of which ten shall be selected, each rated at 10 points, Part II being made up of five "Special Credit" ques-

You Are Viewing an Archived Copy from the New Jersey State Library

tions, involving lines which are to be encouraged in the regular work of the school. One of these latter questions may be selected at the option of the pupil and answered in addition to the ten answered from Part I. This question will be rated on the basis of ten points, which will be in addition to the credits received on questions in Part I.

In making up the final rating of each paper, except English, from one to five points may be added for general appearance and mechanical merit.

It is evident that by answering a "Special Credit" question, and by reason of excellence in the mechanical appearance of the paper, a pupil may receive more than 100 points on any one paper. For this reason the papers are rated by points rather than by per cents.

No deductions for mistakes in spelling and punctuation will be made except in the examination in Spelling and English. This plan is not intended to minimize the importance of correct spelling and punctuation in all written exercises, but is adopted for the first examination to give greater simplicity in the rating of papers.

ENGLISH.

There will be an examination in English consisting of two parts—Part I, Composition, in which a choice will be given of either a social letter, a business letter, a description, an incident or an imaginative story; Part II, some questions on technical English, with special reference to the application of technical English in common speech and writing.

In the Composition part of the examination, pupils will be allowed to correct their manuscript and pass in a copy. Part II should not be copied, but the first writing should be handed in.

In rating Part I—

Ten points are to be allowed for spelling, punctuation, capitals and paragraphing.

Thirty-five points are to be allowed for quality of thought and quality of expression.

Additional rating, not to exceed ten points, should be given as a "Special Credit" for originality of thought. A liberal attitude should be taken towards capitalization and punctuation.

In rating Part II—

Ten points are to be allowed for each correct answer to four out of five questions. The total rating of the English paper will be the sum of the ratings of Part I, Part II, and the "Special Credit" mark.

PENMANSHIP.

The examination will consist of the writing of a paragraph of approximately one hundred words, to be dictated or copied, as directed by the City or County Superintendent.

For this particular test the Ayres Scale, together with the pamphlet describing its construction and use, will be furnished by this Department to assist the teacher in judging the quality of the penmanship.

In addition a "special credit" optional test may be given for the purpose

You Are Viewing an Archived Copy from the New Jersey State Library

of determining the pupils' command of the exercises which they have been practicing during the past year to improve their penmanship. A sheet of blank paper is to be given to each pupil. The object of the exercise is to be explained, and without further direction the pupils will practice for ten or more minutes. During this time the teacher will give a rating to each pupil, which shall not exceed 10 points. The teacher in assigning the rating should take into account the knowledge which the pupil has of the exercises and his method of executing them independently. Teachers who give this test should have a list of pupils already prepared, that she may be able to give her entire time to the work of the pupils.

SPELLING.

The examination will consist of the dictation of seventy-five (75) isolated words out of a list of one hundred (100), together with twenty-five (25) words found in a piece of connected composition, which will also be dictated.

"Special Credit" questions will be given in the fundamentals of etymology, syllabication, and other elements of word study.

Ten points additional will be allowed for the correct answering of any one of these "Special Credit" questions.

ARITHMETIC.

The examination will consist of fifteen questions, or problems, of which ten are to be selected. In addition to these, five "Special Credit" questions, or problems, will be given, of which one may be chosen, and for this an additional rating on the basis of 10 points will be allowed.

About half the questions, or problems, will be of a sort on which the rating will be zero or ten points. On the other questions, or problems, credit will be allowed on the "process," even though the answer is incorrect.

The following summary of the entire state shows the results of these examinations:

SUMMARY FOR ENTIRE STATE.

	Arith.	Writing.	Spelling.	English.	U. S. History.	Geog.
Total No. pupils taking examinations	15,017	14,768	14,854	15,062	14,901	14,772
Total No. who could have taken examinations but did not	399	399	484	398	518	599
No. pupils receiving 90 points or more	7,246	6,491	10,226	5,158	7,193	5,212
No. pupils receiving 70-89 points	5,584	7,432	4,045	8,191	6,086	7,323
No. pupils receiving 50-79 points	1,340	707	438	1,342	1,212	1,613
No. receiving 49 points or less	847	138	145	371	410	324
Total No. receiving less than 70 points	2,187	845	583	1,713	1,622	2,237

The following percentages of success and failure in city districts and in rural districts respectively, is interesting:

CITY DISTRICTS.

	Arith.	Writ-ing.	Spell-ing.	Eng-lish.	U. S. Hist.	Geog.
Percentage of total No. pupils receiving 90 points or more	56+	53+	77+	39+	57+	42+
Percentage of total No. pupils receiv-more than 70 points, or more than the passing mark usually accepted.	89+	93+	95+	91+	92+	87+
Percentage of total No. pupils receiv-less than 50 points	3+	.3	.7	.8	.9	1.8
Percentage of total No. pupils receiv-less than passing mark	10+	6+	4+	8+	7+	11+

RURAL DISTRICTS.

	Arith.	Writ-ing.	Spell-ing.	Eng-lish.	U. S. Hist.	Geog.
Percentage of total No. pupils receiv-90 points or more	40+	38+	64+	29+	39+	28+
Percentage of total No. pupils receiv-more than 70 points, or more than the passing mark usually accepted.	82+	93+	96+	85+	86+	81+
Percentage of total No. pupils receiving less than 50 points	8+	1+	1+	3+	4+	6+
Percentage of total No. pupils receiv-less than a passing mark	18+	5+	3+	14+	13+	18+

It should be said, however, that it is not easy to draw a hard and fast line between territory in New Jersey that is city, or urban, and that which is rural. The distinction here drawn is, therefore, only an approximation.

In planning for the examinations, the Department had the assistance and advice of various school superintendents in the State.

An interesting feature of the test in English were the letters written by Mrs. Grover Cleveland and Mr. Thomas A. Edison.

It should be remembered that an examination prescribed by the state is not only a test of pupils; it is also likely to affect standards of teaching. It was therefore of highest importance that the questions, problems and exercises be prepared with the utmost care. The quality of the tests was sure to be accepted by many teachers throughout the state as the sort or kind of work which was to be done by eighth grade pupils in subsequent classes. It may not be too much to say that most teachers of eighth grade pupils will have in

You Are Viewing an Archived Copy from the New Jersey State Library

mind the character of the May and June tests during their teaching in the following year.

It is too early to determine what will be the result of statutory uniform examinations upon the teaching in the grade affected. It would be unfortunate if teachers should feel that their efforts are to be judged solely by what their pupils accomplish in the tests, and their individuality in consequence hampered. Much of the best part of a teacher's work consists in what she does for her pupils in ways which cannot be tested on paper. The habits which are established in the conduct of pupils as a result of their school life are vitally important. A bare enumeration of some of them is sufficient to call attention to much that is most important in the teacher's work. Habits of industry, application, punctuality, prompt obedience, self-reliance, regard for the rights of others, honesty, politeness, kindness, tolerance, clear and straight thinking, moral courage, telling the truth, standing erect, distinct enunciation, doing one's best, cleanliness, order, ambition, skill with the hands, the right attitude towards life, making use of knowledge, not only for self but for others—in a word, good character—these, as well as good spelling, should be the results of the work of the schools; but spelling must not be neglected.

There are throughout the state large numbers of teachers and superintendents who have very deeply in mind that if the schools are to prepare for citizenship, for right living, these and similar virtues must be made a part of the lives of their pupils.

In the training of pupils in these elemental virtues, however, the teacher must not shut his eyes to the necessity of proficiency in English, mathematics, and the other school subjects, in which the public expects, and rightly expects, the schools to do their work well. The wise teacher is the one who realizes that subjects in courses of study may be used as a means of training in the virtues that result in conduct. The efficient teacher is the one who actually accomplishes it.

Again it would be unfortunate, in my judgment, if school officials should get the idea that the subjects mentioned in the statute are the only ones worth while or necessary.

Reading, and reading things worth while, civics, music, drawing, industrial training, are a necessary part of the curriculum, for reasons pointed out elsewhere.

You Are Viewing an Archived Copy from the New Jersey State Library

THE NEED OF SPECIAL CUSTODIAL SCHOOLS.

There is a need of special custodial schools for some boys of the wayward class, who are either out of school, or if in school make serious trouble for the teachers. Corporal punishment is forbidden in the schools of the state, and if it were not, it is doubtful whether that mode of control would be effective. Many of these boys are not essentially bad boys. They are in an unconscious state of rebellion against the school because there is little in the school that makes an appeal to their interests. The bookish course of study is not what they need. Industrial or vocational training would reach many of them. A few, however, are not susceptible to the influence of the ordinary school, however good the teacher, or whatever the course of study. Too often the homes have little control over these boys. Indeed, some of them are practically without homes. They are out nights, they loaf on the streets, they are attracted by whatever may be immoral in the community, they sometimes commit petty thefts. They are the class from which the vicious and criminal element is recruited. At present the state, in the education of these boys, is not doing its duty to itself nor to them.

I am of the opinion that a few special or custodial schools should be established in different parts of the state, to which these wayward boys could be sent. Such schools should preferably be located in the country where land would be available upon which the boys could work as a part of their education. There should also be some trade instruction. These schools should be under the control and management of the local school officials with some state supervision. To such a school could be sent not only boys from neighboring cities, but from country schools as well. Tuition fees might be charged for pupils from other districts. Such schools, properly managed, would result in saving to themselves, as well as to society, many boys who are now headed towards reformatories, or something worse.

TEACHERS' INSTITUTES.

The law places upon the Commissioner of Education the duty of arranging for teachers' institutes in the several counties of the state; for this purpose $2,500 had been appropriated by the legislature, for the school year ending June 30th, 1912.

It is well for the state to provide funds for the conduct of insti-

You Are Viewing an Archived Copy from the New Jersey State Library

tutes, rather than to call upon the teachers to pay the expenses therefor, as is done in many states.

In most states where institutes are held, they are of a week's duration. In New Jersey, however, the sessions are by established custom, of one, two or three days.

The purpose of the institute is to broaden the outlook of the teacher, to suggest improved methods of teaching, to define the aims of the schools, to set forth some of the newer ideals in education, to give inspiration, and to bring teachers into contact with some of the leaders in education.

It is a serious matter not to realize these aims in the conduct of the institutes. Not only are the schools closed in order that teachers may have the opportunity to attend the sessions, the children consequently being out of school for the time, but the best teachers feel that the time is not profitably employed if the work of the institute is not of a high order.

It is my opinion that the institute is worth while if capable instructors are secured; this depends upon the wisdom of the Commissioner and his success in securing able instructors with the funds at his disposal. The legislature was asked to increase the appropriation from $2,500 to $4,000 for the year 1912-13, which was done.

The members of the faculties of the two normal schools rendered valuable assistance as instructors, and it is the plan for the coming year to make use of the assistant commissioners. It is necessary, however, to secure some assistance from persons outside the state.

Experience may point to the necessity of modifying the institutes in the future, to meet the needs of different sections of the state.

The total cost of the institutes was $2,342.66. Approximately 5,400 teachers attended, which was a cost of forty-three cents for each teacher.

The coming year it is proposed to divide each institute, so far as practicable, into sections, on the basis of elementary and high school teachers, and thus more fully meet the needs of different classes of schools.

THE COUNTY SUPERINTENDENT

The County Superintendent is a very important officer in the educational system of the state. The legislature of 1911 recognized this fact in making it mandatory upon the Board of Freeholders to furnish him appropriate office room. In several counties the office quarters are all that could be desired.

You Are Viewing an Archived Copy from the New Jersey State Library

The legislature of 1912, in further recognition of the office, increased the salary of the County Superintendent from $2,000 to $3,000. $350 is also allowed for necessary expenses, in addition to the salary of a clerk, which is fixed at a maximum of $600 a year.

The duties of the County Superintendent are numerous—more numerous than the public realizes. Some of the most important ones are the following:

To note the condition of school buildings and plots, and to advise school boards respecting the construction, heating and ventilating of school buildings.

To withhold the state school moneys from a district which fails to provide suitable school accommodations.

To visit and examine all schools in his county, and advise teachers and boards as to their duties.

To supervise schools.

To prepare, in conjunction with the local board of Education, the course of study.

To approve the cost and method of transportation of pupils.

To apportion school moneys.

To appoint members of a board of education when there has been a failure to elect, or for a new district.

To issue orders for the payment of school moneys to the several districts in his county.

To hold meetings of the County School Board Association.

To hold teachers' meetings of various kinds.

To make an annual report to the Commissioner of Education, containing full statistics for each district in his control.

To conduct examinations of pupils and issue certificates of promotion to the high school department.

To issue provisional certificates for teachers and to conduct examinations of teachers.

To conduct examinations for applicants for free scholarships in the State Agricultural College.

To conduct a Teachers' Institute.

To examine the financial reports rendered by district clerks and custodians.

To educate public sentiment concerning various phases of school work.

Four meetings of County Superintendents with the Commissioner were held during the year.

You Are Viewing an Archived Copy from the New Jersey State Library

The act of 1912 invested the Commissioner of Education with power to appoint the County Superintendents, subject to confirmation by the State Board of Education.

The act further provides that the County Superintendent shall hold the highest grade of certificate granted by the state. It also provides that he shall have been a resident of the county for three years previous to the date of his appointment.

The County Superintendent is essentially a state official, appointed by state authorities, and paid from state funds, not from county funds. He is the representative of the state, working in the county. The increased salary and the conditions under which he works are such as to attract very capable, well trained and well educated men, and men of broad experience in school affairs. The schools exist for the welfare of the state, and for the training of the children of the state. No law should interfere with giving the state and the children the highest grade of available service. The Commissioner should not be compelled to make his choice of this important official from what is often the limited field within the county, although as a rule he would be likely to do so.

The following superintendents were appointed at the meeting of the State Board of Education held on July 6th:

County.	*Name.*
Atlantic	Henry W. Cressman.
Bergen	B. C. Wooster.
Burlington	Herman A. Stees.
Camden	Charles S. Albertson.
Essex	Lewis H. Carris.
Gloucester	Daniel T. Steelman.
Mercer	Joseph M. Arnold.
Middlesex	H. Brewster Willis.
Passaic	Edward W. Garrison.
Somerset	Henry C. Krebs.
Sussex	Ralph Decker.
Warren	Franklin T. Atwood.

All of these were reappointments except that of Mr. Carris in Essex County.

SUPERVISING PRINCIPALS.

The State appropriates $600 a year to each district in the State in which a supervising principal is appointed, the district itself providing the remainder of the salary. In order to receive the State appropriation, however, the necessity for the appointment of such an official must be approved by the county superintendent of schools.

You Are Viewing an Archived Copy from the New Jersey State Library

the Commissioner of Education, and the State Board of Education. A supervising principal acts as a supervisory officer of instruction and school management, within his jurisdiction. He is chosen by the school board, or boards, in those cases where two or more districts unite for the purpose.

Supervising principals were appointed during the year in the following places:

Pleasantville, Atlantic County.

Northampton, Burlington County. Westhampton, Burlington County. These two districts combined in employing a supervising principal.

Glen Ridge, Essex County.

Randolph Township, Morris County.

Pompton, Passaic County.

Bedminster Township, Somerset County.

Hardyston Township, Sussex County.

There were in the State on June 30, 1912, 102 supervising principals, with state approval, besides the superintendents of schools in cities.

The following is a list of such principals in office on June 30th, 1912.

LIST OF SUPERVISING PRINCIPALS IN DISTRICTS APPROVED BY THE STATE BOARD OF EDUCATION.

The supervising principal is an important officer in the New Jersey system of schools, for it is a well accepted fact that schools dif-

You Are Viewing an Archived Copy from the New Jersey State Library

fer greatly in efficiency in accordance with the ability and intelligence of the supervising principal in charge.

The needs of the state require:

First. That every district in the State should be under a supervising principal. A combination among districts would bring this about.

Secondly. The law should be amended to provide for the approval by the Commissioner of Education and of the State Board of Education of the person chosen by the district or districts, before the State aid of $600 is extended. At present the only voice that State officials have in the matter, although State aid is extended, is to approve of the "necessity" for the appointment of such an official.

Third. The number of schools under the care of a supervising principal should be increased so that the district or districts could offer to pay at least $1,500 for the services of such an official. This could be done by extending the area of the district supervised or increasing the number of districts supervised.

It is the plan of the Department during the coming year to have conferences in various parts of the State with supervising principals, with superintendents of schools in the smaller cities, and county superintendents of schools in the respective districts where the conferences are held. These conferences will be for the purpose of discussing various matters pertaining to the efficiency of schools—courses of study, supervision, problems of school organization, school hygiene, etc.

SCHOOL ATTENDANCE.

The percentage of attendance upon the total number of pupils enrolled in the state was .882.

The total cost of the schools for running or current expenses was $14,547,833.47.

With this cost as one factor, with the percentage of absence of pupils 11.8 as another, it is seen that the money lost by reason of poor or irregular attendance was large. Expenses for operating the schools are the same whether the pupils are present or absent. The attendance, however, in some cities and in a few counties is excellent.

In general, irregularity of attendance is one of the most serious hindrances to the progress of children in school. Some absence is necessary, but much of it is unnecessary. Too many children are in school not to exceed three-fourths of the time. Some poor attendance is due to sickness, poor roads and stormy weather. Much of the inattendance would be avoided if public sentiment were more

You Are Viewing an Archived Copy from the New Jersey State Library

fully aroused as to the value of the schools, if the teacher were better and if the course of study was made to appeal to the interests of the older pupils. The Assistant Commissioner of Elementary Schools makes in his report some important observations upon this subject. A better enforcement of the compulsory education laws is needed in some parts of the State. In order to bring this about it may be necessary to employ agents to supervise attendance. This is done in some of the New England states. I doubt whether supervision of attendance will be effective in this state as a whole while it is solely in the hands of local authorities.

MEDICAL INSPECTION.

The statutes of the state provide that every board of education shall employ one or more competent physicians, to be known as medical inspectors. It is the statutory duty of the local board of education to adopt rules for the government of medical inspectors, which rules must be approved by the State Board of Education.

The duties of the medical inspector are to examine each pupil in the schools, for the purpose of learning whether any physical defect exists, and to keep a record from year to year of the growth and development of such pupil. The rules of the State Board of Education provide that two or more districts may unite in the employment of a medical inspector. The rules also provide that there shall be inspections of schools in rural districts at least once a month; in cities, villages and small towns at least twice a month; in towns and cities the frequency of inspection shall be at the discretion of local boards, but there shall not be less than one inspection a week. The rules also provide that there shall be, at the beginning of each year, a systematic examination of the eyes, ears, throat, teeth, deformities as of spine, limbs, etc., the skin of each pupil, and measurements of children wherever practicable. The rules further provide that the medical inspector shall immediately exclude from the classroom any pupil whom he may suspect of having any form of contagious, infectious, or communicable disease. A written statement is to be sent to the parent, requesting that the pupil be examined at once by the family physician. The inspectors are to work in conjunction with the local boards of health.

The law and the rules of the State Board of Education are comprehensive. Their purpose, of course, is to safeguard the health of the children of the state.

In numerous districts of the state, the law and the rules are com-

You Are Viewing an Archived Copy from the New Jersey State Library

plied with, both in spirit and letter, notably in the cities; in such communities the results of the inspection have been of value that cannot be estimated, in conserving the health and even the lives of the children. The law in such communities is sustained by public sentiment, and is therefore working satisfactorily.

In some other communities, particularly in some rural districts, the law is often disregarded, or enforced in such an indifferent way as to practically nullify its value. While the number of such communities is growing less each year, the condition of medical inspection is nevertheless unsatisfactory in some parts of the State. Some boards of education do not make sufficient appropriation to carry out the provisions of the law effectively. Reports to this effect come from many county superintendents. It may be necessary to ask for legislation in order to make the inspection serve the purpose for which it was intended.

In many instances children are sent home from school by the medical inspector, and no heed is paid by the parents to the advice of the inspector that a physician be consulted. The result is that the health of the children is neglected, they remain out of school, and consequently are seriously handicapped in their educational progress. In some cities of the State school nurses are employed, who render extremely efficient service in advising people in poor or moderate circumstances as to the physical needs of their children. The school nurse is a valuable auxiliary to the work of the medical inspector.

BUREAU OF ACADEMIC CREDENTIALS.

Mr. T. D. Sensor, who has charge of the Bureau of Academic Credentials, has at my request, reported upon the work of the Bureau.

The Bureau of Academic Credentials has charge of the work of deciding whether an applicant is qualified to receive academic certificates for entrance to the professions of Medicine, Law, Dentistry and Chiropody, and also to determine the number of academic counts for State either in taking advanced standing in a school where he has changed his residence or for use in entering a professional school.

A meeting was held during the year with the authorities of New York State and the basis of reciprocity between the two states for determining the value of academic qualifications was readjusted. Simple forms of blanks were agreed upon that will greatly expedite which a student in a New Jersey school can receive credit in another the work in the future.

The number of certificates issued shows a slight decrease over last

You Are Viewing an Archived Copy from the New Jersey State Library

year. The reason for this is that reciprocity on the part of the medical boards of New York and New Jersey was suspended pending the passage of the amendment to the New Jersey Medical Act which made the preliminary requirements for the entrance upon the study of medicine equal in the two states.

The law places the work of determining the value of academic credentials and the examination of applicants for academic credits, upon the Department of Public Instruction and the Commissioner of Education. No fees are charged and no provision is made for the expense of conducting examinations. The work of examining applicants and recording the results is done by the same clerical force as does the work of the State Board of Examiners. This necessarily increases the cost of carrying on the work of the State Board of Examiners.

Two examinations were held during the year. It will be noted that the number of failures is very high compared with the number of applicants. The reason for this is that many of the applicants have never attended High School and are not adequately prepared to enter the examinations.

The following tables show the work of the bureau in detail:

LIST OF ACADEMIC SUBJECTS.

	December, 1911.		April, 1912.

Report of J. Brognard Betts

Assistant Commissioner in Charge of Controversies and Disputes

SUMMARY OF SCHOOL LAWS.

Hon. Calvin N. Kendall, Commissioner of Education.

Sir:—The following is a summary of the acts relating to the Public School System passed by the Legislature of 1912.

Chapter 365 amends the act providing for testing the efficiency of the schools. Chapter 367 changes the method of appointing County Superintendents and Chapter 364 relates to certificates to teach in city districts. As you have discussed them in your report, they are mentioned here only for the purpose of giving a complete list of the laws relating to schools passed at the last session of the Legislature.

There are two Articles in the School Law relating to the management of the public schools. Article VI applies to cities and to such townships, boroughs and towns as have, by referendum, adopted its provisions. Article VII applies to townships, boroughs and towns and to such cities as have, by referendum adopted its provisions.

Chapter 379 amends section 38 of the Revision of 1903 and repeals Chapter 233 of the laws of 1911 which also was an amendment of section 38. By the terms of the act members of boards of education in districts incorporated under article VI of the School Law are to be appointed by the mayor between the first and fifteenth of January and the persons so appointed take office on the first day of February succeeding the date of their appointment. In a district having a population of less than 45,000 the board is to consist of five members, one member being appointed each year for a term of five years. In a district having a population of 45,000 or over the board is to consist of nine members, three being appointed each year for a term of three years.

The Supreme Court declared the act of 1911 to be unconstitutional by reason of faulty classification. There is very grave doubt of the constitutionality of the act of 1912, and I am informed that it

You Are Viewing an Archived Copy from the New Jersey State Library

will be tested in the courts. The uncertainty as to the legality of the boards of education is a serious inconvenience in a number of our city districts, and I believe that it would be wise to repeal the act of 1912 and leave the selection of members of a city board of education to be governed by section 38 of the School Law as originally enacted, possibly with a proviso added that a city district might, by referendum, reduce the number of members of the board from nine to five. Our city school districts range in population from less than 1,000 up to nearly 300,000, and it is therefore almost impossible to draft an act which will suit their varying conditions. The only way in which these conditions can be met, in view of the classification of school districts laid down by the Court of Errors and Appeals in the case of Riccio vs. Hoboken, Vr. p. 649, is by providing alternative provisions which may be adopted by referendum.

Chapter 57 amends section 76 of the School Law by adding a proviso that when it is necessary to issue bonds for the erection or repair of a school building destroyed or damaged by fire, the amount of bonded indebtedness may be a sum not in excess of three and one-half per cent. of the taxable property in the district instead of three per cent. This act applies only to districts incorporated under Article VI.

Chapter 340 provides that in every town school district having a population of 10,000 or over, the members of the board of education shall be appointed by the mayor between the second and fifteenth of January. The board is to consist of five members, one being appointed each year for the term of five years. Next January the mayor in each of such towns must appoint five persons who shall take office on February first. On that date the term of all the members now in office will be terminated. This act does not apply to borough or township districts, and is of very doubtful constitutionality.

Chapter 399 amends section 97 of the School Law by limiting the time for which bonds may be issued by districts incorporated under Article VII to thirty years, and also limiting the amount of bonds to a sum equal to three per cent. of the taxable property in the district.

In many of the smaller districts the three per cent. limit makes it impossible for them to comply with the provisions of section 126 which compels a district to provide suitable school accommodations for all the children desiring to attend school and renders them liable to the penalty of the loss of the State aid. The appropriations in these districts are made by a direct vote of the people, and the people surely may be trusted to limit the bonded debt to a sum which is

You Are Viewing an Archived Copy from the New Jersey State Library

not excessive. For over forty years there was no limit to the bonded debt of these districts, and there is no case on record of a district being unable to pay the principal and interest as they become due. This act should be repealed.

Chapter 183 permits a board of education to admit to the schools persons over the age of twenty years. This is intended mainly for the benefit of the evening schools in the cities and large towns.

Chapter 141 amends section 182 of the school law by providing for an apportionment of $500 for each teacher employed in a special class for the instruction of blind, deaf or sub-normal children. It also amends the same section by providing for an apportionment to a district of a sum equal to seventy-five per cent. of the amount expended by the district for the transportation of pupils. This applies to all pupils transported to schools within or without the district in which they reside. Heretofore this apportionment was made only for pupils transported to schools in other districts.

Chapter 285 amends section 185 of the School Law. It provides for the payment of the compensation of the custodian of school moneys from district funds, instead of from the funds of the municipality in which the district is situate. It also provides that the custodian shall render an itemized report to the board of education whenever requested to so do, and shall deposit school moneys in the banking institution selected by the board. I have no doubt that it was the intention to make the last two provisions apply to all school districts, but the language of the act limits their application to districts composed of more than one municipality. It also extends the term of the custodian to the end of the school year, even though his term as city treasurer or township collecter has expired. I think it was the intention of the author of this act to amend the section only so far as to change the method of the payment of the compensation of the custodian and to give the board of education the power to select the depository for school moneys, and that the change in the term of office was due to inadvertently copying the section as it appears in the Revision of 1903, instead of as amended by chapter 223 of the laws of 1908. I think this section should be amended so as to make it apply to all districts and to make the term of the custodian co-extensive with his term as treasurer or collector. I also recommend that it be amended so as to give a board of education power to select the custodian of school moneys.

I recommend that section 228 be amended so as to permit the use of moneys apportioned to a district from State funds for any item of

You Are Viewing an Archived Copy from the New Jersey State Library

current expense. The section now limits the use of these moneys to the payment of teachers' salaries, fuel, transportation of pupils and payment of tuition fees for pupils attending schools in other districts.

The law now permits a district incorporated under Article VII to purchase supplies and award contracts for buildings without advertisement. I recommend that an act be passed prohibiting districts acting under Article VII from letting contracts in excess of $500 and the purchase of supplies in excess of $250 without advertisement. A similar provision is now in force in districts acting under Article VI.

Article XV relating to the compulsory attendance of pupils is very unsatisfactory and should be revised.

There appears to be some misunderstanding respecting the numbering of the sections in the 1911 edition of the School Law. The numbers in black-faced type are solely for convenience, the legal numbers are inclosed in brackets.

Appended hereto are the decisions rendered in litigated cases during the year for which this report is made. The foot notes indicate the cases in which appeals were taken to the State Board of Education.

J. BROGNARD BETTS,
Assistant Commissioner.

Opinions

TEACHERS' TENURE OF SERVICE ACT. CHAPTER 243, P. L. 1909.

SUE H. COLES,
Appellant,
vs.
THE BOARD OF EDUCATION OF PILESGROVE TOWNSHIP,
Respondent.

E. G. C. Bleakley, for the Appellant.
T. G. Hilliard, for the Respondent.

The appellant has been in the employ of the respondent continuously since September, 1903, and is, therefore, protected by Chapter 243, P. L. 1909, commonly known as the Teachers' Tenure of Service Act. Said act provides that a teacher or principal, after three years of continuous service cannot be removed or subjected to reduction in salary "except for inefficiency, incapacity, conduct unbecoming a teacher or other just cause," and upon written charges and after a hearing before the board of education.

On July 20, 1911, written charges of "inefficiency, incapacity, conduct unbecoming a teacher and insubordination to the rules, requirements and orders" of the board of education were preferred against Miss Coles.

The respondent held a hearing on these charges on August 30, 1911, and, at a meeting held September 18, 1911, the respondent adopted the following resolution:

"Resolved, That this Board do find the charges preferred by Richard K. Layton against Sue H. Coles, supervising principal of the school district of the Township of Pilesgrove are true in fact, and that the said Sue H. Coles is guilty of conduct unbecoming a teacher, and of insubordination, and that such insubordination and conduct unbecoming a teacher is just cause for a removal from her position as supervising principal of the school district of the Township of Pilesgrove, Salem County, New Jersey, and that she, the said Sue H. Coles be and she hereby is dismissed from her employment as supervising principal as aforesaid and from the employment of this Board of Education in any position."

At the hearing before me the counsel for the respondent said "the general charge in the charges of inefficiency and incapacity are not sustained by the evidence and they must therefore be abandoned. The Iredell charge is, in my humble judgment, clearly sustained by the evidence and is pressed. The charge in regard to the Mrs. Shoemaker incident is not withdrawn."

The only charges to be considered, therefore, are, was the appellant guilty of inefficiency, incapacity, conduct unbecoming a teacher and insubordination in the Iredell and Shoemaker cases?

The charges in these cases are not sustained by the evidence.

The resolution dismissing Miss Coles, adopted by the Board of Education

You Are Viewing an Archived Copy from the New Jersey State Library

of Pilesgrove Township at the meeting held September 18, 1911, is null and void, and the judgment rendered at said meeting is reversed.

August 29, 1911.

RESIGNATION OF TEACHER.

ELSIE B. NICHOLSON,

Appellant,

vs.

BOARD OF EDUCATION OF THE BOROUGH OF SWEDESBORO.

Respondent.

A Board of Education is not a continuous body, it cannot, therefore, act on a resignation presented to it by a teacher, when said resignation is not to take effect until after the organization of its successor.

J. Warren Davis and Frank S. Katzenbach, for the Appellant.

David O. Watkins, for the Respondent.

The Appellant in this case appeals from the action of the Respondent accepting, on April 3, 1911, her resignation as Supervising Principal of Schools, said resignation having been previously rejected at a meeting of the Board of Education held March 31st.

Miss Nicholson had for some years been in the employ of the Board of Education of the Borough of Swedesboro as Supervising Principal of Schools, and on February 8th, 1911, she presented to the Board her resignation "to take effect when the work of the present school year will have been completed." The resignation was received and laid over.

At a meeting of the Board held March 31st a motion was adopted "that the resignation of the supervising principal be not accepted."

At a meeting of the Board held April 3rd, 1911, the minutes of the meeting were "read and approved" except motion as to Supervising Principal's resignation" and at the same meeting the following motion was unanimously adopted: "That the Supervising Principal's resignation be accepted."

At meetings of the Board held on August 31st and September 18th, 1911, it was ordered that Miss Nicholson be again notified that her resignation had been accepted and that she was no longer in the employ of the Board.

Section 238 of the School Law (P. L. 1903, Special Session) provides that the school year shall begin on the first day of July and end on the 30th day of June. The resignation, when accepted, would, therefore, go into effect on or about June 30th.

The Appellant has produced evidence that subsequent to the date when her resignation would become effective, she rendered service to the Board by furnishing lists of text-books and supplies needed for the coming school year, but there is no evidence that such lists were furnished at the request of the Board.

If the Board of Education had power on March 31st to act on the resignation of Miss Nicholson, then the subsequent action taken on April 3rd was

You Are Viewing an Archived Copy from the New Jersey State Library

null and void. The first question to be determined, therefore, is, did the Board of Education on that date have power to act on a resignation which was not to go into effect until about June 30th?

Section 79 of the school law (P. L. 1903, Special Session) provides that an annual meeting for the election of members of a board of education incorporated under Section 84 of said act, shall be held on the third Tuesday in March, and Section 85 of said act, as amended (P. L. 1907, p. 283), provides that the Board shall organize on the first Monday in April.

The Board of Education in the Borough of Swedesboro is incorporated under Section 84 and is composed of nine members, three members being elected each year who take office on the first Monday in April.

The Supreme Court in the case of Gulnac vs. The Board of Chosen Freeholders of Bergen County, 45 Vroom, 543, said, "Although only a portion of a board of freeholders goes out of office each year, the body itself is not a continuous body (State vs. Rogers, 27 Vroom, 480). The reasons which led to the decision that the Senate of New Jersey is not a continuous body are quite as cogent in the case of a board of freeholders." The same reasoning applied to a board of education leads to the conclusion that it is not a continuous body.

In the case of Pryor vs. Norton, 38 Vroom, 23, the Supreme Court said, "The general rule is that the resignation of a municipal office, to be complete, must be accepted by the authority having the power to fill the vacancy thereby created," and in the case of Fitch vs. Smith, 28 Vroom, 526, it said, "Assuming for present purposes that the position of principal of a public school is, as the relator insists, a public office, still it appears that when the relator was chosen to that office by the former board of trustees, the office was held by an incumbent whose term would not end until after the expiration of that Board and the organization of a new board. Such a choice could give the relator no title to the office, as the power of appointment belonged to the board which would be in existence when the office became vacant."

The board of education which, on March 31st, refused to accept the resignation of the appellant ceased to exist on the third day of April, and the action taken, in view of the decisions above quoted was null and void.

The Board of Education which ceased to exist on April 3rd, 1911, having no power to act on the resignation of Miss Nicholson, the next question to be considered is could the Board which organized on that date act on said resignation?

The resignation not having been withdrawn it was properly before the Board of Education as soon as it had organized and said Board was acting within its powers when it accepted Miss Nicholson's resignation.

The appeal is dismissed.

November 10th, 1911.

On appeal to the State Board of Education this decision was sustained on the 3rd day of February, 1912.

The Supreme Court reversed the decision at the February term, 1912.

CONTRACTS FOR BUILDINGS BY BOARD OF EDUCATION ACTING UNDER ARTICLE VII OF THE SCHOOL LAW.

ANDERSON PRICE

vs.

BOARD OF EDUCATION OF THE BOROUGH OF RUTHERFORD.

Article VII of the School Law contains nothing relating to the method of awarding contracts for buildings, and a dispute as to the legality of a contract entered into by a board of education acting under the provisions of said article is not a controversy arising under the School Law.

Anderson Price, *pro se.*
Luther Shafer, for the Respondent.

The Petitioner prays that the Commissioner of Education decide as to the legality of the action of the Respondent in making certain changes in the specifications for the erection of two school buildings after the contract had been awarded but prior to its execution.

It appears that in May, 1911, the Board of Education advertised for proposals for the erection of two school buildings; that when the proposals were opened it was found that all exceeded the amount of the appropriation; that action on the bids was deferred and an additional appropriation was secured; that later the bid of Julius Koch Company was accepted, said company being the lowest bidder, and a contract drawn, dated July 3rd, 1911; that said contract was not executed on that date, the Julius Koch Company refusing to sign it for the reason that owing to the delay the cost to him would be greater by reason of the increased cost of material; that after the contract was drawn, but before it was executed, certain changes were made in the specifications, making a reduction in the cost of the building of about $2,500 and that the Koch Company signed said contract about August 14th.

The School District of the Borough of Rutherford is incorporated under Section 84 of "An Act to establish a thorough and efficient system of free public schools, and to provide for the maintenance, support and management thereof," approved October 19, 1903, and is governed by the provisions of Article VII of said act. There is nothing in Article VII prescribing the method of awarding contracts, and the action of a board of education in this respect is governed by such sections in the "Act for the punishment of crimes" and in other acts of the Legislature as relate to the awarding of contracts by municipal boards.

Section 10 of the act relating to public schools above referred to provides that the Commissioner of Education "shall decide, subject to appeal to the State Board of Education and without cost to the parties, all controversies and disputes that shall arise under the school laws."

The action of the Board of Education of Rutherford in amending the specifications for the erection of the school buildings after the contract had been awarded, is not a "controversy or dispute arising under the school laws."

The appeal is dismissed.

December 15, 1911.

You Are Viewing an Archived Copy from the New Jersey State Library

CONTROVERSY ARISING UNDER THE SCHOOL LAW, SECTION 10.

ARTHUR W. CLAYTON,
vs.
THE BOARD OF EDUCATION OF THE CITY OF HOBOKEN.

Edward I. Taylor, for the Appellant.
Merritt Lane, for the Respondent.

The Appellant is the Business Manager of the school district of the City of Hoboken.

Charges of "conduct unbecoming an employe and gross neglect and laxity in the performance of his duties as Business Manager" were preferred against him, and after a hearing before the Respondent he was adjudged guilty. The resolution adopted by the Board of Education finding the Appellant guilty contains the following: "That sentence be suspended pending an investigation by the Prosecutor of the Pleas of the County of Hudson, and action thereon by the Grand Jury of the County of Hudson."

The Grand Jury has taken no action in the matter, and the Appellant is still in the employ of the Respondent and is performing his duties as Business Manager. The Respondent has not taken any action looking to the punishment of the Appellant.

Section 10 of the School Law gives to the Commissioner of Education power "to decide all controversies and disputes that shall arise under the school laws."

The action of the Board of Education of Hoboken in this case is not complete, and the Appellant has not been deprived of any of his rights or privileges as Business Manager. There is not, therefore, any controversy or dispute within the meaning of Section 10 of the School Law.

The appeal is dismissed.

December 21, 1911.

DISCHARGE OF SUPERVISING PRINCIPAL. TEACHERS' CONTRACTS.

GROVER F. KIPSEY,
vs.
BOARD OF EDUCATION OF WARREN TOWNSHIP.

Alvah A. Clark, for the Appellant.
John F. Reger, for the Respondent.

The minutes of the Board of Education of Warren Township for April 3rd, 1911, contain the following:

"Motion made by Mr. Shoemaker that Grover F. Kipsey be engaged as Supervising Principal, if qualified, for the balance of the year, with the understanding that if his services were satisfactory to the Board he be engaged

You Are Viewing an Archived Copy from the New Jersey State Library

to serve as Principal beginning in September in the immediate year. Carried."

At a meeting of the Board held June 3rd, 1911, certain teachers were appointed for the then ensuing year, and action on the continuance of the Supervising Principal was deferred.

At a meeting of the Board held June 24th, after a motion had been made to continue Kipsey as Supervising Principal, and before action thereon, the President, Edmund E. Sage, presented his resignation as a member of the Board. The resignation was at once accepted, and after the election of a President, Minard G. Smith was elected a member of the Board, and at once took his seat. Immediately thereafter, Sage was elected as Supervising Principal for the then ensuing school year.

Kipsey claims that his appointment on April 3rd was not only for the remainder of the then current school year, but also for the year beginning July 1st, 1911, and he appeals from the action of the Board and prays that he be restored to the position of Supervising Principal.

The Board of Education denies that it elected Kipsey for more than three months, but insists that his employment for the ensuing year was conditioned upon his services being satisfactory; that his services were unsatisfactory; that Kipsey was not qualified for the position by reason of the fact that he did not hold a proper certificate, and that the contract was invalid for the reason that it was not in writing.

A supplement to the School Law, P. L. 1909, p. 259, provides, among other things, that "no person shall be appointed Supervising Principal unless he or she shall hold either a State or first grade county certificate."

At the time Kipsey was appointed he held a second grade county certificate and he also had a letter from the County Superintendent of Schools dated March 31, 1911, stating that Kipsey had passed an examination in all but one of the subjects required for a first grade county certificate, and that "should you be elected Supervising Principal I should, therefore, give you a provisional first grade certificate good until June 1, the understanding being that you would pass the one subject still to be taken at the May examination for teachers." There is no record of the issuing of the provisional certificate, and the County Superintendent was unable to fix the date on which it was issued, but he says in his testimony: "On further reflection I feel perfectly satisfied that I did give a permit to Mr. Kipsey, although I cannot recall the actual fact of handing it to him or mailing it. I am morally certain, entirely to my own satisfaction, that I did give such a permit, particularly in the light of the letter which was presented here this morning in which I said I would do so. A permit is not usually given until a position is established. We would not give a permit in advance because we would not know where the party would be. I simply had to wait until some one was elected to fill the position, and I issued the permit to the best of my recollection."

A provisional first grade county certificate has the same value as a license to teach as a certificate of the same grade issued after the required examination is completed.

The evidence regarding the certificate is not entirely satisfactory, but in view of the testimony of the County Superintendent and of the fact that Kipsey was paid his salary each month, the right of the appellant to the office

You Are Viewing an Archived Copy from the New Jersey State Library

of Supervising Principal cannot be attacked successfully on the ground that he did not hold a proper certificate.

The Respondent in its brief says "the contract was not in writing." There is nothing in the evidence covering this point, and in the absence of proof to the contrary it must be assumed that the appellant was legally employed.

A Board of Education is presumed to know the law relating to contracts and the payment of salaries, and the Respondent having permitted Kipsey to serve as Supervising Principal, and having paid him his salary, it cannot at this late date plead that there was no contract with Kipsey.

Full force and effect must be given to all parts of a contract, and the language must, if possible, be given its ordinary interpretation.

If, as the Respondent insists, the contract was only for the months of April, May and June, the latter part of the resolution was unnecessary. Had the resolution simply read "That Grover F. Kipsey be engaged as Supervising Principal, if qualified, for the balance of the year," the Board of Education and Kipsey could have, at a later date, entered into a contract for the school year 1911-12. If the contention of the Respondent is correct, the remainder of the resolution which reads "with the understanding that if his services were satisfactory to the Board, he be engaged to serve as Principal beginning in September in the immediate year," is unnecessary and meaningless.

On the other hand construing the resolution as a contract for the ensuing year, if Kipsey's services proved satisfactory, gives a meaning to all parts of the resolution, and it is the natural and correct construction.

The determination as to whether or not the services rendered by Kipsey from the date of his employment until the date on which his successor was appointed, were satisfactory, rested entirely in the discretion of the Respondent and the Board had the undoubted right to discharge him at the end of June, if, in its judgment, his services were unsatisfactory.

The value of his services was to be determined by the Board, and even if it could be proven that his services were of the highest order it would be of no avail if the Board discharged him in good faith, for the reason that his services were not satisfactory to it.

The only cause for which Kipsey could have been removed was that his services were unsatisfactory to the Board of Education, and the point remaining for consideration is, was the appointment of Sage and the consequent removal of Kipsey made in good faith, and because Kipsey's services were unsatisfactory?

A careful reading of the evidence given by the members of the Board who voted for the appointment of Sage leads inevitably to the conclusion that the character of the services rendered by Kipsey had no influence whatsoever on the action of the Board.

Certain members of the Board testified that they had heard rumors about Kipsey, but they were never brought to the attention of the Board, and no attempt was made to ascertain whether they were true or false.

At the meeting of June 24th when the County Superintendent asked if there was any dissatisfaction with Kipsey there was no response.

All the circumstances connected with the candidacy of Sage, his resignation as a member of the Board, the election of his successor, and his appointment as Supervising Principal, show conclusively that the removal of Kip-

You Are Viewing an Archived Copy from the New Jersey State Library

sey was not done in good faith and because his services were unsatisfactory to the Board of Education. In fact, the Board never considered the question, but the members have endeavored to justify their action on their individual judgment founded on rumors which they never investigated.

The Appellant was not legally removed and must be restored to his position of Supervising Principal.

December 29, 1911.

BOARDS OF EDUCATION IN CITIES, CHAPTER 233, P. L. 1911.

APPEAL OF JOHN H. SHERIDAN, GEORGE BARSO, FREDERICK WENDELKEN AND WILSON TAYLOR FROM APPOINTMENTS MADE BY THE MAYOR OF THE CITY OF HOBOKEN.

Merritt Lane, for the Appellant.
John J. Fallon, for the Respondent.

The petitioners are members of the Board of Education of the City of Hoboken, appointed for terms which will not expire until the first day of January, 1913.

The Mayor of Hoboken has appointed nine persons to take office as members of the Board of Education of the City of Hoboken upon the first day of February, 1912, claiming as his authority for such action Chapter 233 of the laws of 1911.

The petitioners request that the appointments of the Mayor should be set aside for the reasons

First, that Chapter 233 of the laws of 1911 is unconstitutional, and,

Second, because the Board of Education of the City of Hoboken is composed of less than nine members.

The law gives to the Commissioner of Education power to decide all controversies and disputes which arise under the school laws of the State. The constitutionality of an act is not a controversy arising under the school laws and the Commissioner is without authority to pass on this question.

The members of the Board of Education of the City of Hoboken have heretofore been appointed in accordance with the provisions of Chapter 49, P. L. 1902. The act says that "There shall be established in every city in the second class in this State whose population now exceeds or may hereafter exceed fifty thousand, a board of education which shall be composed of and managed and controlled by eight commissioners to be known as Commissioners of Public Instruction * * * and the mayor of such cities shall be a member ex-officio of said board and shall be entitled to vote therein in case of a tie."

Chapter 233, P. L. 1911, says that "In each city, other than those cities where boards of education now consist of less than nine members each, the mayor or other chief executive officer of said city shall, during the month of January next after the passage of this act, appoint nine persons to be members of the board of education of such school district. * * * The term of

You Are Viewing an Archived Copy from the New Jersey State Library

office of a member of the board of education, except a member appointed to fill an unexpired term, shall begin on the first day of February next succeeding his appointment."

Section 2 of the last mentioned act provides that "The terms of office of all members of boards of education in school districts which are affected by this act, * * * shall expire on the thirty-first day of January next after the passage of this act."

If the Board of Education of the City of Hoboken is composed of nine members it is, of course, subject to the provisions of Chapter 233 above referred to, and the terms of office of the members of the Board of Education appointed in January, 1911, for the term of two years will expire January thirty-first, 1912. If, however, the Board of Education of the City of Hoboken is not composed of nine members it is not affected by the act and the members will serve for the terms for which they were originally appointed.

The powers of the mayor under Chapter 49 of the laws of 1892 are limited to voting to break a tie vote in the Board of Education. This does not make him a member of the Board of Education within the meaning of Chapter 233 of the laws of 1911. The Board of Education of the City of Hoboken is not affected by the provisions of Chapter 233, P. L. 1911, and the members of said Board are to be appointed in the same manner as heretofore.

January 24, 1912.

Chapter 233, P. L. 1911, was declared unconstitutional by the Supreme Court at the June term, 1912.

DISCHARGE OF JANITOR. CHAPTER 44, P. L. 1911.

A. R. VICKERS

vs.

BOARD OF EDUCATION OF NORTHFIELD BOROUGH.

A. R. VICKERS, *pro se.*

D. Ryon Price, district clerk, for the Respondent.

Chapter 44, P. L. 1911, provides that a public school janitor shall not be discharged, dismissed or suspended, nor shall his pay or compensation be decreased, except upon sworn complaint for cause, and upon a hearing had before such board. This act went into effect on March 20th last.

It appears from the papers before me that Vickers was elected janitor of the school in Northfield about fifteen years ago, and that his last appointment was under date of September 27th, 1910. It also appears that there was no written contract entered into and that the resolution appointing him did not specifically state the term for which he was appointed. It also appears that the board attempted to elect another person in his place as janitor at a meeting of the board held in September last. This action was taken after the act above referred to became a law. It further appears that no charges had been made against him nor any hearing held as required by the statute, and that he was not formally dismissed by the board from its services as janitor.

He is clearly protected by the act above referred to and is still janitor of

You Are Viewing an Archived Copy from the New Jersey State Library

the school. The action taken in attempting to appoint his successor is null and void.

February 1, 1912.

REMOVAL OF DISTRICT CLERK. CHAPTER 1, SPECIAL SESSION, 1903.

CLARE M. HENRY,

Appellant,

vs.

BOARD OF EDUCATION OF BERNARDS TOWNSHIP,

Respondent.

The Appellant was appointed District Clerk by the Respondent in June, 1911, for a term which would expire June 30, 1912. At a meeting held April 1, 1912, the Respondent declared the office of District Clerk vacant and thereupon appointed John J. Foley to that office.

Section 91 of the School Law provides that a board of education may remove a district clerk by a vote of a majority of all the members of said board.

I am of the opinion that a board of education may remove a district clerk at any time, even though he was appointed for a definite term.

The appeal is dismissed.

May 3, 1912.

TEACHERS' TENURE OF SERVICE ACT. CHAPTER 243, P. L. 1909.

HOWER T. MARSTELLER,

Appellant,

vs.

BOARD OF EDUCATION OF PLEASANTVILLE, N. J.,

Respondent.

A teacher is not protected by chapter 243, P. L. 1909, until he has begun the fourth year of consecutive service in the district.

A teacher who entered into a contract for a definite term prior to the approval of said act, which contract did not expire until after said approval, is not protected by its provisions unless re-employed, even though he has been employed in the district more than three years.

A teacher who attempts to render service after his contract has expired is not protected by said act unless he has been re-appointed by the board of education.

McCarter and English, for the Appellant.

Charles C. Babcock, for the Respondent.

The appellant was first employed by the Respondent in 1902. On May 12th, 1908, a contract was entered into, by the parties to this action, by the

You Are Viewing an Archived Copy from the New Jersey State Library

terms of which the appellant was to serve as the Supervising Principal of the Schools in Pleasantville for the term of three years, beginning September 1st, 1908.

Section 87 of the School Law (Special Session 1903) gave to a board of education power to "appoint a suitable person as supervising principal of schools, define his duties and fix his salary." It was under the provisions of this section that the contract of May 12, 1908, was entered into. In 1909 the legislature passed an act (P. L. 1909, Chapter 170) amending section 87 by providing that no supervising principal should thereafter be appointed "until the necessity for the appointment of a supervising principal should have been authorized in writing by the County Superintendent of Schools and approved by the State Superintendent of Public Instruction and the State Board of Education." The amendment also provided that "the terms of all Supervising Principals now in office shall end on the thirtieth day of June next after the passage of this act, and none shall hereafter be appointed except in the manner provided by this act." This act went into effect April 19, 1909. At the same session the Legislature passed an act known as the "Teachers' Tenure of Service Act" (P. L. 1909, Chapter 243). This act provides that "the service of all teachers, principals, supervising principals of the public schools in any district of this State shall be, during good behavior and efficiency, after the expiration of three consecutive years in that district, unless a shorter period is fixed by the employing board; provided, that the time any teacher, principal, supervising principal has taught in the district in which he or she is employed at the time this act shall go into effect, shall be counted in determining such period of employment."

At a meeting of the Board of Education of the Borough of Pleasantville, held May 9, 1911, the following resolution was adopted: "Resolved, by the Board of Education of the Borough of Pleasantville that the services of the said Hower T. Marsteller as Supervising Principal of the said Borough of Pleasantville be, and are hereby terminated at twelve o'clock midnight, May 11, 1911, and the District Clerk is hereby directed to so advise said Hower T. Marsteller."

Marsteller applied to the Court for a writ of certiorari, and while the matter was still before the Court filed an appeal with the State Superintendent. The State Superintendent declined to consider the appeal while the matter was before the Court.

On September 15, 1911, the Court refused the writ, on the ground that the matter should first be decided by the Commissioner of Education and the State Board of Education. The full amount of salary due Marsteller under his contract, which expired September, 1911, has been paid him, and it is not necessary, therefore, to pass upon the complaint filed by Marsteller appealing from the action of the respondent in this case in attempting to discharge him on May 11, 1911.

Marsteller has, however, filed a supplementary appeal in which he claims that he is protected by the provisions of chapter 243, P. L. 1909, and that no charges have been made against him, as required by said chapter, and that he continued to perform the duties of Supervising Principal without molestation or interference until September 22, 1911. The appellant insists that having been continuously in the employ of the respondent since 1902, he is protected

You Are Viewing an Archived Copy from the New Jersey State Library

by the Teachers' Tenure of Service law, that he is still in the employ of the respondent, and that the resolution adopted by the respondent on September 22, 1911, notifying the teachers employed in the School District of the Borough of Pleasantville that Marsteller had been dismissed was null and void.

The Constitution prohibits the legislature from passing any act impairing the obligation of a contract in force at the time of the passage of the act.

The provision contained in Chapter 170, P. L. 1909, that the terms of all supervising principals in office at the time said chapter became a law should terminate on June 30, 1909, must, therefore, be construed as not applying to Marsteller for the reason that he was holding his position under a contract entered into prior to the date on which said chapter went into effect, said contract being for a definite term, which did not expire until September 1st, 1911.

If the contract was terminated by the amendment to section 87, above referred to, the position of supervising principal in Pleasantville has not been in existence since June 30th, 1909, for the position has not been created as required by said amendment.

There are two questions, now, before me for determination:

First. Was the contract between Marsteller and the Board of Education of Pleasantville terminated by the provisions of Chapter 170, P. L. 1909?

Second. If said contract was not terminated is Marsteller protected by the Tenure of Service Act?

The first question has already been decided. In June, 1909, Marsteller applied to the State Superintendent for a decision as to what effect, if any, Chapter 170, P. L. 1909, had on his contract, and the State Superintendent then decided that his contract was not affected, and that he was entitled to hold the position of Supervising Principal in the School District of the Borough of Pleasantville for the full term of his contract. No appeal was taken from this decision.

The second question divides itself into two parts:

(a) Did Marsteller come within the provisions of the Tenure of Service Act immediately upon its going into effect, and, (b), if not, has Marsteller since the termination of said contract rendered such service as entitles him to the protection of said act.

The contract between Marsteller and the Board of Education was entered into prior to the passage of the Tenure of Service Act, and, as has been shown above, the Legislature was powerless to pass any act which would change the conditions of the contract. When the period for which the contract was made had ended, Marsteller ceased to be in the employ of the Board of Education of the Borough of Pleasantville, and if he now is in its employ it is by means of some service rendered by him since the termination of his contract.

Marsteller testified that the schools opened September 20, 1911, and that he entered upon the discharge of his duties on that date, and continued without interruption until September 22, 1911, but there is no evidence that he had been re-engaged or that the Board of Education had taken any action subsequent to the termination of his contract, other than the resolution adopted September 22, 1911, notifying the teachers that Marsteller was no longer in the employ of the Board.

You Are Viewing an Archived Copy from the New Jersey State Library

His testimony on this point is as follows:

Q. Who, if anybody, directed you to go to the school on September 20th?

A. No one.

Q. Previous to September 20th had anybody connected with the School Board directed you not to go there on the 20th?

A. No one.

The Board of Education not having taken any action for the re-employment of Marsteller, subsequent to the termination of the contract, any service rendered by him was without the sanction of the Board of Education, and could not reinstate him. In attempting to render service he was an interloper and not an employee of the Board of Education.

The appeal is dismissed.

May 9, 1912.

This decision was reversed by the State Board of Education December 7, 1912.

GRADUATING EXERCISES NOT A PART OF THE COURSE OF STUDY.

JOHN H. BARTLETT, JR.,
Appellant,
vs
THE BOARD OF EDUCATION OF THE TOWNSHIP OF WEST ORANGE,
Respondent.

The appellant is the father of John H. Bartlett III, who was a pupil in the twelfth year of the West Orange Schools during the school year of 1910-11, and he appeals from the action of the Respondent in refusing to deliver to his son a diploma at the graduating exercises held in West Orange on June 23rd, 1911.

The facts in the case as they appear in the evidence are as follows:

Bartlett was notified on May 15th, 1911, that he had been selected by the faculty of the high school as valedictorian of his class. He asked to be excused for the reason that he was busy preparing for his entrance examinations to college, and did not have time to prepare the valedictory. His request was refused and he thereupon prepared a paper and presented it to Miss Drew, his teacher in English, on or about May 29th. On the same day the paper was rejected as unsuitable, and he again requested that he be excused. He repeated the request the next day and Miss Drew then told him that she was willing he should be excused, provided, Mr. Todd, the Principal, consented. Bartlett testifies that Todd did consent, and Todd testifies that he was willing to excuse him and tried to get another boy to take the valedictory. Failing in this the consent was withdrawn. On June 14th Bartlett presented a second paper which was rejected on the ground that, while it was suitable for a Class Day paper it was not sufficiently dignified for a valedictory.

On June 22nd, the day before the graduating exercises were to be held,

You Are Viewing an Archived Copy from the New Jersey State Library

Bartlett presented a thesis in lieu of a valedictory. This was refused on the ground that it was submitted too late.

Bartlett testifies that he believed he had been excused, and this is corroborated by his mother who testifies that Miss Drew said to her:

"It was positively funny the relief John showed at having been excused from giving the valedictory."

The Board of Education took no action in this case. It is true that there was an informal meeting of the members of the Board with the faculty of the high school, but not all the members were notified of the meeting, and no minutes were kept. Any expression of opinion by the members of the Board at that meeting must be considered as an expression of their individual opinions and not as the action of the Board. Bartlett was not notified of the meeting, was not present, and was not, at any time, given a hearing. The action, such as it was, was *ex parte*

There are two questions before me for decision, viz.:

Are the graduating exercises a part of the Course of Study in the West Orange Schools?

Did Bartlett complete the course of study, and if so, is he entitled to receive a diploma notwithstanding the fact that he did not deliver the valedictory or submit a thesis satisfactory to the faculty of the school?

Section three of the School Law gives to the State Board of Education power "to prescribe and enforce rules and regulations necessary to carry into effect the School Laws of this State," and section 182, paragraph (b) provides for an apportionment of State moneys for a high school "having a full four years' course of study approved by the State Board of Education."

A rule of the State Board of Education reads as follows:

"Diplomas shall be granted only to pupils who shall have completed a full four year course aggregating at least seventy-two academic counts. The counts shall be reckoned in accordance with the number of recitations per week of a school year of at least thirty-eight weeks, and the recitation periods shall average at least forty minutes."

The course of study in the West Orange High School has been approved by the State Board of Education. It requires for graduation from its College Preparatory Course eighty-four counts, but does not provide that papers prepared for the graduating exercises shall be a part of the required course. In fact, it makes no reference whatever to the graduating exercises. A diploma is evidence of the completion of a required course of study, and, in the absence of any requirement that the preparation of a paper for the graduating exercises is a part of the course, a pupil who has completed the course and received the required number of credits is entitled to a diploma even though he may not have prepared such a paper.

It is in evidence that Bartlett had completed the course with the exception of the valedictory. The Principal, Mr. Todd, testifies that "his work would have been satisfactory if he had presented that valedictory properly written." He also testifies that a "diploma indicates a satisfactory completion of a course of study prescribed by the Board of Education for the High School," and that there was no reason, other than his failure to present and deliver the valedictory, why Bartlett should not have received his diploma.

You Are Viewing an Archived Copy from the New Jersey State Library

Mr. Farr, the President of the Board, testifies that Bartlett was an unusually bright pupil, and that the Board would have been only too happy to have permitted the diploma to have been given to Bartlett, and would "have been willing to strain a point had his record in previous cases and also at this time shown the right attitude."

It is also in evidence that Bartlett stood at the head of his class. If, therefore, the other members of the class received the required credits, Bartlett also received them.

The testimony of Miss Drew, Mr. Todd and Mr. Farr leads inevitably to the conclusion that the refusal to grant a diploma to Bartlett was not because he had not completed the required course, but as a matter of discipline.

I find that the graduating exercises are not a part of the course of study prescribed for the West Orange High School, and that Bartlett completed the prescribed course.

It is hereby ordered that the Board of Education deliver to John H. Bartlett III a diploma dated June 23rd, 1911.

May 27, 1912.

PROCEDURE FOR THE ISSUE OF BONDS BY A DISTRICT ACTING UNDER ARTICLE VII.

WILLIAM B. KRUG *and* BENJAMIN F. ELLISON,

Appellants,

v.

THE BOARD OF EDUCATION OF THE TOWNSHIP OF WOODBRIDGE,

Respondent.

It is not necessary that at a meeting of the legal voters called to vote on a proposition to purchase land, erect a school house, and issue bonds, the resolutions stated in the notice should be read and a formal motion made that they be adopted.

A resolution authorizing a board of education to erect a school house and purchase the school furniture and other necessary equipment is not bad when the amounts appropriated for the building and for the furniture and equipment are not separately stated.

Ephraim Cutter, for the Appellant.

J. H. Thayer Martin, for the Respondent.

The complainants allege that the proceedings had at a meeting of the legal voters of the School District of the Township of Woodbridge, held on the nineteenth day of March, 1912, were illegal, so far as said proceedings relate to the selection of a lot, the erection of a school house, and the issuing of bonds, for the following reasons:

First. Because the said resolutions were not introduced at said meeting, and no motion was made to adopt them;

Second. Because no motion was made at the said meeting to adopt the

You Are Viewing an Archived Copy from the New Jersey State Library

said resolutions or any of them, and there was no such motion before the meeting to be voted on;

Third. Because there were no such resolutions before the said meeting to be voted on;

Fourth. Because the said resolutions, and each of them, were not legally adopted at the said meeting;

Fifth. Because proper ballot boxes were not used at the said meeting;

Sixth. Because the first resolution does not state of whom certain lots are to be purchased, and does not properly describe the said lots.

Seventh. Because the first resolution authorizes the Board of Education to accept certain lots, as well as to purchase certain other lots, all of the lots forming one plot to be used for the erection of a school house.

Eighth. Because in the second resolution it is not specified what amount is to be expended for the erection of a school house, and what amount for the purchase of school furniture and equipment.

Ninth. Because the polls at said meeting were kept open longer than the time provided by law.

The first four reasons may be considered together.

There is nothing in the law which prescribes the method of conducting a school district meeting, other than the provision for the election of a chairman and secretary, the appointment of tellers, that the vote shall be by ballot, and the minimum time the polls shall be open. The complainants contend that the resolutions must be introduced at the meeting and a motion made to adopt them, and that in the absence of such introduction and motion the resolutions are not before the meeting. If this contention is sound it would be possible for the voters present at the time the resolutions were introduced to refuse by a *viva voce* vote to consider them and thus prevent persons who were not present at the opening of the meeting from voting. If the contention of the complainants is simply that the resolutions should be presented and a motion made to adopt them, and that the polls should immediately be declared open, without any action on the motion, such motion would be absolutely meaningless. The notices state the purpose for which the meeting is called and the resolutions which will be acted on. Any voter who presents himself during the time the polls are open has the right to cast his ballot for or against any proposition stated in the notices. He may not alter any resolution, except by reducing the amount of money to be appropriated for the purpose named in the resolution. A school district meeting is an election and not a meeting in the ordinary meaning of that word, and it is not necessary that the resolutions be offered at the meeting, or that any motion be made to adopt them.

The fifth objection is that proper ballot boxes were not used at the meeting. The law does not prescribe the kind of ballot box which shall be used at a school district meeting. In the absence of any such provision any box may be used.

The sixth objection is that the resolution does not state from whom the lots are to be purchased and does not properly describe said lots. If the voters desire to purchase a certain plot for school purposes they may direct the Board of Education to purchase it; provided, such plot has been described in the notices. It is immaterial, so far as the voters are concerned, who is

You Are Viewing an Archived Copy from the New Jersey State Library

the owner of the plot. Any description in the notices which will enable the voters to locate the plot is sufficient. The description of the plot now under consideration was stated in the notices and on the ballots as follows:

"Plot about seven hundred feet west of Avenel Railroad Station on Cedar Street containing lots numbered 19, 20, 21, 22, 23, 24 and 25 for the sum of Five Hundred Dollars and to accept for the same purpose adjoining lots on the north side of Avenel Street numbered 1, 2, 3, 4, 5 and 6, from Mr. J. Blanchard Edgar, making in all a plot one hundred and fifty feet fronting on Avenel Street by two hundred feet in depth by one hundred and eighty feet on Cedar Street in the rear."

Witnesses produced on behalf of the complainants testified that they had never heard of Cedar Street, and that there was no street about two hundred feet north of, and parallel with, Avenel Street, but Mr. Cutter testified that he had found in the office of the County Clerk a map on which Cedar Street was shown and the property west of the Railroad and along said street laid out in lots. It is also in evidence that the distance from the railroad to the first street running at right angles to Avenel Street is about fifteen hundred feet. The plot proposed to be purchased is about half way between the railroad and this street. The description of the plot as it appears in the notices and on the ballots, complies with the statute and was sufficient to enable the voters to act intelligently.

The seventh objection is that the resolution authorizes the Board of Education to accept a donation of certain lots as a part of the plot on which to erect a school house. I know of no provision of law which prohibits a school district from accepting a gift of land for school purposes.

The eighth objection is that the amount to be expended for the building and the amount to be expended for furniture and equipment were not separately stated. In the case of Stackhouse v. Clark, 23 Vr. 291, the Supreme Court held that a "resolution to raise a single sum for building and furnishing a school house is not bad for uncertainty because the amount to be used for building and the amount for furnishing are not separately stated." In the case of Chamberlain v. Cranbury, 29 Vr. 347, the Court of Errors held that bonds could not legally be issued for the purchase of school furniture. The law in force at the time the later decision was rendered authorized the issue of bonds for the purchase of lands and the erection or improvement of school buildings, but made no reference to the purchase of furniture, and the court decided that bonds could be issued only for the purposes designated in the law. The law now provides that bonds may be issued for the erection of a school house and for the purchase of school furniture and other necessary equipment. I think that the decision in the Chamberlain case is not in conflict with the decision in the Stackhouse case. The resolution is not bad because it fails to state separately the amount appropriated for the building and the amount appropriated for furniture.

The ninth objection is that the polls were kept open longer than the time provided by law. The law does not fix the maximum time the polls shall be kept open, it simply provides that they "shall remain open one hour and as much longer as may be necessary to enable the legal voters present to cast

You Are Viewing an Archived Copy from the New Jersey State Library

their ballots. The evidence is that the polls closed about four-thirty, and that votes were cast after four o'clock. As the meeting did not convene until three o'clock and some time must have been consumed in selecting the officers, the polls would not have been open one hour had they been closed at four o'clock.

The appeal is dismissed.

An appeal was taken to the State Board of Education, and at a meeting held Sept. 9, 1912, this decision was affirmed.

The Supreme Court in the November term, 1912, denied the application for a writ of certiorari.

RESIDENCE OF MEMBER OF A BOARD OF EDUCATION.

FRANK H. O'BRIEN,
Appellant,
v.
THE BOARD OF EDUCATION OF THE TOWN OF WEST NEW YORK,
Respondent.

The residence of a member of a board of education is his legal residence or domicile and not the place where he is temporarily living.

A board of education is without power to pass on the residence of one of its members. The question as to whether or not a member of a board of education has ceased to be a resident of the school district is a controversy arising under the School Law and must be decided, in the first instance, by the Commissioner of Education.

For the Appellant, Francis B. McCauley.
For the Respondent, Mark A. Sullivan.

The appellant was elected a member of the Board of Education of West New York for a term of three years from the first Monday in April, 1911, and served as such member until March 30, 1912. On that date the following preamble and resolutions were adopted by said Board of Education:

"Whereas, It has been brought to the notice of the Board of Education of the School District of West New York that Frank H. O'Brien has ceased to be a resident of the territory contained in the School District of the Town of West New York, and has thereby ceased to be a member of the Board of Education of said School District; NOW, THEREFORE,

BE IT RESOLVED, That a vacancy exists in the membership of said Board of Education, and be it further

RESOLVED, That Louis Wagner be and he is appointed a member of the Board of Education of the Town of West New York, in the County of Hudson, to take place of said Frank H. O'Brien, and to fill the vacancy caused by the non-residence of said Frank H. O'Brien."

O'Brien attended a regular meeting of the Board on Monday, March 25, 1912. This meeting was adjourned until the Thursday following, and again adjourned to Saturday, March 30, when the preamble and resolutions above

You Are Viewing an Archived Copy from the New Jersey State Library

quoted were adopted. O'Brien attempted to attend the meeting of March 28, but was prevented by illness. He had no knowledge of the meeting of March 30, nor had he any knowledge that there was any question as to his being a resident of West New York. In fact, he received on the very day the resolution was adopted a notice of a meeting of the Board of Education to be held the following Monday. There is nothing in the evidence to show that the question as to his residence had been before the Board at any time prior to March 30th. There was no evidence presented at that meeting, and the action appears to have been based on statements made by O'Brien that he would not be able to attend all the meetings of the Board for the reason that, owing to ill health, he was temporaily living with his wife's mother at Newburgh, New York, and for the further reason that he had broken up his home in West New York and shipped his household effects to Newburgh.

It is very clear from the evidence that O'Brien did not leave West New York with the intent of establishing a residence elsewhere, but that he fully expected to return as soon as his health would permit. The counsel for the Respondent very ingeniously argued that the residence of a member of a board of education contemplated by section eighty-three of the School Law, is not his legal domicile, but his actual place of residence, and that a member of a board of education ceases to be a "resident of the territory contained in the school district" when he actually ceases to reside there, even though it is his intention to return. In many of our towns there are members of boards of education who have summer residences in the mountains or at the shore. The interpretation advanced by the counsel for the Respondent would create vacancies in such boards whenever members left the districts for their summer homes, and in some cases might result in leaving the boards with less than a quorum, and possibly leave a district without any board. I think that the word "resident" in section 83 must be construed as meaning domicile. Adopting this construction O'Brien has not ceased to be a resident of the School District of West New York.

But had I reached the conclusion that he had ceased to be a resident of the School District, I am of the opinion that he is still a member of the Board of Education. A public officer having been duly elected cannot be deprived of his office except by due process of law. A member of a board of education must not only be a resident of the district at the time of his election but must continue to be a resident during the term for which he was elected If he loses his residence he ceases to be a *de jure* member, but continues as a *de facto* member until his office has been declared vacant in the manner provided by law.

The only provision in the School Law giving to a board of education power to remove one of its members is contained in section ninety-two. This section confines the power to remove to a case when a member fails to attend three consecutive regular meetings of the board without a good cause. It is not contended that O'Brien is subject to removal for this cause.

The question as to whether or not a member of a board of education has ceased to possess the qualifications prescribed by law for membership in the board, is a controversy arising under the School Law, and the Board of Education of the Town of West New York had no power to decide such controversy. O'Brien has never ceased to be a member of said Board of Education,

You Are Viewing an Archived Copy from the New Jersey State Library

and the action of the Board in ousting him, and in appointing a person to fill the vacancy thus created, was illegal, null and void.

June 13, 1912.

This decision was affirmed by the State Board of Education at a meeting held Sept. 9, 1912.

CONTROVERSY ARISING UNDER THE SCHOOL LAW. SECTION 10.

IN THE MATTER OF THE COMMON COUNCIL OF SOUTH AMBOY,

vs.

THE BOARD OF EDUCATION AND BOARD OF ESTIMATE OF SOUTH AMBOY.

It appears that the Board of Education requested the Board of School Estimate to make an appropriation for the purpose of repairing two school buildings in South Amboy and that the Board of School Estimate determined the amount for the repair of said buildings and certified the same to the Common Council. It further appears that the Common Council has not taken any action for raising the amount certified to it by the Board of School Estimate. No claim is made that any of the proceedings taken by the Board of Education or by the Board of School Estimate were irregular, the sole cause of complaint being that the repair and enlargement of these school buildings is unwise, and that in lieu thereof a new building should be erected.

This is not a controversy or dispute arising under the school law within the meaning of Section 10 of the general school law and the appeal is, therefore, dismissed.

July 2, 1912.

APPOINTMENT OF MEMBERS OF A BOARD OF EDUCATION. P. L. 1912, CHAPTER 370.

JAMES F. BOURNE,

Appellant,

v.

THE BOARD OF EDUCATION OF THE CITY OF ATLANTIC CITY,

Respondent.

John J. Crandall, for the Appellant.
James H. Hayes, Jr., for the Respondent.

The petitioner claims membership in the Board of Education of Atlantic City by virtue of appointment by the former mayor of said city and the Respondent denying the legality of the appointment of the petitioner, has refused to recognize him as such member.

On July 16th, at ten o'clock in the forenoon, the then mayor appointed the petitioner a member of the Board of Education, and at twelve o'clock noon, on the same day, the five persons elected as Commissioners of said city

You Are Viewing an Archived Copy from the New Jersey State Library

organized, pursuant to the provisions of an act entitled "An act relating to, regulating and providing for the government of cities, towns, boroughs and other municipalities within this State." (Chapter 221, P. L. 1911).

At a meeting of the Board of Education held on the 24th of July last, a resolution was adopted declining to recognize as legal the appointment of the petitioner. The respondent in its answer claims that the former city government ceased to exist at 12.01 A. M. on July 16th, and, that the former mayor had no power to make appointments thereafter. It also claims that if the mayor was in office at ten o'clock in the forenoon of July 16th, he still was without power to appoint a person to membership in the Board of Education, for the reason that the act under which such appointment was made would not become effective in Atlantic City until January next, and that no vacancy existed in said board. The respondent denies that the Commissioner of Education has jurisdiction in the matter of a dispute as to the legality of an appointment of a member for a Board of Education.

There are in this case, three questions:

1. Has the Commissioner of Education jurisdiction?
2. Was there a vacancy in the Board of Education?
3. If a vacancy did exist had the former mayor power to appoint a person to fill such vacancy?

1. Section ten of an act entitled "An act to establish a thorough and efficient system of free public schools, and to provide for the maintenance, support and management thereof" (Special Session 1903) gives to the Commissioner of Education power to decide "all controversies and disputes that shall arise under the schools laws." Members of boards of education are appointed by virtue of said act or the supplements thereto, and a dispute as to the legality of such an appointment is a "dispute arising under the school law," and the Commissioner of Education has jurisdiction. The Supreme Court has so held in the cases of Buren v. Albertson, 25 Vr. 72, and DuFour v. State Superintendent, 43 Vr. 371.

2. If a vacancy existed in the Board of Education of Atlantic City on July 16th last, it was by virtue of the provisions of Chapter 370, P. L. 1912. Prior to the passage of said act the appointment of members of the Board of Education in said city were made in accordance with the provisions of section 40 of the act of 1903 above referred to. Said section provided that until the provisions of either section 38 or 39 of said act had been adopted as prescribed in section 40, the members of the board of education should be "selected, elected, or appointed at the same time and in the same manner and serve for the same terms as members of such board have been heretofore selected, elected or appointed." As Atlantic City had not adopted either section 38 or 39 the selection of members of the Board of Education continued to be made in the same manner as said members had been selected prior to 1903, viz: By appointment by the Common Council. The act under which the members were appointed provided that the Board of Education should be composed of seven members.

Chapter 370, above referred to, provides that in a city having a population of forty-five thousand or upwards the board of education shall consist of nine members appointed by the mayor, and that appointments shall be made "between the second and fifteenth days of January in each year, and terms of

You Are Viewing an Archived Copy from the New Jersey State Library

office shall begin on the first day of February thereafter. . . . that every member of a board of education in a school district affected by this supplement shall continue to serve during his term of office and thereafter until the first day of February then next ensuing . . . that first appointments under this supplement may be for less than full terms if necessary, it being the intention to provide hereby that when this supplement shall take effect in a school district there shall be an immediate increase, if necessary, to five or to nine members according to the population of the school district as above provided." The act further provides that "Any vacancy in such board of education shall be forthwith reported by the secretary of said board to the mayor of other chief executive officer, who shall, within thirty days thereafter, appoint a person to fill such vacancy for the unexpired term." This act was approved April 2, 1912, and went into effect immediately.

This supplement also repealed sections 38, 39 and 40 of the Act of 1903, and the only method of appointing members of a board of education and of filling vacancies is that provided in said supplement.

The Respondent contends that the act will not go into effect in Atlantic City until January 2nd, 1913. To adopt this interpretation would nullify the provision that the act should go into effect immediately and would make it impossible for the mayor to fill vacancies caused by death, removal from the city or otherwise, and might leave a board of education without a quorum and, therefore, unable to transact its business. I cannot believe that the Legislature intended that such a condition should be possible. I am of the opinion that the act went into effect in Atlantic City upon the date of its approval by the Governor, and that the number of members constituting said board was immediately increased from seven to nine, and that the mayor had the power to fill such vacancies. The Respondent also contends that the mayor had no power to fill the vacancies because the secretary of the Board of Education had not notified him that vacancies existed. It is true that the act makes it the duty of the secretary to notify the mayor as soon as a vacancy is created. This provision is simply for the purpose of calling the attention of the mayor to the vacancy in order that it may promptly be filled, but the failure of the secretary to perform his duty cannot deprive the mayor of his right to fill a vacancy.

3. Section two of Chapter 221, P. L. 1911, reads as follows:

"2. The term of office of such Commissioners first elected under the provisions of this act shall commence on the first Tuesday following such election, and the term of office of all succeeding Commissioners shall commence on the third Tuesday of May next, ensuing after their election, at twelve o'clock noon, and, upon the organizing of the Commissioners in any such city elected under this act, the city council or other governing body or bodies theretofore acting as governing body or bodies in such city, and having any other function, shall be *ipso facto* abolished, and the terms of office of all councilmen or aldermen, and all other officers, whether elective or appointive, shall immediately cease and determine."

The Respondent contends that the provision in the section above quoted that the Commissioners shall organize at noon does not apply to the first organization, and that the term of office of the Commissioners elected in Atlantic City on July 11th, 1912, began at 12.01 o'clock A. M. on July 16th,

You Are Viewing an Archived Copy from the New Jersey State Library

1912, and, therefore, that the former mayor had no power to fill a vacancy in the Board of Education at 10 o'clock A. M., on said July 16th.

The section above quoted provides "upon the organizing of the Commissioners . . . that the terms of office of all councilmen or aldermen, and all other officers, whether elective or appointive shall immediately cease and determine."

It is conceded that the Commissioners in Atlantic City did not organize until 12 o'clock noon on July 16th, 1912, therefore, the term of office of the mayor did not expire until that hour. Being in possession of the office at 10 o'clock A. M., on that date, the mayor had the power to fill a vacancy in the Board of Education.

The petitioner is entitled to membership in the Board of Education of Atlantic City upon qualifying as provided in sections 41 and 42 of the School Law.

August 20, 1912.

This decision was affirmed by the State Board of Education January 4, 1913.

APPOINTMENT OF MEMBERS OF A BOARD OF EDUCATION. P. L. 1912, CHAPTER 370.

IN THE MATTER OF THE APPLICATION OF WILSON TAYLOR TO REVIEW CERTAIN PROCEEDINGS OF THE MAYOR OF THE CITY OF HOBOKEN, AND OF CERTAIN PERSONS ASSUMING TO ACT AS MEMBERS OF THE BOARD OF EDUCATION OF THE CITY OF HOBOKEN.

Merritt Lane, for the Appellant.
John J. Fallon, for the Respondent.

The points to be decided in this matter are:

First—The legality of the appointment by the Mayor of the City of Hoboken on June 14th, 1912, of certain persons as members of the Board of Education of said city, and

Second—The legality of the election of the President of said Board at a meeting held June 17th, 1912.

1. Prior to January, 1911, the Board of Education of the City of Hoboken consisted of eight members appointed by the mayor, four members being appointed each year for a term of two years.

In January, 1911, the mayor failed to appoint four members of said board in place of those whose terms had expired, but, claiming that Chapter 233, P. L. 1911, applied to the City of Hoboken, appointed, in accordance with the provisions of said act, nine persons as members of the Board of Education. The members so appointed organized and acted as the Board of Education until said act had been declared by the Supreme Court to be unconstitutional. On June 14th, 1912, the Mayor appointed four persons to fill the vacancies in the Board of Education.

You Are Viewing an Archived Copy from the New Jersey State Library

Section 40 of the revised School Law, passed in 1903, provided that, until the provisions of either section 38 or 39 of said act had been adopted as prescribed in section 40, the members of the Board of Education should be "selected, elected or appointed at the same time and in the same manner, and serve for the same terms as members of such board have been heretofore selected, elected or appointed." Prior to 1903 the members of the Board of Education had been appointed under the provisions of Chapter 49, P. L. 1892. In making the appointments on June 14th, the Mayor claimed to be acting under the provisions of the act of 1892 as authorized by section 40 of the School Law.

Chapter 370, P. L. 1912, approved April 2nd, provides that in a city having a population of forty-five thousand or upwards the Board of Education shall consist of nine members appointed by the Mayor, and that appointments shall be made "between the second and fifteenth days of January in each year, and terms of office shall begin on the first day of February thereafter." The act further provides that "every member of a Board of Education in a school district affected by this supplement shall continue to serve during his term of office and thereafter until the first day of February then next ensuing . . . first appointments under this employment may be for less than full terms if necessary, it being the intention to provide hereby that when this supplement shall take effect in a school district there shall be an immediate increase, if necessary, to five or nine members according to the population of the school district as above provided. . . . Any vacancy in such Board of Education shall be forthwith reported to the Mayor or other chief executive officer who shall, within thirty days thereafter, appoint a person to fill such vacancy for the unexpired term." The act repealed sections 38, 39, 40, 46 and 241 of the School Law of 1903, and went into effect immediately.

Section 246 of the School Law provides that "all school districts shall hereafter be governed solely by the provisions of this act."

The repeal of sections 38, 39 and 40 left Chapter 370 of the Laws of 1912, as the sole method of selecting members of a Board of Education in a city school district.

The date on which Chapter 370, above referred to, becomes effective in a city came before me recently in the case of Bourne v. The Board of Education of Atlantic City. I decided in that case that the act went into effect immediately upon its approval by the Governor. To adopt any other interpretation would nullify the provision that the act should take effect immediately and would make it impossible for the Mayor to fill vacancies causd by death, removal from the city, or otherwise, for, as before stated, it is the only law in force relating to the appointment of members of a Board of Education. This interpretation is further strengthened by the fact that, as will hereafter appear, the Board of Education of Hoboken would be without a quorum and unable to transact any business if the Mayor can not fill vacancies in the board until January next.

As said act went into effect April 2nd, 1912, the Mayor of the City of Hoboken was without power to fill vacancies under authority of Chapter 49 of the Laws of 1892.

There is nothing in the School Law nor in Chapter 49 of the Laws of

You Are Viewing an Archived Copy from the New Jersey State Library

1892 which extends, until his successor has been appointed, the term of office of a member of a board of Education whose term has expired.

The petitioner contends that the members of the Board of Education of Hoboken whose terms expired January 1st, 1912, were extended by the provisions of "An act relating to officers in cities who now hold or hereafter shall hold their offices for a fixed period." Chapter 43, P. L. 1881.

The Constitutionu provides that "every law shall embrace but one subject, and that shall be expressed in the title." There is nothing in the title of the act of 1881 to show that it relates to public schools.

The Constitution has also made the public school system a special subject for legislation. The boundaries of a school district are co-extensive with those of the municipality in which it is situate, but the school district is a separate and distinct municipal corporation and the members of the Board of Education are not city officers. Chapter 43 of the Laws of 1881 is not, therefore, applicable to members of a Board of Education. Until the vacancies are filled in the manner provided by law the Board of Education has but four members and is without a quorum.

2. At a meeting held June 17th, 1912, there were present eight persons acting as members of the Board of Education of the City of Hoboken. At that meeting an attempt was made to elect a president. George W. Lankering received four votes, William Taylor received three votes, and John H. Sheridan received one vote. Mr. Lankering was declared elected. A majority vote is necessaray to elect an officer of a board. A plurality vote is not sufficient.

The respondents have attempted to raise the question as to the status of the petitioner in the Board of Education. The right of a person to an office cannot be raised collaterally, and this question is not, therefore, properly before me.

August 22, 1912.

POWERS OF A COMMITTEE OF A BOARD OF EDUCATION.

IN THE MATTER OF THE APPLICATION OF WILSON TAYLOR, A CITIZEN AND TAXPAYER OF THE CITY OF HOBOKEN, TO SET ASIDE CERTAIN RESOLUTIONS PASSED BY A BODY ASSUMING TO ACT AS A BOARD OF EDUCATION OF THE CITY OF HOBOKEN, HUDSON COUNTY, NEW JERSEY.

Merrit Lane, for the Appellant.
John J. Fallon, for the Respondent.

At a meeting of the Board of Education held June 17th, 1912, the following resolution was adopted:

"RESOLVED, That the President appoint a committee of three to whom shall be referred the bids which may be submitted at this meeting; said committee to report thereon at next regular meeting, and said committee, until

You Are Viewing an Archived Copy from the New Jersey State Library

otherwise ordered, shall transact all other business in the supervision of school affairs."

The petitioner asks that this resolution be set aside.

The resolution is clearly illegal. It attempts to confer upon a committee power to transact all the business of the board. Such power can not be delegated to a committee.

The petitioner also asks that the election of George W. Lankering as president of the board be set aside.

This question has been decided in the "Matter of the application of William Taylor to review certain proceedings of the Mayor of the City of Hoboken, and of persons assuming to act as members of the Board of Education of the City of Hoboken," decided this day.

August 22, 1912.

POWERS OF A COMMITTEE OF A BOARD OF EDUCATION.

IN THE MATTER OF THE APPLICATION OF WILSON TAYLOR, A CITIZEN AND TAXPAYER OF THE CITY OF HOBOKEN, AND A MEMBER OF THE BOARD OF EDUCATION OF THE CITY OF HOBOKEN, TO SET ASIDE CERTAIN RESOLUTIONS PASSED BY A BODY ASSUMING TO ACT AS A BOARD OF EDUCATION OF THE CITY OF HOBOKEN.

Merritt Lane, for the Appellant.
John J. Fallon, for the Respondent.

At a meeting of the Board of Education of the City of Hoboken, held June 24th, 1912, the following resolution was adopted:

"RESOLVED, That the president appoint a committee of three, to be known as the Committee on Schools, to which committee the president of the Board of Education, until otherwise directed, may refer for examination and consideration matters concerning schools and school affairs; and, in conjunction with the president, shall have the power to act summarily in the interest of the public schools in cases of emergency. Said committee to report to the Board at its regular meetings."

This resolution gives to a committee the power to act summarily in case of emergency, and leaves to the committee, or the president, the right to decide as to the emergency. It is true that the resolution directs the committee to report to the board, but there is nothing to show that the action of the committee is not final, or that the report to the board is for any purpose except as a matter of information. In certain matters a vote of a majority of all the members of a Board of Education is required, and in all other matters, the vote of a majority of a quorum is necessary. All business must be transacted in open meetings of the Board, regularly called. A committee can only consider matters referred to it and report its conclusions thereon to

You Are Viewing an Archived Copy from the New Jersey State Library

the board. The resolution under consideration attempts to give to a committee full power to act in certain cases and is, therefore, illegal.

August 22, 1912.

THE CALLING OF A MEETING OF THE LEGAL VOTERS OF A SCHOOL DISTRICT UPON PETITION, CHAPTER 1, SPECIAL SESSION 1903, SECTION 86, PARAGRAPH X.

MARK STOLTZ,

Appellant,

v.

BOARD OF EDUCATION OF WARREN TOWNSHIP,

Respondent.

Alvah A. Clark, for the Appellant.
Hon. S. S. Swackhamer, for the Respondent.

On April 22nd, 1912, the legal voters of the School District of Warren Township, Somerset County, authorized the Board of Education of said district to purchase or take and condemn, for school purposes a certain plot of land, being a portion of the property of the Petitioner. The Petitioner refused to sell said plot, and on or about June 14th, 1912, before said plot had been condemned, a petition, signed by at least fifty of the legal voters of the district, was presented to the Board of Education requesting it to call a meeting of the legal voters, and to submit at said meeting the question of rescinding the resolution adopted at the meeting of April 22nd, authorizing the Board of Education to purchase or take and condemn the plot selected at said meeting. The Board of Education has refused to call the meeting as requested by said petition.

Paragraph X of Section 86 of the School Law, provides that the Board of Education shall have power "to call a special meeting of the legal voters of the district at any time when in its judgment the interests of the school require it, or whenever fifty of such legal voters shall request it by petition so to do. In the notices of any special meeting called upon petition as aforesaid, shall be inserted the purposes named in said petition so far as the same are not in conflict with the provisions of this act."

If the purpose named in the petition is not in conflict with any provision of the School Law the Board of Education must call a meeting of the legal voters. To hold that it rested in the discretion of the board whether or not the meeting should be called would defeat the purpose of this provision of the act. It remains, therefore, to be considered whether the purpose named in the petition was in conflict with the School Law.

There is nothing in the law which authorizes or prohibits calling a meeting for the purpose of rescinding action previously taken. The right exists, therefore, under the general power to call a meeting when the interests of the schools require it. The Respondent contends that "the will of the majority expressed in an election, if legally expressed, is supreme, absolute and final, when the object sought is secured by the vote." It is admitted, of

You Are Viewing an Archived Copy from the New Jersey State Library

course, that a meeting may be called to vote on a proposition which had been defeated at a previous meeting for the courts have so held in numerous cases, but it is denied that the people have the right to reconsider their action if the vote was in the affirmative.

I am unable to perceive that the will of the majority is any less "supreme, absolute and final" when it has secured the defeat of a proposition to purchase a certain plot of land, than when the vote has been in favor of the proposition. The method of recording the will of the people in either case is exactly the same. The Respondent erred in refusing to call the meeting as requested by the petition.

The Respondent denies the jurisdiction of the Commissioner of Education in a dispute arising over an election held under the School Law.

Section 10 of the School Law, (Special Session 1903)provides that the "Commissioner of Education shall decide, subject to appeal to the State Board of Education, and without cost to the parties, *all* controversies and disputes that shall arise under the school laws," and Section 5, Paragraph VI of Chapter 231, P. L. 1911, directs that the commissioner shall designate one of his assistants to hear such controversies and disputes. The language of Section 10, above quoted, is very explicit, and all disputes under the School Law are with the jurisdiction of the Commissioner of Education.

The right of a Board of Education to refuse to call a meeting of the legal voters when petitioned so to do is certainly "a controversy or dispute" arising under the school laws.

The Supreme Court has held in the cases of Buern v. Albertson, 25 Vr. 72, and DuFour v. State Superintendent, 43 Vr. 371, that the State Superintendent was authorized by law to decide disputes and controversies as to the election of members of Boards of Education. The method of conducting an election for members of a Board of Education is the same as that used at a meeting to vote moneys for school purposes. It can not be successfully contended that the Commissioner of Education has power in one case and not in the other.

The Respondent must act on the petition presented to it and call a meeting of the legal voters and insert in the notices calling such meeting the propositions stated in the petition.

TENURE OF SERVICE OF TEACHERS.

MARY K. BLACKUS,

Appellant,

v.

THE BOARD OF EDUCATION OF DELAWARE TOWNSHIP,

Respondent.

William W. Still, for the Appellant.
William Early, for the Respondent.

The Appellant has been a teacher in a school under the control of the Respondent for over three years, and is, therefore, protected by Chapter 243, P. L. 1909.

You Are Viewing an Archived Copy from the New Jersey State Library

Charges of incompetency, inefficiency and insubordination were brought against her as provided in said act

After a hearing by the Board of Education she was found guilty of insubordination in that she failed to open her school at the proper time, being late many mornnigs. The evidence shows that Mrs. Blackus has repeatedly been late in opening school during the past two years, that she was warned several times by members of the Board of Education, and that notwithstanding such warnings she was late several times during the last two or three months the school was in session.

A teacher should, by example as well as precept, impress upon the pupils the necessity of being punctual. In nearly all schools it is the practice to discipline pupils who are habitually tardy, and a Board of Education is well within its rights when it refuses to retain in its employ a teacher who is guilty of the same offence.

The appeal is dismissed.

September 9, 1912.

CONTRACTS—CHAPTER 1, SPECIAL SESSION 1903, SECTION 53.

WALLACE D. PATTERSON,

Appellant,

v.

BOARD OF EDUCATION OF THE CITY OF HOBOKEN,

James A. Gordon, for the Appellant.
John J. Fallon, for the Respondent.

The Board of Education of the City of Hoboken received and opened bids for coal and wood on July 17th, 1911. The Appellant was the lowest bidder, but the Board rejected all the bids, and, later, re-advertised for bids, and on November 20th, 1911, awarded the contract for coal and wood to W. L. Kamena. The Petitioner appeals from the action of the Respondent in rejecting his bid.

It is contended on behalf of the Respondent that the bid of the Appellant was irregular.

First. Because he did not submit a sample of the coal to be furnished.

Second. Because he did not agree to bear the cost of weighing the coal.

Third. Because he did not submit a bid for furnishing wood.

The Appellant and Respondent do not agree in the identification of the specifications on which the bids submitted July 17th, were based.

Mr. Clayton and Mr. Sheridan testified that the specifications marked "R 1" were the specifications on which the bids of July 17th were based and that the specifications marked "A 28" were the specifications on which the bids of November 20th were based. The testimony of Mr. Patterson, Miss Beavers and Mr. Decker is that the specifications marked "G. W. B. 2," which are identical with "A 28" were those prepared for July 17th, and those marked "G. W. B. 1," which are identical with "R 1" were those prepared for November 20th.

You Are Viewing an Archived Copy from the New Jersey State Library

The testimony of Mr. Patterson is supported by the fact that the copy of the specifications attached to the answer of the Respondent is the same as the copy marked "A 28;" also by the fact that the bids of Patterson and Kamena both comply with the requirements of the specifications marked "A 28." These specifications provide that the bidder "shall specify the percentage of moisture and ash contained in the coal upon which the bid is based."

The bid of Mr. Kamena states that the egg coal he proposed to furnish "would run in ash from eight to twelve per cent., stove from ten to fourteen per cent., and chestnut from twelve to sixteen per cent." Also that "the moisture will not exceed four per cent."

The bid of Mr. Patterson also gives the per cent. of moisture and ash in each size of coal. The specifications marked "R 1" provide for testing sample of coal taken from each delivery, and the method of making the test. The bid of Mr. Kamena of November 20th contains no reference whatever to the percentage of moisture and ash.

I am of the opinion that Mr. Patterson was correct in his identification of the specifications on which he based his bid of July 17th.

The specifications for the bids of July 17th do not require that a sample of the coal proposed to be furnished shall be submitted with the bid. This disposes of the first objection made to the bid of Mr. Patterson.

Second. The advertisements for proposals for coal in 1909 provide that "a weighmaster's certificate must accompany each load, to be furnished by the contractor at his expense." The advertisement in 1910 contains the same provision in slightly different language.

The specifications for July 17th, 1911, provide that "Portable scales shall be furnished by the Board of Education. The contractor shall convey said scales to and from the points directed, and shall maintain them in perfect condition while they are in his custody. Coal shall be weighed at the point of delivery; the weight in each instance shall be taken by the authorized representative of the Board of Education."

The intent of this provision in the specifications of 1911 is not entirely clear, but the omission of the direct provision contained in the advertisements of 1909 and 1910, I think, justified Mr. Patterson in assuming that the contractor would not be required to pay to the representative of the Board of Education the cost of weighing the coal.

Third. The advertisements for bids for furnishing wood were identical in 1909, 1910, and 1911.

The bid submitted by Mr. Patterson in 1909 was for coal, and made no mention of wood. The contract for coal alone was awarded to him in 1909. There is nothing in the advertisement of 1911 which would lead him to believe that the conditions had been changed, and that the bidder must bid on both coal and wood.

Section 53 of Chapter 1 P. L. 1903 (Special Session) reads as follows:

"53. No bid for building or repairing school houses or for supplies shall be accepted which does not conform to the specifications furnished therefor, and all contracts shall be awarded to the lowest responsible bidder."

No question has been raised as to the responsibility of Mr. Patterson, and I am of the opinion that his bid did conform to the specifications. The

You Are Viewing an Archived Copy from the New Jersey State Library

Respondent erred in rejecting his bid. The contract should have been awarded to him.

TENURE OF SERVICE OF TEACHERS.

PARTHENIA JOHNSON,

Appellant,

v.

BOARD OF EDUCATION OF STAFFORD TOWNSHIP,

Respondent.

William I. Garrison, for the Appellant.
The Respondent, pro se.

The Appellant was a teacher in Stafford Township, and was subject to the provisions of Chapter 243, P. L. 1909, commonly known as the "Teachers' Tenure of Service Act."

Charges were preferred against her of conduct unbecoming a teacher in that she, "previous and during the sixth and seventh grade examinations drilled her pupils in that examination, giving them the questions in that examination, and giving them the answers to those questions."

After a hearing the Board of Education found the Appellant guilty and discharged her from its employ.

There is no evidence to show that Mrs. Johnson had previous to the examination, had possession of a copy of any of the questions to be used at said examination, or that she had ever seen them. Mrs. Johnson testified that she had never seen the questions prior to the examination. Twice during the hearing before the Board of Education, when an attempt was made to ascertain if she had had copies of the questions, members of the Board objected on the ground that the charges did not contain any allegations that she had had the questions.

Mr. Steelman, who had charge of examinations stated that he received the questions from the County Superintendent in a sealed envelope, and that the seal was not broken until the examination began.

The whole case rests on the fact that in reviewing the pupils in the sixth and seventh grades Mrs. Johnson used questions, in some cases, identical with, and in others, similar to those used at the County Examination.

In the absence of any proof that Mrs. Johnson had had access to the questions prior to their being used at the examination the Board erred in finding Mrs. Johnson guilty as charged. The appeal is sustained and it is hereby ordered that the Board of Education of Stafford Township reinstate Mrs. Johnson.

You Are Viewing an Archived Copy from the New Jersey State Library

MEETINGS OF THE LEGAL VOTERS OF A SCHOOL DISTRICT.

RICHARD S. HARTPENCE,
Appellant,
v.
BOARD OF EDUCATION OF KINGWOOD TOWNSHIP,
Respondent.

Richard S. Hartpence, pro se.
Harry J. Abel, for the Respondent.

A meeting of the legal voters of the school district of the Township of Kingwood was held April 18, 1911, and at said meeting the Board of Education was authorized to purchase a certain plot of ground at a cost not to exceed the sum of $150, and to erect thereon a school house at a cost not to exceed the sum of $1,350. It was also ordered at said meeting that the money necessary to purchase said land and to erect said school house be "raised by Township Tax."

In accordance with the action of the legal voters the $1,500 ordered to be raised was assessed and collected and paid to the custodian of the school moneys of the district.

The Board of Education finding it impossible to purchase the plot selected at the district meeting of April 18th, called another district meeting which was held on June 30th, 1911.

At the meeting of April 18th three plots had been submitted to the vote of the people, and at the meeting held June 30th two plots were submitted, one of said plots being one of those rejected at the meeting of April 18th, and the other an entirely new plot, and the Board of Education was authorized to purchase one of said plots at a cost not to exceed the sum of $140, and to erect thereon a school house at a cost not to exceed the sum of $1,350. The District Clerk did not notify the Assessor and Collector of the action taken at the meeting of June 30th,, and the only tax assessed and collected for the purchase of land and the erection of a school house was the tax ordered at the meeting of April 18th.

Subsequently the Board of Education purchased the plot selected at the meeting of June 30th, and paid for the same from the proceeds of the tax ordered at the meeting of April 18th.

The appellant claims:

1st. That the meeting of June 30th was not legally called for the reason that the notices calling said meeting were prepared by a committee and not by the board in regular session; that the District Clerk did not personally post all the notices, and that there is no proof that the notices were posted the time required by law.

2nd. The appellant also claims that the ballots used were illegal, because they do not conform to the statute.

(b) Because they state the money is to be raised by "township tax," instead of by "district tax."

You Are Viewing an Archived Copy from the New Jersey State Library

(c) Because they do not state the purpose for which the money was to be raised.

3. Also that the Board of Education could not legally use the money appropriated at the meeting of April 18th for the purchase of a certain plot for the purchase of another plot selected at the meeting of June 30th.

The District Clerk testified that he prepared the notices for the meeting of June 30th after the adjournment of the meeting of the board on June 16th, and in accordance with the direction of the board. The evidence also shows that a notice was posted on each of the eight school houses in the district, and that they were posted on the 19th and 20th of June.

The District Clerk did not personally post all the notices, but he testified that they were posted by the other members of the board at his request, and the other members of the board testified that they posted the notices on the school houses near their homes.

The law requires that the District Clerk shall post a notice on each school house in the district, and at such other places as the Board of Education shall direct, and that at least seven notices shall be posted not less than ten days prior to the meeting.

The meeting of June 30th was called for one P. M. The Appellant claims that because some of the notices were not posted until after one o'clock on June 20th the notices were not posted the ten days required by the statute. The law does not recognize parts of days, and, a notice posted at any time on June 20th was a legal notice.

I am of the opinion that the notices were posted in substantial compliance with law, and that the failure of the District Clerk personally to post them did not make the meeting of June 30th illegal.

The law does not specify the kind of ballot which shall be used at a school meeting. Any ballot, therefore, which expresses the intent of the voter is a legal ballot.

I am of the opinion that the ballots used at the district meetings of April 18th and June 30th clearly express the intent of the voters to purchase a lot, erect a school house thereon, fix the amount of the appropriation for each purpose, and determine the method by which the money shall be raised. It is true that the ballots read, "Resolved, That money be raised by Township Tax to pay expense of the same;" using the term "Township Tax" instead of "District Tax." As the school district comprised but one township, and as the amount to be raised was to be assessed on all the taxable property in the township, I am of the opinion that the use of the term "Township Tax" did not render the tax illegal.

The fact that one of the plots submitted at the meeting of June 30th was the same as one submitted at the meeting of April 18th, also that but one school building is needed in the part of the township in which the plots selected are situate, shows that all that the voters intended to do, by their action at the meeting of June 30th was to substitute a plot on which to erect a school house for the plot selected at the meeting of April 18th.

There is, however, no resolution on the ballots used on June 30th, directing that the money appropriated for the purchase of land at the meeting of April 18th should be used for the purchase of the plot selected at the meeting of June 30th.

You Are Viewing an Archived Copy from the New Jersey State Library

Moneys appropriated for a specific purpose cannot be used for any other purpose without the consent of the appropriating power. The action of the Board of Education, therefore, in using the money appropriated at the meeting of April 18th for the purchase of a plot of ground selected at said meeting to purchase the plot selected at the meeting of June 30th was illegal.

The moneys appropriated at the meeting of April 18th for the purchase of land and the erection of a school house cannot legally be used for any other purpose until the legal voters at a regularly called district meeting have authorized the transfer.

TENURE OF SERVICE OF TEACHERS.

WALTER G. DAVIS,

Appellant,

v.

BOARD OF EDUCATION OF THE TOWNSHIP OF OVERPECK,

Respondent.

John Scott Davison, for the Appellant.
William J. Morrison, for the Respondent.

From the "Agreed State of Facts" it appears that the Appellant was continuously in the employ of the Respondent from 1906 to the end of the school year in 1912; that from September, 1906, to June, 1909, he was a teacher in the High School, and from September, 1909, to June, 1912, was principal of the High chool, and that his salary for the school year of 1911-1912 was $1,200. It also appears that in August, 1912, the Respondent forwarded to the Appellant for his signature a contract for the school year of 1912-13, at a salary of $1,200. Said contract does not specify the position to which the Appellant had been assigned, and it appears that when he reported for duty on the opening of the schools in September, 1912, the person who had been appointed to succeed him as principal, assigned him to teach the eighth grade in School No. 1, which assignment the Appellant declined.

Chapter 243, P. L. 1909, provides that "the service of all teachers, principals, supervising principals of the public schools in any school district of this State shall be during good behavior and efficiency, after the expiration of a period of employment of three consecutive years in the district. . . . No principal or teacher shall be dismissed or subjected to a reduction of salary in said district except for inefficiency, incapacity, conduct unbecoming a teacher or other just cause."

It is claimed by the appellant that the recommendation of the committee adopted by the Respondent at the meeting held May 17th, 1912, was a dismissal and, therefore, in violation of the Teachers' Tenure of Service Act, above quoted, no charges having been preferred against him as required by said act.

This recommendation reads as follows:

"The Committee on School Government recommends that Walter G. Davis be not re-employed as principal of and instructor in the High School

You Are Viewing an Archived Copy from the New Jersey State Library

of Overpeck Township for the coming year, it being our conviction that the best interests of the schools would be served by dispensing with his services."

Taken alone this action, in the absence of any charges or hearing, would undoubtedly be a violation of the Tenure of Service Act, but taken in connection with the fact that the Respondent tendered him a contract for the ensuing year is evidence that all that was intended was to relieve him of his duties as principal of the high school, and that the "dispensing with his services" applied only to his position as principal, and that it was not the intention of the Respondent to dismiss the Appellant from its employ.

The Tenure of Service act prohibits a Board of Education from dismissing a teacher, except in the manner provided in the act, but makes no reference to the transfer of a principal or teacher to another position.

The counsel for the Appellant admits that a person protected by the Tenure of Service act may be transferred from one position to another; provided such transfer is made by the vote of a majority of all the members of the Board of Education. In the absence of proof to the contrary, it must be assumed that the transfer of the Appellant to the eighth grade in School No. 1 was legally made.

The counsel for the Respondent argued that the positions of principal and teacher are separate and distinct, and, therefore, the Appellant was not protected by the Tenure of Service Act for the reason that he had held the position of principal only for three years, and that he would not be protected by said act until he had entered upon his fourth year of service as principal.

I am clearly of the opinion that the Legislature did not intend to divest a Board of Education of its power to transfer a teacher or principal from one point to another as the best interests of the schools demanded, and that a Board of Education may make such transfer; provided there is no reduction in salary.

A contract between a Board of Education and a teacher protected by the tenure of service act is unnecessary for the reason that the terms of the contract are fixed by said act. The Appellant has not lost any of his rights by failing to sign the contract forwarded to him, neither would his rights have been impaired had he signed it.

The appeal is dismissed.

SALUTE TO THE FLAG AT THE OPENING EXERCISES OF A SCHOOL.

FRED TEMPLE,

Appellant,

v.

BOARD OF EDUCATION OF THE TOWNSHIP OF CEDAR GROVE,

Respondent.

Fred Temple, pro se.

The Respondent, Mr. Jacobus, President of the Board.

The only questions before me for decision are the resolutions adopted

You Are Viewing an Archived Copy from the New Jersey State Library

to be used at the morning exercises in a salute to the flag, and the suspension of the son of the Appellant for failure to repeat this pledge.

A Board of Education has the right, under the law, to make rules and regulations for the government of the school, to prescribe the course of study, and, when it deems advisable, the character of the opening exercises. Its action, however, must be reasonable, and must not impose an undue hardship on any pupil.

The Respondent in this case has evidently adopted the rule relating to a salute to the flag in accordance with a suggestion made some time ago by County Superintendent Meredith, which suggestion was in compliance with a rule of the State Board of Education. The rule directed the County Superintendent to see that the law requiring the display of the flag during school hours was observed, and further to recommend to the schools, wherever advisable, that a salute to the flag be made at the opening exercises. The latter part of the rule of the State Board of Education is not mandatory, and, therefore, has no force of law.

I think if a pupil is present at the opening exercises, it is his duty to salute the flag. It is a mark of respect that any decent man or boy would use, no matter what country he was in. But, I think that this goes further. It reads:

"I pledge allegiance to my flag, and to the Republic for which it stands, one nation indivisible, with liberty and justice to all."

That is certainly a pledge of allegiance to the United States. The son of the Appellant is not a citizen of the United States. His citizenship must follow the citizenship of his parents until he becomes of age, when he may choose his own; but until that time his citizenship must follow that of his parents. I think, therefore, that if the child salutes the flag, and does not repeat this pledge, that he is doing all that can reasonably be expected of him; and that a Board of Education has no right to ask a child to pledge allegiance to the flag of a country of which he is not a citizen.

The appeal is sustained, and the son of the Appellant must be admitted to the school.

TENURE OF OFFICE OF A JANITOR.

WILLIAM GOORLEY,

v.

Appellant,

BOARD OF EDUCATION OF THE BOROUGH OF BRADLEY BEACH,

Respondent.

Charles A. Cook, for the Appellant.
John D. Carton, for the Respondent.

The Appellant was employed by the Respondent as a janitor in the

You Are Viewing an Archived Copy from the New Jersey State Library

1911. A special meeting of the Respondent was held June 10th, 1912. This meeting was called by order of the president of the Board of Education and the purposes as specified by the president were "to settle the question of janitors and the election of District Clerk." At this meeting there were six members present. A motion was made to elect the Appellant and a man named Pyoth as janitors for the ensuing year. The president declared the motion out of order, and left the room, calling on Brown, one of the members, to go with him. The president admits that his action was for the purpose of preventing the election of janitors. The vice-president took the chair and the motion to appoint the janitors was again made, and the roll was called, four members voting in the affirmative, and none in the negative. During the roll-call Brown left the room.

There is nothing in the law which requires that a majority vote of all the members of the Board of Education is required to elect a janitor. A majority of a quorum, therefore, is sufficient. The Board of Education of Bradley Beach is composed of nine members, and five constitute a quorum.

The question before me is was a quorum present when the vote was taken.

Brown testified that he was not in the room when the vote was taken, but later was asked:

"Q. Do you swear, on your oath, that the roll was not being called while you were in the room?"

His answer was:

"A. I can't say that it was not, but I never heard it."

Goorley testified, "Four members voted in the affirmative that the janitors be employed at $75 per month, and Bradley Brown, the motion put, left the room afterwards, but he was in the room at the time the roll was being called."

Rogers, Harvey and Barton all testified that Brown was still in the room when the roll-call was begun.

Barton testified in part as follows:

"Q. Was Bradley Brown in the room when any name was called and recorded on the roll?"

"A. Yes, I think I had voted."

"Q. When you voted was Bradley Brown still in the room?"

"A. I think he was just going through the door."

Harvey testified in part as follows:

"Q. Was one name called while Brown was still in the room?

A. There was one or two called and I think I voted as Brown went through the door."

The minutes read as follows:

"Motion made by Barton, seconded by Bradner, that the present janitors, Goorley and Pyoth, be retained for another year at a salary of $75 per month.

Aye and Nay vote:

Rogers, aye; Barton, aye; Brander, aye; Harvey, aye.

Bradley Brown left the room after the motion had been made and seconded, and while the vote was being called."

The minutes of the regular meeting of July 6th show that a notice signed by five members of the Board was served on Goorley, stating that they

You Are Viewing an Archived Copy from the New Jersey State Library

would not recognize him as janitor or pay him for any service rendered after June 11, 1912. Also the adoption of the following:

"Be it resolved that we employ one janitor the year around at the Bradley Beach School, and that Ridgway Pyoth be retained in that capacity."

If Goorley was legally elected at the meeting of June 18th, the action taken at the meeting of July 6th was null and void, for it is expressly provided in Chapter 44, P. L. 1911, that a janitor shall not be "discharged, dismissed, or suspended, nor shall his pay or compensation be decreased, except upon sworn complaint for cause, and upon a hearing, had before such board."

It was admitted by the counsel for the Respondent that no charge of inefficiency had been preferred against the Appellant.

I am of the opinion that there was a quorum present at the time the vote was taken, and the Appellant was legally elected janitor at the meeting held June 18th, 1912.

SUSPENSION AND EXPULSION OF A PUPIL.

RICHARD TATHAM,

Appellant,

v.

BOARD OF EDUCATION OF THE BOROUGH OF WALLINGTON,

Respondent.

Andrew Foulds, for the Appellant.
The Respondent, pro se.

In the appeal in this case it is charged that corporal punishment was inflicted upon Hobson Tatham, the son of the Appellant, a pupil in the school under the control of the Respondent; that later the Respondent "did suspend and expel the said Hobson Tatham and did refuse and still refuses to permit him to attend the public school aforesaid," and, that at a meeting of the Board of Education at which the Appellant and his counsel were present, the Respondent refused to permit the Appellant to produce witnesses, and also refused to investigate the matter.

It appears that Hobson Tatham, with other boys, was in the basement of the school house, and that the boys were trying to put Hobson in the part of the basement in which were situated the girls' closets. The janitor testified that when he discovered them, they ran out, and as they passed him he "slapped each one on the behind;" that Hobson came back and used indecent language, and that in order to take him to the principal he was compelled to carry him. It also appears that Hobson was defiant to the principal, and was thereupon sent home, and that later the Respondent sustained the action of the principal.

Section 112 of the School Law prohibits the infliction of corporal punishmnt by any "principal, teacher, or other person employed or engaged in any capacity in any public school."

There is no evidence of the infliction of corporal punishment other than

You Are Viewing an Archived Copy from the New Jersey State Library

the opinion that the act of the janitor was not a violation of the section above quoted.

Section 120 of the school law provides that "pupils in the public schools shall comply with the regulations established in pursuance of law for the government of such schools; pursue the course of study and shall submit to the authority of the teacher. Continued and wilful disobedience, open defiance of the authority of the teacher, the use of habitual profanity or obscene language shall be good cause for suspension or expulsion from school."

The evidence shows that Hobson had been, from the time the schools were opened in September, insubordinate, and that on the day he was suspended, used obscene language.

I think the action of the principal in suspending him was fully justified.

There is nothing in the law which prescribes the procedure by a Board of Education in its action in cases of suspension of pupils. Its action may be reviewed in appeal, and if it has erred its action will be set aside.

The only point remaining to be considered is, whether the principal or the Board of Education could impose as a condition precedent to the reinstatement of Hobson Tatham that his "father would be responsible for his conduct."

Section 111 of the School Law provides that "a teacher shall hold every pupil accountable in school for disorderly conduct, on the way to or from school, or in the play grounds of the school, or during recess."

This gives the teacher full control of a pupil from the moment he leaves his home on his way to school until he enters it on his return from school. The law substitutes the teacher in place of the parent, and the parent, therefore, cannot be held responsible for the conduct of his child during the time he is in school or on his way to or from school.

The action of the Respondent in approving the suspension of Hobson Tatham is sustained, but it is ordered that it rescind so much of its finding as requires the Appellant to assume responsibility for the conduct of his son while under the control of the teacher.

USE OF SCHOOL BUILDINGS FOR OTHER THAN SCHOOL PURPOSES.

FRED KLEIN, ET AL.,
Appellant,
v.
BOARD OF EDUCATION OF JERSEY CITY,
Respondent.

John J. Mulvaney, for the Appellant.
Warren Dixon, for the Respondent.

The Appellants charge that the Respondent permitted the use of the auditorium in the high school building under its control for lectures, meetings, and purposes other than those directly connected with the regular school course, and pray that the action of the Respondent be declared illegal, and

You Are Viewing an Archived Copy from the New Jersey State Library

that the use of said auditorium for other than school purposes be prohibited.

Article VI of the School Law provides for the government of city school districts. Section 50 of said law gives to the Board of Education in a city district "supervision, control, and management of the public schools and public school property in its district," and section 51 gives to said board power to "make, amend and repeal rules, regulations and by-laws not inconsistent with this act, or with the rules and regulations of the State Board of Education, for its own government, for the transaction of business, and for the government and management of the public schools and the public school property in said district."

Article VII provides for the government of township, incorporated town and borough school districts, and section 86, paragraph XI gives to a Board of Education in such district power "to permit a school-house to be used for other than school purposes when the board shall consent thereto."

There is no express provision in Article VI authorizing the use of school buildings for other than school purposes, but an examination of Articles VI and VII discloses that in the latter the powers of the Board of Education are prescribed with considerable detail, while in Article VI they are expressed in general terms. I am unable to discover any reason for permitting the use of a school house in a borough district for other than school purposes and prohibiting such use in a city district, and I am of the opinion that it was the legislative intent to give to the boards of education in both classes of districts like powers in the control and management of school buildings.

The custom of permitting the use of school buildings for other than school purposes is well established and has existed almost from the time of the erection of the first school house. I think such use should be permitted unless there is an express statutory prohibition. A Board of Education must use reasonable discretion in the exercise of this power, and must not permit a school building to be used for other than school purposes at any time when such use would interfere with the regular school sessions.

The appeal is dismissed.

TENURE OF SERVICE OF TEACHERS.

ELLA CONROW,

Appellant,

v.

BOARD OF EDUCATION OF THE TOWNSHIP OF LUMBERTON,

Respondent.

The Appellant had been employed by the Respondent as a teacher in the schools under its control consecutively for the term of eight years at the close of the school year of 1911-12.

The Respondent failed to assign her to any school for the year of 1912-13, and gives as a reason that her hearing is so defective as to make it impossible for her to give satisfactory service. It is admitted that no charges, in writing, were preferred against her, and that she was not given a hearing.

Chapter 243, P. L. 1909, provides that the "service of all teachers, princi-

You Are Viewing an Archived Copy from the New Jersey State Library

pals, supervising principals in the public schools in any school district in this State shall be during good behavior and efficiency after the expiration of three consecutive years of service in that district. . . . No principal or teacher shall be dismissed or subjected to reduction of salary in said district except for inefficiency, incapacity, conduct unbecoming a teacher or other just cause, and after a written charge of the cause or causes shall have been preferred against him or her . . . and after the charges shall have been examined into and found true in fact by said Board of Education upon reasonable notice to the person charged, who may be represented by counsel at the hearing."

The discharge of the Appellant in the absence of written charges and without a hearing was in violation of the provisions of the statute above quoted. The Appellant is, therefore, still in the employ of the Respondent, and is entitled to her salary.

TENURE OF SERVICE OF JANITORS.

EDWARD DEISEROTH,
Appellant,
v.
BOARD OF EDUCATION OF MARGATE CITY,
Respondent.

Chapter 4 of the Laws of 1911, gives to a Board of Education power to make proper rules and regulations for the employment, discharge, management and control of public school janitors, employed by such board, inconsistent with the provisions of said act. It also provides that "no public school janitor shall be discharged, dismissed or suspended, nor shall his pay or compensation be decreased, except upon sworn complaint for cause, and upon a hearing had before such board.

The evidence in this case shows that the Appellant was employed as janitor by the Respondent in the fall of 1911, and the records do not show that he was employed for a definite term. It is admitted by the Respondent that no written charges or sworn complaint were ever made against the Appellant, nor was he given a hearing before the board as required by the act of 1911. Mr. Deiseroth, thereforth, is still in the employ of the Board of Education of Margate City, and is entitled to his salary.

Report of A. B. Meredith

Supervisor of Secondary Education

Hon. C. N. Kendall, Commissioner of Education.

Sir: In accordance with your request, I have the honor to respectfully submit the following report of my activities for the six months ending June 30, 1912. I also include extracts from the statistical tables for the year, together with some comments and comparisons with previous years.

TABLE I.

COMPARITIVE STATISTICS OF TOTALS.

	1911.	1912.	Increase.	Decrease.
Number of approved 4 year high schools	115	116	1	..
Number of registered 3 year high schools	26	21	..	5
Registered 2 year high schools	19	18	..	1
Registered 1 year high schools	5	3	..	2
Total enrollment in high schools	27,090	28,479	1,389	..
Total enrollment of State	442,949	459,189	16,240	..
Number of pupils transported from adjoining districts	..	4,909	..	..
Number of high school teachers—				
Male	387	425	38	..
Female	772	805	33	..
Total	1,159	1,230	71	
Amount expended for high school teachers salaries	$1,235,911 70	$1,370,715 97	$13,480 27	..
Average salary per year paid to male teachers, high school	1,380 98	1,436 41	55 43	..
Average salary per year paid to female teachers, high school	908 63	944 39	35 76	..

From the comparative table it will be noted that there has been a decrease of five in the number of three year partial high schools.

You Are Viewing an Archived Copy from the New Jersey State Library

One of these schools, that at Hopewell, Mercer county, has become a four year school, while from four others approval has been withdrawn.

Among the two year registered schools, one has been closed, and by September 1, 1912, two others will be closed. In all cases the pupils are being transported to neighboring four year schools.

Two one year schools have been closed and the pupils transported while next year one other such school will transport its high school pupils.

There is thus a constant and natural change taking place among the partial high schools. In some cases schools are getting larger and offering a wider range of work, and in this way gradually attaining the standard of four year schools. In other cases, it has been found necessary to close weak struggling schools and transport the pupils to neighboring high schools. In some instances Boards of Education quickly see the wisdom of this policy, when transportation is practicable, then again, occasionally it becomes necessary to recommend the withdrawal of approval.

It will not be possible, even were it to seem desirable, to have all pupils in four year schools. Some districts are not large enough to support such schools because of insufficient enrollment, and then others are so remote that transportation to a central high school is not practicable for all pupils. The feasibility of transportation, however, is seen in the decided increase of pupils attending high schools outside their home districts. Five years ago, in 1907, 10.2 per cent. of the high school enrollment attended outside high schools, while in 1912, 17.2 per cent. of the enrollment so attended.

While these figures refer to the entire state, is will be observed in an examination of the reports of the various county superintendents that in some counties the percentage of increase in the number of high school pupils transported has been very much higher. From these figures there should be read the fact that this increase in pupils transported means that the rural sections of the state have been particularly benefited. Parents have seen and pupils have taken advantage of the opportunities for training in advance of that given in the local elementary schools.

Undoubtedly the condition will always remain that some pupils can take one or two years of work at home in a high school department, who would not do so were it necessary for them to travel any considerable distance. Under such circumstances there will always be the short term high school, but at the same time ample opportunity

You Are Viewing an Archived Copy from the New Jersey State Library

is afforded throughout the State for all who desire the full four years of work.

How well these opportunities are taken advantage of, is seen in the increase in enrollment over 1911, which amounts to 1389 pupils, and for five years, 10919 pupils. This has meant an increase in the number of teachers, which has been 71 when compared with last year, and 571 if compared with 1907. The interpretation to be put upon these figures can only be, that the high school has an established position in the popular mind, and that it is justifying the expenditure of large sums of money each year for its support.

One element in this growth, which has been far reaching in its effect, is the decision given by the State Superintendent Baxter in 1905, that the system of free public education, guaranteed by the State Constitution and strengthened by subsequent legal enactment, contemplated within its scope what is termed high school work, to be had either locally or in approved schools outside the home district, with encouragement by the state through aid in tuition and transportation. Another fact worthy of comment is the reflex influence of these advanced opportunities upon the ambitions of pupils in the elementary grades. The chance for a full four year high school training, opening as it does the eyes of pupils to larger fields of service, has acted as a powerful magnet to draw them on to a longer school life.

TABLE II.

A TABLE SHOWING THE DISTRIBUTION OF HIGH SCHOOL GRADUATES BY AGES.

	14 yrs.	15 yrs.	16 yrs.	17 yrs.	18 yrs. and over.	Total.
Boys	1	27	172	339	641	1180

Normal Schools	9	614	623
Other Higher Institutions	55	101	156
Total	732	1063	1795

You Are Viewing an Archived Copy from the New Jersey State Library

An interesting table is that showing the distribution by ages and by sexes of the graduates of four year schools. It appears that 34.6 per cent. of those graduating are boys and 63.3 per cent. are girls. This table, taken in connection with that showing the number of pupils going to higher institutions indicate that in 1912, 57.5 per cent. of those graduating expect to continue their formal education. This is indeed an excellent showing, but at the same time raises a question concerning the 42.5 per cent. who go out into the home, industrial and commercial life.

Moreover, in thinking of these 42.5 per cent. who did not go to higher institutions we must not lose sight of the truth that through the various commercial courses, hundreds of graduates have been able to obtain positions as a result of their specific training. To this extent at least the schools have been vocational. The question remaining to be solved is that of providing suitable training for other activities for those who end their school training in the high school

In this same connection it would be illuminating to know something about the number of pupils who dropped out of school during the four years, and the relation that the number of graduates bears to the number of pupils who entered the ninth grade in September, 1908.

At the present time there appears to be no data at hand with which to make a state wide comparison. These factors of persistence of attendance, or its opposite, the dropping out of school, are exceedingly important in the survey of any community or of the state, when planning courses of study which shall be adapted both to those who go on to higher schools and colleges, and those who do not.

In general it must mean that uniform courses for all high schools are not desirable or practicable. The varying industrial and social interests of the different parts of the state require a differentiation of courses suited to local needs. Then again the varying size of the different high schools adds complexity to the problem of making high schools meet community needs. There is a limit to the differentiation of courses that can be offered in a small school compared with that possible in larger municipalities. It seems probable that in a state wide survey of high school conditions it will be found desirable to divide, for the purpose of the discussion of courses of study and organization, the schools into different types, classified according to the size and the character of community supporting them, whether it be agricultural, industrial, suburban or urban. The term

You Are Viewing an Archived Copy from the New Jersey State Library

high school, at least has not a uniform meaning as a study of tables V and VI will show.

Here the four year schools are grouped according to enrollment and number of schools in each group.

54	1
65	1
68	1

It appears that the most frequent, in the sense of being the most numerous kind of school, is that enrolling between 50 and 100 pupils. 88 schools or 75.9 per cent. of all the four year schools have less than 200 pupils. At the same time, from data upon which this table is based, it is true that 33.6 per cent. of the total high school enrollment is in the schools of five municipalities, viz, Newark, Jersey City, Paterson, Trenton and Camden.

These five cities represent 36.7 per cent. of the population of the State. In comparing these two figures, viz, 33.6 per cent. representing the per cent. of total high school enrollment with 36.7 per cent. representing the population of the same cities compared with that of the state, it appears that in these cities, at least the connection between relative high school enrollment and relative population is comparatively close. It is undoubtedly true that as the plans are perfected for industrial and commercial schools, or as such courses of study in the schools already established are further developed, more pupils will attend the larger schools of the cities here mentioned.

From the viewpoint of the number of teachers (Table VI) the most numerous kind of school is that with three teachers, although the differences between the 4, 5, 6 and 7 teacher schools respectively is not very great. In other terms, the table says that 78 schools or 67.1 per cent. of the four year schools have between 3 and 7 teachers.

The practical outcome of this analysis is to emphasize the thought that in the general discussion of New Jersey high schools, whether with regard to the courses of study, administrative details, or the per capita cost, it is the relatively small school, which is most typical in the sense that it is the most numerous, and it is with the problems of this type of school that we should be largely concerned.

The following table shows the number of pupils studying the various subjects in comparison with the number pursuing similar subjects five years ago.

My first work upon taking office in January was to get into touch with all the county superintendents in order to learn what high school matters needed immediate attention.

For two and a half years past the high schools had been without

You Are Viewing an Archived Copy from the New Jersey State Library

approved courses had crept in, some of which were not tending to strengthen the work of the schools. It was also apparent that some schools had been organized under conditions which did not promise a fair chance for continued growth, or whose existence were wholly unnecessary when considered in connection with neighboring established schools, and the liberal laws governing tuition and transportation. Some of these schools had grown up because it was not until the passage of the laws of 1911 that any power was lodged with the State Board of Education to pass upon the establishment of new high schools.

Frequently with the breaking up of larger municipalities into smaller, there is a pride that each shall have in school facilities all that the larger municipality offered. This means that often both attempt to maintain high school departments of varying length of course, when the sole consideration of efficiency in instruction and economy in management would have dictated otherwise.

Inasmuch as public education is a matter of state concern, it is well that school conditions be viewed with a perspective which local interests do not possess in full measure.

As a result of visits to various municipalities, with a study of school conditions on the ground, and with the local authorities, it became necessary to recommend the withdrawal of approval from several schools and to check the extension of others. At the same time recommendations have been made for more closely articulated courses of study and for a more practical application of the content of various subjects, particularly Science and English. These suggestions have been received very cordially and during the next year most of them will be in full effect.

Among the changes effected have been the closing of a three year school at Franklin Furnace, and the sending of these pupils to Hamburg High School, located in the same municipality. In September this school will be housed in a modern high school building.

The approval was withdrawn from the three year schools at Netcong, Morris County, and Stanhope, Sussex County, two contiguous school districts. These districts were urged to unite in the establishment of a union graded school but failed to do so. Netcong, however, has planned an addition to its present building and early in the year should have a building capable of accommodating both high school departments, and will in all probability extend the course to four years. Should Stanhope send its pupils to Netcong, a distance

You Are Viewing an Archived Copy from the New Jersey State Library

Dover, where the Boards of Education are facing crowded conditions in their high schools.

A similar consolidation, but at the initiative of the West Cape May Board of Education, is that at West Cape May and Cape May City. The high school pupils of this three year school will go to Cape May City to a four year school.

Somewhat similar is the case of Wildwood and Holly Beach, two adjoining municipalities, which are likely to become a city. These schools will be consolidated. Wildwood has a four year course and Holly Beach but three years.

The one year school at Peapack will be closed in September and the pupils sent to a new school at Bernardsville.

Among the schools whose courses have been lengthened and approved are Blairstown, Dumont, Hopewell. New schools have been established or registered at Leonia, Cliffside, Westwood, Middletown Township.

In many other districts, of the more than fifty which I visited problems involving approval or discontinuance, within a short time, were discussed and plans of action determined upon. These matters will receive attention during the coming year.

In every instance where schools were discontinued, a large element in my recommendation was the obvious necessity for more room for the elementary grades and also the fact that approved schools were available. Without substantial work in the elementary school the efficiency of high school is proportionately decreased.

In visiting schools, it has been my practice to ask the county superintendent to accompany me. I have thus, in a reasonably short time, been able to get the setting of any individual high school, with regard to its previous history, the general educational and financial policy of the community, the relation of the elementary grades to the high school, and any plans in process of development for increased efficiency. It is a pleasure to record the fact that in my visits I have had a cordial welcome from the county superintendents, principals and teachers, which speaks loudly in praise of a generous spirit of professional loyalty and interest in the plans of the Department of Public Instruction. I also take pleasure in speaking of the results of the admirable work of Dr. Louis Bevier, Jr., Inspector of High Schools, which are evident in the schools visited by him from 1905 to 1910. During that period the high school policy of the state took shape and the system was unified and standardized. The problem to-day is largely one of adjusting high school curricula to the

You Are Viewing an Archived Copy from the New Jersey State Library

needs and capacities of pupils and of relating school work to the changing economic and social conditions of the community.

Among the matters considered during my visitation of a school are the following: The condition of the building as to adaptability, heating, ventilation, sanitation and the general upkeep of the property.

The preparation, experience and amount of work required of the teachers, together with their efficiency as instructors. In this connection tests of different classes are made, sometimes written and at other times oral. The quality and amount of work required of classes has also been examined. An effort has been made to get at the real life and work of the school, and to test the progress of classes, and to advise with the principal and teachers.

It has been a frequent practice to call together, at the end of the day, the teachers of the high school and those of the eighth grade for a round table conference on matters suggested by the visit, or to discuss general questions affecting the school. These conferences have tended to be informal, and hence all the more helpful, in getting at a general understanding of the needs of the school. In every instance I have met with a willingness and desire to follow suggestions looking toward closer adjustment to local needs, at the same time keeping in mind the necessity of providing opportunity for continued training in normal school or college.

An examination has been made of the library facilities, especially with regard to reference books and supplementary material for work in English and History. It has been pointed out that work in English to be effective, must have as a laboratory, a sufficient supply of books to illustrate the various types of literature and to furnish abundant and well chosen material for study and reading.

I find the schools well supplied with dictionaries and encyclopaedias. In several instances I have found that the public libraries and the schools are working in close relation.

The amount and character of laboratory apparatus for use in Physics, Chemistry and Biology has been examined. Here I found it necessary, in most cases, to recommend the purchase of more apparatus for individual instruction, without which science study falls far short of its possibilities. I have been assured that the necessary addition will be made.

It has also been emphasized that science work can best be taught in close relation to matters of everyday interest on the farm, in the home and in the industrial occupations. A number of schools are al-

You Are Viewing an Archived Copy from the New Jersey State Library

ready treating physics less mathematically than a few years ago, and are seeking to explain phenomena within the range of the pupil's observation and experience. In chemistry the general principles are being applied to cooking and other problems of the household. It is encouraging to know that some colleges are accepting this kind of laboratory work when sufficiently intensive in lieu of that from the former lists of experiments.

Other matters that have received attention are the relative sizes of the different classes by years, and the relation between the elementary school and the ninth year classes. The general practice seems to be to admit pupils to the high school after reading a standard comparable with that represented by the eighth grade county certificate.

I have called attention to the necessity of keeping concise, adequate school records so that pupils later in life, who may need a complete record of their previous work and standing, may have this without loss. With changes of administration such records are too often lost, or are not easily interpreted. With a few exceptions this phase of administration has been well taken care of in the schools I have visited.

One of the most important matters relating to high school efficiency is the preparation of the teachers for giving training through the subjects assigned to her. The day has gone by when the mere holding of a college degree is a sufficient guarantee of ability to teach high school subjects. The teacher must know something of the problems of adolescence, and the methods of teaching the subjects she is asked to handle.

A long step in the direction of making high school teaching more professional was the adoption of the present rules relating to secondary certificates. The high school teacher now must hold a certificate which specifically states the subjects she is legally qualified to teach. With a rigid enforcement of the provisions of these rules, there should be a better adjustment of teacher and subject than has obtained heretofore. Admirable work in general has been done, but it is a protection to pupil and teacher alike that the subject to which a teacher has given especial attention shall be the one she is given to teach.

As soon as Boards of Education see the real significance of this provision of the rules relating to certificating teachers, there will be fewer cases of maladjustment of work. The outlook in this direction is very bright.

You Are Viewing an Archived Copy from the New Jersey State Library

Another matter which has been of particular concern is that of the number of subjects pursued by a pupil at any one time. I find a tendency in the smaller school to allow, and sometimes require, pupils to take five and six solid subjects during one year. Superficial knowledge and poor training must of necessity result. On the other hand, in the larger and well equipped schools, in most cases, pupils take but four subjects in addition to manual training or drawing. In suggesting changes in courses of study this factor has been given careful attention.

Among other activities have been addresses to various bodies of teachers, associated school boards and general audiences. There have been numerous conferences with boards of education and with groups of school administrators.

To briefly summarize:

I. The general situation with regard to high school education throughout the state is very encouraging. Boards of Education and the public generally are interested in high school development.

II. Small schools closely related geographically have been consolidated, and weak schools and teachers strengthened.

III. Changes have been effected in courses of study, tending to better the quality of the work, and better regulate its amount, and its adaptation to local conditions.

IV. School boards and administrative officers have been advised with, and recommendations given, looking toward better equipment, greater efficiency in administration and teachers.

V. School facilities, with the co-operation of county superintendents have been increased .

VI. The opportunities and obligations of the high school have been discussed before special and general audiences.

VII. The beginnings have been made toward a revision of the syllabi of high school subjects, beginning with that in English.

Respectfully submitted,

A. B. MEREDITH,
Assistant Commissioner of Education.

Report of George A. Mirick

Supervisor of Elementary Education

Hon. Calvin N. Kendall, Commissioner of Education.

Sir: The following report of the Assistant Commissioner in charge of Elementary Schools for the half year beginning January 1, 1912, and ending June 30, 1912, is respectfully submitted .

The duties of this office were assumed about the middle of January. They consist of (a) visits to the elementary schools; (b) meetings with boards of education, superintendents, supervisors, teachers and citizens; (c) formulating monographs and "minimum courses of study"; (d) the preparation of the examination for pupils in the highest elementary grade, as required by law.

(A) SCHOOL VISITS.

These visits have been made for the most part with county superintendents. Through these visits it has been possible not only to learn the local school conditions, but also to discover the forces that are in general controlling school affairs.

Regarding local conditions no generalization is possible. There are communities where children are compelled to attend school in unclean, ill-ventilated, inadequately warmed school houses, so lighted that the eye-sight of all who attend is of necessity impaired. Many of these houses were built fifty, seventy-five and even one hundred years ago and are not only unsanitary but in some instances are unsafe.

The existence and continuance of these conditions are due to several causes:

1st. The entire community is sometimes indifferent, not because there is intention to do harm to the children of the community, but because it is not realized that the buildings which have stood so long have been deteriorating, and that new knowledge regarding health has created new standards of life which apply in the school at least as vitally as they apply in the home, the church and the dairy.

2nd. Boards of Education have not in these communities realized the

You Are Viewing an Archived Copy from the New Jersey State Library

responsibilities of their position. They have not studied the problems which they were elected to study. They have in some cases not known the conditions in the schools because they have not visited them. They have not been able to rise above personal or partisan considerations in planning for the schools.

3rd. The expense involved in improving conditions has often closed the eyes and the minds of the Boards of Education, and a majority of the community to the evident facts. In some instances communities are being taxed to the limit, but if all communities that were amply able to make their schools wholesome and efficient should do so, there would not be a large number of poor schools in the State.

4th. In some cases school buildings are not repaired and cared for and supplies are not furnished, not because money has not been appropriated, but because members of boards of education, who are busy people, do not see that these things are done.

5th. In these same communities there is indifference to the educational work of the schools. If a teacher "keeps order" or "controls the school," there is a general feeling of satisfaction. Good order is a necessary factor in a good school, but education is something more than "good order." Some of these apparently very orderly schools are doing little in the way of education.

Such communities are, however, apparently decreasing in number, as they realize the unfavorable conditions to which their children are being subjected, and the money and educational losses which they are suffering.

TYPES OF SCHOOLS.

The one room rural school with eight groups of children, called grades, and the large, many room city school with one group of children in each room, represent the two extreme types of school. Between these two types are the one room school with fewer than eight groups, the two room school, etc., to the other extreme type of city school.

Each of these types of school has peculiar problems. The rural schools are doubtless in greatest need of State assistance and, therefore, a somewhat detailed study of them is here submitted.

Rural schools involve problems in the following fields:

I. Consolidation of schools.
II. Building, equipment and location, of the school house.
III. (a) Formulation of courses of study sufficiently elastic to make them adaptable to the character of each school neighborhood.
(b) The planning of programs of work which will increase educational efficiency.
IV. The adoption by the State of a carefully planned policy for the training of rural school teachers, and all other teachers who are without normal school training.

You Are Viewing an Archived Copy from the New Jersey State Library

V. An effective regulation of school attendance and school discipline.
VI. A system of skilled, experienced supervision covering all the schools of the State.

CONSOLIDATION OF SCHOOLS.

As is well known consolidation of rural schools is rapidly going on in the State. This movement consists of

(a) Union of entire schools.

(b) Removal of upper grades—6th, 7th, and 8th, to a central school.

The action of the Department of Public Instruction in condemning unfit rural school buildings is hastening this consolidation as rapidly as perhaps it is wise to attempt to hasten it. Whenever old buildings are condemned the opposition to consolidation decidedly diminishes, or disappears. It would seem that in this consolidation care should be taken to properly safeguard and regulate transportation so that exposure under the transportation plan may be much less than that without transportation; that the distance which children are transported should not be too great; that the rural school children should not be taken to a city environment and given a city school training unless there are conspicuously good reasons for doing it. Consolidation of rural schools should be made in such a way that the children are kept in their natural environment and the school life and its curriculum should be one adapted to the needs of the rural school children.

BUILDING, EQUIPMENT AND LOCATION OF THE SCHOOL HOUSE.

There are, as is well known, a great many rural school buildings entirely unfit for school purposes. However, it is also well known that the law which gives the Department of Public Instruction and the State Board of Education authority to inspect and condemn school buildings and pass upon new buildings is very rapidly improving school conditions in this particular. It is a noticeable fact that the school attitude of the community, and of school boards, is generally entirely changed when a new school building has been erected, especially if this building is located where it will serve more fully the community needs.

Many of the new buildings are models of their kind, placed on large grounds, ample for play grounds and for school gardening.

You Are Viewing an Archived Copy from the New Jersey State Library

COURSES OF STUDY FOR RURAL SCHOOLS.

The rural school has many advantages over the thoroughly graded and systematized city school. The problem is to realize the advantages that inhere in the rural school. Some of these advantages are,

(1) A loose gradation which makes it possible to meet the individual needs of pupils more fully than can be done in a thoroughly graded school.

(2) The rural school has a background of industrial life that is absent in the city school. This industrial life is full of educational material and is itself educative. It is important that the educational possibilities of this industrial environment, in which the children are actual industrial participants, shall be utilized educationally.

Advantages that belongs to the rural schools for the reasons mentioned above cannot be realized if the school is too large. It is, therefore, believed that when a rural school of eight groups of pupils or approximately eight groups, has a membership of thirty-five pupils, it is time to divide this school into two parts. That can be done either by having a two-room building replace the one-room building, or by transporting the upper grade children to a central school. The course of study also should be planned in such a way that the industrial life of the children shall become a subject of study. The Department of Public Instruction proposes to work out plans for agricultural courses which will become the basis of much of the work in elementary mathematics, English, reading and drawing. The Department is also advocating for all 2, 3, 4, 5, and 6 room buildings a division of the so-called special subjects among the six teachers. By this plan it is hoped to give the children in these rural schools training in drawing, manual training, sewing, and music, without the assistance of a special teacher, or with very little of such assistance. It is believed that these so-called special subjects should become a vital part of the regular work; that they should receive more attention than is ordinarily given them in school; and that they be taught by the regular teachers. It has been found that, generally, in a graded school having two to six teachers there will be a variety of specialized interests and capacities among these teachers sufficient to meet the school needs, provided the school boards will give some additional compensation for the special training which some of the teachers may need in order to fit themselves more fully to do special work. School boards are taking a liberal attitude in

You Are Viewing an Archived Copy from the New Jersey State Library

this matter and this policy is spreading, perhaps, as rapidly as could be expected.

THE PLANNING OF PROGRAMS.

At present there is no guide which a rural school teacher can use in making her daily program. The result is that in too many cases there is not the proper consolidation of groups of children; there are too many recitations; these recitations are too brief to be of value, and the important phase of the work such as oral composition, manual training activities, etc., are crowded out as well as the work a teacher should do in the way of teaching. A pamphlet of suggestive programs will be issued as soon as it can be prepared.

TRAINING OF TEACHERS.

A large part of the teaching body of the State is entirely without professional training. The State has theoretically adopted the policy of training teachers of the public schools. It has never, however, adequately carried out this policy in practice. If the schools are to be anything but places where the mechanics of education are to be maintained—if they are to become really educational schools in the proper meaning of that term, the teachers must be trained.

Besides then the additional normal schools, there seems to be a call for State assistance for those teachers who are already in service or who in the future come into the service of teaching without training. There would seem to be two ways of meeting this need. One way has already been worked out, and in a small way has shown its value—the Cape May Summer School. However, the Cape May Summer School, with such other similar schools as may in the future be established, cannot meet fully the present needs of these untrained teachers.

It would seem worthy of consideration whether or not correspondence courses should be provided at nominal expense, for such teachers, in such subjects as drawing, penmanship, English composition, history, geography, and probably some of the industrial arts. Just how these courses should be administered, and by whom (whether by the normal schools or by a body of instructors especially appointed for this particular work) is not at present evident, but it is probable that such courses would prove to be of great value to the untrained teachers, and even to many trained teachers who have been teaching a long time.

You Are Viewing an Archived Copy from the New Jersey State Library

ATTENDANCE AND DISCIPLINE.

It is well known that school attendance in rural schools is generally very irregular. An average percentage of attendance for the year of 60 to 65 per cent. is not unusual. The causes which produce this limited and uncertain attendance are well known and hardly need to be enumerated. They consist in the pressing and immediate need for assistance on the farms and in the home. This pressing need for industrial assistance overshadows the apparently more remote needs of the children for education.

Unquestionably, too, in the upper grades there is a lack of enthusiasm in attendance because the course of study is not adapted to the needs of the children. In general the untrained teacher is more capable of teaching the first five grades than she is of giving real value to the work of the last three grades of the elementary schools. The work in these years is often mechanical, memory work, with very little vitality or substance. It is hoped that the pamphlets that will be prepared by the Department of Public Instruction will help to vitalize the work of the 6th, 7th and 8th grades in these schools, but, of course, the teacher and other factors enter into this matter also.

In addition to these two considerations there is little likelihood of a state compulsory attendance law being enforced so long as that enforcement is in the hands of the local authorities. It can hardly be expected that a person would hale into court his neighbor for an infringement of the compulsory attendance law, when he must meet that neighbor day after day and transact business with him, and perhaps lose business and influence by reason of his action. For the same reasons local justices of the peace and judges are disinclined to fine or otherwise condemn parents who disregard the compulsory school law.

The reasons that explain poor attendance also explain in part a poor attitude on the part of the children towards their school work. Discipline, especially in the upper grades, often becomes a serious problem in rural schools, and the teachers is in a way quite helpless. In many schools boys and girls of 15 and 16 years of age, and some times older children, who have quite outgrown the life of the school they are attending, become a menace to the good order and wholesome life of the school, but there is no power in the hands of the teacher to regulate it and the local authorities are often disinclined to support a teacher if she resorts to extreme measures. The State law prohibiting corporal punishment tends to bind the teacher's

You Are Viewing an Archived Copy from the New Jersey State Library

hands, and often destroys her authority when extreme measures are needed.

It is a question worthy of serious consideration whether or not the time has not arrived in this State for the establishing of county or state disciplinary schools to be supported at state or county expense. It may also be questioned whether the enforcement of the compulsory school law and the law relating to proper conduct in school should not be placed in the hands of county or state officers, appointed by the Commissioner of Education, or by county superintendents, subject to the approval of the Department of Public Instruction, the appointment being made so that the officer shall not act in his home territory. In this way an attendance and disciplinary officer would be entirely free to enforce the law without the limitations that now are controlling local officers.

SUPERVISION.

When a district has re-organized its school system, consolidating its schools, providing a proper school building, properly located on grounds that give opportunities for play and school gardens, etc., there is imperative need for skilled, experienced supervision. It is not likely that the re-organized school, established with conditions for more efficient work, will become a much more efficient school, unless there is this kind of supervision. Both the weakness of human nature and the controlling power of tradition work against any other policy, and perpetuate all the undesirable practices that were in vogue under former conditions. It would seem that the time had come for New Jersey to adopt a State policy of compulsory school supervision.

If this is done the State should standardize the supervision and have some control over the appointment of the supervisor and over his removal.

(B) MEETINGS WITH BOARDS OF EDUCATION, SUPERINTENDENTS, ETC.

Between January 15th and June 30th twenty-eight meetings of an educational character have been attended. At these meetings general and particular subjects of teaching, supervision, school policies, and local school problems have been discussed.

(C) MINIMUM COURSES OF STUDY.

In compliance with the law there are in preparation pamphlets on the teaching of each of the subjects of the elementary curriculum. The pamphlet on "The Teaching of Spelling" has been issued.

You Are Viewing an Archived Copy from the New Jersey State Library

The law for the special training of children three years or more below the normal has been interpreted and put into effect. A pamphlet has been issued, recommending a plan for the study of all school children with a view to their classification according to their special needs. Among these classes provision is made for the mentally retarded.

(D) EXAMINATION FOR PUPILS IN THE HIGHEST ELEMENTARY GRADE.

A great deal of time and careful thought have been given by the Commissioner of Education and his assistants, to make these examinations helpful to the schools. It was desired to make the first examinations fair for all schools in the State, and to deprive no pupil of a just promotion to the high school. Therefore the request was made that these examinations be not made the sole basis of promotion. It is the intention to make these examinations in the future tests not only of the knowledge that may have been learned, but gradually to introduce factors that shall test the habits of mind that have been formed in the process of learning.

Respectfully submitted,

GEO. A. MIRICK,
Assistant Commissioner of Education in Elementary Schools.

You Are Viewing an Archived Copy from the New Jersey State Library

Annual Report of the State Board of Examiners

FOR THE SCHOOL YEAR ENDING JUNE 30, 1912

The school law describes it to be a duty of the State Board of Education to make and enforce rules and regulations for the examination of teachers and the granting of certificates or licenses to teach.

The law had further provided, from time to time, for boards of examiners, State, city and county, to carry out these rules and regulations.

For many years there were county and city certificates valid for the localities they represented and for these localities only. These certificates were granted by the local boards of examiners. There were at the same time State certificates granted by a State Board of Examiners.

For a time local certificates were not recognized in granting State certificates, but there naturally grew up a desire that the local certificates should be of such a standard that they could be accepted in the granting of State certificates for the work they covered. This desire resulted in an inquiry into the relative merits of local certificates. This inquiry developed what might have been expected, namely, that there was a great variety of standards, growing out of the influence of local customs and traditions, rather than out of the peculiarities of fundamental needs.

It is a commonly accepted theory that education is general in its nature, rather than peculiar. Out of this theory grew the feeling that measures should be taken to do away with the local peculiarities, the provincialisms of our system, and thus make our education of a more generally accepted nature.

This feeling took very definite shape in the Council of Education. This body is composed voluntarily of a large number of the most effective superintendents, principals and teachers of the State. They

You Are Viewing an Archived Copy from the New Jersey State Library

agreed in conference that it would be better to have the examination questions for the whole State made under the supervision of one party, as they had been for county and State certificates, and to have all the answers to questions read and estimated under the supervision of the same party.

The State Board of Education accepted this theory and put it into effect at once, for all examinations outside the cities that were governed by special laws on this subject.

The Legislature of 1911 passed an act abolishing city boards of examiners, and placing the certificating of teachers in the cities also under the State Board of Examiners. This act was repealed in 1912, and part of the cities have returned to the issuing of local certificates.

The change in the system, abolishing local certificates, together with demands for secondary education, made necessary the revision of the nomenclature of certificates to conform to their more general character and larger uses. This revision was made at the request of the State Board of Education by a committee consisting of members of the State Board of Examiners, which was composed of the State Superintendent of Public Instruction, representing the State at large, the principals of the State normal schools, representing the definite preparation of teachers in the State, the city superintendent of one of the largest cities, together with the county superintendent of one of the most populous counties.

This committee gave nearly two years to the study of the revision, during which time they consulted many of the superintendents and teachers and members of boards of education of our state, and of other states. The revision met practically all of the important claims for recognition, and was adopted by the State Board of Education by unanimous vote.

Its basis of revision was to substitute for the various local certificates of different classes the common classes, elementary, secondary, supervisors, and special.

When the revision was adopted it included the provision that all outstanding certificates should be allowed to live out the terms for which they were issued, the proviso implying that nothing in the revision should be regarded as ex post facto.

The revision of the system, and the study that it made possible has revealed many important things, notable among which are the following:

There is a lack of standardization among school boards. What

You Are Viewing an Archived Copy from the New Jersey State Library

some think are good subjects and good standards others do not accept.

There is great lack of standardization among teachers. What some think is proper subject matter for the grammar school, others would have in the high school, and the reverse. There is great need of individual attention to the certificating of teacher,—some come from one school, some from another,—some from one college, some from another,—some from one state, some from another,—many through agencies paid for their services, some through the direct recommendation of the institutions or states from which they come. It is difficult, at any rate, to get good teachers, and without special care many good teachers may be kept out, or many poor teachers engaged.

When the new rules went into effect they did not carry with them the provision for a working force that could meet the greatly increased demands on the office of the Department of Public Instruction. The number of persons to be examined runs into the thousands each year, and the number of papers into the tens of thousands. These papers have to be carefully read, and the questions upon which they were written have to be carefully formed. It is necessary to standardize those who make the questions and those who read the answers if the teachers themselves are to be standardized.

It was because of the great increase of work devolving upon the Board as the result of the new law that the expenses of the Board increased from $963.72 to $5,934.62.

It should be borne in mind, however, that the expenses in connection with the examination and certification of teachers were formerly borne by the counties, and not by the State.

To recapitulate and summarize, from every point of view, this recent revision of the certificating system of the State was a move in the right direction. It has been hampered by an insufficient working force to carry its measures into effect. There should be in the employ of the State Department of Education several persons who can give practically their whole time to this work, and one or more who have what might be termed the teacher's instinct, who are in sympathy with the educational work, who are more than mere statisticians.

It is very clear that the system of certificating the teachers of the State is more than anything else the educational barometer of the State. It is there, better than anywhere else, that analyses may be

You Are Viewing an Archived Copy from the New Jersey State Library

made and reactions recorded of all the influences that are operating in our educational system.

The members of the State Board of Examiners are representative of the educational system of the State, and should have general supervision of this work, but each of them has a large additional department, hence, they cannot, in the very nature of things, do the detailed work of the examinations.

During the year, Mr. T. D. Sensor, who had for many years been connected with the Department, was elected Secretary, or administrative officer of the Board. Three young women devote all their time, under Mr. Sensor's direction, to the work of the Board.

Mr. Sensor has prepared the following report of the main activities of the Board during the year.

The rules and regulations concerning teachers' certificates provide that, "No person shall be employed as a teacher, principal or supervisor (the term supervisor includes county and city superintendents, supervising principals, principals of graded schools who devote their entire time to supervision) unless he shall hold a certificate, which certificate shall be in full force and effect in this State and valid for the position to be filled at the time he shall begin teaching under a contract entered into with a Board of Education."

This means that to every new applicant to teach in the State, there may be issued some form of provisional certificate pending the examination of credentials, or the time required to take necessary examinations. Provisional certificates may be issued by City or County Superintendents.

The correspondence required in securing certificates by endorsement is often very great, as only original evidence can be accepted.

The State Board of Examiners held fourteen meetings during the year, at which routine business was transacted and special cases reviewed. Two cases were tried involving the right of teachers to retain their certificates but in neither case was the certificate revoked.

The table showing results of the examinations includes applicants for new certificates, together with a larger number of teachers who are endeavoring to change county certificates, which are limited in their use, to State certificates, which will be good for use in all counties in the State. When the plan of licensing teachers, contemplated by the new rules and regulations, is in full effect, this State will have placed itself in the forefront of all the states in the Union. The general plan is, and has been gradually to raise the standards in

You Are Viewing an Archived Copy from the New Jersey State Library

such a way as not to work any injustice to teachers holding certificates under the old rules and at the same time safeguard the welfare of the children who are to be taught.

Report of the Inspector of Accounts

November 1, 1912.

Dr. W. G. Schauffler, President State Board of Education, Trenton, N. J.

Dear Sir: In response to your request for a report concerning the inspection of accounts, the duties of this office were taken up by me on July 8, 1912, and from this date I beg to submit the following:

The districts in which I made inspections are as follows:

Pompton Township, Passaic County.
Borough of Norwood, Bergen County.
Lower Penns Neck Township, Salem County.
Borough Point Pleasant, Ocean County.
Town of West New York, Hudson County, and have started an inspection in the City of Bayonne, Hudson County.

With the exception of Bayonne a complete report of inspections has been filed.

In addition to the above inspections the systems in use, and the method of handling the school accounts, have been looked into in the following districts:

West Orange, Orange, East Orange and Newark, Essex County.
Plainfield, Westfield, Elizabeth, Union County.
Middletown Township and Asbury Park, Monmouth County.
Hoboken, Hudson County.

I have also visited a number of the County Superintendents in order to get an idea of the Districts requiring the most urgent attention.

In all the districts in which inspections have been made the method of handling the accounts has been very lax. In each case in order to arrive at a correct solution of affairs it was necessary to retabulate each warrant drawn and charge same to the proper account.

From my experience there are very few districts maintaining a system of accounts from which any reliable information can be ob-

You Are Viewing an Archived Copy from the New Jersey State Library

tained. The accounts are not classified so that the correct cost can be arrived at.

Very few of the districts keep a ledger, and consequently there is no record showing the valuation of school properties, or the liabilities of the Board of Education.

At the suggestion of the Honorable Melvin A. Rice new forms were drafted for a uniform system of bookkeeping for use in all school districts. Careful consideration was given to the making up of these forms, and, as far as possible, all conditions which would in anyway hinder the carrying out of the proposed system were eliminated.

A Warrant Register has been designed in which all warrants can be entered as issued. The Warrants can be classified and arranged in such a way that the records kept for the statistical purpose of the Board of Education can be posted directly from this book to a ledger. I find that a great many of the districts are interested in the cost of operation and maintenance of each individual school, and others again are interested in the cost of maintaining each grade. To design a book to meet all these different conditions would be almost impossible.

The general accounts in the (New Forms) are in accordance with the classification of accounts as shown in the blanks issued by the United States Commissioner of Education, and detailed accounts, under general accounts, are arranged to furnish data required by the Commissioner of Education of New Jersey.

Provisions have been made whereby the "Available Appropriations and Other Income" can be recorded in this book, and the total amount available in each of the several funds can be always ascertained. Provision is also made whereby "Appropriations and Other Income" can be applied to the detail accounts under the Caption of "Analysis of Appropriations and Other Income."

Under the Caption of "Receipts" the arrangement is such that upon receipt of money, same can be entered in the proper columns, thus, showing at all times the amount of money received from each of the several funds. By deducting the actual "Receipts" from the total "Appropriations and Other Income" the amount of money still in a district from any of the several funds can be quickly ascertained.

In regard to "Expenditures" warrants as issued can be entered in numerical order, space being provided for the name of Claimant and the purpose for which warrant is drawn. The different accounts are

You Are Viewing an Archived Copy from the New Jersey State Library

then arranged in columns so that warrant can be posted very readily to the proper account. The arrangement is such that the Expenditures charged in the various accounts can be deducted from the appropriations and show at all times the unexpended balance to credit of each of the several accounts.

The Warrant register has been made up in two forms, one for the large districts and one for the rural districts, the arrangement and classification of accounts in both books being the same.

In the book designed for the rural districts the stub of warrant has been embodied in same and a sheet containing four warrants, properly perforated, inserted between each page. This method of handling the warrants eliminates the use of a warrant book.

In both forms arrangement has been made for the handling of Temporary Loans.

A Form of Book for the Custodians' use has also been prepared. This book is so arranged that the custodian will be able to keep a correct record of the cash received in detail, that is, cash received from Temporary Loans will be kept separate from cash received from other sources.

The accounts under Expenditures in this book are in accordance with the general accounts as shown in the book prepared for the District Clerks and Secretaries.

The idea is that District Clerks and Secretaries will have a check on the Custodians' cash and Custodians will have a check on the District Clerks' and Secretaries' expenditures.

The work of inspection of accounts would be greatly facilitated by the use of this system.

In the large cities there seems to be considerable detail work necessary in order to arrive at the relative efficiency of each school. For these cities it is almost impracticable to design a book which could be used to good advantage by them. I think if it were possible to do this that the large cities should be furnished with a statement or report, giving the information which would be required by the State in their next annual report, and ask them to arrange their books and accounts so this information could be accurately obtained at the close of the fiscal year. I think such a scheme as this, would be far more convenient for these districts, and that the information received from them would be very reliable.

INSURANCE: In each of the districts where inspections have been made, I found the matter of Insurance was very irregular, and, in a few instances, the premiums paid appearing very excessive.

You Are Viewing an Archived Copy from the New Jersey State Library

INTEREST ON BANK BALANCES: As already reported Pompton Township, Point Pleasant, and Lower Penns Neck Township were not receiving interest on the School Funds deposited in the local banks in their respective districts. Upon investigation I found that there are a great many districts throughout the State not receiving interest on the School Funds.

DEEDS: It is very important that the various Boards of Education have deeds covering lands owned by them. Very little attention has been given to this matter by any of the districts in which I have made inspections.

BONDS: In the districts operating under section 7 of the School Law, the matter of recording bond issues is given very little consideration. A proper record should be kept of bond issues. A Bond Register should be used for this purpose.

I would suggest that the following information be embodied in the Annual Reports filed with County Superintendents by the districts.

Name of Bank or Banks in which funds are deposited.

Rate of interest being received on account.

The reason why interest is not being paid on account.

MONTHLY REPORT FOR TREASURER: At the suggestion of the Honorable Edmund Osborne, a comparative monthly report to be submitted to the State Board of Education, by the Honorable J. Bingham Woodward as Treasurer of each of the following institutions, was designed by me. State Normal Schools, Trenton and Montclair, and the Manual Training and Industrial School for Colored Youth.

Respectfully submitted,

(signed) W. C. HOPKINS,
Inspector of Accounts.

Report of the Inspector of Buildings

Trenton, N. J., November 29, 1912.

To the Honorable the State Board of Education of the State of New Jersey,

Gentlemen: Complying with your instructions I desire to submit to you a summary of my work from the time of my appointment (Nov. 1st, 1911) to the ending of the last school year which was July 1st, 1912.

During the eight months preceding July 1st last inspections have been made of one hundred and fifty-six (156) school buildings which did not comply with the law and the rules and regulations of your Board. Of this number thirty-nine (39) have since been altered to meet the recommendations contained in my detailed reports, copies of which can be found in the files of the Department of Public Instruction.

Thirty-five (35) of the aforesaid one hundred and fifty-six buildings were found to be in such poor condition that it would be impossible to alter them to meet the required standard and I have recommended their condemnation.

I have also inspected sixteen (16) buildings which have been constructed in the last two years which meet all requirements, and twelve (12) buildings in course of construction, which I found were being built in strict accordance with the plans and specifications as approved by your Board.

Plans and specifications for eighteen new buildings have been submitted, examined and certified to your Board as meeting the requirements of the law and rules and regulations of your Board. Plans and specifications for alterations to nineteen (19) existing buildings have also been examined and approved by your Board.

I have met with a number of local Boards of Education in reference to alterations and advised with them as to the best and most economical way of improving the building under their control.

Glaring attempts have been made in several instances by the contractors erecting school buildings in different sections of the State

You Are Viewing an Archived Copy from the New Jersey State Library

to slight the work and use materials inferior to those specified in the approved specifications. Reports have been made in writing from time to time and in most cases these defective conditions have been corrected by the contractors upon my recommendation to the Boards of Education, and the Districts have received what they are entitled to under their contracts. It has been necessary in several cases to make numerous inspections to accomplish this result, and with the support of the Commissioner, County Superintendents and the local Boards of Education much has been accomplished toward this end. Respectfully submitted,

CHARLES McDERMOTT,
Inspector of Buildings.

Reports of County Superintendents

ATLANTIC COUNTY.

HENRY M. CRESSMAN, SUPERINTENDENT.

In supplementing my annual statistical report for the year ending June 30, 1912, I desire to call attention to the following:

Children enrolled, 14,362, an increase of 621 over the preceding year. Teachers employed, 411; males, 55, and females, 356; increase, 21. Number of teachers employed in Atlantic City, 218.

RECEIPTS.

Amount of money available from balances and from State appropriation for year 1911 to 1912	$237,606 84
Railroad tax, local taxes, including balances	323,428 46
Other sources, including the sale of bonds and balances from sale of bonds	272,182 89
Total	$833,218 19

EXPENDITURES.

For teachers' salaries	$293,076 96
For Teachers' Retirement Fund	4,761 92
For fuel	15,921 41
For transportation of pupils	10,405 80
For medical inspection	6,659 33
For attendance officers	3,863 09
For land, new buildings and repairs of school houses	180,907 45
For text books, apparatus and supplies	32,041 63
For tuition of pupils in other districts	4,311 62
For payment of bonds and interest on bonds	72,446 52
For balances on hand, all sources	77,065 79
For other school expenses, including interest, redemption of bonds, libraries, janitors' salaries, manual training and incidental expenses	131,756 67
Total	$833,218 19

Possible days attendance	2,131,878½
Actual attendance	1,814,197
Attendance preceding year	1,704,131
Increase attendance, 1911-1912	110,166
Per cent. attendance for the county	85

The year 1911 to 1912 has been marked by considerable activity on the part of the Boards of Education and the teachers of Atlantic County. Meetings of the County Boards of Education were held, as the law prescribes, one at

You Are Viewing an Archived Copy from the New Jersey State Library

the Hotel Chalfonte in Atlantic City on December 14, 1911, the other at Egg Harbor City on February 27. At the former addresses were made by Dr. Kendall, Commissioner of Education, on "Characteristics of a Good School," and by Rev. J. H. Waidelich, of Pennsylvania, "The Duties of Members of Boards of Education." After the formal addresses discussions were entered into by the members upon the subjects of medical inspection, improvements of school buildings and compulsory education. Every school district, except two in the county, were represented at this meeting. At the meeting at Egg Harbor City in February, Mr. Charles McDermott, Inspector of School Buildings, addressed the convention on the subject of School Buildings. Rev. E. A. Wells, Secretary of the Board of Education of Pleasantville, delivered an address on the subject of Truancy. This was followed by an address by Mr. John F. Hall, Chief Truant Officer of Atlantic City, whose subject was "The Practical Truant Officer."

A teachers' institute for the counties of Atlantic, Gloucester and Salem was held in the High School Building on Thursday, Friday and Saturday, November 23, 24 and 25. Addresses were made by Dr. Luther H. Gulick, Dr. Henry Suzzalo, Superintendent O. J. Kern, of Winnebago, County Illinois, Dr. Elmer Bryan, President of the Colgate University, Miss Frances C. Hays, and the Commissioner of Education, Dr. Calvin N. Kendall. These addresses were instructive and practical and were very beneficial to the teachers. Seldom, if ever, has there been held an institute in the county at which subjects of greater vital importance were discussed by men so well recognized for their ability in their special departments.

A county institute for the teachers of Atlantic City and of the county was held in the High School Building, Atlantic City on March 15 and 16. The instructors were Mr. George A. Mirick, Commissioner of Elementary Education, Prof. Harold Barnes of Girard College, Philadelphia, Pa., Miss Frances C. Hays, of Newark, and Prof. Harry Houston, of New Haven, Conn.

Teachers' meetings were frequently held in the following districts: Hammonton, Hamilton Township, Buena Vista Township, and Egg Harbor City. The teachers of Galloway Township and Absecon held monthly meetings at Absecon. Prof. E. D. Riley was chosen the chairman of this group of teachers and Miss Lizzie English secretary. The teachers of Linwood, Egg Harbor Township, Northfield City and Somers Point City formed another group that met periodically throughout the school year. These local meetings aided very much in forming a professional spirit. Pedagogical subjects were discussed, class drills were given and plans formed for competitive exercises and field day contests.

Exhibitions of work in drawing, hand work and manual training were given at various times throughout the year in the districts of Buena Vista Township, Hammonton, Galloway Township, Egg Harbor Township, Folsom and Mullica Township. These exhibitions were attended by the parents of the children and other persons of the neighborhood who were interested in the work of the public schools. The teachers and the pupils deserve commendation for the work they did in connection with these exhibitions.

School Buildings. During the year an eight-room school building, costing $40,000, was completed, and occupied by the pupils of Margate City. Dedicatory exercises were held during the last week of December. The speakers on this occasion were Honorable S. R. Morse, ex-County Superintendent of Schools of Atlantic County, County Superintendent H. M. Cressman, Mr. John F. Hall, of Atlantic City, and Mr. William Loudenslager.

At Minotola in Buena Vista Township, there was also completed a primary and grammar school building, costing in the neighborhood of $17,000. This was erected to take the place of a three-room building that had been destroyed the previous year by fire. Two other two-room buildings were erected during the course of the year in this township. These are frame buildings, lighted and heated in every respect as the law requires.

The following districts, in addition to those mentioned above, have either built new buildings, additions to old buildings or remodeled old buildings so as to conform with the requirements of the law: Egg Harbor Township,

You Are Viewing an Archived Copy from the New Jersey State Library

Folsom, Galloway Township, Hammonton and Egg Harbor City. The main building at Egg Harbor City is now being entirely remodeled,—a ventilating system being installed and the light admitted so as to conform with the law in this respect. The capacity of the building is increased by an addition of four rooms.

The cities of Port Republic, Absecon, Northfield and Somers Point have been considering the erection of new buildings. In my last report I stated that Absecon City had voted $22,500 for the erection of a new building. To this date the building has not been built, owing to the fact that the bond issue failed to receive the State's approval, due to the fact that but three per cent. of the assessed valuation can be used for such purposes. This law has handicapped the four above named municipalities in carrying out the much-needed improvements in each of these places. It is hoped that measures of relief for such situations may be provided during the next session of the Legislature.

I am glad to note that considerable provision has been made during the last year for the ventilation of school buildings in the rural districts. The following districts have, during the year, introduced or increased the number of ventilating stoves: Buena Vista Township, Egg Harbor Township, Folsom, Galloway Township, Hammonton, Hamilton Township and Weymouth Township. With this change there came also a number of other changes, such as the introduction of single desks and other features that helped to harmonize and make more agreeable the surroundings.

Medical Inspection. Medical inspectors were elected in all the districts for the year that has just ended. The inspection was more satisfactory than that of the previous year because of the fact that the inspectors were chosen earlier and the Boards of Education were somewhat more exacting in the work which they required from the men who were appointed to do this service. In one of the districts, however, the medical inspector was asked to resign before the close of the year because of the fact that he failed to begin his work, and to carry it out as the spirit of the law demands. In another district, practically inaccessible, through some misunderstanding the service of the medical inspector was not rendered, so that I am obliged to report that two districts had practically no medical inspection. It is reported that many children, as a result of medical inspection, have had treated teeth, ears, eyes, etc., and in some cases adenoids have been removed, and here and there children have been excluded for incipient tuberculosis and for other temporary or chronic ailments that threatened the comfort or health of others. It is to be regretted that many of the children who are most in need of attention or treatment are those of parents that are either unable to give it or indifferent as to the necessity of it.

Greater attention was given to the attendance of children during the past year than hertofore. Ten of the districts employed attendance officers. In the remaining districts, with the exception of two, no attendance officers were required. It seems to be a somewhat difficult matter for some members of Boards of Education to distinguish between themselves as individuals and as members of a Board of Education chosen or appointed to act in the interests of the child and of the State which they represent. Attendance officers and members of Boards of Education should be fearless. Children of school age should be obliged to attend school under all circumstances, unless they are excused for good reasons by the action of the Board of Education, or by the committee that has charge of truancy. Until this is done a member of a Board of Education, or the Board of Education as a body, will not be held in the respect which this high calling deserves. I find too frequently that children who have passed the age of fourteen or fifteen years are excused by Boards of Education upon the presentation of an affidavit by their parents that they have need for the service of their children. Facts frequently suggest that some of these parents do not regard an oath with that sacredness with which the oath should be regarded. Dealing lightly with the sanctity of the oath, it seems to me, is demoralizing to the parents and their children alike. As I see it no child should be excused from school unless a thorough

You Are Viewing an Archived Copy from the New Jersey State Library

investigation reveals the fact that such parents have absolute need of their child's assistance.

School Yards. I am especially pleased with the improvements that have taken place in the grounds surrounding many of the school buildings. Dividing fences have been erected in very many of the school yards that had not been provided heretofore with them, as the law requires. Weeds, shrubs and stumps have been removed in numerous instances during the school year, and the ground graded so as to have a gradual slope away from the school building. Trees, flowering shrubs and flower beds have in some cases taken the place of these heretofore unsightly occupants of the school yard.

Arbor Day was celebrated by the planting of trees in some cases, and by exercises in other instances. A twelve page booklet, "Suggestions for the Observance of Arbor Day in the Public Schools of Atlantic County," was printed and distributed to every teacher in the county.

Elementary manual training has been continued and introduced in a few of the districts which heretofore did not have any in their course. The work at Hammonton, Egg Harbor City, Buena Vista Township, Galloway Township, Folsom, Linwood, Mullica Township and Northfield has been improving from year to year. There is, however, great opportunity for its farther improvement and it will, no doubt, improve as the teachers become more apt and the districts convinced of its value.

The pamphlets "The Treatment of Sub Normal Children" have been received. Every teacher and member of a Board of Education has been furnished with one of them. So far we have but four classes in the county that have been organized to teach such children. Nearly every school has its defective child or children. It will be quite difficult, if not impossible, to segregate the pupils in the distinctly rural districts. I believe within a reasonably short time the larger communities will be in an attitude and enabled to take care of these unfortunates, as the spirit of humanity suggests and the law now requires.

One hundred and fifty-eight pupils attended high schools in "Other Districts." These were transported by wagon, train, trolley and automobile. Satisfactory transportation is one of the difficult problems of our county, owing to its large territorial area, and to the fact that a number of the districts are remote from railroads or trolley lines. Distance in a few cases makes transportation to high school practically impossible.

The largest number that ever completed the county course, ninety in number, gathered in Cante's Theatre, Pleasantville, on the evening of June 28th to receive their diplomas. The exercises consisted of music by the Egg Harbor City Amateur Orchestra, recitations and orations. Dr. Thomas J. Cross, of Atlantic City, addressed the graduates and their parents. The hall was beautifully decorated and children did their parts in a most creditable manner.

The number ninety does not include the graduates of grammar schools from the schools of Hammonton, Egg Harbor City, May's Landing and Pleasantville. These districts conduct their own grammar school graduating exercises.

The table below shows the results obtained by the pupils of the county who took the eighth grades examination as furnished by the State last May. Numbers in the column on the left indicate those that took the examination, those in the next column indicate the number that passed within a mark of 70 or over. The third column shows the per cent. that passed with an average of 70 per cent or over.

Our teaching force last year, apart from the city of Atlantic City, consisted of 193 teachers. Thirty-seven of these were either new to the county or else without experience. Of this number one taught as a kindergartner, thirty-four in the primary and elementary grades, one as teacher of music, and one as a teacher of music and drawing. Of these, three were graduates of the New Jersey Normal Schools, one of a Jersey City Training School, two of colleges and twenty of Normal Schools of other states. Twelve had either a partial high school course or training in grammar schools only. We need more home trained teachers.

In conclusion I desire to express my appreciation for the co-operation on the part of the teachers, Boards of Education of the county, as well as the valuable assistance that I have obtained from time to time either directly from you as Commissioner of Education or from your assistants, or through your department.

BERGEN COUNTY.

B. C. WOOSTER, SUPERINTENDENT.

I submit herewith my annual statistical report for the school year ending June 30, 1912. A few school conditions seem worthy of especial comment.

ENROLLMENT AND ATTENDANCE.

There were 3,028 children enrolled in kindergartens; 17,893 in grades I to IV; 9,860 in grades V to VIII; 1,854 in grades IX to XII; and 867 in evening schools; a total of 33,412. 1,124 children were neither absent nor tardy during entire year, and average attendance was 88 per cent. of enrollment.

Eight hundred and fifty-nine high school, and 314 elementary school pupils were sent to schools out of the home districts, at a cost of $37,401.29 for tuition, and $15,677.45 for transportation.

SCHOOL ACCOMMODATION.

New and very satisfactory buildings have been erected in Dumont, East Rutherford, Fort Lee, Midland Park, North Arlington, Orvil Township, Overpeck Township, Ramsey, Rutherford and New Barbadoes. This latter cost $180,000, and has an especially fine auditorium of one thousand capacity.

In the county as a whole the number of school sittings about equals the attendance. Few districts, however, have any excess accommodation, and two or three have had to resort to part time. With an annual increase of about 2,000 children we need to build from fifty to seventy-five new rooms each year. The 3 per cent. limit to school bond indebtedness fixed by last Legislature has checked materially our advance in this respect, and even if law is repealed promptly, we shall feel the retardation for some time, and many children will be without adequate school facilities because of unwise legislation. The State requires, in one law, each district to provide adequate school accommodation for all children in district, and then by another law effectually prevents compliance with first law.

We find the bond buyers more potent than the Constitution of the State.

SCHOOL FINANCES.

The total expenditure of the school districts of Bergen last year, for all school purposes was $1,704,682.30. Of this amount $468,026.27 was for school buildings, furniture and repairs, and $165,522.53 for bonds and interest on bonds.

You Are Viewing an Archived Copy from the New Jersey State Library

Bonds were issued during year for $347,000, and $46,475 bonds were paid. Outstanding debt July 1, 1912, was $2,998,195, while valuation of school property is placed at $3,742,505. The idea of a generation paying for its own education is a bit overworked. Bonds are issued for too long a time and there is danger that some time there will be a generation unable to pay the debt placed upon it by a former generation, and at same time meet its own just and proper expenses.

TEACHERS AND SALARIES.

Nine hundred and fifty-nine teachers were employed, 120 men and 839 women. For the most part these teachers are both trained and experienced, only two having begun the year without either training or experience.

Two factors have contributed largely to this desirable condition. First, we have been very particular about certificates. I am convinced that liberality with provisional or temporary certificates contributes greatly to weaken a teaching body. The State has established certain standards of admission to a teacher's position, but if a temporary certificate can be had for the asking, standards of certification are in large measure avoided. Second, salaries in Bergen County have been higher than in most suburban sections.

The average salaray paid kindergarten teachers was $654.50; primary teachers $616.66; grammar grade teachers, men $994.17; women $707.50; high school teachers, men $1,181.15; women $920.50.

COUNTRY SCHOOLS.

The average country school continues to be unsatisfactory. Residents of country districts oppose consolidation and supervision, and the country districts do not get a sufficient share of the State moneys.

HIGH SCHOOLS.

We have four year high schools in Hackensack, Englewood, Ridgewood, Rutherford, Park Ridge, Ramsey and Ridgefield Park. Closter is waiting for approval of fourth year. Two year courses are offered in East Rutherford, Hasbrouck Heights, Bergenfield Dumont, Leonia, Cliffside Park, and we send to several high schools in adjoining counties, still we have reason to expect in near future that some districts will be unable to find high school accommodation.

Districts having the largest and most efficient high schools, that have been fostered by State aid, will make no effort to extend facilites to adjoining districts, and some charge unduly large tuition rates. These matters very much need State regulation.

COMPULSORY ATTENDANCE.

Gradually, boards of education are awakening to the community's duty to the child of careless or selfish parents, and attendance laws are more generally enforced. Sometimes, when the awakening is sudden and has been long deferred, there is an excess of zeal, and a boy who has been allowed to remain away from school for years, and who is profitably employed, is forced back into a school totally unfitted to meet his needs. If children are required to attend school regularly from seven years of age, most of the attendance troubles will be avoided.

BURLINGTON COUNTY.

HERMAN A. STEES, COUNTY SUPERINTENDENT.

I herewith submit a brief statement of the conditions and interests of the public schools of Burlington County for the year ending June 30, 1912.

Perhaps there is no other county in the State having such marked contrasts in school conditions and interests as has Burlington County. We have three very distinct sections; the River End where manufacturing is the chief interest, the Pine Belt given up almost wholly to cranberry culture and woodcraft, and lying between these two a rich agricultural section. Each year there is a substantial improvement in the schools throughout that section bordering on the Delaware. Here it is that new buildings are erected, salaries increased, trained teachers employed. There is no great rush even here, no mushroom growth, but steady and substantial gain; conditions are improving and will continue to improve. In the agricultural section there is here and there a district that is doing splendid work for its children; notable among these are Northampton Township, Chester Township and Pemberton Borough. It is in the other districts of this farming section that the greatest improvement should be made in the next few years. The good people of these rich communities must be made to see the great advantages of closing their small schools and of erecting central graded schools. The conversion of these people to a realization of the greater efficiency of consolidation of schools is no light task, but it can be accomplished. Here there is no problem to be solved, what should be done is known. There is, however, a real, a perplexing problem in our Pine Belt. What can be done for the children in Washington and Woodland Townships? Conditions here are growing worse and worse. Bad as are the buildings, a more discouraging feature is the scarcity of capable teachers who are willing to accept employment where the salaries are small, social conditions uncongenial and religious services few and far between. In these two districts there are five schools in which the enrollment is less than twelve. Transportation is not practicable, the distances are too great and the roads are too bad during the winter months. These small schools must remain, but their efficiency must be increased. How can this be done is the problem. Very greatly increased salaries would undoubtedly attract teachers, but where shall the money come from to pay for the services of capable teachers? These people claim that their tax rates are proportionately higher than those of the other districts of the county, and the claim must be allowed.

Our approved high schools, six in number, are in excellent condition. The number of pupils enrolled and in attendance is constantly increasing, showing that parents are willing and anxious to do the best they can for their children. In three of these high schools there have been established superior courses in commercial branches; in one of them a very creditable course in manual training; in all of them the sciences, mathematics and languages are receiving a fair proportion of attention. It is remarkable what a stimulus the high schools have been to the grades. Even those pupils who do not enter the high schools are being greatly benefitted by the very general improvement made necessary by the demands of the high schools upon the grades. This is a healthy condition and should be encouraged. In June 211 pupils, not including those of districts having approved high schools, received the county grammar school certificate. About 90 per cent. of these will enter the high schools. This is an excellent showing when it is known that until recently there was little or no demand for advanced educational facilities in these very districts.

It may be well to call attention to the very creditable work carried on in Florence, by private means, for the purpose of improving home conditions. Mr. Walter Wood employs a teacher and furnishes a room and materials for instructing the girls in Florence in home economics. In this private school

You Are Viewing an Archived Copy from the New Jersey State Library

every girl in the public schools above the third grade devotes one hour each week to sewing and cooking. In May these pupils gave an exhibition of their work, and, in justice it must be said, that the variety and excellence of the display was most gratifying. There is a movement on foot to try to induce Mr. Wood to place this school under the control of the local Board of Education, so that the very generous donation of Mr. Wood may be duplicated by the State and thus expand the work so as to include some form of activity for the boys of Florence.

Mention should be made also of the corn growing contests carried on by the Y. M. C. A. of the county under the very able management of Mr. Otis B. Reed. While this movement is not a part of the public school system it is helping our school boys in many ways. Not only are better methods of growing corn taught, but a higher standard of living is part of the curriculum. The good effects of this work are being felt in our schools, and teachers and parents are not slow to recognize and encourage this most excellent movement. It is to be hoped that other forms of activity may be added so that the girls may be included in the uplift. Homes are largely what the women make them. Teach the girls domestic science and kindred subjects and life will be happier and more worthwhile.

Pemberton Borough has completed a new building that is a credit to the community and to the county. Every comfort and convenience may be found in this new school. Undoubtedly this school will be a great help to the district in which it is located and to the surrounding districts. The people of Pemberton Borough should be commended for their enterprise in supplying such excellent educational advantages to this section of the country. In other sections of the county there are buildings in course of erection an account of which will appear in next year's report. In several schools much needed repairs have been made and furniture of a better kind has been supplied.

There have been numerous meetings of teachers and boards of education throughout the county during the year. The County Board of Education met at Burlington in December. One hundred and fifty members of the various county boards were present. This splendid attendance alone shows a lively interest in school affairs. The County Teachers' Association met in May and about three hundred teachers enrolled and nearly two hundred were present. These two organizations are most helpful to our schools. Membership in both is voluntary and both are most liberally supported.

I am greatly indebted to the Department of Public Instruction for much needed assistance in the performance of my many and perplexing duties.

CAMDEN COUNTY.

CHARLES S. ALBERTSON, SUPERINTENDENT.

Herewith is submitted my statistical report for the year ending June 30, 1912. The report is encouraging as it shows advancement and improvement in the county along all lines of educational work. In addition to the facts embodied in the report I am pleased to inform you that there is a very good feeling toward the schools and their management. Very little adverse criticism is heard. On every hand I hear expressions of satisfaction and commendation. This feeling of confidnce and approval adds much to the strength and power of the schools. As soon as a school is discredited—justly or unjustly—very much of its usefulness is gone.

In general I feel that the attitude of the pupils toward their schools is admirable. I frequently have pupils express interest and affectionate pride in their schools. We may have perfectly equipped and appointed buildings and teachers of the highest academic and professional attainments, but unless we secure the confidence and affectionate co-operation of the pupils and

You Are Viewing an Archived Copy from the New Jersey State Library

parents, the schools will fail to measure up to what should reasonably be expected of them.

I feel that I can report that there is, on the part of most of our teachers, a keen interest in their work and a conscientious desire to give their best to their profession. In nearly all of our districts teachers' salaries are being steadily increased, and consequently the standard of teaching efficiency is increased. There are, however, some districts in which it is very difficult to induce progress along these lines. Some of the rural schools are suffering in consequence of having indifferent and poorly equipped teachers.

Teachers of these schools should be enthusiastic and specially equipped, and they should command high salaries.

Six new buildings have been completed during the year. Two of these are in Pensauken Township. They are eight-room buildings—one at Amon Heights and one at Pensauken. They are modern in every particular and are ornaments to their localities and a credit to the district. These buildings were dedicated early in the school year with appropriate and impressive ceremonies.

Haddon Heights Borough has completed a handsome high school building fully equipped in every way. This building was also dedicated with appropriate exercises.

A new four-room building at Clementon has been erected. This, too, is an excellent building.

A two-room building at Sadlertown, Haddon Township, also a two-room building at Blue Anchor, Winslow Township, are in course of construction.

During the next school year two new buildings in Audubon Borough, one in Woodlynne Borough, one in Gloucester Township, and two in Winslow Township will be provided.

Drinking fountains are provided in all buildings where running water is available. In other schools individual cups are required.

Several old buildings have been equipped with improved heating and ventilating systems. Some of the districts are taking measures to change old buildings to make them conform to present day requirements.

Additional high school facilities are required. All our available high schools are now full. The problem of making provision for the constantly increasing number of high school pupils now confronts us.

The "eighth grade" examinations were held as usual at "Centers." The "State questions" in six subjects and questions in five subjects prepared by the County Superintendent were used. A large number of pupils were successful in securing admission to high schools.

At the close of the school year exhibitions of school work, including manual training and vocational training were held in many of the schools. I inspected the work with much interest and found that the public generally are enthusiastically proud of the exhibitions.

I attended a number of commencements and "Closing Exercises." These events are quite important occasions in most of the districts and attract crowds of interested and appreciative citizens.

A very interesting and helpful teachers' institute was held at the Camden High School Auditorium. It is noteworthy that, though our institutes are held on Saturdays, nearly all our teachers attend without protest.

Regular meetings of the Camden County Teachers' Association and the Camden County Supervising Principals' Association have been held. At one of the meetings of the former the Commissioner of Education made a helpful and inspiring address.

A good meeting of the County Association of School Boards was held at the Court House on May 16. Nearly all the Boards were represented at this meeting. Dr. Kendall ably pointed out the needs of the schools and the duties and responsibilities of Boards of Education. The address called forth much inquiry and valuable discussion.

The Boroughs of Collingswood, Haddonfield, Merchantville, and the Township of Pensauken have well equipped manual training departments with

You Are Viewing an Archived Copy from the New Jersey State Library

special directors for the work. These districts, as well as several others, have manual training of some kind in all the grades.

Interest in agriculture has been aroused by providing a corn-growing contest for boys. This is under the auspices of the Y. M. C. A.'s County Committee—New Jersey Agricultural College, State and County Boards of Agriculture, the Public Schools, New Jersey Congress of Mothers, and the Granges co-operating.

The co-operating committee consists of progressive men representing the different localites in the county. The chairman of the committee is Hon. E. T. Gill, of Haddonfield, and the secretary is Mr. Hugh D. Maydole, county secretary of the county Y. M. C. A.

Some of the valuable prizes offered by the business men and associations are as follows: Pure-bred Guernsey calf valued at $100, pure-bred Holstein calf valued at $50, pure-bred Jersey Red pig valued at $8, pair of choice pigs valued at $6, silver medal valued at $15, full expenses of two-day trip to the New Jersey Agricultural College during "Farmers' Week," "Iron Age" riding cultivator valued at $35, and several other valuable and interesting prizes. The competition is keen, there are about seventy entries, and we expect to have a fine showing.

The County Board of Agriculture offers a cash prize of $15 to the "Library Fund" of the school showing the best agricultural exhibit grown on parents' farms or collected by the pupils of the school. There are also valuable second and third prizes for this exhibit.

The Haddonfield Grange offers a cash prize of $12 to the same fund of the school that enrolls the largest number of prize winners in the corn-growing contest. There are second and third prizes for this also. Prizes are offered for the best essay on "How I Grew My Corn," and for the six best photographs showing boys working in the corn field.

In connection with the above, the New Jersey Congress of Mothers in the "Home-Making Contest" offers prizes for sewing and baking.

The exhibitions will be held in connection with the meeting of the Board of Agriculture in November.

I consider this movement a valuable one and am much interested in the outcome.

In closing this report I am reminded of the very pertinent request made by the Commissioner last year for a supplementary report showing the "needs" of the schools. I feel that I must repeat that better trained teachers and specially equipped teachers are needed for our rural schools. More of our districts should have supervising principals. We should have more effective teaching of manual training and vocational training. Better medical inspection is needed. The compulsory education law is not enforced as it should be. A State course of study would be advantageous.

CAPE MAY COUNTY.

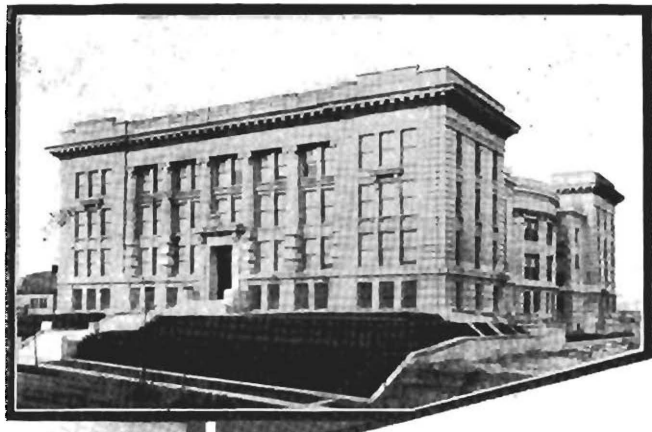
AARON W. HAND, SUPERINTENDENT.

The school year ending June 30th, 1912, has been somewhat eventful in Cape May County, from the standpoint of the schools and of those interested in the administration of school affairs.

At the opening of the schools in September, there was a feeling of expectancy, and even of anxiety, among teachers and school boards, as to what the reorganized State Board and State Department might require in the nature of changes in the various details of school management and organization, but this feeling was removed as plans developed and as it was discovered that the new administration would proceed along lines carefully chosen and wisely progressive.

Our educational meetings during the year have been particularly good. The first meeting of the Teachers' Association was especially interesting and

You Are Viewing an Archived Copy from the New Jersey State Library



You Are Viewing an Archived Copy from the New Jersey State Library

You Are Viewing an Archived Copy from the New Jersey State Library

profitable, both from the viewpoint of inspiration and of actual applicable information given. Our departments, Primary, Grammar and High School, demonstrated, very fully, their value, and were largely attended. The general program included an address by Mrs. Augustus H. Reeve, President of the New Jersey Congress of Mothers; "Rural School Programs," by Mr. F. W. James, of Goshen; "The Realization of Personality," by Rev. J. B. Haines, recently connected with Pennington Seminary; and "Domestic Science," by Miss Miriam C. Smafield, teacher of that subject, at Ocean City.

The annual Teachers' Institute occurred November 15th, 16th and 17th, at Wildwood, and the corps of instructors sent us was of the highest type, their work being thoroughly appreciated and enjoyed by the teachers of the two counties, Cape May and Cumberland, in joint institute.

The annual meeting of the Association of Boards of Education of the county was held at Holly Beach, March 2d, 1912, and was a very gratifying and successful one, due to the fact that most of the papers were presented by members of the Boards, and all of them gave abundant evidence of the thoughtful interest and careful attention to school questions, being given by the writers. The subjects discussed were: "Co-operation," by Mr. Stephen Jefferson, District Clerk of Dennis Township Board; "The Relation of the School and Home," by Mr. L. C. Ogden, President of the Cape May City Board; "Consolidation of Schools in Township Districts," by Mr. Alfred Cooper, President of Middle Township Board of Education; and "The Work of a Medical Examiner," by Dr. J. S. Douglass, Medical Examiner of Middle Township and Avalon. These were given in the afternoon session, and the morning session was devoted to the very able and comprehensive address of Hon. A. B. Meredith, Assistant Commissioner of Education, assigned to Secondary Schools, and to the annual address of the County Superintendent.

The annual meeting of the Cape May County High School Association and its annual banquet were held at the Hotel Virginia, Cape May, February 28th, with Commissioner Meredith as a guest. At the conclusion of the banquet, the evening was spent in discussing high school matters, until a late hour. Dr. Meredith's presence was highly valued and the information obtained from him as to the probable attitude of the Department upon high school matters was very helpful to our high school principals and supervisors, all of whom were present.

The annual Spring Session of the Teachers' Association occurred at Court House, Friday evening and Saturday morning and afternoon, March 29th and 30th, the annual banquet being given Friday evening. Our guests of honor were C. N. Kendall, Commissioner of Education, and Superintendent George Morris, President of the State Teachers' Association.

Bromley Smith, A. M., of Bucknell University, delivered the evening lecture upon "Julius Cæsar," this being followed by a reception to the guests and the lecturer of the evening. The Saturday moring general session was memorial for very interesting and valued addresses by Dr. Kendall and Superintendent Morris. The department sessions were largely attended and extremely interesting, the feature of the Primary Department being a demonstration of methods in physical training by Miss Cheldray, teacher of the primary grades at Cape May Point, who brought with her, for the purpose, one of her classes of children.

The thirty-first annual examinations of the Cape May County Schools occurred May 13th, 14th and 15th, and May 27th, 28th and 29th. The State's test served a double purpose in the first examinations, first, as a State test, in accordance with the law and directions, and second, as county examination questions for the Eighth Grade pupils. They were excellent in every way, providing a very fair test in both capacities.

Mr. Charles McDermott, State Inspector of School Buildings, visited Belleplain, at my request, during January, and examined the school building there. In March he made a tour of inspection of one side of Dennis Township, and in August, was in our county again to examine the new building at Belleplain, and another at Stone Harbor. He found them being constructed in accordance

You Are Viewing an Archived Copy from the New Jersey State Library

with plans and specifications which had been approved. He also visited the buildings at West Cape May and at Tuckahoe, making suggestions as to how they could be altered to conform with the requirements of the State Building Code.

Hon. George A. Meirick, Assistant Commissioner of Education, assigned to Elementary Schools, visited our county February 5th and 6th, and inspected several schools, making helpful suggestions and criticisms.

Hon. C. N. Kendall, Commissioner of Education, has favored us, also, with several visits, inspecting the schools of Holly Beach, Wildwood and North Wildwood, on one occasion, and those of Ocean City on another. He also delivered the address to the graduates of the Cape May High School during June, and inspected the Cape May Summer School in July. His visits have been appreciated and enjoyed by all with whom he has come in contact.

I have been making strenuous efforts during the year to secure the attention of the various Boards of our county to the necessity of making the school buildings in each district conform to the new building code of the State, and I feel quite sure that the buildings of the entire county will have been modernized within two years, at the utmost. Boards of Education, in our county at least, are always willing to discuss school matters with open minds, and when convinced, to perform any duty devolving upon them with thoroughness and care. It is sometimes necessary to condemn school buildings, where conditions are such as to warrant this kind of action, for the purpose of securing the attention of the public to a condition, rather than for the purpose of coercion. When action like this is taken, the Board is materially strengthened in its efforts to improve conditions, and the people at large are led to discuss and investigate, and finally to see the necessity for proposed changes and improvements. Wherever it is possible to deliver an address to a public audience upon school matters I find marked attention and interest.

As in very many instances, particularly in the rural sections, existing school buildings are of the four-square type and not worth any attempt at modernizing, the question of new buildings immediately arises. My advice and urgency are always for consolidation in these cases and the results have been encouraging. In Lower Township a movement is on foot which is reasonably sure to result in the erection of a $20,000 building to which all of the pupils of the township will be transported. Public sentiment is strongly in favor of it as a consequence of the efforts of progressive members of the Board and myself.

In Upper Township the effort is being made to reduce seven school buildings to three and to transport all children to these points.

In Dennis Township preparations are being made to transport sixth, seventh and eighth grade pupils to central points, and to continue with primary pupils in the small buildings. A movement is also under way here to secure a modern Central High School building and the people seem to be almost a unit in its favor, though there is some difference of opinion about the question of location. In Middle Township, in which the school buildings are in excellent shape, several of them new, the older ones have been repaired to conform to the new code.

In Sea Isle City, council has passed the necessary ordinance at the suggestion of the Board of Estimate, to issue bonds to pay for the erection of a $25,000 new school building. A fine new $35,000 school building is in process of erection at Ocean City and the new city of Wildwood will take up the question of the erection of a central high school building, so as to have it in readiness for the school year 1913-1914.

The first of the new school buildings to be completed for the school year 1912-1913, is that of Belleplain, a two-room building, upon approved lines. A one-room building has been completed and is in use at Stone Harbor.

West Cape May has under consideration plans for remodelling both of its buildings, and Cape May Point will either rebuild or transport all of its children to Cape May City, in accordance with my suggestion. Excellent trolley conveniences exist by which this can be done at less discomfort and

You Are Viewing an Archived Copy from the New Jersey State Library

difficulty to the children than would be involved in their walking to their own school, and the expense to the district would be less.

Our gain in days of attendance in the year 1910-1911 over the year 1909-1910 was 12,508 days. Our gain in 1911-1912 over 1910-1911 was 18,574, which indicates a progressive increase in population each year, of several hundred pupils. The percentage of attendance remains very nearly stationary, at about 85 per cent. on the enrollment. I am taking steps to secure a much more vigorous enforcement of the compulsory attendance law, and the results will be noticeable during the present year. Boards are beginning to realize that their districts are losing considerable sums of money each year by failure to secure the attendance of a larger percentage of pupils, the rate per day's attendance in this county being 12½ cents.

The need for the division of the counties into supervisory districts and for the appointment of competent supervising principals is becoming more apparent each year. These officers are needed not only for guiding the daily work of the schools, but for the purpose of looking after the business details of the districts. The matter of attendance could receive daily attention from such an officer, and many matters which district clerks of township districts, covering wide areas, cannot adequately look after, would also be under the daily notice of this officer. A monthly report of his work would give to his Board opportunity for a business-like oversight of the condition of school affairs, which would secure much better results and probably pay any additional expense involved by the greater attendance obtained.

The new year opens in a promising manner and we are entering upon the work with enthusiasm, confident of satisfactory accomplishments and of progress in every direction.

My thanks and appreciation are due to yourself and to all the officers of the Department for their assistance and suggestions during the year and for the general spirit of helpfulness which has characterized their attitude.

ESSEX COUNTY.

A. B. Meredith, Superintendent.

In accordance with law I respectfully submit the following report for Essex County for the year ending June 30, 1912.

For the statistical portion of this report I am indebted to my successor, Mr. Lewis H. Carris, who took office July 6, 1912.

In comparison with last year the following totals are significant:

	1911.	1912.	Increase.	Decrease.
Number of teachers	305	339	34	..
Number of Normal graduates	199	214	15	..
Number of college graduates	64	77	13	..
Number of teachers holding county certificates	77	59	..	18
Number of teachers holding State certificates (old form)	228	197	..	31
Number of teachers holding elementary certificates	...	53	..	..
Number of teachers holding secondary certificates	...	16	..	..
Number of teachers holding special certificates (new form)	...	14	..	..

You Are Viewing an Archived Copy from the New Jersey State Library

	1911.	1912.	Increase.
Days attendance	13,142,628½	13,932,184½	789,556
Total pupils enrolled	89,010	93,805	4,795
Pupils enrolled—High School	5,052	5,812	760
Pupils enrolled—Grammar School	23,882	26,216	2,434
Pupils enrolled—Primary School	48,249	49,254	1,005
Pupils enrolled—Kindergarten	11,827	12,523	706
Days transported	19,229	27,704	8,475
No. of class rooms	289	309	20
No. sittings	10,049	10,478	329
Average salary Primary teachers	$829	$835	$6
Average salary Grammar teachers	915	938	23

During the year a special effort was made to make all the school houses of the county conform to the building code adopted by the State Board of Education, with the result that through recommendations and by the condemnation of buildings, all the schools are in process of being brought into agreement with the present requirements.

At Belleville School, No. 1, Cortlandt St., was condemned, as being unsuitable for continued use as a school, both on account of its ventilation and lighting. The stairway also was declared to be dangerous in case of fire.

At the Jerolamon Street School the ventilating apparatus was inadequate, and in the older part of this building the only ventilation was by doors and windows.

The Montgomery School was crowded, necessitating the removal of one class. The heating of this building was by direct radiation and no ventilation was provided except by windows and doors. Recommendations were made regarding both buildings, and as a result the Board of Education has presented some of these matters to the legal voters. Next year should see conditions remedied and possibly a new school erected in the northern end of the district.

To meet the rapid increase in enrollment, the citizens have erected a three-story addition to the Silver Lake School, providing five class rooms and an auditorium, with a seating capacity of four hundred.

A commendable improvement should be noted at the Jerolamon Street School, where a retaining wall has been erected about the south and east sides of the school lot, and concrete walks have been laid about the grounds.

At Caldwell an addition has been made to the school which will provide better facilities for the rapidly growing high school enrollment. This school serves as a high school center for the districts of Caldwell, Roseland, Essex Fells, North Caldwell and Caldwell Township.

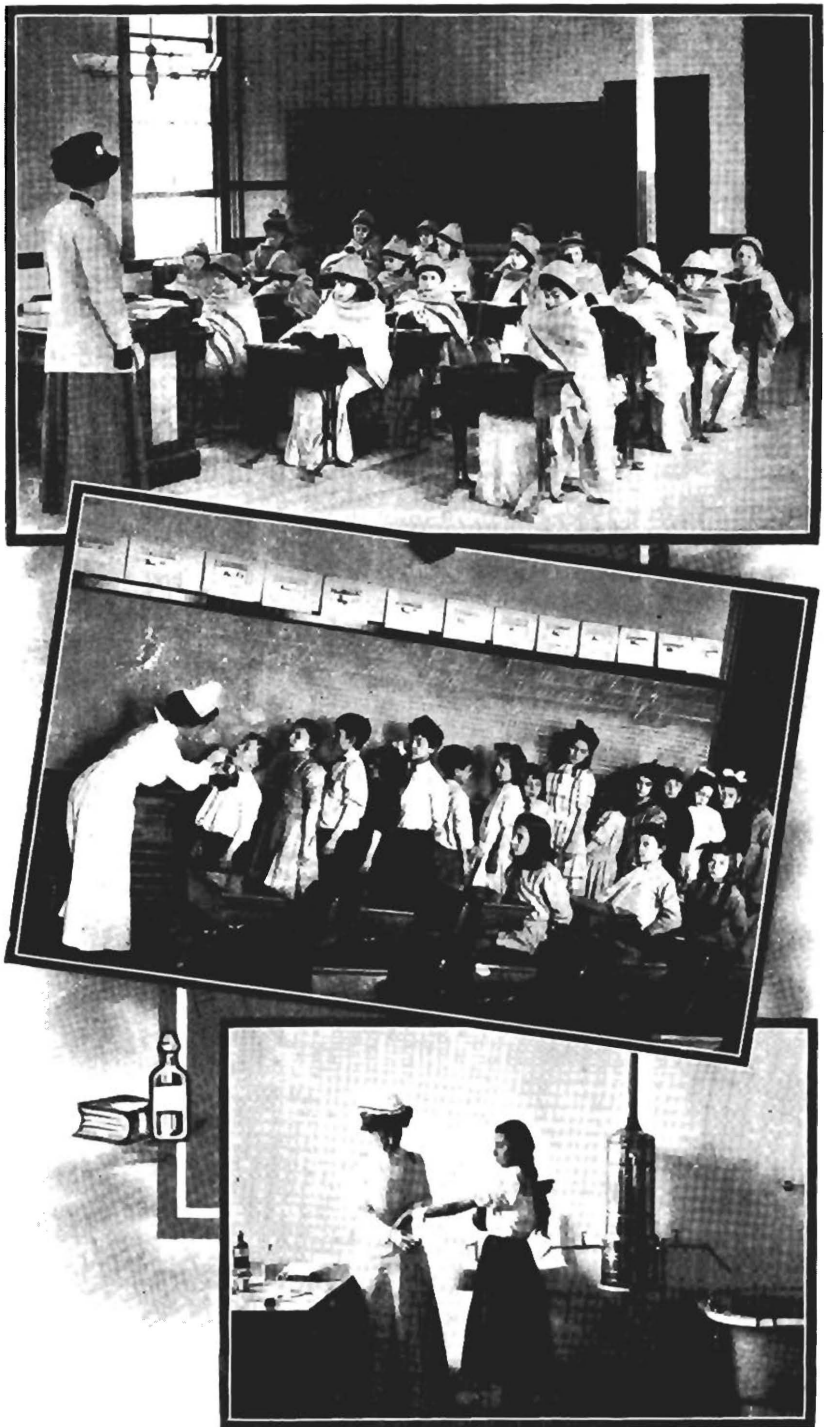
At Cedar Grove certain ventilating and lighting defects have been pointed out and steps have been taken to put the building into proper condition. It is likely, however, that within a few years the rooms now used for the two year high school classes will have to be utilized for lower grade classes. A brick addition to replace the original frame building would be an adequate solution of the problem of providing additional room.

The district of Essex Fells, whose school has been occupying a rented building, has been bonded for a new brick school, which will be ready for use during the coming year.

At Glen Ridge a new building called the Linden Avenue School, was made ready for occupancy in September. The building contains a kindergarten and first to fifth grades, including a commodious assembly room located on the second floor. The construction is of the semi-fire proof type, all halls and stairways being of concrete and steel. The school is located on a lot 260x263 feet, and so placed as to have room for a large playground in the rear.

At Livingston the High School building has been condemned, as was the two room school at Northfield. Attention was also called to the improper lighting and ventilation at the West Livingston School, and this will be remedied by September, 1912. The citizens have purchased a large plot of

You Are Viewing an Archived Copy from the New Jersey State Library



You Are Viewing an Archived Copy from the New Jersey State Library

ground, centrally located for a high school, and next year will see a new building in process of erection.

Millburn has under construction a two room concrete building at White Oak Ridge to replace a frame structure.

At Nutley a nine room concrete building was opened in September, and at once all class rooms were used.

The Hilton School at South Orange, a frame building, has been crowded for several years past. The citizens of South Orange have purchased a nine acre plot upon which it is proposed to erect a building costing about $70,000. When ready for occupancy the old Hilton School will be abandoned.

Verona has made an addition to its brick building, and thus takes the high school from crowded quarters in the third floor of the present structure.

At West Orange the old St. Marks School was condemned. After several district meetings, and much discussion, it was voted to erect a building in the rear of the Gaston Street School. This school is now in process of construction. In both the Mt. Pleasant and St. Cloud Schools the defective lighting and heating have been remedied.

With the changes already made, and those in progress, it is not putting the matter too strongly to say that the school buildings of the county are in excellent condition.

During June the examinations of the Commissioner were given to the pupils of the eighth grade in all schools with the following results:

	Arithmetic.	Writing.	Spelling.	English.	U. S. History.	Geography.
Total number of pupils taking examinations	501	471	489	481	465	422
Total number of pupils who could have taken examinations, but did not	2	4	2	3	1	9
Total	503	475	491	484	466	431
Number of pupils receiving 90 points or more	298	168	365	127	268	213
Number of pupils receiving 70-89 points	185	299	103	321	171	197
Number of pupils receiving 49 points or less	10	1	2	3	3	2

For the county certificate a standing of 75 per cent. in each subject prescribed by the Commissioner was required, and in addition an examination in Physiology and Hygiene. As a result 404 certificates were issued, an increase of 16 over 1911.

Medical inspection has been given the serious attention it deserves, and all districts now have medical inspectors, who are intelligently carrying out the provisions of the law. Special attention has been given to the condition of the teeth of pupils in several districts.

At Glen Ridge a modification of the course of study has been made, which allows the beginning of Latin instruction to come in the eighth grade for those pupils going to college. During the second half of the year Algebra is begun. This experiment will be watched with interest.

It is a pleasure to note that increasing interest is manifested in public prize speaking contests. Some excellent work in these respects has been done in Belleville and Glen Ridge.

At South Orange steps have been taken through the organization of a Preparatory Trade Class, to care for a considerable number of pupils who find especial difficulty with the academic work of the seventh and eighth grades. These pupils are usually over age for their grades, but develop very rapidly in industrial work.

You Are Viewing an Archived Copy from the New Jersey State Library

A special class room and manual training laboratory has been provided for these pupils at the Columbia School. The most practical problems only are handled, and a close connection between academic and manual work maintained.

Such differentiation of work in the upper grammar grades is significant of a growing tendency in school organization to provide more completely for individual differences and attitudes among pupils.

In general the work of the schools of the county has been good. Nothing spectacular has been attempted, but the policy of holding fast to that which has been found successful, and carefully modifying school practice with new knowledge, has been followed.

Each year I find myself under renewed obligations to the Department of Public Instruction for help in bettering school conditions. This help I gratefully acknowledge.

GLOUCESTER COUNTY.

D. T. STEELMAN, SUPERINTENDENT.

I have the honor to submit herewith the annual report of the schools of Gloucester County for the school year ending June 30th, 1912.

September 23d was a very important day in the educational affairs of this county. On this date the cornerstone of the Woodbury High School was laid by the Governor of the State, in the presence of a great throng of people assembled from all parts of the county. Addresses were made on this occasion by Governor Wilson and the Commissioner of Education. Immediately following these exercises the new eight-room building at Westville was dedicated by the Commissioner of Education.

The following amounts have been voted for the erection and improvement of school buildings:

On April 19th the voters of the Borough of Pitman appropriated $13,000 for a four-room addition to the building erected in 1909 at a cost of $25,000. This addition, to be completed in September, is made in conformity with the original plans, and will add much to the appearance of this already fine structure.

Glassboro has appropriated $36,000 for the erection of a new high school building. This was made necessary by the increasing enrollment in this high school centre. During the year pupils have been enrolled in this school from the Borough of Pitman and the townships of Harrison, South Harrison, Elk, Washington and Monroe. This building will contain rooms for manual and industrial training and domestic science.

Deptford Township has voted $3,000 for the purchase of a site and the erection of a building at New Sharon. The pupils residing in this locality have attended the Monongahela school; this building will be abandoned when the new school building is completed.

Logan Township has appropriated $5,000 for remodelling and enlarging the buildings at Bridgeport and Repaupo and the installing of a new heating plant in the Bridgeport school.

Mantua Township has voted an appropriation of $15,000 for the erection of new stone buildings to replace the old wooden structures at Sewell and Barnsboro. A new and more conveniently located site has been secured for the Sewell building, while the Barnsboro building will be erected on the present school site.

Seven hundred dollars has been appropriated in Elk Township for necessary changes in the school at Ferrell.

Other districts have made appropriations for alterations in lighting, the installation of approved heating, and other minor needed changes.

You Are Viewing an Archived Copy from the New Jersey State Library

You Are Viewing an Archived Copy from the New Jersey State Library

The small building at Downstown, in Franklin Township, was burned during the year, and the forty-four pupils enrolled in this school were transported to the graded school at Minotola. Transportation in this case proved unsatisfactory, on the account of the long distance, and the Board of Education decided to purchase a new site. An appropriation of $1,350 has been made for the purpose of erecting a one-room building thereon. This township has also appropriated $600 for necessary improvement to the Lake school building.

Three meetings of the Gloucester County Teachers' Association were held during the year. At two of these meetings, subjects of special interest to members of boards of education were considered at the afternoon sessions. At the October meeting, the speaker was Dr. A. B. Bunn Van Ormer, of the Pennsylvania State College, whose subjects were "Childish Instincts" and the "Greatest Achievement in the History of Education." The speakers at the January meeting were County Superintendent John Enright, whose subject was "What the Teacher Should Be," and Miss Susie G. MacMurray, of the Woodbury High School, who spoke on "A Method of Dealing with Wayward Children." Miss MacMurray's address was an interesting account of the methods of discipline employed in the George Junior Republic. Miss Lillie Cole gave an interesting talk on Penmanship. At the meeting held March 30th, Mrs. Borton, a representative of the New Jersey Congress of Mothers, spoke on "Rural Child Welfare." Superintendent George W. Twitmyer, of Wilmington, Del., gave an address on "The Schools of To-day and What They Are Doing." All of these meetings were largely attended by teachers and school officials.

The Gloucester County Supervising Principals and Principals' Association has held meetings regularly throughout the year. An address by one of the members of the Association and the discussion of the various school problems is the usual program for these meetings. This Association is one of the most helpful of our organizations.

The following is a summary of the results of the eighth grade State examinations held in this county in May:

	Arithmetic.	Writing.	Spelling.	English.	U. S. History.	Geography.
Total number of pupils taking examinations	337	336	336	336	337	337
Total number of pupils who could have taken examinations, but did not	1	1	1	1	1	1
Number of pupils receiving 90 points or more	115	92	221	107	133	132
Number of pupils receiving 70-89 points	128	193	92	174	165	157
Number of pupils receiving 49 points or less	37	2	6	12	9	7

In addition to the above subjects, the eighth grade pupils were required to pass an examination in the following subjects: Physiology, Reading, Drawing, Manual Training and Agriculture. Two hundred and eighty-five pupils were successful in this examination and were awarded grammar school certificates.

The enrollment in the high schools of the county for the year was as follows: Clayton, 55; Glassboro, 113; Paulsboro, 46; Woodbury, 221; twenty-two pupils were enrolled in the Swedesboro school, which is registered for two years of work. The increase in the high school enrollment as compared with last year is 27. Fifty-five pupils were graduated from full four-year high school courses. Thirty-one of these graduates propose to enter higher institutions of learning, and fourteen of this number have expressed their intention of entering normal schools.

Medical inspection was more thorough and systematic this year. Sixteen

You Are Viewing an Archived Copy from the New Jersey State Library

medical inspectors were employed, at an average salary of $229.23. The statistical report on medical inspection shows that the majority of the defects reported are defective vision and hearing, enlarged tonsils and accompanying adenoids. It is gratifying to note that the interest of parents and school officials is being aroused and that the results of medical inspection are much more satisfactory.

Some form of manual and industrial training is now taught in every school of the county, and a few of the districts have school gardens, while in others seeds are distributed to the children through the schools and home gardening is encouraged. An exhibit of the manual and industrial work of the schools was held in the Court House on March 30th. Every grade of work from the lowest primary to and including that of the high school was exhibited and included every form of hand work done in our schools. The exhibit was the subject of much favorable comment on the part of the press and those who were in attendance. An annual exhibit of the manual and industrial work of our schools is held in connection with the Grangers' picnic, which meets at Alcyon Park during the month of August. No prizes are awarded for this work, which is collected and exhibited by a committee of members of the organization, assisted by the teachers of the county. Interest in this exhibit is increasing, and each year it is found necessary to provide additional space for this work.

The following data regarding teachers' salaries in this county may be of interest:

ELEMENTARY SCHOOLS.

Number of teachers (including kindergartners and not including principals) who receive $200 and less	..	
Number who receive $200 to $250	..	
Number who receive 250 to 300	..	
Number who receive 300 to 350	2	
Number who receive 350 to 400	16	
Number who receive 400 to 450	27	
Number who receive 450 to 500	48	
Number who receive 500 to 550	38	
Number who receive 550 to 600	20	
Number who receive 600 to 650	5	
Number who receive 650 to 700	2	
Average salary of Elementary Teachers		$475 40

Salaries of Principals of Elementary Schools:

Number who receive $400 to $500	9	
Number who receive 500 to 600	8	
Number who receive 600 to 700	7	
Number who receive 700 to 800	4	
Number who receive 800 to 900	..	
Number who receive 900 to 1000	..	
Number who receive 1000 to 1100	..	
Number who receive 1100 to 1200	1

Average salary paid to Special Teachers		$383 33

The Monroe Township Board of Education has decided to close the ungraded school at Cecil and transport the pupils to Germania and Williamstown, beginning September next. In this district the pupils of the upper grammar grades attend the central graded school at Williamstown. This Board of Education would further consolidate, but have not the room to accommodate the pupils in the Williamstown school.

I feel that consolidation is greatly needed in Harrison Township. In this district, three small, ungraded schools are maintained which should be abandoned, for the following reasons: The buildings are small and old and unsuitable for school purposes, while the attendance in the nearby graded schools is such that these pupils could easily be accommodated without increasing the number of teachers or overcrowding the graded schools. I trust that the sentiment against consolidation in this district may soon be overcome.

The schools of South Harrison Township could easily be consolidated if an addition were built to the Harrisonville school, so that the pupils now attending the small, ungraded schools at Columbia, Cedar Grove and Oak Grove could be transported to this central school. I have urged this plan, but, as yet, the Board of Education has failed to approve it.

I regret to state that public sentiment is not altogether favorable to consolidation in this county; many parents look with disfavor upon the transportation problem, and are unwilling to have their small children transported during the cold winter months.

The schools of Franklin, Harrison and West Deptford are still greatly in need of supervision.

The Board of Chosen Freeholders of this county has complied with the law regarding an office at the county seat for the use of the County Superintendent of Schools by providing suitably and well furnished rooms in the Court House.

HUDSON COUNTY.

M. H. KINSLEY, SUPERINTENDENT.

In conformity with the requirements of the law I submit herewith the annual report of the schools of Hudson County.

The steady growth of the schools of this county is indicated by the fact that the number of teachers in the schools under my supervision has increased 303 employed in 1910-11, to 325 employed in 1911-12. Harrison, North Bergen and West New York are the districts in which the growth has been most rapid. Though the congestion in Harrison was greatly relieved by the opening of a fourteen room addition to School No. 1, the schools in this district are still much in need of additional accommodations. The Board has under advisement a proposition to increase the school facilities by putting a large addition to School No. 3.

The people of North Bergen voted to bond the township for $97,000 for the purpose of making much needed changes and repairs in some of its buildings

*Teaches Music two hours per week.

You Are Viewing an Archived Copy from the New Jersey State Library

and putting additions to others. The citizens of this township to a unit stand back of the Board of Education in an endeavor to furnish the best school facilities for the pupils of the district.

Near the close of the school year I consulted with the Board of Education in Secaucus and advised them to close No. 3 and distribute the pupils among the other two schools until such time as the roof of that school should be placed in a perfectly safe condition. Just prior to the close of the year arrangements were made with the original contractor whereby the inferior slate which had been placed upon the building should be removed and No. 1 slate substituted therefor. It was further necessary to add stanchions for the support of the roof. I made an examination of the work just prior to the opening of school in September and I am satisfied that the building is now in a perfectly safe condition.

In my last report I called attention to the fact that Weehawken was about to put in Manual Training in School No. 1. I visited this school several times during the year and found the pupils doing excellent work in the newly-added subject. The Board has spared no expense in fitting up a suitable room for bench work for the boys and a well-equipped kitchen for the girls.

West New York also added Manual Training, but on account of the fact of their limited school facilities, the work has not received the same attention as Weehawken was able to give it. West New York, however, has been able to sell bonds to the amount of $125,000 for the erection of School No. 5. Temporary buildings have been erected in connection with School No. 3 and School No. 1, giving a total of twelve additional class rooms. Notwithstanding this fact an increasing number of classes will have to be maintained on part time until the completion of School No. 5.

HUNTERDON COUNTY.

JASON S. HOFFMAN, SUPERINTENDENT.

The statistical report for the school year of 1911-12 is more varied and comprehensive than those of former years.

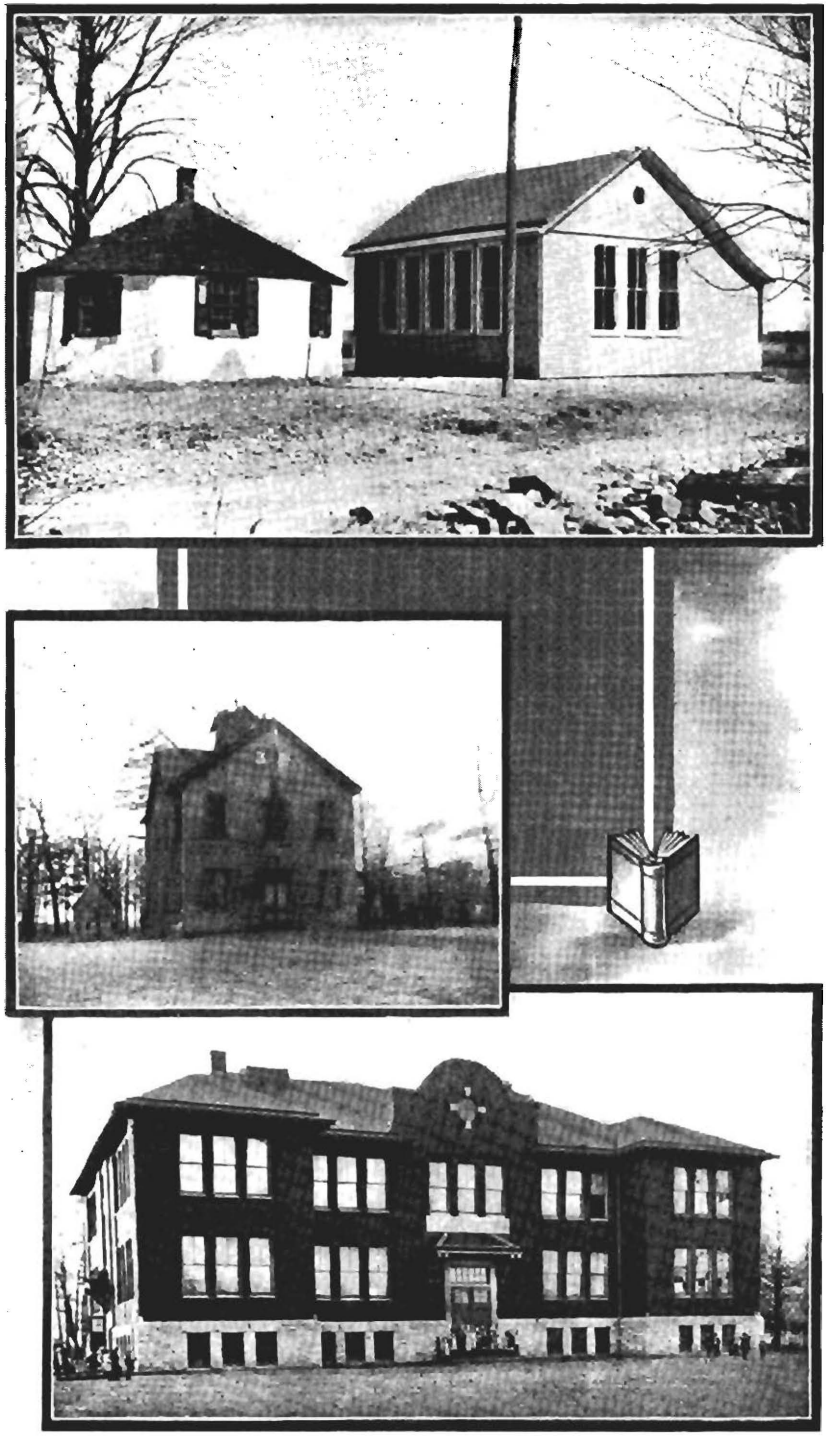
Usually, tables are but a repetition, with additions and variations designed to measure and weigh the results of educational effort, so far as such results may be material.

The efficiency expert has a legitimate and interesting problem in our school system, and through honest inquiry and sympathetic investigation may render invaluable service. Judgments deduced from naked statistics are, however, apt to be misleading, erroneous, and of doubtful value in reaching just conclusions of results that future events alone evaluate. The testing time of the school is always a generation in advance and the investigating spirit of this age speaks louder to us of the efficiency of the school of a generation ago than do the forgotten and musty statistical records of that period.

The accompanying tables reveal only the physical condition surrounding and controlling our school plant and simply reflect the slow, steady development characteristic of an agricultural county.

The borough of Hampton has appropriated $30,000 for the erection of a new building on a beautiful site; High Bridge Borough has appropriated $35,000 for increased school facilities made necessary by its desirability as a high school centre; the city of Lambertville has appropriated $75,000 for a new school building; the township of Franklin has voted $2,000 for a new one-room building in the village of Quakertown; the township of Union has abandoned three small one-room schools and voted $2,000 for a new building to be erected in the village of Jutland; the township of Bethlehem has abandoned a small one-room school known as Charlestown and contracted to transport the children to Hampton borough; the borough of Bloomsbury has remodelled its four-room brick building by reconstructing the stairway,

You Are Viewing an Archived Copy from the New Jersey State Library



You Are Viewing an Archived Copy from the New Jersey State Library

supplying additional light, reseating and painting the interior. Efforts were made in Readington township to consolidate three one-room and two two-room schools in the vicinity of Whitehouse Station, the proposition failed to receive the approval of the voters. The voters of Lebanon township were called together three times to vote on consolidation with Glen Gardner and Califon as centres; these propositions were also defeated. Many of our districts have placed new heating and ventilating stoves in the one-room buildings and are planning to correct defective lighting and seating.

You will note from the above statement that from the aspect of improved school facilities the year has been exceedingly fruitful.

The school board meetings were largely attended and full of interest. Reports of consistent efforts on the part of boards to make effective the compulsory section of the school law were very gratifying, and the complete success of the effort in the town of Clinton, where every child within the compulsory ages was reported in school, furnished a stimulating object lesson, and I am pleased to report greater accomplishment along this line than in any previous year.

The annual test given in June to eighth grade pupils by your department supplemented by questions in Civics, Drawing, Reading, Physiology and Hygiene resulted in a large increase in successful applicants for high school entrance. Seventy-five per cent. of the candidates passed a successful examination. This is a twenty-five per cent. increase over any former year. The tests were held in the high school centres under practically uniform conditions conducted by the high school principals. With this standard of judgment the year's work has proved most efficient and the rural school has once again established its right to exist in the school unit and receive only its proportionate share of a criticism that applies with equal force upon all departments of school life.

In our eagerness to criticize the schools and to find an object for our attack, there seems to be a magic charm in the very title "RURAL SCHOOL PROBLEM" that attracts the educational theorist even though he may have no first hand knowledge or intimate experience with this type of school. Have we not overworked this "problem," and should we not direct our attention to the school problem without its distinguishing adjective and seek solutions that are general and apply with equal force to the urban and highly organized schools as well as to the rural schools?

We are in great danger of placing the demand of the elementary school too high, and this applies equally as well to the city as to the country school. It has been the motive of the elementary school to give the child a familiarity with the English branches of study, viz: reading, spelling, writing, number, some knowledge of the history of our country, of local and general geography, a general understanding of civic life, knowledge of the functions and care of his own body, and a workable use of our own language. Every known test and comparison justify the statement that this is better done than ever before in the history of the common school. It is with equal frankness admitted that our schools are not as good as they should be,—the largeness of the problem of life as it looms up before our boys and girls, its increasing complexity, its mechanical and scientific trend, and the strain for existence amid stronger competition have so increased the conditions that we are losing sight of the most important element in the elementary school—THE IMMATURITY OF THE CHILD. It behooves us to remember that he leaves the elementary school STILL A CHILD. How much shall we demand and expect of him when he still lacks six or more years of being mature? Does not our State recognize the high school as a component part of that great educational matter, so often referred to, and must we not look to the high school for that greater efficiency that is made possible with maturing years?

I regret that I have no medium to transmit to you the HUMAN SPIRIT and the PERSONAL INFLUENCE of a body of consecrated men and women who with earnest effort and unselfish zeal are rendering devoted service to the vital life of the next generation of Hunterdon county's citizenship.

You Are Viewing an Archived Copy from the New Jersey State Library

MERCER COUNTY.

J. M. ARNOLD, SUPERINTENDENT.

I herewith submit my annual report of the schools of Mercer County for the year ending June 30th, 1912.

In a general way there has been a gradual and substantial forward movement in the different departments of school work. The people are interested, the Boards of Education earnest in their endeavors and the teachers awake to the needs of the schools. With these forces acting in harmonious accord the future is bright with promise.

The following summary of statistics will indicate some measure of growth:

	1910-11.	1911-12.
Number of pupils enrolled	5,357	5,535
Days attendance	642,303	684,142
Average daily attendance	3,437	3,633
Average days per pupil	120	124
Cases of tardiness	6,219	6,867
Pupils not absent or tardy	154	187
Number of days transported	33,750	40,686
Paid for transportation within the district	$3,518.17	$4,904.07
Paid for transportation without the district	3,450.12	3,735.21
Paid for tuition in other districts	7,467.00	8,645.00
Number of teachers and supervisors	151	163
Number of Normal graduates	81	89
Number of college graduates	12	14
Number holding State certificates	89	113
Number holding county certificates	62	50
Amount expended for teachers' salaries	$84,609.37	$94,910.55
Amount expended for current expenses	135,613.70	156,854.36
District tax raised for current expenses	38,620.00	43,660.00

As a mark of material progress during the year, we can point to erection of three new buildings and to improvemnts in many of the old ones. In the erection of school buildings, the greater regard now paid to the architectural design and beauty, as well as to the comfort and healthfulness of pupils, is especially noticeable. Where formerly the architect was enjoined to adhere strictly to the line of immediate utility, to-day his taste and skill are called into play in the direction of attractiveness, comfort and convenience.

A beatuiful, commodious and well-appointed building was erected in Princeton at a cost, including the site, of about $112,000. This building is used for primary and grammar grades, and in its arrangement and equipment has all the latest features found in a modern school building, including a gymnasium with a running track, shower baths, etc. It was so planned that it is practically a three-story building. The first floor, or basement, is given over to lunch room, stock rooms, locker rooms and to the Domestic Science Department, a new feature to be introduced at the beginning of the school year. This building was ready for occupancy in May, and with its completion, adequate and comfortable school facilities for all the children of the district were afforded for the first time in several years. In the Witherspoon school in this borough, a room will also be fitted up for sewing and cooking.

The rapidly increasing school population in Hamilton Township necessitated an expansion of school accommodations. This led to the erection of two four-room buildings. The one at Mercerville replaces a one-room building, while the other, erected near White Horse, will relieve the crowded conditions of the Rowan and Maple Shade schools. Both buildings have spacious, well-lighted and well-equipped rooms and an excellent system of heating and ventilating. In this district, additional rooms were opened in the Farmingdale, Klockner and Rowan schools.

You Are Viewing an Archived Copy from the New Jersey State Library

The enlarged building at Lawrenceville was completed in October and an additional room opened. In Lawrence Township, another building is necessary to relieve the Slackwood school, and to provide accommodation for the children of Eldridge Park and vicinity. A two-room building is now in course of erection. In Ewing Township, a room was opened in Prospects Heights school. In the districts of Hopewell, which comprises Hopewell Township and the boroughs of Hopewell and Pennington, two rooms were opened in the grammar school at Hopewell and one at Pennington. Cloak rooms were added to several one-room buildings. New furniture and the Waterbury system of heating and ventilating were placed in many buildings throughout the county. A new High School building will be erected at Hightstown, where increased school facilities have long since been needed.

The course of study for the Hopewell High School was lengthened to four years and placed upon the approved list. The first class to complete the four-year course was graduated in June. This school will be greatly strengthened during the coming year by an increase in the teaching force and an enlarged Physical and Chemical Laboratory.

More attention is given generally to the improvement of school grounds and surroundings, and this is as it should be. From an educational viewpoint, it pays to make the school room and the school surroundings as pleasant and attractive as we can make them. If a little time is given each year, it will not be long before the unsightly places in many of our school yards will be filled with beautiful shrubbery. Arbor Day is devoted to this end, and in addition to the exercises in the school room, the day is given over very largely to the planting of trees and flowers and to the beautifying of the school grounds.

There is a growing demand for more and better instruction in Agriculture. The people are coming to realize that this subject should be added to the curriculum of the rural schools, even if some other subject or subjects must give way. Not only is more attention given to Agriculture, but a greater interest is manifested in school and home gardens. The flowers and vegetables from many of these home gardens are entered in competition at the Inter-State Fair.

In order to stimulate greater interest and activity in practical agriculture, as well as to vitalize the education of the country boys and girls, Corn Growing contests have been organized for the boys, and, under the auspices of the New Jersey Congress of Mothers, Home Culture Contests for the girls. In each district, in November, an exhibition of the work of the pupils will be held and prizes awarded to the successful contestants.

Through Mr. T. D. Sensor, of the Department of Public Instruction, a squash growing contest was entered into by the pupils of the eighth grade of the Trenton Junction school. This led to a corn growing contest among the pupils in the same school. Prizes were offered by Mr. Sensor, ex-Governor Stokes, Mr. M. B. Ribsam, the Supervising Principal, and the County Superintendent. The exhibit held in connection with the Thanksgiving Day exercises attracted much attention and was most successful.

Industrial work, especially in the rural schools, is not progressing as rapidly as we might desire. This is due to the fact that the teachers, as a rule, are not prepared to take up and carry on this work to any extent. By those teachers who have availed themselves of the opportunities offered at the Cape May Summer School, we find some forms of handwork enthusiastically carried on. A few who have not received any special instruction, but who are interested and have the desire to do, are making considerable progress. In the district of Hopewell, every school had an exhibit of handwork for "Patrons' Day," and every pupil contributed to this exhibit. The industrial work of many of these rural schools was especially good, and that done in the larger graded schools at Hopewell and Pennington reached a high degree of merit.

In Hamilton, the teachers again organized a class and received instruction from Miss S. Ida Fairbrothers, instructor in Manual Training in the Trenton schools. This instruction was apparent in the handwork done in many of the schools of this district. Special teachers for Manual Training are

You Are Viewing an Archived Copy from the New Jersey State Library

employed in the Princeton schools, and instruction in Drawing is given by special teachers in the schools of Hamilton Township and in the Hopewell, Pennington and Hightstown schools.

The closing of the one-room school and the transporting of pupils to a graded school is now looked upon with more favor by the patrons than it was a few years ago, although in some sections the subject still meets with much opposition when proposed. Where given a trial, however, the advantages are at once apparent. At present, nine wagons are required to transport the pupils in those districts where schools have been closed.

The law as amended at the last session of the Legislature, returning to the district from the State funds seventy-five per cent. of the amount so expended, will not only tend to bring about the closing of more of our one-room schools, but will do much in the way of providing better transportation facilities generally. In some districts its effect has already been felt, in that boards are providing better wagons, extending the routes and making them more convenient for the pupils. The county offers excellent opportunities for the centralization of schools, and it would seem that wherever possible the one-room school should be closed and the pupils transported to a convenient graded school. Where this is done, the attendance is better and the progress of the pupils necessarily much more satisfactory. A supervising principal in his report states: "The attendance of transported pupils is far more regular than that of the non-transported. The attendance on extremely bad days was marked carefully this year and it was found that only 23 to 30 per cent. of the non-transported pupils attended in bad weather, while 60 to 80 per cent. of those transported reached school on the same days. For the year the percentage of attendance in the one-room schools was only 74 per cent., while that of the Windsor graded school, to which pupils are transported, was 82 per cent., although in the latter a case of scarlet fever interferred with the attendance." Another supervisor on the same subject says: "The closing of the rural schools and the transporting of the pupils has been a great success, and, with very few exceptions, entirely satisfactory to the patrons. Increased attendance and improvement in the work of the pupils is very noticeable."

Five districts transported pupils of the eighth grade to convenient graded schools within the district. Tuition charges were paid for 248 pupils in the elementary grades. This is the normal number attending school in districts other than those in which they reside. Princeton Township alone had 119 attending outside the district, or more than a total enrollment of the three schools of the township. This is due to the fact that a large majority of these pupils live on the outskirts of the borough of Princeton and remote from the schools of the district.

The tests sent out from the Department of Public Instruction together with the February tests sent out from this office and the class record were made the basis of promotion from the eighth grade to High School. Each year an increasing number of pupils complete the grammar school course and enter High School. The fact that these pupils, for the most part trained in the rural schools, hold their own with those who have passed through the graded schools, speaks well for the one-room country school. The usual county tests were conducted in February and June in all the grades above the second.

For the first time, closing exercises for the schools of the district were held in the townships of Lawrence, Washington and West Windsor. Through the courtesy of the Board of Trustees of the Lawrenceville School, the exercises for Lawrence Township were held in the Auditorium of Memorial Hall. A most pleasing program was rendered and the large attendance evidenced the interest of the patrons and the public generally. No less pleasing and well attended were the exercises of the Washington Township schools held in the Odd Fellows Hall at Windsor, and in the chapel of the Presbyterian Church at Dutch Neck for West Windsor. These occasions offer an excellent opportunity to bring together those interested in the educational progress of the district and to call attention to those things that stand for progress and

You Are Viewing an Archived Copy from the New Jersey State Library

improvement. The spirit manifested at these gatherings shows that the people are concerned in the welfare of the schools of the county.

"Patrons' Day" was observed in several districts. For this day the rooms are tastefully decorated with the work of the pupils and a special invitation extended to the fathers and mothers to visit the schools.

Medical inspectors are employed in all the districts of the county, and, while the pupils are examined and the required visits of inspection made, yet I am of the opinion that we are not accomplishing all that is intended.

In every school are found pupils who suffer from defective hearing, adenoids, enlarged tonsils, defective teeth, or other structural disabilities. As long as they suffer from these physical defects they are certain to be below par in their school work. These physical deficiencies are hindrances of the most serious sort, as well as the beginnings of the more serious maladies of later life, and as they reveal themselves only to trained eyes, it follows that the school department should use its best efforts to hunt them down, and, so far as lies in its power, remove them. A report should be made to the parents of every defective child, with the recommendation that his case be taken up with the family physician or a specialist. The health of school children is a primary concern of the public schools. The crowding together in school rooms, the school desks, the school confinement, the school occupations and the school air create conditions favorable to ill health and to the communication of disease. The Medical Inspector can deal with the more obvious forms of disease, but he cannot prevent the physical deterioration which school conditions, unless carefully watched, are prone to bring about. The ever present health officer must be the teacher. She alone can keep the air of the school room pure. She alone can lead her pupils in frequent breathing exercises. She can regulate their posture in sitting, standing and walking; and in her daily control over the details of their lives she has it in her power to influence their health more than any physician could.

Our educational meetings were all well attended. County Institute was held in the Auditorium of the Trenton High School, October 30th and 31st, and was in every way both helpful and inspiring. The instructors were Dr. Seely of the Trenton Normal School, Dr. Will S. Monroe, of the Montclair Normal, Mr. A. W. Dunn, Secretary Public Educational Association, Dr. Charles H. Judd, of Chicago University, Dr. Will D. Howe, of Indiana University, and Miss Annie E. Moore, of the Teachers' College, Columbia University.

Meetings of the Teachers' Club were held the last Saturday of each month, and the usual meetings of the School Board Association.

Each year an increasing number of teachers attend summer schools to fit themselves more fully for their work. These, out of an income of $500 or less, spend one-tenth or more of their annual salary for this purpose. In what other profession is this proportion of the annual income so expended? "That teachers do so," says Dr. Schaeffer, "speaks volumes for their zeal and earnestness." Should not Boards of Education recognize this zeal and earnestness in fixing the salary schedules of teachers?

As a whole, our teachers are wide awake to the new school movement and to the great demand of the time for another kind of a school—"a school that will give more originality, more practical training, more freedom and self-activity. A school that will teach children how to live, to conserve their energies, to have healthy bodies and keen minds, and that will best arm them for the battle of life."

You Are Viewing an Archived Copy from the New Jersey State Library

MIDDLESEX COUNTY.

H. Brewster Willis, County Superintendent.

In accordance with your request, I herewith submit the following as a report of the public schools of this county, for the year ending June 30, 1912:

NON-ATTENDANCE.

For the past two years we have been studying the causes of non-attendance and the first complete yearly record was filed on June 30, 1912.

These records were secured by monthly reports of non-attendance filed by the Supervising Principals, concerning pupils within the compulsory attendance age, in boroughs and townships, and excluding pupils within said age in cities and those attending parochial and private schools.

SCHOOL RECORDS.

School census, 1911-12, compulsory age	9,357 pupils
Enrollment, 1911-12	9,309 pupils
Percentage of enrollment on school census	.98 per sent.
Possible number of days of attendance	1,477,976 days
Total number of days of absence	137,764 days
Number absent days per pupil, on enrollment, excluding days lost by sickness and quarantine, during the year	10 days

CLASSIFICATION OF CAUSES OF NON-ATTENDANCE.

Number of days lost per pupil, sickness	5.44 days
Number of days lost, per pupil, quarantine	.30 days
Number of days lost, per pupil, religious holidays	.21 days
Number of days lost, per pupil, bad weather	1.83 days
Number of days lost, per pupil, home work	3.47 days
Number of days lost, per pupil, want of proper shoes and clothing	.29 days
Number of days lost, per pupil, paid work	.17 days
Number of days lost, per pupil, truancy and suspension	.05 days
Number of days lost, per pupil, pleasure	.61 days
Number of days lost, per pupil, all other causes	2.43 days
Number of absent days, per pupil, on enrollment during school year, for all causes, including sickness, religious holidays and quarantine	14.80 days

The further fact also appears that pupils between the ages of 5 and 7, not included in the above statement, lost 21.23 days, per pupil, during the year, showing conclusively that these pupils, too young to be effected by the compulsory law, are the largest factors in the problem of non-attendance.

The above conclusions are our first attempts at yearly results and we hope to do better work on this problem of non-attendance during the present year.

COUNTY SCHOOL BOARD ASSOCIATION.

The County School Board Association has discussed, during the year, the propositions of district valuation, district school tax rate, condition of school buildings, manual training and heard addresses delivered by Dr. Calvin N. Kendall, State Commissioner of Education, Francis H. Green, West Chester Normal School, Superintendents Shull, Eckels, Willis and others.

The February meeting, morning session, was held in the auditorium and the afternoon session in the gymnasium of the Woodbridge High School, with an attendance of over 200 members.

You Are Viewing an Archived Copy from the New Jersey State Library

SUPERVISING PRINCIPALS' ASSOCIATION.

The meetings of this Association have been regularly maintained. We have heard addresses by George A. Mirick, Assistant Commissioner of Education, Prof. K. C. Davis, Rutgers College, Supt. E. R. Johnstone, Vineland, T. D. Sensor, State Department of Education, Prof. Prince, New York, Prof. Hughes and others.

The principal subjects under discussion have been retardation of pupils, interest in reading, uniform spelling lists, monthly geography course, school gardens, girls' clubs in rural schools, elimination of certain phases of work in elementary grades, combination of the 7th and 8th years in geography and history, using the topical method.

After a considerable discussion, upon a report of the committee, the following flag salute was unanimously adopted to be used in the schools of Middlesex County:

We salute the flag,
The stars and stripes,
Guardian of peace and freedom,
Emblem of truth and purity,
Friend of the oppressed.

TEACHERS' INSTITUTE.

The Institute was held in the auditorium of the Metuchen High School. Addresses were made by Dr. Calvin N. Kendall, State Commissioner of Education, Dr. J. C. Van Dyke, member State Board of Education, Dr. S. Parkes Cadman, Brooklyn, Dr. E. R. Johnstone, Vineland, Dr. Charles H. Judd, University of Chicago, Dr. Will D. Howe, Indiana University, Miss Patty Smith Hill, Columbia University.

At the close of the afternoon session a reception was given to the State Commissioner of Education.

TEACHERS' PROFESSIONAL MEETINGS.

The monthly meetings of the teachers have been maintained in every district with the usual interest. In addition to discussions of school room work and prepared papers on assigned subjects, the following works have been studied and discussed during the year under the supervision of the Supervising Principal with a most excellent attendance:

Social Phases of Education.....Dutton
Talks on Psychology and Life's Ideals.....James
General Methods .....McMurry
Pedagogy .....Hewett
Psychology .....James
Elementary Pedagogy .....Seeley
Method of Teaching.....Swett
Nature Study .....Wilson
Teaching a District School.....Dinsmore
Psychology and the Teacher.....Munsterberg
Art of Teaching.....White
School Management .....Seeley
Chips from a Teachers' Workshop.....Klemm
Principles of Teaching.....Thorndike
Mind in the Making.....Swift
Hints and Helps.....Griffin
Laggards in our Schools.....Ayres
Principles of Secondary Education.....DeGarmo
Educational Aims and Values.....Hanus

You Are Viewing an Archived Copy from the New Jersey State Library

Principles of Agriculture.....Goff and Mayne
Manual Training .....Woodward
Bench Work in Wood.....Gross
Jukes Edwards .....Winship
Sewing Course .....Woolman

The above works were sent out from the Middlesex County Pedagogical Library.

PEDAGOGICAL LIBRARY.

The library has been maintained with a regular librarian in attendance during the school year, and many new works have been added on Moral Education, Agriculture, Manual Training and Domestic Science.

We have also added the following works on School Administration, which we are inducing our School Board men to read:

School Hygiene .....Newsholme
Ventilation and Warming of Schools.....Morrison
School Recreation and Amusements.....Mann
School Interests and Duties.....King
Teachers and Parents.....Wilson
Medical Inspection of Schools.....Gulick and Ayres
Administration of Public Education.....Dutten and Snedden
Business in Education.....Vanderlip
Public Education in Germany and United States.....Klemm
Laggards in our Schools.....Gulick and Ayres

COMPARISON OF 1911-12.

Comparing results of 1911 with those of 1912, we find a general increase and advance all along the line. The enrollment of pupils, number of teachers, teachers' salaries, janitors' salaries, janitor service, manual training appropriation, transportation, tuition, attendance, medical inspection, salaries of medical inspectors and salaries of truant officers, are all moving in the right direction.

EIGHTH YEAR EFFICIENCY TEST.

The following is the result of the State test in the eighth year work of the public schools of this county, held in May last, under the new State law:

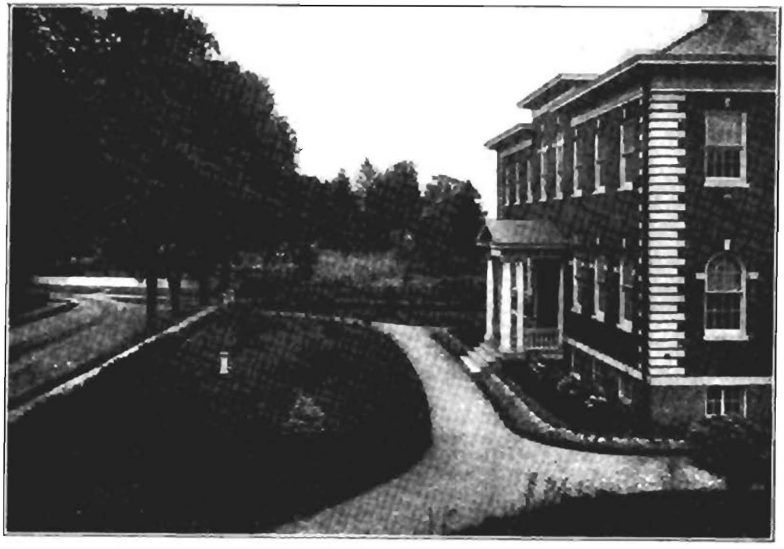
	Arithmetic.	Writing.	Spelling.	English.	History.	Geography.
Total number of pupils taking examinations	348	346	346	347	347	348
Total number of pupils who did not take the examination	1	2	2	1	1	1
Number of pupils receiving 90 points of success or more	89	94	213	61	135	85
Number of pupils receiving 70-80 points of success or more	177	203	110	209	158	175
Number of pupils receiving 49 points of success or less	27	5	2	25	16	42

OUR NEEDS.

First. Shortening the elementary course.

Second. Moral attention to agriculture, manual training and domestic science.

You Are Viewing an Archived Copy from the New Jersey State Library



High School Building at Freehold, Monmouth Co., (front view).

Rear view of High School grounds, Freehold, Monmouth Co.

You Are Viewing an Archived Copy from the New Jersey State Library

Third. More trained teachers with attractive personality.
Fourth. Less of book and more of teacher.
Fifth. Repeal of so much of Chapter 259, Session Laws of 1912, which limits the issuing of school bonds to three per centum of the taxable valuation of the real and personal property in boroughs and townships.

MONMOUTH COUNTY.

JOHN ENRIGHT, SUPERINTENDENT.

I herewith submit my annual report for the school year ending June 30th, 1912.

The statistical report for the year, which is forwarded with this, is a fuller report of all phases of school work than has ever been prepared before. It is quite possible to find almost any isolated fact in regard to the operation of the schools from these statistics. In those things which are spoken of in known units which can be compared with former years there is a very noticeable improvement. The one thing that attracts attention to an outsider is the physical feature of a school exhibit of any kind. Thinking over the progress that has been made in those things which can be seen, I know of nothing more effective than the improvement that is constantly being made in school buildings—not only in the erection of new buildings but in the remodeling of older buildings.

In my last report I mentioned the necessity of a new building at Keansburg in Raritan Township, where there has been a two-room building. This building has been replaced by a new brick, six-room building with an assembly room. The building will cost about $22,000. It is expected to be ready for the opening of the new school year. A very complete two-room, new brick building has been erected in Freehold townshsip. It is to take the place of the old building occupied for many years by the colored school. The building cost $5,000 and fulfills the requirements in regard to light and ventilation.

A handsome four-room building has been completed at Oceanport, Eatontown Township, at a cost of about $15,000. The Highlands district remodeled and extended its school, making four more class rooms and placing in the building sanitary closets. Keyport has ordered a thorough remodeling of its grammar and high school, at a cost of $40,000. This was done at the request of the State authorities who had inspected the building and found it wanting in proper school facilities. In Howell Township a neat one-room building has been erected at a cost of about $2,000. Also moneys for a one-room building in Marlboro Township were ordered. This building will be completed during the summer.

In Middletown Township a large and very complete building for grammar and High School purposes has been finished at a cost of some $65,000. I referred to this munificent provision in my last report. The building in all its appointments is one of the very best in Monmouth County. It contains a physical laboratory, a chemical laboratory, a manual training room, a gymnasium, and one of the handsomest auditoriums that we have in the whole county. The building has been provided for a rural population. It is situated in the village of Leonardo, which is the geographical center of the township, although not the center of population. About two-thirds of the children are provided with transportation to this school. The building is situated in the center of a plot of two acres of ground, donated by Mr. M. A. Rice, President of the Board of Education. Nearby is an athletic field of several acres which was donated by Mr. Lewis A. Thompson, who is also a member of the Board. In this school there will be worked out so far as

You Are Viewing an Archived Copy from the New Jersey State Library

possible the activities in this township with a strong trend given to the industrial side of things.

We have a few places still left which need a remodeling of their present buildings or new ones. This is especially true of Manasquan where better school facilities are required—in fact a new building. The school property in all the districts has been looked after very carefully, and a good deal of repairing and extension work has been done.

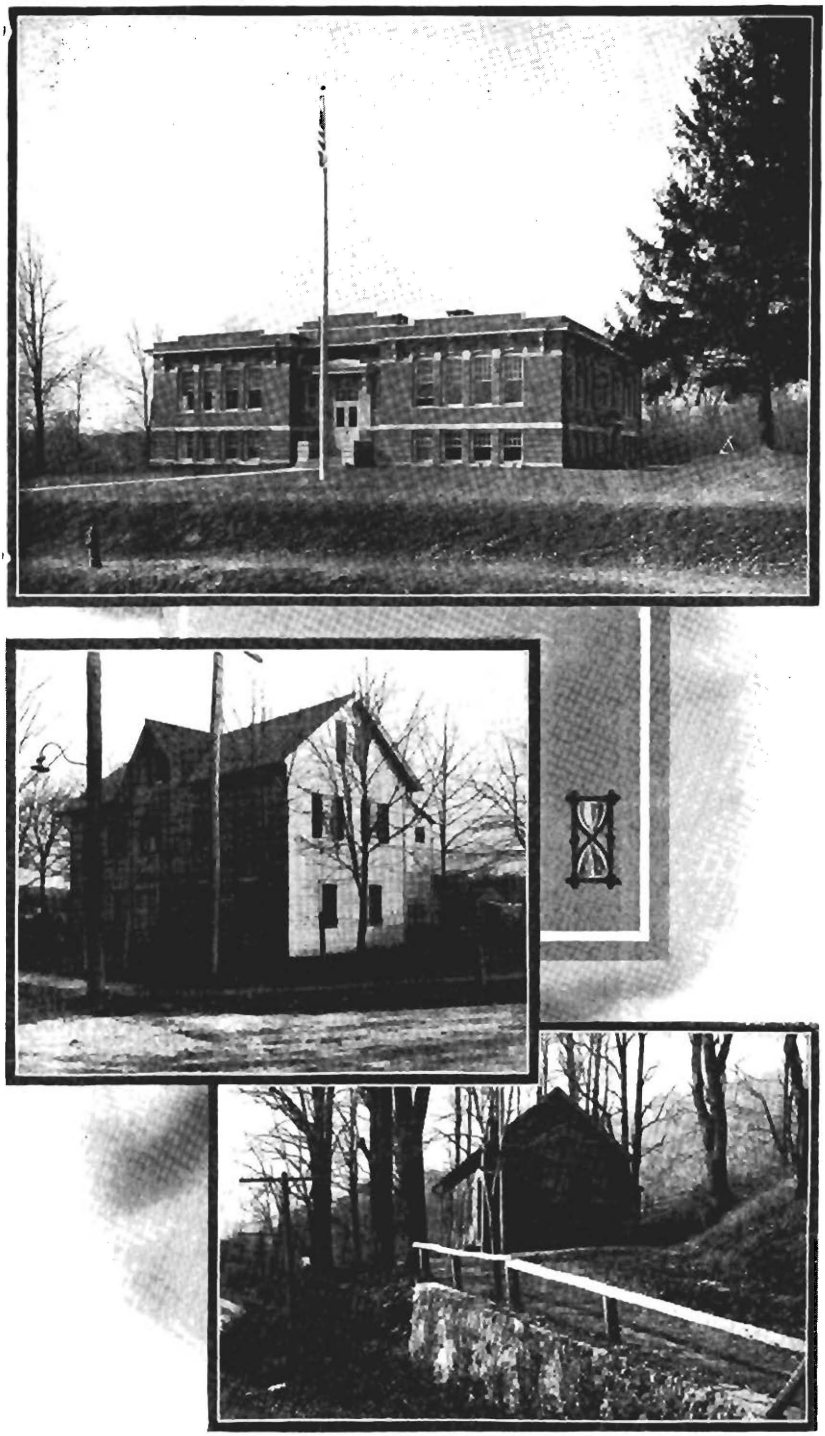
It is all very well and most important to have these physical requirements and facilities of the very best, but our zeal and interest should not stop after providing fine buildings. More important than brick and mortar is the live teacher who shall direct the education of the children. While improvement has been made we think in this line yet there is plenty of room for more improvement. The number of teachers in the county has increased from 559 at the last report, to 580. The number of pupils in all schools of Monmouth County has increased from 19,990 to 20,694, or an increase of 704 children. There has been provided a teacher for every 34 children of increase. The number attending the different grades are kindergarten 921, primary 11,216 grammar 6,852, and High School 1,705. The noticeable thing about these figures is that the greatest percentage of increase has been in the grammar and high school grades. There was an increase in the primary and kindergarten grades of only 243, whereas there has been an increase in the grammar grades of 354, and an increase in the High School of 107. This shows that there is a growing persistency in remaining in school for the higher grades. It also shows that the kind of education which the people are demanding is being furnished at least to a degree. I believe that we are beginning to see that the greatest force in the line of compulsory education is to make the school more and more what the people are demanding. In the total days attendance there has been 94,000 days increase. This is an increase in the percentage of attendance of nearly one per cent. There remains still very much room for improvement because the percentage of days attendance on the possible days attendance for Monmouth County is only .852. The poorest attendance is in the rural schools.

There are in this county 63 single room schools and 9 two-room schools. These schools might be classed as rural schools. The number of children in each school is as a rule not large. Discipline is easy. They are often taught by beginners. Sometimes the energy, zeal and ambition of the young teacher makes up for the lack of experience. Especially is this true if, as we sometimes find, there is a tendency toward the great qualities of a true teacher—spirituality, humanity and love. Besides the advantage of smaller numbers there is also the advantage of freedom in promotion from grade to grade without the hindrance of examinations. The teacher knows the individuals better because she knows the whole better than in the highly graded school where the teacher knows only her grade. The weakness of the single room school lies in the smallness of the class. The inspiration that comes from the response of numbers, from competition, from emulation, is wanting. It is hardly compensated for in the nearness to nature or in the varied activities of life in the rural community. The best thing that can be done for these schools is, as it seems to me, to provide teachers who like the independence that such schools offer and who love the zest that initiative stimulates and who have a love for the work.

The examinations set by the State for the eighth grade were given in all the schools outside the cities of Long Branch and Asbury Park in May, and were acepted in lieu of the regular examinations. They were held for all the schools at the usual places for holding grammar school examinations. Six hundred and ninety-six tried these examinations. Out of this number 111 failed to reach the standard hitherto set for entrance to High School. This was a smaller percentage of failures than ever before. There were not so many subjects required which may have something to do with the better showing.

A County Institute of one day was held at Freehold in October. This Institute was regarded as very interesting. Commissioner Kendall opened

You Are Viewing an Archived Copy from the New Jersey State Library



New South Street School, Morris Township, Morris Co., at the top, takes the

You Are Viewing an Archived Copy from the New Jersey State Library

the Institute and was followed by an able corps of instructors. There was a division made of the Institute. Those in the higher grades and High School ocupied the High School building and the lower grades occupied the Grammar School Building.

The Monmouth County Teachers' Association held a successful meeting at Matawan in May. This Association is a voluntary one. Nevertheless its meetings are well attended. The speakers at this meeting were Assistant Commissioners A. B. Meredith and George Mirick, County Superintendent John Enright and Elizabeth A. Allen, of Hoboken.

Mr. Melvin A. Rice, of the State Board of Education, attended this meeting and spoke an encouraging word to the teachers.

A County School Board meeting was held in April at Freehold. This meeting was one of the largest school board meetings ever held in this county. Commissioner of Education Calvin N. Kendall, addressed the meeting. Several practical questions were discussed by the members. The main subject of interest was a school of detention. A committee was appointed to make investigation and to report at some future meeting on the advisability of providing a school of detention for Monmouth County. This committee is working on the subject at the present time.

In a general survey of the work of the schools in this county during the year I can report that there has been a growing tendency of unification of all school interests. The school districts are not entirely separate forces unrelated with other school districts. There are nine four-year High Schools which are regarded as the common possession of all the school districts of the county. These High Schools are so situated as to make them easy of access to all children desiring a High School education. There being over 1,700 boys and girls in these schools, testifies to the popularity of them. The total population of Monmouth County is a little less than 100,000. It is pretty safe to assert that no city with a population of 100,000 inhabitants has in its High Schools 1,700 boys and girls. The problem to be met is to make the High School course of study such that it will have a direct application to the real activities of life. This I think is the aim of Boards of Education. It goes without saying that it is a desirable thing to provide.

MORRIS COUNTY.

J. Howard Hulsart, Superintendent.

In accordance with custom the following report of the condition and progress of the schools of Morris County is respectfully submitted.

In most important particulars the statistics and records of the schools of this county show definite improvement during the past school year, and in no particular do they indicate any decided retrogression. The following table of statistics is indicative of the general progress of the schools.

Number of pupils enrolled	13,012	2.1% increase.
Number of pupils in High School	1,163	10.7% "
Possible days attendance	2,066,193	3.3% "
Days present	1,761,430	3.6% "
Times tardy	16,699	4.9% "
Number neither absent nor tardy	584	8.1% "
Number of teachers and supervisors	387	1.8% "
Number holding State certificates	227	18.8% "
Number Normal graduates	181	16.0% "
Number college graduates	51	Same as last year
Average annual salary—Males, exclusive supervisors and principals not teaching	$778.96	Not estimated separately last year.
Same for females	$610.74	2.4% increase.

You Are Viewing an Archived Copy from the New Jersey State Library

The new South Street School, Morris Townshsip, has been completed, and with the reopening of the schools the Mt. Kimble Avenue and the Union Hill schools will be abandoned and the pupils transported to the larger schools of this district. The Whippany School, Hanover Townshsip, and the addition to the Maple Avenue School, Morristown, will be completed and ready for ocupancy early in the coming school year. The two-room school at Hanover Neck, Hanover Township, and the four-room addition to the Netcong Borough School have been begun, and it is expected that they will be occupied about January 1st. During the summer several buildings are being remodeled as to light and ventilation—as at Morristown, Dover, Mendham and Ledgewood. Nearly all the rooms of the Pequannock Township school have been reseated with new single desks. About twenty-five ventilating stoves have been ordered for various small schools of the county, and their installation promised in time for use during the coming year.

Medical inspectors were appointed for every district of the county, and in nearly all districts the physical examination of the pupils and other duties pertaining to the position received faithful attention. In my visitations I notice in many schools a pronounced improvement in cleanliness and better and more intelligent attention to health.

The teaching force of the county is quite thoroughly organized. Of the entire number of teachers of the county only fifteen have been without a Principal, and only thirty without the supervision of a Supervising Principal, or of a Principal giving his whole time to supervision. The general work of the school is improving in many particulars, and with the gradual increase in the number of trained teachers it is reasonable to expect the improvement in teaching to be continuous and permanent.

Interest in industrial work is growing, though much is yet to be desired in this direction. Several successful school gardens have been conducted during the spring and summer. The corn-growing contest which two years ago was conducted among the pupils of the Hanover Township schools, and last year in Hanover and Mendham Townships, is this year organized into a county contest with eight townships participating. The plan is to have as many districts as will do so hold local exhibits, offering such prizes as they may, and then have the best specimens of the local exhibits brought together for county competition, allowing pupils of districts having no local exhibit to enter their corn directly in county competition. Five districts are to hold local contests. Besides the prizes offered in these local exhibits one hundred dollars in prizes is offered in the county contest.

Together with the county corn exhibit will be held also an exhibit of childrn's work in sewing and baking, for which prizes will be awarded under the direction of the New Jersey Congress of Mothers.

The most apparent needs of the schools of the county are still more trained teachers; still better school buildings in many sections; still broader, more intelligently interested, more progressive and more liberal school boards and people in several slow and backward districts.

The matter of transportation of pupils is becoming a serious burden to several districts in this county. During the past year between fifteen and sixteen thousand dollars was paid in the county for this purpose. The arrangements for the coming year will extend this amount to nearly or quite twenty-five thousand dollars; and yet many parents are using one pretext and another to demand more. Some of these demands I consider quite unreasonable, and do not approve them. It would be a great advantage if it could be more definitely established as to what distance a pupil must travel and what other conditions of reaching school would warrant a demand for transportation.

OCEAN COUNTY.

CHARLES A. MORRIS, SUPERINTENDENT.

The following brief report of school conditions and interests in Ocean County for the year ending June 30, 1912, is respectfully submitted:

Much interest has been shown by boards of education in the condition of the rural schools. The unsuitable conditions which prevailed with reference to light, heat, ventilation and sanitary arrangements were called to their attention and when the matter was clearly understood many boards of education set about improving the buildings and grounds.

Lakewood Township has about completed a thoroughly modern high school building of two stories and basement at a cost of $50,000. $10,000 additional was expended for the site of an entire town block of more than four acres. The outside walls are brick with limestone trimmings, interior walls of hollow tile, corridors and stairs of reinforced concrete and fire-proof construction, making the building practically fire-proof. The auditorium will seat 600 and will have a gallery and a large stage. The commodious study hall will be seated with desks and accommodate the entire high school. Besides these large rooms there will be eight class rooms of generous size, high school principal's office, Supervising Principal's office and board room, manual training room, science laboratories, locker and toilet rooms with the most modern equipment. This elegantly equipped building will be the most up-to-date of any in the county and will generously provide the facilities which have been needed several years for the high school.

The borough of Bay Head has completed a one-room addition, remodeled the old room and now have a suitable two-room school which will accommodate all the elementary school pupils of the district.

The borough of Beach Haven has authorized a bond issue of $13,000 to purchase a new site of about one acre and to erect a modern four-room building to replace the present inadequate two-room building.

Little Egg Harbor will remodel the schools at Parkertown and Giffordtown, making two-room schools of each one, which fully comply with the legal requirements.

Manchester Township will erect an addition at Whitings and have a very satisfactory two-room school. The Ridgeway school will be remodeled with respect to light and thoroughly repaired. Bonds have been authorized for completely remodeling the Lakehurst school.

Tuckerton Borough is erecting an addition of three rooms to the building which was completed in that district but three years ago.

Buildings in the following districts have been equipped with approved ventilating stoves or will be so equipped when the schools open in September: Berkeley Township (2), Dover Township (2), Island Heights Borough (3), Manchester Township (3), Sea Side Park Borough.

The coming year will see many other school rooms remodeled and put in suitable shape for school work, ventilating stoves installed and sanitary conditions improved.

We still need more attention given the school grounds to make them attractive by proper planting of trees and shrubs and to the interior decoration of the school rooms. Not only do many of the schools lack a collection of good pictures, but in too many of the buildings little attention is given to cleaning the walls, windows and ceilings.

Medical inspection has been provided for all the schools of the county. Where inspections have been regularly made, reports concerning physical conditions of the schools transmitted to boards of education, recommendations for the correction of physical defects insisted on and pupils with contagious or infectious disease excluded from school, the value of medical inspection has been very evident. In some few districts this work has received little attention, but in general the schools of the county have been well served. The

You Are Viewing an Archived Copy from the New Jersey State Library

chief difficulty is to insist that recommendations for correcting physical defects be carried out.

Through the generosity of Mr. W. H. Fischer, of Toms River, a contest in growing corn and sweet potatoes has been organized in which 140 boys and girls have entered. An exhibition of their products will be arranged in the fall and prizes awarded. We desire to arouse more interest in agricultural pursuits in Ocean County and to relate this practical work with the more formal class room studies.

Reports collected indicate some form of hand work taught in 55 of the 65 schools. Outside of Lakewood and Point Pleasant, where regular Manual Training courses are maintained, most of this is done by teachers who have pursued courses in the Cape May Summer School. Twenty-two teachers from Ocean County attended the 1912 session of this school.

Considerable attention was devoted to the enforcement of the Compulsory Attendance Law. Eleven districts report the employment of truant officers. Bi-monthly reports of non-attendance of pupils were filed in the County Superintendent's office and were very helpful in urging truant officers and boards of education to action. Blanks were furnished to warn parents who violated the law, and for making complaints against those who would not heed the warning. Sixty-five cases were disposed of in the County court of Common Pleas and the general effect on the attendance was very noticeable. The matter of bringing truancy cases before the County Juvenile Court is so cumbersome that it is seldom attempted. A revision of this law is needed giving the Juvenile Court jurisdiction over truancy matters. Truant officers may well be appointed for more than a single district. Capable men, fitted for this work, should be selected and given enough territory to occupy their time, even to the extent of giving one truant officer authority over one entire county.

The schools of Ocean County cost last year $132,718.85, but much of this was wasted through failure of many to avail themselves of their opportunities.

Following the practice of former years a certificate of attendance was issued to each pupil not absent more than 10 days. 1,145 of these were granted.

The Annual Institute was held in Lakewood, November 20-22, 1911. The instructors were: Dr. Wm. G. Schauffler, President State Board of Education; Supt. O. J. Kern, Winnebago County, Illinois; Dr. John C. Stone, Montclair State Normal School; Miss Sarah J. Walter, Principal Training Department, Hampton Institute, Hampton, Va.; Miss Sarah A. Dynes, History Department, Trenton State Normal School; Dr. J. J. Savitz, County Superintendent, Union County; Mr. W. A. Baldwin, Principal State Normal School, Hyannis, Mass.; Rev. Henry R. Rose, D. D., Newark.

The last meeting of the Ocean County School Board Association met at Toms River, December 11, 1911. Reports were read and discussed by the County Superintendent and by representatives from the several districts. Hon. C. N. Kendall, the State Commissioner, and Hon. W. G. Schauffler, President of the State Board of Education, attended and each delivered an inspiring address.

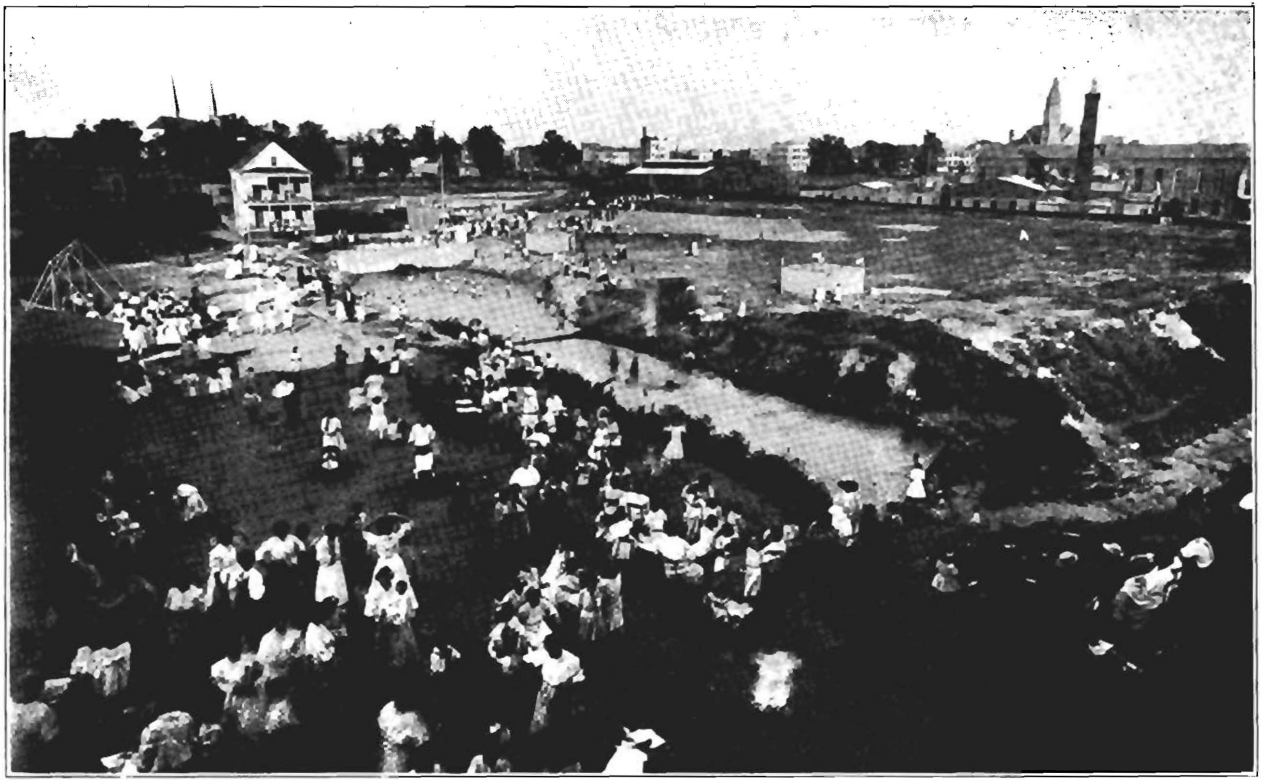
The regular meeting of the County Teachers' Association was held at Toms River, March 30, 1912. The principals and supervising principals held two meetings to plan work for the year and make reports. Assistant Commissioner Mirick attended one meeting and delivered an inspiring address.

The examinations for the highest grade in the elementary schools were conducted in eleven centers. These with tests in Civics and Physiology were adopted as the finals for the eighth year of the County Course of Study. 210 pupils took the tests and 159 earned County Grammar School Diplomas.

Of the 164 teachers 18 are college graduates and 45 are Normal School graduates. One of the greatest needs continues to be a greater number of trained teachers. Many districts still fail to employ a single teacher who has had the advantage of college or Normal School training, with the result that the schools fail to have the fullest influence in the community.

Teachers' and parents' meetings were held during the year in our most

You Are Viewing an Archived Copy from the New Jersey State Library



Summer Play Ground, Passaic, Passaic Co.

You Are Viewing an Archived Copy from the New Jersey State Library

progressive school districts. These were well attended and promise much for the interests of the schools.

Those caring for a more detailed study of school conditions in the county will be interested in the following summary:

	Number.	Average Salary.
Number of Supervising Principals and Supervisors	9	$1,096 66
Number of Kindergarten teachers	5	540 00
Number of teachers in Grades I-IV	35	477 00
Number of teachers in Grades V-VIII	28	580 08
Number of teachers in Grades IX-XII	18	755 55
Number of teachers in one-room schools	42	415 35
Number of teachers in two-room schools	24	400 31

	Days' Attendance 1911-1912.	Increase.	Percentage of Attendance.	District Tax Raised.	Tax Rate for Schools.

	$65,681 34	$132,718 85	$28 25	153	$502 15

Amounts expended for permanent investment and interest on debts not included. It has not been possible to add to the days' attendance the allowances which will be made on account of quarantined pupils.

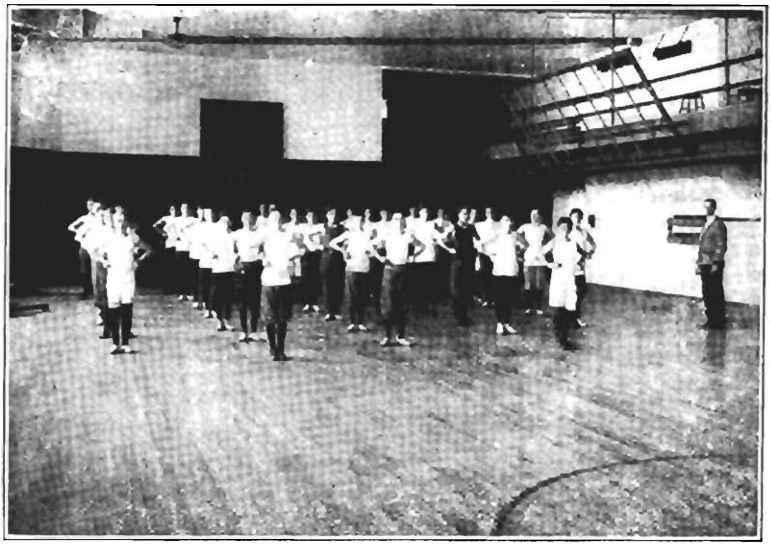
PASSAIC COUNTY.

E. W. GARRISON, SUPERINTENDENT.

I herewith submit a brief report of the school work ending June 30, 1912. The Boards of Education have been alive to the needs in school facilities over the county during the past year with the result of many improvements having been made. We close our school year feeling somewhat proud of our accomplishments, and with a determination to carry our success to a greater issue. School-houses have been built, old ones repaired, ventilation greatly improved and cross light practically eliminated.

While these things which tend to add to the physical comfort of the child were being done, the educational side was not neglected. Among the many things accomplished, I desire to make special note of the kitchen and manual training room installed in the school at Little Falls. We are expecting great work in this department which is receiving the careful attention of Mr. C. E. A. Walton, Supervising Principal of the township. Beside this addition to the school curriculum of the townshsip, the people have voted to erect an

You Are Viewing an Archived Copy from the New Jersey State Library



Gymnasium, High School, Passaic, Passaic Co.

School Play Ground, Sussex Ave. School, Newark, Essex Co.

You Are Viewing an Archived Copy from the New Jersey State Library

painted and a new heating and ventilating plant installed, and modern lavatory facilities put in buildings separated from the main building but accessible without going into the open.

The Griffith Street School has had the light area increased to conform with the law, a new heating and ventilating plant has been installed and modern and convenient toilet facilities for both boys and girls.

The Board of Estimate of Salem has recently fixed an amount of $90,000 for the purchase of land and for the erection of a High School building. Work upon it will begin immediately so that it may be completed by March first next. The Copner School will then be abandoned and the present High School building will be used exclusively for grammar grades.

The Township of Oldmans has abandoned the Perkintown school and is now transporting the pupils from that vicinity to Pedricktown. Oldmans now has all its pupils in two graded schools, one at Auburn and the other at Pedricktown.

In Upper Penn's Neck Township Center School and Cove school have been abandoned and the pupils are being transported to Penn's Grove.

A new building will be erected at Woodstown in Pilesgrove district, one at Alliance in Pittsgrove district, and another at Penn's Grove. The Alliance building will be erected before January first next and the others by the opening of the school term in 1913.

Several districts are having trouble in securing teachers, especially experienced ones. They are scarce in Salem County for, after having had a year or two of experience, they go where they are better paid for their work. There are in the county forty-eight teachers receiving less than $400 a year each for their services. About one-fourth of the total number of teachers employed have taught one year or less. Only twenty-four have an experience of more than five years, Salem teachers not included. The standard of efficiency will always remain low as long as such conditions prevail. Boards of Education should be alive to the situation and offer better inducements to their teachers.

The results of the examinations sent out from your office last May show that the schools which have had several changes in teachers during the past few years made the poorest averages, and likewise with the schools that have the poorly paid teachers. Elsinboro Township sent but one pupil to the examination.

The following table is enlightening upon the subject:

District.	Salaries.	Pupils in 8th Grade.	Granted Certificates.
Alloway	$378.00—$665.00	10	10
Elmer	427.50— 589.00	8	8
Elsinboro	292.50— 360.00	1	1
L. A. Creek	315.00— 450.00	7	2
L. P. Neck	360.00— 720.00	8	7
Mannington	360.00— 495.00	7	4
Oldmans	360.00— 765.00	10	9
Penn's Grove	427.50— 475.00	27	22
Pilesgrove	382.50— 650.00	39	39
Pittsgrove	382.50— 450.00	39	28
Quinton	382.50— 700.00	5	5
Salem City	425.00— 700.00	59	57
U. P. Neck	360.00—	2	2
U. Pittsgrove	360.00— 450.00	31	15

Medical inspection was carried on in all districts except Elsinboro and Lower Penn's Neck. Boards of Education have been lax in requiring regular detailed reports from its inspectors, hence my statistical report is blank on that subject.

On account of poor transportation facilities but one meeting of our County Teachers' Association was held. Some of our teachers could not attend,

You Are Viewing an Archived Copy from the New Jersey State Library

and others were there but one session. The Association will be divided and several meetings a year will be held at each of the following centers: Penn's Grove, Elmer and Salem.

The Teachers' Institute held jointly with Gloucester and Atlantic Counties at Atlantic City was very profitable. All the speakers were excellent and each had a message for the Institute.

SOMERSET COUNTY.

H. C. KREBS, COUNTY SUPERINTENDENT.

The schools of Somerset County have progressed normally during the past year, nothing of special import having taken place.

Bernards Township has erected a fine new High School building at Bernardsville. This relieves the crowded condition of the school building used for the grades, but does no more. All the rooms are again filled, and ere long steps must be taken to secure additional accommodations.

The growth of this school has been very remarkable. Seven years ago there were three teachers and no High School. Now there are twenty teachers, with a High School enrollment of one hundred and forty pupils—four-year courses and efficient teachers throughout.

Bernards Townshhip is also about to erect a four-room building at Far Hills, to cost sixteen thousand dollars. Mr. G. B. Schley, a public-spirited citizen, has added three thousand dollars to this sum for the purpose of installing baths and other conveniences in this building.

Somerville has completed a splendid building costing forty thousand dollars, devoted to primary grades. Bound Brook completed an addition at the same cost.

Montgomery Township voted three thousand dollars for a single-room school at Skillman.

North Plainfield Borough voted a new heating plant, to cost eighteen thousand dollars.

I am pleased to report that the people of Somerset County are responding to a good degree to the requirements of improved education. Parents are sending their children to High School more freely than heretofore. They are willing to vote for new buildings as may be required. Very little complaint is heard of school taxes.

The number of graduates from the eighth grade this year was unusually large. Hillsborough Township was formerly pleased with twelve graduates—this year there were thirty.

The examination questions used were those supplied by the State Department. They met with unanimous approval from the teachers.

Each year sees an advance in the efficiency of our teachers. Any superintendent may well be proud of the quality and personal standard of our teaching body. Especially is this true of the rural districts.

We employ trained or experienced teachers exclusively, even in our rural schools. We believe the country child is entitled to the same grade of instruction as the town child. Great pains are taken to exclude all teachers who are likely to prove mediocre.

Medical inspection is established in all districts, in some of which the work has not been made as valuable as in others. Some districts pay too low salaries to enlist the time of a physician to the extent of accomplishing effective work. At best the physician works at a loss. By increasing the salaries the value of medical inspection would be greatly enhanced.

All school districts held eighth grade commencement exercises, and of course the various High Schools held graduation exercises. These occasions,

You Are Viewing an Archived Copy from the New Jersey State Library

especially in rural districts, afford an excellent opportunity for the creation and stimulation of a good feeling toward schools and education.

The large majority of the rural schools are taught by Normal graduates from Pennsylvania, because New Jersey Normal graduates are not available. Trained teachers are so desirable that I have for years maintained, and still maintain that we should encourage them to enter this State to take places that cannot be filled by our own Normal graduates. Our present laws make the way increasingly difficult for these Normal graduates to enter our State, because we insist on a High School requirement which a majority of them do not have. I understand perfectly that such should not receive a certificate equal to that granted to our own Normal graduates; but I do feel that our schools would be greatly benefited if we were to make some arrangement whereby the newcomers were exempt from examinations temporarily, and given our lowest form of certificate on approved experience. After all, what we want is a good teacher. If we are assured of her value, it does not matter much whether she has at some time had a High School education, or whether she has gained her proficiency otherwise. By insisting on an arbitrary standard we lose many of the best graduates from other states. Our aim should be to secure these teachers rather than repel them. I hope that this matter may be very seriously considered by all school authorities—a plan whereby we may encourage good trained teachers to enter our State. and at the same time not be unfair to our own standards.

SUSSEX COUNTY.

RALPH DECKER, COUNTY SUPERINTENDENT.

Herewith I have the honor to present to you my tenth annual report of the schools of Sussex County.

It presents no one thing in particular that is startling but carefully studied and compared with the report of last year it shows a very healthy condition of school affairs in the county.

FINANCES.

The total expenditure for all purposes this year was $173,294.77, against $157,926.04, or an increase of $15,368.73. Of this amount expended $58,712.72 was received from the State and $70,510.52 raised by district tax. The total of all balances carried over this year was $2,924.48, against $10,534.66. There is railroad tax still due to the amount of over $7,000, which added to our balance, would make it about the same as last year.

A number of our districts have been very much embarrassed by the non-payment of the balance of the R. R. tax, and were forced to borrow in order to close their year's business.

The table below will give you some idea of the amount of district tax raised and the tax rate in each district in Sussex County for year of 1911 and 1912.

Districts.	Assessed Valaution.	Amount of District Tax.	Rate of D. T. per C.	Total Tax Rate per $100.
Andover	$403,944	$1,200	$ .29	$1 54
Boro. Andover	252,315	1,900	.75	2 16
Boro. Branchville	341,265	1,600	.46	1 94
Boro. Hopatcong	362,022	300	.08	1 63
Boro. Stanhope	483,397	3,900	.80	2 28
Boro. Sussex	825,670	4,140	.54	2 05
Byram	435,236	1,300	.29	1 50
Frankford	702,485	2,500	.35	1 55
Fredon	309,998	1,000	.32	1 68

	$15,605,451	$68,145	$ .44	$1 87

TEACHERS.

Our schools were presided over by 170 teachers, 42 males and 128 females. Of this number 24 were graduates of colleges and 51 were graduates of Normal Schools, making a total of 75, or 44 per cent. of trained teachers.

Of this number thirty-one were beginners; sixty have taught between one and five years; forty between five and ten years; thirteen between ten and fifteen years; eight between fifteen and twenty years; seven between twenty and twenty-five years, and eleven have taught over twenty-five years.

The professional spirit of the teachers was good. The interest in their work was very marked, the attendance at the teachers' meetings was excellent, and every teacher was enrolled as a member of the State Teachers' Association.

Hardyston Township made an advance step in employing a Supervising Principal and a Supervisor of Music for their schools.

SALARIES.

$93,274.57 were spent for salaries, against $85,138.75. The average annual salary of all males were $701.19, and of all females was $503.94.

The table below will give you an idea of the average salary paid in each district.

Districts.	Males	Females.
Andover	.....	$450 00
Boro. Andover	.....	650 00
Boro. Branchville	900 00	500 00
Boro. Hopatcong	360 00	.....

Walpack	.....	315 00
Wantage	414 28	410 00
Average	$642 10	$496 46

You Are Viewing an Archived Copy from the New Jersey State Library

The lowest salary paid to male, $350; female, $270. The highest salary paid to male, $1,500; female, $750.

(NOTE—The above table does not include Supervising Principals and Special Supervisors).

ENROLLMENT.

The total enrollment for the year was 5,347, a decrease of 33 from the previous year. This is due to the removal of several families from the vicinity of the cut off on the D., L. & W. R. R., which was completed during the year.

A number of the districts, especially those containing High Schools, show an increase enrollment, while others show a decrease which in most instances are due to High School pupils going to other districts.

The enrollment is as follows:

Kindergarten	247
Grades 1 to 4	2,766
Grades 5 to 8	1,894
High School	440

ATTENDANCE.

Despite the fact that the enrollment is less than last year still there is an increase of 18,381 days in the attendance. The total of days attendance being 653,224.

We thought we were doing extremely well last year when we reported 201 pupils who had not been absent or tardy, but this year with 301 is a record breaker for our county.

The per cent. of attendance for the county was 84. Sussex Borough, Andover Borough and Newton did well, their per cents. were 93, 92 and 90.

HIGH SCHOOLS.

The High Schools at Stanhope and Franklin Furnace had the approval of their three year courses withdrawn during the year by the State Board of Education. This leaves three four year schools in the county, namely—Hamburg, Sussex and Newton.

The work done during the year was very satisfactory and the standards are gradually going upward. Graduates from them are being admitted in many of the colleges on certificate and are making good.

The graduates at Sussex numbered nine, at Hamburg sixteen, and at Newton was twenty-two, making in all forty-seven. Of this number seventeen will enter college and seventeen will enter one or the other of our Normal Schools.

The total enrollment in the High Schools during the year was 440, about one-half of which were pupils who are being transported from adjoining districts. The majority of these transported pupils are doing good work and rank high in the classes in the several schools. The honors in each High School last June went to pupils from rural districts.

EXAMINATIONS.

Two examinations for teachers certificates, the first under the new rules, were held during the year. I was pleased to see that there was no falling off in the number of the older teachers, a number of which are changing their old county certificates for State certificates, the number of new applicants remain about the same.

The Grammar School or Eighth Grade examination was held in June. The questions submitted by the State were considered most excellent and fair. The results for the county are submitted below. Total number of pupils taking examination in

71	6	14	62	71	75	28	19

TRANSPORTATION TO HIGH SCHOOLS.

Transportation is now being given to every pupil who desires to enter High School in a number of the districts, such as Stillwater, Sparta and Wantage, the cost is very large. The total amount expended for this purpose during the year was $11,131.06.

CONSOLIDATION.

Consolidation of schools has been a movement that has taken root very slowly, but we are beginning to see the front at last. During the past year five schools were transported. During the coming year at least fourteen will be transported. The people are beginning to see the need of fewer schools and better teachers.

MEDICAL INSPECTION.

During the past year two districts have had medical inspectors, but next year will find each district following out the law.

BUILDINGS.

During the year the new High School Building at Hamburg was completed. This building is nicely fitted out, has physical, chemical and biological laboratories, and is beautifully decorated with works of art, including pictures and pieces of statuary.

Improvements have been made to a number of the buildings and a general movement has been made to fix up the outside closets so that they will comply with the requirements of the law, and nearly all the districts have complied.

COST OF EDUCATION.

Below is a tabulated cost of education in each school district. This contains all the operating expenses of the schools, including tuition and transportation to adjoining districts.

You will note the cost on average daily attendance in a number of districts is high. This in a number of cases is due to poor attendance, and in

You Are Viewing an Archived Copy from the New Jersey State Library

some to the cost of transportation, where it has to be done by wagon for long distances.

Wantage	30 38	60 38
Average	$28 36	$43 86

MISCELLANEOUS.

The usual number of teachers' meetings were held and well attended. At these meetings Penmanship and English were the two subjects that were given stress during the year.

The Principals' Association was reorganized and several meetings held. It was voted to not only include principals but any teachers who were interested in the school problems of the day.

The County Board of Education held a meeting on the closing day of the institute.

The usual number of visits to schools and Board of Education were made during the year.

On April 1st, an office was opened in the Court House, at Newton. The Board of Freeholders have nicely equipped it, and I have been very fortunate in securing the services of a very competent assistant.

Our work is being handicapped from the fact that we are unable to place a copy of our Course of Study in the hands of each teacher, owing to the fact that the old edition is exhausted. We hope that the State Department will soon have completed their monologues as they will cover the ground admirably.

Two districts, Newton and Hardyston have voted an appropriation for Manual Training, and will add that department of work during the coming year.

A class for Defectives will be added by the Newton school.

During the coming year we wish to emphasize a better enforcement of the Compulsory School Act, the remodelling of our old buildings to comply with the present requirements of the law, more intense teaching on the part of the teachers, and more interest on the part of the patrons in the school.

UNION COUNTY.

J. J. SAVITZ, SUPERINTENDENT.

I take pleasure in presenting my fifth annual report of the schools of Union County. Since four of the districts, Elizabeth, Plainfield, Rahway and Summit, organized under Article VI, employ capable and efficient city superintendents who report directly to the State Department of Public Instruction, this report does not include these districts unless they are especially mentioned.

BUILDINGS.

The rapid growth of the school population in our suburban district and the delays incident to securing the money for new school buildings, owing to the failure of citizens to agree on suitable sites, make the problem of providing adequate school facilities unnecessarily difficult. The people of all our communities generally vote money for new buildings very willingly but they frequently are unable to agree on sites. This disagreement results in such serious controversies that it is difficult to secure cooperation of all factions necessary for successful school work after the buildings are erected. In districts in which buildings must be erected every few years the strife over the location of one building is not allayed before the location of another must be determined. Some small body of men, if not the school board, should have the authority to locate school sites. Authority should be granted such a body to select sites in anticipation of the future needs of the district. Many of our districts pay now five times the cost of the same sites two or three years ago.

This method of selecting school sites is not only antiquated but unbusiness like. Unfortunately the children are the innocent victims of school houses improperly placed both as to accessibility, drainage, noises interfering with school work, etc. By disregarding the centre of population schools, even in towns, cannot be properly graded and frequently rooms must be overcrowded in one building while there is room to spare in another. The district meeting as a plan of selecting school sites is a failure and its methods disgrace an intelligent people.

The pupils of one section of the Linden School District have been compelled to attend school in a temporary structure for two years because of a controversy over a site. Cranford rents a building unsuited for school purposes, in addition to part time classes, for the same reason. Indeed there is not a district in the county in which the school work has not been seriously crippled, at some time or other, for similar reasons.

During the year Clark Township completed its new two room building, costing $10,000, and replacing a one room building; Linden, a $100,000 school building; Roselle, a four room building; Westfield, a $60,000 building; and New Providence Township is erecting a new building to accommodate all the scholars now attending their four buildings. Garwood has rescinded its action of a year ago providing for the erection of a $20,000 building and has voted a $40,000 building; Linden voted a $35,000 building; Roselle Park, a $38,000 building; and Union, a $40,000 building.

DEPARTMENTAL INSTRUCTION.

It gives me pleasure to report that Fanwood, Roselle, and Roselle Park have arranged for departmental instruction in the seventh and eighth grades for the coming year. This system will henceforth be employed in every district in which it is feasible. In addition to this, in the smaller districts, a limited form of departmental instruction is made possible by using the best equipped teacher to instruct in her specialty throughout the grades.

You Are Viewing an Archived Copy from the New Jersey State Library

Usually this is confined to music, writing, drawing and in rare instances reading. There does not seem to be any good reason why the four or five teachers in a building should be rigidly limited in their instruction to one class, especially when they are unusually capable in some subject in which teachers otherwise efficient may be deficient.

In addition to departmental instruction efforts should be made to differentiate the work beginning with the seventh grade. The traditional course of study surely is not adapted to pupils of the upper grammar grades with their varying native capacities. Perhaps the work below the seventh grade, if made more vital, may be considered reasonably satisfactory. Above the sixth grade pupils should be given such work and in such manner as will result in the development of native capacity and endowment. To insist that a pupil of a decided manual type should follow the usual course prescribed for the seventh and eighth grades, especially with a teacher who teaches a textbook, means one boy or one girl less in school. Boys and girls are driven from school by the hundreds on account of such requirements.

If the law providing for the apportionment by the County Superintendent of $400 for each high school teacher could be so extended as to include the seventh and eighth grade teachers this differentiation could easily be made. Until this disparity in the amounts allotted to high school teachers and upper grammar grade teachers is done away with there will always be this arbitrary division between the grammar and the high school, to my mind a purely fictitious division. The closing of this gap would enable smaller districts, and larger districts as well, in which high schools are maintained to use their high school teachers in the upper grammer grades, much to the advantage of pupils attending the latter. Of the twenty-five per cent. who fall by the wayside in the first year high school classes many would be saved by such reorganization. The organization of the schools in Union County is particularly favorable to such differentiation.

MEDICAL INSPECTION.

The work in medical inspection is in charge of a competent physician in each district. These inspectors, actuated by high professional motives, devote a large amount of their time to this work for a mere pittance. The results of their inspection is however not wholly satisfactory because their work has not been followed up. The more intelligent parents responded very readily to the suggestions of the inspector, but the very indifference or ignorance of parents which causes them to overlook physical defects in their children nullifies the efforts of the medical inspector. Careful records of each inspector should be kept and a case should be followed up until the physical condition of the child is improved.

EVENING SCHOOLS.

The influx of foreigners who are necessary to do the unskilled work in our municipal improvements make necessary some means to put these people fully in possession of our inheritance. Much good work is being done by various church organizations but it remains for the school to give these people a knowledge of the English Language, and an understanding of our social and political practices. Evening schools in Elizabeth, Garwood, Plainfield, Westfield, and Rahway have been liberally patronized. Kenilworth has decided to establish such a school; other districts are considering the matter. The eagerness and earnestness of those attending is a joy to everyone who is interested in human progress and the transformation wrought by these schools in those attending is nothing short of marvelous.

Some form of Continuation School is undoubtedly necessary in a community where so many young men leave school at the end of the grammar school course. These evening schools strive to provide practical courses for young men engaged in the markets, in the counting house, and in the trades.

You Are Viewing an Archived Copy from the New Jersey State Library

Efforts are made to meet the individual needs and many a young man is developing greater efficiency in his chosen calling by attending these schools.

TRANSPORTATION OF PUPILS.

The law providing for state aid in transporting pupils within the district has made possible for the abandonment of one room school houses affecting pupils in Clark, Linden, Mountainside, New Providence Township, New Providence Borough, Springfield, Union and Westfield. The advantages derived by these transported children will be a manifold return for the small expenditure which hastened the abandonment of the buildings.

COUNTY INSTITUTE.

A County Institute, the first in seven or eight years, was held in Elizabeth in November. Interesting and inspiring addresses were delivered by Drs. Howe, Judd, Parsons, and Stecher. Judging from the expression of teachers the institute was a most profitable one. The enthusiasm of the more than six hundred interested teachers of the County together with the one hundred students of the Elizabeth Training Class who attended in a body was in itself a stimulus to every sincere teacher.

THE STATE EXAMINATIONS.

Instead of the usual eighth grade county examinations the examinations prescribed by the State Department of Public Instruction to test the efficiency of school work were used for promotion to the high school. The usual county examinations prepared by the Principals Association were given to the sixth and seventh grades. Two hundred and fifty-one eighth grade, two hundred and eight seventh grade, three hundred and eighty-six sixth grade pupils passed.

The test prescribed by the Department of Public Instruction was eminently fair and not a single criticism has been heard from either pupils, teachers, principals or parents. In most cases the pupils acquitted themselves in a satisfactory manner, the failures being comparatively few. Perhaps the most surprising thing in the whole examination was the result in spelling. Judging from the impressions of people outside of the schools one would expect poor results, nevertheless seventy-five per cent. (75%) of the pupils averaged above ninety per cent. (90%). The results in the remaining subjects were fully as satisfactory when the character of the subjects and the immaturity of the students is considered.

WRITING.

Emphasis is now placed in every district on the development of the forearm movement for writing. This subject has been indifferently taught in the past because very few of the teachers themselves were taught in the grades to use anything but the finger movement, which virtually is drawing. Therefore, before anything could be accomplished the teachers themselves had to learn to write. Most of them have done this and the results show great gains in speed and legibility.

PHYSIOLOGY.

Instead of presenting a mass of facts of but little interest to pupils, recent textbooks have treated this subject from a mere rational point of view. Emphasis is now placed on keeping the body in such condition that it is at all times an efficient instrument. Much interest is now manifested in this subject since the pupils fully appreciate the necessity of caring for the body and are taught how this may be done through an intelligent observ-

You Are Viewing an Archived Copy from the New Jersey State Library

ance of nature's laws by the individual both in his own life and his surroundings. A very decided improvement in the teaching of this subject is noted.

COUNTY CONTESTS.

The annual County Speaking Contest arranged for by the Principals Association last year was held in the Roselle Park High School in May. The interest of the patrons in this contest and the efforts of the pupils who participated were a surprise to every one. Cranford, Fanwood, Roselle, Roselle Park and Springfield were represented. Supt. H. C. Krebs of Somerset County, Dr. W. H. Demarest of Rutgers College, and Senator Carlton B. Pierce of Cranford were the judges. These contests in public speaking, spelling, and music have done much not only to stimulate interest in these subjects but also to awaken a consciousness on the part of the patrons of the possibilities of the schools and of their duty to support them by liberal appropriations and, more particularly, by cooperating with teachers and boards of education in their efforts to make them more effective.

Stimulated by the success of the Musicial Contest of two years ago, the Music Supervisors Association are planning a Tri-County Musical Festival in which pupils from the school districts giving special attention to music in Union, Somerset, and Middlesex Counties will take part. Many interesting features are provided for, chief among them a large chorus comprising the best singers from all the schools participating.

ATTENDANCE AND PUNCTUALITY.

A systematic effort has been made by the County Principals Association to instil habits of regularity and punctuality. Although the school population steadily increases the number of cases of tardiness is growing less each year. The Committee on Attendance and Punctuality of the Principals Association issues a monthly report. The pupils of each school eagerly await this report to find the standing of their own school. Following is the form of the report:

UNION COUNTY PUBLIC SCHOOLS.

Month of 191 .

ATTENDANCE.—Total days of possible attendance. Total days present. Days lost by personal illness. Per cent. Rank last month. Rank this month. District.

PUNCTUALITY.—Total enrollment. Not absent or tardy. Times tardy. Per pupil per day. Rank last month. Rank this month. District.

Each district now employs a truant officer and the compulsory school law is strictly enforced. Pupils over fourteen years who must work during the day time are compelled to attend a night school somewhere in the county.

MANUAL TRAINING.

Roselle Park voted to introduce shop work into the curriculum the coming year. Westfield introduces cooking and otherwise extends the courses in manual training. All the schools in the county give some form of handwork in the elementary grades, but this work should be rapidly extended and, instead of being an addition to the usual school exercises, should become an integral part. Instead of being an isolated subject it should be correlated with the other subjects.

All forms of expression serve to make ideas vivid. Therefore, an idea should be expressed in a variety of ways, in fact, in all possibile ways. The child who expresses an idea by the use of tools in the shop, by means of the brush in the painting lesson, by using his drawing pencil, and by oral and

You Are Viewing an Archived Copy from the New Jersey State Library

written expression, will have made this idea so vivid that it will readily function in later life. He will also that these various forms of expression are related rather than isolated activities.

If the proper subjects are included in the school curriculum and if full opportunity for expression of ideas is provided through hammer, brush, pencil, and oral and written composition, our pupils will have the initiative and adaptability which seems so greatly lacking in young men and women to-day. They will, moreover, other things being equal, have the energy that is needed for success in life. Continual inactivity must give way to activity in the school room. Ideas tend to express themselves and opportunity must be afforded for such expression as soon as the ideas arise in the mind.

If properly related the subjects which require motor expression should be very suggestive to the regular grade teacher. In fact one of the weak points in our manual training work is that the special teacher does the teaching while the regular class teacher works at her desk. The regular teacher is not influenced in her methods by this work which should be full of suggestion for her in all her work.

RETARDATION.

A careful census of retarded pupils has been taken and the number retarded is about the same as those reported in other municipalities. This is rather surprising as our pupils generally belong to the more favored classes. In many of our smaller districts those who are mentally defective present a serious problem as there are not enough of them to secure the special appropriation for a teacher of subnormal children.

In our towns with rapidly growing population the pupils who come to us from other schools often become a serious problem. Practically all of them need special instruction to keep them in the grades corresponding to the ones from which they were transferred. This is not necessarily because of lower standards in other schools but because of emphasis on subjects which by us are held of less importance and vice versa. In many classes of forty pupils less than fifteen per cent. of the pupils started their school careers in the same district. This throws an unusual burden on teachers and is a fruitful source of retardation.

Following are a few statistics which may prove of interest:—

	1907-1908.	1910-1911.	1911-1912.
Number Enrolled	19,329	22,250	23,568
Days Attended	2,756,110	3,330,007	3,527,291
Average Daily Attendance	14,649	17,519	18,674
Average Days per Pupil	142	149	150
Pupils Neither Absent nor Tardy	658	898	1,261
Cases of Tardiness	24,482	28,119	28,636
*Cases of Tardiness	6,573	6,034	5,975
Pupils in Kindergarten	766	1,308	1,393
Pupils in Primary Grades	11,482	11,949	12,721
Pupils in Grammar Grades	5,619	6,987	7,201
Pupils in High School	1,462	1,996	2,253
*Pupils per Teacher	36	30	31
*Number of Teachers	150	212	232
*Teachers—College Graduates	36	51	55
*Teachers—Normal Graduates	72	122	143
Average Salaries of Teachers—			
Male	$864.39	$1,099.30	$1,352.13
Female	577.85	789.52	813.61

Generally speaking the situation in the county is hopeful. The people provide liberally for schools and they are interested in them. There is a splendid school sentiment in all the districts and the spirit manifested by

*Cities not included. Remaining statistics include entire county.

our happy and interested boys and girls is very gratifying to all school officials.

The supervising principals of the county continue a source of inspiration to the County Superintendent. Never has there been a more helpful, resourceful and loyal body of co-workers. That their efforts have been appreciated by the patrons and boards of education is a source of great satisfaction to me. We begin the new year without any change in the supervisory force. Our boards of education composed of broad minded and liberal men continue to devote their best efforts to the schools at great personal inconvenience and sacrifice.

Appreciating fully this splendid effort and cooperation on the part of the teachers, supervising principals, board of education, and patrons, and with grateful acknowledgment of the helpful assistance and encouragement of the Commissioner, his Assistants and the entire State Department of Education, I respectfully submit this report.

WARREN COUNTY.

F. T. ATWOOD, SUPERINTENDENT.

I herewith submit my annual report for the school year ending June 30, 1912.

The statistical report shows a grand total of all receipts and balances for the year to be $241,421.98. 7,289 pupils have been enrolled in the schools, with an average daily attendance of 5,296. The average number of days schools have been kept open, 182 8-21. The total number of days present for the county is 992,048, and 494 pupils have not been absent or tardy during the school year. In the six high schools of the county 653 pupils have been enrolled, in the grammar schools 2,349 and the primary schools 4,287. We have 33 male and 191 female teachers, whose salaries average $791.36 and $485.92 respectively. I am glad to report that there has been a decided increase in the number of trained teachers.

Prior to this year the grammar grade examinations were held in each district, but this year they were held in the high school which the pupil expected to attend. This plan is a great improvement and is giving satisfaction. Two hundred ten tried the examinations and one hundred forty-eight were granted grammar grade certificates.

The State tests were held at Blairstown, Belvidere, Hackettstown, Phillipsburg, Oxford and Washington. Much interest was manifested in this new work.

Our teachers' and principals' meetings have been carried on as usual and have been well attended and helpful.

Two meetings of the County School Board Associations have been held as required by law, and many subjects have been helpfully discussed.

More than usual enthusiasm was shown in the observance of Arbor and Bird Day.

Medical Inspectors were furnished by seventeen districts in the county.

Blairstown has been added to the four-year high schools, making five four-year high schools in this county. This makes a four-year high school course possible for every pupil in Warren county.

At present the subject of transportation and consolidation seems to be one of great interest and importance. The schools at Saxton Falls, Allamuchy Township and Pleasant Hollow, Harmony Township, were closed at the beginning of this school year and the pupils transported to other schools. Prior to this, two other schools in Blairstown and Knowlton Townships were consolidated with nearby schools. In two other instances schools have been closed and the pupils transported, but later the plan was abandoned on

You Are Viewing an Archived Copy from the New Jersey State Library

account of opposition from the parents. In a number of places small schools are situated where it would be advantageous to consolidate with a nearby graded school, but owing to the crowded condition of the graded school this is impossible.

Usually the voters of a district oppose the plan of enlarging or building new school houses for the accommodation of pupils from other districts. It seems to be the sentiment of the people most interested that the theory of consolidation is a fine one and would be for the best interests of education in any other place and under other conditions than those existing in their own school. The condition of the roads, the distance from the central schools and the crowded conditions of these central schools are the main reasons why more consolidation has not been accomplished in this county. However, notwithstanding these conditions, I believe that there is a probability of additional consolidation being effected in the near future. The law enacted by the recent Legislature returning to the district seventy-five per cent. of the cost of all the transportation is fully appreciated in this county, and will surely have a tendency to further the plan of transportation and consolidation.

ENROLLMENT OF STUDENTS 1911-12.

Total number enrolled		672
Males	496	
Females	176	
		672
Attending evening only	566	
Attending day only	80	
Attending both day and evening	26	
		672

TRADES AND PROFESSIONS REPRESENTED IN THE SCHOOL.

Machinists and Machinists' Apprentices	106
Others employed in Shops, Mills and Factories	78
At Home	37
Students from other schools	99
Clerks, Stenographers, Bookkeepers, etc.	85
Art Students	39
Employed in Potteries	43
Building Trades	42
Electrical Trade	14
School Teachers	35
Pattern Makers	9
Draftsmen and Designers	21
Housekeepers	4
Dressmakers	3
Various other trades and professions	50
No occupation reported	7
	672

From the above it will be seen that of our six hundred and seventy-two students ninety-nine supplement their work in the Normal, High and other schools by study in this school, thirty-nine are making a special study of art to fit themselves to follow it professionally, forty-one are enrolled in various classes (especially craft classes) as amateurs, and the remaining four hundred and ninety-three are employed during the day and study in the evening classes to perfect themselves in their several vocations.

The Department of Domestic Art (organized last September) offering instruction in dressmaking, millinery and home decoration, has proved very successful, ninety-seven having enrolled in the various classes in the department.

Arrangements have been made for a course in applied or industrial physics to be offered next year. This should prove of great assistance to many in this industrial city. Forty-seven separate courses of study are now offered by twenty-four instructors.

The past year has been the first in the new building presented to the Board of Trustees of Schools for Industrial Education of the City of Trenton by the Hon. Henry C. Kelsey. It has been found to be perfectly adapted to the character of work carried on by the school.

The Board wishes to put the building to the fullest possible use and is ready to establish any day or evening classes in any branch of industrial education for which there is a demand and for which the city will provide the necessary funds.

Respectfully submitted,

FRANK F. FREDERICK,
Director School of Industrial Arts.

Report of the Board of Trustees of the Teachers' Retirement Fund

For the Year Ending June 30, 1912

You Are Viewing an Archived Copy from the New Jersey State Library

Teachers' Retirement Fund

Report of the Board of Trustees of the Teachers' Retirement Fund of the State of New Jersey for the fiscal year 1911-1912; presented by the Secretary to the Annual Convention of the Teachers' Retirement Fund, held in the Assembly Chamber, State House, Trenton, New Jersey, at twelve o'clock, noon, on Saturday, September 28th, 1912.

September 28th, 1912.

To the Members of the Teachers' Retirement Fund of the State of New Jersey:

In compliance with the law, I have the honor to submit the report of the Board of Trustees of the Teachers' Retirement Fund for the fiscal year which ended June 30th, 1912.

STATE TREASURER'S REPORT.

(*Note—In presenting the State Treasurer's report, the Secretary has taken the liberty of inserting in the statement of assets, the maturity of Atlantic City bonds, and the net interest-yield of bonds on which premium was paid.*)

The State Treasurer's report is as follows:

STATE TREASURER'S OFFICE,
TRENTON, JULY 22, 1912.

The Board of Trustees, Teachers' Retirement Fund.

GENTLEMEN:—The following is the annual statement of receipts and disbursements of the Teachers' Retirement Fund for the year ending June 30th, 1912:

SYNOPSIS OF BUSINESS OF FISCAL YEAR 1911-1912.

The operations of the year which ended June 30th, 1912, may be summarized as follows: Receipts, $192,585.86, of which interest contributed $10,167.76, more than sufficient to pay 40 annuities of $250.00 each. Disbursements, $135,730.06, of which $131,560.97 was paid in annuities, and $3,998.09 was premium and interest on bonds bought for investment. Invested during year, $66,000.00. Surplus on year's business, $56,855.80. Fifty-four annuities were granted; annual value, $25,826.88; average, $478.27. Four annuities were granted to men; average, $383.97; and fifty to women, average, $485.82. All, except one, were granted under the Act of 1907. Eight annuitants paid their deficit in a lump sum; the other forty-six took advantage of that clause of Section 217, Chapter 139, Laws of 1907, which permits the deficit to be liquidated by the accruing annuity. Nine annuities deceased; value, $4,001.84; average, $444.64. The decedents paid to the Fund an average of $215.61, and received from the Fund an average of $1,511.20. Net increase in annual value of annuity obligations, $21,825.04. On June 30th, 1912, thirty-four annuities, (annual value, $16,127.20; average, $474.32,) were pending action by the Trustees. At the close of business 1911-1912 and beginning of business 1912-1913, three hundred and thirty-eight annuities were living and in force; annual value, $142,498.68; average, $421.59. Assets, $313,013.50. Liabilities, none.

RECAPITULATION FROM BEGINNING TO JUNE 30TH, 1912.

The Teachers' Retirement Fund became a part of the Public School System of the State of New Jersey by virtue of Chapter 32, page 58, Laws of 1896, enacted March 11th, 1896, and six times amended and re-enacted. The latest revision is Chapter 139, page 365, Laws of 1907; enacted May 7th of that year. The first annuity was granted December 3rd, 1897. To June 30th, 1912, four hundred and fifteen teachers had been granted annuities aggregating an annual value $171,717.12; averaging $413.77, and had received benefits totaling $599,628.98. Of the 415 annuities granted, sixty were to men; annual value, $25,004.08, and averaging $416.73; while three hundred and fifty-five were to women; annual value, $146,713.04, and averaging $413.27. Seventy-seven annuities had died; annual value, $29,218.44; average, $379.46. Three hundred and thirty-eight annuities were living and in force June 30th, 1912; annual value, $142,498.68, average, $421.59. Total rebates paid, $1,121.80. Assets June 30th, 1912, $313,013.50; investments, $235,750.00; cash in bank, $77,263.50; no liabilities; annuities paid in full to date.

ANNUITY RECORD YEAR BY YEAR.

The following table shows year by year: (1) Number and value of annuities granted; (2) Number and value of annuities deceased; (3) Number and value of annuities living and in force at end of fiscal year.

BEQUESTS TO FUND.

Mr. Edward Kelly, an annuitant, of Jersey City, who passed to his reward, April 16th, 1912, after a long and honorable career as citizen and teacher, left the Fund a legacy of $500.00.

Following is a schedule of legacies and gifts to date:

1899—Henry E. Harris, of Bayonne; gift	$50.00
1900—Emily S. Sayre, annuitant, Woodstown, Salem Co.; legacy, half her estate	2,285.74
1902—H. Anna Lindsley, Morristown; balance due the estate of her sister, Mary G. Lindsley, annuitant	33.00
1905—Carrie B. Runyon, annuitant, Plainfield, Union Co.; legacy	100.00
1908—Lydia V. Marden, annuitant, Trenton; ten shares of Stock of New Jersey Interstate Fair Association—par value $10.00; legacy	100.00
1912—Edward Kelly, annuitant, Jersey City; legacy	500.00
1912—Rachel H. Strong, annuitant, Waterford Township, Camden Co.; balance of annuity due her estate; gift	1.61
	$3,070.35

ANNUAL CONVENTION.

The Annual Convention, prescribed by Section 214 of the School Law, was held at twelve o'clock, noon, on Saturday, September 30th, 1911, in the Assembly Chamber, State House, Trenton. Mr. James E. Bryan, of Camden, was unanimously nominated to succeed himself as a Trustee for the term of four years and was, accordingly, appointed by Governor Wilson, who appointed, also, two non-teacher Trustees, Mr. William G. Bumsted, of Jersey City, to fill the unexpired term caused by the resignation of Mrs. Isabel Craven, of Salem, who found it difficult to attend Trustees' meetings because of her geographical and railway location, and Mr. John Scott Davison, of Passaic, for the full term of four years.

ANNUAL COUNTY AND STATE CONVENTIONS.

Whereas, It is essential to an orderly administration of the Teachers' Retirement Fund that definite rules and regulations be formulated to govern the calling, advertising and holding of the County Meetings and Annual Convention provided for by Section 214 of the School Law, now, therefore, be it

Resolved, That this Annual Convention of Teachers' Retirement Fund Delegates hereby respectfully requests the Board of Trustees of said Fund, under the powers conferred by Section 220 of the Law, to formulate such rules and regulations, and be it further

Resolved, That the said Board be and is hereby requested to adopt such rules and regulations prior to January first, 1913, so that same may be published in the forthcoming 1912 report of the New Jersey State Teachers' Association, and be it again further

Resolved, That the Secretary of this Convention be and is hereby directed to forthwith send a copy of this Preamble to the President of said Board of Trustees, and another copy to the Secretary of said Board.

CONSTITUTIONALITY SUIT.

The suit of Myrtle Allen vs. the Board of Education of Passaic City, to determine the constitutionality of Section 221, Division IV, of the School Law, known as the "by virtue of appointment" provision, which was decided in favor of the Fund by the District and Supreme Courts, has been taken to the Court of Errors and Appeals, and is down for argument in November, 1912.

The Officers and Trustees of the Fund are:

President—Hon. CALVIN N. KENDALL, State Commissioner of Education.
Vice-President—Hon. WILLIAM R. CODINGTON, of Plainfield.
Treasurer—Hon. DANIEL S. VOORHEES, Treasurer of the State of New Jersey, *ex-officio.*
Secretary—Miss ELIZABETH A. ALLEN, Terminal Building, Hoboken.
Miss SOPHIE M. BRAUN, Principal of School Number One, Elizabeth.
Mr. JAMES E. BRYAN, Superintendent of the Camden Public Schools.
Mr. WILLIAM G. BUMSTED, of Jersey City.
Mrs. GEORGIA BEERS CRATER, of Newark.
Mr. JOHN SCOTT DAVISON, of Passaic.
Dr. ADDISON B. POLAND, Superintendent of the Newark Public Schools.

NOTE.—Expenditures under District Taxes and R. R. Taxes exceed the receipts, on account of using moneys from Other Sources—as receipts for tuition, etc., for the payments of items listed under District Taxes. As much as payments under District Taxes exceed the receipts, by so much the payments under Other Sources are less than the receipts, making the Grand Total of Payments and Balances equal the Grand Total of receipts.
