# **FIFTY-NINTH ANNUAL REPORT**

**1968**

**BOARD OF  
PUBLIC UTILITY COMMISSIONERS  
STATE OF NEW JERSEY**

**STATE OF NEW JERSEY  
DEPARTMENT OF PUBLIC UTILITIES  
BOARD OF PUBLIC UTILITY COMMISSIONERS  
State House Annex, Trenton, N. J. 08625**

Honorable Richard J. Hughes, Governor  
State of New Jersey  
Trenton, New Jersey

Dear Governor Hughes:

The Board of Public Utility Commissioners herewith submits to you its fifty-ninth annual report, in accordance with N.J.S.A. 48:2-11, covering the activities of the Board and its staff during the calendar year 1968.

The report is a summary of the numerous statutory activities of the Board and its staff. A complete record is available in the files of the Board.

Respectfully submitted,

A handwritten signature in blue ink, reading "Brendan T. Byrne".

Brendan T. Byrne, Pres.

## THE BOARD

### IT'S WORK FOR THE PEOPLE OF NEW JERSEY

The Board of Public Utility Commissioners, with the assistance of a staff of approximately 150 engineers, accountants, attorneys and other specialists, regulates the 600 utilities doing business and providing services in the state. A utility, by definition, is non-competitive, and at the same time, essential to the public convenience. Hence, utilities must be regulated in such a way that they are able to render services to the public in an efficient manner, at prices that provide a fair return on investment and are, at the same time, fair to the public.

New Jersey's Board of Public Utility Commissioners was organized by Governor Woodrow Wilson in 1911. In its 58 years of service, it has provided, through responsible regulation, a healthy atmosphere for the state's utilities to render the services required for the state's ever-expanding economy and prosperity. Today, the commission is concerned with the problems of utilities in the atomic age, the further development of essential services for the state's growing population, and the continued surveillance required to assure the public that utility services will be available at reasonable rates.

*Commissioners Grossi,  
Ozzard and Byrne inspect  
wrecked locomotive to  
determine causes of accident,  
and develop preventive  
measures for the future.*

## HIGHLIGHTS OF 1968

### **Telephone Rate Reductions**

Telephone rate reductions initiated for some services in 1967, were extended in 1968 to additional users and services, providing additional savings of \$6.7 million to subscribers.

### **Prevention of Power Failures**

To prevent further major power failures, the Board continued its financial support of an independent study of existing electric power resources, in co-operation with the District of Columbia, Maryland, Delaware and Pennsylvania.

### **Nuclear-fueled Electric Power**

Nuclear-fueled electric power came closer to reality in New Jersey as state's electric utilities, under Board regulation, undertook \$1

billion in construction of nuclear-powered generating plants.

### **Underground Electric Lines**

Underground electric lines are being considered in more locations as a growing number of municipalities, under Board supervision, study the feasibility of requiring such installation.

### **\$500 Million Expansion**

Authorized expansion and improvements in the state's utilities totalling almost \$500 million.

### **Improved Bus Service**

Authorized improved bus and limousine service between New Jersey cities and metropolitan airports.

**WILLIAM L. HUMPHREYS,**  
director

**Safety Inspection....**John Cronshey, wearing cap, and Edgar Washburn inspect buses in company garage to insure safety for passengers.

#### MAJOR ACCOMPLISHMENTS

Approved six new routes in areas previously without autobus service.

Extended service on 24 existing routes.

Made 11,000 safety inspections.

Investigated 500 rider complaints.

## MOTOR CARRIER DIVISION

There is a total of 308 autobus companies under the Board's jurisdiction holding approval of municipal consents for the operation of autobuses on 447 separate routes.

During 1968 members of the Division sat on the Interstate Commerce Commission Joint Board for eleven days on interstate matters concerning the operation of autobuses into or through the State of New Jersey.

Municipal consent for transfers from forty-

six individual operators of various routes to eight remaining operators were approved, as were municipal consents for the operation of six new routes in areas previously without auto-bus service.

One major autobus carrier, operating in the shore area of the State, was given approval to transfer its stock to new stockholders and operator.

#### FORMAL PROCEEDING

Municipal Consents	1967	1968
New routes . . . . .	7	6
Change or extended routes . . . . .	33	18
Additional buses . . . . .	1	2
Transfer of consents . . . . .	7	7
Modification or restrictions . . . . .	3	1
Discontinue Service or Portion of Service . . . . .		4
Formal Complaints . . . . .	3	3
I.C.C. Applications . . . . .	11	21
Miscellaneous . . . . .	5	5
Total . . . . .	70	67

#### INFORMAL PROCEEDINGS

Inspections	1967	1968
New buses . . . . .	276	215
Rebuilt buses . . . . .	208	182
Maintenance . . . . .	10,332	10,541
Traffic Investigations . . . . .	550	451
Routes surveyed . . . . .	332	173
Accidents investigated . . . . .	100	69
Accident reports examined . . . . .	5,570	5,868
Insurance matters . . . . .	2,707	2,951
Complaints investigated . . . . .	428	382
Miscellaneous matters . . . . .	232	238
Total . . . . .	20,735	21,070

**JOSEPH W. FERRARO,**  
*director*

#### MAJOR ACCOMPLISHMENTS

**12 new grade crossings with safety devices.**

**138 accidents investigated.**

**Two bridges reconstructed.**

**1,000 crossing inspections.**

**Nine grade crossing protection projects undertaken.**

*Serve Metropolitan Area...  
N.J. railroad terminals  
serve metropolitan area*

## DIVISION OF RAILROADS

The Division of Railroads investigates complaints and inquiries relating to the safe operation of railroads, passenger and freight service, and examines freight and express tariffs filed with the Board.

An extensive program designed to assure maximum safety and convenience to the public is carried out, including grade crossing elimination, grade crossing protection, bridge reconstruction, and the establishment of new grade crossings. Railroad equipment and property are inspected and reviewed periodically to assure safe railroad operations.

A continuing major concern of the Board is the need for increased protection at many of the State's more than 2,000 grade crossings. The Board is co-operating with Federal and State Agencies in developing new grade crossing safety standards and techniques for diagnosis of the most hazardous crossings.

**Service Investigation...** Luciano Corea and Thomas J. Salagaj investigate train service and schedule performance of one of railroads serving state.

**VAUGHN M. DONOVAN,**  
director

**Chief Hearing Examiner**  
*Andrew V. Farley conducts  
hearing on application for  
change in a utility rate.*

## DIV. OF RATES AND RESEARCH

The Division deals with all matters involving rates for public utility services which come before the Board. These include: rate of return studies; determination of rate base and the reasonableness of operating revenues and expenses; fare schedules; utility tariffs; studies of the cost of capital, capitalization ratios; participation of negotiations under the Rate Negotiation Statute.

Public Service Electric and Gas Company filed revisions of its tariff which will effect an estimated reduction of \$345,000 to its gas customers, and \$114,000 reduction to its electric customers as a result of refunds which the company received from its natural gas suppliers.

As a result of conferences initiated by the Board, South Jersey Gas Company filed rate schedules reducing rates by \$180,729 annually. The new rates became effective for service rendered commencing with regular meter readings taken on and after January 31, 1968. The rate reductions will benefit approximately 3,400 of the company's commercial

and light industrial customers.

The Delaware Valley Water Co. was authorized to increase its rates for service by approximately 34%, so as to provide approximately \$220,000 in overall revenues annually. The company, which provides water service for domestic, commercial, industrial and fire protection purposes, to approximately 14,000 customers in nine municipalities in Burlington County, had proposed an increase of 50% in service rates, which would have increased overall revenues by approximately \$326,000.

The Board authorized Lakewood Water Company to file rates designed to produce an additional annual operating revenue of \$150,373. The new rates were authorized to become effective for service rendered on and after November 30, 1968. The company, in its petition was seeking an increase of \$185,000 and proposed that the rates should become effective May 1, 1968.

The Board, on November 14, 1968, authorized Blackwood Water Company to file a revision in its tariff increasing its rates for

#### MAJOR ACCOMPLISHMENTS

Savings of \$459,000 to gas and electric users.

Gas rates reduced in southern part of state.

Proposed water and sewerage rate increases are reduced.

*A dam of a privately-owned water company, under PUC regulation, in northern New Jersey.*

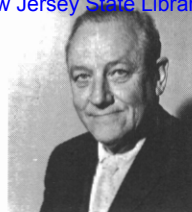

private and public fire protection service.

The original filing was estimated to produce additional annual revenues, under these classifications, of \$52,813, representing an aggregate increase of approximately 575% in public and private fire protection charges. The authorized rates would produce additional annual revenues of approximately \$17,000 representing an increase of approximately 153%.

The Board authorized Atlantic City Sewerage Co. to increase its rates for service, so as to produce an aggregate annual increase of \$220,000 in its revenues, an increase of approximately 26.6%. The petitioner had requested an aggregate increase of approximately \$714,000 annually, or 87.5%. Some points considered by the Board in reviewing this case were the facts that the rate base was considerably reduced due to the retirement of plant facilities heretofore used in service to sections no longer providing revenues, because of the Urban Renewal Projects now underway in petitioner's service area.

*Financial Review... Kenneth Roberts, seated, and Louis P. Gaeta review financial reports of utility companies.*

**LEIGH P. HARTSHORN,**  
*director*

#### **MAJOR ACCOMPLISHMENTS**

**Authorized \$316 million in utility financing.**

**Audited utility capital outlays of approximately \$500 million.**

**Encouraged utility expansions to meet growing needs of state.**

*Modern Look...  
Telegraph offices have  
adopted modern look*

## **DIV. OF ACCOUNTS & FINANCE**

The staff of the Division of Accounts and Finance examined 789 annual reports, 285 monthly and quarterly reports. Reports were required to be filed to insure that utilities' operations are on a sound financial basis. These reports are submitted on forms supplied by the Board, ranging from a one-page simplified form for utilities having operating revenues less than \$7,500 per annum to a 110-page report required of utilities having annual revenues in excess of \$1,000,000. Every gas and electric utility is also required to file a copy of its monthly report with the Board. Autobus and water utilities having annual revenues in excess of \$200,000 and \$1,000,000 respectively, are also required to file quarterly reports. These reports make possible valuable research and form the background against which the Board may judge rate matters and petitions for approval of specific financial transactions. In addition, they are open for inspection by the public and during 1968, 132 requests were made by persons visiting the Board's offices to examine specific reports or to make general studies.

Numerous field investigations were conducted with respect to the adequacy of the utility's books and records. The examinations not only included seeing that the books and records were in agreement with the filed annual reports, but that information recorded therein was in accordance with the requirements of the Board's applicable uniform system of accounts. The Director participated in the work of the NARUC Subcommittee of Staff Experts on Accounting, N.J. Civil Defense Coordinator's Committee and the Governor's Interdepartmental Committee for State Planning.

During the year the staff of this division cleared 204 formal petitions requesting the authority to issue securities, transfer stock, form new utilities, mergers, acquisitions, show cause orders and dismissals, sales of buses and other matters requiring formal action, and reviewed 68 formal petitions of other divisions for a total of 272 formal matters.

The total dollar value of financing authorized was \$316,557,090.

**ROBERT G. PESCHEL,**  
director

**Accuracy Check...** John Healy and Gerald N. Tobia, Jr. check gas meters at utility repair shop to insure accurate charges for consumers.

#### MAJOR ACCOMPLISHMENTS

**Expedited construction of nuclear-fueled generating plants**

**Investigated and took steps to assure improved telephone service**

**Maintained reliability of electric power systems**

**Encouraged installation of underground electric distribution lines**

## DIVISION OF ENGINEERING

The Engineering Division handles the technical aspects of the various matters which come before the Board with the exception of railroads and autobuses, and investigates both formal and informal complaints. The Division assists the other Divisions of the Board insofar as technical or engineering information may be necessary. Some of the specific items which are investigated, and upon which studies are made and recommendations are presented to the Board, are: depreciation rates, the sale or lease of property, eminent domain proceedings, matters requiring the issuance of certificates of convenience and necessity, highway relocations, and approval of municipal consents. The Division is also responsible to the Board for the supervision, regulation and control over natural gas pipeline utilities. The Division is responsible to the Board for the safety and adequacy of service of the operations of all the utilities under the Board's jurisdiction and, as a result thereof, makes investigations relating to service inadequacies, as well as

accidents occurring as a result of utility operations. The testing of electric, gas and water meters, as well as the calibration of standards for the measurement of various utility services, are also a responsibility of this Division.

During 1968, the Division processed approximately 1,100 informal complaints and analyzed 430 technical reports. Formal proceedings processed and numbers of decisions issued for each category are as follows: Municipal Consent, 50; Eminent Domain, 5; Property Sale, 144; Certificate of Convenience, 3; Highway Relocation, 41; Miscellaneous, 48; Other Than Engineering Matters, 43; or a total of 334 decisions during the year.

During the year, after having received numerous inquiries and complaints from residential and business customers, as well as resolutions from affected municipalities, questioning the adequacy of service provided and the charges filed therefor by New Jersey Telephone Company, the Board instituted a formal investigation of the matter. Public hearings in this matter were held on several

## Division of Engineering...

days. The Board issued its Decision and Order in this matter, wherein it required the company to file certain information and set the matter for further hearings in 1969.

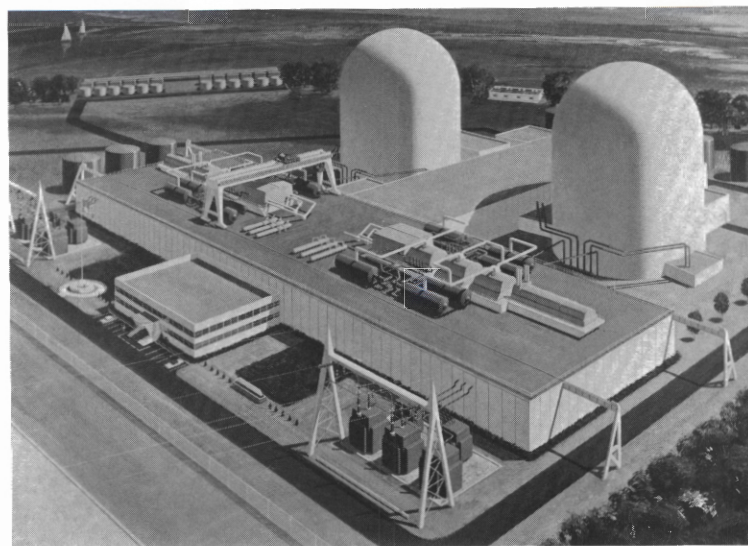

The Board issued its Fifth Interim Order pertaining to the proposed construction by Jersey Central Power & Light Company of a nuclear fueled generating plant at Oyster Creek, Lacey Township, Ocean County. In the Order, the company was directed to appear on May 9, 1968 and produce a qualified witness or witnesses prepared to introduce into evidence the reasons for the delay in the start up of the plant, and also the effect of the reactor, if any, upon the citizens or the environment of the State. The latter request was made as a result of Governor Hughes' Executive Order No. 38, creating the New Jersey Atomic Energy Council. At the hearing, since certain investigatory work had not been completed, Jersey Central Power & Light Company requested that the matter be adjourned until such time as complete information would be available. Accordingly, this matter has been scheduled for hearing in 1969.

The Board has received several petitions filed by Public Service Electric and Gas Company for permission to exercise the power of eminent domain to acquire interest in certain lands to install lines for the transmission of electric power relating to the Keystone Project. During these proceedings, a petition was filed with the Board by Citizens Opposed to Power Towers (COPT) Readington Chapter Inc. The purpose of this filing was to cause a review by the Board of compliance by Public Service with the terms of the Board's Decision and Order relative to the Keystone Project. The Board issued an Order in the COPT Readington matter staying all matters then before it relating to this project and ordered hearings to be conducted regarding compliance with its previous Order. The Division is actively participating in these hearings, which are continued into 1969.

A member of the Division has instituted a study of the status of underground electric and communication distribution lines in the State of New Jersey, particularly with respect to maintenance of a current list of the municipalities now having, or contemplating, ordi-

nances requiring such installations. A review of the ordinances on file reveals differences in requirements but the majority of them provide for definite, aggressive action, especially with respect to new construction. Several New Jersey electric utilities are taking an active interest in this program and are working very closely with the various political subdivisions. Previously, the utilities required the developers of new subdivisions to pay the difference in cost between overhead and underground installation. Recently they have liberalized this policy on existing and future programs by introducing a revenue credit plan. Credits are based on revenues from service and the amount varies depending on the anticipated revenues. This revised liberalized policy is apparently satisfactory to developers and appears to have served as an effective stimulant in introducing underground service to new homes and apartments.

The Board, representing the State, entered a contract with Commonwealth Associates, Inc., a firm of engineering consultants of Jackson, Michigan. Under the contract, New Jersey joined Pennsylvania, Maryland, Delaware and the District of Columbia in a study being made by Commonwealth to determine the system reliability of the PJM Inter-connection, which consists of the electric transmission systems in these states and the District of Columbia.

### MAJOR ACCOMPLISHMENT

**Investigated 2,355 complaints  
made by consumers against  
utilities.**

It is the responsibility of Service Inspection to investigate service complaints, both written and verbal, involving the extension of utility services, high utility bills, improper bills, denials of service, unsafe conditions, poor

service, security deposit problems, requests for service, applications of tariff provisions, annoying telephone calls, interruptions of service, inaccurate and inoperative meters, rude service, use of unauthorized equipment, location of utility facilities, and damages (within the scope of the Board's jurisdiction).

During the year 1968, Service Inspection processed 2,335 complaints, 794 written and 1,541 verbal, covering all electric, gas, water, telephone and sewer utilities under the jurisdiction of the Board.

## COMBINATION WATER

### and SEWER

Lakewood Water Company

***A Touch of Nostalgia...*** Even in this atomic era there are still traces of a more leisurely age in New Jersey. Here one of the relatively few remaining street gas lights in the state is adjusted by a utility employee.
