

Potential Lead Exposure Mapping

A Story Map (<https://storymaps.arcgis.com>)

Potential Lead Exposure Mapping (PLEM) project provides a publicly available mapping tool to show potential sources of lead exposure. Currently this tool looks specifically at lead paint in housing as a source, provides information on distribution of one and two-family rental units built prior to 1980, and details the applicable lead-based paint inspection methodology per the requirements of P.L.2021, c.182. Future phases will incorporate other potential NJ lead sources. The tool can be used by local health officers, community groups and other members of the public to help identify the potential environmental sources of a child’s lead exposure. It is best viewed using Google Chrome or Mozilla Firefox.
