JON S. CORZINE
GOVERNOR

KRIS KOLLURI, ESQ.
COMMISSIONER

STATE OF NEW JERSEY
DEPARTMENT OF TRANSPORTATION
1035 PARKWAY AVENUE
P.O. BOX 601
TRENTON, N.J. 08625-0601
609-530-3535

August 9, 2007

The Honorable Jon S. Corzine
Governor
State House
P.O. Box 001
Trenton, NJ 08625-0001

Dear Governor Corzine:

Pursuant to your directive issued August 2, 2007, attached please find the interim report on bridges. The accompanying documents detail the number of bridges located in the state, their jurisdiction of control, structural condition, the date of last inspection and the anticipated date of the next inspection.

Of the 6,434 bridges in New Jersey, including those owned and operated by the State, New Jersey Transit, independent and bi-State authorities, counties and municipalities, there are 736 (11%) that are considered "structurally deficient". These are bridges whose deck, superstructure and/or substructure are deteriorated; however, this does not mean that these bridges are unsafe to travel on. I want to assure you that the safety of the motoring public is my highest priority.

In fact, under federal regulation, the New Jersey Department of Transportation rigorously inspects the bridges under its jurisdiction a minimum of every two (2) years, or more if necessary. Further, the NJDOT Office of the Inspector General is conducting unscheduled audits and investigations of all movable bridge operational procedures to test for compliance with all aspects of the Movable Bridge Protocol Program. I have asked the Inspector General to conduct similar audits of non-movable bridges as well. In addition, inspections of the seven (7) New Jersey bridges with similar deck truss structures as the bridge in Minneapolis have been ordered for immediate inspection based upon the Federal Highway Administration directive. These inspections began August 6, 2007 and will be conducted over the coming weeks.

Our focus is not just on inspection but funding bridge repair and maintenance programs, understanding that the fiscal constraints are enormous. Regularly scheduled and, if necessary, emergency maintenance is performed on our bridges, as determined by our bridge engineers and

You are viewing an archived copy from the New Jersey State Library

maintenance operations staff, on an on-going basis, and all available resources are devoted to this endeavor. Through your leadership, we have been successful in increasing our available state resources to $509 million in Fiscal Year 2008 dedicated to bridge preservation and maintenance. In New Jersey, the state bridges that are identified in the attached report as "structurally deficient" are prioritized to ultimately be replaced or rehabilitated through the Capital Program process.

This interim report will highlight and provide an overview of the condition of New Jersey's bridges, of which a vast majority (5,125) are owned by the NJDOT, county and municipal governments. Some of the findings in the report include: 4,196 (66%) of New Jersey's bridges are neither Structurally Deficient nor Functionally Obsolete; 1,502 (23%) are Functionally Obsolete; 396 bridges are Load Posted which limit the weights of trucks using the bridges. Additionally, there are 279 bridges in New Jersey that are required to have safety inspections at a more frequent cycle than the once every two years as required under federal regulations. These bridges (70 State, 14 NJ Transit, 185 County/Municipal, 4 Toll Highways and 6 Special Agency) are required to have interim inspections of the structural members where a potential exists for deterioration that could cause a loss of load carrying capacity.

Over the coming days, we will continue to synthesize this data and produce, as requested a final report for your review which will contain an anticipated capital investment strategy to bring our public bridges into a state of good repair.

Sincerely,

Kris Kolluri
Commissioner

State of New Jersey
OFFICE OF THE GOVERNOR
PO BOX 001
TRENTON NJ 08625-0001

JON S. CORZINE
GOVERNOR

August 2, 2007

The Honorable Kris Kolluri, Esq.
Commissioner
Department of Transportation
PO Box 600
Trenton, NJ 08625

Dear Commissioner Kolluri:

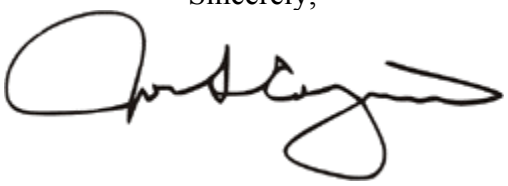
Recognizing the tragic events last night in Minneapolis, this morning I am calling on the New Jersey Department of Transportation to prepare a report describing the safety status of all bridges in the State. This report is to include bridges owned and operated by the State, New Jersey Transit, State and bi-state authorities, counties, municipalities, and orphan bridges.

I direct the Department to provide to me within 7 days an inventory of all bridges, including ownership, date of most recent inspection and identification of those classified as structurally deficient or functionally obsolete.

Within the next 45 days, I direct you to outline the current bridge capital investment strategy and identify the necessary resources to replace or repair any bridge within the jurisdiction of the Department, New Jersey Transit, the New Jersey Turnpike Authority, the South Jersey Transportation Authority or other public entities, to the extent permitted by current law, found to be structurally deficient or functionally obsolete.

These steps are necessary to provide a safe transportation system for every New Jersey resident and those traveling through our State.

Sincerely,



Jon S. Corzine

Highway Carrying Bridges in New Jersey
Inventory Report

Preface

In response to the loss of life during the catastrophic collapse of the Silver Bridge over the Ohio River between Ohio and West Virginia in 1967, the United States Congress passed a law mandating regular safety inspection of the nation's bridges. In 1969, the National Bridge Inspection Standards (NBIS) were added to the Code of Federal Regulations (23CFR650) mandating that all of the nation's highway carrying bridges over 20 feet long be inspected at a cycle of not more than two years. The NBIS also specifies requirements for the State bridge inspection organization, inspection personnel, inspection procedures, and data inventory. The New Jersey Department of Transportation instituted the mandated bridge safety inspection program starting in 1971. New Jersey's inspection requirements exceed the minimum standards set in the NBIS in order to reduce the risk that undetected deterioration of our bridges would impact the safety of the traveling public and the loss of valuable infrastructure.

The information contained in this report primarily comes from the current data in the Statewide Bridge Management System. Since the bridge inspection program is a continuous ongoing program and the data is continually being updated, there may be some minor inconsistencies in the data due to the lag between the actual inspection and the data update, especially for bridges not under the Department's jurisdiction. However, the overall data contained in this report gives an accurate representation of the condition of the highway carrying bridges in New Jersey.

Summary

At present, there are 6,434 highway carrying bridges over 20' long in New Jersey's bridge inventory. These bridges are categorized by their respective owners in Figure 1 (below).

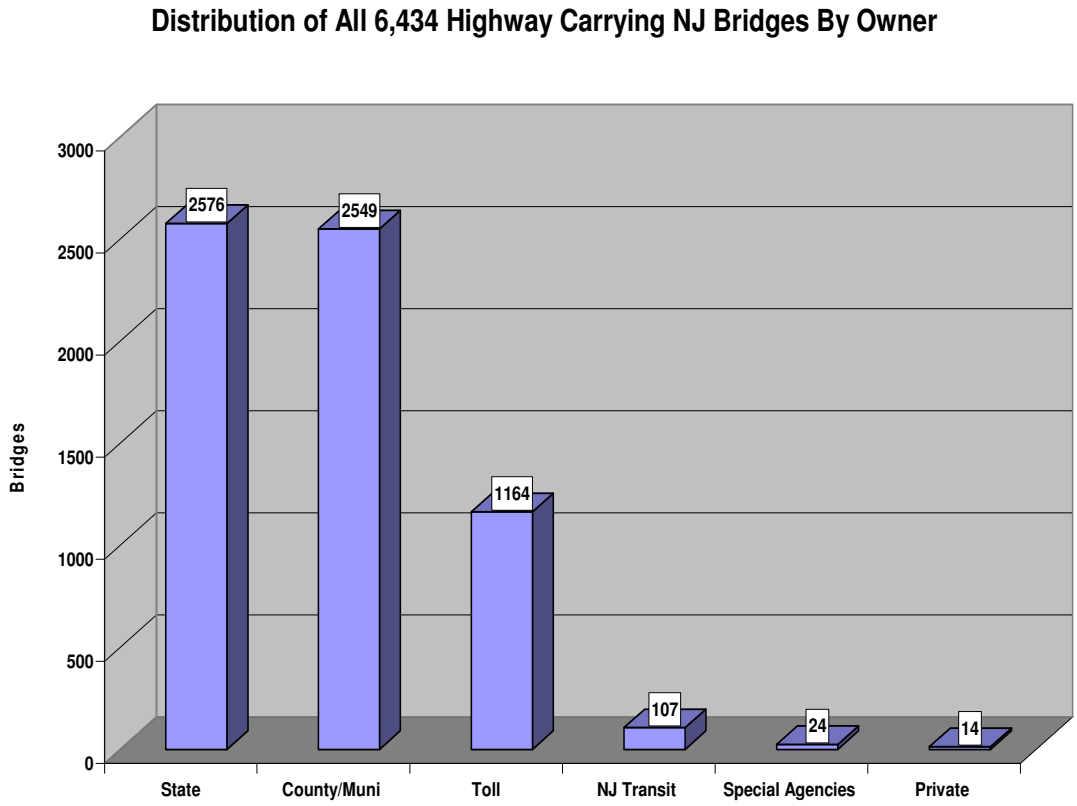

FIGURE 1

You are viewing an archived copy from the New Jersey State Library

Of all the bridges in New Jersey, Figure 2 (below) depicts the percentages of bridges that are Not Deficient (neither Structurally Deficient nor Functionally Obsolete), Structurally Deficient, and Functionally Obsolete.

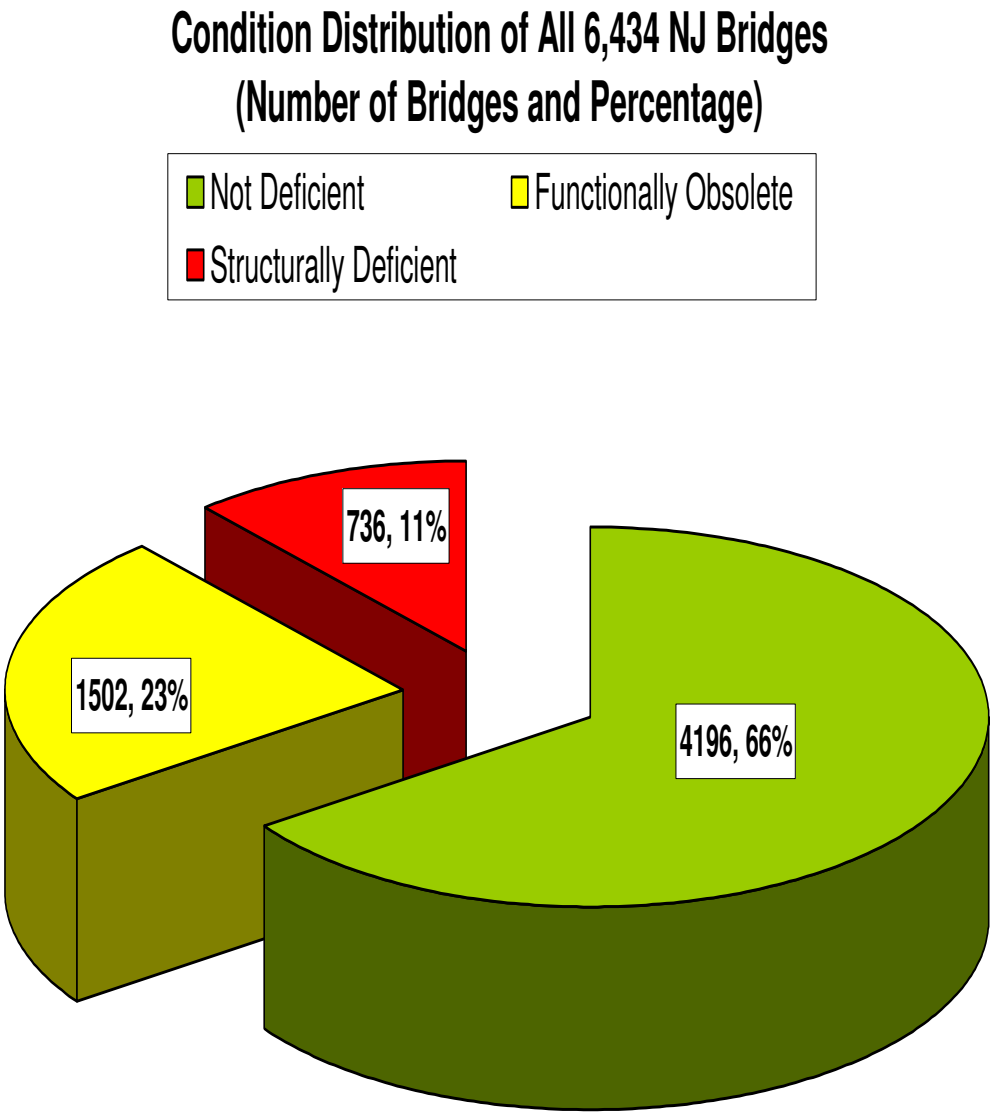

Figure 2

You are viewing an archived copy from the New Jersey State Library

Figure 3 (below) is a further breakdown of the bridges shown in Figure 2, showing the percentages of Not Deficient, Structurally Deficient and Functionally Obsolete bridges in New Jersey by bridge owner.

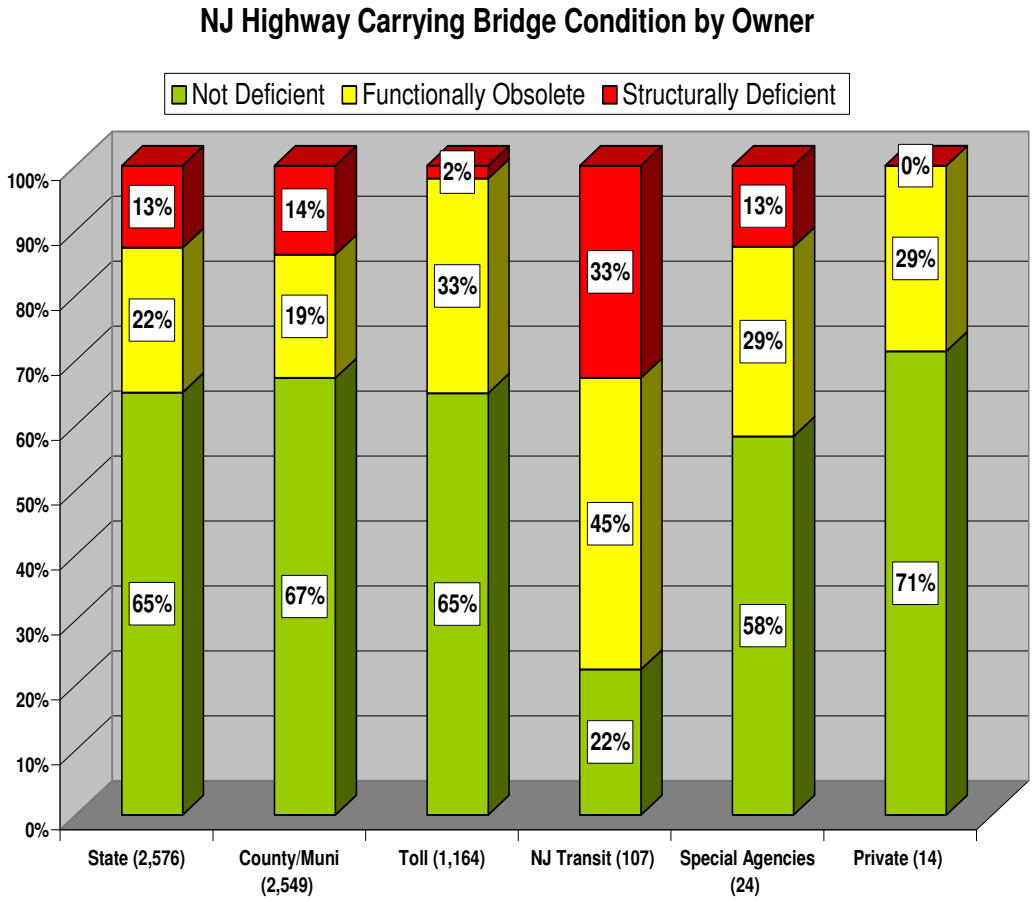

Figure 3

In addition to the regular biennial bridge safety inspection, the National Bridge Inspection Standards also mandate that additional types of inspections and other information be retained. Some of the additional information is as follows:

- There are 634 Fracture Critical (non-redundant) bridges in New Jersey (220 State, 42 NJ Transit, 266 County/Municipal, 99 Toll, 4 Special Agency & 3 Private). These bridges are constructed in a manner when the failure of a single member could result in the collapse of the entire bridge or a significant portion of the bridge. Fractured Critical bridges in general, are constructed with steel tension members that have welded, riveted or bolted connections. The Pulaski Skyway is an example of a riveted Fracture Critical bridge. Fracture Critical bridges are required to have more in-depth inspections than other bridges which lack such critical members.

You are viewing an archived copy from the New Jersey State Library

- There are 279 bridges in New Jersey that are required to have safety inspections at a more frequent cycle than those required for most bridges (70 State, 14 NJ Transit, 185 County/Municipal, 4 Toll & 6 Special Agency). These bridges are required to have interim (more frequent) inspections of the structural members where a potential exists for deterioration that could cause a loss of load-carrying capacity.

- There are 507 Scour Critical bridges in New Jersey (165 State, 340 County/Municipal & 2 Other). Scour Critical bridges have a potential for damage due to the erosion of streambed material during severe floods that could cause damage. The Scour Critical bridges are monitored during periods of severe flooding to assure that they have not sustained any damage. In addition, these bridges receive special inspections following the severe flooding to assure that no damage has occurred and to identify the need to repair any damage sustained.

- There are 396 Load Posted bridges—225 of which are required to be posted due to low load carrying capacity. Load Posted bridges have restrictions which limit the weights of trucks using the bridges. Four (4) State owned bridges are currently load posted (Pulaski Skyway/Passaic River, Pulaski Skyway/Hackensack River, Route 52/Rainbow Thorofare & Route 52/Elbow Thorofare).

The following information is provided as Attachments to this report:

- Attachment #1—NJ Highway Carrying Bridge Condition Inventory. The data report indicates the Category Owner, Maintenance (Responsibility), Route, Structure Number, (Bridge) Name, (Date of) Last Inspection, (Date of) Next Inspection, Deficient or Obsolete, and Sufficiency Rating for every bridge in New Jersey.

- Attachment #2—A list of all Structural Deficient bridges in New Jersey. The data report indicates the Category Owner, Maintenance (Responsibility), Route, Structure Number, (Bridge) Name, (Date of) Last Inspection, Sufficiency Rating, and Interim Inspection (Required) for every bridge in New Jersey.

- Attachment #3—Bridge Inventory Information from New Jersey State & Bi-State Authorities. Data provided by the State and Bi-State Authorities in response to Governor Corzine's letter to Commissioner Kolluri dated August 2, 2007.

As stated earlier in this report, the data provided is the current information in the Bridge Management System. This data may not represent the most up-to-date information due to the time lag between the date the bridges were last inspected and the time the database was updated. Understanding this issue, all bridge owners are being requested to verify their data and this report will be reconciled with the updated information once received.

NEW JERSEY BRIDGES

ATTACHMENT # 3 – Bridge Inventory Information from New Jersey State & Bi-State Authorities

IN RESPONSE TO

GOVERNOR CORZINE'S AUGUST 2ND LETTER

August 8, 2007

You are viewing an archived copy from the New Jersey State Library

The 7-day bridge inventory information has been provided by the following NJ State and bi-state authorities as requested by Governor Corzine in his letter to Commissioner Kolluri on August 2, 2007.

- Burlington County Bridge Commission
- Cape May County Bridge Commission
- Delaware River & Bay Authority
- Delaware River Joint Toll Bridge Commission
- Delaware River Port Authority
- New Jersey Sports & Exposition Authority
- New Jersey Transit Corporation
- New Jersey Turnpike Authority
- New Jersey Water Supply Authority
- Palisades Interstate Park Commission
- Port Authority of New York and New Jersey
- South Jersey Transportation Authority

Some of the bi-state authorities have included bridge information on bridges they would normally report on to Pennsylvania or Delaware. The information included in this report is as it was received by the authorities to be as inclusive as possible. This may result in differences in bridge inventory counts and other information, where data may be inconsistent.

Please note that our inventory predominantly includes only highway carrying bridges. Some of the authority information also includes railroad and pedestrian bridges. New Jersey Transit's inventory also includes light rail bridges in addition to their railroad bridges and some highway carrying bridges.

Trenton, New Jersey 08625

Re: NJDOT Request for Bridge Information
Burlington County Bridge Commission

Dear Commissioner Kolluri:

On behalf of the Burlington County Bridge Commission, please find enclosed herewith the information requested in your e-mail of August 3, 2007. This information was compiled primarily by the Commission's resident engineer, Pennoni Associates, Inc.

Please also be advised that today the Commission announced that it has ordered that immediate in-depth inspections be conducted on the Tacony Palmyra and Burlington Bristol Bridges. The Commission is also pleased to announce that its engineers are partnering with Drexel University on an immediate basis to work with them to explore, recommend, and implement any new technologies for monitoring and testing that could further enhance an already rigorous monitoring, inspection, and repair program undertaken at the Commission's bridges.

Finally, I would like to reiterate that while the Federal Highway Administration and New Jersey Department of Transportation require inspections every two years, all Commission bridges undergo annual inspections. In fact, the in-depth inspections which we will begin

You are viewing an archived copy from the New Jersey State Library

this week were originally scheduled to take place in June, 2008. However, in the wake of the Minnesota disaster, we are fast-tracking these inspections to assure the public that our bridges are safe.

If the Commission can be of any further assistance, please do not hesitate to contact me.

Very truly yours,

John D. Jeffers
Acting Executive Director

Burlington County Bridge Commission
Bridge Inventory Condition Response

August 6, 2008

You are viewing an archived copy from the New Jersey State Library

Bridge Name	Structure Number	Last Inspection	Next Inspection	Condition	Sufficiency Rating (S.R.)	Condition Notes		Current and/or Planned Action
Tacony-Palmyra Bridge	3000001	5/2007 (annual) 6/2006 (in-depth)	**August, 2007**	0 Not Deficient	42.1	Item 58	Good condition, bascule span grid deck is in poor condition	Design of new bascule span grid deck underway. Construction included in the Capital Program for FY 2008 (Oct 07-Sept 08)
						Item 59	Fair condition due to new bearings (July, 2006). Section loss, rust pack and deteriorated rivets noted throughout. Paint condition poor.	Design of floor beam repairs and design of painting for the bascule span underway. Construction included in the Capital Program for FY 2008.
						Item 60	Fair condition throughout	
						Item 62	N/A	
						Item 67	Fair (5)	
						Item 71	Above desirable	
Burlington-Bristol Bridge	3000002	5/2007 (annual) 6/2006 (in-depth)	**August, 2007**	1 Structurally Deficient	31.1	Item 58	Deck is in satisfactory condition; curbs in poor condition	Replacement of bridge wearing surface and repairs to deck joints underway. Construction included in the Capital Program for 2008.
						Item 59	Fair condition with section loss, rust pack and deteriorated rivets. Some bearings are frozen. Cracks in NJ Viaduct crossbeam connection welds and other welds in Tower Span. Operating Ropes in poor condition.	Bearing replacement design underway; monitoring of cracks and crossbeam repair design underway. Design of the replacement of the Lift Span operating ropes is underway. Tension members in truss have been load tested using strain gauges. Analysis and design of possible retrofit of members is currently being undertaken.
						Item 60	Substructure in poor condition; cracks and spalls throughout; south abutment bearing undermined	Design of South Abutment repair underway. Construction included in the Capital Program for FY 2008.
						Item 62	N/A	
						Item 67	Poor (4)	Due to poor rating on substructure. See Item 60 above.
						Item 71	Above desirable	
Riverside-Delanco Bridge	3000003	5/2007 (annual) 6/2006 (in-depth)	6/2008 (in-depth)	0 Not Deficient	65.7	Item 58	Fair condition	
						Item 59	Fair condition, corrosion and cracked welds throughout superstructure; bearings are frozen	Design for bearing replacement is underway; NDT testing planned on welds; remediation as required.
						Item 60	Fair condition, cracks and spalls throughout substructure concrete.	Design of fender repairs underway; budgeted for 2008
						Item 62	N/A	
						Item 67	Fair (5)	
						Item 71	Equal to minimum desirable	
Route 73 Overpass	3000004	4/2007 (annual)	5/2008 (in-depth)	0 Not Deficient	74.3	Item 58	Good condition	Deck repairs were completed in 2005 raising the coding from 4 to 7.

Re: Request Bridge Inventory and Capital Investment Strategy
Cape May County Bridge Commission

Dear Ms. Snyder:

As per Commissioner Kris Kolluri's August 3, 2007 request please find below the bridge inventory information for the Cape May County Bridge Commission (Commission):

Str. No.	Date of Last Regular Inspection	Date of Last Interim Inspection	Date of Next Regular Inspection	Condition of Bridge	Sufficiency Rating	Special Notes or Concerns
3100-001	10/03/2006	—	10/08	—	87.4	Yes
3100-002	10/21/2005	05/02/2007	10/07	SD, FO	12.4	Yes
3100-003	10/20/2005	05/02/2007	10/07	SD, FO	2.0	Yes
3100-005	10/24/2005	05/02/2007	10/07	SD, FO	2	Yes
3100-006	10/21/2005	05/02/2007	10/07	SD, FO	7	Yes

SD – Structurally Deficient
FO – Functionally Obsolete

Each of the five bridges owned and operated by the Commission was the subject of one or more priority repair letter. The Commission has engaged the services of PB Americas, Inc. Princeton, NJ or Bergmann Associates, Inc., Jersey City to address many of the items noted in the priority repair letters for all structures but Str. No. 3100-001.

Special notes or concerns for each bridge are as follows:

Str. No. 3100-001 was the subject of a Priority 1 Repair letter regarding the marine fender system about Pier 12. The fender system has since dislodged from the pier and sank.

Str. No. 3100-002 was a subject of emergency repairs due to deteriorated condition of the steel stringers and bascule girders. Immediately upon notification of issues with the deterioration resulting in very low live load ratings, the bridge weight posting was dropped to '3' tons. The emergency repair program restored the bridge back to its 15 ton load posting. This bridge was also the subject of a Priority 2 Repair letter regarding some large spall areas

You are viewing an archived copy from the New Jersey State Library

and bridge railing. The railing has since been repaired and the spall areas are the subject of the contract documents being prepared by PB Americas.

Str. No. 3100-003 is the subject of a Priority 2 letter regarding extensive steel corrosion in the bascule span; bearings and bearing plate issues; fender system condition; and locations of severe scaling in some piers. The bascule span repairs are included in a construction contract being prepared by Bergmann Associates. PB Americas is currently preparing a construction contract addressing the other noted priority repair items except for the fender system. The fender system will be addressed by others.

Str. No. 3100-005 is the subject of a Priority 1 and 2 repair letter regarding the expanded condition of certain bearings; extensive corrosion of the steel stringers in the bascule span; and spalling on the concrete piles. The bascule span issues are subject of a project being designed by Bergmann Associates regarding the reconstruction of the bascule span and the other repair needs are the subject of the repair program under design by PB Americas, Inc.

Str. No. 3100-006 is the subject of a Priority 2 repair letter regarding the expanded condition of certain bearings, the fender system condition and a wide crack in a pier check wall. The fender system will be the subject of a construction contract being prepared by the Cape May County Engineer's Office and the other repair needs are the subject of the repair program under design by PB Americas, Inc.

Four of the Commission bridges are load posted for 15 tons. The original design of these bridges was for a 17.5 ton vehicle. The Commission bridges vary in length from 1,032 feet to 3,400 feet.

The Cape May County Bridge Commission is a financially strapped public agency that has recently bonded for approximately $10 million. Most if not all of these funds will be expended just addressing the emergency and/or priority repairs noted in the most recent bridge re-evaluation cycle. Substantial additional funds are required to clean and paint the bridge so as to arrest the currently unabated corrosion of the structural steel in this harsh marine environment.

Should you have any questions, please do not hesitate to contact me.

Very truly yours,

Original Signed

Dale M. Foster, P.E.
County Engineer

Delaware River and Bay Authority

You are viewing an archived copy from the New Jersey State Library

Please find the specific inventory information requested via NJDOT Commissioner Kolluri's email of August 3, 2007. I have added some additional general information for your use

Facility: Delaware Memorial Bridge
Owner: Delaware River and Bay Authority
Facility Description:

In April 1945 the Delaware State Highway Department was authorized to construct and operate a crossing of the Delaware River between New Castle, Delaware, and Pennsville, New Jersey. It took $44 million to build the graceful 440-foot-high span, which opened to traffic on August 15, 1951.

The first span provided a Delaware River crossing for 17 years. Three days after the second span was opened in 1968, the first span closed for more than a year for a major overhaul. Both spans became available to traffic on December 29, 1969.

	First Span-NJ bound (I-295N)	Second Span-DE bound (I-295S)
Main Spans, Suspension Bridge	2,150 feet	2,150 feet
Side Spans, Suspension Bridge	two at 750 feet	two at 750 feet
Total length, Suspension Bridge	3,650 feet	3,650 feet
Date Opened to Traffic	1951	1969

Date of last Inspection: First Span – 8/2006
Second Span – 7/2005
Date of next planned inspection: First Span – 8/2008
Second Span – 8/2007
Condition of each bridge: First Span – Good
Second Span – Good
Sufficiency Rating from last inspection: First Span – 68
Second Span – 71.1
Any Special concerns or notes from prior inspections:
First Span – None. Structurally Deficient (No), Functionally Obsolete (No)
Second Span – None. Structurally Deficient (No), Functionally Obsolete (No)

Each Span has a detailed inspection every two years. As seen above, those inspections alternate. In the alternate years, when a span is not undergoing a detailed inspection, it undergoes a cursory visual inspection via a walk-through. Approximately 75% of the DMB is in Delaware. Consequently, inspection results are reported to the Delaware Department of Transportation for the National Bridge Inspection Program.

Capital investment strategy and resource needs for the Delaware Memorial Bridge will be sent by August 31, 2007.

Jim Johnson, Jr., P.E.

Trenton, NJ 08625

Re: Request for Sufficiency Ratings

Dear Commissioner Kolluri:

This letter is in response to your request for information pertaining to bridge structures owned and operated by the Delaware River Joint Toll Bridge Commission. The Commission reports the inspection results of its main river bridges (22 in all, I-80 and I-78 are twin structures) along with all the associated Pennsylvania approach structures (14) to PennDOT. The New Jersey approach structures (18) within the Commission's jurisdiction are reported to NJDOT.

The Commission has contacted each DOT to obtain the data which is reported in the attached table. As part of its bridge inspection program the Commission inspects all of its toll bridges and associated approach structures in odd years (e.g. 2005, 2007, etc.) and its toll supported bridges and associated approach structures in even years (e.g.: 2004, 2006, etc.). The following toll bridges and their associated approach structures are being inspected as part of the 2007 General Engineering Consultant (Lichtenstein Consulting Engineers) – Annual Inspections, Contract C-07-02:

- Trenton-Morrisville (US Route 1) – currently under construction
- New Hope-Lambertville (Rte 202) – inspection completed 7-20-07
- Interstate 78 (I-78)
- Easton-Phillipsburg (Rte 22)
- Portland-Columbia (US 46 & PA 611)
- Delaware Water Gap (I-80)
- Milford-Montague (Rt. 206)

We anticipate completing all of the above bridge inspections by the end of September 2007.

110 Wood Street
Morrisville, PA 19067

CONTINUATION SHEET

DELAWARE RIVER JOINT TOLL BRIDGE COMMISSION

The attached table and the information below tabulate our response to the five issues contained in your letter for all the bridges under the Commissions jurisdiction as reported to PA or NJ.

1. Date of last inspection.
2. Date of next planned inspection.
3. Condition of each bridge, i.e., whether classified as "structurally deficient or functionally obsolete"
4. Sufficiency rating for each bridge from the last inspection.
5. Any special concerns or notes made about the bridge from prior inspections.

Be advised that since 2001 the Commission has undertaken a comprehensive capital improvement program that will see the rehabilitation of each of its twenty main river bridges by the year 2015. Specific to those bridges that are listed on the attached table as structurally deficient the Commission has:

1. In 2004 completed a $4.5 million rehabilitation of the Lower Trenton Bridge.
2. In 2007 completed a $9.8 million rehabilitation of the Centre Bridge- Stockton Bridge.
3. In 2001 completed a $5.8 million rehabilitation of the Uhlerstown – Frenchtown Bridge
4. In August 2007 will undertake a structural analysis of the Calhoun Street bridge to identify and assess various rehabilitation options.
5. Monitor the Broad Street Viaduct as part of its overall bridge inspection program. The viaduct will be inspected this month as part of the Commission's program to inspect all Toll Bridges and their approach structures in "odd" years.

It is noted that the I-78 main river bridges (there are two) and the three PA approach structures are not currently in PADOT's BMS system. We are presently contacting PADOT to resolve this omission.

If you have any questions or need further information please contact me. I can be reached at 267-790-1002, or fgmccartney@drjtbc.org.

Sincerely,

FRANK G. MCCARTNEY
Executive Director

MEMORANDUM

DELAWARE RIVER PORT AUTHORITY
of Pennsylvania & New Jersey

TO: Pat Snyder, Executive Director of Policy & Authority Coordination, NJDOT via email: pat.snyder@dot.state.nj.us

FROM: John J. Matheussen, CEO

SUBJECT: Delaware River Port Authority Requested Bridge Inventory

DATE: August 7, 2007

Ms. Snyder: attached you will find the requested bridge inventory related to Governor Jon S. Corzine's Directive 8.02.07. It is in spreadsheet form and includes the age of the bridges, date of last inspection, date of next planned inspection, condition of each bridge and sufficiency rating for each bridge from the last inspection. Highway ramps, approaches and viaducts for each bridge are also included.

It is important to note at the onset all of DRPA's bridges and pertinent structures have been certified to be in good or satisfactory condition during our 2006 Biennial Inspection.

The Delaware River Port Authority subjects each of its bridges to regular in-depth Biennial Inspections. These inspections are undertaken every 2 years in accordance with the National Bridge Inspection Standards (NBIS). Pursuant to federal regulations, interim inspections are done if needed, as conditions arise. The NBIS are federal regulations which establish requirements for:

- Inspection Procedures
- Frequency of Inspections
- Qualifications of Inspection Personnel
- Inspection Reports
- Maintenance of Bridge Inventory

The inspections are performed by qualified independent consulting engineering firms who have demonstrated requisite expertise. Information as to the condition of each bridge is submitted to the New Jersey Department of Transportation who in turn submits the information for inclusion in

You are viewing an archived copy from the New Jersey State Library

the National Bridge Inventory.

In addition to the Biennial Inspections, stringent underwater inspections are performed at each bridge every four years. This exceeds the NBIS requirement that underwater inspections be conducted at a maximum 5 year interval. (The underwater inspections look for scouring/erosion, undermining of the footings, or other damage to portions of the bridge below the waterline.)

The Biennial Reports include a listing of recommended repairs, along with a recommended timeframe for completing those repairs. These recommendations are reviewed by in-house Engineering staff and are instrumental in guiding the development of the Authority's Capital Program.

The Authority has an in-house engineer assigned to each facility along with dedicated maintenance staff. The Authority's Bridge Engineer coordinates with Bridge Operations staff to determine which of the repairs can be completed in-house and which require the use of an outside contractor.

The DRPA has continually maintained a very aggressive, proactive program of identifying elements of each bridge in need of attention and a Capital Program that addresses these issues in advance of them becoming structural concerns.

The required capital investment strategy and resource needs will be provided to your office to meet the Friday, August 31, 2007 close of business deadline.

Please do not hesitate to contact my office if we can provide any further information in this regard.

* The Authority's Board awarded a contract for the design of the Walt Whitman Bridge deck replacement in June, 2007. Design efforts are scheduled for completion in 2008 with construction immediately following. Components of the deck will be inspected annually until redecking work is completed.

The Port Authority Transit Corporation (PATCO) is a wholly owned subsidiary of DRPA. PATCO is a subway/surface heavy rail rapid transit line operating between Lindenwold, NJ and Philadelphia, PA. Railroad bridges are not covered by the NBIS standards and hence are not given sufficiency ratings.All PATCO bridges however undergo the same level of inspection and are inspected during our Biennial Inspections. **All of the PATCO bridges have been certified as in good or satisfactory condition during our 2006 Biennial Inspection.

Structurally Deficient — Refers to bridges which either have load restrictions as a result of deteriorated conditions or provide inadequate waterway openings

Functionally Obselete — Refers to bridges with deck geometry, load carry capacity, clearence or alignment that no longer meets current criteria

Sufficiency Rating — The numerical rating of a bridge based on its structural adequacy and safety, essentiality for public use, and its serviceability and functional obsolescence.

To: George Zoffinger

August 7, 2007

From: John Duffy

Subject: Requested Bridge Inventory and Capital Investment Strategy

As per the information request from the Department of Transportation:

South Connector Bridge Over Rt. 120:

1. Date of Last Inspection: July 2006
2. Date of Next Planned Inspection: July 2008
3. Condition of Bridge: Not Deficient
4. Sufficiency Rating: 71
5. Special Concerns or Notes: Substructure was downgraded from good to fair condition due to large spalls with rusted rebar in the east abutment breastwall. Work is being completed as part of the Xanadu and Rail projects to correct this.

North Connector Bridge Over Rt. 120:

1. Date of Last Inspection: July 2006
2. Date of Next Planned Inspection: July 2008
3. Condition of Bridge: Functionally Obsolete
4. Sufficiency Rating: 82
5. Special Concerns or Notes: The overall condition of the structure is fair due to the condition of the substructure.

Pedestrian Bridge Over Rt. 120:

1. Date of Last Inspection: July 2006
2. Date of Next Planned Inspection: July 2008
3. Condition of Bridge: N/A
4. Sufficiency Rating for Each Bridge: N/A
5. Special Concerns or Notes: Since the previous inspection, deficient bridge abutments have been removed as part of the Xanadu project. As a result, the substructure has been upgraded from fair to satisfactory condition. The overall condition of the structure is satisfactory due to the conditions of the superstructure and substructure.

To keep all bridges in a “state-of-good-repair,” $100,000 should be budgeted annually for inspections and routine maintenance. At this time, we anticipate the need for significant work within five (5) years due to the age and use of the North and South

You are viewing an archived copy from the New Jersey State Library

Connector Bridges. We anticipate that expense to be approximately $500,000. per bridge.

Thank you and please contact me with any questions or concerns.

NJ TRANSIT

Memorandum

TO: Kris Kolluri, Esq.

FROM: Richard R. Sarles

DATE: August 7, 2007

SUBJECT: NJ TRANSIT Bridge Inventory

The attached inventory of NJ TRANSIT-owned bridges is provided in response to your request dated August 2, 2007.

The inventory provides information on the location, date of last inspection, condition rating, and any special concerns for NJ TRANSIT's 96 overhead bridges, 538 undergrade railroad bridges, and 38 light rail bridges. Overhead bridges are assigned sufficiency ratings on a scale of 0 to 100 and undergrade bridges are classified according to the Brim rating scale from "poor" to "good". Bridges with sufficiency ratings below 50 or identified in "poor" condition are noted and identified as "structurally deficient" or "functionally obsolete" where appropriate. Where the condition of the bridge is not indicated, the bridge is in "fair" or "good" condition.

NJ TRANSIT's in-house trained bridge inspectors conduct visual inspections of all bridges once annually. NJ TRANSIT further contracts with engineering firms to have licensed engineers inspect all overhead bridges (road over railroad) every two years consistent with FHWA requirements. The next inspection dates for these bridges are two years after the last inspection date. Additionally, NJ TRANSIT contracts with engineering firms to have licensed engineers inspect all undergrade bridges (railroad over road, water, etc.) every five years. The next inspection dates for these bridges are five years after the last inspection date.

Please let me know if you have any questions. By August 31, I will provide a capital investment strategy to bring all bridges up to a state of good repair and will refresh the bridge inventory at that time.

New Jersey Water Supply Authority

You are viewing an archived copy from the New Jersey State Library

The New Jersey Water Supply Authority does not own any bridges but is responsible for the maintenance of one bridge that carries traffic over a waterway, Canal Road over Six Mile Run in Franklin Township, Somerset County (Structure No. 18G0403). The Canal is owned by the NJDEP and is operated as a water supply source by the Authority. Bridges that convey traffic over the Canal are maintained by the NJDOT, the municipalities and counties.

Structure No. 18G0403 is included on the State's bridge inventory and is inspected by a consultant working for the Somerset County, Office of the County Engineer. The latest inspection of the structure was completed in November 2005 by IH Engineers, PC of Princeton, NJ. The bridge received and overall condition rating of Satisfactory. The structure is considered as Functionally Obsolete due to the substandard bridge roadway width. It should be noted that the bridge and the Delaware and Raritan Canal are on the State and National Registers of Historic Places. The next scheduled inspection of the bridge will be in November 2007.

The Authority is responsible for the maintenance of the multi arch culvert under the road and the Canal and the headwalls at the upstream and downstream end of the culvert but are not responsible for the roadway. The Authority also periodically removes the debris that accumulates at the upstream end of the structure. The Authority has retained an engineer/diver to inspect the culvert barrels and recommend rehabilitation as needed. That inspection is scheduled for early September 2007.

BRIDGE INSPECTION CONDITIONS SUMMARY

Structure No.	Location	Last Inspection Date	Overall Rating	Sufficiency Rating	Major Conclusions	Major Recommendations
4000-001	Parkway Eastbound (Linwood Extension) over Lemoine Ave. (Rt. 67)	9/20/2005	Fair	84.7	Bridge is rated fair due to low inventory rating due to as- built capacity of steel stringer.	None
4000-002	Parkway Westbound (Linwood Extension) over Lemoine Ave. (Rt. 67)	9/20/2005	Satisfactory	94.4	None	None
4000-003	Parkway (Linwood Extension) over Hudson Terrace and Parkway southbound	9/21/2005	Poor	96	Functionally obsolete due to inadequate vertical and lateral underclearances.	Bridge replacement
4000-004	Pedestrian Overpass over Parkway Northbound at Linwood Extension	12/20/2001	Satisfactory	N/A	None	None
4000-005	Parkway over Allison Park Road	9/21/2005	Satisfactory	85.4	Functionally obsolete due to substandard vertical underclearance	Lower roadway below bridge by 10".
4000-006	Parkway over Palisade Avenue	9/22/2005	Satisfactory	90.7	Functionally obsolete due to substandard vertical underclearance	Lower roadway below bridge by 2".
4000-007	Parkway Southbound over Greenbrook Rd.	9/22/2005	Satisfactory	91.4	None	None
4000-008	Parkway Northbound over Greenbrook Rd.	9/27/2005	Satisfactory	90.4	Bridge is rated satisfactory due to low inventory rating.	None
4000-009	Parkway Southbound over pedestrian thoroughfare	9/27/2005	Satisfactory	96.6	None	None
4000-010	Parkway Northbound over pedestrian thoroughfare	9/28/2005	Satisfactory	96.6	None	None
4000-011	Parkway Southbound over Alpine Approach Road	9/28/2005	Satisfactory	96.4	None	None
4000-012	Parkway Northbound over Alpine Approach Road	9/29/2005	Satisfactory	94.6	None	None
4000-013	Pedestrian Overpass over Parkway at Exit No. 3	12/20/2001	Satisfactory	N/A	None	None
4000-014	Parkway Southbound over Rt. 9W	9/29/2005	Satisfactory	92.8	Functionally obsolete due to inadequate horizontal underclearance	Remove abutment barriers below bridge and restripe roadway
4000-015	Parkway Northbound over Rt. 9W	10/4/2005	Fair	63.1	Functionally obsolete due to inadequate deck geometry and horizontal underclearance.	Widen bridge and restripe road below bridge
4000-016	Henry Hudson Drive over Greenbrook Falls	10/5/2005	Fair	72.8	Spalling in arch superstructure	Repair concrete on superstructure
4000-017	Englewood Boat Basin Access Road over Sylvan Brook	10/4/2005	Very Good	78.5	None	None

All bridges are due to be reinspection starting in the fall of 2007. Awaiting final contract from NJDOT.
For a list of priority repair recommendations see tab entitled Priority Work

ITEM 67

STRUCTURAL EVALUATION CONDITION

Code	Description
N	Not applicable
9	Superior to present desirable criteria
8	Equal to present desirable criteria
7	Better than present minimum criteria
6	Equal to present minimum criteria
5	Somewhat better than minimum adequacy to tolerate being left in place as is
4	Meets minimum tolerable limits to be left in place as is
3	Basically intolerable requiring high priority of corrective action
2	Basically intolerable requiring high priority of replacement
1	This value of rating code not used
0	Bridge closed

Bridge Sufficiency Rating

Under the FHWA's Highway Bridge Replacement and Rehabilitation Program, money budgeted for bridge improvements is allocated to different states for use on national publicly-operated bridges. NBI data for each state, in particular, bridge condition and appraisal ratings, are used in making decisions as to how these funds are to be allocated. Through a complex formula that uses these ratings as input values, each bridge is assigned a "sufficiency rating." These ratings are a quantitative measure of the degree of sufficiency of a bridge. The sufficiency rating is a numeric value which indicates a bridge's relative ability to serve its intended purpose. The American Association of State Highway and Transportation Officials (AASHTO) Sufficiency Rating Formula defines the method for calculating this numeric value. The result of this calculation is a percentage in which 100% would represent an entirely sufficient bridge and 0% would represent an entirely insufficient or deficient bridge.

Factors in Determining Sufficiency Rating

Condition ratings of the superstructure and substructure or culvert, and inventory rating (load carrying capacity of the structure), have the most impact in the sufficiency rating calculation. Serviceability, functional obsolescence, and essentiality for public use are also considered in the sufficiency rating calculation. Loss of accessibility to schools, businesses, etc., due to a posted or closed bridge, constitutes an undue hardship to the public, not to mention the reduction or loss of essential services, i.e., fire, police, medical services. Also, lengthy detours due to a closed or posted structure present ecological and financial hardship. All these factors combine to produce the sufficiency rating.

Structural adequacy and safety **(S_1 = 55% maximum)**

The first and most weighted factor in determining a bridge sufficiency rating is structural adequacy and safety. This counts for up to 55 percent of the rating, and is determined using primarily two criteria, bridge superstructure (Item 59) and substructure (Item 60). These bridge elements are rated on a scale from 0 to 9, and the lowest rating of the two categories determines the base for the structural part of the overall sufficiency rating. For example a condition rating of 5 or higher, meaning that all primary structural elements are sound, earns a bridge a base rating of 45 percent. This base rating may be lowered in relation to the bridge load carrying capacity (Inventory Ratings Item 66); for example, if a bridge can only support 20 metric tons, about 15 percentage points would be subtracted from the base rating. The less weight a bridge can hold, the more points are deducted from this category; no points are deducted if the bridge can carry 32 metric tons or more.

Serviceability and functional obsolescence **(S_2 = 30% maximum)**

The second factor, which counts for up to 30 percent of the rating, is serviceability and functional obsolescence. In this category, each bridge starts out with a 30 percent rating, and deductions are made for characteristics such as poor deck condition, inadequate allowance for drainage, low underclearances and overhead vehicle clearances, and insufficient roadway and narrow lane width.

You are viewing an archived copy from the New Jersey State Library

Essentiality for public use **(S_3 = 15% maximum)**

The third factor is essentiality for public use, which makes up 15 percent of the rating. This factor is calculated using a ratio that includes the average daily traffic (Item 29), the total detour length (Item 19) if the bridge is out of service, the STRAHNET Highway Designation (Item 100) and the previous two factors. High daily traffic and detour length will lower the score, while having high ratings in both structural adequacy and serviceability will raise it.

Special Reductions **(S_4 = 13% maximum)**

In addition to these three main categories, special deductions can be taken from a bridge's rating if the bridge falls into certain structure-type categories or if the bridge lacks (or has inadequate) safety features such as railings and approach guardrails. However, these deductions cannot total more than 13 percent. These deductions are subtracted from the sum of the three main categories, and the resulting number is the overall sufficiency rating. A graph depicting the sufficiency rating criteria is shown in Figure 1 of appendix B.

The sufficiency rating could be generated automatically using various bridge management softwares, or hand calculated using the Sufficiency Rating Formula in appendix B

Eligibility of Deficient Structures

It's important to note that only eligible structures determined to be deficient, i.e. structurally deficient (SD) or functionally obsolete (FO), are considered in the process for apportioning Highway Bridge Program (HBP) funding. Deficient structures, as defined in attachment A, with an SR value less than 50 are eligible for replacement, 50 to 80 are eligible for rehabilitation, and above 80 are not considered eligible. Other eligibility rules also apply, i.e. the structure must be of bridge length and had not been constructed or had major reconstruction within the past ten years. In general, the lower the SR, the higher is the probability to qualify for federal fund.

You are viewing an archived copy from the New Jersey State Library

Attachment A

Basic method for determining if a structure is deficient.
Non-Regulatory Supplement for subpart 650, subpart D
HIGHWAY BRIDGE REPLACEMENT AND REHABILITATION PROGRAM (23 CFR 650.409). The National Bridge Inventory will be used for preparing the selection list of bridges both on and off of Federal-aid highways. Highway bridges considered structurally deficient or functionally obsolete and with a sufficiency rating of 80 or less will be used for the selection list. Those bridges appearing on the list with a sufficiency rating of less than 50.0 will be eligible for replacement or rehabilitation while those with a sufficiency rating of 80.0 or less will be eligible for rehabilitation. To be considered for the classification of deficient bridge, a structure must be of bridge length, and had not been constructed or had major reconstruction within the past 10 years.

A structurally deficient bridge, as defined by the FHWA, is one whose condition or design has impacted its ability to adequately carry its intended traffic loads. A functionally obsolete bridge is one in which the deck geometry, load carrying capacity, clearance, or approach roadway alignment has reduced its ability to adequately meet the traffic needs below accepted design standards.

General Qualifications: In order to be considered for either the structurally deficient or functionally obsolete classification a highway bridge must meet the following:

Structurally Deficient -
A condition rating of 4 or less for
Item 58 - Deck; or
Item 59 - Superstructures; or
Item 60 - Substructures; or
Item 62 - Culvert and Retaining Walls. (1)
Or an appraisal rating of 2 or less for
Item 67 - Structural Condition; or
Item 71 - Waterway Adequacy. (2)

Functionally Obsolete -
An appraisal rating of 3 or less for
Item 68 - Deck Geometry; or
Item 69 - Underclearances; (3) or
Item 72 - Approach Roadway Alignment.
Or an appraisal rating of 3 for
Item 67 - Structural Condition; or
Item 71 - Waterway Adequacy. (2)

Any bridge classified as structurally deficient is excluded from the functionally obsolete category.
Foot Notes
1. Item 62 applies only if the last digit of Item 43 is coded 19.
2. Item 71 applies only if the last digit of Item 42 is coded 0, 5, 6, 7, 8 or 9.
3. Item 69 applies only if the last digit of Item 42 is coded 0, 1, 2, 4, 6, 7 or 8.

Appendix B

Sufficiency Rating Formula and Example

The sufficiency rating formula described herein is a method of evaluating highway bridge data by calculating four separate factors to obtain a numeric value which is indicative of bridge sufficiency to remain in service. The result of this method is a percentage in which 100 percent would represent an entirely sufficient bridge and zero percent would represent an entirely insufficient or deficient bridge.

An asterisk prefix is used to identify a sufficiency rating that was calculated even though some essential data was missing or coded incorrectly. The Edit/Update Program will substitute a value for the unusable data (which will not lower the rating) and calculate the sufficiency rating. The asterisk is dropped when the unusable data is corrected. It is normal that all culverts with Bridge Roadway Width, Curb-to-Curb - Item 51 coded '0000' will have an asterisk prefixed sufficiency.

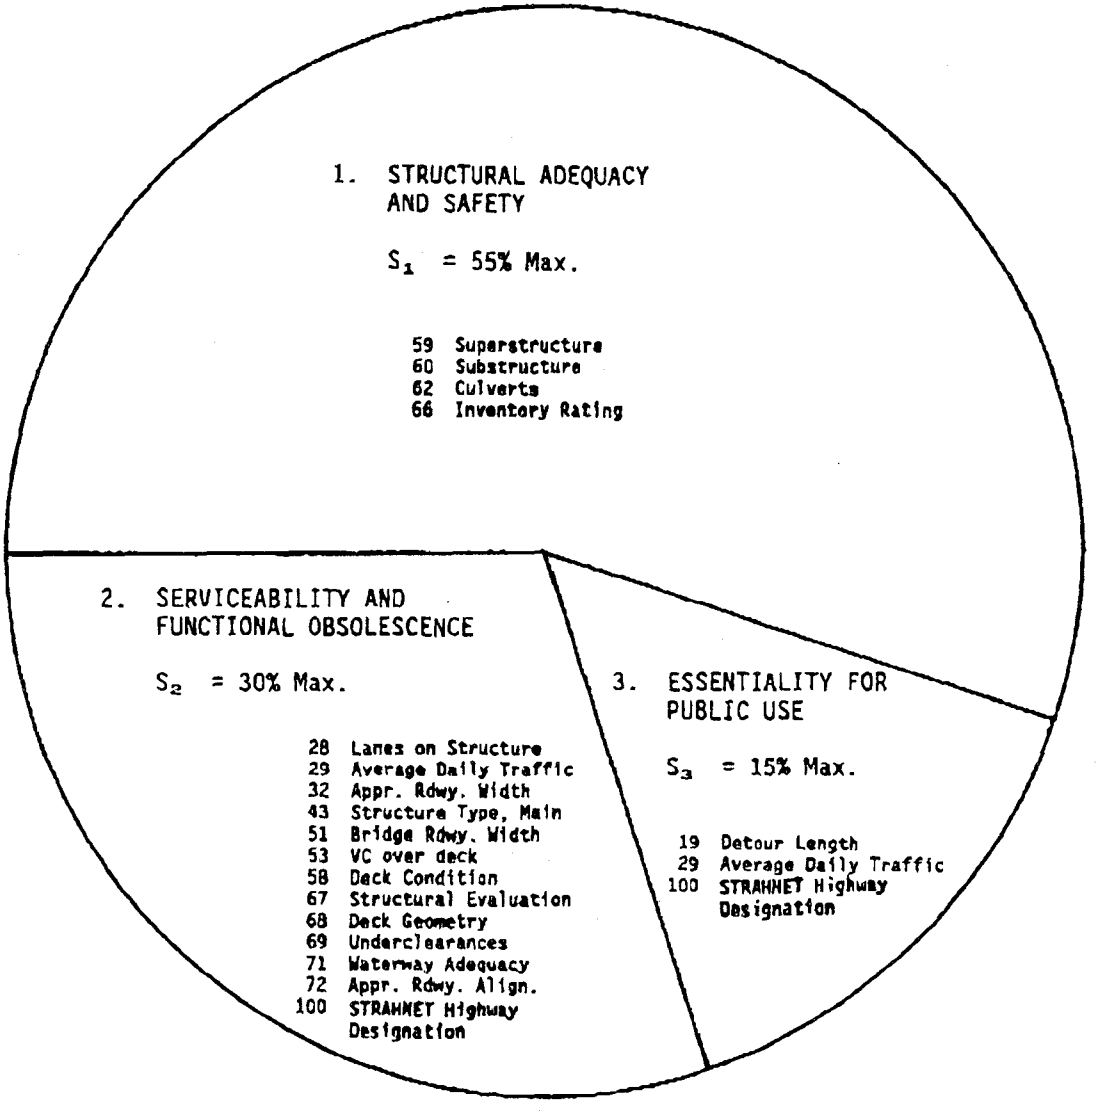
Figure 1. Summary of Sufficiency Rating Factors



4. SPECIAL REDUCTIONS

S_4 = 13% Max.

19 Detour Length
36 Traffic Safety Features
43 Structure Type, Main

SUFFICIENCY RATING = $S_1 + S_2 + S_3 - S_4$

Sufficiency Rating shall not be less than 0% nor greater than 100%

You are viewing an archived copy from the New Jersey State Library

Sufficiency Rating Formula

1. Structural Adequacy and Safety (55% maximum)

   a. Only the lowest rating code of Item 59, 60, or 62 applies.

If Item 59 (Superstructure Rating) or Item 60 (Substructure Rating) is	≤ 2	then	A = 55%
	= 3		A = 40%
	= 4		A = 25%
	= 5		A = 10%
If Item 59 and Item 60 = N and Item 62 (Culvert Rating) is	≤ 2	then	A = 55%
	= 3		A = 40%
	= 4		A = 25%
	= 5		A = 10%

   b. Reduction for Load Capacity:

   Calculate using the following formulas where IR is the Inventory Rating (MS Loading) in tons or use Figure 2:

   $$B = (32.4 - IR)^{1.5} \times 0.3254$$

   or

   If $(32.4 - IR) \leq 0$, then $B = 0$

   "B" shall not be less than 0% nor greater than 55%.

$S_1 = 55 - (A + B)$

S_1 shall not be less than 0% nor greater than 55%.

You are viewing an archived copy from the New Jersey State Library

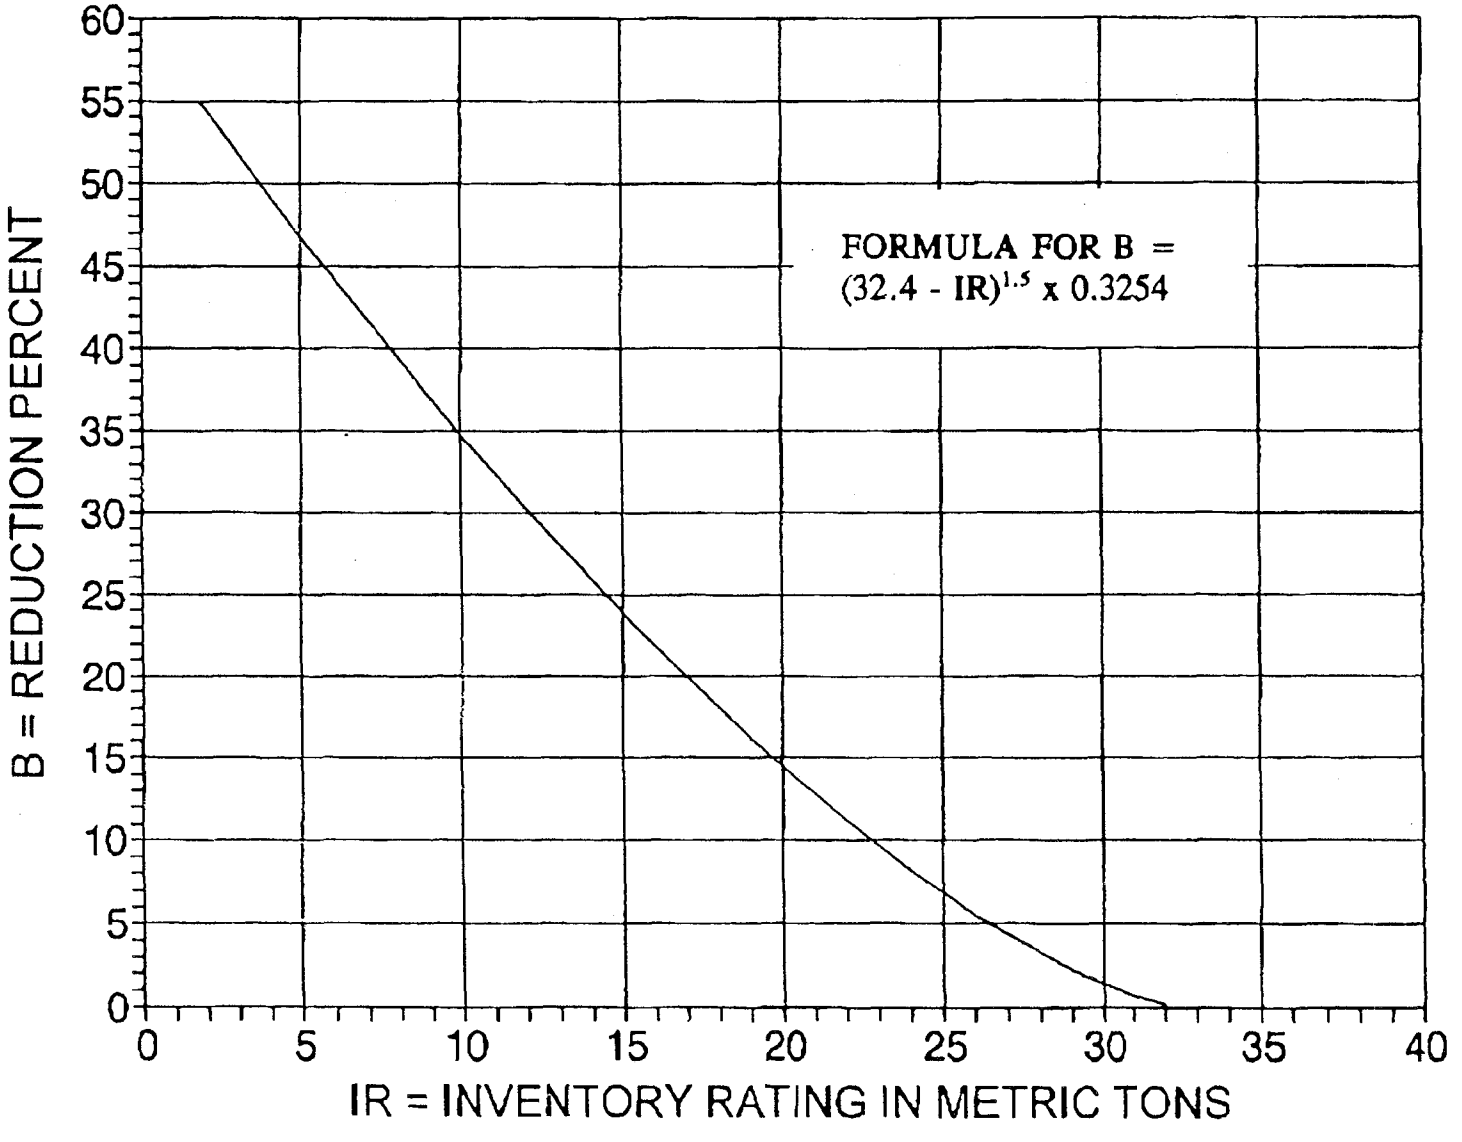


FIGURE 2. Reduction for Load Capacity

You are viewing an archived copy from the New Jersey State Library

2. Serviceability and Functional Obsolescence (30% maximum)

a. Rating Reductions (13% maximum)

If #58 (Deck Condition) is	≤ 3	then	A = 5%
	= 4		A = 3%
	= 5		A = 1%
If #67 (Structural Evaluation) is	≤ 3	then	B = 4%
	= 4		B = 2%
	= 5		B = 1%
If #68 (Deck Geometry) is	≤ 3	then	C = 4%
	= 4		C = 2%
	= 5		C = 1%
If #69 (Underclearances) is	≤ 3	then	D = 4%
	= 4		D = 2%
	= 5		D = 1%
If #71 (Waterway Adequacy) is	≤ 3	then	E = 4%
	= 4		E = 2%
	= 5		E = 1%
If #72 (Approach Road Alignment) is	≤ 3	then	F = 4%
	= 4		F = 2%
	= 5		F = 1%

J = (A + B + C + D + E + F)

J shall not be less than 0% nor greater than 13%.

b. Width of Roadway Insufficiency (15% maximum)

Use the sections that apply:

(1) applies to all bridges;
(2) applies to 1-lane bridges only;
(3) applies to 2 or more lane bridges;
(4) applies to all <u>except</u> 1-lane bridges.

Also determine X and Y:

$$X\ (\text{ADT/Lane}) = \frac{\text{Item 29 (ADT)}}{\text{first 2 digits of \#28 (Lanes)}}$$

$$Y\ (\text{Width/Lane})^{*} = \frac{\text{Item 51 (Bridge Rdwy. Width)}}{\text{first 2 digits of \#28 (Lanes)}}$$

*A value of 10.9 Meters will be substituted when item 51 is coded 0000 or not numeric.

2000

You are viewing an archived copy from the New Jersey State Library

(1) Use when the last 2 digits of #43 (Structure Type) are not equal to 19 (Culvert):

If(#51 + 0.6 meters) < #32 (Approach Roadway Width) G = 5%

(2) For 1-lane bridges only, use Figure 3 or the following:

If the first 2 digits of #28 (Lanes) are equal to 01 and

Y < 4.3	then	H = 15%
Y ≥ 4.3 < 5.5		$H = 15\left[\frac{5.5-Y}{1.2}\right]\%$
Y ≥ 5.5		H = 0%

(3) For 2 or more lane bridges. If these limits apply, do not continue on to (4) as no lane width reductions are allowed.

If the first 2 digits of #28 = 02 and Y ≥ 4.9, H = 0%

If the first 2 digits of #28 = 03 and Y ≥ 4.6, H = 0%

If the first 2 digits of #28 = 04 and Y ≥ 4.3, H = 0%

If the first 2 digits of #28 ≥ 05 and Y ≥ 3.7 H = 0%

(4) For all <u>except</u> 1-lane bridges,use Figure 3 or the following:

If	Y < 2.7 and X > 50	then	H = 15%
	Y < 2.7 and X ≤ 50		H = 7.5%
	Y ≥ 2.7 and X ≤ 50		H = 0%

If X > 50 but ≤ 125 and

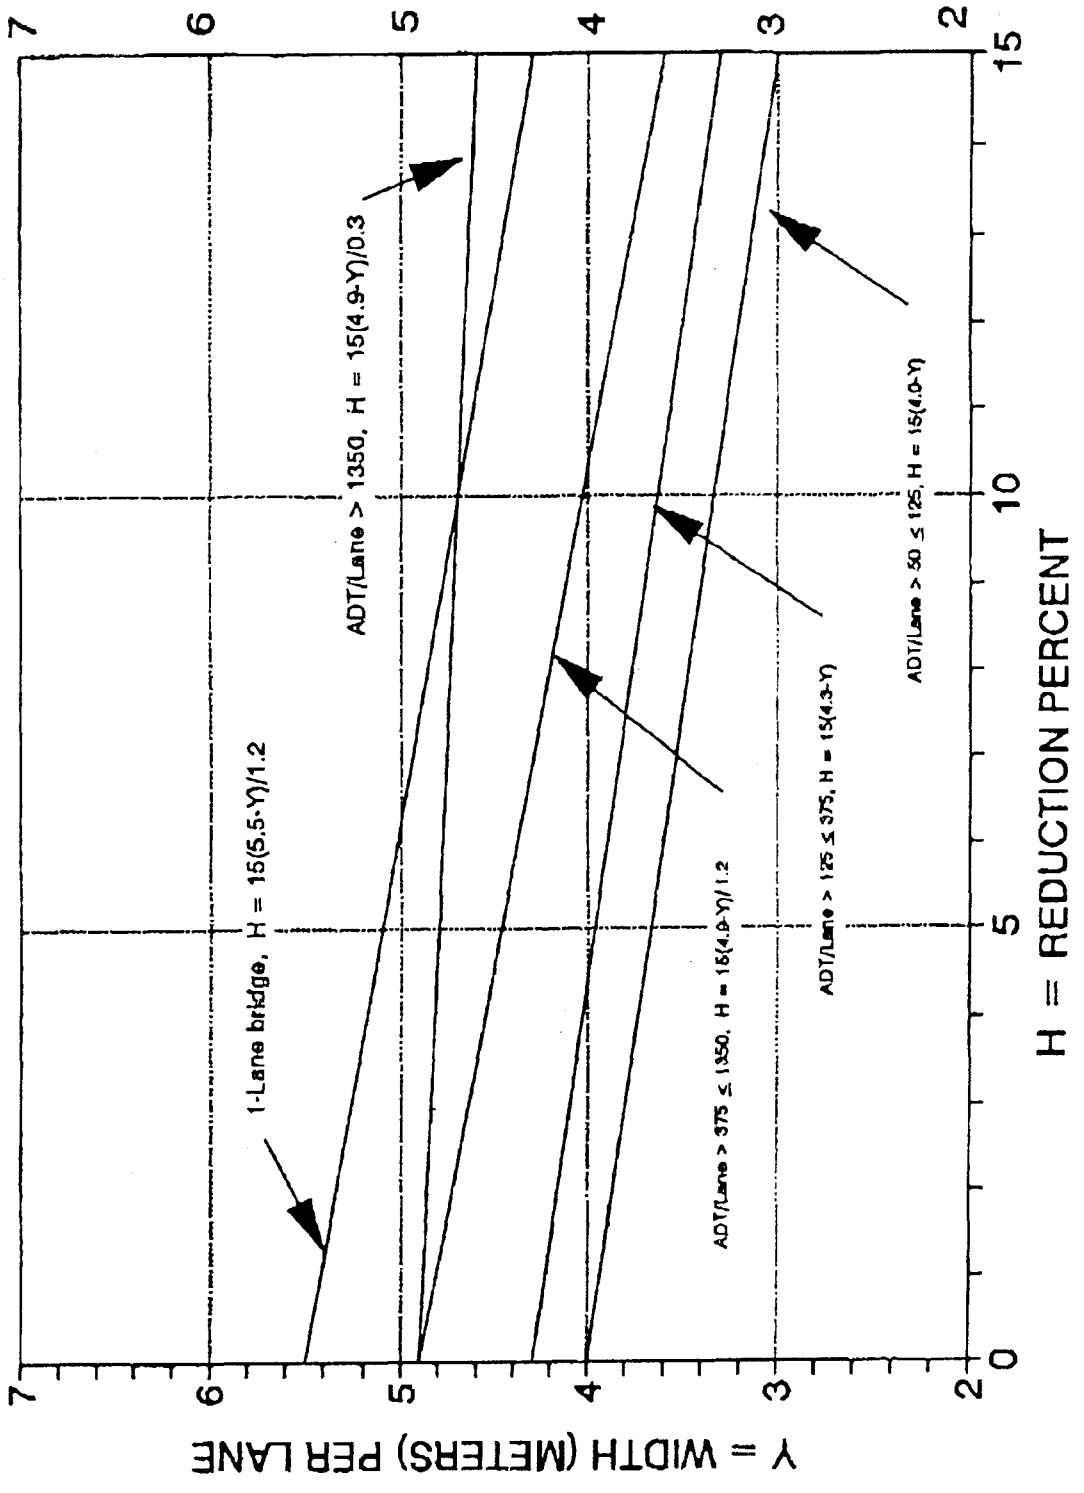
Y < 3.0	then	H = 15%
Y ≥ 3.0 < 4.0		H = 15(4-Y)%
Y ≥ 4.0		H = 0%

If X > 125 but ≤ 375 and

Y < 3.4	then	H = 15%
Y ≥ 3.4 < 4.3		H = 15(4.3-Y)%
Y ≥ 4.3		H = 0%

You are viewing an archived copy from the New Jersey State Library

Figure 3. Width of Roadway Insufficiency



You are viewing an archived copy from the New Jersey State Library

If X > 375 but ≤ 1350 and

Y < 3.7	then	H = 15%
Y ≥ 3.7 < 4.9		$H = 15\left[\frac{4.9-Y}{1.2}\right]\%$
Y ≥ 4.9		H = 0%

If X > 1350 and

Y < 4.6	then	H = 15%
Y ≥ 4.6 < 4.9		$H = 15\left[\frac{4.9-Y}{1.2}\right]\%$
Y ≥ 4.9		H = 0%

G + H shall not be less than 0% nor greater than 15%.

c. Vertical Clearance Insufficiency - (2% maximum)

If #100 (STRAHNET Highway Designation) > 0 and

#53 (VC over Deck) ≥ 4.87	then	I = 0%
#53 < 4.87		I = 2%

If #100 = 0 and

#53 ≥ 4.26	then	I = 0%
#53 < 4.26		I = 2%

$S_2 = 30 - [\ J + (G + H) + I\ ]$

S_2 shall not be less than 0% nor greater than 30%.

3. Essentiality for Public Use (15% maximum)

a. Determine:

$$K = \frac{S_1 + S_2}{85}$$

You are viewing an archived copy from the New Jersey State Library

b. Calculate:

$$A = 15\left[\frac{\#29(ADT)x\#19(DetourLength}{320{,}000xK}\right]$$

"A" shall not be less than 0% nor greater than 15%.

c. STRAHNET Highway Designation:

If #100 is > 0 then B = 2%

If #100 = 0 then B = 0%

S_3 = 15 - (A + B)

S_3 shall not be less than 0% nor greater than 15%.

4. Special Reductions (Use only when $S_1 + S_2 + S_3 \geq 50$)

a. Detour Length Reduction, use Figure 4 or the following:

$A = (\#19)^4 \times (7.9 \times 10^{-9})$

"A" shall not be less than 0% nor greater than 5%.

b. If the 2nd and 3rd digits of #43 (Structure Type, Main) are equal to 10, 12, 13, 14, 15, 16, or 17; then

B = 5%

c. If 2 digits of #36 (Traffic Safety Features) = 0 C = 1%
If 3 digits of #36 = 0 C = 2%
If 4 digits of #36 = 0 C = 3%

S_4 = A + B + C

S_4 shall not be less than 0% nor greater than 13%.

Sufficiency Rating = $S_1 + S_2 + S_3 - S_4$

The Rating shall not be less than 0% nor greater than 100%.

EXAMPLE

Calculation of Sufficiency Rating

1. Structural Adequacy and Safety

   A = 10%

   B = [32.4 - (19.8 metric tons)]$^{1.5}$ x 0.3254 = 14.6

   S_1 = 55 - (10 + 14.6) = 30.4

2. Serviceability and Functional Obsolescence

   A = 3%, B = 1%, C = 4%, D = NA, E = NA, F = NA

   J = (3 + 1 + 4) = 8%

   $X = \frac{18500}{2} = 9250$ $Y = \frac{7.9\ m}{2} = 3.95$

   (1) If (7.9 + 0.6) < 12.2 then G = 5

   (2) Not Applicable

   (3) Not Applicable

   (4) If X = 9250 and Y = 3.95 then H = 15

   G + H = 5 + 15 = 20 (however, maximum allowable = 15)

   I = 0

   S_2 = 30 - [8 + (15) + 0] = 7.0

3. Essentiality For Public Use

   $K = \frac{30.4 + 7.0}{85} = 0.44$

   $A = 15\left[\frac{18{,}500x12.8Km}{320{,}000x0.44}\right] = 25.2(however, \max.allowable = 15)$

   B = 0

   S_3 = 15 - (15 + 0) = 0

You are viewing an archived copy from the New Jersey State Library

4. Special Reductions

$S_1 + S_2 + S_3 = (30.4 + 7.0 + 0.0) = 37.4 < 50$

S_4 = NA

SUFFICIENCY RATING = 30.4 + 7.0 + 0.0 = 37.4
