

Environmental Information Inventory

New Jersey State Library

ENVIRONMENTAL INFORMATION INVENTORY – a working tool for a state and local partnership in environmental planning.

"Environmental protection" includes not only the protection of our natural resources but the protection and enhancement of economic and social conditions which contribute to the overall well-being of our neighborhoods, our communities, our townships, our counties, and our state. Perspectives vary greatly between private interests and public interests, even amongst our levels of government.

The developer sees a wooded lot as an area to be cleared for housing. A forester may see this same lot as containing a harvestable commodity of lumber with potential for reforestation. The preservationist may see this same lot as unique habitat for endangered or threatened species which should be protected . . . A local planner may view the developer's plan as a means for providing much needed low or middle income housing. The chamber of commerce may view this development as providing attraction for business and tax rateables . . . The local environmental commission may side with the preservationist. The county, regional, and state planner, in an attempt to balance their views from a broader perspective, may lose the closeness to the issue required for pragmatic evaluation.

The New Jersey Department of Environmental Protection is responsible for the protection of New Jersey's environment. The Department faces conflicts and compromises concerning uses of New Jersey's resources on a daily basis. In response, the Department is in the process of developing the Environmental Information Inventory. The Inventory concept recognizes the value of varied perceptions of "environmental protection" and the benefits to be derived from a sharing of viewpoints.

* * *

The mechanics of the system involve the use of USGS quadrangles at a reduced one inch to the mile scale, an easily reproduceable 8½" x 11" format. The maps were produced from full scale, film positive, black line, USGS quadrangles at a cost of \$1.95 each. Participating divisions in DEP purchased a set of mylars of the 173 quadrangles covering the state for less than \$350. This represents the sole, up-front cost of participation.

Selected divisions within DEP were asked to map their essential planning information: e.g., jurisdictional boundaries; areas of key concern; managed lands; areas where grants have been made for planning, acquisition, and development. The criteria for selection of just what to map included: (1) What land areas are we involved with?; (2) What information must we furnish to other agencies on a day-to-day basis?; (3) What information do we want other agencies to be aware of?

These questions are important. There are direct benefits in knowing that programs conflict, complement, or have no relationship. There are indirect benefits in allowing all agencies to reference programs in a common format.

Each map contains a title, the name of the agency that prepared the map, the date of its preparation, and the dates of revisions. Areas of concern may be noted by symbol, boundaries, or jurisdictional lines.

There is no attempt at this small scale to show specific concerns or provide precise boundaries. Rather, the symbols are "indicators" of involvement, referencing the 1:24000 scale USGS quadrangles and other types of mapping which provide definite boundaries or give more detailed information. The use of USGS quadrangles as a common base map simplifies cross referencing of agency involvement.

ENVIRONMENTAL INFORMATION INVENTORY

Division of Waste Management

The sets of maps in this notebook were prepared by the Division of Waste Management as part of the Department of Environmental Protection's Environmental Information Inventory (EII). These maps display selected categories of solid and hazardous waste sites in New Jersey.

The notebook format of the Waste Management Map Sets provides easy access to some of the Division's planning and regulatory information. This information is provided in order to strengthen coordination of programs within the Department as well as with other state, federal and local government agencies. While it is important that other agencies are aware of these sites for planning and development purposes, it should be understood that not all sites are cause for concern for persons planning to develop, perform work, or live in areas in the vicinity of the listed sites. Detailed information is available on each site listed in the EII. This information can be obtained by calling the Division at 609-292-8242.

SOLID WASTE LANDFILLS AND
HAZARDOUS WASTE SITES
Bureau of Solid Waste and
Resource Recovery Planning

October 29, 1985

The maps included in this notebook show two types of waste sites; sanitary landfills and hazardous waste sites. The Sanitary Landfill Sites represent those solid, non-hazardous waste facilities that were registered with the Department since its creation in 1970. The operational status and size of these facilities vary greatly but the majority are relatively small municipal and sole-source landfills which are now closed. Sole-source facilities are those landfills, usually owned and operated by private companies, which accept only non-hazardous solid waste generated on site. Approximately one-third of the mapped sanitary landfills remain open, a very small number of which, ten to twelve, would be considered major. The Hazardous Waste Sites are listed under two categories: National Priority List Sites, which are contained on the Federal Superfund clean-up list; and Interim Management Plan Sites, where clean-up is being pursued under the authority of the New Jersey Spill Compensation and Control Act. [Note: only Sanitary Landfills have a facility number on the index sheet].

Of the 172 quad maps comprising the state, several do not contain any waste sites. These quads were included in the Waste Management Map Sets in order to provide a complete statewide map set for the user. Also note that certain quads contain both hazardous and non-hazardous waste sites at the same location. These sites have at one time been registered as sanitary landfills and have subsequently been designated as a state or federal hazardous waste clean-up site.

October 2, 1985

The Division of Waste Management Map Sets are provided as a reference guide to some of the solid and hazardous waste sites which are regulated by the Division. These maps are not official maps and are not intended to show exact locations or boundaries for legal or site specific planning and development purposes. The Division of Waste Management or the appropriate county solid waste officials must be contacted if such a use is intended.

For map updates or more detailed information, contact the Bureau of Solid Waste and Resource Recovery Planning, Division of Waste Management, New Jersey Department of Environmental Protection, 32 East Hanover Street, Trenton, New Jersey 08625, 609-292-8242.

MILFORD QUADRANGLE
PENNSYLVANIA-NEW JERSEY
7.5 MINUTE SERIES (TOPOGRAPHIC)
1:250,000 SCALE

Maped, edited and published by the Geological Survey
Control by USGS, USCGS, and New Jersey Geologic Survey
Photography from aerial photographs by photogrammetric methods
Aerial photography taken 1957, 1958, and 1959
Photographic projection, 1927 North American datum
10,000 foot grid based on Pennsylvania coordinate system,
North zone, and New Jersey coordinate system,
1000 meter Universal Transverse Mercator grid zone,
zone 18, shown in blue
The red dashed lines indicate boundary lines and road lines
shown on aerial photography. The information is unclassified
Revisions shown in purple compared in observation with
State of Pennsylvania agencies from aerial photographs taken 1969
This information has been classified

PINE ISLAND QUADRANGLE
NEW YORK-NEW JERSEY
7.5 MINUTE SERIES (TOPOGRAPHIC)
SIXTH CORNER OF QUADRANGLE

Maped by the Army Map Service
Edited and published by the Geological Survey
Revised by the Geological Survey in cooperation with New York
Department of Transportation
Control by USGS and USACGS

Topography by photogrammetric methods from aerial photographs
taken 1962. Field checked 1963. Revised from aerial
photographs taken 1968. Field checked 1969.
Perimeter projection. 1927 North American datum.
10,000 foot grid based on New York coordinate system, with zone
1000-meter Universal Transverse Mercator grid lines, zone 18,
datum in feet.
Four red dashed lines indicate special flood and high water areas
primarily based on aerial photographs. This information is unclassified.

ROAD CLASSIFICATION
Secondary highway, all weather. Light-duty road, all weather.
hard surface. Improved surface.
Unimproved road, fair or dry
weather.

SOLID WASTE LANDFILLS AND HAZARDOUS WASTE SITES

DEP, Division of Waste Management

Date Prepared: 7/15/85 Revised:

Maped by the Army Map Service
 Edited and published by the Geological Survey
 Control by USGS and USACGS
 Topography from aerial photography by stereophotogrammetric
 methods. Aerial photographs taken 1967. Field check 1963
 Culture revised by the Geological Survey 1954.
 Projection: 1927 North American datum
 10,000-foot grid based on New Jersey coordinate system
 and New York coordinate system
 and zone
 Uncontoured elevations are shown in brown
 1,000 meter Universal Transverse Mercator grid ticks
 zone 18 shown in blue

SCALE 1:24,000
