Health & Forensics

- Used to have to receive raw EHD data (or other HF data), ad hoc, in an excel file from Health Forensics staff
- Would then have to join this data to the 'Municipality' feature class before being able to analyze the data
- With the new feature service, we have automatic access to all NJ health forensics data, which improves the efficiency of analyzing wildlife health forensics data
 - No longer have to wait for HF staff to send the data
 - All data is comprised in one service, instead of multiple excel files
