

Water Conservation

Did you know the average American uses 100 gallons of water per day?

In the summer, outdoor water use can more than double. We can reduce our water use by as much as 30% by taking a few simple steps, both inside and outside your home.

While water conservation is important all the time, it is especially important during times of drought. Visit [New Jersey Drought Information](#) to determine if your area is under a drought watch or warning and the scientific data collected to determine drought status.
