New Jersey Economic Indicators (ISSN 1064-5942) is published monthly except February (due to annual revisions). The report is prepared with the cooperation of other state and federal agencies by the New Jersey Department of Labor and Workforce Development, Division of Labor Market and Demographic Research. For information, please contact JoAnne Caramelo at the New Jersey Department of Labor and Workforce Development, PO Box 057, Trenton, NJ 08625-0057, phone: (609) 292-2582 or e-mail: joanne.caramelo@dol.state.nj.us.

RESTRICTIONS: All material may be reprinted without permission; however, it would be appreciated if appropriate credit were given.

ON THE INTERNET: Current and recent back issues are available via the *Labor Planning and Analysis* Web site (lwd. dol.state.nj.us/labor/lpa)

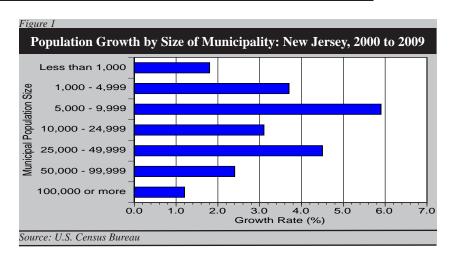

2009 Municipal Population Estimates for New Jersey

by Sen-Yuan Wu, Division of Labor Market and Demographic Research

According to the latest population estimates prepared by the US Bureau of the Census, New Jersey had 8,707,739 residents as of July 1, 2009, up from 8,414,378 on April 1, 2000. Gloucester was the fastest growing county between 2000 and 2009 while Ocean added more population than any other county in the state. An analysis of the state's 2009 county population estimates was published in the April 2010 issue of the New Jersey Economic Indicators. This article presents the 2009 municipal population estimates and population changes during the 2000 to 2009 and 2008 to 2009 periods.

Small Municipalities Grew Faster Than Their Larger Counterparts

When grouped by size, the 64 municipalities with a resident population between 25,000 and 49,999 gained more residents (+96,500) than any other group between 2000 and 2009. However, this group's population growth rate (+4.5%) was second to the 5.9 percent growth experienced by the 143 municipalities with 5,000-9,999 residents. The 153 small municipalities (with 1,000-

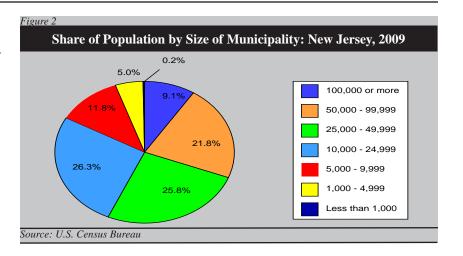

4,999 residents) also had an above average growth rate (3.7%). Growth rates among large municipalities (with 50,000-99,999 and 100,000+ population) and very small municipalities (with less than 1,000 residents) were relatively slow and below average.

Among the state's 566 municipalities, 410 gained population, 12 had no change, while the other 144 experienced population decline between 2008 and 2009. Since the 2000 Census, resident population has increased in 351 municipalities and declined in 214 municipalities in New Jersey. Atlantic County's Weymouth Township was the only municipality to experience neither an increase nor decrease in population during the 2000-2009 period.

The average population size of a New Jersey municipality increased somewhat from 14,866 in 2000 to 15,385 in 2009. The state's municipal median population was 8,152 in 2009, up from 7,660 in 2000.

Approximately one in eleven (9.1%) New Jerseyans resided in the state's four largest municipalities (with 100,000 resident population or more), as of 2009. Between 2000 and 2009, the combined population of these four large municipalities increased by 1.2 percent — a rate substantially slower than the state's average growth rate (+3.5%). However, this group of large municipalities was the leader for population growth in New Jersey between 2008 and 2009 (+0.7% growth). The other fast growing group during the one-year period was the 25,000-

49,999 size group, which includes 64 municipalities, with an annual growth rate of 0.6 percent.

Franklin and Lakewood Townships Posted the Largest Population Gains

With a net gain of 12,000 residents, Somerset County's Franklin Township led the state's population growth between 2000 and 2009, followed by Ocean County's Lakewood (+11,000) and Jackson (+10,400) townships. Another seven New Jersey municipalities had numeric growth of 5,700 or more from 2000 to 2009. With the exception of Newark (+5,700), they were all suburban townships located mostly in the state's coastal and central counties (Atlantic, Middlesex, Monmouth, Ocean, Somerset, etc). Together, these 10 municipalities accounted for approximately 29.0 percent of the state's total population gains.

Some Demographic Shifts Took Place Recently

The majority of the top ten 2000-2009 population gainers were no longer on the list of the top ten for the most current one-year (2008-2009) period, implying that their hefty population growth had occurred earlier in this decade. Somerset County's Franklin Township, Middlesex County's Monroe Township, Ocean County's Toms River Township, as well as Newark were the exceptions – population growth in these four municipalities was still substantial between 2008 and 2009. Hudson County's Jersey City was the new leader in population growth between 2008 and 2009, with a net gain of 2,800 resident population, followed by Bayonne (+1,200) of the same county. Hudson County's Harrison and Jersey City, and Ocean County's Lakewood Township also registered population gains of at least 1,000 from 2008 to 2009. For the first time in this decade, the top ten municipalities with the largest numeric gains include significantly more urban places (7 cities) than suburban townships (3).

Eight Municipalities Each Lost More Than 3,000 Residents

Four municipalities in Hudson County (Union, Kearny, Bayonne and North Bergen Township), three in Essex County (East Orange, Irvington Township and Bloomfield Township) and one in Passaic County (Paterson) experienced population declines of 3,000 or more between 2000 and 2009. The most severe population loss was found in Union (-5,100). Cape May County's Lower Township (-2,700) and Essex County's West Orange Township (-2,400) rounded out the state's list of top ten municipalities with the largest 2000-2009 numeric losses.

Only two of these ten municipalities (North Bergen Township and Lower Township) were among the leading numeric losers during the 2008-2009 period, as population losses have slowed in recent years in the other eight municipalities. Camden County's Camden (-700) was the leader for population decline in the state between 2008 and 2009, followed by Cape May County's Ocean City (-200).

Population More Than Tripled in Woolwich Township Since 2000

With a 214.0 percent growth rate, Gloucester County's Woolwich Township was the fastest growing municipality in New Jersey from 2000 to 2009, followed by Morris County's Riverdale Borough (+125%)¹ and Hunterdon County's Lebanon Borough (+88%).

Resident population grew by at least 44.0 percent in ten New Jersey municipalities in the past nine years. These top ten fastest growing municipalities were scattered in seven counties: three in Burlington, two in Gloucester and one each in Hunterdon, Monmouth, Morris, Ocean and Warren counties.

A New List of Fastest Growing Municipalities for the 2008-2009 Period

Population growth has recently slowed in all but two municipalities on the state's 2000-2009 ten fastest growing list. Consequently, the ten growth leaders list over the most recent one-year (2008-2009) period contains almost all new entrants except Morris County's Riverdale Borough and Gloucester County's East Greenwich Township. The duo still led for the rate of growth (+7.6% and +7.2%, respectively) between 2008 and 2009. Two municipalities from both Gloucester and Monmouth counties, and one each from Camden, Hudson, Passaic and Union counties rounded out the top ten fastest growing municipalities in 2008-2009, all having annual growth rates of three percent or more.

The Most Rapidly Declining Municipalities Were Found in Cape May County

Cape May County's Lower and Dennis townships had the steepest rates of population decline (11.8% and 11.5%, respectively) in the state between 2000 and 2009. Five more municipalities in Cape May County also experienced rapid population declines. These Cape May County localities were joined by two municipalities in Hudson County and one in Essex County to constitute the top 10 list of municipalities with the highest rate of population decline since the 2000 Census. Population declines in Cape May County municipalities resulted mainly from natural decreases (more deaths than births) and net out-migration (fewer people moved in from abroad and other counties than moved out).

Table 4

Cape May County still dominated the list of fast declining municipalities from 2008 to 2009. The ten rapidly declining municipalities for the 2008-2009 year include four localities in Cape May County, two in Warren County and one each in Burlington, Camden, Hunterdon and Sussex counties. Each has lost at least 0.5 percent of their residents from 2008 to 2009. Ocean City's (Cape May County) 1.1 percent decline during the last year was the most rapid.

Newark Remains the State's Most Populous Municipality

With a moderate yet steady population growth so far in this decade, Newark City's most populous status in the state remained unchallenged in 2009. Newark's 278,200 current population ranked 68th among the nation's 276 incorporated places with 100,000 or more population. Hudson County's Jersey City (ranked 78th nationally), Passaic County's Paterson (ranked 161st nationally) and Union County's Elizabeth (ranked 195th nationally) also had more than 100,000 residents in 2009.

Resident population has increased during the 1980s and 1990s, albeit slowly, in three of the state's four largest urban centers. Newark was the only exception – its population declined in each decade between 1950 and 2000. However, Newark has gained population since the 2000 Census, along with Jersey City and Elizabeth. Paterson was the state's only large city to experience population decline in the first decade of this century.

Source: U.S. Census Bureau									

Middlesex County's Edison and Woodbridge townships, Ocean County's Toms River and Brick townships, as well as Mercer County's Hamilton Township and Trenton made up the rest of the state's ten most populous municipalities. Most of these cities and townships have been among the top municipalities since 2000 with the exception of Brick Township. Brick Township ranked twelfth in 2000, but by 2009 its population growth had surpassed Camden and Clifton (ranked 10th and 11th in 2000, respectively). Most of the ten large municipalities experienced population growth, albeit modest, in this decade. With moderate population declines, Paterson and Trenton were the exceptions. Together, the top ten's share of the state's total population declined somewhat to 15.4 percent in 2009, from 15.7 percent in 2000.

There were nine large cities with one million or more population in the US in 2009. New York City continued to be the nation's most populous incorporated place with 8,391,900 residents in 2009, followed by Los Angeles City (population: 3,831,900). They were the same nine largest cities in the nation since 2000. However, Phoenix (Arizona) replaced Philadelphia as the nation's fifth largest city in 2007, and San Antonio (Texas) moved up from ninth place in 2000 to seventh place in 2009, surpassing Dallas (Texas) and San Diego (California).

Among the nation's largest 276 incorporated places, 53 experienced population declines from 2000 to 2009 while 223 gained population. Frisco City (Texas) was the fastest growing large place (+203.9%) in this decade, and was also the growth leader in 2008-2009 (+6.2%). Although its population grew by 5.4 percent between 2008 and 2009, the City of New Orleans (Louisiana) suffered the most severe population decline (-26.8%) during the nine year (2000-2009) period due, at least partly, to the effect of hurricane Katrina.

Ten Municipalities Had Less Than 500 Residents

New Jersey's least populated municipality — Teterboro Borough, located in Bergen County — had only 17 residents in 2009. Three other municipalities had less than 100 residents: Camden County's Pine Valley (population: 24) and Tavistock (population: 32) boroughs, and Sussex County's Walpack Township (population: 39).

Six other municipalities (two each in Cape May and Ocean counties, and one each in Bergen and Monmouth counties) with

population counts ranging from 222 to 455 rounded out the state's ten least populous municipalities list. No other municipality had less than 500 residents in 2009.

Guttenberg Town Was the State's Most Densely Populated Municipality

With 1,174 persons per square mile as of 2009, New Jersey is the most densely populated state in the nation. Population density in New Jersey ranged from less than two persons per square mile in Sussex County's Walpack Township to almost 55,000 persons per square mile in Hudson County's Guttenberg Town. The state's seven most densely populated municipalities (with at least 20,000 persons per square mile) included five in Hudson County, and one each in Bergen and Passaic counties.

The six most sparsely populated municipalities in New Jersey still had less than 30 persons per square mile as of 2009. They include three municipalities in Burlington County, and

one each in Bergen, Camden and Sussex counties. Population density in the nation as a whole was 86.8 persons per square mile, as of 2009.

idway through 2010, there was growing uncertainty surrounding the future of the national economy. Some signs suggested a slow economic recovery, while others indicated that consumers might be cutting back due to ongoing weakness in the labor and housing markets. On a positive note, private sector employment posted its sixth consecutive

monthly gain during June and the unemployment rate fell from 9.7 to 9.5 percent. Total employment, however, retreated for the first time this year, reflecting the loss of temporary Census workers from federal payrolls. The slowdown in job growth contributed to a sharp drop in consumer confidence during June, reversing the trend of the prior three months. A decrease in gasoline prices, combined with a drop in auto sales, caused retail sales to fall for the second straight month in June. Housing starts and sales posted declines following the expiration of the federal home buyer tax credit program.

Nonfarm payrolls fell by 125,000 in June, following five consecutive monthly increases. The monthly decline reflected the

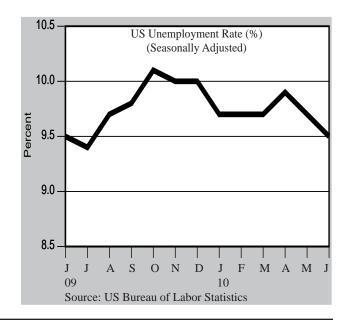

loss of 225,000 temporary Census workers, which offset a gain of 83,000 in the private sector. Private sector employment rose by 593,000 during the first six months of 2010, but in June was 7.9 million below the level in December 2007 when the recession began. Monthly job gains occurred in professional and business services (+46,000), leisure and hospitality (+37,000), education and health services (+22,000) and manufacturing (+9,000). Employment in construction and financial activities fell during the month by 22,000 and 15,000, respectively.

The unemployment rate continued to edge down, falling to 9.5 percent in June from 9.7 percent in May and matching the rate of a year ago. The jobless rate has been generally trending down since its recessionary peak of 10.1 percent in October 2009. Of the 14.6 million individuals who were unemployed during June, about 6.8 million, or about 46 percent, had been

jobless for 27 weeks or longer, compared with 1.3 million, or about 17 percent, when the recession began.

Consumer confidence declined sharply in June, following three consecutive monthly gains. The Consumer Confidence Index fell from 62.7 in May to 52.9 in June, a monthly decrease of 15.6 percent. The decline was attributed to increasing uncertainty and apprehension about the economy, particularly the labor market. Both components of the index were down, as consumers' appraisal of current economic conditions as well as expectations of improvement grew more pessimistic.

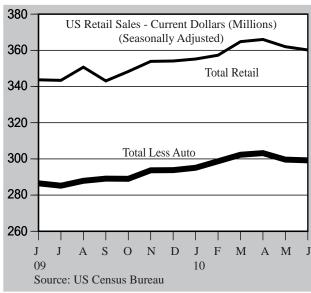

Retail sales declined in June by 0.5 percent, after a decrease of 1.1 percent in May.

The back-to-back monthly declines followed seven consecutive increases, with sales 4.8 percent above the level of June 2009. The decrease in June was driven by sales declines at motor vehicle dealers (-2.3%) and gasoline stations (-2.0%). Excluding autos, sales were down by 0.1 percent with declines occurring at sporting goods, hobby and book stores (-1.4%) and furniture

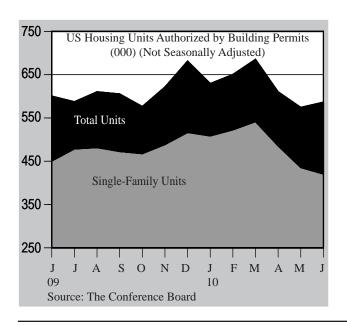

retailers (-1.1%). Electronics and appliance stores recorded the largest gain (+1.3%).

Consumer prices fell for the third consecutive month in June fueled by declines in the energy index during April, May and June. The Consumer Price Index edged down by 0.1 percent in June, following declines of 0.2 and 0.1 percent in May and April, respectively. After declining by 1.4 percent in April, the energy index fell by 2.9 percent in both May and June, accounting for most of the monthly declines in the overall index. The core index for all items less the more volatile categories of food and energy edged up by 0.2 percent in June after increasing by 0.1 percent in May.

Despite record low mortgage rates, housing market indicators were down during May and June following the expiration of eligibility for federal home buyer tax credits which required that a binding sales contract be signed by April 30, 2010. Mortgage rates for 30-year loans averaged 4.56 percent during the week of July 22, according to Freddie Mac.

Pending home sales fell by 30.0 percent in May. The decrease followed three strong monthly gains as homebuyers rushed to take advantage of the federal tax credit program. Compared with a year ago, the index of pending home sales was down by nearly 16 percent. Sales of new and existing homes also declined during May, falling by 32.7 and 2.2 percent, respectively. Sales of existing homes remained above the level of a year ago by 19.2 percent as sales during May still reflected the finalization of contracts signed before the tax credit deadline.

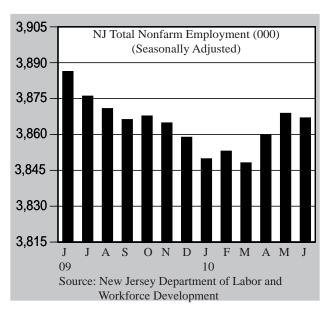

New home sales were down by 18.3 percent over the year as gains in the Northeast and Midwest regions were offset by larger losses in the South and West regions which have been especially hard hit by foreclosures.

Housing starts fell for the second consecutive month in June to the lowest level since October, decreasing by 5.0 percent after a 14.9 percent drop in May. June's decline was driven by a drop of 19.3 percent in construction of multi-family structures; singlefamily home starts were down by 0.7 percent during the month. New home construction declined by 5.8 percent compared with June 2009. On a more positive note, building permits rose 2.1 percent in June after declining in both April and May.

Economic Situation: The State

As in the nation, there were mixed economic signals in New Jersey halfway through 2010. After rising in April and May, employment decreased in June due to job losses in the public sector, which offset a gain in the private sector. The unemployment rate continued to edge down from its peak of 10.0 percent in December, falling to 9.6 percent in June. New

Jersey shoppers faced higher price increases than the national average, but inflation remained under control. Home sales and construction slowed following the expiration of the federal home buyer tax credit program.

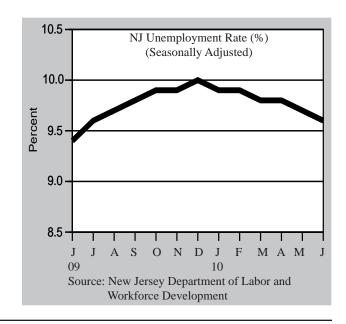

Employment fell by 1,900 during June following increases of 11,700 and 9,000 during April and May, respectively. Since December 2009, employment has risen by 8,100 in the state, but the level in June was down by 19,400 compared with a year ago. During June, payrolls increased in 21 states and the District of Columbia, decreased in 27 states and were unchanged in two states. Over the year, employment was down in 28 states and up in 22 states and the District of Columbia.

Private sector employment rose in New Jersey by 5,300 during June and has increased during three of the past five months. During June, the largest monthly job gains occurred in professional and business services (+4,400), leisure and hospitality (+2,800), trade, transportation and utilities (+2,600) and education and health services (+1,300).

The monthly gain in private sector jobholding was offset by a loss in the public sector of 7,200, with the majority of the decline attributed to a drop of 4,300 in federal employment due to the separation of temporary Census workers. Local government employment also fell during the month by 2,800 due to cutbacks in county, municipal and local government employees. Monthly job losses also occurred in other services (-4,600) and manufacturing (-1,800).

The unemployment rate continued to edge down in June, falling to 9.6 percent from 9.7 percent in May. The jobless rate has been gradually trending down since December 2009 when it reached a recessionary peak of 10.0 percent. New Jersey's unemployment rate remained above the rate of a year ago (9.4%) and was also higher than the U.S. rate (9.5%). Thirty-nine states and the District of Columbia experienced rate decreases during June, while rates went up in five states and were unchanged in the other six. Compared with a year ago, jobless rates were higher in 24 states, lower in 22 states and the District of Columbia and the same in four states.

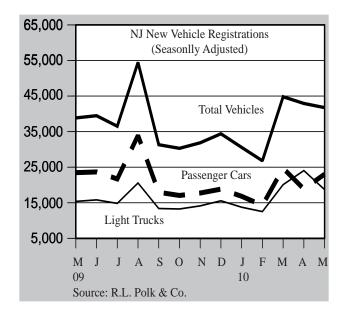

New Jersey's insured unemployment rate (IUR), which is based only on employ-

ment covered by unemployment insurance, edged down to 4.3 percent in June, after increasing in April and May. The IUR was down from the rate of a year ago of 5.7 percent and from the recessionary high of 5.8 percent reached in May 2009. During the first six months of this year, the weekly average of initial claims was down by 23.7 percent compared with the same period

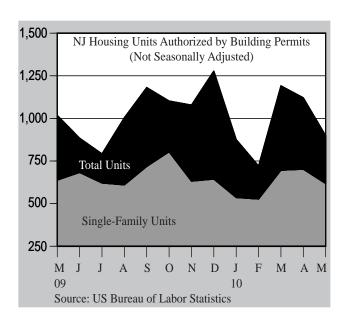

in 2009, while the number of claimants exhausting regular benefits declined (-1.4%).

Consumer prices in the area covering northern New Jersey/New York fell by 0.1 percent on an unadjusted basis from May to June, declining by the same percentage as the U.S. city average. Compared with a year ago, the Consumer Price Indexes for northern New Jersey and the U.S. rose by 1.5 and 1.1 percent, respectively, while the index for the southern New Jersey/Philadelphia region was up by 1.9 percent. Data for the southern New Jersey/Philadelphia region show that consumer prices increased by 0.3 percent from April to June, while the index for northern New Jersey was up by 0.1 percent over the same period; the U.S. city average was unchanged during the two-month period.

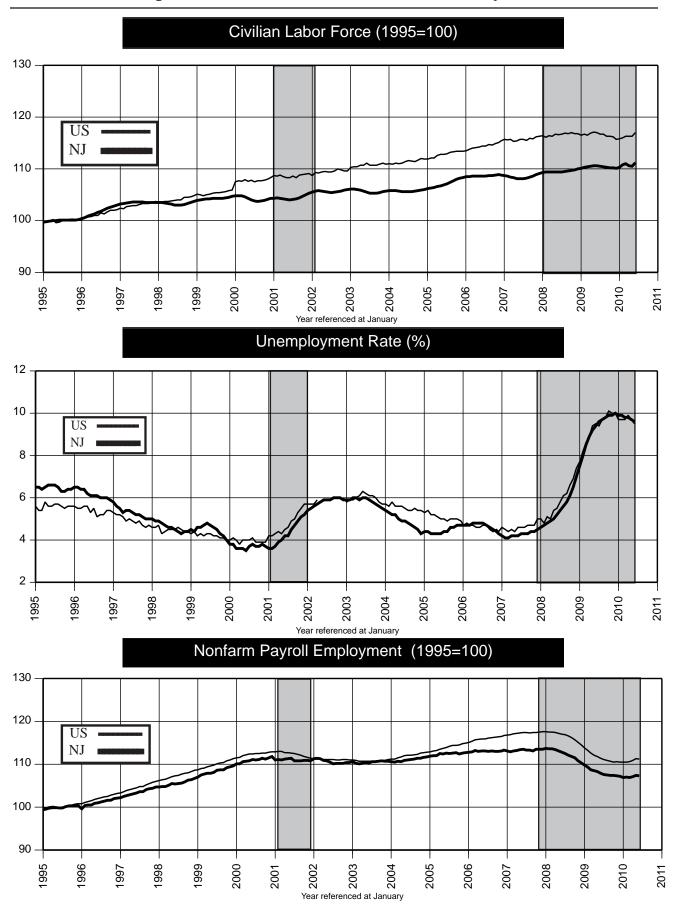

Auto sales in New Jersey, as measured by vehicle registrations, were up by 8.1 percent from January through May, compared with the same period a year ago. Sales of trucks and vans rose by 15.4 percent during the first five months of this year, while car sales increased by 2.8 percent. Year-to-date U.S. car sales were up by 14.0 percent.

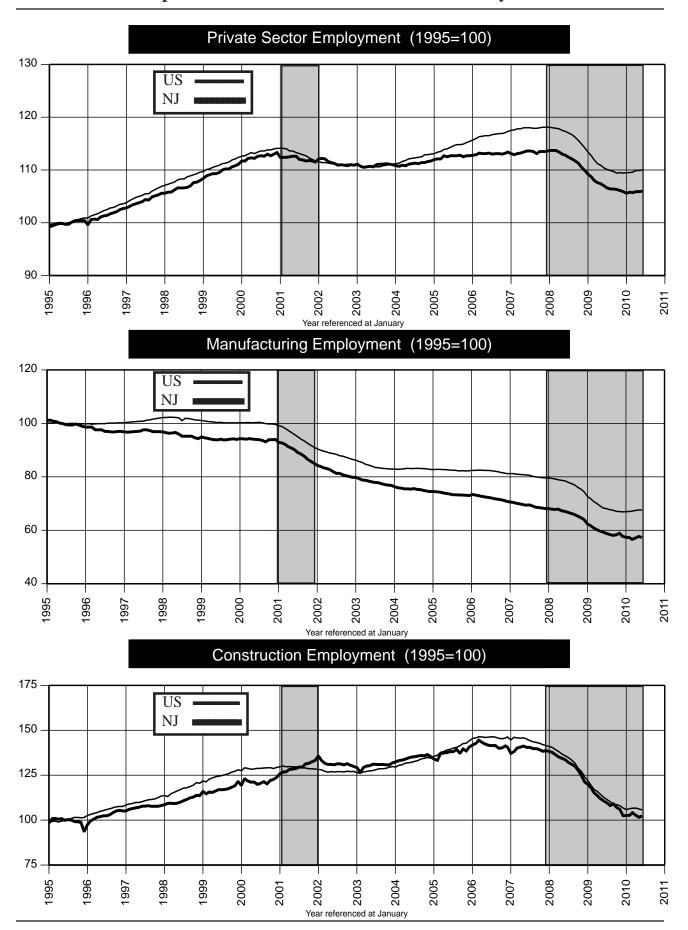

Building permits, an indicator of future construction activity, declined from April to May by 19.8 percent in New Jersey, and were down by 11.7 percent compared with May 2009. Yearto-date planned home construction fell during the first five months of 2010 by 5.5 percent compared with the same period in 2009, while building permits for the U.S. were up by 16.2 per-

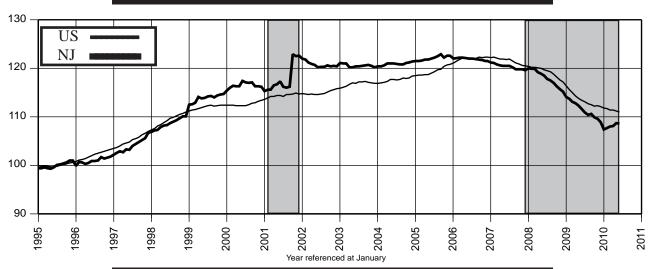

cent. In the Northeast, building permits rose by 32.3 percent during June compared with the previous month and with the level of a year ago. Home construction in the Northeast fell by 11.3 percent in June and was down by 20.3 percent compared with June 2009.

The impact of the expiration eligibility for the federal home buyer tax credit on April 30 was reflected in the May home sales statistics. In the Northeast, sales of new and existing homes fell from April to May 33.3 and 18.3 percent, respectively. New and existing home sales remained above the levels of a year ago by more than 12 percent. Pending home sales fell by 31.6 percent in May in the Northeast and were down by nearly 15 percent from a year ago.

New Jersey Residential Permitting Activity Decreases in 2009 Reflecting the National Trend

by Walter Nyakanga, Division of Labor Market and Demographic Research

Recently released annual building permit data from the US Census Bureau indicates that in 2009 the local building permit offices authorized the construction of 12,421 new privately-owned housing units in New Jersey with a total estimated cost of construction of about \$2 billion. This was 5,942 units or 32.4 percent lower than the 2008 estimate of 18,363 housing units, and is the lowest number of authorizations since the Census Bureau began tracking data in 1959. The drop in demand for new privately-owned homebuilding in the state reflects the national trend of weakness in the housing market since 2007 resulting from the sub-prime mortgage crisis and worsened by the ongoing recession.

However, permitting activity in New Jeresy fared better than in the nation in 2009. The state's 32.4 percent decline in permits for residential units since 2008 was less than the 35.6 percent decline experienced nationally during the same period. This marks the fourth consecutive annual decline in building permits both nationally and in the state. New Jersey also fared better than the Northeast Region which posted a 42.4 percent decline in authorizations since 2008 due to a steep drop in activity in New York (-64.5%). New York's decline had a major impact on the region as its permitting activity represented 43.4 percent of the region's total in 2008. With the exception of North Dakota (+12.8%) and Alaska (+1.7%), which each saw a rise in permitting activity over 2008, all other states experienced an over-the-year decline.

The number of housing units authorized to be built throughout the state in 2009 was 57.4 percent below the state's annual average of 29,130 units issued yearly during the decade. However, the total number of units authorized in the 2000s (291,300 units through 2009) surpassed the number of permits issued during the 1990s when only 239,100 units were planned. The 1990s total was a half-century low and well below the production levels of the 1960s (501,000 units), 1970s (405,600 units) and the 1980s (379,100 units).

Table 1

Source: US Bureau of the Census, Manufacturing and Construction Division										

During the early and middle years of the most recent decade, demand for new housing increased due to low interest rates and lenient lending practices. From 2000 through 2007, New Jersey averaged 33,589 authorizations per year. The national recession, which began in December 2007 and was partially the result of the sub-prime lending crisis, led to tighter lending practices in the latter part of the decade which drastically impacted demand. During the last three years of the decade New Jersey issued an average of only 18,724 permits per year.

Analysis of planned homebuilding by type shows that each category posted significant declines in permitting activity since 2008. The two largest categories, single-family units and 5-

Source: U.S. Bureau of the Census, Manufacturing and Construction Division

or-more family units, realized the biggest declines (-1,958 and -3,515, respectively). However, single-family units posted the smallest percentage decline (-21.4%). The 3-or-4-family units category, which accounts for only 1.7 percent of all permits issued, saw the steepest decline (-49.9%).

In the most redecade, cent multi-family categories were a significant contributor to residential construction accounting for 108,740 units or 37.3 percent of the state's 291.297 authorizations. During the previous decade of the 1990s, they only accounted for about 17 percent of all authorized permits; however, most of the increase in the state's multi-family building activity occurred in the northern coastal counties of the state that lie close to New York City and are primarily composed of urban areas.

Permitting Activity Declines in Most New Jersey Counties

Only three New Jersey counties saw a slight increase in permitting activity in 2009. In Gloucester County, permits increased to 865 in 2009 from 788 in 2008. Authorizations in Hunterdon County rose to 268 in 2009 from a low of 206 in 2008. Warren County issued 165 permits in 2009 after issuing just 146 in 2008. Permits in all but five counties (Gloucester, Hudson, Hunterdon, Salem, and Warren) fell to the lowest point of the decade in 2009.

Hudson County, for the fifth consecutive year, ranked first for the number of permits issued (total and 5-or-more-family units) in New Jersey with 1,618 total units authorized. Over 86 percent of all units were for 5-or-more-family units construction, the bulk of these originated from the municipality of Jersey City (1,048 units) which accounted for 65 percent of the county's total new residential construction (1,618 units). Prior to 2005, Ocean County had led the state in permitting activity for eight consecutive years.

The high demand for housing in Hudson County began in the mid 1990s as the number of permits authorized jumped from a modest 360 units in 1996 to an annual average of 2,661 units during the 2000s. The only county to top this average was Ocean County which averaged 3,043 authorizations yearly during the same period. However, demand for new housing in Hudson County has dropped dramatically since 2008 when 3,229 permits were issued. Hudson's 2009 permitting activity was the lowest since 2001 when 1,116 permits were issued.

Middlesex (1,018 units) and Monmouth (964 units) counties ranked second and third, respectively. Ocean County, which ranked second for four consecutive years, dropped to fourth place with 902 units authorized, and Gloucester County (865 units) rounded out the top five.

A large proportion (43.2%) of the planned residential construction in the state was authorized in the top five counties. While Hudson and Ocean Counties have been perennially two of the top destinations for homebuilders in the state since 2004, Monmouth, Gloucester, and Middlesex counties are relative newcomers as a top choice for planned new residential construction activity.

The past year continued a trend that began in mid-decade as the more urban norther counties of the state established themselves as leaders in new home construction on the strength of multi-family permits while the demand for new housing in the suburban coastal counties continues to be primarily for single-family units. In top-ranking Hudson County, 98 percent of the total units planned in 2009 were in the multi-family categories which is in sharp contrast to the type of construction being planned in suburban Ocean County. In Ocean County, which has led the state since 1993 for the highest issuance of building permits for single-family units, 97 percent of the total planned home construction was in the single-family category.

Jersey City Leads All Municipalities in 2009

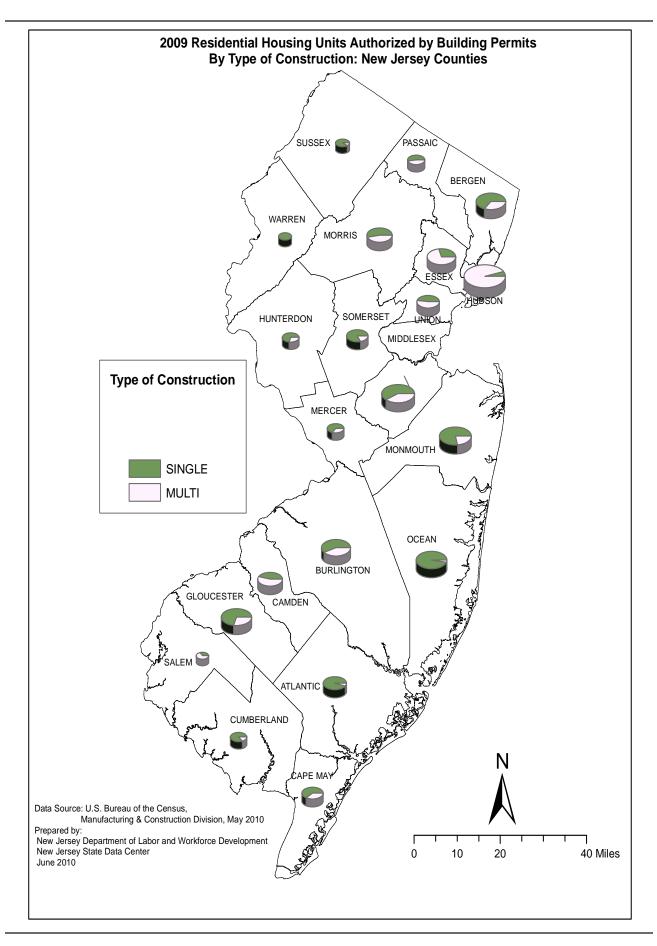

For the fifth consecutive year, Jersey City led all New Jersey municipalities with 1,048 housing units authorized in 2009, on the strength of permitting for multi-family units. In fact, planned construction in Jersey City was higher than the county total in all but one of the state's 21 counties. Newark (Essex County) came in second with 477 planned units, Monroe Township (330 units, Middlesex County) and Riverdale Borough (222 units, Morris County) were third and fourth respectively, and Gloucester County's Deptford Township (201 units) rounded out the top five municipalities.

Planned construction of housing units among the municipalities was fairly distributed, with Middlesex County having four municipalities in the top twenty-five municipalities, while Hudson and Gloucester counties had three municipalities each. In addition, the following counties had two municipalities each among the top 25 in the state: Burlington, Camden, Monmouth and Ocean counties. The top 25 municipalities accounted for 40.4 percent of the state's total units authorized in 2009.

Notes:

- Nonfarm payroll employment includes civilains on nonfarm establishment payrolls who worked or received pay for any part of the pay
 period including the 12th of the month. It excludes proprietors, self-employed, unpaid family members and domestics in private households. All data are revised to March 2009 benchmarks. Individual series may not add to sector or supersector totals because not
 all sector/supersector components are published.
- 2. "Other Services" include: Repair and maintenance; Personal and laundry services; Religious, grantmaking, civic, professional and similar organizations.
- 3. The total number of state employees reported under this heading is determined on the basis of a definition developed by the US Bureau of Labor Statistics which is standardized throughout the nation. The definition includes both full- and part-time workers in the executive departments, the legislature, and the judiciary, as well as all employees of authorities, commissions, the state universities and colleges, and other agencies not included on the central payroll.
- * Seasonally adjusted total has been indirectly computed from the sum of the underlying industries.
- ** The industry is not seasonally adjusted because seasonality is not statistically significant.

^{*} Eight manufacturing production series were deleted because these series failed to meet the criteria established by the Bureau of Labor Statitstics and will no longer be published.

⁽¹⁾ Average hours worked or paid are affected by labor turnover, changes in overtime hours and part-time employment.

⁽²⁾ Hourly earnings include paid holidays, vacation and sick leave. They are affected by changes in workforce composition and in wage rates.

⁽³⁾ Weekly earnings are affected by premium pay, shift differentials, piecework and incentive payments, length of workweek and other factors.

⁽⁴⁾ Non-supervisory workers. The Information Supersector includes the Publishing Industries, Telecommunications, and Internet Service Providers, Web Search Portal, and Data Processing Service Sectors.

US and New Jersey Civilian Labor Force Trends 1984-2010 (000)

Government	2.6	2.6	2.6	0.3	2.0

Notes: Totals may not add due to seasonal adjustment, rounding and differences in the availability of data.

^{*} Not seasonally adjusted

Statistical Section Notes

Adjustment of Data

Seasonal Adjustment. All tables/charts, unless otherwise specified, contain data that are seasonally adjusted using the **X-12 ARIMA** (Auto-Regressive Integrated Moving Average) method of seasonal adjustment developed by Statistics Canada.

The **X-12** procedure was used in a "two-step" process. One set of factors was generated for benchmarked estimates, based on absolute or universe counts of employment determined through Unemployment Insurance records. These factors were used to seasonally adjust historical, universe-based data through September 2008. A second set of factors was generated using the record of sample-based estimates, and applied to reprojected sample-based estimates for the last quarter of 2008 and sample-based estimates developed month by month in 2009.

Annual Revision and Internet Access

Annual revisions of the data series in *Economic Indicators* normally incorporate:

- (1) the latest benchmark 2009 for the Resident Labor Force Indicators (Series 1-6) and 2009 for Establishment Employment Indicators (Series 7-16).
- (2) new seasonal adjustment factors, which usually affect at least five years of seasonally adjusted data, or the period from January 2005 forward.

Internet Access: Available on the Labor Planning & Analysis (LPA) Web site, **http://lwd.dol.state.nj.us/labor/lpa**, are:

- (1) the current month's *Economic Indicators* issue.
- (2) historical series when available, January 1976 to December 2009. This includes the latest annual revisions to unadjusted nonfarm data (January 2007 to December 2009) and seasonal adjustment revisions (January 1990 to December 2009). Because revisions can affect various multi-year periods of original and seasonally adjusted data, it would be incorrect to generate a historic time series for *Economic Indicators* data by tying together series from old issues. For example, seasonally adjusted data from January 2006 to December 2010 are subject to change during the next annual revision cycle.

General Notes

Annual Averages. On p. S-20 are the annual averages of the of the data series for recent years to be used as a benchmark for evaluating current monthly data.

Charts. Unless otherwise noted, all graphs were developed with seasonally adjusted data.

Moving Averages. Series where the monthly data vary erratically have been plotted with moving averages (thick line) and nonaveraged data (thin line) superimposed.

Scales. The scale of each series is determined by the volume and trend of the data series. Caution should be exercised in making comparisons among charts of different scales.

Shaded Columns. Shaded areas indicate periods of general national contraction as identified by the National Bureau of Economic Research (NBER). The July 1990-March 1991, March 2001-November 2001, and December 2007- present national recessions are shown in the graphs for Series 1-27.

Tables. Revised data are indicated by an "R" after the entry.

		Evaluation

Data Sources for Economic Time Series 1-27

1-6 **Resident Labor Force Indicators** are produced using a modeling procedure based on regression techniques, that allows for the construction of error ranges. This procedure includes data variables from the NJ Department of Labor & Workforce Development's monthly Current Employment Statistics (CES) survey, unemployment insurance claims data and responses from the US Bureau of Labor Statistics' Current Population Survey (CPS) of 1,200 households in NJ. Data are available monthly back to 1976.

Since the third generation of LAUS models were introduced in January 2005, there has been a growing concern among data users regarding monthly volatility of official statewide seasonally-adjusted employment and unemployment series. As a result, the BLS has implemented a smoothed-seasonally-adjusted (SSA) methodology to labor force estimates from January 1976 forward. These revised estimates will be available beginning with the publication of 2009 annual revised estimates. The SSA methodology will be reflected in statewide labor force estimates from January 2010 forward.

For additional information regarding this change in methodology, please refer to the "SSA Questions and Answers" on the BLS website at: http://www.bls.gov/lau/lassaqa.htm

Beginning with 1990, data incorporate 2000 census-based population controls as well as improved estimates of immigration, emigration, births and deaths for the state and are not directly comparable to earlier figures.

You're viewing an archived copy from the New Jersey State Library. Statistical Section Notes (cont.)

The **Labor Force Participation Rate** and the **Employment/Population Ratio** (Series 4 and 5) are expressed as percentages of the civilian noninstitutional population aged 16 years and over.

7-16 The **Establishment Employment Indicators** are generated from the monthly CES survey of employers on the number of persons who worked or received pay for any part of the pay period including the 12th of the month.

Data reflect March 2009 benchmarks.

Seasonally adjusted data for Series 7-16 have been revised back to January 1990. Not seasonally adjusted data have been revised back to 2007.

Private Sector Nonfarm Payroll Employment (Series 8) is computed by subtracting government employment from total nonfarm employment.

Standard errors have been computed to estimate the variance of total private sector employment and for all supersector series statewide, as well as for total private sector employment for Metropolitan Statistical Areas. More detailed information is available at lww.labor/lpa under "Employment & Wages". Please see the technical note on sample variance.

The Consumer Price Index for All Urban Consumers (CPI-U) is a measure of the average change over time in the prices paid by all urban consumers (excluding military personnel and persons in institutions) for a fixed market basket of consumer goods and services. The month-to-month change in the CPI is a measure of inflation. Beginning with January 2007, monthly data is reported out to three decimal points.

The **CPI-U** represents approximately 87% of the total population. The **US CPI-U** is the US City Average. The **US CPI-U** and **Metro Area CPI-U** (see definitions below) are not seasonally adjusted.

The CPI does not measure the relative cost of living between areas. There is no "New Jersey CPI". The division of New Jersey's 21 counties between two metropolitan areas for which CPIs are calculated is defined below.

Internet: US Bureau of Labor Statistics Web site may be accessed at http://www.bls.gov/data/top20. htm for all regional and national CPI data.

Metro Area definitions:

"NY" designates the *New York-Northern New Jersey - Long Island, NY-NJ-CT-PA area*. In New Jersey this includes Bergen, Essex, Hudson, Hunterdon, Mercer, Middlesex, Monmouth, Morris, Ocean, Passaic, Somerset, Sussex, Union and Warren counties. In New York, it includes New York City (5 counties), Dutchess, Nassau, Orange, Putnam, Rockland, Suffolk and Westchester counties. In Connecticut, it includes Fairfield and New Haven counties, plus parts of Litchfield and Middlesex counties. In Pennsylvania, it includes Pike County. Data are published monthly.

"PA" designates the *Philadelphia-Wilmington-Atlantic City, PA-NJ-DE-MD area*. In New Jersey this includes Atlantic, Burlington, Camden, Cape may, Cumberland, Gloucester, and Salem Counties. In Pennsylvania, it includes Bucks, Chester, Delaware, Montgomery and Philadelphia counties. In Delaware, it includes New Castle County, and in Maryland, Cecil County. Data are published bi-monthly.

Consumer Confidence Index (CCI), (US 1985=100) is based on a representative, random sample of 5,000 US households surveyed monthly by TNS for the Conference Board. The index represents consumers' perceptions of the present general economy, their own financial conditions as well as their short-term (six months) outlook. Economists use the CCI as a leading indicator for consumer spending.

19-21 The **Residential Building Permits Indicators** are compiled by the US Bureau of the Census, Manufacturing and Construction Division as of the thirteenth workday of the following month. Data are collected for all permit-issuing places in the state through a monthly survey of local construction officials. If data are not received for a particular place for that month, the data are imputed. The Census Bureau conducts an annual follow-up to obtain as much data as possible for places for which the data were imputed during the year; these data are then considered to be **FINAL MONTHLY FIGURES**. (Final statewide totals used to produce the annual averages on p. S-20 also include "undistributed" units.) Data beginning January 1998 contain revisions allocated back to prior months and are directly comparable to over-the-year changes shown on the **New Jersey's Economy by the Numbers** table.

Total Private Dwelling Units Authorized by Building Permits (Series 19) data are the sum of single-family, two-family, three-or-four-family, and five-or-more-family dwelling units. Public housing units are not included in the series and represent a tiny fraction of the total.

Private Multi-Family (5+ units) Authorized by Building Permits (Series 21) include all multi-family structures with five or more units, except those in public housing. Data do not exhibit a stable seasonal pattern and are, therefore, not appropriate for seasonal adjustment.

22-24 These series on **New Passenger Car & New Light Truck/Van Registrations** present data only on total new passenger cars and total light truck/vans (in the gross vehicle weight class 0-10,000 lbs.) registered in New Jersey, regardless of the state in which the sales occur. Included are both domestically produced and imported vehicles. Excluded are all federal government registrations. Monthly data for current and prior-year are subject to revision.

Because of unemployment insurance (UI) coverage and other law changes affecting eligibility for benefits, data on unemployment insurance claims (Series 25-27) may not be directly comparable between years.

Weeks Claimed (Weekly Average) is computed by dividing the total number of weeks claimed (intrastate and interstate agent under the Regular State UI Program only) in the month by the number of weeks in the month.

The **Insured Unemployment Rate (IUR)** is the seasonally adjusted weekly average of weeks claimed (intrastate and interstate agent claims under the Regular State UI Program only), which is a proxy for a count of claimants, as a percent of employment covered by unemployment insurance.

- The **Initial Claims Weekly Average** represents intrastate and interstate agent claims under the Regular State UI program only.
- 27 **Unemployment Insurance Exhaustions** are for the Regular State UI Program only.
