

NEW-JERSEY.

THE BURLINGTON  
ALMANACK

1764 FOR 1500

The Year of our LORD 1778.

BEING THE SECOND AFTER BISSEXTILE OR LEAP-YEAR.

*Fitted to the latitude of forty degrees, and a meridian  
of near five Hours west from London; but may, without  
sensible error, serve all the NORTHERN STATES.*

CONTAINING,

The motions of the Sun and Moon; the true places and  
aspects of the planets; the rising and setting of the  
sun; the rising, setting and southing of the moon.

A L S O,

The lunations, conjunctions, eclipses, rising, setting and  
southing of the planets; length of days; judgment  
of the weather; festivals, and other remarkable days;  
high water at Burlington; Quakers general meetings;  
courts; roads, &c. Together with very useful tables,  
chronological observations, and a variety of instructive  
and entertaining MATTER both in Prose and  
Verse.

By TIMOTHY TRUEMAN, *Philom.*

BURLINGTON,

PRINTED AND SOLD BY ISAAC COLLINS  
IN MARKET-STREET.

The ANATOMY of Man's Body, as governed by the  
TWELVE CONSTELLATIONS.

♋ The Head and Face

♋ The Feet

*To know where the Sign is,*

First find the Day of the Month, and against the Day you have the Sign or Place of the Moon in the sixth Column. Then finding the Sign here, it shews the Part of the Body it governs.

*The Names and Characters of the Seven Planets.*

☉ Sol, ♄ Saturn, ♃ Jupiter, ♂ Mars, ♀ Venus, ☿ Mercury, ☾ Luna, ♁ Dragon's Head and ♂ Tail.

*The Five Aspects,*

♄ Conjunction    ♂ Opposition, \* Sextile.  
△ Trine,            □ Quartile,

*Common Notes for the Year 1778.*

Golden Number,	12		Epact,	1
Dominical Letter D			Cycle of the Sun,	23

A TABLE shewing the INTEREST due upon any Sum of Money, from Five Shillings to One Hundred Pounds, for a Year or under, at Six or Seven per Cent.

At Six per Cent.

Explanation of the above Table. Find the Principal in the first Column, and against it is the Interest due for one, six or twelve Months, as the Titles express.

*A N Ointment for the eyes.* Take of prepared tummy one ounce; of lapis hæmatites prepared, two scruples; of the aloes prepared, twelve grains; of prepared pearl four grains. Put them into a porphory of marble mortar, and rub them with a pebble of the same stone very carefully, with a sufficient quantity of vipers greafe or fat to make a liniment. To be used daily, morning and evening, or both.

# JANUARY. The FIRST MONTH.

## HYMN TO THE MORNING.

**D**AUGHTER of heaven, Aurora, rise,  
 Thy cheering course to run,  
 With lustre crimson o'er the skies  
 And usher in the sun.  
 Thy balmy breath's refreshing power,  
 Shall soon revive the plain :  
 Awake the sweets of every flow'r,  
 And gladden ev'ry swain.

**A**T a time when *sweetening* has become so very scarce and dear as not to be come at by many, it may be agreeable to some of thy readers to know that a very good syrup, nearly equal to West-India *melasses*, may be made of Indian corn stalks in the following manner: As soon as the grain is hard enough to save with care, and before the leaves lose their verdure, husk the corn, clear the stalks of leaves, and cut them close to the ground; the tassel, with three or four joints of the top, may then be taken off, and the rest of the stalk run through a good apple mill well wedged up, unless a mill with round rollers, made for the purpose, can be had, which is the best, as the stalks may be run through that a second time; keep a large tub under the nuts or rollers with a coarse linen cloth tied over it to separate the pure juice from the broken stalks; the liquor thus strained should immediately be put over a good fire in a brass or copper kettle, some say iron is as good, skim it clean as long as any skum arises;

# FEBRUARY. The SECOND MONTH.

The virgin yet untaught to sigh,  
 Shall lightly tread the vale ;  
 And raise with joy the tearless eye,  
 To bid thy presence hail !  
 Come, modest maid ! with blushes spread,  
 In all thy roses drest :  
 Diffusing health to every cheek,  
 And peace on ev'ry breast.

Come,

		13 25	12 16	21 22	15 3	N	5	
		19 1	14 16	20 27	23 5		3	
		25 7	15 16	20 2	10	S.	3	

D	☽ r. f.	☽ sou.	1	after which, and the liquor boils, it
1	9 38	3 28	8	should be stirred frequently, and
2	10 46	4 16	9	when boiled away to near one third,
3	11 55	5 6	10	strain it through a flannel; or if that
4	Morn.	5 58	10	cannot be come at, a coarseish strong
5	1 6	6 53	11	linen cloth will do, then immediate-
6	2 16	7 51	12	ly hang it over the fire again, and
7	3 27	8 49	1	boil it until of a proper thickness,
8	4 32	9 50	2	which may be known by cooling a
9	5 31	10 48	3	little in a bowl. It is observable,
10	Moon	11 43	4	when near done a rich yellowish froth
11	rises	Morn.	5	appears on the top resembling that
12	6 32	12 34	5	which sometimes is seen in warm
13	7 35	1 24	6	weather on good melasses; in this
14	8 37	2 9	7	last boiling it should be almost con-
15	9 37	2 53	7	stantly stirred with a wooden stick,
16	10 37	3 36	8	to prevent its burning. The time it
17	11 35	4 18	9	requires to evaporate to a perfect
18	Morn.	5 1	10	melasses depends a little upon the
19	12 34	5 45	10	ripeness of the juice when the stalk
20	1 33	6 32	11	is cut, and the briskness of the fire;
21	2 32	7 21	12	if the juice is in maturity, and the
22	3 27	8 11	1	liquor is kept in a constant good
23	4 18	9 3	2	boil, about seven or eight hours
24	5 7	9 57	2	actual boiling, has been found sufficient,
25	6 27	10 50	3	otherwise a longer time is necessary.
26	Moon	11 42	4	The process may be expedited and
27	sets	after.	5	much helped by having several ket-
28	7 25	1 24	6	tles

Contradict not such as are apt to quarrel; and take no pleasure in provoking them.

# MARCH. The THIRD MONTH.

Come, morning ! come, which heav'n design'd  
 It's choicest gifts to bear ;  
 And kindly teach the human mind  
 To worship and revere.  
 In wonder wrapt, let nature stand  
 To think how much she owes ;  
 And learn to praise that gracious hand  
 From whence the blessing flows.

D	Dr.f.	D fou.	Titles on at once, and when partly
1	8	36	2 14 7 boiled and strained as above directed,
2	9	48	3 5 8 put the whole into one that will con-
3	11	0	3 57 8 tain and finish it off; this makes room
4	Morn.	4 51	9 for more fresh juice, and prevents
5	12	12	5 48 10 burning the kettles or the melasses.
6	1	23	6 46 11 A very good melasses may also be
7	2	29	7 46 12 made of pumpions, by baking them
8	3	28	8 44 1 until soft, then expressing the juice and
9	4	21	9 39 2 boiling it as above: and also of cider
10	5	5	10 31 3 made of good sweet apples: in both
11	5	40	11 21 4 cases the second straining is necessary
12	Moon	Morn.	4 4 to make it of the best quality.
13	rises	12 8	5 5 If these hints, from one who has
14	7	30	12 53 6 had some little experience, may put
15	8	29	1 36 6 others upon making the trial, and
16	9	29	2 19 7 furnishing thy next year's Almanack
17	10	28	3 1 8 with a more clear and practical me-
18	11	28	3 44 8 thod in one or all of these branches
19	Morn.	4 31	9 9 of manufacturing this useful com-
20	12	26	5 18 10 modity, and in the mean-time en-
21	1	23	6 8 11 courage my countrymen to supply
22	2	16	7 0 12 themselves with a substitute for the
23	3	5	7 51 12 foreign melasses, that may atone in
24	3	50	8 44 1 some measure for the present scarcity,
25	4	29	9 36 2 and perhaps save the importation of
26	5	5	10 28 3 so much made by the <i>iron hand of</i>

# MAY. The FIFTH MONTH.

And melts with tender love;  
 Compassion with his filken hand,  
 Each passion binds with soft command,  
 Unruffled with ambitious dream,  
 His bark glides down fair mercy's stream,  
 Protected from above.

No ills that haunt the guilty breast,  
 The peaceful roof shall e'er invest,

Where

B

# JUNE. The SIXTH MONTH.

Where virtue holds her spotless reign,  
 Where pity throbs in ev'ry vein,  
 And mercy keeps the door.  
 Who listens to the wretch's cry,  
 Who wipes the tear from orphan's eye,  
 Who cheers the heart o'erprest with woe;  
 Him God will greater mercy show,  
 And blefs him evermore.

where they often take root again, and at any rate obstruct the growth of the flax in the furrows.

*Of pulling Flax.*

When the crop grows so short and branchy, as to appear more valuable for seed than flax, it ought not to be pulled before it be thoroughly ripe; but if it grows long and not branchy, the seed should be disregarded, and all the attention given to the flax. In the last case it ought to be pulled after the bloom has fallen, when the stalk begins to turn yellow, and before the leaves fall, and the bolls turn hard and sharp pointed.

When the stalk is small, and carries few bolls, the flax is fine; but the stalk of coarse flax is gross, rank, branchy, and carries many bolls.

When flax has fallen and lies, such as lies ought to be immediately pulled, whether it has grown enough or not, as otherwise it will rot altogether.

When parts of the same field grow unequally, so that some parts are ready for pulling before other parts; only what is ready should be pulled, and the rest should be suffered to stand till ready.

The

# JULY. The SEVENTH MONTH.

*Character of a country Parson.*

**A** Parish priest was of the pilgrim train,  
 An awful, reverend and religious man;  
 His eyes diffus'd a venerable grace,  
 And charity itself was in his face.  
 Rich was his soul, though his attire was poor,  
 As God had cloth'd his own ambassador.  
 For such on earth his blest'd Redeemer bore.

Refin'd

30	11 9	5 34	10	Both rivers and lochs water the flax										
31	11 35	6 17	11	quicker than canals.										

# AUGUST. The EIGHTH MONTH.

Refin'd himself to soul, to curb the sense,  
 And made almost a sin of abstinence.  
 Yet had his aspect nothing of severe,  
 But such a face as promis'd him sincere.  
 Nothing reserv'd or sullen was to see,  
 But sweet regards and pleasing sanctity  
 Mild was his accent, and his action free.  
 With eloquence innate his soul was arm'd ;

Tho'

But all flax ought to be watered  
in canals, which should be digged  
in clay ground if possible, as that  
soil retains the water best: but if  
a firm retentive soil cannot be got,  
the bottom or sides of the canal,  
or both the bottom and sides may be  
lined with clay, or instead of lining  
the sides with clay, which might  
fall down, a ditch may be dug with-  
out the canal, and filled with clay,  
which will prevent both extraneous  
water from entering, and the water  
within from running off.

A canal of forty feet long, six  
broad and four deep, will generally  
water the growth of an acre of flax.

It ought to be filled with fresh soft  
water from a river or brook, if pos-  
sible two or three weeks before the  
flax is put in, and exposed all that  
time to the heat of the sun. The  
greater way the river or brook has  
run, the softer, and therefore the bet-  
ter, will the water be. Springs, or  
short runs from hills, are too cold,  
unless the water is allowed to stand  
long in the canal. Water from coal  
or iron is very bad for flax. A little  
of the powder of galls thrown into a  
glass of water, will immediately dis-  
cover

# SEPTEMBER. The TENTH MONTH.

Tho' harsh the precept, yet the preacher charm'd :  
 He bore his great commission in his look ;  
 But sweetly temper'd awe, and soften'd all he spoke.  
 He taught the gospel, rather than the law,  
 And forc'd himself to drive, but lov'd to draw.  
 For fear but freezes minds ; but, love, like heat,  
 Exhales the soul sublime to seek her native seat :  
 The tithes his parish paid he freely he took,

Put

as before mentioned, should next be put in beets, never larger than a man can grasp with both his hands, and tied very slack, with a band of a few stalks. Dried rushes answer exceedingly well for binding flax, as they do not rot in the water, and may be dried and kept for use again.

The beets should be put into the canals slope ways, or half standing upon end, the root end uppermost. Upon the crop ends, when uppermost, there frequently breeds a deal of vermin, destructive of the flax, which is effectually prevented by putting the crop end downmost.

The whole flax in the canal ought to be carefully covered from the sun with divots (or sods;) the grassy side of which should be next the flax, to keep it clean. If it is not thus covered, the sun will discolour the flax, though quite covered with water. If the divots are not weighty enough to keep the flax entirely under water, a few stones may be laid above them. But the flax should not be pressed to the bottom.

When the flax is sufficiently watered, it feels soft to the grip, and the *harle* parts easily with the *boon* or *show*

# NOVEMBER. The ELEVEN. MONTH.

Were only stewards of their sov'reign lord:  
 Nothing was their's but all the publick store,  
 Intrusted riches to relieve the poor;  
 Who, should they steal for want of his relief,  
 He judg'd himself accomplice with the thief.  
 And still he was at hand without request,  
 To serve the sick, to succour the distress'd.  
 He duly watch'd his flock by night and day,

And

C

# DECEMBER. The Twelfth Month.

And from the prowling wolf redeem'd the prey,  
 But hungry sent the wily fox away.—  
 The proud he tam'd, the penitent he chear'd,  
 Nor to reprove the rich offender fear'd,  
 His preaching much, but more his practice wrought,  
 (A living sermon of the truth he taught)  
 For this by rules severe his life he squar'd,  
 That all might see the doctrine which they heard;  
For

It is sown about the first of May, so thin, that about four pecks are sufficient for an English acre; and the ground must then be covered as much as possible to preserve the seed from the birds, who are very fond of it.

The

For priests, he said, were patterns for the rest,  
The gold of heav'n who bear the God impress;  
But, when the precious coin is kept unclean,  
The sov'reign's image is no longer seen:  
If they be foul, on whom the people trust,  
Well may the baser brass contract a rust;  
With what he begg'd his brethren he reliev'd,  
And gave the charities himself receiv'd;  
Gave while he taught, and edify'd the more,  
Because he shew'd by proof, 'twas easy to be poor.

The taper topped stalk which does not bear the pods, is called the female, though in fact it is the male, scattering from its bloom a small dust, which impregnates the pods of the bushy topped; which last is commonly, tho' improperly, called the male or carle hemp.

When hemp is the object of the farmer more than a crop of seed, the whole should be pulled when the stalk begins to grow yellow, and the earth remaining about the roots should be beat off to prevent more growth: but if the seed is wanted in its greatest perfection, the stalk bearing the pods must be pulled before the upmost pod begins to open; the earth should not be beat off from the roots; it should be stooked in sheaves upon the field, to dry and win as corn; and the top of these stooks should be covered with undergrowth, or the like, to preserve the seed from the birds.

Hemp is sooner watered than flax, and the canals must be deeper.

In keeping the seed care must be taken to preserve it from rats, mice, and such like vermin, who are all fond of it.

It is dressed as coarse flax, but is sooner dressed; and its greater length requires more care, and renders it more troublesome in the handling, especially in the skutching of it by the water lint-mills with horizontal skutchers, when it must be folded double. What is too coarse and strong in the stalk for the hand or foot machines, may be broke and peeled by the hand.

ECLIPSES

ECLIPSES for the Year 1778.

THE first is a great and almost total Eclipse of the Sun, on the 24th day of June in the forenoon,

H. M.

Beginning at	8 43	} Apparent Time.
Greatest obscuration	9 55	
End at	11 15	

Digits eclipsed  $11\frac{1}{2}$  on the south side.

In this Eclipse the centre of the moon's shadow first touches the earth in the Pacifick ocean, and, crossing Mexico, passes along the northwest side of the gulf; thence proceeding through West-Florida, the Carolinas and Virginia, it leaves the continent about the capes of Virginia. It then runs quite across the Atlantick, through the Azore islands, and passing over the empire of Morocco, leaves the earth in the desarts of Africa.

The second is a visible Eclipse of the moon on the night following the third of *December*,

H. M.

Beginning at	11 20
Middle at	12 29
End	1 38

Digits eclipsed 6 on the north side.

The third and last is of the sun December the 18th, at five o'Clock in the afternoon, invisible.

A TABLE of the Value and Weight of COINS.

*Circuit Courts are to be held at such times and places  
in the respective counties, as the Justices of the  
supreme court for the time being, or any of them,  
shall direct and appoint.*

*The learned lady's soliloquy.*

**H**OW horrid is the tyranny of fashion! What right can an equality or superiority of fortune give one lady to rob another of her time, patience and sense—yes—sense—in the conversation of fools and knaves, leaves a tincture of folly upon us. How many painful, ridiculous, trifling and impertinent visits am I obliged to pay, and receive from the sillier part of the sex! What title has dress or figure to lay a tax on us for admiration? Do not those who expect this, insult our understanding? And are not those who pay it slaves to folly? O that the shackles of custom were once broken, and that we might choose our society out of either sex without censure or inconvenience.

**T**O take iron mould out of linen. Take sorrel, bruise it well in a mortar, squeeze it through a cloth, bottle it, and keep it for use. Take a little of the above juice in a silver or tin sauce-pan, and boil it over a lamp; as it boils dip the iron mould, don't rub it, but only squeeze it. As soon as the iron mould is out throw it into cold water.

**A**N excellent way to take spots or stains out of linen.

Take fair water, dissolve in it bay salt, and steep the linen therein; then take juice of sorrel and sharp vinegar, and rub the spot with them, suffering it to soak in, and in often so doing it will disappear.

**T**O take away ink-stains, stains with fruit, &c. Take powder of allum half an ounce, juice of housleek or sengreen two ounces, and apply them, the allum being dissolved, very hot, the business will be done.

*The PEASANT and JUPITER.*

A FABLE.

**J**OVE, the great parent of mankind,  
Once to a Peasant land assign'd,  
In trust at the year's end to yield  
Half the neat profits of each field.  
With this proviso, that the god  
Should now attend the farmer's nod,  
To rain, blow, freeze, or give sunshine,  
Just as the Peasant should incline:  
On this the man, with pain and toil,  
Plough'd, sow'd and harrow'd well the soil,  
Which first he dung'd, and saw with joy  
JOVE, as agreed, his pow'r employ.  
Just as he wish'd, the weather came,  
Nor had one neighbour's fields the same.  
Well, harvest comes—and then he saw  
A field, not full of corn, but straw.  
At this Jove smil'd, who little car'd  
How well in partnership he far'd,  
And only meant to shew, 'tis vain  
For us of seasons to complain.  
See, friend,—he to the Peasant said,  
How ill, on your own terms, you've sped,  
When wind and snow, and rain and sun,  
Round daily at your option run.  
Go plough, sow, dung and tend your ground,  
I in my province will be found;  
Your labour shew, doubt not my skill,  
But leave the weather to my will.  
This said and done—and harvest come,  
Such mighty loads of corn went home,  
That 'twas with equal skill and pain,  
The barns were made to hold the grain.

*Such was the mighty change when man  
No more beyond his limits ran.*

To cure a musty pipe, hoghead or any other vessel of wine. Apply the soft part of a large wheaten or household loaf to the bung-hole, and let it remain there five, six or seven days, which will certainly take away the must.

To cure a musty bottls. Fill it with kennel dirt and water; let it remain three or four days, and then rinse it with clean water.

The collecting of LINEN RAGS, for making Paper, from the Scarcity and Dearness of that Article, justly merits the serious Attention of the Publick.—It is customary in Great-Britain for Women who sew to have a small Bag hanging to the Backs of their Chairs, into which they put their Cuttings even to the smallest Shred; if this was generally practised here, we should not only have Paper enough for our own Consumption, but, in all Probability, be able to export some to other Places.—The Printer in Burlington, and Stacy Potts in Trenton, will give the highest Price for any Quantity delivered clean at their respective Places of Abode.

QUAKERS GENERAL MEETINGS are kept.

At Philadelphia the FOURTH Firstday in the 3d Month, and the FOURTH Firstday in the 9th Month.

At Wilmington the next Firstday after Spring Meeting in Philadelphia.

At Chester-river the SECOND Firstday in the 4th Month.

At Duck-Creek the FOURTH Seventhday in the 4th Month.

At Salem the THIRD Firstday in the 5th Month.

At Flushing the LAST Firstday in the 5th Month, and LAST Firstday in the 11th Month.

At Little-Egg-Harbour the FIRST Firstday in the 6th Month.

At West-River at the Time called Whitsunday.

At Newport (Rhode-Island) the SECOND Sixthday in the 6th Month.

At Choptank the THIRD Firstday in the 10th Month.

At Little-Creek the FOURTH Seventhday in the 10th Month.

At Shrewsbury the FOURTH Firstday in the 10th Month.

At Lancaster the FOURTH Secondday in the 8th Month.

At Setacket the FIRST Firstday in the 6th Month.
