General Information

The DEP Bulletin is an information service provided by the New Jersey Department of Environmental Protection. In compliance with the Rules and Regulations Governing 90 Day Construction Permits (NJAC 7:1C-1.1 et seq.) this semi-monthly publication contains a list of construction permit applications recently filed or acted upon by the DEP. Using the Application Milestone Codes located on the inside front cover, interested persons can determine the status of Coastal Area Facility Review Act (CAFRA) permits, Federal Consistency Activity permits, Freshwater Wetlands Individual and Statewide General permits, General Groundwater Petroleum Products Cleanup permits, Open Water Fill permits, Solid Waste Facility permits (SWF), Stream Encroachment (SE) permits, Tidal Wetlands permits, Waterfront Development permits and Treatment Works Approvals (TWA).

In addition, a calendar of Events of Interest and a Schedule of Public Hearings is provided. The public hearings listed does not, however, constitute an official notice. Environmental Impact Statements acted upon during the period are also shown. Additional information concerning the permit applications can be obtained by calling the project manager at the appropriate office listed inside the back cover.

Public Hearings are held for the purpose of obtaining input and reaction to a proposed rule, regulation, or new program. Some hearings may be mandated by law. Generally their scope of impact is statewide or of broad general interest and open to the public.

Contested Case Hearings are held between the State and a particular party involving an application, enforcement violation or an appeal. Interest in these hearings is generally limited to those directly involved.

DEP Events of Public Interest include public hearings, council meetings, workshops, public information meetings, and exams.

The existing treatment plant serves an abbey, run by a religious order, and an educational and developmental complex rented to a state-funded (DYFS), non-profit group (Willow Glen). The sanitary sewage is directed to an onsite sewage treatment plant. The treatment plant consists of extended aeration and settling after which the treated effluent is alternatively dosed to a four-section sand filter bed. The capacity of the plant is 20,000 GPD. In the past, chlorination was used as 5% of the discharge was periodically directed to a surface water outfall approximately one-half mile away (Pequest River). The connection has since been severed and the outlet from the plant is plugged. Therefore, the discharge is now wholly directed to ground water through the sand filter beds. All residuals generated by the treatment and disposal system is managed at an approved residuals management facility. Effluent and ground water quality monitoring program will be established to control the discharge of pollutants and to assess environmental impact.</p>

An average of 300,000 gallons per day of wastewater containing residual waste from filter backwash, sedimentation cleaning, and clarifier cleaning is discharged to Reservoir #2. A floating baffle wall is proposed to contain the residual waste to a portion of the reservoir. An effluent and ground water monitoring program will be established to control the discharge of pollutants and assess the environmental impact.</p>
