General Information

The DEP Bulletin is an information service provided by the New Jersey Department of Environmental Protection. In compliance with the Rules and Regulations Governing 90 Day Construction Permits (NJAC 7:1C-1.1 et seq.) this semi-monthly publication contains a list of construction permit applications recently filed or acted upon by the DEP. Using the Application Milestone Codes located on the inside front cover, interested persons can determine the status of Coastal Area Facility Review Act (CAFRA) permits, Federal Consistency Activity permits, Freshwater Wetlands Individual and Statewide General permits, General Groundwater Petroleum Products Cleanup permits, Open Water Fill permits, Solid Waste Facility permits (SWF), Flood Hazard Area (FHA) permits, Tidal Wetlands permits, Waterfront Development permits and Treatment Works Approvals (TWA).

In addition, a calendar of Events of Interest and a Schedule of Public Hearings is provided. The public hearings listed do not, however, constitute an official notice. Environmental Impact Statements acted upon during the period are also shown. Additional information concerning the permit applications can be obtained by calling the project manager at the appropriate office listed on the inside back cover.

Public Hearings are held for the purpose of obtaining input and reaction to a proposed rule, regulation, or new program. Some hearings may be mandated by law. Generally their scope of impact is statewide or of broad general interest and open to the public.

Contested Case Hearings are held between the State and a particular party involving an application, enforcement violation or an appeal. Interest in these hearings is generally limited to those directly involved.

DEP Events of Public Interest include public hearings, council meetings, workshops, public information meetings, and exams.

This draft permit renewal proposes to authorize the intake of waters from Forked River as well as the discharge of wastewater through seven outfalls to both Forked River and Oyster Creek. The Station withdraws up to 662.4 million gallons per day (MGD) of water from an intake canal that leads from the Forked River, uses this water as non-contact cooling water, then discharges these waters into a discharge canal which leads to Oyster Creek. The plant also withdraws approximately 732 MGD of water from the intake canal and discharges it directly into the discharge canal (without added heat) for the purpose of diluting the thermal discharge from the non-contact cooling water. This permit also serves to authorize the discharge of miscellaneous non-contact cooling water, process wastewater, intake screen washwater and stormwater in minimal amounts through five other outfalls. This draft permit renewal incorporates NJDEP's determination with respect to the permittee's request for a thermal variance from surface water quality standards (SWQS) for heat and temperature pursuant to Section 316(a) of the Federal Clean Water Act. Further, this draft renewal permit incorporates NJDEP's determination pursuant to Section 316(b) of the Clean Water Act regarding the best technology available for the cooling water intake structure. Specifically, the Department has determined that closed-cycle cooling (i.e. cooling towers) constitutes best technology available for the Oyster Creek Generating Station.

Morris County	Kerri Standowski Bureau of Nonpoint Pollution Control (609) 633-7021	FW2-NT(C2) 02030103020100	The above named applicant has applied for a New Jersey Pollutant Discharge Elimination System (NJPDES) Permit Revocation and Reissuance to the New Jersey Department of Environmental Protection (NJDEP), Bureau Nonpoint Pollution Control. The applicant is involved with the manufacturing of asphalt emulsions under the Standard Industrial Classification (SIC) 2951. The permittee is currently authorized under the Basic Industrial Stormwater General Permit (5G2). The 5G2 requires that regulated industrial facilities eliminate all exposure of industrial materials or activities to stormwater (rainfall and snowmelt waters). Dosch King Co., Inc. has exposed materials and is in need of an individual stormwater permit. Thus, the facility's currently active 5G2 will be revoked and an individual industrial stormwater permit will be issued. The individual industrial stormwater permit will regulate stormwater discharges to Whippany River, classified as FW2-NT.

Smithville Professional Center NJ0073679 Ground Water	48 S. New York Road A-1 Galloway Twp. Atlantic County	Keith Howell Bureau of Nonpoint Pollution Control (609) 633-7021	I-PL (Preservation Area)	Smithville Professional Center is applying for a renewal NJPDES-DGW permit. This facility is an office development consisting of 3 buildings encompassing approximately 19,557 square feet that are used for office/condominium purposes only. Sanitary wastewater from the facility is treated by an existing on-site septic system. Disposal is to the ground waters of the state via one subsurface disposal bed. Wastewater flow is not to exceed 2000 gallons per day. Discharge from the Smithville Professional Center is treated by an onsite septic system. Disposal is to the ground waters of the state via one (1) subsurface disposal field. Actual flow data generated from July 2000 through December 2003 was evaluated to establish the design criteria. This design flow will incorporate no more than 2,000gpd discharge. This facility's permit is designed to monitor for flow volume only unless a discharge of 2,000gpd is exceeded. If this limit is exceeded discharge sampling and ground water monitoring will be implemented. The disposal field is 3200 square feet. All effluent is discharged to this disposal field.
Jackson Twp. MUA NJ0062090 Ground Water	135 Manhattan Street Jackson Twp. Ocean County	Keith Howell Bureau of Nonpoint Pollution Control (609) 633-7021	II-A	Jackson Township MUA is applying for a renewal NJPDES-DGW permit. This facility manages residential wastewater through a on-site contact stabilization package treatment plant. Maximum design flow for this treatment plant is 52,000gallons per day (gpd) although it is currently only permitted for 17,000gpd discharge. Treated effluent is discharged to one (1) on-site subsurface disposal bed with an area of 16,740 square feet. The Department is granting a reduction in the number of parameters that must be reported on the annual residuals "production" WCR at monitoring location SL1A, pursuant to N.J.A.C. 7:14C-1.13(c). The new annual residuals WCR with reduced reporting parameters will replace the existing annual residuals WCR beginning the calendar year that the permit becomes effective.
