## PERSONAL INCOME IN NEW JERSEY COUNTIES

This report consists of two parts which present recently revised income data for the United States, New Jersey, and its 21 counties. These estimates were compiled by the Bureau of Economic Analysis, U.S. Department of Commerce and supplied to the Office of Demographic and Economic Analysis in the form of computer printouts, from which this report was prepared.

BEA's work on regional income estimates began in the mid-thirties with the construction of a series of "State income payments" to individuals. This was the precursor of the extensive work carried out in the forties and fifties on more comprehensive annual state-by-state breakdowns of total personal income and work completed in the sixties on the development of quarterly estimates of State personal income. During the latter half of the fifties, BEA inaugurated its sub-State estimates on a limited basis, and this program has been expanded to the point where annual personal income estimates are now being made for all U.S. counties and county equivalents.

Total personal income is defined here as consisting of private and government wage and salary payments in cash and in kind, other labor income, farm and nonfarm proprietors' income, interest, net rents, dividends, and transfer payments, less personal contributions for social insurance. It is measured before the deduction of personal income and other personal taxes and is reported in current dollars (no adjustment is made for price changes).

Part I consists of tables for only the United States and the State of New Jersey. Detailed are both total and per capita income for the years 1958 through 1977. Labor and proprietors' income by place of work is given by type -- wage and salary, other labor and proprietors' income -- and by broad industrial groupings. In addition, total labor and proprietors' income, adjusted to a residence basis, is added to dividends, interest, rent and transfer payments to show the derivation of income by place of residence. Part I differs from Part II in that the tables in Part I reflect a major benchmark revision made in January 1976 which, at the time of this publication, had not been incorporated into the local area estimates for the years 1958-1968. (See "Revisions".) Part I also includes preliminary tables for 1977 and revised tables for 1975 and 1976 which are not presently available for local areas. The tables in Part I are consistent with those published in the October 1978 issue of the Survey of Current Business.

Included in Part II of this report are historical series on both total and per capita income for the United States, New Jersey, and its 21 counties, and per capita income relatives (county incomes measured as a percent of U.S. per capita) for selected years back to 1929. Labor and proprietors' income by place of work is given by type -- wage and salary, other labor and proprietors' income -- and by broad industrial groupings. In addition, total labor and proprietors' income, adjusted to a residence basis, is added to dividends, interest, rent and transfer payments to show the derivation of income by place of residence.

## Components of Personal Income and Data Sources<sup>1</sup>

The estimates of personal income are constructed from a wide variety of statistical information. This consists very largely of compilations by government agencies, although data are drawn from private sources as well. For the most part this statistical information is not collected in the framework of a coordinated statistical program designed for income measurement, but rather as the byproduct of information obtained (by administering agencies) in the course of carrying out the legal provisions of various government programs. For this reason many of the data series are not directly or wholly suitable for income estimation purposes and must be processed to adjust for differences in definition and to fill gaps in coverage.

Several of the more important sources of administrative record information include data generated as the by-product of the State unemployment insurance (UI) program of the Employment and Training Administration, the insurance programs of the Social Security Administration, and the Federal tax program of the Treasury Department. Two of the more important Censuses utilized are the Censuses of Agriculture and Population. The data obtained from the above sources yield more than 90 percent of the data needed for the preparation of State and county income estimates.

The ES-202 unemployment insurance (UI) tax reports of the Nation's employers to their respective State Employment Security Agencies are used to estimate four-fifths of total wage and salary disbursements, which account for about two-thirds of all personal income. Until 1972, the usefulness of the ES-202 file was somewhat limited by the exclusion of small firms from mandatory coverage under the UI program. To supplement this deficiency, BEA derived estimates for small firms based on relationships developed from the records of the Old Age and Survivors Insurance (OASI) program, since size-of-firm is not a factor governing coverage under OASI.

Beginning in 1972, with the exception of agriculture, private households, and nonprofit institutions, size-of-firm is no longer a criterion for coverage under the UI program. Moreover, the extended coverage provisions initiated in 1972 were also effective in improving the reporting in forestry, fisheries, hospitals, and museums, art galleries, etc., so that they are considered "covered" industries. In 1978, mandatory coverage was further extended to all State and local government employees (with minor exceptions such as elected officials, members of the National Guard, and temporary emergency workers).

---

<sup>1</sup> A summary description of the methodology and data sources used in the derivation of personal income for local areas, including an explanation of the definitional and classificational revisions introduced into the personal income series, appears in each of the eight regional volumes of Local Area Personal Income, 1971-76 published in August 1978 by the Bureau of Economic Analysis, Department of Commerce. (Data for New Jersey appear in Volume 3.)

At present, several industries remain either not covered or only partially covered by UI (farms, contract farm labor, railroads, non-profit institutions, private educational services, and private households). In addition, portions of "covered" industry payrolls also remain outside the scope of the State UI laws. These elements include tips; insurance solicitors on commission; and wage disbursements to employees of electric railways, carrier affiliates, and the Federal Reserve Board and banks. A wide variety of data sources were employed in the computation of estimates for these groups, including Civil Service records, data from the Censuses of Population and Agriculture, Department of Defense records, County Business Patterns, Social Security (OASI) and records of private industry groups. "Other Labor Income," which consists of fringe benefits and miscellaneous other payments, was distributed to counties primarily on the basis of payroll and employment allocators.

Two broad segments of proprietors' income may be distinguished with respect to source material and methods of estimation -- nonfarm and farm proprietors' income. Nonfarm proprietors' income is estimated and allocated using IRS and OASI data. The methods used to generate farm proprietors' income rely heavily on quinquennial data obtained from the Census of Agriculture and on selected intercensal data prepared by the Economic Statistics Cooperative Service of the U.S. Department of Agriculture.

Dividends, personal interest income, and rental and royalty income of persons, both monetary and imputed, generally account for about 12 to 14 percent of total personal income. Income estimates for these segments generally rely on IRS data supplemented with information from other sources.

Transfer payments, one of the fastest growing components of personal income, generally are receipts of persons from government (other than government interest) and business for which no services are rendered currently. The estimates of total transfer payments represent the summation of over 50 separate series, ranging from large, well-known programs such as Social Security, unemployment insurance, veterans benefits, and welfare to relatively obscure items such as Bureau of Indian Affairs payments and Black Lung disability benefits. Income estimates for the wide variety of transfer payments are based largely on fiscal records of Government agencies.

Contributions made by individuals (both employees and nonfarm self-employed) under the various social insurance programs are excluded from personal income by handling them as explicit deductions. The employee portion covers payments for Old Age, Survivors, Disability, and Health Insurance (OASDHI), State unemployment insurance, railroad retirement and public retirement systems. Contributions of self-employed relate to OASDHI only.

### State Controls

The local area estimates prepared by BEA are tied directly to official personal income estimates for states, which appear regularly in the U.S. Department of Commerce's Survey of Current Business. That is, the State total for each income component, as taken from the official State income series before adjustment for residence, is allocated to the counties of the State in accordance with each county's proportionate share of the same or some related series that is available on a county basis.

Because of the availability of State control totals, a different allocator may be used in each State without impairing the interstate comparability of the estimates. This use of individual State totals makes it possible to incorporate the best county estimating series available in each State, thus increasing the accuracy of the sub-State estimates. Moreover, since most components of personal income can be estimated more accurately for States than for smaller geographic areas, the allocation procedure permits the use of local area data that may approximate rather than match the component being estimated and still reflect the accuracy of the State estimate.

### Residence Adjustment Procedure

In order to estimate the total and per capita income of residents in a local area, all the components of personal income must be put on a "where-received" (i.e., place-of-residence) basis. In the BEA local area income series, dividends, interest, rental income, and transfer payments are estimated initially on a where-received basis. The proprietors' income series is treated as being on a where-received basis although fragmentary information indicates that for many urban counties, estimates may represent a mixture of the place-of-work and place-of-residence classification.

Wages and salaries, other labor income (OLI) and personal contributions were adjusted to convert them from a where-earned to where-received basis. Excluded from adjustment were farm wages and OLI, private household wages and OLI, the family allotments (Q) portion of military pay, the pay of military reservists, personal contributions for Government Life Insurance, State unemployment and cash sickness insurance, and contributions by the self-employed for Old Age, Survivors, Disability and Health Insurance, since these are already on a place-of-residence basis.

The residence adjustment is based primarily on commuting and income data obtained from the 1960 and 1970 Censuses of Population and on the 1972 and 1974 county wages reported by the Internal Revenue Service. The Census commuting data give place of residence and place of work of employed persons at the State and county levels. Data on average incomes for selected groups of commuters were also available from the 1970 Census and were ~~incorporated~~ for the first time, into the 1973 estimating cycle. The Census commuting and average income data were used to yield the primary residence adjustment. Census county wage data for 1969 and IRS county wage data for 1972, 1974 and 1975 were used to identify the areas that needed further adjustment and to determine the size of the correction.

## Revisions

As would be expected with a statistical series like personal income where great masses of data are collected from a wide variety of sources, frequent revisions to the estimates have been necessary. These revisions may be generally classified as definitional and classificational, on the one hand, and statistical, on the other. They generally evolve from development of new or improved data sources, benchmarking of input series and classificational changes in income components.

The BEA national income and product accounts underwent a major benchmark revision in January 1976 which produced changes in the personal income series as well. Currently, State personal income estimates reflecting these revisions are available back to 1958. Local area estimates have been revised back to 1969. Revisions for the earlier years, back to 1959, will be available by the end of this year. A description of these revisions as they pertain to personal income appears in "State Personal Income, 1971-76," Survey of Current Business, August 1977. A summary of these changes appears in Tables A and B. The detailed tables in Part I of this report reflect these revisions back to 1958, revised estimates for 1975 and 1976, and preliminary estimates for 1977. The detailed tables in Part II reflect these revisions for 1969-1974; they do not include the revisions for 1975 and 1976; and 1977 preliminary estimates are unavailable for local areas at the time of this publication.

1973	42,527.5	42,527.5	1,045,098.0	1,045,098.0
1974	46,320.8	46,320.8	1,147,257.0	1,147,257.0
1975	49,758.4	49,823.9	1,246,501.0	1,248,446.0
1976	54,324.8	53,672.8	1,372,833.0	1,374,387.0
1977	NA	58,588.8	NA	1,518,390.0

The revised data shown on this table are incorporated in Part I (United States and New Jersey only). They are only incorporated in Part II (United States, New Jersey and Counties) for the years 1969-1974 because comparable statistics for 1958-1968, 1975 and 1976, and preliminary 1977 are not yet available. They are shown here and in Part I so that those using the data may anticipate the magnitude and direction of changes when a revised county series is produced.

TABLE B  
JANUARY 1979 REVISIONS TO PERSONAL INCOME DATA

YEAR	NEW JERSEY		UNITED STATES	
	Unrevised	Revised 1/79	Unrevised	Revised 1/79
1958	NA	2,471	NA	2,049
1959	2,656	2,603	2,167	2,145
1960	NA	2,700	NA	2,201
1961	NA	2,753	NA	2,248

1963	NA	2,973	NA	2,436
1964	NA	3,120	NA	2,572
1965	3,323	3,310	2,785	2,750
1966	3,540	3,542	3,001	2,963
1967	3,778	3,768	3,188	3,142
1968	4,081	4,074	3,457	3,401
1969	4,359	4,359	3,667	3,667
1970	4,684	4,684	3,893	3,893
1971	4,967	4,967	4,132	4,132
1972	5,326	5,326	4,493	4,493
1973	5,807	5,807	4,980	4,980
1974	6,326	6,326	5,428	5,428
1975	6,786	6,794	5,851	5,861
1976	7,405	7,314	6,396	6,403
1977	NA	7,994	NA	7,019

The revised data shown on this table are incorporated in Part I (United States and New Jersey only). They are only incorporated in Part II (United States, New Jersey and Counties) for the years 1969-1974 because comparable statistics for 1958-1968, 1975 and 1976, and preliminary 1977 are not yet available. They are shown here and in Part I so that those using the data may anticipate the magnitude and direction of changes when a revised county series is produced.

## DEFINITIONS AND TERMS

Personal Income -- The definition of personal income used in this report appears on page one. It is important to note that BEA income estimates differ substantially from other published estimates, including the widely used Bureau of the Census series. BEA estimates would generally exceed those of the Census Bureau. Bureau of the Census data are obtained directly from households, whereas the BEA series is estimated largely from administrative records. Moreover, the definitions of income are different. The BEA income series includes some items not included by the Census Bureau, such as income in kind, income received by nonprofit institutions, the value of services of banks and other financial intermediaries without the assessment of specific charges and medicare payments. On the other hand, the Census income data include contributions for support received from persons not residing in the same household and employee contributions for social insurance.

Per Capita Income -- Per capita income is computed by dividing the residence-adjusted total personal income by mid-year population estimates. Population data for July 1 of each year are provided by the Bureau of the Census; the college population, however, is measured as of April 1.

Wage and Salary Disbursements -- Wage and salary disbursements consist of the monetary remuneration of employees commonly regarded as wages and salaries, inclusive of executives compensation, commission, tips, and bonuses, and the value of payments in kind which represent income to the recipient. All payments in the current period are covered, including any payments retroactive to past years. That is, retroactive wages are counted when paid rather than when earned.

Wages in Kind -- Wage and salary estimates include allowances for the food, clothing and lodging paid in kind to employees which represent income to them. The concept of valuation is cost to the employer.

Other Labor Income -- Other labor income consists of supplementary types of labor income paid out or accruing in the current period. These include employer contributions to private pension, health and welfare, and group insurance plans; compensation for injuries; pay of military reservists; and several minor items.

Proprietors' Income -- Proprietors' income measures net business earnings of owners of unincorporated enterprises. Farmers, independent professional practitioners (such as physicians, dentists, and lawyers), entrepreneurs in nonfarm business and others in self-employment status are included in the scope of proprietors' income.

Dividends, Interest, and Rental and Royalty Income -- In addition to money income from these sources received by individuals, fiduciaries, and non-profit institutions, this income component includes estimates for imputed interest and imputed rent. Imputed interest measures the value of services -- such as checking, banking and investment services -- which are rendered to persons by financial institutions without the assessment of specific charges. Such services represent a real element of income and production. They may be regarded as interest income in kind, closely analogous to wages in kind. The other major element in imputed interest is the property income withheld by life insurance companies and mutual financial intermediaries on the account of persons, such as the addition of income to policy holder reserves held by life insurance companies. Imputed rent measures the gross rental income accruing to nonfarm residence of owner-occupied nonfarm dwelling units less the normal expenses incurred in home ownership. A similar imputation for farm dwellings is included in the series on farm proprietors' income. Allowance for this type of income in kind affords comparable treatment of rented and owner occupied houses in the income estimates.

Transfer Payments -- Defined as receipts of persons from government and business (other than government interest) for which no services are currently rendered, transfer payments represent the summation of over 50 separate series. Examples of transfer payments from government sources would include Social Security, unemployment insurance, welfare and veterans benefits, while business transfers would include individuals' bad debts to business, corporate gifts to nonprofit institutions, cash prizes, and personal injury payments to persons other than employees.

Personal Contributions for Social Insurance -- Contributions made by employees and nonfarm self-employed under the various social insurance programs are excluded from personal income. The employee portion covers contributions for Old Age, Survivors, Disability and Health Insurance (OASDHI), state unemployment insurance, railroad retirement insurance, and public employee retirement systems, as well as premium payments for government life insurance. Contributions of the self-employed relate to OASDHI only. In addition to employees social insurance contributions, contributions made by employers on behalf of employees are excluded. Because social insurance contributions are treated as an explicit deduction after computation of labor and proprietors' income is calculated, the breakdown of labor and proprietors' income by type and by industry such as shown in Tables 3 and 8 of this report will include social insurance payments. The deduction for social insurance is subsequently applied to total labor and proprietors' income (Tables 4 and 9) to produce total personal income estimates.

PART I  
PERSONAL INCOME  
FOR  
UNITED STATES  
AND  
NEW JERSEY  
1958-1977

NOTE: *Part I differs from Part II in that the tables for 1958-1968 in Part I reflect a major benchmark revision made in January 1976 which, at the time of this publication, had not been incorporated into the local area estimates for those years. Part I also includes preliminary tables for 1977 and revised tables for 1975 and 1976 which are not presently available for local areas.*

PART II  
PERSONAL INCOME  
FOR  
UNITED STATES  
AND  
NEW JERSEY  
  
SELECTED YEARS  
1929-1976

NOTE: *Part I differs from Part II in that the tables for 1958-1968 in Part I reflect a major benchmark revision made in January 1976 which, at the time of this publication, had not been incorporated into the local area estimates for those years. Part I also includes preliminary tables for 1977 and revised tables for 1975 and 1976 which are not presently available for local areas.*
