5:23-7.6 Exception for accessible entrance due to site impracticality

(a) Terrain: Site impracticality due to terrain shall mean the following:

1. Single building with common entrance: A site with a single non-elevator-serviced building with a common

building entrance for all units shall not be required to provide an accessible building entrance when the following conditions have been met:

- i. The slopes of the undisturbed site measured between the planned building entrance and all vehicular or pedestrian arrival points within 50 feet of the planned entrance exceed 10 percent; and

ii. The slopes of the planned finished grade measured between the entrance and all vehicular or pedestrian arrival points within 50 feet of the planned entrance also exceed 10 percent.

iii. Where there are no vehicular or pedestrian arrival points within 50 feet of the planned entrance, the slope shall be measured to the closest vehicular or pedestrian arrival point.

iv. For the purposes of this subchapter, vehicular or pedestrian site arrival points shall include public or resident parking areas, public transportation stops, passenger loading zones, and public streets or sidewalks.

(1) In the case of sidewalks, the closest point to the entrance shall be where a public sidewalk entering the site intersects with the sidewalk to the entrance.

(2) In the case of resident parking areas, the closest point to the planned entrance will be measured from the entry point to the parking area that is located closest to the planned entrance.

2. Multiple buildings or single building with multiple entrances: For a site with multiple buildings or a site with a single building with multiple entrances, an accessible building entrance shall not be required to be provided when the following conditions have been met:

i. The percentage of the total buildable area of the undisturbed site with a natural grade less than 10 percent slope shall be calculated. The analysis of the existing slope (before grading) shall be done on a topographic survey with two-foot contour intervals with slope determination made between each successive interval. The accuracy of the slope analysis shall be certified by a licensed professional engineer, landscape architect, architect, or surveyor.

ii. The minimum percentage of ground floor dwelling units to be made accessible shall equal the percentage of the total buildable area (not including floodplains, wetlands, or other restricted use areas) of the undisturbed site that has an existing natural grade of less than 10 percent slope.

(b) Floodplain: Site impracticality due to unusual characteristics shall apply to non-elevator-serviced buildings on sites located in a Federally designated floodplain or coastal high-hazard area or sites that are subject to other similar requirements of law or code that require that the lowest floor or lowest structural member of the lowest floor be raised to a specified level at or above the base flood elevation. An accessible entrance shall be deemed to be impractical due to usual characteristics when one of the following conditions is met:

1. The unusual site characteristic results in a difference of finished grade elevation exceeding 30 inches and 10 percent when measured between a building entrance and all

vehicular or pedestrian arrival points within 50 feet of the planned building entrance; or

2. If there are no vehicular or pedestrian arrival points within 50 feet of the planned building entrance, the unusual characteristics result in a difference in finished grade elevation exceeding 30 inches and 10 percent measured between the planned building entrance and the closest vehicular or pedestrian arrival point.

(c) Site impracticality exceptions shall not apply to elevator-serviced buildings.

(d) The exemption for an accessible building entrance notwithstanding, the interior of the dwelling units required to comply with this subchapter shall be required to be accessible or adaptable in accordance with the provisions of this subchapter.

5:23-7.7 Exterior accessible route

(a) Every site containing one or more buildings required by this subchapter to be accessible shall have at least one accessible route which shall provide access to and between buildings and facilities on the same site that are also required to be accessible.

1. Exterior accessible routes may include parking access aisles, curb ramps, walks, or ramps.

2. Where the natural and undeveloped contour of the land exceeds the slope required for an accessible route and it is technically infeasible to alter the land contour, a vehicular route may be provided as an alternate accessible route.

3. An accessible route within a site shall be provided from public transportation stops, accessible parking and accessible passenger loading zones, and public streets or sidewalks to the building entrance served.

4. Entrances to buildings or spaces in buildings that are not required to be accessible shall not be required to be on an accessible route.

5. Unless it is the only building entrance, a loading or service entrance shall not be required to be on an accessible route.

The primary entrance(s) used by the general public shall be accessible.

1. Where a building or facility has separate entrances that serve such functions as accessible parking facilities, passenger loading zones, taxi stands, public streets and sidewalks, or accessible interior vertical access, at least one entrance serving each such function shall be accessible.
2. At least one accessible entrance shall serve each separate tenancy or function within a building or facility.
