Jon S. Corzine, Governor
Douglas H. Fisher, Secretary

CIRCULAR 571

OCTOBER 2010

F O R E W O R D

The New Jersey Department of Agriculture's Division of Marketing and Development offers producers, retailers, wholesalers and consumers a wide variety of quality assurance services. Included among its responsibilities, the division's Bureau of Agricultural Chemistry is mandated by law, N.J.S.A. 4:4-1 through 4:4-20, N.J.S.A. 4:9-1 through 4:9-15 and N.J.S.A. 4:9-16 through 4:9-21, to sample and analyze animal feeds (including pet foods), commercial fertilizers (including indoor plant foods), soil conditioners and liming materials.

The Bureau registers manufacturers, inspects products, analyzes samples and enforces the law. The goal is to maintain and insure the quality of these agricultural commodities.

A current list of feed, fertilizer and lime registrants; the consumption data for feed, fertilizer and lime in New Jersey; the New Jersey fertilizer tonnage report; and results of the analytical work performed during the period from July 1, 2009 to June 30, 2010, are summarized in this publication.

EXECUTIVE SUMMARY

The Division of Marketing and Development, Bureau of Agricultural Chemistry, inspected a total of 8394 lots of various commodities for compliance with the respective laws and registration requirements of the State of New Jersey. When unregistered products were found, either the company was required to apply immediately for registration or their products were removed from the market.

During the period covered by this report, the agricultural product agents in the Bureau of Agricultural Chemistry took 390 official samples of commercial animal feed. Protein determinations were run on all feed samples with six of them (1.54%) found to have values below the label guarantee. Two (.51%) had a fat content that did not meet the guarantee value. Fifteen of canned pet foods sampled were checked for moisture content. One producer was unregistered at the time they were sampled.

A total of 270 official samples of commercial fertilizers were collected for laboratory tests during the report period. Of these, 268 carried a nitrogen guarantee and 23 (8.58%) were below the guaranteed value for nitrogen content. A total of 223 samples were analyzed for available phosphate and 22 (9.87%) were below their guarantee. Twenty nine (11.79%) of 246 samples failed to meet their soluble potash guarantees.

A total of 383 micro-nutrients analyses were performed. In the samples tested, the following percentage was found to be below guarantee levels: none in calcium; none in magnesium; 3.88% in sulfur; 3.85% in boron; none in copper; 1.82% in iron; 16.36% in manganese and none in Zinc. One sample was unregistered at the time of sampling.

The Bureau sampled 3 agricultural liming materials during this inspection period. Of these, no sample failed to meet the calcium oxide and magnesium oxide. No sample failed to meet the fineness specifications.

These data are not to be interpreted as a complete evaluation of the suitability of these agricultural chemicals for a specific purpose. Many factors other than physical and chemical composition must be considered. For more complete information regarding the efficacy of these products, contact Cook College, Rutgers University, or a county agricultural extension agent.

The Fertilizer and Soil Conditioner Law require manufacturers to compensate consumers for lots of fertilizer judged to be deficient. Each year the unit value for each of the primary plant nutrients is determined. The commercial value of deficient lots is dependent upon the magnitude of the deficiency multiplied by the unit value of the nutrient involved. The penalty assessed is equivalent to five times the commercial value. When the ultimate consumer of the deficient lot of fertilizer cannot be determined, the penalty is paid to the State Treasurer. During the period covered by this report, \$11,061.03 was refunded to consumers and \$8,282.24 was transmitted to the State Treasury.

Agricultural lime use in New Jersey increased from 74,084 tons in 2008 to 80,639 tons in 2009. Animal feed consumption decreased from 737,534 tons in 2008 to 699,449 tons in 2009. A total of 232,693 tons of fertilizers was distributed in 2009, a decrease from 262,459 tons in 2008. It is estimated that the 64% of these commodities were used on farms.

Please address inquires concerning this report, and the feed, fertilizer and lime laws to:

Alfred W Murray
Acting State Chemist
New Jersey Department of Agriculture

Safety Statutory Requirements Relative
To The Labeling Of Fertilizer, Feed and Lime

N.J.A.C. 2:68, N.J.A.C. 2:69 and N.J.A.C. 2:70 provides that:

No commercial feed, fertilizer and lime shall be distributed in New Jersey if there are deemed to be misbranded or adulterated.

A. The commercial fertilizer, feed and lime product shall be deemed to be misbranded:

1. if its labeling is false or misleading in any particular; or
2. if it purports to be or is represented as a commercial fertilizer, feed and lime unless label includes nutrient to the definition of identity.

B. The commercial fertilizer, feed and lime product shall be deemed to be adulterated:

1. if it contains any deleterious or harmful ingredient in sufficient amount to render it injurious to be beneficial to plant or animal when applied in accordance with directions for use on the label, or its adequate warning statements or direction for use, which may be necessary to protect plant or animal life are not shown upon the label;
2. if its composition falls below or differ from that which it is purported to possess by its labeling.

SUMMARY OF FEED ANALYSES

Number of Samples	Unregis-tered	Protein		Fat		Water	
		A	B	A	B	C	D
390	1	390	6	390	2	15	2
% in Violation	0.26%	1.54%		0.51%		13.33%	

A - Represents the number of analyses made.

B - Represents the number of samples that exceeded the permitted analytical variation.

C - Represents the number of Water analyses made.

D - Represents the number of Water samples that exceeded the permitted analytical variation.

* - Indicates that the sample is below label guarantee and subject to penalties.

FERTILIZER

KEY

G – Represents the guaranteed percentage levels

F – Represents the found percentage levels
