7:11-2.8 Equivalent sustained supply: Spruce Run/Round Valley Reservoirs System

- (a) In operating the Spruce Run/Round Valley Reservoirs System to augment natural stream flow during a period of low runoff, optimum dependable supply is attained at the confluence of the Millstone River where the combined flow from the tributaries to the Raritan River above that point becomes effective.
- (b) Each application for the diversion, withdrawal or allocation of water from the Raritan River Basin is, therefore, to be evaluated, and differentiation in rates, charges and assessments shall be made on the basis of quantities of water to be supplied, distance between the facility and point

of diversion, the cost in making such water available, the place where the water is to be used, and the character of such use.
