COVID-19

COVID-19 is a highly contagious respiratory illness caused by a virus. Most cases of COVID-19 are mild to moderate, like the common cold. But it can be more severe in older adults and people with chronic health conditions.

The virus is most likely to be spread from person to person by droplets when coughing and from contact with surfaces where those droplets have landed. Since this virus is new, health authorities continue to carefully watch how this virus spreads.

New Jersey COVID-19 Vaccination Page

The Department of Health is working with many other state, federal, and local agencies to quickly and equitably distribute COVID-19 vaccine to all New Jersey communities. It is the goal of the Department of Health to make safe and effective COVID-19 vaccination available to all who live, work, and/or are educated in New Jersey.

This page and the resources available here will continue to evolve as that effort moves forward.
