### 7:11-2.9 Production factor

(a) For any depletive diversion at any location above the confluence of the Millstone and Raritan Rivers, the inverse ratio between the allocation and its equivalent in sustained supply at the confluence is expressed as the Production Factor for that allocation as follows: Production Factor = Safe yield at the confluence/yield at the point of diversion.

(b) For any depletive diversion at or below the confluence of the Raritan and Millstone Rivers, the Production Factor shall be considered to be unity (1.0).

(c) The total daily allotment charge set forth in N.J.A.C. 7:11-2.7 shall be multiplied by the production factor for a given allocation.

(c) The total daily allotment charge set forth in N.J.A.C. 7:11-2.7 shall be multiplied by the production factor for a given allocation.

(b) The New Jersey Water Supply Authority reserves the right to revoke such standby service classification at any time on 30 days written notice to the user.

(c) Such revocation shall not prejudice the right of the user to submit an application for normal water use either prior to or following the effective date of revocation.
