

The New Jersey Wind Port is expected to support up to \$500 million in new economic activity within the State and region each year

The New Jersey Wind Port

The New Jersey Wind Port is the nation's first purpose-built offshore wind marshaling port, promising to position New Jersey as a hub for the U.S. offshore wind industry.

The Port offers an unrivaled combination of:

- ✓ Purpose-built marshalling space
- ✓ Heavy-lift wharfs and component laydown areas
- ✓ Open access to the Atlantic Ocean (free of vertical restrictions)
- ✓ Short steaming distances to more than 50 percent of US offshore wind lease areas
- ✓ Access to a highly skilled trades and technical work force

Construction, which is targeted to start in late 2021, will create hundreds of union jobs.
