Custom Alloy Corporation NJ0166511 Storm Water	412 Trimmer Rd. Califon Boro Hunterdon County	Dan Kuti Bureau of Nonpoint Pollution Control (609) 633-7021	Hollow Brook FW2-TP(C1) 02030105010060	The Custom Alloy Corp. Trimmer Rd. facility has applied for a individual NJPDES stormwater permit. The applicant is involved with the storage of cast pipe fittings and flanges of various size and composition under the Standard Industrial Classification (SIC) 3494. The proposed permit action will regulate stormwater discharges to Hollow Brook classified as FW2(C1) -TP waters.

Thompson County Park	Perrineville Rd And Fir Dr	Greg Chin	II-A	This is a Major Modification permit action to an existing facility. Manalapan Lake is located within the northern most portion of Thompson Park. This manmade recreational lake is approximately 60 years old, sedimentation has reduced water depth and fostered growth of vegetation such that it has protruded above the surface of the lake. 120,000 cubic yards (cf3) of sediments were proposed to be dredged from the lake to deepen the lake, retard vegetative growth and restore the lake's recreational value and aesthetic quality. This represents the first time Manalapan Lake has been dredged. Chemical analysis of leachate quality from the sediments to be dredged from Manalapan Lake showed elevated concentrations of mercury (Hg). The sediments to be dredged from Manalapan Lake were emplaced within an upland confined disposal facility (CDF) located in an abandoned borrow pit in the approximate center of Thompson Park. The proposed upland CDF will cover approximately four acres and extend 20 feet in height. Hydrogeologic simulations provided by the County of Middlesex indicated that the ground water plume from the proposed upland CDF is not expected to contravene New Jersey Ground Water Quality Standards (GWQS) for Hg in downgradient receptors (northern and southern tributaries of Manalapan Brook). In order to test the validity of the prediction of the model, ground water quality will be assessed for Hg. Four ground water monitoring wells (MWs) will be used to assess ground water quality with one MW located at a point hydraulically upgradient from the upland CDF and three MWs located at points hydraulically downgradient from the upland CDF. Ground water samples shall be collected from each MW on a semi-annual basis. A ground water constituent standard (GWCS) for Hg of 1.25 ug/l has been established for this permit.
