LETTER OF TRANSMITTAL

To the Honorable William T. Cahill, Governor of the State of New Jersey; the Honorable Raymond H. Bateman, President of the Senate, and Honorable Members thereof; and the Honorable William K. Dickey, Speaker of the General Assembly, and Honorable Members thereof:

Pursuant to N.J.S.A. 52:17B-5.5, there is hereby respectfully submitted the third annual report on information gathered and collated under the New Jersey Uniform Crime Reporting System, inaugurated on January 1, 1967, which provides a comprehensive compilation and analysis of crime statistics for New Jersey.

As noted the past two years, New Jersey's effort in this area predated the Report of the President's Commission on Law Enforcement and the Administration of Criminal Justice, which urged the creation of such state systems. FBI officials, in discussing this system with members of our State Police, have described it as a model of its kind.

On the positive side this year, you will note that while both the volume and the rate of crime have again increased, those changes were small when compared to the alarming increases noted last year. The volume of crimes reported under the system increased by two percent in 1969, while in 1968 they rose by almost 24 percent. Violent crime, up in volume by about 25 percent a year ago, increased by only four percent this year. One category under the index even decreased in 1969—atrocious assaults were down by six percent.

Another hopeful sign this year is that the state crime rate—the number of persons in a given population who were victims of crime—increased only one percent over the 1968 figure. In 1969, there were 2,410 crime victims for every 100,000 residents of New Jersey. Not so encouraging is the fact that since 1967, the crime rate has increased by more than 22 percent. As is the case elsewhere in the United States, the risk of becoming a crime victim in New Jersey is increasing at a rate greater than the population increase.

There are several specific areas in this year's report to which I would call your official attention:

A special statewide survey last August revealed an alarming incidence in New Jersey of automobile thefts—more than four vehicles are reported stolen each hour of every day in this state. Auto theft is a serious problem, not only because this classification accounts for almost half the value of property stolen in the state, but also because of the high involvement of juveniles in these crimes. Almost half the auto theft cases solved in 1969 involved persons under 18 years old; since 1967, two out of every three auto theft arrests have been juveniles. And more than half of all auto theft arrests reported during the past three years have been of youngsters 16 years of age and younger—an age too young even to qualify for a driver's license. A number of young people, then, are driving stolen automobiles they are not legally qualified to drive, compounding the theft problem with obvious dangers to the public safety. And many young people are beginning an unfortunate criminal career by stealing a car.

This Report notes that auto theft is a “crime of opportunity”—that is, in those cases where the condition of the vehicle at the time of theft was known, the key was left in the ignition more than 14 percent of the time, and the auto was unlocked in almost half of the cases. More than 83 percent of all car thefts for which police were able to determine a motive were attributable to instant transportation, the “joyride”. While police believe that post ignition steering locks are an effective deterrent to such joyriders, not all automobiles are equipped with these devices. Removing the keys and locking an unattended auto still are the best ways to discourage non-professional auto thefts. At this time, New Jersey has no statute requiring removal of the ignition key and the locking of an unattended vehicle. Only one percent of the state's municipalities have such a “key” ordinance, and this Report notes that during the special survey period last August, not one summons was issued for violations in those communities that have such an ordinance. In view of the size and the nature of the auto theft problem in New Jersey, the facts disclosed in this Report would seem to indicate that the state should undertake a serious and thorough study of corrective measures.

Secondly, narcotics violations are a continuing problem in New Jersey, despite increased public awareness and official concern. As was the case in 1968, arrests for Narcotic Drug Law violations again reflected the highest individual increase for 1969, more than 69 percent. Since these Reports began in 1967, narcotics arrests have increased a whopping 165 percent, the most dramatic arrest variation recorded during the three years. These figures illustrate two things, I believe: First, they indicate that police are continuing to step up their efforts to enforce the narcotic laws; second, they give us still another indication of the scope of the drug problem in New Jersey. It was sobering for me to read here that more than half of all persons arrested for narcotics violations last year were under 21 years old; 12 percent were 16 years old or younger.

These figures should remind us all of the urgent need for narcotics law reform in New Jersey, and recall to our attention the Legislative work still to be done in this area.

Thirdly, this Report clearly indicates that we have a continuing problem in New Jersey with the juvenile offender. Fifteen percent of all persons arrested for all index crimes were less than 15 years old, more than 35 percent were under 18, and more than half were under 21. Furthermore, almost a third of all those arrested for robbery were under 18, and about half those arrested for breaking and entering were juveniles, as were two-thirds of those arrested for auto theft.

We know that most habitual criminals begin their careers as juvenile offenders, and these statistics, coupled with ever increasing crime rates and volumes, lead one to the conclusion that attacking the juvenile problem successfully will make a significant contribution toward solving the whole problem of crime in New Jersey. This Report, then, indicates that we undertake a review of what we are doing and what can and ought to be done for the youthful offender.

Finally, this Report notes that again this year New Jersey police cleared by arrest less than 14 percent of the index offenses reported to them. While the 1969 clearance rate of 13.5 percent was only nominally below the 13.6 percent recorded in 1968, still the clearance rate has dropped by 14 percent over the past two years and the figures for New Jersey are below the national average.

There are several possible explanations for this less than satisfactory statistic: It is true that over the past three years police have become more proficient in reporting crimes, so that the counts are more complete and accurate than in the past; also, we know that the public is making increasing demands on police for services and time and that population has increased while police strength has not increased proportionately; we know that index crimes per police officer have increased almost 14 percent since 1967, and that social changes and rapid urban growth present new and more complex problems to the policeman; and we know that those who commit crimes in this growing, urban society are far more mobile, thus more difficult to apprehend, than in the past.

All this, however, underscores the urgent need in New Jersey for more thorough and vigorous training for police. Obviously, the police officer graduating from academy today is faced with far more complex and diverse pressures than was his fellow officer 10 years ago. It follows, then, that training procedures and techniques which were more than adequate a decade ago are no longer adequate. This office already has undertaken a review of the existing police training statutes, and we intend to make recommendations which we hope will put New Jersey in the first rank among the states in the recruitment and training of competent police officers.

It would, of course, be impossible to compile this Report without the cooperation of New Jersey's municipal, county, state and other law enforcement agencies, 594 of whom contributed to this effort in 1969. It is with appreciation to these dedicated public servants, and in the interests of more effective law enforcement for all the citizens of New Jersey, that this third annual Uniform Crime Report is

Respectfully submitted,

A handwritten signature in cursive script, reading "George F. Kugler, Jr.", written in dark ink.

GEORGE F. KUGLER, JR.
ATTORNEY GENERAL OF NEW JERSEY

THE NEW JERSEY UNIFORM CRIME REPORTING SYSTEM

DEFINED

The New Jersey Uniform Crime Reporting System involves the uniform compilation, classification, and analysis of crime statistics reported by all police agencies of the state pursuant to guides and regulations prescribed by law.

The statute which established the Uniform Crime Reporting System (N.J.S.A. 52:17B-5.1 et seq) empowers the Attorney General to collect, gather, assemble, and collate information which would be of assistance in the proper administration of criminal justice. The Attorney General and the New Jersey State Police (the agency designated by the Attorney General to establish the Uniform Crime Reporting System), in an attempt to achieve uniformity with the FBI reporting system and to establish a broad base for the collection of data involving anti-social behavior, and other relevant information with respect thereto, have defined the word "crime" to include acts which technically within our State are not considered crimes. In this reporting system the word "crime" includes some "disorderly persons offenses." It also includes in a category entitled "all other offenses" violations of municipal ordinances. References to the relevant tables which set forth the Class I and Class II offenses contained in this report clearly indicate what is covered.

PURPOSE

Effective law enforcement requires the coordination of law enforcement activities within and among political subdivisions. Special attention must often be devoted to a selective and concentrated effort both areawide, as well as in terms of a specific pattern and type of criminal behavior. Selective and coordinated enforcement becomes possible only when the type and volume of crime can be analyzed on the basis of accurate information comprehensively developed and systematically collated.

Information revealing the location, frequency, and nature of crime is essential to this purpose. It is for these reasons that New Jersey's Uniform Crime Reporting System was developed.

DEVELOPMENT

The New Jersey Uniform Crime Reporting Law was enacted on May 16, 1966 and became effective January 1, 1967. Responsibility for the establishment, direction, control and supervision of the Uniform Crime Reporting System was assigned to the Attorney General of the State. After passage of the law, the Attorney General, as provided by the statute, designated the New Jersey State Police as the agency to collect, gather, assemble and collate information from the law enforcement jurisdictions within the state.

Prior to the enactment of the law, the New Jersey State Police conducted research and study of crime reporting

systems then operational throughout the country. Study results established that adoption of a reporting program paralleling that of the federal system of Uniform Crime Reporting would be the soundest approach toward development of a state system. The obvious advantage found in the adoption of the federal system included the desirability of having compatible state and federal systems, thereby allowing absorption of state crime data into that at the national level.

The Committee on Uniform Crime Reporting of the New Jersey State Chiefs of Police Association has served the program in an advisory capacity since 1966. The contributions made by this committee have proven invaluable and, indeed, insured the success of the program. This body continues to work closely with the Uniform Crime Reporting Unit of the New Jersey State Police to improve further the quality of reporting and to recommend additional program standards, policies and procedures.

During the development phase of the program a study of the federal and various state systems of crime reporting revealed the importance of a sound internal police records system, if accurate crime statistics were to be forthcoming. Upon recognition of this factor, the State Police revised completely their method of internal reporting in order to meet the requirements of the Federal System of Uniform Crime Reporting. This step not only hastened program development but also proved invaluable throughout the operational phase.

Education of contributors to the program in the areas of mechanics, methods and concepts must be a constant operational requirement, if continued system adherence and valid statistics are to be expected. This vital need is satisfied by the personal contact between the seven state troopers assigned as field representatives to the program, and the contributors to the system.

The difficult and important task of maintaining close liaison is obvious when it is realized that services now are extended by the New Jersey State Police Uniform Crime Reporting Unit, through its field representatives, to the 594 law enforcement agencies of the state. Although each contributor to the program is supplied with the "Uniform Crime Reporting Guide" describing system procedures and mechanics, personnel changes within reporting departments and program refinements make the educational phase a continuing one.

As an adjunct to the program, the New Jersey State Police has offered its revised method of internal reporting to those police departments who wish to adopt it. By the end of 1969 more than one-third of the state's 443 municipal police departments had installed this identical system for their own use. This willingness to adopt a more efficient reporting system demonstrates the degree of program acceptance by law enforcement in New Jersey. In all cases of report adoption and record up-dating, assistance

is rendered by the field representative who provides the necessary guidance and instruction. The personal contact between the field representative and the contributor not only serves as a rapid means to resolve areas of report error, but also provides the opportunity to discuss other areas of mutual interest, thus providing an additional communication link between municipal, county and state law enforcement agencies.

PROGRAM EVALUATION

The scope of mandatory crime reporting in New Jersey extends far beyond the stated purpose of the initial program. The compilation and publication of an annual report, which identifies and offers analysis of the extent and nature of crime on a state, regional, county and municipal level, may be considered an end in itself. However, practical application of such data must be made before the program can be judged substantive.

Police executives throughout the state are making increased use of this data in administrative, planning and operational determinations for their respective jurisdictions. During 1969, the State Police Uniform Crime Reporting Unit rendered operational assistance to more than 80 municipal police agencies by providing individual analysis of statistics as they related to specific crime problems and for use in identifying necessary police manpower and equipment needs. Program requirements have also increased police efficiency in the areas of reporting and record keeping. Examples of program application, as discussed here, aid police in their day to day operations and contribute toward the constant effort of upgrading the quality of police services in the community.

The State Law Enforcement Planning Agency, which was established in August of 1968 to conform with the provisions of the Omnibus Crime Control and Safe Streets Act of 1968, has the responsibility of improving law enforcement throughout the state. Since its inception, in all of its determinations as to application of allocated funds, this agency has used analyzed crime data obtained through the Uniform Crime Reporting program. The establishment of crime rates on regional, county and municipal levels with identification of specific crime problems allows the agency to construct priorities, formulate plans and implement these plans to the benefit of the state and all units of local government. This administrative application of such crime data illustrates the far reaching effect the program has on all efforts to combat crime in the state.

The New Jersey National Crime Information Center Terminal (NCIC) maintained by the State Police at West Trenton, links law enforcement of the state with a computerized nationwide index of crime and criminals in Federal Bureau of Investigation headquarters, Washington, D.C. Since becoming operational on February 1, 1968, the New Jersey terminal has processed almost 800,000 transmissions regarding entry and inquiry of criminal data included in the system. This service is rendered to the police agencies of the state in the interests of increasing

police efficiency in dealing with the mobility factor of crime.

A statewide computerized law enforcement information system for New Jersey is now in the final stage of development. Upon completion, this system will interface with other regional systems and the National Crime Information Center in Washington, D.C., thus making state, regional and national layers of data concerning crime and the criminal rapidly available to the police of the state. While such an information system is indeed desirable and necessary, it must be stated that successful interchange of information is based on common crime classifications, definitions and data elements. These vital components have already been formulated through the uniform classifications and definitions found in the Uniform Crime Reporting Program. The need for comprehensive arrest records and court dispositions has long been recognized in law enforcement. Such information is necessary to identify recidivists, and evaluate the effectiveness of the actions of police, courts and other agencies of criminal justice.

Recognition of this need in New Jersey led to a comprehensive study of existing methods of collecting and analyzing data pertaining to persons entering the criminal justice system by arrest. Study results disclosed that pertinent data pertaining to persons arrested was fragmented and, in many cases, insufficient to serve the needs of police, courts, correction and rehabilitation agencies. The positive identification of a person charged with a criminal offense and his subsequent experience within the criminal justice system is vital to any effort in measuring the effectiveness of those agencies which comprise that system.

A coordinated effort by the Attorney General, Administrative Director of the Courts and a State Police Crime Study Committee established the Court Disposition Reporting Program, whereby all data pertaining to persons charged could be collected, collated, analyzed and rapidly disseminated to the various law enforcement agencies concerned. The State Police was given legislative responsibility for program administration and, in practice, functions in conjunction with the Administrative Director of the Courts.

Program responsibility with respect to police agencies lies in the identification of a defendant through fingerprinting and submission of other pertinent data at the time of arrest. Fingerprints are submitted to the State Bureau of Identification for purposes of positive identification and search for prior record. Other defendant data is returned to the court of jurisdiction for program submission by the court upon disposition of the charge. Disposition data is furnished by the clerk of each court through which the defendant passes.

County prosecutors provide additional data through the submission of indictment and accusation information as it relates to specific defendants. This process makes possible the documentation of final and interim dispositions, allowing for identification of the defendant's status at every level of criminal justice. In this manner, the program

supplies meaningful data to all administrative units of the criminal justice system for use in objective evaluation of existing procedures and planning of more efficient methods of operation where the need exists.

The need for field services to provide guidance and direction to contributors becomes apparent when it is realized that almost 1,200 police, court and correctional units contribute under the program. This need is satisfied by the personal contact provided by the six field representatives assigned to the Court Disposition Reporting Unit of the State Police. Questions regarding program procedures and mechanics are resolved at each level of submission, thus insuring the accuracy of data submitted.

Total evaluation of the recently established Court Disposition Reporting Program at this time would be premature. However, certain observations can be made.

Input increases in identification and related information now provide a comprehensive data base for use by all contributors. This, combined with improved methods of dissemination, will allow for a more efficient approach toward rapid exchange of meaningful information among the police, courts and correction agencies of the state.

Crime related programs designed to serve law enforcement and increase the overall efficiency of the criminal justice system in the state require extensive planning and coordination. The State Chiefs Association has rendered valuable assistance in these areas, thereby contributing toward the development of the National Crime Information Center System and the Court Disposition Reporting Program, in addition to their continuing status in the Uniform Crime Reporting Program.

Since 1967 more than 35 states have studied the New Jersey system for adoption within their respective states. Two of these, Kentucky and Rhode Island, presently have ongoing programs based on the New Jersey system and many more of the remaining states are in the process of implementing similar programs.

The element of compatibility of crime statistics between state and federal programs is vital, and evaluation must include consideration of the degree of that compatibility. The Uniform Crime Reporting Unit of the State Police has worked closely with the members of the Federal Bureau of Investigation who administer the National Uniform Crime Reporting Program. Invaluable aid and assistance has been given by the FBI which resulted in the New Jersey program being totally compatible with that of the national program. This compatibility allows absorption of state crime data into the national system without lengthy and costly conversion processes.

On January 1, 1969, the FBI, who have collected National Uniform Crime Reports in the states and counties since 1930, eliminated the direct collection of National Uniform Crime Reports from the police of New Jersey. This procedure change followed a two-year evaluation of the New Jersey program by the FBI and resulted in an agreement wherein uniform crime reports for each municipality of the state are now being submitted to the national program by the State Police. This working relationship,

which was coordinated through the Chiefs of Police Association, State Police and the FBI, is enjoyed by only one other state in the nation and is a direct result of the interest and cooperation of the law enforcement agencies of the state in the Uniform Crime Reporting program.

FACTORS RELATED TO CRIME

It has long been noted there are numerous factors, environmental and others, which have an important bearing on the scope and intensity of crime. As an adjunct to the statistical compilation and analysis of crime reported herein, special attention is devoted to certain of these factors.

To understand further the nature and scope of crime in various sections of the state, a section entitled "Profiles of Incorporated Municipalities in New Jersey" appears in this publication as it did in the first annual report of 1967. The profile information set forth in the areas of population, estimated density rates, population growth since 1960, all relate to the year 1969, as do the urban, suburban, rural characterizations, given land areas and industrial populations. The updating of these categories is predicated on the year to year change normally experienced in these areas. Obviously, numerical, percentage or other annual variances would affect the degree of impact these factors may have on crime statistics for the year 1969.

Factors considered within profiles are those which are out of police control, but which may affect a community's crime rate and which may vary from community to community. The presence of these factors are noted in order that the resulting crime statistics may be reviewed in a more fair and equitable manner. The effect of these factors on a community's crime rate is not easily determined. But they are set forth for the purpose of alerting the reader to their existence in varying degrees in all New Jersey communities.

REFINEMENT OF THE SYSTEM

The collection of meaningful data to supplement that which is normally collected is a vital element of the system. This supplementary information regarding crime and the criminal enters the system by way of special surveys and samplings. Periodic collection of such information enables better identification of specific crime problems and those factors which contribute to them. Analysis of refined information and dissemination to contributors provides additional intelligence upon which more effective police action can be based.

Special statewide surveys taken in previous years have dealt with the important mobility factor of crime and the specific offense of robbery. The results of the mobility study served as an indicator of the effect the element of criminal mobility can have on the crime experience of the community and the contribution it makes toward police problems in the control of crime. Robbery analysis, based on that special survey, better identified the nature of the crime, its impact on society and the robbery perpetrator.

The collection of refined information relative to crime was continued in 1969 through a one month "Special Auto Theft Survey" conducted in August of that year. The auto theft problem, although not unique to New Jersey, has grown to major proportions and its continuing growth suggests serious consequences for the individual and the community.

Information requested in the survey included volume, time and location, condition of vehicle, and known purpose of theft. Additional data was collected regarding vehicle recovery and those persons arrested for auto theft during the month. Complete survey data and resulting analysis are contained elsewhere in this report.

In the interest of satisfying a national, as well as a state need for uniformity, completeness, and accuracy in crime statistics, every report submitted under the system is prepared in triplicate by the contributor. One copy is retained by the contributor and the remaining copies are submitted to the State Police Uniform Crime Reporting Unit which in turn forwards a copy to the Federal Bureau of Investigation for inclusion in the National Uniform Crime Reporting program.

Statistical comparisons set forth in this publication relate to that crime data collected in the state during the years 1967, 1968 and 1969. These comparisons are shown in an attempt to measure the extent, fluctuation and distribution of serious crime in New Jersey. The New Jersey system is based on 100 percent reporting coverage and, therefore, not only projects a crime picture for the entire state, but, by inclusion in the national program, makes a valuable contribution to the measurement of crime in the country as well.

OBJECTIVES

Uniform Crime Reporting in New Jersey, as a program parallel to the National Uniform Crime Reporting System, sets forth objectives similar to those of the federal program. Basically, the System was designed to fulfill the need for accurate crime statistics for use in police administration, planning and operations. Additionally, the Program provides the public with information regarding general state-wide crime conditions as well as the documentation of crime data for students of the criminal process.

The attainment of these objectives is accomplished by the following program procedures:

- (1) An attempt is made to measure the extent, fluctuation and distribution of serious crime in the state through the use of a Crime Index consisting of seven selected offenses reported to police or coming directly to their attention.
- (2) The total volume of all types of criminal offenses is compiled as they become known by police arrests.
- (3) Since the above are also measures of law enforcement activity, related data are collected to demonstrate the effectiveness of enforcement activities, available police strength, and significant factors involved in crime.

COLLECTION OF CRIME DATA

As required by statute, all law enforcement agencies in the state submit crime reports to the program. During the year 1969, offense and related supplementary information, as well as arrest and disposition data, were received from 443 organized municipal police departments, 87 special non-organized municipal police, and the New Jersey State Police who provided the necessary information for the 37 municipalities without local police services.

In addition to the above agencies, arrest and disposition data were received from the state's 21 county prosecutors' and sheriffs' offices, two county police departments and eight county park police departments. In order to incorporate all New Jersey law enforcement under the system, the following state agencies with law enforcement responsibilities were included: New Jersey Marine Patrol, Division of Fish and Game, Division of Motor Vehicles, Division of Alcoholic Beverage Control, Division of Weights and Measures, Division of Shell Fisheries, Department of Institutions and Agencies, and the Forest and Parks and Forest Fire Services. This amounts to 594 enforcement agencies reporting.

METHOD

Reported offenses are related to the municipality in which they occur, rather than to the agency which may investigate, arrest or otherwise in some manner, dispose of the case. The clearance, in every case, is attributed to the municipality in which the offense occurred, even though the arresting agency may not be the department originally reporting the offense. Each contributing agency is responsible for compiling its own reports. The Uniform Crime Reporting Guide, which is supplied to all contributors, outlines reporting procedures in detail and is complete with examples and illustrations. Field Representatives provide additional instruction and clarification when required.

Municipal law enforcement agencies report the number of known offenses according to the following categories:

- (1) Homicide (Murder, Manslaughter and Accidental Death)
- (2) Forcible Rape
- (3) Robbery
- (4) Assault
- (5) Breaking and Entering
- (6) Larceny-Theft
- (7) Auto Theft

This count is determined from a record of all criminal complaints received by the police from victims or other sources or discovered by the police during their operations. Complaints determined by police investigation to be unfounded are eliminated from this count. The number of "offenses known" in each crime category is reported without regard to whether anyone is arrested, stolen property is recovered, local prosecutive policy, or any other consideration. Municipal law enforcement agencies also report the total number of these crimes cleared by arrest. A separate category is made for crimes cleared by the arrest of

persons under 18 years of age. Certain other analytical data pertaining to specific crime categories are also reported, including, for example, total adult and juvenile arrests made during the month.

Annual report forms contain data such as the number of persons arrested for all criminal offenses with respect to age, sex and race of the offender, as well as an accounting of persons formally charged, their bail data, and dispositions. Police employee data are also collected annually, including the number of police killed and assaulted.

In summary, the presentation of this report, "Crime in New Jersey," reflects the compilation of the seven serious "offenses known to police," arrests of persons under 18 years of age and 18 years of age and over, and the ultimate disposition of those persons charged. This data is then related to the State of New Jersey as a whole, by population groups, designated crime reporting regions of the state, individual counties and, with respect to offense occurrence, to the municipality.

VERIFICATION PROCESSES

An obvious concern in the collection of crime statistics from 594 enforcement agencies throughout the state is the uniformity of data received. Program aids such as guides and instructions do not necessarily guarantee the accuracy and correctness of the reports submitted by the contributors. Additional controls are therefore necessary.

Each report received by the Uniform Crime Reporting Unit is recorded and examined for mathematical accuracy and, possibly more important, for reasonableness as to interpretation of offense classifications. Fluctuations from levels established by previous reports submitted by the contributor become subject of inquiry as to reason for variations. Improper classification, changes in reporting procedures or actual change are identified in this manner. Errors of a minor nature are corrected by direct telephone contact with the contributors, while all other errors are resolved by a personal visit by a field representative to the reporting agency. These personal contacts are invaluable to the accuracy of the system. Field representatives are engaged in a constant educational effort and, as such, provide a vital link between the program and the reporter.

During 1969, field representatives made 2,569 personal contacts, 698 field corrections, answered 164 requests for reporting assistance or clarification, and presented 123 lectures to police groups. A Uniform Crime Reporting orientation lecture is presented to each class of municipal police officers attending the Municipal Police Academy at Sea Girt. Since 1967 more than 2,100 officers have received basic instructions regarding the Uniform Crime Reporting System.

Seminars for police administrators and records personnel were also conducted during the year to review uniform crime reporting concepts and mechanics. These seminars, attended by representatives of municipal police departments, were conducted on a county level throughout the

state and were coordinated through the offices of the county prosecutors and the county police chiefs associations.

CLASSIFICATION OF OFFENSES

Uniformity in reporting under the New Jersey system is based upon the proper classification of offenses by police. The adoption of the federal system of reporting included the utilization of the offense classifications of that system. Law enforcement in this state has made accurate application of those classifications in the reports submitted to the program.

In view of the need for compatibility with the federal system, "offenses" under the program are not distinguished by designation of "high misdemeanors", violations of the Disorderly Persons Act or municipal ordinances. The explanation of offense classifications may vary slightly with those employed at the federal level because the language used is that familiar to law enforcement in this state. However, the major categories of offense classification remain the same as those employed nationally.

OFFENSE CLASSIFICATIONS

(1) Homicide

1a. Murder—The unlawful killing of a human being with malice aforethought.

General rule—Any death due to a fight, argument, quarrel, assaults or commission of a crime.

1b. Manslaughter—The unlawful killing of a human being, by another, without malice aforethought.

General rule—The killing may result from the commission of an unlawful act or from a lawful act performed with gross negligence. Traffic deaths may be classified as such when due to gross negligence of someone other than the victim.

1c. Accidental Death—Non traffic—The death of a person resulting from his own gross negligence, mishap, or the negligence of another not sufficient in degree to classify the act as manslaughter.

General rule—Any death *not* resulting from murder, manslaughter, suicide or natural causes is classified as accidental. Deaths resulting from traffic accidents on public trafficways are excluded.

(2) Forcible Rape

2a. Rape by force—The carnal knowledge of a female forcible against her will. General rule—Forcible rape of a female, but excluding carnal abuse (Statutory Rape) or other sex offenses.

2b. Assault to rape—Attempts—All assaults and attempts to rape.

(3) Robbery—The felonious and forcible taking of the property of another, against his will, by violence or by

putting him in fear. Includes all attempts.

General rule—Robbery differs from larceny in that it is aggravated by the element of force or the threat of force.

3a. Armed Robbery—Any weapon—Any object so employed as to constitute force or the threat of force is to be considered a weapon. This includes firearms, knives, clubs, brass knuckles, black-jacks, broken bottles, acid, explosives, etc. Also cases involving possible pretended weapons or when the weapon is not seen by the victim, but the robber claims to have it with him, constitutes armed robbery due to instilling fear.

3b. Strong Armed—No weapon—Includes muggings and similar offenses where no weapon is used, but strong arm tactics are employed to deprive the victim of his property. This is limited to hands, fists, feet, etc. As in armed robbery, all attempts are included.

(4) Assaults—An assault is an attempt or offer, with unlawful force or violence, to do physical injury to another.

General rule—All assaults will be classified in the following categories, excluding assaults with intent to rob or rape.

4a. Gun—All assaults and attempted assaults involving the use of any type of firearms. (Revolvers, automatic pistols, shotguns, zip guns, rifles, pellet guns, etc.)

4b. Knife or cutting instrument—All assaults and attempted assaults involving the use of cutting or stabbing objects. (Knife, razor, hatchet, axe, cleaver, scissors, glass broken bottle, dagger, ice pick, etc.)

4c. Other dangerous weapon—All assaults or attempted assaults when any other object or thing is used as a weapon. (Clubs, bricks, pick handles, bottles, explosives, acid, lye, poison, scalding water and cases of attempted drownings, burnings, etc.)

4d. Hands, fists feet, etc.—Atrocious—Assaults which are of an atrocious nature when hands, fists, feet, etc. are used. To be classified as atrocious assault, the attack must result in serious personal injury.

(5) Breaking and Entering—Unlawful entry or attempted forcible entry of any structure to commit a felony or larceny.

General rule—Any unlawful entry or attempted forcible entry of any dwelling, house, attached structure, public building, shop, office, factory, store house, apartment, house trailer, warehouse, mill, barn, other building, ship or railroad car.

Note: For uniform Crime Reporting purposes, breaking, entering and larceny are classified only as

breaking and entering, the larceny is excluded. Breaking and entering of a motor vehicle is classified as larceny.

5a. Forcible entry—All offenses where force of any kind is used to enter unlawfully a locked structure, with intent to steal or commit a felony. This includes entry by use of a master key, celluloid or other device that leaves no outward mark but is used to open a lock. Concealment inside a building, followed by the breaking out of the structure is also included.

5b. Unlawful entry—No force—Any unlawful entry without any evidence of forcible entry.

5c. Attempted forcible entry—When determined that forcible entry has been attempted.

(6) Larceny Theft (Except auto theft)—The unlawful taking of the property of another with intent to deprive him of ownership.

General rule—All larcenies and thefts resulting from pocket-picking, purse snatching, shop lifting, larceny from auto, larcenies of auto parts and accessories, theft of bicycles, larcenies from buildings, and from coin operated machines. Any theft that is not a robbery or the result of breaking and entering is included. Embezzlement, larceny by bailee, frauds or bad check cases are excluded.

(7) Auto theft—The larceny or attempted larceny of a motor vehicle.

General rule—Thefts and attempted thefts of a motor vehicle. This includes all vehicles which can be registered as a motor vehicle in this state. Excludes where there is a lawful access to the vehicle, such as a family situation or unauthorized use by others with lawful access to the vehicle. (Chauffeur, employees, etc.)

(8) Other assaults—Not atrocious—Assaults and attempted assaults which are not of an atrocious nature and are simple and minor in nature.

(9) Arson—Willful or malicious burning with intent to defraud. Include attempts.

(10) Forgery and counterfeiting—Making, altering, uttering, or possessing or attempts to make, alter, utter or possess with intent to defraud. Anything false which is made to appear true.

(11) Fraud—Fraudulent conversion of another's money or property by false pretenses. Includes bad checks, except forgery and counterfeiting.

(12) Embezzlement—Misappropriation or misapplication of money or property in trust to one's care, custody or control.

(13) Stolen Property—Buying, receiving, possessing—Buying, receiving and possessing stolen property and attempts.

- (14) Malicious Mischief—Willful or malicious destruction, injury, disfigurement or defacement of property without consent of the owner or persons having custody or control.
- (15) Weapon carrying, possessing and etc.—All violations of regulations or statutes controlling the carrying, using, possessing, furnishing and manufacturing of deadly weapons or silencers and attempts.
- (16) Prostitution and Commercial vice—Sex offenses of a commercialized nature and attempts. Such as prostitution, keeping a bawdy house, procuring or transporting women for immoral purposes.
- (17) Sex offenses—Except forcible rape, prostitution and commercial vice—Statutory rape, offenses against chastity, common decency, morals, and the like. Also include attempts.
- (18) Narcotic Drug Law—Offenses relating to narcotic drugs, such as unlawful possession, sale or use. Does not include: Failing to register as user or federal offenses.
- (19) Gambling—Promoting, permitting, or engaging in gambling.
- (20) Offenses against family and children—Non support, neglect, desertion, or abuse of family and children.
- (21) Driving under the influence—Driving or operating any motor vehicle while drunk or under the influence of liquor or narcotics.
- (22) Liquor Laws—State or local liquor law violations, except “drunkenness” and “driving under the influence.” Excludes federal violations.
- (23) Drunkenness or intoxication.
- (24) Disorderly conduct—Breach of the peace. (Disorderly persons).
- (25) Failure to give good account—Vagabondage, begging, loitering, etc.
- (26) All other offenses—All violations of state and local laws except classes 1-25.
- (27) Suspicion—Arrest for no specific offense and released without formal charges being placed.
- (28) Curfew and loitering laws (Juveniles)—Offenses relating to juveniles of local curfew or loitering ordinances, where such laws exist.
- (29) Runaways (Juveniles)—Limited to juveniles taken into protective custody under provisions of local statutes as runaways.

CRIME FACTORS

Statistics gathered under the Uniform Crime Reporting Program are submitted by the law enforcement agencies of New Jersey and project a statewide view of crime. Awareness of the presence of certain crime factors, which may influence the resulting volume and type of statistics presented, is necessary if fair and equitable conclusions are to be drawn. These crime influencing factors are present, to some degree, in every community and their presence affects, in varying degrees, the crime experience of that community. Attempts at comparison of crime figures between communities should not be made without first considering the individual factors present in each community.

Crime, as an outgrowth of society, remains a social problem of grave concern and the police are limited in their role to its suppression and detection. As stated by the President's Commission on Law Enforcement and Administration of Criminal Justice in their report *The Challenge Of Crime In A Free Society*—(1967—Page 92)—“But the fact that the police deal daily with crime does not mean that they have unlimited power to prevent it, or reduce it, or deter it. The police did not create and cannot resolve the social conditions that stimulate crime. They did not start and cannot stop the convulsive social changes that are taking place in America. They do not enact the laws that they are required to enforce, nor do they dispose of the

criminals they arrest. The police are only one part of the criminal justice system; the criminal justice system is only one part of the government; and the government is only one part of society. Insofar as crime is a social phenomenon, crime prevention is the responsibility of every part of society. The criminal process is limited to case by case operations, one criminal or one crime at a time.” Set forth below are some of the conditions which will, by type and volume, affect the crime that occurs from place to place:

- Density and size of the community population and the metropolitan area of which it is a part.

- Composition of the population with reference particularly to age, sex and race.

- Economic status and mores of the population.

- Relative stability of population, including commuters, seasonal, and other transient types.

- Climate, including seasonal weather conditions.

- Educational, recreational, and religious characteristics.

- Effective strength of the police force.

- Standards governing appointments to the police force.

- Policies of the prosecuting officials and the courts.

- Attitude of the public toward law enforcement problems.

- The administrative and investigative efficiency of the local law enforcement agency, including the degree of adherence to crime reporting standards.

STATE, COUNTY AND MUNICIPAL PROFILES

The presentation of state, county and municipal profiles in this section is offered for the purpose of projecting, for the consideration of the reader, a group of recognizable factors which may affect the amount and type of crime that occurs from community to community. Selection of the areas of information to be related to individual municipalities was based on the immediacy and completeness of data available.

Population statistics presented here and throughout this publication, with respect to 1969 population estimates, population growth since 1960, and given land area in square miles by political sub-division, were obtained from the Research and Statistics Section of the State Department of Conservation and Economic Development. Estimated densities for 1969 and character of municipalities by urban, suburban and rural classifications were compiled by the Division of State and Regional Planning, Department of Community Affairs.

The industrial population for 1969, as supplied by the Division of Employment Security, Department of Labor and Industry, represents that employment in the community covered by the New Jersey Unemployment Compensation Law as of July 1969. Excluded generally are those persons who are self employed, agricultural labor and state, county and municipal employees.

Certain other socio-economic factors, present in varying degrees in all communities, may have an influence on resulting crime rates. Obvious difficulties in the identification, documentation and measurement of these factors, however, precluded their application in this report.

Those factors presented were listed to affirm their existence within the community and provide a base for consideration in the evaluation of that community's crime experience. (Tables 1 through 21)

PROFILE OF NEW JERSEY

The State of New Jersey, situated in an area of wide industrial diversification between the major markets of New York and Philadelphia, can be classified as the "Crossroads of the East". The geographic location of New Jersey has been a major factor in its growth and, as a vital segment of the complex megalopolis which stretches from Maine to Washington, D.C. its development has been urban in nature. Over 500 miles of super-expressway facilities within the state connect New Jersey with not only the neighboring states of New York, Pennsylvania and Delaware, but with the rest of the nation as well. Thus, New Jersey, as a corridor state, accommodates great volumes of traffic from both the eastern and western part of the United States.

Nationally, New Jersey, although 46th in size, ranks eighth in population. The state is politically subdivided into 21 counties which contain 567 incorporated municipalities. The 1969 estimated state population figure of 7,283,440 represents a 20.1 per cent increase over the 1960 total of 6,066,782, or a daily growth of 334 persons since the 1960 Census. Migration plays an important role in the population pattern of New Jersey. Since 1960 immigration has accounted for 48 per cent of the total population increase of 1,216,658 persons.

New Jersey is the most densely populated state in the country, with an average density of 969.9 persons per square mile. This growth is dramatically illustrated when this density is compared to the 806.5 persons per square mile of 1960. Areas of the state that historically were sparsely populated have contributed to the overall density

increase. Ocean County has registered a more than 60 percent population increase since 1960, Burlington County over 48 percent, Sussex County almost 42 percent, with Morris and Somerset Counties recording gains of 41 and 40 percent respectively.

The building, planning or operation of a rapid transit line, a new bridge facility, an express highway or a major recreation area can stimulate growth to a great extent. Development of this type has contributed to population increases registered since 1960 in Gloucester County, almost 26 percent, and Camden County over 22 percent. Some of the predominately rural counties of the state have also been affected in this manner. Sussex County population has increased by almost 42 percent, Hunterdon County, 25 percent, Cumberland County over 21 percent and Warren County almost 20 percent.

Within the counties, more dramatic increases occurred in specific localities. More than fifty municipalities in the state have experienced increases of 60 percent or more over a nine year period. The trend of most rapid growth in the suburbs and rural areas has resulted in the loss of some city populations. Although losses have been partially stemmed through urban re-development and renewal programs, outlying suburbs have absorbed the remainder.

The unique image New Jersey presents for consideration is not only the result of the many and varied factors which are present within its own boundaries, but also the complex elements of the megalopolis of which it is a part.

NEW JERSEY CRIME INDEX—1969

In this section, tabulations presented in tables and charts indicate the extent, fluctuation and distribution of crime for the state as a whole, reporting regions, counties, population groups and individual municipalities. The Crime Index, consisting of seven serious offenses, is used as a measure. Offenses are counted as they become known to law enforcement agencies. Crime classifications used in the index are: murder, forcible rape, robbery, atrocious assault, breaking and entering, larceny (\$50.00 and over) and auto theft.

Although the total number of criminal acts that occur are unknown, those that are reported to police provide the first means of a count. All crimes do not readily come to the attention of police nor are all crimes of sufficient importance to be significant in an index, and further, not all important crimes occur with enough regularity to be meaningful in an index. With these considerations in mind, the above crimes were selected as a group to furnish some measure of the crime problem in New Jersey.

The volume of crime in a state, region, county or municipality is subject to those crime influencing factors set forth elsewhere in this publication. Crime rates are constructed from estimates of current permanent population. The important transient population factor, although

present in every community in varying degrees, cannot be measured in all instances and therefore is not included in the establishment of a crime rate. The existence of this factor, however, should be considered when reviewing the tabulations presented in this section.

The establishment of the base year New Jersey Crime Index for 1967 provided a foundation which allows year to year comparison of like data to be made. Specific areas of comparison presented in this publication are in respect to variances of offense volumes, rates, clearances and related information. Fluctuations in arrest volumes, rates and supplementary arrest information are also included in the tabulations shown.

CRIME AND POPULATION

Crime rates relate the incidence of crime to population. More specifically, a crime rate should be considered as a count of victims. The risk of victimization arises from crime-population computations and provides a numerical result for consideration. Crime influencing factors, which are complex in nature and exist in varying degrees in all areas, are not incorporated in the determination of a crime rate.

1969 CRIME STATISTICS FOR NEW JERSEY

STATE OFFENSE DATA

VOLUME

Law enforcement agencies of New Jersey received report of 175,554 crime index offenses during 1969, a two percent increase over the number reported in 1968. The crimes in the index present a serious problem to the police and public of the state because of either the nature of the crimes or the frequency with which they occur. Since 1967, crimes within the index have risen by almost 26 percent. Offenses within the index can be further categorized as violent such as murder, forcible rape, robbery and atrocious assault, or as nonviolent crimes which would include breaking and entering, larceny (\$50.00 and over) and auto theft. (Tables 22, 23 and Chart 1)

In 1969 the violent crimes as a group made up slightly less than 10 percent of the total and rose by more than four percent over 1968 counts. Individually, murder was up three percent, forcible rape four percent, robbery 11 percent, while atrocious assaults recorded an almost six percent decline. A two year comparison of violent crime counts, 1969 over 1967, reflects an over 29 percent volume increase in this category.

Nonviolent crime made up slightly more than 90 percent of the total 1969 index and rose almost two percent over 1968 counts. Over 158,000 offenses of this type were reported during the year with larceny registering an increase of more than 11 percent and auto theft up over one percent. Breaking and enterings declined by almost five percent when compared to 1968. However, this serious offense has risen over 12 percent since 1967. (Table 24, Charts 2 a and 2 b)

The distribution of offenses within the index is the indicator of the frequency with which these crimes occur. Breaking and enterings made up almost 39 percent of all crimes reported during the year and 43 percent of all those crimes in the nonviolent category. Robbery, as in 1968, was the most prevalent crime within the violent group accounting for over 56 percent of all such crimes reported in that category and well over five percent of those reported in the total index.

RATES

Crime rates, or more realistically, rates of victimization, only take into consideration those numerical factors of resident population as they relate to the incidence of crime. Transient population and other elements which contribute to the volume and type of crime in a given area are not incorporated. The distribution of 100,000 person units used in computations naturally include areas of rural, suburban and urban classification, each with its own set of complex factors. A number of these factors, as they relate to the political subdivisions of the state, are shown in the State, County and Municipal Profile section of this publication.

The 1969 crime rate for New Jersey computes to 2,410 victims for every 100,000 persons of the state's estimated population of more than 7.2 million people. Percentagewise this rate represents an almost one per cent increase over the 1968 rate and an over 22 per cent increase since 1967. As elsewhere in the nation, the risk of becoming a victim of crime in the state is rising at a rate which is disproportionate to the increase in population.

The rate for the violent crime group was established at 236 victims for every 100,000 inhabitants, a three percent increase over 1968. Within the violent category robbery again reflected the highest victim count, over 132 per 100,000. The nonviolent crime rate was up less than one percent with 2,174 victims per 100,000 residents with larceny over \$50 recording the highest single rise of more than 10 percent. Breaking and entering, in spite of the significant volume drop, continued to contribute the most victims to the overall crime rate, 935 per 100,000.

CLEARANCES

For uniform crime reporting purposes, a crime is cleared when police have identified the offender, have evidence to charge him, and actually take him into custody. Crime solutions are also recorded in exceptional instances when some element beyond police control precludes formal charges against the offender, such as the victim's refusal to prosecute or local prosecution is declined because the subject is being prosecuted elsewhere for a crime committed in another jurisdiction. The arrest of one person can clear several crimes or several persons may be arrested in the process of clearing one crime.

The police of New Jersey cleared by arrest 13.5 percent of all index offenses reported to them during 1969. This rate of solution remained somewhat static when compared to the 1968 rate of 13.6 percent success in case solution. A two year comparison, however, discloses a decrease of 14 percent in this area so no appreciable gains were made in 1969 toward attaining a more desirable solution rate. As in 1968, slightly over 40 percent of all violent crimes reported were cleared by arrest and solution was made in almost 11 percent of all reported crimes of a nonviolent nature. Since 1967, violent crime solutions have decreased more than 18 percent while those nonviolent crime clearances declined by almost 12 percent. The total solution rate for 1969 was affected by an almost 10 percent decrease in auto theft solutions and a one percent decline in breaking and enterings cleared by arrest.

The decline in the police solution rate is not indigenous to New Jersey. Nationally, the rate of crimes cleared by arrest has been decreasing since 1960 and New Jersey has been part of this trend since statewide measurement began in 1967.

Police report of case clearance for crimes of violence disclosed that successful solution was reached in more than 74 percent of the murder offenses, 59 percent of the reported forcible rapes, 21 percent of the robberies reported to them and over 64 percent of the atrocious assaults. Solutions for nonviolent property crimes were made in 12 percent of all breaking and enterings reported, almost 10 percent of all larcenies and slightly over nine percent of all auto thefts.

The relatively high clearance rate for violent crimes as compared to nonviolent crimes is in part attributable to the volume difference between the two. Nonviolent crime volume is much greater than that of violent crime and police investigation of violent crime is usually more intense. The element of confrontation between victim and perpetrator, as well as witness identification of the perpetrator, also contributes to this higher rate of solution.

JUVENILE CLEARANCES

One means of measuring the degree of criminal involvement for those of the young age group is to identify the number of crimes in which they are the offenders. In 1969, 34 percent of all crime index offenses solved in New Jersey involved persons under 18 years of age, an almost nine percent rate increase since 1967. (Charts 3 and 4)

Almost 14 percent of all solutions for violent crimes in 1969 involved juveniles compared to an 11 percent rate of involvement in 1967. Individually, the rate of involvement for persons under 18 years of age was almost six percent of all murders solved, over 13 percent of the forcible rapes, more than 22 percent of the robberies and 10 percent of the atrocious assaults.

Over 42 percent of all nonviolent crimes solved during the year involved juveniles. Case clearances for the serious offense of breaking and entering identified perpetrators as being under 18 years of age in over 45 percent of all such cases, larceny in more than 33 percent of all cases and auto theft in almost 48 percent of all such solutions.

STOLEN PROPERTY VALUE

The proceeds of all criminal offenses reported in the state during 1969 amounted to almost \$89 million. This figure represents the total property value connected with the 9,659 robberies, 68,110 breaking and enterings, 53,060 larcenies and 37,173 auto thefts reported during the year. Police recoveries reduced this loss by almost 40 percent. However, the remaining unrecovered portion represents a loss of almost \$53.6 million to victims. Value of property stolen and recovered is shown by percentage and type in Table 25.

MURDER

Murder is defined as the unlawful killing of a human being with malice aforethought. Any death due to a fight, argument, quarrel, assault or commission of a crime is included. This index offense is scored by police on the basis of their investigation without regard to findings of a court or jury or the decision of a prosecutor. Traffic deaths, caused by the negligence of someone other than the victim, are not included here, but are counted under manslaughter. Attempts to kill and assaults to kill are scored as atrocious assaults and not as murder. Suicides, accidental deaths, and justifiable homicides are also excluded.

VOLUME AND RATE

Murder volumes reached a total of 366 reported cases during 1969, a three percent increase over 1968 counts. By distribution, murder accounts for slightly over two percent of all violent crime and two-tenths of one percent of all index offenses.

A two year trend for murder volumes in the state reflects a more than 33 percent increase since 1967 and a numerical increase of 92 such offenses.

The frequency of murder during 1969 was highest during the three month period of July through September with 29 percent of all homicides reported during that quarter. Individual identical monthly highs were recorded for April and September with 42 occurrences reported.

There were five murder victims for each 100,000 residents of the state in 1969. This is a slight rise from the 4.9 murder rate recorded in 1968 and represents a two percent increase in the murder rate 1969 over 1968. Using 1967 as a base, the statewide murder victim risk rate has risen by more than 28 percent.

MURDER ANALYSIS

In all cases of murder reported under the system, a supplementary report is submitted by the reporting law enforcement agency. Pertinent information including age, sex and race of the victim, weapon used to commit the offense, and circumstances or motive which led to the crime, is among the data collected. Place of occurrence, relationship of victim to perpetrator, and day of week are also included.

In 1969, almost seven out of every 10 murder victims were male, a slight decrease in the male-female ratio recorded in 1968. Victim analysis by race discloses that 54 percent were Negro and 46 percent were White. Murder victims by age reflected the highest group incidence in the 20-39 years of age bracket, over 46 percent, with the more specific group of 30-34 years of age accounting for almost 14 percent of the total victim count.

Incidence of murder by day of week reflected Saturdays as having the highest frequency rate, over 21 percent. (Chart 5) More than 39 percent of all murders reported were perpetrated during the weekend period of Saturday and Sunday.

Adult males were identified as known perpetrators in 84 percent of all murders solved and adult females in 13 percent. Male juvenile perpetrators accounted for the remaining three percent, down from the five percent involvement figure of 1968. Table 26 depicts murder victims by age and percent of distribution, in addition to sex and race.

Firearms were employed in 49 percent of all murders, up from a less than 43 percent rate in 1968. Handguns, the most predominant firearm used, were employed in over 42 percent of all murders. Cutting or stabbing weapons were used in 29 percent of all homicides and personal weapons, such as hands, fists and feet were used in 11 percent of all instances. Other weapons, including blunt objects such as hammers and clubs, poison, arson, explosives and drowning, among others, were employed in the remaining 11 percent of the murders. (Chart 6)

As in prior years, analysis of murder by location disclosed that the largest percentage, almost half, of all murders occur in a private residence. In 1969 more than 48 percent of all homicides were reported as occurring within the confines of a private home. Spouse killing spouse accounted for almost 20 percent of the total number of slayings and murder within the immediate family group (brother, sister, father, mother) accounted for over 31 percent of all criminal homicides. A majority of the murders, almost 79 percent, were committed by relatives of the victim or persons acquainted with the victim. This significant fact contributes much toward understanding the overall nature of murder.

Those circumstances listed above and motives which are listed below suggest that, to a great extent, murder is a social problem beyond police prevention and control. Murders occurring among the family group within the confines of the home or perpetrated by friends and acquaintances, for the most part, result from emotional factors and are not planned.

"Felony murders" are defined under the program as those killings which are perpetrated during the commission of another crime, those classified as "gangland" slayings and all sex motivated homicides. More than 20 percent of all murders reported in 1969 were of the above described felony type.

Quarrels or altercations between victim and perpetrator were by far the most prevalent circumstance recorded during the year. Such circumstance was present in 70 percent of all murders reported in 1969. Lovers quarrels and romantic triangle situations which resulted in murder contributed almost seven percent to this count with money quarrels, drinking quarrels, revenge motives and other quarrels of undetermined nature accounting for the remainder.

Persons known to be mentally disturbed were responsible for more than 12 percent of all murders during the year. This figure represents a significant nine percent increase over the three percent rate of distribution recorded for this area in 1968.

CLEARANCES

In 1969, the police of the state were successful in clearing by arrest almost 75 percent of all murders reported to them, an increase of two percent over the figure for 1968. Since 1967, police solutions for murders have risen by three percent with the resulting clearance rate being the highest among all offenses within the crime index. This degree of successful police solution for murder applies

nationally as it does in New Jersey. The social aspect of murder, wherein the large majority of homicides are committed by relatives or acquaintances of the victim, contribute greatly to the relatively high clearance rate.

Juveniles were identified in six percent of all murder solutions in 1969, a slight decrease from the 1968 rate of involvement for those of the young age group.

MURDER VICTIMS
TYPE OF WEAPONS USED
1969

FORCIBLE RAPE

Forcible rape is defined as the carnal knowledge of a female forcibly and against her will. All assaults and attempts to rape are counted, but carnal abuse, rape without force (statutory rape) and other sex offenses are not included.

VOLUME AND RATE

The police of New Jersey received reports of 911 forcible rapes during 1969, an almost 14 percent increase over the 800 cases reported in 1968. Rape accounted for over five percent of all violent crime counts and one half of one percent of the total crime index. The trend for reported rapes has been increasing since 1967 and reflects a more than 32 percent increase since that time. The highest incidence of rape during the year was recorded for the month of August with May registering the second highest monthly volume.

A crime rate equates the number of crimes per unit of population and, in its proper perspective, is a victim risk rate. In 1969 more than 12 out of every 100,000 females were reported as forcible rape victims. Since 1967, the forcible rape crime rate has increased 29 percent. In 1969, the rate increased by almost 13 percent over 1968.

ANALYSIS OF RAPE

Forcible rape differs from other violent crimes in that the victim, in many cases, is hesitant in reporting the offense to police. The rigors of court procedure, embarrassment, and fear of the possible accompanying stigma have a deterrent effect on the victim's willingness to report the crime to police. Rape is a violent crime against the person, and occurs most often out of reach of police patrols. Additionally, the presence of a prior relationship between victim and perpetrator makes the determination of the act of force difficult to establish, and the usual clandestine nature of the offense presents a problem in verification. Of all the crime index offenses, law enforcement administrators recognize this offense as probably the most under-reported.

More than 70 percent of all offenses reported in this crime class in 1969 were actual rapes by force while the remainder were attempts or assaults to rape. The initial report of a rape to police does not enter final counts until police investigation establishes that a rape, in fact, did occur. Only those actual offenses established by police investigation have been considered here.

CLEARANCES

Clearance by arrest was made in more than 59 percent of all forcible rapes reported to police in 1969. Although this represents a better than one percent increase over the reported clearance rate for 1968 it also represents a more than two percent decrease in solutions when compared to 1967. Persons under 18 were involved in more than 13 percent of all rapes cleared by arrest, down from the more than 17 percent rate of juvenile involvement reported in 1968.

ROBBERY

Robbery is defined as the felonious and forcible taking of the property of another, against his will, by violence or by putting him in fear. The element of personal confrontation is always present in this crime. Under the program, all assaults or attempts to rob are included. Robberies are reported in two general categories—armed, when any object is used as a weapon; and strong arm, which includes muggings and similar offenses where no weapon is used, but where strong arm tactics are employed.

VOLUME AND RATE

During the calendar year 1969, there were a total of 9,659 robberies reported by the police of the state. When compared to the 8,716 offenses reported in 1968 this figure represents a significant increase of almost 11 percent. Robbery offenses make up over five percent of the total crime index for the state and 56 percent of all violent crimes reported. Since 1967 robbery has led all other crime index offenses in the percentage increase in volume with a total increase of more than 67 percent.

The rate of robbery in 1969 was almost 10 percent higher than that for 1968 with over 132 victims per 100,000 population.

ANALYSIS OF ROBBERY

Supplementary statistical information, which projects the nature of robbery, is collected monthly under the program in order to gain further insight regarding this violent crime. In 1969, these figures disclosed that armed robberies accounted for more than 52 percent of all cases, while the remaining percentage of offenses were unarmed. Although armed robberies show a minimal decrease compared to 1968, they have increased 64 percent over 1967 counts. Reported offenses involving the unarmed perpetrator rose 26 percent over 1968 and have risen 80 percent since 1967.

The quarterly period of October through December again reflected the greatest frequency of robbery as it has since 1967. The individual month of highest incidence was January, with 939 offenses reported.

Almost 60 percent of all robberies occurred on the streets of the state. (Chart 7). The trend for robbery by location, 1969 over 1968, shows notable increases in residence robberies, up over 18 percent, and highway or street robberies, up more than 16 percent. Decreases are noted in the volume of bank robberies, down about 15 percent, and robbery of chain stores, down almost five percent. (Table 27)

The average proceeds from a robbery were \$377 during 1969 and the total loss amounted to over \$3.6 million. Proceeds from bank robberies averaged more than \$7,700 per offense and from chain stores, over \$1,500. As mentioned previously, almost six out of every 10 robberies committed in 1969 occurred on the streets. A large percentage of these were of the strong arm variety, and yielded an average of \$212 per offense.

A special robbery survey taken in November of 1968 included information regarding the victim of robbery and the robbery offender. Three out of four persons arrested for robbery during that month had prior records of arrest for robbery. During the survey month the perpetrators inflicted injury on 326 of their 989 victims, 10 of whom died as a result. These facts emphasize again the degree of jeopardy in which the robbery offender places his victim.

CLEARANCES

The law enforcement agencies of New Jersey were successful in solving over 21 percent of all robbery offenses reported to them, an increase of almost nine percent compared to 1968. Almost four of every five solutions for robbery involved adults.

ROBBERY—PLACE OF OCCURRENCE—1969

CLASSIFICATION	NUMBER OF OFFENSES	TOTAL VALUES	AVERAGE VALUE
Highway	5,781	\$1,226,471	\$ 212

ROBBERY
PERCENT DISTRIBUTION BY LOCATION
1 9 6 9

ATROCIOUS ASSAULT

Atrocious assault, as defined under the Uniform Crime Reporting System, is an attempt or offer, with unlawful force or violence, to do serious physical injury to another. Attempts are included since it is not necessary that any injury result when a gun, knife or other weapon is used which would result in serious personal injury if the crime were successfully completed.

VOLUME AND RATE

There were a total of 6,275 atrocious assaults reported to the police of the state in 1969. When compared to 1968 counts this figure represents an almost six percent decrease in volume, the largest such decrease within the crime index. Atrocious assault makes up less than four percent of the total index but more than 36 percent of all crimes of violence. August, with 670 offenses reported, was the highest individual month for offense frequency. The summer period, June through August, reflected the seasonal high.

Counts for atrocious assaults have decreased by almost five percent since 1967. This reduction can be attributed, in part, to increased proficiency by police in separating minor or "simple" assaults in which hands, fist, feet, etc. are used from those in which serious injury is inflicted as a result of use of these "personal" weapons.

In 1969 there were 86 victims of atrocious assault for every 100,000 persons, a decrease of almost seven percent in the rate of victimization when compared to 1968.

WEAPON ANALYSIS IN ATROCIOUS ASSAULT

The use or attempted use of a dangerous weapon in an assault, or the serious injury inflicted by hands, fists or feet separates this index offense from those assaults categorized as "simple" and not atrocious in nature. The victim of an actual assault of this type may suffer serious injury or permanent disability and all assaults to kill and attempts to kill are recorded in this area. Most atrocious assaults occur within the family unit or among neighbors or acquaintances. The victim and offender relationship, as well as the very nature of the attack, makes this crime similar to murder.

Firearms were employed as a weapon in 18 percent of all atrocious assaults reported during 1969. Knives or cutting instruments were, as in 1968, the most frequently employed (37 percent) weapon of assault. The category of "other dangerous weapons", which includes any object which can be used to inflict serious injury, recorded a 23 percent rate, and hands, fists and feet were listed as the weapons used in the remaining 22 percent portion of offenses reported. (Chart 8)

CLEARANCES

Solutions for atrocious assault offenses were made in more than 64 percent of all cases reported in 1969, a two percent increase over the rate for 1968. This relatively high

solution rate follows that of other crimes against the person. Adults were identified as being involved in 90 percent of all case solutions.

BREAKING AND ENTERING

Under this program, breaking and entering is defined as an unlawful entry or attempted forcible entry of any structure to commit a felony or larceny.

Data collection for this offense is further categorized as to forcible entries, unlawful entries, where no force is used, and attempted forcible entries.

VOLUME AND RATE

A total of 68,110 breaking and enterings were reported by New Jersey law enforcement agencies during 1969. This count represents a volume decrease of 3,335 offenses when compared to 1968 figures, or a percentage decrease of almost five percent. This crime still remains the most voluminous within the index and contributes almost 39 percent of the overall offense counts for the year. As an offense within the nonviolent crime category, breaking and entering accounted for 43 percent of that group total. The reported decrease in volume notwithstanding, the number of breaking and enterings recorded during the year still reflects more than a 12 percent increase since 1967.

The summer period, June through August, reflected the highest period of offense frequency, with January recording the individual monthly high, 6,615 offenses. The high frequency trend of the summer months has held since 1967 and reflects the opportunities given perpetrators during these vacation months.

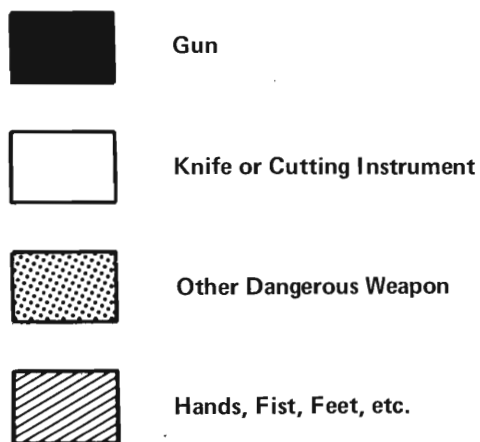

The 1969 crime rate for breaking and entering was 935 victims for each 100,000 inhabitants of the state. Individually, the rate for this offense is the highest within the crime index, but, the 1969 rate represents an almost six percent decrease when compared to the 992 per 100,000 rate of 1968.

ANALYSIS OF BREAKING AND ENTERING

In 1969, 80 percent of all breaking and enterings involved forcible entry, while 11 percent were cases of unlawful entry during which no force was used. Nine percent involved attempts to gain entry. Private residences were the target in 55 percent of all cases, with the remaining 45 percent identified as non-resident locations.

Daytime breaking and enterings of residences accounted for 54 percent of all those offenses where time of occurrence could be determined. Unattended apartments and homes, such as those found in the daytime, offer the perpetrator increased opportunities for theft and the rising frequency of this particular circumstance indicates the perpetrator is exploiting these opportunities to the fullest. Breaking and entering of nonresident locations showed a 90 percent night time frequency.

**ATROCIOUS ASSAULT
WEAPONS USED
1969**

The great volume of this offense presents police with a difficult problem of suppression and detection. In many cases police personnel strengths are not sufficient to provide adequate patrols to serve as a deterrent or to provide offense solutions. Breaking and enterings of residences resulted in property loss exceeding \$15.6 million and proceeds from offenses at nonresident locations amounted to more than \$11.4 million. The over \$27 million economic loss incurred by property owners as a result of this crime averaged \$398 per offense. (Table 28)

CLEARANCES

The police of New Jersey were successful in solving slightly more than 12 percent of all breaking and entering

offenses reported during 1969, a solution rate almost identical to the one attained in 1968. Although 1968-1969 clearance rates have remained static, there has been a notable 11 percent rate decrease since 1967.

This low clearance rate for a serious property crime illustrates the small detection risk a perpetrator takes, which results from the lack of the deterrent effect of adequate police patrol.

Juveniles were involved in 45 percent of all case solutions in 1969. The increasing serious crime involvement of those persons under 18 is readily apparent when it is realized that their offense involvement in 1967 was less than 40 percent. Adults were identified in 55 percent of all case solutions for the year.

BREAKING AND ENTERING, 1969

CLASSIFICATION	NUMBER OF OFFENSES	PERCENT DISTRIBUTION	TOTAL VALUES	AVERAGE VALUE
RESIDENCE	37,710	55.3	\$15,682,408	\$416
Night	13,446	19.7	6,700,048	498
Day	15,591	22.9	5,403,195	347

TOTAL for New Jersey	68,110	100.0	\$27,129,348	\$398

LARCENY-THEFT

The definition of larceny-theft, as provided under this program, is the taking of the property of another with intent to deprive him of ownership. All larcenies and thefts resulting from pocket-picking, purse-snatching, shoplifting, larcenies from autos, thefts of auto parts and accessories, bicycle thefts, etc., are included here. Embezzlement, unlawful conversions, larceny by bailee, frauds or bad check cases are not included.

The crime index offense of larceny includes only those thefts where the value of the goods stolen is \$50 or more.

VOLUME AND RATE

Larceny, \$50 and over, is second only to breaking and entering as the most voluminous offense within the crime index. There were a total of 53,060 larceny offenses reported in 1969, up from the 47,524 offenses recorded for 1968. Percentagewise, larceny counts increased by almost 12 percent over 1968, the highest such rise recorded in the index. A two year volume trend for this offense discloses a more than 48 percent increase since 1967. In 1969, larceny made up over 33 percent of all nonviolent crime counts and 30 percent of the total crime index. As in 1968, offense frequencies for 1969 generally reflected an upward swing from the beginning of the calendar year until a peak was reached in August, and then a gradual decrease through the remainder of the year. The summer months of June, July and August reflected the period high.

A more than 10 percent larceny crime rate increase was recorded for 1969 with over 728 offenses per 100,000 population as compared to less than 660 offenses per 100,000 computed for 1968. The crime rate for larceny has shown a 48 percent increase since 1967.

ANALYSIS OF LARCENY THEFT

As with other offenses against property, larceny is primarily a crime of opportunity. Types of larcenies, as identified in this portion, will differ in volumes depending upon the opportunity for theft offered in a given area.

The average value of property stolen in each larceny reported during 1969 rose to \$164, up from \$141 in 1968. This average value includes losses from the voluminous thefts under \$50 in value, of which there were over 55,000 in 1969. While it is true that a portion of the goods stolen is recovered and returned to victims, the relatively low

solution rate for these crimes indicate that these recoveries will not materially reduce the overall victim loss. In addition, many offenses in this category, particularly where the value of stolen goods is small, never come to police attention.

The identification of "type" and area of larceny, without regard to dollar value, allows a more realistic approach toward establishing the crime experience in this category. By way of example, "street thefts" which would include pocket-picking, purse-snatching, thefts from autos, automobile accessories, thefts from coin operated machines and "all other" larceny, showed an increase of six percent as a group compared to the almost 12 percent increase when larceny of \$50 and over value was considered. These "street thefts" generally occur within reach of police patrols and the deterrent effect of these patrols is evident when only type and area of theft is considered.

In 1969, the average value of goods and property reported stolen from victims of pickpockets was \$136, by purse snatchers \$65, by shoplifters \$50, by thefts from autos \$197 and by miscellaneous thefts from buildings \$263.

Collectively thefts from autos and of auto parts and accessories made up 40 percent of all thefts. This type of theft, which accounted for more than \$7 million in property value, is generally attributed to those of the young age groups. By distribution, larcenies from buildings accounted for over 17 percent of total counts and a property value loss of almost \$5 million. Miscellaneous types of larcenies, not falling into any of the specific categories for which statistics are collected, made up almost 16 percent of the total (Table 29).

CLEARANCES

Larceny offenses cleared by police arrest are dramatically affected by the nature of the crime. As with other nonviolent crimes, opportunity and stealth, working in favor of the perpetrator and against police detection, reduce solutions for this offense. The lack of witnesses and the volume of these crimes add to difficulties encountered by law enforcement.

In 1969, police solutions for larceny offenses was made in almost 10 percent of all cases reported. This rate of case clearance represents an almost 10 percent increase over that recorded for 1968. The degree of juvenile involvement in offenses of this type is indicated in that three of every 10 solutions made involved persons under 18 years of age.

LARCENY (Except Auto Theft) — 1969

CLASSIFICATION	NUMBER OF OFFENSES	PERCENT DISTRIBUTION	TOTAL VALUES	AVERAGE VALUE

TOTAL for New Jersey	108,200	100.0	\$17,693,190	\$164

AUTO THEFT

In Uniform Crime Reporting, auto theft includes all thefts and attempted thefts of a motor vehicle. This includes all vehicles which can be registered as a motor vehicle in this state. This definition excludes taking a motor vehicle for temporary use, such as a family situation, or unauthorized use by others having lawful access to the vehicle.

VOLUME AND RATE

In 1969, the theft of 37,173 motor vehicles were reported to the police of New Jersey compared to 36,592 reported in 1968. The numerical difference of theft volumes, 1969 over 1968, represents a less than two percent increase for the year. However, a comparison of current volumes with those for 1967 reflect an almost 25 percent increase in offenses of this type. Auto theft, as in 1968, made up 21 percent of the total crime index and more than 23 percent of all nonviolent crime. The summer months of June, July and August recorded the highest quarterly frequency during the year with August (3,576 offenses) registering the individual monthly high.

The 1969 auto theft rate of 510 victims per 100,000 population represents only a minimal increase over the 508 victim per 100,000 reported for 1968. Since 1967, however, the auto theft crime rate has risen by over 21 percent.

In order to relate better a victim risk to motor vehicle owners, the following is offered for consideration: based on the 1969 figure of 3,615,418 motor vehicles registered in the state, a theft rate of more than one in every 100 registered vehicles evolves. Although theft volumes used to compute this rate include vehicles registered in other states but stolen in New Jersey, there still appears a strong indication as to the victim risk rate for owners of New Jersey registered vehicles.

ANALYSIS OF AUTO THEFT

The crime of auto theft has been documented primarily as a crime of opportunity. The youthful offender finds the automobile easily accessible for his immediate transportation needs and usually the target is ready to drive away or

the ignition is easily compromised. In order to provide more detailed data regarding the problem of auto theft a comprehensive statewide Special Auto Theft Survey was conducted during the high volume month of August, 1969. Included in survey information was specific data concerning pertinent details of theft, vehicle recovery and persons arrested for theft. Survey results and analysis are presented in the pages which follow.

In 1969 stolen automobile values exceeded \$40.6 million and represented 46 percent of the value of all property stolen during the year. The average value of a stolen auto was \$1,093 at the time of theft and although police recovered 74 percent of the value of all stolen autos the remaining unrecovered portion represents a loss of over \$10.5 million to the victim. This loss figure does not take into account the monetary loss resulting from damage to the vehicles, property and persons which are a direct result of these crimes. As an indication of the mobility present in this offense, almost 37 percent of all vehicles recovered were recovered in jurisdictions other than the one from which they were stolen. (Chart 9)

CLEARANCES

Law enforcement agencies of the state were successful in clearing by arrest only slightly more than nine percent of all auto thefts reported to them during the year, an almost 10 percent decrease when compared to the solution rate recorded for 1968. The obstacles to solution faced by law enforcement are discussed fully in the Special Auto Theft Survey which follows. Generally, factors contributing to this low solution rate include the high degree of mobility present in the offense, the carelessness of the vehicle operator and the lack of witnesses.

More than 76 percent of all vehicles reported stolen were recovered by police and, although this does not clear the offense, the owner does benefit by the return of his vehicle. (Chart 10). Most vehicles are stolen for the purpose of transportation which accounts for the high ratio of police recovery.

Juvenile involvement in auto theft solutions were, as in past years, greater than for any other index crime. In 1969, persons under the age of 18 were involved in 48 percent of the total cases solved.

SPECIAL ANALYSIS OF AUTO THEFT

August, 1969

Auto theft presents a special problem of major proportions to both law enforcement and the public of the state. The realization that New Jersey, although 45th in physical size, is ranked eighth nationally in total motor vehicle registration, with over 3.6 million vehicles registered, may provide a better understanding as to the complexity of the problem with respect to the availability of the auto as a target for theft. Add to this, however, the hundreds of thousands of motor vehicles which annually enter New Jersey from other states and a true picture of motor vehicle volumes in the state emerges. These volumes must be considered as a factor which contribute to New Jersey's auto theft problem.

The responsibility of law enforcement with regard to the problem is limited to the suppression of thefts and the detection and apprehension of the perpetrator. The first of these responsibilities, suppression, is perhaps the most difficult for law enforcement to fulfill. The degree of negligence of the motor vehicle operator in most cases dictates whether or not the theft will occur. The portion of thefts attributed to the professional car thief is relatively small when compared to that portion perpetrated by the non-professional whose actions depend chiefly on the opportunities afforded by careless operators who fail to take normal safeguards when leaving a motor vehicle unattended.

Once an auto theft is perpetrated, the detection and apprehension of the offender is dependent upon the time involved between the theft and the report of theft to police. The high degree of mobility present in this offense places law enforcement at an extreme disadvantage. As a corridor state, New Jersey offers hundreds of miles of high speed highways, affording the perpetrator an additional advantage in avoiding apprehension, thus further complicating the law enforcement effort.

The monetary impact of auto theft reaches far beyond the loss to the owner and the insurance company who carried the vehicle. Every motor vehicle owner in the state is affected because of mounting insurance claims. Increases in auto thefts and other criminal activity also results in the need for greater police service, manpower and equipment. These increases eventually reach every citizen through rises in tax and insurance rates. Another important facet of the problem lies in the offense involvement of the young age group. Since 1967 two of every three arrests for auto theft in New Jersey have been of a person under the age of 18.

In order to gain more insight with respect to this mounting problem the Uniform Crime Reporting Unit of the New Jersey State Police in conjunction with the New Jersey State Chiefs of Police Association, conducted a statewide survey on auto theft during the month of August, 1969. Information requested from the police agencies of the state related to offense volumes, location, time of day, condition of vehicle at time of theft and recoveries. Additional information was requested as to persons arrested

for auto theft during the month regardless of when the offense took place.

PLACE AND TIME OF THEFT

The police of the state reported a total of 3,576 auto thefts during the survey month, the highest monthly total ever recorded in New Jersey. Over 45 percent of the motor vehicles were stolen from streets of residential areas and more than seven out of every 10 of these thefts occurred after 6 p.m. Theft from off street parking facilities in residential areas, such as garages, driveways and parking areas, accounted for slightly over 10 percent of all thefts reported with occurrence after 6 p.m. in eight of every ten cases.

Thefts from streets of commercial or business areas contributed slightly over 15 percent to the monthly offense total, with more than 65 percent of these thefts occurring after 6 p.m. The off-street parking facilities in commercial areas, such as shopping center parking lots, garages and parking areas were the location of almost 27 percent of all auto thefts recorded during the month. Again, the period between 6 p.m. and 6 a.m. showed the greatest offense incidence with more than two out of three thefts during this time span.

More than 70 percent of all thefts reported during the course of this survey occurred after 6 p.m. and before 6 a.m. of the following day. The hours of twilight and darkness afford the perpetrator an obvious advantage in escaping detection and apprehension. By location, daylight thefts reflected the highest degree of incidence, about 37 percent, at shopping centers and parking lots in business areas. (Chart 11).

CONDITION OF VEHICLE AT TIME OF THEFT

The inclusion of information regarding condition of the vehicle at time of theft provides a measure as to the opportunity for theft afforded by the vehicle operator who fails to remove the key from the ignition and/or lock the vehicle. Condition of vehicle at time of theft, as reported to police by the owner, was known in 2,352 cases recorded during the month. The remaining 34 percent portion of cases, where the owner or operator could not provide police with information as to key in ignition or locked-unlocked status of vehicle, were not considered for analysis.

The key was left in the ignition in over 14 percent of all thefts where the condition of the vehicle was known at the time of theft. In addition, more than three percent of all thefts were cases in which the key was left elsewhere in the car, such as under the seat, over the visor, etc. In almost half of these cases where condition of vehicle was known at time of theft, the vehicle was unlocked. Post ignition steering locks, such as those found on some vehicles manufactured in 1969, have proven an effective deterrent, but those vehicles pre-dating the 1969 model year or those of that year without post ignition steering locks afford the offender greater theft opportunity when left unlocked. The would-be perpetrator need not be a professional car thief to enter an unlocked vehicle and compromise the ignition.

While removing the key from the ignition and locking an unattended vehicle does not totally eliminate the possibility of theft, it must be said it greatly lessens it. (Chart 12)

PURPOSE OF THEFT

Police, through investigation and condition of vehicle upon recovery, were able to indicate the purpose of theft in 1,323 of the 3,576 cases reported during the month. Over 83 percent of these thefts occurred for the purpose of transportation (joyrides) an activity most frequently attributed to the young. Those vehicles stolen for the purpose of stripping for parts represented over 13 percent of the total, and vehicles stolen for use in the commission of a crime or for an escape represented almost three percent of all cases. Theft for purpose of resale could not be determined because more than three out of 10 vehicles stolen during the survey month were not recovered during the same period. It should be noted that law enforcement authorities cannot always distinguish between so-called "joyride" offense and theft for profit or other purpose, solely on the recovery of a stolen car.

RECOVERY OF VEHICLES

Information regarding recovered vehicles related to vehicles which were stolen during the survey month of August and recovered during the same month. There were 2,440 vehicles recovered of the 3,576 reported stolen, or slightly over 68 percent. The municipal law enforcement agency in whose jurisdiction the theft occurred, reported recovery of almost 63 percent during the month, with the remaining 37 percent being recovered by law enforcement agencies of other municipalities. More than eight out of 10 recoveries were made in the same county where the theft occurred and over 95 percent were recovered within the state.

Of those vehicles stolen and recovered locally, 64 percent were recovered within a 24 hour period, 16 percent within a 48 hour period, with the remainder of recoveries, 20 percent, being made sometime after a 48 hour period.

ARRESTS FOR AUTO THEFT

Law enforcement agencies of the state reported a total of 366 persons arrested for auto theft during the survey month of August. Arrests of those persons under the age of 18 made up almost 60 percent of these arrests with adult arrests comprising the remainder. More than 40 percent of all persons arrested had some prior record of criminal arrest and almost 16 percent of all those arrested had at least one previous arrest for auto theft. (Chart 13)

ANALYSIS SUMMARY

In any determination as to cause and prevention of auto theft, the two major contributory factors, volumes and lack of witnesses, deserve serious consideration. Auto theft volumes in New Jersey are such that more than four vehicles are reported stolen each hour of every day. Each

theft initiates a law enforcement investigatory process which is costly in time and effort. Based on a citizen's complaint of theft, a police agency cannot distinguish between a "joyride" type theft and a theft for profit. Therefore the same investigatory process must be employed in all cases. The fact that police recover almost 80 percent of all vehicles reported stolen notwithstanding, the process leading to recovery is expensive to the public as is the monetary loss of the unrecovered vehicles.

The degree of juvenile involvement in auto theft should be a matter of public concern. Auto theft can generally be categorized as a crime of opportunity and, in many cases, results from the impulsive act of a teenager to whom the opportunity is presented. State arrest data substantiates this observation when it is noted that since 1967 two out of every three arrests for auto theft have been of persons under the age of 18. The observation can be extended even further in that more than half of all auto theft arrests reported in the past three years have been of persons 16 and under, an age too young to even qualify them for a New Jersey driver's license.

Arrest of the youthful auto theft offender, many times marks the beginning of continued criminal involvement. Over 68 percent of the juveniles arrested during the month of survey had no known prior record of arrest, which must be considered a high percentage of "first" arrests. Once the auto theft involvement of a juvenile begins, however, his chances toward recidivistic behavior seems to increase. Survey data discloses that those juveniles arrested, who had prior record of arrest had, in more than two of every five cases, at least one previous arrest for auto theft.

Removing the opportunity for theft must be considered the prime preventative measure in reducing the number of auto thefts in the state. "Joyride" and transportation thefts made up over 83 percent of all thefts where purpose of theft could be determined. A large majority of these thefts were perpetrated by those of the young age group and were dependent upon "opportunity" for successful commission.

Auto thefts of a "commercial" nature and those perpetrated to aid the commission of another crime are usually the work of the career criminal. This type theft will not be materially affected by any normal application of preventative measures. Prompt investigative action by police, apprehension of the offender, and successful prosecutive action are the only real deterrents in cases of this type.

The high degree of mobility present in auto theft adds to the complexity of the problem. The auto thief has no regard for political or geographical boundaries and the act of an offender transporting the proceeds of his theft from one jurisdiction to another removes the overall issue from one of strictly "local" concern.

Thirty-seven percent of all vehicles reported stolen during the month of survey and recovered in the same month, were recovered outside the municipality in which the theft occurred. Almost 20 percent were recovered in a county other than the county of theft and almost five percent were recovered out of the state entirely.

This problem of mobility creates a serious communication need between jurisdictions in New Jersey. This need is partially satisfied by the NCIC System Terminal which is maintained by the New Jersey State Police at West Trenton, New Jersey, where a file of all vehicles reported stolen in the state is maintained for dissemination upon police inquiry as to a specific vehicle. Although important, this service does not fulfill the communications need necessary between jurisdictions with respect to prompt notification of surrounding law enforcement agencies of pertinent information relative to the theft of a vehicle.

Reduction in theft opportunities, and therefore thefts, have been accomplished in various parts of the nation by

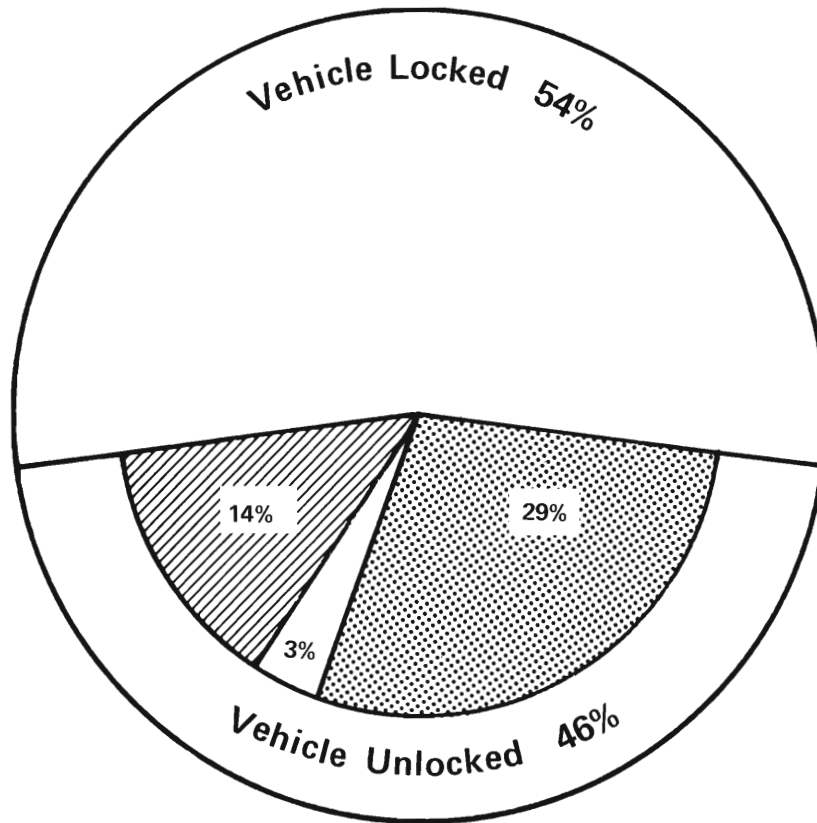

passage and enforcement of "key" ordinances. Penalizing a driver for failing to remove the key from the ignition and locking an unattended vehicle may seem somewhat harsh. However, it must be remembered that these actions are normal safeguards for which the public has a definite responsibility.

At present, New Jersey does not have a prohibitive motor vehicle statute relative to this situation and, at time of survey, only one percent of all New Jersey municipalities had local key ordinances in effect. Survey results also disclosed that no summons was issued during the month for ordinance violations in those communities where such ordinances exist.

AUTO THEFT LOCATION - TIME AUGUST, 1969

CONDITION OF VEHICLE AT TIME OF THEFT AUGUST, 1969

AUTO THEFT ARRESTS AUGUST, 1969

STATE ARREST DATA

In the year 1969, law enforcement agencies of the state reported a total of 227,478 arrests for all criminal acts. When related to 1969 population estimates for New Jersey there were over 31 arrests for every 1,000 persons, up from the less than 28 per 1,000 rate of 1968. (Table 30)

Under the Uniform Crime Reporting Program, statistics concerning persons arrested are collected annually and are correlated as to age, sex and race. These arrest statistics, as submitted by the law enforcement agencies of the state, relate to the total population of New Jersey.

An arrest is counted each time a person is taken into custody, notified or cited. The number of charges placed against a person at the time of arrest is not considered in the count. The same person may be arrested several times during the year for similar offenses, as in cases of drunkenness, disorderly conduct and related violations, and is counted each time he is arrested. Further, the arrest of one person may solve several crimes and, in other instances, two or more persons may be arrested during the solution of one crime.

Arrests are primarily a measure of law enforcement activity as it relates to crime. Arrest practices, policies and emphasis will vary from place to place and within a community from time to time. The volume of police arrests for certain unlawful conduct such as drunkenness, disorderly conduct and certain local ordinances is particularly influenced by the above. On the other hand, robbery, breaking and entering and other arrests for serious crimes are more likely the result of standard procedures.

Program arrest scoring procedures regarding juveniles provide that an arrest is counted when a person under 18 years of age commits an offense and the circumstances are such that if the offender were an adult an arrest would be made. It must be remembered that arrest counts do not reflect the specific number of persons arrested since one person may be arrested several times during the year.

Considerations regarding the overall arrest data presented should include that while it is a measure of police activity it can be used, as within the limitations of all criminal statistics, to gauge criminality.

PERSONS ARRESTED

Those persons arrested for serious crime index offenses during the year made up 18 percent of the total arrest figure with the arrest of persons under 18 years of age accounting for more than half of the arrests of this type. Juvenile arrest involvement was, as in prior years, greatest in the nonviolent crime categories of breaking and entering, larceny and auto theft where such arrests represented 58 percent of that group's arrest total. Almost eight of every 10 persons arrested for offenses of the violent crime category (murder, rape, robbery and atrocious assault) were 18 years of age or over.

Arrest distribution by race, discloses that of those persons arrested for all criminal acts during the year, 67 percent were White, 32 percent were Negro and the remaining one percent were of other races. This distribution for 1969 is identical to the one recorded in 1968. Arrest distribution by race for those serious offenses within the crime index reflect that 55 percent of all those arrested were White, 44 percent were Negro with the remainder of persons arrested being of other races. Persons arrested for crimes of violence within the index (murder, rape, robbery and atrocious assault) were 64 percent Negro, 35 percent White with the remaining one percent being of other races. The use of the crime of murder as an indicator, with respect to victim information in violent crime, identifies 54 percent of all 1969 murder victims as being Negro.

In 1969, 60 percent of all persons arrested for the nonviolent crime of breaking and entering, larceny and auto theft were White, 39 percent were Negro, with the remaining percentage being distributed among other races. (Tables 31, 32 and 33)

ARREST TRENDS

In 1969, police arrests for all crimes increased 14 percent over 1968 counts. Adult arrests rose by over 11 percent while juvenile arrests had an overall increase of almost 19 percent. For the period 1967-1969 police arrests for all criminal acts have increased over 27 percent. During the same period adult arrests increased less than 23 percent while juvenile arrests were up more than 39 percent.

Arrests for crime index type offenses increased over five percent during the year and within the index violent crime arrests were up more than 10 percent while nonviolent crime arrests rose four percent. Increases in arrest volumes, 1969 over 1968, were noted for specific index offenses with murder up almost three percent, forcible rape, 25 percent, robbery, 16 percent, atrocious assault, six percent and larceny theft, 14 percent. Volumes for breaking and entering and auto theft arrests declined almost four percent and 14 percent respectively. (Table 34)

As in 1968, arrests for Narcotic Drug Law violations reflected the highest individual rise for the year with a volume increase of over 69 percent. Arrests for Narcotic Drug Law violations show an almost 165 percent increase since 1967, the most dramatic arrest variation recorded for that period. Gambling arrests were up almost 25 percent in 1969 and have risen a substantial 82 percent since 1967. (Charts 14 and 15)

Juveniles continue to show increasing arrest involvement in serious crime. Adult arrests for murder, rape, robbery and atrocious assault rose less than eight percent during the year while violent crime arrests for those young persons under the age of 18 increased 28 percent.

ARREST ANALYSIS BY AGE

The distribution of 1969 state arrest totals by age discloses that 15 percent of all persons arrested were under the age of 15, over 35 percent were under the age of 18, and more than 50 percent were under the age of 21. As a further indication regarding the degree of serious crime involvement of juveniles it was noted that more than three of every 10 persons arrested for robbery were under 18; almost six of every 10 persons arrested for breaking and entering were juveniles; over half of those arrested for larceny-theft were of the young age group as were two of every three persons arrested for auto theft. (Table 35)

As noted in previous years, more than half (54 percent) of all persons arrested for Narcotic Drug Law violations were under the age of 21, over 32 percent were in the specified age bracket of 18 to 20 years of age and more than 12 percent were 16 years of age or under.

Arrest of those persons 18 years of age and over represented over 64 percent of all arrests reported. Adult arrests for violent crime, which includes murder, rape, robbery and atrocious assault, comprised over 78 percent of that group's total arrest figure. The arrest of young adults, ages 18 through 22, accounted for almost 35 percent of the total arrests reported. (Table 36)

ARREST ANALYSIS BY SEX

In 1969, almost 87 percent of all persons arrested were male. Female arrests, although representing slightly over 13 percent of the total arrest figure, increased more than 28 percent during the year with significant increases noted in arrests for Narcotic Drug Law violations, up 88 percent and larceny-theft, up over 36 percent. Since 1967, female arrests for all criminal offenses have increased by 40 percent while male arrests were up 25 percent for the same period.

Females were identified in more than 13 percent of all arrests for the serious index type offenses with primary involvement in the crime of larceny where over 22 percent of all arrests made were of females. Female arrests for violent crime within the index made up nine percent of all such arrests reported and included an over 13 percent rate

of involvement in the specific crimes of murder and atrocious assault. In the nonviolent crime category, arrest of females accounted for 14 percent of the total arrests recorded. When only index type offenses are considered, female arrests have increased 31 percent over counts reported in 1968. (Table 37)

ARRESTS FOR OTHER AUTHORITIES

The arrest data presented in this publication is based on statistics collected under the program and provides a count of only those arrests police make for offenses committed within their jurisdictions. Arrests are primarily a measure of police activity and, in order to present all facets of this activity, the program has included, for additional consideration, statistics on the arrests police make in their jurisdictions for criminal offenses committed elsewhere, both within and outside of the state.

These statistics, although separate and apart from those shown elsewhere in this publication, are presented as an indication of the total enforcement program facing police today. The factor of mobility of the offender, in many instances, results in a person committing a crime in one community and being apprehended by the police in another. This type of activity, although not related to the individual community's crime experience, places an additional responsibility on the police of all communities.

During 1969, law enforcement agencies of New Jersey reported a total of 11,618 arrests of the type described above, an almost 16 percent increase when compared to 1968. Arrests for the serious crime index offenses accounted for over 12 percent of the total arrests reported and, of these, almost one of every three was for the violent crime group of murder, forcible rape, robbery and atrocious assault.

The distribution of total arrests reported made for other authorities includes 10,380 arrests made by police for offenses committed in New Jersey communities other than their own, and 1,238 arrests made for out of state or federal law enforcement agencies. The volume of arrests reported within the category of "Arrests for Other Authorities" has increased 32 percent since 1967.

Table 37

PERSONS CHARGED

The disposition made of those persons arrested and formally charged in a court of jurisdiction is of great interest to the police administrator. Knowledge as to the quality of the police investigation, case preparation and presentation is gained from the subsequent dispositions of those cases which reach the court level. (Table 38).

In 1969, 84 percent of all persons arrested for crime index type offenses were turned over to the courts. Adults charged with crime index offenses were found guilty in 77 percent of all cases presented.

It must be recognized that not all arrested persons are turned over to the courts for prosecution. There are various reasons for this: failure of the victim to cooperate or appear at time of trial, as in cases of rape, is one reason for failure to prosecute effectively those persons arrested and charged. Evidence obtained which discloses the arrested person did not commit the offense, or the instances where there is insufficient evidence to support either a formal charge or a subsequent prosecution, are additional reasons. For example, one half of all juveniles arrested were handled by the individual law enforcement agencies, without preferring a formal charge or referring them to juvenile authorities. Table 39 is shown to illustrate how police methods in handling juveniles differ throughout the state. All other data presented in this section refers only to those juveniles who were arrested and turned over to juvenile authorities in connection with specific criminal acts.

In 1969, slightly more than 22 percent of the murder defendants were either acquitted or their cases were dismissed at some prosecutive stage. Over half of those tried for rape were acquitted or had their cases dismissed as did almost one of every three persons charged with robbery.

Of those adults who were prosecuted for crime index offenses, nine percent were found guilty of a lesser crime and almost 23 percent were acquitted or dismissed. Larceny recorded the highest percentage of persons found guilty on the original charge, 94 percent, followed by robbery, 90 percent. The percentage of those found guilty on the original charge for the remaining index offenses were as follows: murder, almost 90 percent; breaking and entering, 87 percent; auto theft, 82 percent; rape, 71 percent; and atrocious assault, 67 percent. Those offenses where the highest percentage of adults were convicted of a lesser offense were atrocious assault, 31 percent and rape, 29 percent.

In 42 percent of the crime index type offenses where formal charges were preferred, the offender was referred to juvenile court. This juvenile referral percentage has remained substantially the same since 1967. As in prior years, juvenile referrals were highest for auto theft with 62 percent. Young persons were referred to juvenile court jurisdiction after being charged in 53 percent of the cases of breaking and entering, 41 percent of the larcenies, 29 percent of the robberies, 16 percent of the rapes, 13 percent of the atrocious assaults and nine percent of the murders. In 1969, malicious mischief, arson and violation of liquor laws recorded the highest percentage of juvenile referrals for those offenses not included within the crime index.

Disposition data for 1969 discloses that, as in prior years, the acquittal or dismissal rate is collectively greater for the violent crimes of murder, rape, robbery and atrocious assault than for breaking and entering, larceny and auto theft of the nonviolent category. The dismissal or acquittal rate for those violent crimes was reported at more than 36 percent while dismissal or acquittal for those crimes of a nonviolent nature was less than 19 percent.

Observations regarding convictions on original charges for all crime categories disclose that the highest individual rates were for those offenses involving morality. An over 91 percent rate of conviction was recorded for prostitution and commercialized vice, while sex offenses (except forcible rape and prostitution) reflect a rate of 72 percent. The conviction rate for violation of the Narcotic Drug Laws remained high, 84 percent, as it did for those offenses involving alcoholic beverages. (Drunkenness, 90 percent, driving under the influence, 94 percent and other liquor law violations, 85 percent.)

The above data discloses the results of cases after police have arrested and formally charged the adult offender. The remaining cases pending court action, or undecided at the year's end, are classified as pending and are carried from year to year until a disposition is furnished by a court of jurisdiction. For the year ending 1969, over 39,700 cases remain pending according to information supplied police by the various courts of New Jersey.

A final review of all crime categories discloses that 23 percent of all adults tried by the courts were either acquitted or their cases were dismissed at some prosecutive level. Persons of young age groups who were referred to juvenile court represented 21 percent of the total persons formally charged in all crime categories. (Table 40)

DISPOSITION OF PERSONS FORMALLY CHARGED, 1969

OFFENSES	CHARGED (Held For Prosecution)	GUILTY OF		Acquitted or Dismissed	Referred to Juvenile Court	Pending

BAIL INFORMATION

As an adjunct to the New Jersey Uniform Crime Reporting Program, information regarding the bail experience of those persons charged by police is collected annually from the law enforcement agencies of the state. Measurement of this bail experience provides a base for consideration regarding the equity of bail in the administration of criminal justice within the state, as well as information regarding the initial status of those persons charged.

The categories of "Released in Bond or Bail", "Released on Own Recognizance", "Committed in Default of Bail", and "Committed Without Bail" are recorded by police as the information becomes known to them. This bail information, in most cases, must be obtained by police from the court and relates only to the first opportunity an arrested person has to post bail. A person may be committed in default of bail and then later post bail and be released. However, the status would be reported as "Committed in Default".

The law enforcement agencies of the state reported bail information regarding 126,036 persons for the year 1969. This figure represents 86 percent of all those adults formally charged by police and is the base used in all analyses presented.

Bail information regarding those adults charged with the serious crime index offenses discloses that over 42 percent were released in bond or bail, a slight increase from the 40 percent figure recorded in this area for 1968. More than 34 percent of those persons charged with index type offenses were committed in default of bail, 17 percent were released in their own recognizance and less than seven percent were committed without bail.

Those persons charged with a crime of violence, which includes murder, rape, robbery and atrocious assault, had

the following initial bail experience: 35 percent were released in bond or bail; 10 percent were released on their own recognizance; 41 percent were committed in default of bail and 14 percent were committed without bail.

The following initial bail status was experienced by those persons with a nonviolent crime: Released in bond or bail, 45 percent; released on own recognizance, 19 percent; committed in default of bail, 32 percent; and committed without bail, less than four percent.

The total bail experience of those persons charged by police in 1969 reflected only slight variations from that experience which was recorded for 1968. A 46 percent portion of all those charged were released in bond or bail, 29 percent were released in their own recognizance, almost 22 percent were committed in default of bail and slightly over three percent were committed without bail.

Comparisons of 1969 bail information with that of 1967 reflects significant changes in certain areas. In 1967, those persons charged with the serious crime index offenses were committed without bail in nine percent of all cases. The 1969 experience in this same area reflected that less than seven percent were committed without bail, a rate clearance of almost 37 percent. More specifically, those persons charged with nonviolent crimes within the index and who were committed without bail show a 46 percent rate decrease since 1967.

The bail disposition area of "Released on Own Recognizance" has also reflected an upward trend since 1967. In 1969, those persons who were charged with a violent crime and released on their own recognizance represented 10 percent of all such cases. Compared to the less than nine percent figure of 1967, a 16 percent rate decrease is noted. Since 1967, the rate for persons released on their own recognizance for all the serious crimes of the index has increased by four percent. (Table 41)

CRIME STATISTICS BY GEOGRAPHIC REGION AND COUNTY

The presentation of criminal statistics by geographic regions of New Jersey, and by counties within the respective regions, is made for the purpose of further analysis of crime within the state. The type and volume of crime will vary from place to place as do the influencing factors which contribute to a crime rate. Recognition of these variances, through identification, helps provide a more equitable base for consideration. (Tables 42 through 60 and charts 16 through 19).

Geographic groupings by county, as shown in this section, were made using the following criteria: one, location in the state in relation to outside influence, (e.g., large urban centers); two, the presence of major urban cores within individual counties; and three, the general character of the county, (e.g. urban or openness). Employing these criteria, the state is divided into four regions.

NORTHWEST REGION

The Northwest Region is comprised of Sussex, Warren and Hunterdon Counties. The region is primarily a rural area because of its distance from the two major metropolitan centers of New York and Philadelphia, as well as the absence of any major core cities.

CRIME VOLUME AND RATE

A total of 2,432 crime index offenses were reported to the police of the Northwest Region during the year, a volume increase of seven percent when compared to 1968 counts. Nonviolent crimes which include breaking and entering, larceny and auto theft, represented a 95 percent portion of crimes reported with violent crime accounting for the remaining 5 percent portion of the total index.

Variations in crime counts for the Region, 1969 over 1968, ranged from an almost four percent decrease in reported breaking and enterings to an over 37 percent increase in larceny, \$50 and over. The overall increase of seven percent was distributed evenly between the categories of violent and nonviolent crime.

The greatest frequency of crime occurrence for the region was recorded in the three month period of October through December, a change from 1968 seasonal counts when the summer months reflected the higher volumes. The individual monthly high was recorded during December while the low volume month proved to be February. Monthly crime frequency trends for the three year period since 1967 are shown in Chart 16.

In 1969, there were 1,142 victims of index crime for each of the 100,000 inhabitants of the region compared to the 1,086 per 100,000 rate computed for 1968. The crime rate for the region remains the lowest among all regions of the state however, the 1969 rate includes a five percent general increase over the 1968 rate of victimization. Within this general increase the violent crime rate rose to 59 victims per 100,000 population, an almost five percent upward trend, and the nonviolent crime rate grew to 1,083 per 100,000, an increase of more than five percent.

CLEARANCES

The police of the Northwest Region provided solution for more than 17 percent of all crime index offenses

reported to them in 1969, up from a 16 percent rate of solution recorded for 1968. The percentage of those violent crimes solved, as in the other regions of the state, far exceeded that for those crimes of a nonviolent nature. More than seven out of every 10 forcible rapes and atrocious assaults were cleared by arrest as were almost half the robberies. Nonviolent crime solutions were highest in the auto theft category where more than one of every four cases reported was cleared by arrest.

Total case solution involved adults in two of every three instances with persons under the age of 18 being identified in the remainder. Juvenile involvement was primarily in nonviolent crime areas where almost two of every five cases were cleared by the arrest of a juvenile. Breaking and entering reflected the highest individual involvement for those persons under 18 with almost 43 percent of all such cases cleared being attributed to the arrest of a juvenile.

PERSONS ARRESTED

During the year 1969, a total of 3,546 arrests for all crimes were reported by the police of the Northwest Region. This total reflects a more than 15 percent increase in arrest activity when compared to 1968 counts.

Arrests for the serious offenses of the crime index represented a 25 percent portion of the total arrest figure. Violent crime arrests accounted for nine percent of the total index crime type arrests reported with nonviolent crime arrests making up the remaining 91 percent. Within individual index offenses, breaking and entering arrest volumes were the highest recorded with such arrests representing more than 50 percent of the total arrests reported for index crime.

Juvenile arrests for all crimes within the region were up more than 13 percent over 1968 figures and represented 30 percent of the total arrest figure reported. The arrest of persons under 18 years of age made up 50 percent of the total arrests for serious index crime in the region, with more than half of those arrested for either breaking and entering or auto theft being of the young age group.

**NORTHWEST REGION
TOTAL CRIME INDEX
BY MONTH
1967 - 1968 - 1969**

NORTHEAST REGION

The eight counties of Bergen, Morris, Passaic, Essex, Hudson, Union, Somerset and Middlesex make up the Northeast Region, the character of which is a suburban-urban mix. The most densely populated urban areas of the state and the nation, with their complex problems, are located within this region. The major urban cores are Newark, Jersey City and Paterson, with surrounding suburban areas. On the larger scale, however, the region is oriented toward the New York metropolitan center. The industrial complex of the state is centered in this region, as is more than 65 percent of the state's population.

CRIME VOLUME AND RATE

The police of the Northeast Region received report of 116,314 crime index offenses during the year 1969, a 1.5 percent decrease from the 118,031 offenses reported in 1968. The volume of offenses reported in this highly urbanized and densely populated area, which houses more than 65 percent of the state's total population, represents slightly over 66 percent of the total index offenses recorded in the state.

Counts for those crimes of the violent group, which include murder, rape, robbery and atrocious assault increased by three percent during the year and accounted for an eleven percent portion of all index crimes reported. The voluminous nonviolent crime group of breaking and entering, larceny over \$50 and auto theft made up 89 percent of all index crime and reflected a two percent volume decrease when compared to 1968. Despite the general decrease in index crime counts for the region there were significant increases in certain crime categories. Robbery and rape of the violent crime group were up more than seven percent and six percent respectively, while in the nonviolent group, offense counts for larceny \$50 and over, increased well over seven percent.

As in 1968, the highest monthly crime volume for the region was recorded in August with the summer period of June through August producing the seasonal high. A three year monthly crime frequency trend for the region is shown in Chart 17.

A 2.5 percent decrease in the crime rate for the Northeast Region was realized in 1969 and resulted from a reduction of the 2,530 index crime victims per 100,000 population ratio recorded in 1968 to a 1969 rate of 2,468 victims per 100,000. The general crime rate decrease in the region can be attributed to a three percent decrease in the number of victims per 100,000 for those voluminous crimes of a nonviolent nature. These decreases notwithstanding, the rate of victimization for violent crime increased by two percent when compared to the rate computed for 1968.

CLEARANCES

In 1969, the police of the Northeast Region cleared by arrest more than 13 percent of all crime index offenses reported to them. This solution rate represents a slight increase in the percentage of successful case clearances when compared to 1968 counts. Violent crime solutions

were provided by police in 73 percent of the murders, 57 percent of the rapes, 21 percent of the robberies and in over 61 percent of the atrocious assault reported. Solutions for those nonviolent property-type crimes were considerably lower than for those of the violent crime group. The volume of this type crime in the region contributes to the relatively low solution rate as does the nature of the crime itself. Case clearance by arrest for breaking and entering, the most prevalent index crime in the region, occurred in only 12 percent of all cases reported. Slightly over 10 percent of all larceny-thefts were solved and auto theft case clearances were made in eight percent of all such cases reported.

Adults were identified in 67 percent of all solutions for serious crime in the region with their primary involvement being in crimes of a violent nature. Arrest of persons 18 and over provided solution in 94 percent of the murder cases cleared, 86 percent of the forcible rapes, 78 percent of the robberies and 90 percent of the atrocious assaults. As a group, 86 percent of all violent crime solved in the region involved adults.

Arrest of juveniles provided solution in a 33 percent portion of all crimes cleared by arrest in the region and, as in previous years, those of the young age group reflected the higher involvement in property-type crime. Persons under the age of 18 were identified in 41 percent of all solutions for nonviolent crime. More specifically, juvenile involvement was evidenced in 44 percent of all solutions for breaking and entering, 36 percent of all larceny-theft and 45 percent of all auto thefts cleared by arrest.

PERSONS ARRESTED

Law enforcement agencies of the Northeast Region reported a total of 138,592 persons arrested for all crimes during the year, an increase of more than 16 percent in arrest activity over 1968.

More than 26,600 persons were arrested for those serious offenses of the crime index, which represents over 19 percent of the total arrests reported in the region. Arrests for the violent crimes of murder, rape, robbery and atrocious assault made up 20 percent of all arrests for index offenses with the remaining 80 percent of arrests being for those index crimes of a nonviolent nature.

The more than 12,600 arrests which were reported for larceny-theft offenses was the highest individual arrest count for index crimes and represented a 48 percent portion of all arrests recorded for index-type offenses.

The criminal arrest involvement of juveniles was again higher in the Northeast Region than in any other region of the state. The over 54,000 juvenile arrests reported for all crimes represent a 40 percent portion of the total arrest figure for the region and, when compared to 1968, reflect a volume increase of 21 percent. More than half of those arrested for serious crime were under the age of 18. Juvenile arrests represented 66 percent of all arrests recorded for auto-theft, 59 percent of larceny-theft and 58 percent of all arrests for breaking and entering.

**NORTHEAST REGION
TOTAL CRIME INDEX
BY MONTH
1967 - 1968 - 1969**

SOUTHWEST REGION

The Southwest Region is comprised of the four counties of Mercer, Burlington, Camden and Gloucester. The character of this area is also suburban-urban mix. The urban cores within the region are Trenton and Camden, with surrounding suburban development, but the entire region is oriented toward the Philadelphia metropolitan center.

CRIME VOLUME

A volume of 29,917 crime index offenses was reported by police of the Southwest Region during 1969, a numerical increase of 3,286 offenses and a percentage rise of 12 percent over 1968 counts. Violent crime, which includes murder, rape, robbery and atrocious assault, represented an eight percent portion of all crimes reported and also reflected an upward trend of 12 percent. Individual variances within the violent crime group were noted for rape, up 31 percent, robbery up 23 percent and counts for atrocious assault down nine percent.

Nonviolent crime, which includes breaking and entering, larceny and auto theft, made up the remaining 92 percent of index counts and reflected a 12 percent volume rise. Significant volume increases were noted for all crimes of this group with breaking and entering offenses up almost 13 percent, larceny over 13 percent and auto theft up over nine percent. The highest crime volumes within the region occurred during the three month period of October through December with the individual monthly high recorded in August. A three year trend for monthly crime volumes is shown in Chart 18.

Regional crime volumes, when related to resident population, result in a rate of victimization of 2,326 victims for every 100,000 inhabitants of the region, a 12 percent increase over the regional crime rate computed for 1968.

CLEARANCES

Police of the Southwest Region provided solutions in slightly over 12 per cent of all index offenses reported to them during the year. A rate of solution almost identical to the one attained in 1968.

Successful solution was made in 39 percent of all violent crime cases reported with clearances made in 78 percent of the murders, 57 percent of the rapes, 20 percent of the robberies and 70 percent of the atrocious assaults. Clearance for those crimes of a nonviolent nature was made in slightly less than 10 percent of all such cases reported. Solution was provided in over 10 percent of the breaking and enterings, nine percent of the larcenies and in almost 11 percent of the auto thefts.

Young persons under 18 years of age were involved in more than 37 percent of all serious crimes cleared by arrest during the year. The degree of juvenile involvement in specific crime is indicated by the 26 percent portion of clearances they represent in total robbery solutions, 48 percent in breaking and entering, 27 percent in larceny and 58 percent in auto theft.

Regional crime volumes, when related to resident population, result in a rate of victimization of 2,326 victims for every 100,000 inhabitants of the region, a 12 percent increase over the regional crime rate computed for 1968.

PERSONS ARRESTED

Law enforcement agencies of the Southwest Region reported a total of 38,592 persons arrested for all crimes during 1969, an increase of more than nine percent over 1968.

Persons arrested for those serious offenses of the crime index represented 18 percent of all arrests reported. Within the index, violent crime arrests for murder, rape, robbery and atrocious assault accounted for 17 percent of the total arrests for serious crime. Nonviolent crime arrests made up the remaining 83 percent of all index-type arrests, with the greatest distribution, 46 percent, being in the larceny-theft category.

Violent crime arrest volumes increased by 13 percent during the year while nonviolent crime arrests were up four percent.

**SOUTHWEST REGION
TOTAL CRIME INDEX
BY MONTH
1967 - 1968 - 1969**

SOUTHEAST REGION

The Southeast Region contains the six counties of Monmouth, Ocean, Atlantic, Cape May, Cumberland and Salem. The general character of this region is rural, except for the large resort area stretching along the Atlantic coast. The major center for this region is Atlantic City. The resident population of the resort counties within this region is dramatically supplemented during the summer season, resulting in urban-like problems not normally associated with a "rural" classification.

CRIME VOLUME AND RATE

During the year 1969, a total of 26,891 crime index offenses were reported to police of the Southeast Region, a seven per cent increase over the 25,161 offenses reported in 1968.

Violent crime, which includes murder, rape, robbery and atrocious assault, was up over two percent and comprised seven percent of all offenses reported. Substantial rises in individual violent crime categories were noted with forcible rape, up 24 per cent and robbery, which rose 23 per cent. Counts for the nonviolent crimes of larceny-theft, breaking and entering, and auto theft, increased more than seven percent as a group and made up the remaining index volume of 93 percent. Although reported cases of breaking and entering decreased by four percent during the year, larceny-theft and auto theft increased 24 percent and seven percent respectively.

Regional crime frequencies, by month, are indicative of the general nature of the region. As would be expected in this resort oriented area, crime volumes were heaviest during the summer vacation months of June, July and August which period accounted for 32 percent of the total crime count reported. Individually, August, with 3,263 offenses reported, recorded the monthly high. Regional monthly crime trends for a three year period are shown in Chart 19.

The great volumes of transient vacation population in the Southeast Region contribute to the relatively high crime rate of 2,510 victims for every 100,000 permanent residents of the region. Although the vital factor of transient population cannot be computed into the establishment of a crime rate, the impact it can have becomes quite evident when the Southeast Region is considered.

CLEARANCES

Law enforcement agencies of the Southeast Region cleared by arrest slightly over 14 percent of all crime index

offenses reported to them during the year, down from the almost 16 percent rate of solution attained in 1968.

Violent crime solutions were provided in 51 percent of all such offenses reported. Case clearances were reported in 80 percent of the murders, 67 percent of the rapes, 23 percent of the robberies and 74 percent of the atrocious assaults. Solutions for those crimes of a nonviolent nature was made in slightly under 12 percent of all cases reported. Reported cases of breaking and entering were cleared by arrest in 14 percent of all instances, larceny-theft, eight percent and auto theft, 14 percent.

Persons under the age of 18 were involved in 35 percent of all solutions for serious crime in the region. Almost one of every 10 solutions for a crime of violence involved a member of the young age group. The highest violent crime involvement for juveniles occurred in robbery, where almost 18 percent of all clearances were attributed to the arrest of a person under 18.

Juveniles were identified in over 43 percent of all solutions for nonviolent crime. Over 48 percent of all cases cleared for breaking and entering and 49 percent of all auto theft solutions, involved those of the young age group.

PERSONS ARRESTED

Law enforcement agencies of the Southeast Region reported a total of 44,956 persons arrested for all crimes during the year 1969, an increase of more than 11 percent over 1968 counts.

Arrests for those serious offenses of the crime index represented an over 16 percent portion of all arrests reported. Within this category, 15 percent were arrests for those crimes of violence and the remaining 85 percent for those crimes of a nonviolent nature. Violent crime arrests increased by four percent during the year while arrests for nonviolent crime reflected a volume rise of almost five percent.

Juvenile arrests were up over 14 percent and represented more than 29 percent of the total arrest figure. Arrest of persons under the age of 18 accounted for 48 percent of all arrests for the serious offenses of the crime index. Almost 6 of every 10 persons arrested for breaking and entering were under the age of 18 as were more than two of every three persons arrested for auto theft.

POPULATION GROUPS

The presentation of crime statistics by population groups was made for the purpose of projecting, for consideration, the relative crime experience of communities of varying populations. Although the individual municipalities within the various groups may be geographically separated, their inclusion into a specific group was predicated by the similarity in population with the other municipalities within the group. Municipalities within the same group may differ widely when all factors are considered but they do share the common bond of population size. The grouping of communities in this manner allows recognition of variances in the crime volumes, rates and clearances between the established groups. (Table 61).

Set forth below are the established municipal groupings as used in this section:

GROUP I

6 Municipalities over 100,000
Total population – 1,162,100

GROUP II

16 Municipalities 50,000 to 100,000
Total population – 1,057,630

GROUP III

46 Municipalities 25,000 to 50,000
Total population – 1,626,080

GROUP IV

56 Municipalities 15,000 to 25,000
Total population – 1,058,400

GROUP V

196 Municipalities 5,000 to 15,000
Total population – 1,789,550

GROUP VI

141 Municipalities 2,000 to 5,000
Total population – 472,920

GROUP VII

106 Municipalities Under 2,000
Total population – 116,760

MUNICIPAL OFFENSE DATA

The 1969 offense data provided in this section is shown as it relates to the incorporated New Jersey municipality in which the offense occurred and is based on the individual contribution of crime statistics by the respective police jurisdictions of the state.

The isolation of offenses by place of occurrence, as shown in Table 62, makes possible the projection of a more accurate statistical picture of the individual community's crime experience. Additionally, this approach has provided a sound base for offense computation and analysis by county, region, population group and state. This application has been made, in varying forms, in all of the

preceding offense information shown.

The statistical tables which follow offer numerical counts of Class I offenses as reported during 1969. Tables also include, for the purpose of reference, individual municipal counts as reported during 1968. It is important to remember, in reviewing these tables, that the extent and fluctuation of crime in a given municipality may be subject to the many complex factors set forth elsewhere in this publication. Conclusions drawn from direct comparisons between municipal offense volumes should not be made without first considering the crime contributing factors present in each of the municipalities.

POLICE EMPLOYEE DATA

The Uniform Crime Reporting Program of New Jersey incorporates the collection of pertinent data relating to the police of the state. Information as to police employee strengths, rates and distribution are shown by state, region and county. Data is presented in this manner so that it may be more easily related to the existing political subdivisions of New Jersey.

Individual listings of municipal police departments for the organized police departments of the state are shown in Table 63. Although the Uniform Crime Reporting Law did not become effective until January 1, 1967, the municipal police departments of the state voluntarily submitted complete data for the year 1966. References to that period in this section are based on those submissions. Tables containing data with respect to law enforcement officers killed and assaulted in the line of duty are also shown to supplement related narrative.

POLICE EMPLOYEE TRENDS

In 1969 the number of municipal police employees in New Jersey (including civilian personnel) increased to 14,807 from the 14,106 employees recorded for 1968. The numerical increase of 701 police employees in the state represents a five percent volume rise over 1968 counts and was distributed, in varying degrees, among all the geographic crime reporting regions. The predominantly rural Northwest Region reflected the largest gain, over 11 percent, and the densely populated Northeast Region, the smallest, less than four percent.

By county, the comparison of 1969 police employee volumes with those for 1968 reflect an even broader range of variance. The relatively small volume of municipal police employees in Sussex County was increased by 17 percent while volumes for the metropolitan county of Hudson decreased by one tenth of one percent.

POLICE EMPLOYEE RATES

In 1969, the average number of police employees (including civilian personnel) for every 1,000 inhabitants of the state remained at 2.0, unchanged from the 1968 rate. In the three year period from 1967 this rate has shown only negligible growth.

When compared to the 1.9 per 1,000 rate for 1967 a less than significant five percent rate increase is noted, an increase certainly not corresponding to the growth of crime and demands for police service throughout the state. This almost static growth in police strength limits law enforcement's response to increases in requests for police service, both criminal and noncriminal.

As in 1968, regional rate increases in the number of municipal police employees per 1,000 were minimal. The 1.5 per 1,000 rate for the Southwest Region, up from the 1.4 per 1,000 rate of 1968, represented the highest

percentage of rate increase, seven percent. This was followed by a 1.9 per 1,000 rate for the Southeast Region, up from the 1968 rate of 1.8 per 1,000, an increase of less than six percent. The populous Northeast Region reflected a less than five percent rate of increase over 1968 in the 2.3 per 1,000 rate for 1969 and the predominantly rural Northwest Region rate of 0.6 per 1,000 was the same as that recorded in 1968. (Chart 20).

CIVILIAN EMPLOYEES

In 1969, civilian police employees represented 8.2 percent of the 14,807 municipal police employees in the state. Although this rate of distribution is identical to that of 1968, it does represent a notable increase over the 1966 ratio of 7.5 percent. Within regions the ratio of civilian employees varied from 12.6 percent in the Southwest Region down to 7.3 percent in the Northeast Region.

The demands and responsibilities placed before the individual police department, in many cases, governs the amount of civilian employees that can be utilized. As a result, there are wide variations in the number of civilians employed within specific municipal police departments. In recent years, however, there has been a general upward trend in the use of civilian employees to perform non-police functions within the police departments. Police administrators have made this application in an attempt to overcome difficulties in recruiting qualified sworn personnel and to meet the increasing demands for police service.

POLICE OFFICERS

The number of full time municipal police officers for each 1,000 persons for the state rose to 1.9 in 1969, up from the 1.8 per 1,000 rate recorded in 1968. Percentage-wise, this rate change represents an increase of less than 6 percent, 1969 over 1968. The rate of growth for municipal police officers per 1,000 has been somewhat less than dramatic in recent years. In the four-year period from 1966 there has been a less than 12 percent increase in the police-population ratio.

Regionally, the number of full-time municipal police officers per 1,000 varied from 0.6 in the Northwest Region to 2.1 in the Northeast Region. Individual county rates ranged from 3.4 per 1,000 in Cape May County down to 0.4 per 1,000 in Hunterdon County. (Chart 20)

The rate of police officers per 1,000 shown here represent averages based on state, regional and county computations in this area and should not be construed as being recommended ratios. The determination of police strength for any given area or municipality should be the subject for serious consideration. Such consideration, however, should be based on the numerous factors which create the need for police services. It must be remembered,

AVERAGE NUMBER OF MUNICIPAL POLICE OFFICERS AND POLICE
EMPLOYEES PER 1,000 POPULATION BY REGION AND COUNTY
1969

**AVERAGE NUMBER OF MUNICIPAL POLICE OFFICERS AND POLICE
EMPLOYEES PER 1,000 POPULATION BY REGION AND COUNTY (CONT'D)
1969**

therefore, that just as the conditions which affect the amount and type of crime that occurs from place to place vary, so do the requirements for types of police services vary, based upon the conditions which exist in a given community. For example, many New Jersey resort communities have highly mobile or seasonal populations. Obviously, the need for police in these communities differs from other New Jersey communities with relatively stable or fixed populations. Additionally, smaller communities which border large urban areas may require a greater number of police to cope with additional traffic enforcement problems and crime "spillage" from the urban areas. The police requirements of small communities of this type would therefore differ from communities of like size geographically located in rural areas. Other factors, including size, density of population and character of the community should also be considered in any determination as to police employee strength.

Generally, it can be stated that the rate of full time municipal police officers for each 1,000 inhabitants of New Jersey has not shown sufficient growth since 1966. Although recorded growth continues to be at least commensurate with population increases since 1966, no appreciable gains have been made toward attaining a more desirable ratio.

COUNTY POLICE, SHERIFFS AND PROSECUTORS

The functions of county law enforcement agencies vary widely throughout the state. The operations of one sheriff's department may be limited exclusively to civil areas and the administration of the county jail, or they may be actively involved in criminal matters throughout the county. County police departments are varied in their activities as well, in that some are responsible for total enforcement throughout the county while others may have as their primary mission the policing of county parklands. The responsibilities of county prosecutor's offices include criminal investigation, trial preparation, court presentation and special probes. Because of the difference in the types of police service rendered, rates for county law enforcement agencies are not presented here.

The various county law enforcement agencies of the state employed a total of 2,564 police employees during the year 1969. This figure represents a nine percent increase over the 2,352 police employees reported for the year 1968. (Table 64).

Slightly over 20 percent of all persons employed by county law enforcement agencies during 1969 were civilians, down from the 22 percent rate of distribution recorded in 1968. The number of civilian personnel within county law enforcement agencies increased less than one percent in 1969 and sworn personnel volumes were up 11 percent. The variance of the ratio between civilian police employees of county enforcement agencies and those of municipal police departments provides an indication as to the difference in police services rendered by these agencies.

STATE POLICE

The New Jersey State Police is empowered to provide law enforcement in all its phases in all areas of the state. It also renders aids and services, upon request, to all the law enforcement agencies in the state. No rates are used due to the variations in the nature and extent of the police services performed by the State Police.

The Division of State Police employed a total of 1,853 persons during the year 1969. Of these, 22 percent were civilians, with the remainder sworn personnel. The total number of State Police employees increased less than 12 percent during the year. Included in this increase was a rise of over 18 percent in civilian personnel and a slightly less than 10 percent increase in sworn personnel.

State Police employees, both sworn and civilian, are dispersed throughout the state and render various police services without regard as to established jurisdictional lines of political subdivisions. This extent of activity negates the possibility of establishing State Police employee rates by either region or county.

POLICE KILLED AND ASSAULTED

The killing or assault of a police officer has an effect on society which reaches far beyond the overt act. Such occurrences constitute an immediate threat to the well-being of the community and a serious breach of the internal security of the country. Today, a young man who considers a career in law enforcement must also seriously consider the very strong possibility of being killed or assaulted by a member of the very same society he is sworn to protect. This deplorable situation should be a subject of serious public concern for, in truth, an attack on a police officer is an attack on society. The violence directed against law enforcement officers acting in the line of duty is clearly demonstrated by the following information:

POLICE KILLED

In 1969, four New Jersey officers lost their lives as a result of criminal action directed against them. In addition, one New Jersey correction officer was murdered while attempting to stop an "on view" criminal offense, a bank robbery occurring in his presence.

Weapon circumstances surrounding the slaying of the four police officers were identical in that a firearm was the instrument of death in all cases. A handgun was the weapon employed in one police murder and shotguns were used in the remaining three. Since 1966, all but one of the 10 New Jersey police officers who lost their lives in the line of duty have died as a result of gunshot wounds.

In all instances, those four officers slain in 1969 were providing criminal police services. One officer was killed while investigating a robbery in progress, two were murdered while investigating a "man-with-gun" complaint and the remaining officer was slain by an unknown assailant during the course of a neighborhood disturbance.

The police officers murdered in 1969 were from highly urbanized sections of the Southwest and Northeast Regions of the state.

ASSAULTS ON POLICE

Municipal police officers of the state were the victims of 1,887 cases of assault during the year 1969, an alarming increase of 37 percent in such occurrences over reports for 1968. Since 1967, assaults on police officers have increased by 41 percent presenting New Jersey law enforcement with a serious problem which has grown to major proportions. Today, in the performance of their lawful duties, police experience confrontations with emotionally aroused citizens protesting real or imagined grievances. This development has undeniably helped to account for some of the dramatic increase of assaults on police officers. The growing attitude of disrespect for all lawful authority, however, must be considered as the basic underlying factor which contributes to the selection of police as "targets" for these criminal acts.

While every police officer who is assaulted does not suffer personal injury, 45 percent of those assaulted during 1969 did, to one degree or another, sustain physical injury. Those assaults which do result in personal harm to the officer are frequently followed by loss of duty time.

The 1969 rate of police assaulted in the state was computed at 13.9 assaults for every 100 municipal police officers with more than 45 percent of these assaults resulting in personal injury to the officer. When compared to the 1968 rate of police assaults, 10.6 per 100, the risk of a New Jersey police officer becoming the victim of an assault has risen more than 31 percent. Assault and injury rates are shown by population group in Table 66 for the purpose of projecting the comparative assault experience of police in communities of varying populations.

WEAPONS USED

In 1969, personal weapons such as hands, fists, feet, etc., were used in more than 89 percent of all assaults on police officers. Other dangerous weapons, such as clubs, bricks, jack handles, etc., were used in more than six percent of all cases of police assault, while firearms and knives reflected a usage rate of about two percent each. (Chart 21).

TYPE OF ACTIVITY

The police services performed by enforcement agencies vary widely and are governed by the nature of the demands for this service, in both criminal and noncriminal activities. Analysis by the type of service being rendered, which resulted in an assault of a police officer, provides an indication as to the degree of jeopardy in which the officer may be placed when faced with a given situation.

As in prior years, the greatest frequency of assaults on police, 28 percent, were in those situations when the officer was attempting to effect an arrest. Almost as great were the number of those assaults which occurred as a result of police response to disturbance calls (family dispute, tavern disorderly, etc.) at 27 percent. It is interesting to note the almost identical risk of assault between the criminal police service of effecting an arrest and the noncriminal service police provide in responding to "disturbance" calls.

More than 13 percent of all police assaults occurred when a crime was detected to be in progress or while the officer was in pursuit of a suspect fleeing from the scene of a crime. The investigation of a suspicious person and/or circumstance, accounted for slightly over seven percent of all assaults and the transportation of prisoners, almost six percent. Those instances when police were called to cope with a berserk or deranged person contributed slightly over three percent to the total assault figure as did those situations of civil disorder. The remaining portion of assaults incurred by police were reported as having occurred during activities other than those discussed here. (Chart 22)

CLEARANCES

Although an assault upon a police officer is a high misdemeanor in New Jersey, police charged only 44 percent of the 1,866 persons arrested with this serious crime. The remaining 56 percent were charged under the less severe misdemeanor or non-indictable section of the law.
