THREE FACTOR AUTHENTICATION

HelixShield represents a new class of cybersecurity technologies that combine the power of DNA technology and digital technology.

Non-fungible Hardware Token

Synthetic DNA that encodes digital information is stored in a miniature token. The information is user-specific, unique, hidden, and immutable.

Token Reader

A small device that is placed next to the IT system it protects and reveals data in a non-fungible hardware token in seconds.

Smartphone App

Device-specific smartphone app can only be installed by authorized users. The app works with the token reader to authenticate tokens.
