

Appendix G. Municipal Fact Book

Introduction

This section provides a detailed explanation of the Municipal Fact Book. An example of a Fact Book page, with briefer explanations and data sources, follows this detailed section.

The Long-Term Economic Monitoring Program Annual Report has traditionally focused on aggregate trends, with the intent of comparing the economic performance between Pinelands and Non-Pinelands regions of Southern New Jersey. Maps and tables displaying data for each of the Pinelands municipalities were introduced in 2001 in order to gain a better understanding of how places within the Pinelands compare economically. The Municipal Fact Book was introduced in 2002 to take this concept further by presenting data by municipality, rather than by variable. This arrangement provides a summary of economic conditions in each municipality, while placing each municipality in a broader context by displaying average values for Southern New Jersey and municipal ranks for each variable. The 2003 Fact Book was an enhanced version with additional data, including maps and charts for each municipality. In the 2004 Report, the sheets were expanded to include county level data for each of the eight Southern New Jersey counties. This year's report retains the same format as last year's fact book. Each fact sheet contains four distinct parts: Introductory Information, Development Area Map, Property Value and Tax Indices, and Data Table.

Introductory Information

Data for fifty-two municipalities that are completely or partially located inside the state-designated Pinelands area is presented alphabetically by county.¹ The introductory information section is found below the name of the municipality. The percentage of population, housing units, and municipal area within the Pinelands boundary is provided, followed by the actual number of residents, units, and acres in parentheses. Population and housing units for areas inside and outside the Pinelands were calculated using census block data.

In some instances, additional population information is provided for municipalities where the population is affected by the presence of large institutions. The Census Bureau classifies all people not living in households as living in group quarters. There are two types of group quarters: institutional (for example, correctional facilities, nursing homes, and mental hospitals) and non-institutional (for example, college dormitories, military barracks, group homes, missions, and shelters).

Development Area Map

The Long-Term Economic Monitoring Program classifies all municipalities with at least 10% of their land in the Pinelands as "Pinelands" municipalities for comparison against "Non-Pinelands" municipalities. A limitation inherent in this classification is the inclusion of areas that are in Pinelands municipalities, but are actually outside the Pinelands boundary. In some instances, this system does not accurately represent phenomena occurring within the Pinelands, because growth may occur within a Pinelands municipality, but outside the Pinelands boundary. Obtaining sub-municipal data to differentiate between areas inside and outside the Pinelands boundary is a possible solution, but is often not feasible due to lack of data.

The municipal development map is a tool that can be used to gauge where development is and where it can occur, by consolidating various zoning areas inside and outside the Pinelands. Eight of the Pinelands Management Areas were condensed into three zones for the purpose of simpler visual representation: conservation areas where limited development can occur, intermediate areas that act as buffer zones where moderate / rural type growth is permitted, and development areas where sewers are allowed and growth is encouraged. State

¹ Dover Township, Ocean County was excluded because less than half a percent of Dover's area is in the Pinelands, and no residents live in this area.

Planning Areas were grouped with comparable Management Areas in terms of allowable density and use, and divided into the same three categories. The classification scheme is shown in the following table.

General Categories	Pinelands Management Areas	State Planning Areas
Conservation	Preservation Forest Agricultural Production Special Agricultural Production	Rural (PA4) Rural Enviro Sensitive (PA4B) Enviro Sensitive (PA5) Enviro Sens Barrier Islands (PA5B)
Intermediate	Rural Development	Fringe (PA3)
Development	Regional Growth Pinelands Town Pinelands Village	Metropolitan (PA1) Suburban (PA2) Designated Centers
Military / Federal	Military / Federal	Military / Federal

Based on these development maps and census block data, suppositions can be made regarding the location of certain phenomena. For example, Little Egg Harbor Township is classified as a Pinelands Municipality, with 23% of its area inside the Pinelands. The township issued 379 building permits in 2003, and ranked eighth in Southern New Jersey for the number of building permits issued. Is this growth occurring in the Pinelands? The census block data indicates that only 1% of the townships' residents and housing units are inside the Pinelands boundary. The development map reveals that the area inside the Pinelands is classified as a conservation area, while a large area outside the boundary is classified as a development area. Based on this information, it can be inferred that most development in Little Egg Harbor Township is occurring outside the Pinelands boundary.

It is important to note that these zones indicate where growth can occur, but do not necessarily indicate where development currently exists. An area may be zoned as regional growth in the development category, but could still be undeveloped (e.g. since it is not sewered or land is publicly owned). Furthermore, the classification of areas is subject to change. The State Planning Areas were selected to represent development areas outside the Pinelands. If these classifications change, the maps will change accordingly. Pinelands Management Areas change designation infrequently.

Finally, certain places and features such as villages, state forests, and military installations are labeled on each map to orient the map reader and to provide additional information regarding the development status of particular areas.

Property Value and Tax Indices

The population graph that had occupied this position in past fact books has been replaced this year. New population data that will be able to be broken down to the Census block level is unlikely to be available again until the 2010 Census. Instead of repeating the information included in the last two fact books, this section will highlight a new key variable(s) until the new population data becomes available.

Property values and property taxes have undergone a number of significant changes in the past 20 years in South Jersey. This graph traces the pattern of equalized property values against average residential property taxes for the period 1984 – 2004, using an index that sets the value for each variable equal to 1.00 for 1984. It is important to note that these values have been adjusted for inflation, so these graphs represent real increases or decreases. Taking the first fact sheet as an example of how to interpret this: with an average property tax bill index of 1.45, Buena has seen their real average property tax bill increase by 45% from 1984 to 2004. In the same period, the real equalized value of property in Buena has increased by almost 30%.

There is a wide variation in these graphs across municipalities. It should also be noted that the appreciation or depreciation in property values depicted in these graphs would not be realized by the owner until they sell their property. By contrast, real increases or decreases in

property tax bills are paid every year. These particular variables were chosen for comparison for just this reason. In a number of municipalities in South Jersey, residents are being faced with this paradox: while they are realizing huge gains on their capital assets (i.e. their home), at the same time they are becoming hard-pressed to afford the rise in property taxes that are due annually. This “property tax crunch” has been exacerbated by stagnant growth in real income since 1990. In the 1980’s, real incomes across South Jersey increased at about the same rate as property taxes did. Since the early 1990’s, property tax growth has accelerated and real incomes have been flat (even decreasing slightly in some areas). As a result, property taxes now represent a much higher portion of real incomes than they did in the 1980’s. This will not change until real income growth picks up again and/or real average property taxes stabilize or decline, and then consumers will begin to feel some relief.

Data Table

The data table begins with the percentages of municipal Pinelands area classified in each Pinelands Management Area. The boxes are color coded to correspond to the larger data categories in the development area map: conservation, intermediate, and development.

Most of the table is devoted to several municipal variables tracked in the annual report. Variables are from the most current year available, and are shown beside the South Jersey municipal average. Rankings are out of the 202 municipalities in Southern New Jersey. A rank of “1” indicates the highest value for a particular variable, while a rank of “202” typically indicates the lowest value. Municipalities with the same value are given the same rank. Variables tracked: population, population density, population change 1990-2000, land area, percentage of total municipal land that is state owned or non-profit, assessed acres of farmland, building permits, residential housing transactions, median sale price of homes, equalized value of property, effective tax rate, average residential property tax bill, per capita income, and unemployment rate. Thorough descriptions of these variables can be found in the appropriate sections in the annual report.

The number of business establishments in the municipality is indicated below the rankings section. The percentage of establishments in major NAICS groups is provided. This is different from the 2003 Fact Book, which used SIC code groupings and did not include public or unclassified establishments. The last line of information indicates the percentage of assessed value derived from each land use category.

General Caveats

- **Ranking Values.** It is important to note that a high rank does not necessarily have a positive connotation. A high rank for per capita income has a positive connotation, while a high rank for unemployment has a negative connotation. The implications of rankings for certain other variables are less clear. A low rank for building permits issued may be positive, negative or neutral, depending on viewpoint. The reader should understand that the rankings can be interpreted in different ways.
- **Data Volatility.** Municipalities with small populations tend to experience greater volatility in values and rankings from one year to the next.
- **Comparing Ranks to Previous Fact Books.** The change in rank for a particular municipality from its rank in the previous (2004) Fact Book should be interpreted with caution, as data volatility (mentioned above) can often be responsible for a municipality’s change in rank. Ranks in the 2003 Fact Book should not be compared to 2004 or 2005 due to methodological differences in how ranks were created in 2003.

Specific Caveats

- **Population:** Certain municipalities are impacted by the presence of large institutional facilities, such as military bases or prisons. Footnotes are provided for these select municipalities, indicating the non-institutional population of the municipality.

- Assessed Acres of Farmland: 75 municipalities have no assessed farmland acreage. These municipalities share a rank of 127, the lowest rank for this variable.
- Building Permits: While some municipalities with low values for building permits may be suffering from economic hardship or minimal population growth, municipalities with small populations or little developable land remaining also tend to have low values. Several municipalities issued less than ten permits, and thus share similar ranks. The lowest rank is 189, for a value of zero permits.
- Median Sale Price of Homes: This value is dependent on the number of residential housing transactions. Municipalities with few transactions (under 10) experience greater volatility in price from year to year. The municipal value and South Jersey value are medians, not averages.
- Percentage of Total Municipal Land that is State Owned or Non-Profit: 103 municipalities have no state-owned or non-profit conservation land. These municipalities share a rank of 100, for a percentage of zero.
- Business Establishments: The NJ Department of Labor assigns municipal codes to each establishment that files under the Covered Employment Database. The assignment of codes depends on the location information submitted by each business. If a business identifies an incorrect location, for example, a business submits that its location address is Medford Lakes, when the business is actually in Medford Township, this leads to sources of error. The DOL can also make errors when assigning municipal codes based on place names that businesses submit (i.e. Pomona, Cologne, and Oceanville are all places within Galloway, a single township). The number of business establishments for each municipality should be regarded as illustrative and not as exact figures. Unlike the older SIC code system, the new NAICS system does not have a one-digit level. Two-digit level NAICS codes were aggregated in order to display municipal establishments in a summary fashion.

County Level Fact Sheets

County level fact sheets were created for the second time this year for the eight counties of Southern New Jersey and are presented following the municipal sheets. The county level sheets follow the same format and design as the municipal level sheets. It is important to note that the South Jersey average that is presented in-between the county value and county rank is *not* the same as the South Jersey average shown in the municipal sheets. The South Jersey average shown in the county sheets is a *county* average (out of eight counties), while the South Jersey average in the municipal sheets is a *municipal* average (out of 202 municipalities). The county fact sheets were placed together at the end of the fact book (rather than interspersing them throughout the book preceding the municipalities) in order to avoid confusion and to allow for easier comparison between counties.

Property Value and Tax Indices (1984 = 1.00)

20-year indices that show the relative movement of two key municipal (or county) variables:

Equalized Property Value – total assessed value of all property adjusted for municipal biases in valuation (Core Variable MF 2)

Average Residential Property Tax Bill– calculated by dividing the average residential property value by 100 and multiplying by the general tax rate (Core Variable MF1)

Pinelands Management Areas: Percentage of municipal area inside the Pinelands boundary for each Management Area. NJ Pinelands Commission, GIS Office
