STATEMENT REGARDING THE METHOD AND USE OF THE  
1976, 1977, AND 1978  
NEW JERSEY COUNTY ESTIMATES BY AGE, RACE, AND SEX  
PREPARED BY THE U.S. CENSUS BUREAU

The Bureau of the Census has prepared for the National Cancer Institute experimental population estimates by age, race, and sex for 1976, 1977, and 1978 for all counties in the United States. The New Jersey estimates for all three years were prepared by a cohort component technique making separate estimates of births, deaths, and migration by age, race, and sex. The population in 1970 was carried forward by cohort, using estimates of births and deaths adjusted so as to agree with registered totals. Migration was first projected by five year age groups using gross migration rates and proportions for the period 1965-70. The migration data were then adjusted to bring the resulting population into agreement with independent total population estimates for each county developed by the New Jersey Department of Labor and Industry and the U.S. Census Bureau as part of a Federal-State Cooperative Program (FSCP). Additional information on methodology is available from the New Jersey Department of Labor and Industry.\*

These estimates were prepared for the purpose of analyzing indices of cancer mortality, and the data may prove useful for that purpose. However, although the results have been screened thoroughly, indicate reasonable patterns, and have been tested against special census and auxiliary data as available, an exhaustive evaluation cannot be made until the 1980 Census counts are available. As a result, the expected accuracy of the data cannot be established with any degree of precision. And, all of these numbers are subject to revision, particularly once data from the 1980 Census become available. The race detail especially is problematic, since no independent control by race for each county is available.

Additionally, the Census Bureau's project was to develop county estimates by age, race, and sex, and the method was not designed to produce State numbers. The data were not controlled at the State level and do not add up to other estimates by age being published by the Bureau at the State level. The State estimates in this report represent the sum of the individual counties and are presented here merely as a convenience.

The Bureau of the Census has not published the data, but is considering publication of a technical report focusing on methodology, showing most of the age detail. At present, the Bureau does not plan to publish the race estimates in this report, since they are clearly "experimental" in nature. The Bureau cautions users of these statistics that there are

---

\* The total figures in this report, in general, correspond to the total county population estimates published by this Department and the Federal-State Cooperative figures. However, they do not incorporate the latest revisions to total State population estimates published by this Department in May, 1980. See "Comparability."

undoubtedly counties where substantial errors are involved due to errors and inconsistencies in basic data used.

The New Jersey Department of Labor and Industry, with the consent of the Census Bureau, decided to publish these estimates as "experimental" after a careful study of the Bureau's methodology and a desire to have the State's data user community share in this Department's review of the estimates themselves. It is expected that county estimates by age, race, and sex will become a continuing part of the Census Bureau's program.

### Comparability

The data in this report are not directly comparable to those published in August, 1978 by this Department as "County Resident Population Estimates by Age, Race, and Sex 1970, 1975." In that report the 1975 total county population figures represented preliminary estimates and corresponded to those published in the U.S. Bureau of the Census' Current Population Report, Series P-25, No. 678. The 1975 total county population estimates published by this Department in March, 1978 are revised Federal-State Cooperative Program (FSCP) figures, and 1975 estimates by age, race, and sex reflecting these revisions and those made by this Department in May 1980 are not available at this time.

The 1976 data shown on the following pages incorporate some modifications to this Department's publication of October, 1979, "County Resident Population Estimates by Age, Race, and Sex, 1976 (July 1)." However, these data do not include the May, 1980 revisions to the Department's estimates series. Although 1976 data are presented here for 20 counties of the State, the appropriate 1976 estimates by age, race, and sex for Passaic County and the State of New Jersey are unavailable. Revisions based on a reevaluation of the estimate for the City of Paterson in Passaic County were not incorporated in the 1976 data. Because of this lack of full comparability to other data in this report, data for Passaic County have been omitted. The State numbers in this report represent the total of the county numbers, therefore, lacking data for Passaic County prohibits the determination of State data for 1976.

The total population estimates in this report for 1977 represent the revised FSCP estimates and those for 1978 represent the provisional FSCP estimates, as published in the U.S. Bureau of the Census' publication Current Population Report, Series P-26, No. 78-30, October 1979. The 1977 and 1978 estimates for Passaic County do reflect a reevaluation of the estimate for the City of Paterson. However, the data for these years do not incorporate revisions made by this Department in May 1980.

Revisions based on a reevaluation of the estimate for the City of Paterson in Passaic County were not incorporated in the 1976 data. Because of this lack of full comparability to other data in this report, 1976 data for Passaic County have been omitted. See "Comparability," p. 2.

Revisions based on a reevaluation of the estimate for the City of Paterson in Passaic County were not incorporated in the 1976 data. Because of this lack of full comparability to other data in this report, 1976 data for Passaic County have been omitted. The data for the State represent a sum of the county numbers; lacking data for Passaic County prohibits the determination of 1976 data for the State. See "Comparability," p. 2.
