Using the Application Milestone Codes located on the inside front cover, interested persons can determine the status of Coastal Area Facility Review Act (CAFRA) permits, Federal Consistency Activity permits, Freshwater Wetlands Individual and Statewide General permits, General Groundwater Petroleum Products Cleanup permits, Open Water Fill permits, Solid Waste Facility permits (SWF), Stream Encroachment (SE) permits, Tidal Wetlands permits, Waterfront Development permits and Treatment Works Approvals (TWA).

In addition, a calendar of Events of Interest and a Schedule of Public Hearings is provided. The public hearings listed do not, however, constitute an official notice. Environmental Impact Statements acted upon during the period are also shown. Additional information concerning the permit applications can be obtained by calling the project manager at the appropriate office listed on the inside back cover.

Public Hearings are held for the purpose of obtaining input and reaction to a proposed rule, regulation, or new program. Some hearings may be mandated by law. Generally their scope of impact is statewide or of broad general interest and open to the public.

Amboy Aggregates NJPDES Permit No. NJ0104400 Ground Water	Rosewell & Augusta St. South Amboy City Middlesex County	Mike Pigliacelli Bureau of Nonpoint Pollution Control (609) 633-7021	II-A	This is a renewal permit action for Amboy Aggregates. Amboy Aggregates is a facility that processes sand and gravel. Sand from mining operations is unloaded from barges through a pipeline in slurry form. The slurry is pumped to a surge pile, where sand is kept for processing. Water flows from the surge pile to spill box on the south side of the pile. The spill box directs water through a pipe to an unlined secondary settling pond at the southeast corner of the site, which in turn discharges by an overflow weir to the Raritan Bay as regulated by NJPDES-DSW permit NJ0064581. The secondary settling pond has a surface area of approximately one acre. A covered drainage trench, which runs along the south side of the property, also discharges to the secondary settling pond. Raw material from the surge pile is transported by wheel loader and conveyor belt to the processing plant. Here the aggregate is screened, classified and washed. A primary settling pond next to the plant receives water from the processing plant. This unlined pond, which covers approximately ¾ of an acre, discharges to a pipe leading to the secondary settling pond. Fine material from the classifying operation settles in the pond, and is periodically dredged to be sold as fill material.

The following minor modifications and administrative permit revocations were recently issued. These actions are listed for informational purposes only and are not open for public comment.
