Statistical Summaries

ANNUAL REPORT

April 1, 1942.

To His Excellency the Governor and the Legislature:

In accordance with the provisions of Chapter 39:4-6 of the Revised Statutes, there is submitted herewith a report of the activities of the Motor Vehicle Department for the year 1941.

A review of the year reveals the Department breaking all existing records in the matter of revenue, motor vehicle registrations and driver license issuances.

The State's traffic accident experience, while less favorable than in 1940, nevertheless won for New Jersey first place among the Eastern States in the National Interstate Traffic Safety Contest.

It was the sixth time in eight years that New Jersey has achieved prominent position in the national safety movement, as follows:

1934—First Place, Eastern Group of States.

1935—Honorable Mention.

1936—Honorable Mention.

1938—GRAND AWARD.

1939—Third Place, Eastern Group of States.

1941—First Place, Eastern Group of States.

Traffic deaths totaled 971, an increase of 6.5 per cent; all accidents 48,734, an increase of $14\frac{1}{2}$ per cent and persons injured 30,415, an increase of 9.7 per cent.

Winning the coveted safety award is credited to the effectiveness of the state-wide safety campaign in which governmental and private agencies, industry, radio and the press closely cooperated. The State record is all the more encouraging when it is considered that the National Safety Council attributes the national death increase of 16 per cent to the rising tempo of war activities. In no State has the tempo been higher or broader than in New Jersey.

From the standpoint of accident frequency related to miles of motor vehicle travel, New Jersey's accident improvement is further accentuated when considered over a span of the last fourteen years. Motor vehicle registrations in 1941 over 1928 were 54 per cent higher; there were 64 per cent more drivers licensed and gasoline consumption was 129 per cent greater. Despite these factors, deaths in New Jersey per 100 million miles of travel DECREASED 60.5 PER CENT.

In other words, there were 19.58 deaths per 100 million miles of travel back in 1928. In 1941, despite the greater exposure to accidents resulting from many more vehicles using the roadways and the greater use to which they were put as evidenced by the 129 per cent increase in gasoline consumption, deaths per 100 million miles of travel were down to 7.73.

The following table comparing deaths with gasoline consumption and registrations, shows how the accident situation has been improved. The column "Deaths per 100 million vehicle miles" is computed on the basis, recommended by the National Safety Council, of 13 miles per gallon per vehicle.

Year	Traffic Fatalities	Motor Vehicle Registrations	Drivers Licensed	Gasoline Consumption (Taxable Gallons)	Deaths Per 100 Million Veh. Miles
1928	1.075	765.730	881.552	422,346,478 gal.	19.58
1929	1.275	832,102	965,242	498,063,808 "	19.69
1930	1,269	852,703	1,024,166	546,685,108 "	17.85
1931	1,302	869,613	1,063,062	570,801,964 "	17.54
1932	1,180	860,769	1,054,588	554,319,929 "	16.37
1933	1,185	851,502	1,043,185	546,819,642 "	16.67
1934	1,227	875,978	1,065,990	567,838,694 ''	16.62
1935	1,188	900,164	1,097,072	631,601,466 "	14.47
1936	1,107	956,482	1,155,214	719,568,890 "	11.83
1937	1,278	1,008,909	1,224,557	795,554,193 ''	12.35
1938	865	1,024,096	1,259,016	810,952,855 "	8.21
1939	814	1,045,604	1,300,795	847,809,887 ''	7.38
1940	911	1,117,320	1,365,036	896,948,010 "	7.81
1941	971	1,196,209	• 1,447,751	965,206,065 "	7.73

There is gratification to be gained from the downward tendency in deaths but, laying aside the chill statistical approach, one must not lose sight of the human tragedy represented by the year's 971 deaths and the more than 30,000 personal injuries. Not only is it an appalling sacrifice to carelessness, hasty action and reckless disregard for the simple rights of fellow-men but it is likewise a challenge.

With the nation at war, the safety movement imposes additional demands on the home front to do more than ever before to conserve the lives and property of the people. There is need for greater organized coordinated activity among the state, county and municipal authorities from the standpoint of traffic enforcement, education and engineering.

An outstanding example of what can be accomplished by organized activity is the case of Cape May County. This was the only county in the State that reduced its traffic accidents during the year and the answer can be found in the fact that Cape May county and municipal officials responded to the program advanced by the Motor Vehicle Department, organized and promoted a real, workable, safety program. Its officials met regularly, analyzed the records to ascertain the danger spots and then undertook corrective measures. What Cape May has done through organization, every other county can do. It is, in fact, one of the best methods by which accidents can be reduced.

Year after year the pedestrian continues to be the State's main traffic problem. Statistics show that in spite of constant appeals from officials and safety organizations, pedestrians continue to violate rules and regulations designed for their protection with the result that they comprise approximately fifty per cent of the fatalities.

Here again, a smooth working county organization can bring about results by having police officers warn pedestrians when they violate the rules crossing against traffic signals, stepping from behind parked cars, crossing between intersections and other dangerous practices that cause disaster. After a reasonable period of police warnings, the program should call for pedestrian law enforcement.

The importance of selective enforcement is again stressed. While it may mean drastic changes in working hours, it is nevertheless sound judgment that police details should be assigned to the points and during the hours when most accidents occur. This data can be obtained only through scientific analysis of the accident records.

As heretofore stated, the accident situation constitutes a challenge to every man, woman and child to help reduce in 1942 the disgraceful waste and suffering. We can all share in this patriotic service by driving and walking, working and playing in such a way that the accident toll will be cut drastically.

LICENSES, REGISTRATIONS AND TOTAL REVENUE

During the registration year 1941, the number of motor vehicles registered, persons licensed to drive and gross income of the Motor Vehicle Department exceeded all previous records.

Car registrations totaled 1,196,209, an increase of 7.06 per cent over 1940. The number of licensed drivers 1,447,751, an increase of 6.05 per cent over 1940.

Department revenue reached \$24,742,106.46, including \$1,076,277.60 from the fourth year's operation of motor vehicle inspection. Gross revenue increased 8.05 per cent over the year 1940.

The following is a two-year comparison of registrations, licensed operators and gross income:

^{*}Fiscal year ending March 31st of following year.

ACCIDENT STATISTICS

The year 1941 is charged with the greatest total of traffic accidents ever recorded by the Department of Motor Vehicles since the Statistical Division was established.

The number of persons non-fatally injured in accidents likewise reached a new peak while fatalities, although showing a slight increase over 1940, were 331 below the record-breaking year 1931 when 1,302 deaths occurred in traffic.

Accidents reached the unprecedented figure of 48,734 which was 6,196 more than in 1940, an increase of 14½ per cent.

The number of persons non-fatally injured was 30,415, or 2,697 above the 1940 total. This increase was 9.7 per cent.

Traffic fatalities totaled 971 which was 60 more than the previous year; an increase of $6\frac{1}{2}$ per cent.

The year's economic loss from accidents was \$27,000,000.

From the very beginning of the year things started unfavorably as regards fatalities. January ran up a total of 88 deaths, the third highest for the month in ten years. Only four months, April, June, October and November recorded lower tolls than in the same months of the previous year. April, with 49, was the lowest for that month in ten years while the highest monthly toll for the year was in December with 112 deaths.

During the course of the year an average of 2.6 persons were killed each day. There were, however, 47 "deathless days" and strangely enough more fell in the month of June than in any other month of the year. The 'deathless days' were as follows:

January 28.
February 3, 21, 27.
March 9, 12, 17, 19, 20, 26, 31.
April 1, 3, 7, 11, 15, 16, 17, 19, 23.
May 20, 21, 27.
June 2, 4, 5, 9, 11, 14, 18, 21, 23, 25, 29.
July 10, 29.
August 11, 13, 28.
September 14, 22.
October 7, 20, 21, 23.
November 11.
December 3.

In contrast was Sunday, August 24 when 12 persons were killed, eight of them in the Bergen County bus catastrophe. Wednesday, December 24, piled up a toll of 11 fatalities.

Among the year's holidays, New Year's Day was high with 11 killed. Easter ranked second with 7; Thanksgiving Day 6; Christmas Day 4 and Memorial Day, Independence Day and Labor Day 3 each.

Multiple death accidents killing two or more persons each were not unusual. There were 57 such accidents taking a toll of 137 lives. The worst accident in the State's history was the Bergen County bus collision in which eight lives were lost. Others were 2 four-death accidents, 13 three-death accidents and 41 two-death accidents.

There was an average of 133 accidents daily as against 116 daily during the previous year.

The average number of persons injured daily was 83 as compared with 76 the year before.

There was one death for every 31 persons injured. In the year 1940 there were 30 injured for every person killed.

URBAN-RURAL

Seven in every ten accidents occurred in urban districts (over 10,000 population) but while only 30 per cent of the accidents took place in municipalities under 10,000 population, these smaller municipalities accounted for 56 per cent of the fatalities.

	ACC	IDENT	s .		
		19	941 .	19	940
Urban Rural		$33,991 \\ 14,743$	(70%) (30%)	30,113 $12,425$	$(71\%) \\ (29\%)$
	•	48,734		42,538	
	FAT	ALITIE	S		
		. 19	941	19	940
Urban Rural		430 541	(44%) (56%)		(47%) (53%)
		971		911	

It can be seen from the foregoing that the entire increase in the State's traffic deaths during the year occurred not in the cities but in the municipalities under 10,000 population. Deaths in the smaller communities increased 13 per cent.

The same situation prevailed in regard to pedestrian fatalities. As expected, more pedestrians were killed in the cities and built-up areas than in the rural districts. The division was 58 per cent urban and 42 per cent rural. Yet, pedestrian deaths in the urban areas remained practically the same as in 1940 while in the communities under 10,000 population, pedestrian fatalities increased 19 per cent. Rural pedestrian deaths totaled 197 as against 165 in 1940 while in urban areas pedestrian deaths numbered 275 compared with 271 in the previous year.

PEDESTRIAN F	ATALITIES	
•	1941	1940
		271 (62%) 165 (38%)

72 436

POPULATION DEATH RATE

There were 23.3 deaths per 100,000 population during 1941 as against 21.9 in the previous year. Among the counties, Hudson had the lowest death rate, 11.5 and the highest rate was in Salem with 61.5. Ocean County which had the highest rate in 1940 materially improved its rating by dropping from 61.3 to 37.1.

The rate by counties follows:

County	Population	1941	1940
Atlantic	124,066	41.9	25.
Bergen	409.646	21.9	18.8
Burlington	97.013	49.4	
Camden	255,727	28.1	28.3
Cape May	28,919	31.1	38.
Cumberland	73.184	40.9	31.5
Essex	837.340	13.	14.5
Gloucester	72,219	51.2	45.8
	652,040	11.5	9.9
Hudson	36,766	40.8	57.5
Hunterdon			22.8
Mercer	197,318	21.2	
Middlesex	217,077	36.8	36.8
Monmouth	161,238	38.4	31.
Morris	125,732	40.5	25.5
Ocean	37,706	37.1	61.3
Passaic	309,353	17.1	15.5
Salem	42,274	61.5	35.7
Somerset	74,390	33.6	35.1
Sussex	29,632	20.2	27.1
Union	328,344	17.7	17.7
Warren	50,181	31.8	50.
NEW JERSEY	4,160,165	23.3	21.9

SPEED GREATEST ACCIDENT CAUSE

Because there are frequently joint causes, it is difficult to state exactly how many accidents are attributable to high speeds alone.

Yet, taking the accident, rather than the driver, as a unit, speed violations were reported to be a factor in more than one-fourth, (28.7%), of all fatal accidents.

From the standpoint of all accidents, the next most common traffic violation that caused accidents was driving on the wrong side of the road. Following too closely to the vehicle ahead was the third violation in the order of importance and fourth was the failure to signal.

AGE OF DRIVERS

The young driver (under 25 years old) has the worst accident record of any age. Representing but 18 per cent of the total registration, this age group was involved in nearly one-third of total accidents.

Disregarding mileage and other factors but relying strictly on the accident figures, it appears that the group 25 to 44 had the most favorable record during the year. This group, although it was involved in 50 per cent of total accidents, represents 54 per cent of all drivers licensed.

The break-down according to age groups follows:

Age Group	Per Cent of Registration		Cent in cidents	Per Cent in Fatal Accidents				
		1941	1940	1941	1940			
Under 20 20 to 24 25 to 44 45 to 64 65 and over	6. 12. 54. 25.	10.23 20.90 50.16 17.21 1.5	8.44 20.57 52.17 17.42 1.4	10.16 21.77 48.66 17.51 1.9	9. 22. 49. 18. 2.			
	100.00	100.00	100.00.	100.00	100.00			

MANNER OF COLLISION

Sixty-eight per cent of the accidents involved collisions with other motor vehicles while the remaining 32 per cent concerned accident contact with pedestrians, fixed objects, railroad trains, horse drawn vehicles, as well as accidents of the non-collision type.

Analysis of the collision type (auto vs auto) records show that three in every ten of all accidents were of the right angle variety occurring at street intersections. Approximately one in every four accidents $(24\frac{1}{2}\%)$, occurred while both vehicles were heading in the same direction. Three-fifths of the same direction accidents concerned rear-end collisions and two-fifths were side-swipes, etc.

The remaining type of collision accident was the opposite direction accident, usually the type having the most serious results. Nine per cent of all accidents were head-on collisions and 4½ per cent concerned cars travelling in opposite directions but caused when one of the vehicles undertook a left turn.

Following is a record of the manner of collision of the year's accidents:

Type	Percentage of Accidents
Right angle	30.
Same direction—rear end	
Same direction—other	
Opposite direction—head on	9.

THE ALCOHOL INFLUENCE

Although New Jersey imposes the heaviest penalty in the country upon drunken drivers, alcohol was a factor in four per cent of the year's accidents. There were 2,038 accidents reported in which drivers were under the influence of strong drink as compared with 1,846 accidents in the previous year.

The year's accidents caused the death of 82 persons and bodily injury to 1,390 others. The estimated economic loss from these collisions was \$1,400,000.

One of the pathetic aspects of drunken driving is the suffering it causes to innocent people. Considering the 82 fatalities resulting from drunken driving during the year, 37 were drivers whose condition caused the accidents, while 45 were passengers, pedestrians and bicyclists. Among the 1,390 persons injured

in these accidents slightly more than one-third were drivers and the remainder pedestrians or occupants.

Following is a classification of those killed and injured in drunken driver accidents:

	Killed	Injured
Drivers	36	481
Passengers	30	865
Pedestrians	13	27
Bicyclists	2	3
Motorcycle drivers	Ţ	2
Motorcycle passengers	••	ა ი
Others	• •	9
	82	1390

Nearly eight out of every ten accidents featuring drunken driving occurred during hours of darkness and more of them happened on Sunday than on any other day of the week.

The leading traffic violation was driving "on wrong side of road", reported against 27 per cent of these drivers. Second in importance was "speeding," which violation was charged to 19 per cent of the offenders. "Following too closely" was third and "cutting in" fourth. Also listed among the violators were 157 hit and run drivers.

Three in every five of the drivers were of the age group 25 to 44. Also showing up in the record were 91 youths under 21 years of age and 18 elderly drivers over 65 years of age.

The majority of the drivers were males, although 61 females were reported in the list. Nine per cent of the drivers were non-residents and 94 per cent of the vehicles involved were of the passenger type.

Only 28 per cent of the drivers carried liability insurance on their vehicles.

INTOXICATED PEDESTRIANS

Drinking on the part of the driver is not the only place where alcohol figures in the accident picture. Alcohol crops up prominently in another angle namely, the pedestrian accident.

During the year 95 pedestrians were killed by motor vehicles when they staggered across the roadway or from behind parked cars and 365 were injured. In other words, one in every five pedestrians killed in traffic and one in every seventeen injured were under the influence of liquor and thus contributed almost wholly to their accidents.

During the past six years 511 pedestrians killed were reported as being under the influence of liquor:

THE PEDESTRIAN PROBLEM

Motor vehicle accidents killed 472 pedestrians and injured 6,219 during 1941—nearly one-half of all traffic deaths and one-fifth of all injuries. Despite these high casualty rates, pedestrian accidents comprised but 13 per cent of total accidents.

The 1941 pedestrian death total was 8 per cent greater than the 1940 figure. Non-pedestrian deaths, however, rose 5 per cent.

Nearly two-thirds of the pedestrians killed and injured were committing a violation or engaged in some obviously unsafe act. In one out of every three pedestrian accidents the driver was careless.

While a great many pedestrian accidents occurred while crossing between intersections, a total of 1,752 walkers were struck while crossing at unsignallized intersections and in the proper manner prescribed by law. The majority of these accidents were unquestionably the fault of the driver who usurped the pedestrian's right of way at these points of crossing. There can be no question of driver responsibility in the case of the 202 pedestrians who were struck while crossing with the traffic signal, while the 350 pedestrians struck crossing against the signal openly invited disaster.

The year's statistics show definitely that all too many pedestrians still lack the knowledge of safe walking in and across the streets and highways. A striking example of this is the fact that 205 pedestrians were struck while walking with backs to traffic, not to mention those crossing against signals, stepping from behind parked cars, etc.

CHILD PEDESTRIANS

A startling reversal occurred in the death record of children under 15 years of age. During the year 1940, New Jersey was one of the few States in the country that reduced deaths in this age group, but 1941 saw a 20 per cent increase over that record. The total number of fatalities was 59 as compared with 49 in the previous year.

Despite its 1941 increase the school child group still has the only long-time reduction, the 1941 record being 65 per cent below the 1932 rate when 171 youngsters were killed in traffic.

PERTINENT ACCIDENT DATA

The peak hour of all accidents was 5 to 6 P. M. and for fatal accidents 6 to 7 P. M.

The majority of accidents (56%) occurred in daylight but 64 per cent of fatal accidents happened during darkness.

More accidents occurred on Saturday than any other day of the week. Tuesday was the safest day.

Nine per cent of the accident drivers were women.

One-fourth of the accidents occurred on concrete pavement; 59 per cent on asphalt and the remainder on various other types of road surfaces.

Eight out of every ten accidents happened in clear weather.

Forty-two per cent of the accident drivers reported carrying liability insurance; 25 per cent stated they were not insured, while 33 per cent did not indicate their financial responsibility status.

STATE HIGHWAY ACCIDENTS

One in every four accidents and two out of every five deaths in the State took place on the State Highway System. The 12,422 accidents on state routes represent a 19 per cent increase over 1940 while the 399 deaths reported was a 15 per cent increase.

As usual the highest accident and death record occurred on Route 25 which had 3,125 accidents and 56 fatalities.

Route 4 again ranked second with 749 accidents and 24 deaths and Route 29 third with 721 accidents and 18 deaths.

HEARINGS—LICENSE REVOCATIONS

During the past 24 years, the Department revoked the operating privileges of 82,508 persons for various infractions of the Motor Vehicle and Traffic Laws. In 1941 revocations totaled 6,231, a 9.7 per cent increase over the previous year. The year's total, incidentally, was the highest in the Department's history.

YEARLY RECORD OF REVOCATIONS

Year	Revoc	ations	Year	Revoca	tions

DRUNKEN DRIVERS

A total of 1,454 were deprived of their operating privileges during the year for driving while under the influence of intoxicating beverages. Each year this violation leads the list of causes for revocation despite the severe penalty involved and the strenuous efforts of the authorities to discourage the practice.

Although there has been a gradual increase in convictions for driving while intoxicated during the past three years, the total is still considerably lower than those in the last years of the prohibition era.

New Jersey has the most severe penalty in the country for driving while intoxicated, beginning with a mandatory fine of \$200, revocation of driver's license for two years, plus three years of compliance with the Financial Responsibility Law for first offenders. For the second offense there is a mandatory jail sentence.

During 1941, 51.2 per cent of those convicted went to jail and 48.8 per cent received the mandatory fine and penalties. 92 of the offenders lost their licenses permanently.

Other pertinent data divulged by the records include the extreme youth of some of the violators. During the year there was one violator of the tender

age of 17 years; 4 were 18 years old and 9 nineteen years of age. The oldest violator was 76 years old.

The number of permanent revocations during the past ten years has been 936. For a second violation, defendants must serve a mandatory ninety day jail sentence and are forever barred from again driving a motor vehicle in New Jersey.

HABITUAL VIOLATORS

The campaign against persistent violators, commonly known as "repeaters", continued unabated.

Under the Department's policy, "repeaters" are detected by means of two files, one consisting of reports of traffic convictions forwarded by police magistrates and the other of accident reports. When an operator commits two violations of the motor vehicle and traffic laws or is involved in three accidents, or has a record of a combination of three accidents or arrests, he received a warning letter from the Department. Any future conviction or accident causes him to be summoned to Trenton to show cause why his license should not be revoked on the grounds that he is a habitual violator of the law or is accident prone.

Under this system, 3,648 cases were acted upon during the year of which 2,628 received warning letters, 385 appeared for hearings and were dismissed with final warning, and 468 were deprived of their driving privileges. In addition, 167 had their licenses revoked when they failed to contest the rule to show cause.

Instituted in 1933 on a small scale, this campaign against repeaters is today one of the important activities of the Department. From the year 1933 to date, 13,648 warning letters have been sent. In addition to that, as a result of 6,648 hearings, 3,646 licenses have been revoked. By the action taken through letters of warning and the hearings, the Department has been successful in correcting the habits of these "repeater" violators of the Motor Vehicle regulations. When an operating record of any driver was a serious one, a revocation of the driver's license was ordered.

An interesting discovery in this connection is that, as a general rule, drivers who have records of convictions also have records of being concerned in accidents.

FATAL ACCIDENTS

The Department continued to investigate all fatal traffic accidents and to hold hearings in all cases where the accident was found to have resulted from some violation of the law on the part of the driver or drivers. As a result, 273 drivers were given hearings, 186 of whom lost their driving licenses. Another 25 had their licenses revoked for failing to contest the Department's charges.

In cases that produce evidence of flagrant carelessness, the license revocation period is five years.

HEARINGS

During the year 1941, the Department cited for appearance a total of 1,864 persons whose cases were heard by Deputy Commissioner William J. Dearden. These represent the persistent violators of the law; the total of fatal accident cases disclosed by figures in previous paragraphs, and cases where requests were made for the restoration of licenses, which upon examination revealed bad records. It was necessary therefore, to cite these people for appearance to determine whether a restoration of the license would be in order. A large portion of the hearings involved violations of the testing law.

This phase of work has grown tremendously and will continue to expand. It is a clear indication of how closely the Department is supervising the drivers of today in the interest of public safety.

TRAFFIC ENGINEERING

New Jersey's location between and partly within two of the nation's greatest commercial, industrial and financial centers, together with its high rank in the production of war implements, further intensified its highway traffic problem during 1941. The Traffic Engineering Division therefore was confronted more and more with problems of traffic expedition and safety.

An indication of the increase in industrial activity in New Jersey is found in the official figures compiled by the State Department of Labor showing increases during the early part of the year in employment of from 20 per cent to more than 50 per cent in important industrial areas of the state.

In addition to this rapid expansion in industrial and commercial activity, there was an increase in street and highway traffic due to military activities, including the enlargement of military reservations as well as ordnance depots, all of which intensified the traffic problem not only within and adjacent to these industrial and military areas but increased the problem as a whole throughout the state.

The demand for labor, particularly in the specialized skills, resulted in the migration of workers from outlying sections of the state and in some instances from out of the state. Because of preference or convenience, many of these workers as well as those residing within shorter distances, drove private cars to their places of employment. This practice increased the traffic problem along already heavily traveled major roadways and many times produced a difficult problem in the vicinity of industrial areas and plants. In some areas adequate off-street parking facilities were not available for the storage of cars during working hours and of necessity vehicles parked all day along public roadways, thus further reducing roadway space for moving traffic and at times creating accident hazards.

Simultaneous starting and dismissal hours of industrial plants and business establishments within the same areas also created serious congestion not only on roadways adjacent to the plants but in some instances at considerable distances from the plants. During the rush hour in some industrial areas, traffic was slowed to the pace of a few miles per hour because of this condition.

The increase of slightly more than 7 per cent in motor vehicle registration and more than 7 per cent in gasoline consumption in 1941 as compared with 1940, was a further indication of the increase in New Jersey's traffic problem during the year.

Traffic volume studies made at specific locations in the state and compared with similar studies for comparable periods during 1940, indicate in some locations increases of traffic volume of approximately 50. per cent over the previous year.

The increase in accident experience, which somewhat parallels the increase in motor vehicle use reported upon elsewhere in this report, is also indicative of New Jersey's ever-increasing traffic problem.

Throughout the year the Traffic Engineering Division conducted special traffic studies at 169 locations, including studies at 52 rural high-accident locations. After a thorough investigation of each of these locations, recommendations for correction of the difficulties were forwarded to the proper authorities.

During the year the Division reviewed and passed upon 93 ordinances submitted by cities, townships and boroughs in addition to 14 resolutions, all of which pertained to the regulation and control of local traffic.

Applications requesting approval for the installation and operation of traffic control signals at 104 locations were specially investigated. Following thorough investigations to determine the reasonableness and necessity for traffic control signals at these locations, 82 approvals were granted and the installation of traffic control signals at the remaining 22 locations were disapproved.

Approval was granted for the erection of "Stop Street" signs along roadways or sections thereof of 21 municipalities within the state during the year.

Special traffic engineering studies were made, including a survey of accident experience on divided roadways along the state highway system having center islands of varying widths. This study when completed will enable a determination of the degree of effectiveness from the standpoint of accident reduction on divided highways having center islands of from two to twenty-five feet in width.

At the request of local officials, special parking studies were made along sections of important business roadways of three municipalities in the state, resulting in presentation of recommendations for proper and adequate parking restrictions to relieve congestion and improve the expedition of traffic and safety.

LOOKING AHEAD

During the remainder of the emergency, on account of the stringency of the tire situation, the freezing of motor vehicle production and the contemplated rationing of gasoline, the problem of street and highway traffic congestion will progressively be lessened and ultimately there will exist a serious transportation problem rather than a traffic problem; that is, one of making available a sufficient number of vehicles—private automobiles as well as mass transportation facilities—to transport people from their homes to their places of employment rather than one of too many vehicles making simultaneous use of inadequate roadways.

To substantiate this opinion, there is herein partially quoted a statement made on February 17, 1942 by Joseph B. Eastman, Director of the Office of Defense Transportation:

"Street car and bus lines and other local transportation services will be called upon this year to carry the heaviest loads in history, and many cities face acute transportation shortages.

To prevent interference with war production, local communities must take immediate action to assure that equipment and manpower in the transit industry are used at maximum efficiency. The total volume of local passenger traffic on public carriers in 1942 is likely to increase at least 20 per cent over 1941 as a result of increased employment, construction of new industrial plants in outlying areas, stoppage of private automobile production, restriction of civilian purchases of tires, and other factors.

Increases in passenger traffic ranging from 20 to 100 per cent over 1941 totals are anticipated in some important war-industry centers and in many cities of less than 100,000 population, where a relatively higher proportion of persons than in large cities normally travels to and from work in private automobiles."

To obtain expeditious and efficient use of transportation facilities, including private automobiles as well as mass transportation vehicles, it is important that first, wherever necessary, improved traffic regulations making possible more expeditious movement of traffic be inaugurated; second, that a uniform system of the staggering hours of business establishments and industrial plants and schools be adopted and, third, that a more efficient use of automobiles be established through neighborhood pooling of private cars used for transportation to and from work.

More specifically, traffic control measures and traffic engineering principles which will result in improved regulation and control of traffic are:

Traffic Bottlenecks

Frequently congestion occurs at heavily traveled grade intersections due to inadequate facilities and because of obsolete or antiquated traffic control measures. Because of the probable curtailment in use of private motor vehicles, the number of such problems will undoubtedly decrease. However, some may still remain. Ofttimes, at such points, traffic may be expedited through the application of improved and up-to-date control measures such as re-timing traffic control signals, eliminating conflicting turning movements, prohibiting traffic from entering the intersection from minor roadways at multiple-throat intersections and the establishment of by-pass routes. Each problem must be treated individually and a specific solution determined after factual studies.

One-Way Streets

The adoption of one-way streets in congested areas where existing roadway facilities are inadequate and where the street pattern is such that one-way roadways may readily be established, will prove helpful in expediting traffic. One-way streets not only increase street space for moving traffic in specific directions but reduce vehicular conflicts. One-way streets may be established permanently or temporarily. For example, a one-way regulation for the inbound direction during the heavily traveled morning rush period and the outbound direction during the evening rush period, with two-way traffic permitted at all other times.

Parking Restrictions

The adoption and enforcement of proper and adequate parking restrictions, including time limit and prohibited parking along heavily traveled congested roadways in built-up areas, will make available additional street space for vehicular traffic. On two-way roadways used to capacity in one direction in the morning and the other direction in the evening rush periods, but not to the same extent during mid-day, it is many times advantageous to prohibit parking along the curb of the inbound side in the morning and the outbound side in the evening.

The stopping and parking of a motor vehicle is an integral part of motor vehicle transportation and without such a privilege, motor vehicles would be of little value to most of the population. However, the courts have ruled that the primary purpose of streets is for passage and travel and when the parking privilege becomes so extensive that it interferes with reasonable and free passage, then it is necessary to curtail and in extreme cases even abolish the privilege of parking motor vehicles upon the public highways. Many roadways or portions of roadways in congested business districts of some communities in New Jersey have reached the place where permissible parking upon the public streets interferes with free passage of vehicular traffic. It is imperative, therefore, that convenient, off-street parking facilities in these areas be provided.

Staggering of Hours

Staggering business, school and working hours is one of the most productive means of not only reducing serious traffic congestion at and adjacent to business districts and industrial areas but also is a means of providing a more efficient use of mass transportation facilities.

An indication of this latter fact may be observed in determining the number of hours in scheduled service of all mass transportation vehicles operated by one of the larger transport companies of the State. For example, 5 per cent of all vehicles within a 24-hour day are in service for one hour or less; 12.9 per cent two hours or less; 21.8 per cent three hours or less; 30.4 per cent four hours or less, and so on. Slightly less than 50 per cent of all the vehicles in service within a 24-hour day are operated eight hours or less.

It is apparent, therefore, that a plan for adequate staggering of hours within the same plant, between plants within an industrial area, between business establishments within the entire central business district, including schools, offices, retail stores and theatres will not only relieve overcrowding the streets and highways as well as mass transportation vehicles, through reducing the volume of peak-hour flows of traffic and spreading the present comparatively short rush-hour periods over a longer period of time, but also will aid in speeding up traffic flow; will permit street cars and buses to maintain a more uniform schedule of operation; will provide economy in transit equipment and personnel now urgently needed for other purposes and will provide more comfortable and safe conditions for all street users.

Conservation of Private Car Equipment

As the scarcity of tires for civilian use becomes more and more apparent, it is extremely important that the public generally, and particularly motor vehicle owners who are so situated that no other form of transportation to and from their places of employment is available, must conserve to the utmost the vehicle and especially the tires now in their possession.

It is necessary, therefore, that private car users not only stop entirely all unnecessary use of their motor vehicles but adopt neighborhood methods of doubling up to and from work to the extent that all seats are occupied. For example, workers who heretofore individually drove their cars from the same neighborhood to the same plant or industrial or business area, must now mutually agree to travel together to and from work. Such a plan of pooling cars would spread the life of the tires over a considerably longer period of time providing, of course, that all driving except that to and from work is stopped.

VEHICLE INSPECTIONS

In the fourth year of the inspection program, the twenty-eight inspection stations of the Testing Division operated every business day in 1941 with an average daily handling of about 12,000 vehicles.

As usual there were two designated inspection periods which of necessity were related to the registration year rather than to the calendar year. The first period was from March 1 to August 31. The second period commenced on September 1, 1941 and will terminate on February 28, 1942.

It had been planned to seek an expansion of inspection facilities and personnel because of the over 17% increase in registrations since inspections were inaugurated; the expansion being needed most in Bergen, Passaic, Hudson, Essex, Union and Camden counties. After our entry into the War on December 8 and in view of some doubt as to how availability of rubber and gasoline will affect the civilian use of motor vehicles, it was decided not to seek an appropriation for expansion at this time. However, it is a pretty safe prediction that more inspection facilities and personnel will be needed quickly after the termination of the War if not before. Incidentally, lack of facilities makes for long lines and undue waiting at the stations with resultant complaints from the motoring public. One type of complaint has to do with waiting and then there are those owners who receive warning notices because of delinquency and then come back with the excuse that they were to the station a number of times only to find what they believed to be an impossibly long line on each occasion.

To insure an air-tight program, the Department requires the surrender of the registration cards and license plates of those vehicles not presented for inspection. A registration voluntarily surrendered by an owner is received without prejudice and is returned promptly upon request when and if the owner is ready to present the vehicle for inspection. In cases of flagrant violations of the law, the registrations are revoked and the registration cards and license plates picked up. Altogether, 60,427 registrations were surrendered, or picked up, during the year. Of this total 6,635 were returned promptly upon request when the owners presented evidence of their intention to have their vehicles inspected and approved. A survey of the 53,792 registrations remaining on hand reveals that a surprisingly large percentage were issued for vehicles of an average age of over 10 years which apparently have outlived their usefulness or now do not warrant the cost of putting them in condition to pass inspection.

Appended is a table of inspection results for the two periods of the 1941 registration year, but the statistics for the second period are not complete or final because the period had not quite ended at the deadline of this report. It is interesting to note that the results are remarkably consistent with the findings of the previous three years. This continues to point to the conclusion that altogether too many owners will not maintain their vehicles in safe and lawful condition except under compulsion.

Leases on a number of the stations expired on December 31, 1941. New leases were negotiated by the Commissioner of Finance providing additional

office and locker room space at each of the stations in question at a lower over-all rental than heretofore.

The personnel turnover of the Division both in the stations and in the central office has been large because of employees going into the armed forces and war industries.

The New Jersey Vehicle Inspection Program has continued to have the unqualified approval of such authorities as National Safety Council, the Automotive Safety Foundation, the National Conservation Bureau, the American Association of Motor Vehicle Administrators and the automotive industry.

INSPECTOR FORCE

The Inspector Force has an authorized strength of one hundred and ten, including the Chief Inspector and eight Deputy Chief Inspectors. It has been a uniformed organization since January 1, 1937 which changeover has been of material benefit, serving not only as a means of better identification, but in other ways increasing the efficiency of the men.

The conduct of the driver's license examinations is one of the important duties of the Inspector Force. These examinations are carried on at thirty-four points strategically located throughout the State.

During 1941, applicants were examined under the standard examination system developed by the American Association of Motor Vehicle administrators. This examination at present consists of an extended road test, an eye test, and a written and oral examination.

There is, of course, room for improvement in the driver examination, particularly in the eye test, but any changes would involve the need of additional Inspectors and certain special apparatus, and for these reasons must be postponed until conditions are more favorable.

The Manual prepared for the use of applicants for drivers' licenses has again been brought up to date. This pamphlet has proved of great value to the prospective drivers.

In addition to the regular drivers' examinations, the Force is responsible for the examination of applicants for special "For Hire" drivers' licenses. These licenses are issued to drivers of vehicles used for the transportation of passengers for hire. The holder of a special "For Hire" license is required to undergo a complete physical examination each year. This system of annual re-examination has brought to light information which points most conclusively to the need for periodic re-examination of all drivers.

Since January 1, 1941, the Department, as a matter of policy, has re-examined all drivers sixty-five years of age and over, who have been involved in accidents. This experiment has added considerably to the evidence supporting the need for the periodic re-examination of all drivers. The results follow:

Total number examined	390
Drivers' licenses revoked	96
Drivers' licenses endorsed, "Conditional"	
No action taken	158

The twenty-four hour systematic patrol of important highways continued uninterrupted for the greater part of the year. It is unfortunate that shortage of personnel has made it impossible to extend this patrol system to other highways where such activity is badly needed.

Checking of drivers at strategic points was carried out wherever possible. If time and personnel permitted, an extension of this work would produce salutary results.

Supervision of truck loading shows a vast improvement over past years.

The transportation of agency reports during the license renewal season was again entrusted to the Inspector Force, bringing about, as in past years, a very considerable saving in money and time.

Two members of the Force are assigned to the Division of Safety Education and various other members have constituted the major part of the Speakers Bureau. This part of the Safety Education program was carried out as overtime work without added cost to the State.

One Inspector devoted all of his time to the activities of the Traffic Division, his work consisting mainly of traffic engineering surveys.

The Force cooperated closely with the Underwriters' representatives in the apprehension of car thieves. This work, in conjunction with the activities of the Bill of Sale Law Division, has resulted in the practical elimination of the professional car thief in New Jersey.

The Inspectors also did the field work connected with the operation of the Junk Yard Law. This work has disclosed the need for amendment of the present law, there being no seemingly valid reason why some junk yards should be licensed and others permitted to operate uncontrolled.

Investigation of all fatal accidents was made by the Inspector Force. These investigations, and the report and recommendations of the Inspector, form the basis of possible action by the Department. All personal injury accidents should be investigated in like manner. At present, this cannot be done because of budget and personnel limitations.

Members of the Force had occasion during the year to meet in conference with representatives of other States and the Federal Government, working out problems dealing with interstate cooperation.

The Force cooperated with other State agencies and with the Federal Government in dealing with espionage, sabotage, subversive activities, and the operation of the Selective Service and Alien Registration Laws.

The establishment in New Jersey of a number of large military posts has added considerably to the traffic problem. Conferences are being held with the proper military authorities in an attempt to reach a solution of some of the difficulties.

The outbreak of war on December 7 added much to the work of the Force. It was necessary to suspend the patrol system temporarily in order to provide guards for the civil airports scattered throughout the State. The fact that New Jersey is a coastal State, and distinctly within the area of possible attack, also because so much of the defense effort is concentrated here, has made it necessary to assign Inspectors to work which would not normally be carried out by an agency organized primarily for Traffic Law enforcement. Because the protection of such vital structures as bridges, etc., is of paramount importance, however, work of this type will be continued as long as the Governor considers it necessary.

The difficulty of securing additional officers during wartime, the loss of trained officers through the operation of the Selective Service Law and the demands of defense industries, makes it extremely important that the best possible use be made of the available manpower for traffic work.

Traffic enforcement during wartime therefore, should be extremely selective, and officers should be assigned to duty at places and during hours when accidents are most frequent and concentration should be on the violations most conducive to accidents.

Because of the shortage of tires, motor vehicles and repair parts, thought is being given to the substitution of mechanical speed check devices for some of the motor vehicle patrol now carried on.

Reductions in Inspector Force due to: Deaths—1 (O'Neill, J. L.—10-1-41); Resigned—1 (Murray—3-12-41); Granted a year leave of absence—1 (Sherwood—5-11-41).

SAFETY EDUCATION

The activities of the Division of Safety Education were directed:

- 1. To acquaint the motoring and walking public with their responsibility in traffic and for the development of habits, attitudes and skills that will enable highway users to avoid accidents.
- 2. To cooperate with State, County and Municipal officials in all efforts for the promotion of street and highway safety in accordance with a uniform and coordinated plan.

I. Elementary and Junior High School Activities.

- 1. Speakers for assemblies, classrooms and school safety organization meetings.
- 2. Motion pictures, sound and silent.
- 3. Exhibits.
- 4. Posters and illustrations for bulletin board and other school and community safety projects.
- 5. Literature for teachers and students.
- 6. Conferences with police, municipal and school officials pertaining to child safety during school time and for leisure hours.
- 7. Distribution of 208,885 "Bike Quiz", to all County Superintendents.

Immediate action was taken to curtail the rise in child pedestrian fatalities by (a) radio messages, (b) news releases carried in all 425 New Jersey newspapers, (c) a direct appeal by letter to all Mayors and Chairmen of Township Committees for the issuance of a proclamation urging drivers to use the greatest caution for the preservation of the nation's greatest asset—our children.

II. High School.

Driver Education in the high schools, which has the endorsement of educators, is now rendering a definite contribution to National Defense. In cooperation with the New Jersey Department of Public Instruction this Division has attempted to broaden the scope of this training throughout the State and has given every possible technical assistance to the school administrators in setting up and improving these courses so they conform as closely as possible to the requirements of the New Jersey Manual, "Highway Safety; A Course of Study for High Schools". The following tabulation is an indication of the extent of the Division's activity in this work:

		Attendance
Number of high school examinations	152	15,457
Number of classroom lectures	45	4,169
Number of Senior-Junior high school programs	190	73,967
Number of Vocational Schools	6-	2,250
Number of tests used with motion pictures		30,129

An indication of how the younger people are responding to this course was evidenced in a 66 per cent increase in State Safe Driving Certificates issued to

high school students in 1941. The progress made was most gratifying especially in its relation to qualifications demanded of the nation's youth for military and defense purposes.

The School of Education of Rutger's University offered two Credit Courses in Safety Education for teachers. These have been developed as the result of the interest and need expressed by school administrators and teachers in the medium of education. A course for elementary school teachers was included for the year.

Number of Announcements mailed to Superintendents Number of Announcements mailed to secondary school	5,000	
teachers and nurses	11,729 250	
Total	16,979	

New Jersey newspapers gave very helpful cooperation to the high school driver education program by publishing editorial and news articles stressing the importance of this instruction.

III. Adult Education in safe street and highway use constitutes the major part of the activity of this Division. The adopted program reaches out to every municipality in the State as follows:

A. Organized State-wide activities.

1. For the sixth consecutive year a direct safety message in the form of a letter was sent to the bishops and clergy of the various churches throughout the State. These letters, containing an appeal for cooperation from the people in the promotion of traffic safety, were read from the pulpit in churches of the following denominations:

b. c. d. e.	Presbyterian Roman Catholic Methodist Baptist. Episcopalian Hebrew congregations	420 224 206 115
	O .	1,490

2. A letter was sent to all Mayors asking cooperation with the Department's safety program to the end that the 1941 accident record would show a reduction. During the summer vacation this procedure was repeated but the letter urged Mayors and Chairmen of Township Committees to issue a proclamation urging drivers to use the greatest caution during the vacation period for the safety of children and to encourage adult pedestrians to set a good example in their conduct on streets and highways to the youngsters.

Date	•	No. of Letters
		565
July 22-25, 1941		565

3. The lack of guidance in safety during the summer months, when children are away from the influence of the school, was compensated for by cooperating with the 54 active recreational centers in the larger cities.

- 4. The regular periodic spot announcements were broadcast through the 12 radio stations in New Jersey carrying safe walking, good driving and child safety messages. In addition there was a marked increase in 15-minute programs by employees of the Department. The best medium for appeal to child safety was realized in an interview on the radio featuring the outstanding baseball player, Joe DiMaggio, whose subject was "Playing Safe".
- 5. 339 billboards carried a safety message on 24-sheet poster panels to the motoring and walking public at vantage points throughout the State.
- 6. The vast population of service men within the State's boundaries, stationed at all permanent units of the United States Army at Fort Dix, Fort Hancock, Fort Monmouth and Delaware Ordnance Depot, Pedrickstown, was responsible for the inclusion of safety activities for the military forces. A schedule of motion picture programs for all above-mentioned locations was conducted and attendance requested by military authorities at official theaters.
- 7. The 425 newspapers in the State cooperated in publishing releases, mats, etc.
- 8. Signs erected on State Highways where the accident record warranted their usefulness were checked and maintained.

B. Organized County Activities.

1. The New Jersey Traffic Safety Program, created to develop a uniform and coordinated plan of accident prevention procedure for the 21 counties, was intensified and given every possible individual and technical cooperation.

January	.Burlington, Cape May
March	.Cape May
April	Somerset
June	.Middlesex (2), Union, Somerset, Mon-
	mouth (2), Gloucester, Sussex (2), Cape
	May

October	Ocean, Warren (2), Essex (2)
November	Essex, Cape May
December	Gloucester, Essex
	. diodobbol, Ebboli

C. Public Speaking.

Speakers concentrated on Pedestrian Safety, unless specific topics were requested by groups. Requests from schools and Parent-Teacher Associations predominated. Others were Rotary, Kiwanis, political clubs, church groups, women's clubs, American Legions, Lions, Elks, Granges and others too numerous to mention.

D. Visual Education.

1. Motion pictures have proved most effective in the promotion of street and highway safety as the tabulation of the year's activities clearly indicates:

Month	1941	1940	1939
January	39	45	42
February	22	66	46
March	38	86	51
April	42	94	73

September	44	22	17
October	99	48	32
November December	87	29	38
December	79	19	26
	627	499	440

- 2. The new sound pedestrian motion picture titled "Steps to Safety" was extensively used and requested. Other films shown emphasized driving, bicycle, child pedestrian.
- 3. The number of Safety Exhibits with attendance presented during the year were:

Location	Date	Attendance
Asbury Park Press Window (Asbury Park) Hudson County Auto-Sports-Camera Exposition	January 28-February	Cannot be 4estimated
(Jersey City)	February 25-March 4	125,000

j.	"Statistical Summary Sheets"	
k.	"Bike Quiz"	208,885
1.	"New Jersey Traffic Safety Program. A Uniform Plan	
	of Accident Prevention Procedure for New Jersey's	
	County Traffic Safety Organizations"	1,000

6. Publications from Federal Departments, National organizations, other States and 78 monthly safety magazines were catalogued and indexed according to the adopted procedure for ready reference.

The end of the year found the nation at war. This called for additional efforts to prevent losses of civilian lives, health and property. Statistical data on the traffic accident increase in Great Britain since the start of hostilities in September, 1939 called for immediate measures to be taken to prevent a similar increase here. Public education will be an indispensable adjunct to all traffic safety effort during the war period which should include the following provisions:

Economy of operation and conservation of fuel, parts and accessories. Steps to prevent traffic congestion and delay at key points in our industrial areas.

Alternate routes adjacent to strategic highways, adequately publicized. Many old problems must be solved, such as pedestrian protection,

parking, etc.

Many new problems may arise and we must be prepared for such possibilities as lighting restrictions and new methods of night traffic control.

TRAFFIC LAW VIOLATIONS

Police magistrates reported to the Department a total of 111,542 arrests during the year for violations of the Traffic and Motor Vehicle Acts. This was an increase of 10,833 or 10 per cent over the year 1940.

In addition to the 111,542 arrests within the State there were 12,534 New Jersey drivers apprehended for violations while traveling in other States.

ARRESTS AND PENALTIES

	1940	1941
Total arrests	100,709	111,542
Fined or jailed	77.141	84,279
Suspended Sentence	19,431	22,781
Dismissed	4,137	4,482

MAJOR VIOLATIONS

•	1940	1941
Reckless driving	2,502	3,021
Speeding	44,358	44,394
Drunken driving	1.302	1,585
Hit and run		901
Manslaughter		85
Careless driving		19,396
Stop street	2,620	3,788
Passing signal	4,817	5,325
Parking	Not tabulated	8,629
Miscellaneous	27,643	24,418

The sum of \$262,114.37 was derived from fines imposed in cases where arrests were made by Motor Vehicle Inspectors and State Police. This was an increase of 12.7 per cent.

By means of the filing system used by the Department in its handling of the Magistrates' reports of convictions, a total of 2,628 repeaters were brought to attention. These were drivers with a minimum of two convictions which automatically made them subject to revocation proceedings.

TOTAL ARRESTS BY COUNTIES

FINANCIAL RESPONSIBILITY AND ACCIDENT REPORTING DIVISION

The New Jersey Financial Responsibility Law was amended effective July 28, 1941. The law formerly provided for the revocation of licenses of those failing to satisfy judgments in excess of \$100. The amendment calls for the revocation of licenses where a defendant has failed to satisfy a judgment in excess of \$25. within thirty days after the date the judgment becomes final. The law provides, however, for installment payments of judgments.

Defendants in this class are also required to prove evidence to the Motor Vehicle Department of financial responsibility for future accidents for a period of three years after the judgment becomes final. The law applies to judgments secured against New Jersey residents in any part of the United States or Canada.

The other important change pertains to motorists who have avoided compliance with the financial responsibility law by undergoing bankruptcy proceedings. Since July 28, a discharge in bankruptcy following a judgment against an owner or operator resulting from a motor vehicle accident, no longer relieves him of any requirements of the act.

Unsatisfied judgments totaling \$593,025.91 were reported to the department, and as a result of subjecting the defendants to the requirements of the law, proof of payment was subsequently filed in the amount of \$225,345.10. Had it not been for the enforcement of the Financial Responsibility Law, these judgments might have been uncollectible. In the cases where the judgments remained unsatisfied the driving and registration privileges of the defendants were revoked.

In addition to the foregoing, there were scores of cases in which the mere revocation was sufficient to force prompt settlement of claims before the cases were officially brought within the scope of the law.

General activities of the Financial Responsibility Division reveal that in a given year only a small percentage of drivers have accidents and are convicted of Traffic or Motor Vehicle law violations. It is this minority which is responsible for the accident record and, incidentally, the target of the Financial Responsibility Law.

This minority class may include new and different drivers each year, but when it is considered that the Financial Responsibility Law is enforced on a three-year period basis—that these three-year periods interlock and form a continuous chain, each year adding to and eliminating the reckless, irresponsible drivers who cause accidents—it is evident that a good cross-section of this group is brought within the scope of the law.

By forcing most of the drivers and owners in this minority class to prove evidence of their financial responsibility covering every vehicle that they will drive or have registered in the State of New Jersey, or by removing them from the highways, the Department is protecting the citizens and motoring public of the State from this group of motorists. Thus is provided a protection to persons injured in motor vehicle accidents by broadening their ability to collect damages.

Perhaps the outstanding feature of the Financial Responsibility Law is that it either removes from the highways the irresponsible motorists or else forces these motorists into a financially responsible position whereby they will be able to assume their obligations arising from their own negligence.

In order that the safety value of this law can be realized it is important that every driver be made familiar with its requirements and brought to the realization that persistent flaunting of the Traffic and Motor Vehicle Laws will, through this law, directly affect his pocketbook, his livelihood and his privilege of owning and operating a motor vehicle in New Jersey. It can be made one of the law's strongest weapons with which to combat accidents. Then and only then will drivers see the wisdom of driving carefully and thus avoid being placed in the class affected by the application of this law.

There is no authentic data as to the number of motor vehicles registered in New Jersey that are covered by insurance. The number of cars involved in accidents which were insured may be gained from the figures compiled as the result of the answers to the question on our accident report, asking whether or not the vehicles concerned in the accidents were insured.

The results show that of the 89,775 cars involved in accidents reported to this department during the year 1941, 42 per cent were insured, 26 per cent were not insured, while the information was unanswered in 32 per cent of the cases. The figures were as follows:

•	Total	Fatal	Pers. Inj.	Prop. Dmge.
	Cars	Acci.	Acci	Acci.
Car Insured	37,780	413	13,282	24,085
Car not insured	23,150	364	9,012	13,774
Insurance Status Unknown.	28,845	380	11,041	17,424
Total cars	89,775	1157	33,335	55,283

ACCIDENTS:

Title 39: Chapter 4, Section 130 of the Revised Statutes of New Jersey, makes it obligatory for the driver of any vehicle involved in an accident resulting in injuries or death to any person or damage to property to the apparent extent of twenty-five dollars or more, to forward a report of such accident to the Department of Motor Vehicles within forty-eight hours.

Of the accident reports received, 5,539 were originally reported in letter form. Numerous accidents are reported over the telephone or by persons who call personally at the office. Upon receipt of these reports a regular report form is sent to each party concerned in the accident, requesting that the report be filled in and returned to the office.

During the year, the department answered thousands of inquiries regarding accidents advising names and addresses, etc., of the applicants whose license numbers have been quoted, and explaining the procedure to be followed by law in order to make a complaint or to collect damages. Numerous inquiries over the telephone are answered daily, and persons are interviewed who desire information regarding accidents.

Total accident reports received . . . 69,183. Included in these totals are 1,940 accident reports which were received in letter form, the operators having

failed to comply with a report on the regular accident report form. In numerous cases drivers involved in accidents, report such accidents to the local police authorities, and are of the opinion that such a report is sufficient, and, therefore, do not report to this office. In such cases, many of the reports are received direct from the police departments and would be included in the total accidents reported by the Traffic Division.

Also included in these totals are 1,765 accident cases where the parties concerned have established to department satisfaction that the property damage as result of the accident was not \$25, and there was no evidence of personal injury. Therefore, these parties have not been required to file a report as the law does not call for such accidents to be reported—or the parties concerned have proved that a report is not required.

Photostat copies of all reports are forwarded to the Traffic Division where detailed statistics of accidents are compiled. Complete statistics on these accidents will be found in the statistical report of accidents.

MAGISTRATE REPORTS:

Magistrates' reports received during 1941 covering convictions of certain sections of the Motor Vehicle or Traffic Act which are set forth by the New Jersey Financial Responsibility Law, total, 4,756. These reports are classified as follows:

Title 39: Chapter 4, Section 96 Title 39: Chapter 4, Section 129 Title 39: Chapter 4, Section 50 Title 39: Chapter 4, Section 98 (License Revoked) Title 39: Chapter 4, Section 97 (License Revoked)	2,638 649 1,454 8 7
Evidence of financial responsibility requested as result of convictions	4,756
Total cases,—evidence of financial responsibility requested as result of convictions where sufficient time has not elapsed for a certificate to be filed	
or case completed. Pending cases	492

CANCELLATIONS:

Insurance companies are required to advise this office ten days in advance of the cancellation of any policy for which a certificate is filed.

Cancellation notices received and the parties notified	·
of the requirements of the law	3,237
Pending cancellation cases, where sufficient time has not	400
elapsed to complete the cases	120

EXPIRATIONS:

This law requires that evidence of financial responsibility shall remain on file for three consecutive years after the date of the last accident or conviction

which makes a party subject to the law. The department maintains a chronological file where the duplicate copies of all certificates received are filed according to the expiration date of the policy. This file is checked daily and the expired certificates removed; the cases checked, and the parties advised of the necessity of having a renewal certificate filed. During the year 1941, 7,433 certificates expired. These cases were checked and when necessary the party advised of the requirements of the law. This work has discounted considerably due to the expiration of the three-year period in many cases.

Certificates received during 1941 14,255

JUDGMENTS:

The law requires that the department shall revoke the licenses of anyone who fails to satisfy a judgment in excess of \$25. within thirty days after the date that the judgment becomes final. Upon receipt of a certification from a court showing an unsatisfied judgment which comes within the scope of the law, defendants are advised of the proposed suspension of all his licenses, unless he satisfies the requirements of the law within a reasonable length of time. The defendant must immediately satisfy the judgment in full or make satisfactory arrangements for the payment of the judgment in installments. He must also prove to this Department evidence of his financial responsibility for future accidents for a period of three years after the date he is made subject to the law. For failure to fully comply with these requirements, his licenses are revoked until he has complied with the law as explained heretofore.

EXCISE TAX

Transportation is as essential as production in the effort to ACHIEVE VICTORY. Fulfillment of the obligation to keep a fighting America on the move involves "all out" efforts on the part of all agencies of transportation. The role of highway transportation of passengers by the interstate bus lines is a highly important one.

The bus, as well as the automobile, is making available a supply of labor without which newly located and vastly expanded war industries could not operate. Though the shortage of rubber for tires promises future difficulties for the passenger automobile, American ingenuity and common sense will prove equal to the task of insuring that existing public motor transportation facilities render maximum service. In accordance with the provisions of Sections 48: 4-20 to 48: 4-34 inclusive of the Revised Statutes, the Commissioner of Motor Vehicles has collected from the interstate bus operators a half-cent per mile tax for the use of the highways. Following is a summary of the total mileage, mileage exempted from the tax, the taxable mileage and the revenue collected. The tax is payable monthly. For 1941, the total of \$104,461.53 represented an increase of \$3,405.33 over 1940.

MONTHLY RECORD OF EXCISE TAXES IMPOSED AND COLLECTED 1941

TOTAL	44,104,499	1,400,414	20,000,200	9104,401.99

^{*}These 48 certified copies were issued—No Fee, and were for Inspectors to be used as evidence to assist them in the prosecution of cases.

The operation of the photostat equipment comes under the jurisdiction of this division. Pictures were made of all applications for certified copies, and pictures of the records of the Bill of Sale Division for certified copies for which a fee is charged, and the proceeds included in the general returns of the department.

CHANGES IN TITLE 39, REVISED STATUTES

- CHAPTER 341—Provides for the issuance of Compendiums to the holders of learner's permits only.
- 39:3-41. At the time of the issuance of a learner's permit to operate a motor vehicle, the commissioner shall give to each applicant for the learner's permit a compendium of this Title.
- CHAPTER 342—Requires motor vehicles equipped with multiple-beam lighting to be furnished with beam indicator plainly visible to driver.
- 39:3-59. Every New Jersey registered motor vehicle hereafter equipped with multiple-beam road lighting equipment shall be equipped with a beam indicator, which shall be lighted whenever the uppermost distribution of light from the headlamps is in use, and shall not otherwise be lighted. Said indicator shall be so designed and located that when lighted it will be readily visible without glare to the driver of the vehicle so equipped.
- CHAPTER 343—Fixes penalties for violations of Chapter 3 where there is no specific penalty provided.

For a violation of a provision of Chapter 3 of Title 39 of the Revised Statutes for which no specific penalty is provided, the offender shall be liable to a penalty of not more than fifty dollars (\$50.00) or imprisonment for a term not exceeding fifteen days or both.

- CHAPTER 344—Provides penalties for operating after registration or reciprocity privilege has been revoked.
- 39:3-40. No person to whom an operator's license has been refused, or whose operator's license or reciprocity privilege has been suspended or revoked, shall personally operate a motor vehicle during the period of the refusal, suspension or revocation.

No person whose motor vehicle registration has been revoked shall operate or permit the operation of such motor vehicle during the period of such revocation. A person who violates this section shall be fined not less than one hundred dollars (\$100.00) nor more than five hundred dollars (\$500.00).

- CHAPTER 345—Fixes uniform standards for highway and traffic signs. Amends 39:4-141.
- CHAPTER 60—Requires reports to Commissioner of convictions for offense involving use of motor vehicle.
- 39:5-42. Every judge or magistrate shall make a report, in writing, to the Commissioner (1) of all cases heard before him for violation of Chapter 3, of this Title (R.S. 39:3-1 et seq.), or for any other violation in which a motor vehicle was used in any way, and (2) of the conviction of any person having committed a penal offense or crime in the commission of which a motor vehicle was used, within three days after the disposition of the case before him as a judge or magistrate, upon blanks provided by the Commissioner for that purpose.

The report shall state the nature of the violation, the full facts concerning the use of the motor vehicle in the commission of the penal offense or crime, the disposition of the case by the judge or magistrate and any recommendations which the judge or magistrate may deem of value to the Commissioner in determining whether action should be taken against the license of the driver or owner of the motor vehicle.

CHAPTER 31—Fixes \$1.00 annual license fee for farm implements operated as motor vehicles traversing public highways for not more than five miles. Supplements 39:3.

The Commissioner may register motor vehicles, not for hire, used exclusively as farm machinery or farm implements, to travel upon the public highways from one farm, or portion thereof, to another farm, or portion thereof, both owned or managed by the registered owner of the vehicle or vehicles; provided, that no such vehicle shall traverse more than five miles of highway in traveling from one farm or portion thereof, to another farm, or portion thereof; and no such vehicle shall be used to deliver or transport any farm products, goods, wares or merchandise, excepting from one farm or portion thereof, to another farm, or portion thereof, both owned or managed by the registered owner of the vehicle or vehicles, and no such vehicle shall be operated on the highway between sunset and sunrise; and no such vehicle, which is not equipped with rubber tires on all wheels, shall be operated at a speed exceeding four miles per hour, nor with wheels of a type that will damage or will be likely to damage the highway; and no such vehicle shall draw any other vehicle except that, with the permission of the Commissioner, it may draw not more than one vehicle used exclusively on the farm and in such case such drawn vehicle need not be registered.

The fee for such registration shall be one dollar (\$1.00) per annum, whether the registration is issued for a yearly period or only a portion thereof.

CHAPTER 178—Fixes minimum and maximum salary for motor vehicle inspectors, deputy chief inspectors and chief inspectors; prescribes uniform yearly increments.

Amends 39:2-6.

In accordance with the limits hereinafter prescribed the compensation of inspectors is hereby fixed at a minimum of eighteen hundred dollars (\$1,800.00) per annum and a maximum of twenty-nine hundred and forty dollars (\$2,940.00) per annum; of deputy chief inspectors, at a minimum of three thousand dollars (\$3,000.00) per annum and a maximum of thirty-six hundred dollars (\$3,600.00) per annum; of the chief inspector, at a minimum of thirty-nine hundred dollars (\$3,900.00) per annum and a maximum of forty-two hundred dollars (\$4,200.00) per annum. For each year of service after appointment, the minimum salary as inspector, deputy chief inspector and chief inspector shall be increased at the rate of one hundred and twenty dollars (\$120.00) until the maximum salary is reached.

CHAPTER 257—Permits operation of roadbuilding machinery between place of storage and location of construction with "in transit" license. These

registrations are issued from the office of the Commissioner. Amends 39:4-30.

- CHAPTER 260—Governs moving of roadbuilding machinery on trailers or semitrailers. Fee of \$150.00 required for this special registration and before crossing the tracks of any railroad at grade, twenty-four hours' notice shall be given to the officials of the railroad.

 Amends 39:4-26-27-128.
- CHAPTER 296—This amendment provides for the revocation of licenses where a defendant has failed to satisfy a judgment in excess of \$25.00 within thirty days after the date the judgment becomes final. The law provides, however, for installment payments of judgments. A certificate of insurance for a period of three years after the judgment becomes final is also required. This law applies to judgments procured against New Jersey residents in any part of the United States or Canada.

 Amends 39:6-1-5.

INFORMATION SERVICE

An important public service rendered by the Department of Motor Vehicles is the Information Bureau through which data concerning registered motor vehicles, licensed drivers, etc., is supplied twenty-four hours a day. This service ties in directly with the State and local police and has proved, through the years, of great value in connection with criminal and alien investigations.

An idea of the great volume of queries at the Information Bureau is seen in the fact that 613,006 requests for information were handled during the calendar year.

A breakdown showing the types of requests handled by the Bureau is as follows:

TVDES OF	REQUESTS	HANDLED	BV	INFORMATION	BUREAU

SERVICE OF PROCESS ON NON-RESIDENTS

The Department collected the sum of \$4,842.00 in carrying out the provisions of Chapter 7 of Title 39, providing for the service of process on non-residents in automobile accident litigation.

Following is a list of fees collected:

1941	
January	\$272.00
	168.00
February March	570.00
April	216.00
May	398.00
June	508.00
July	318.00
August	504.00
September	530.00
October	352.00
November	
December	418.00
TOTAL	\$4,842.00

BILLS OF SALE

New car sales during the year totaled 151,881 while the number of used car assignments which includes deals covering cars sold between dealers as well as the trade-in and the subsequent re-sale to the retail purchaser, was 763,310. These figures represent an increase of 7,662 in new car sales and an increase of 84,933 in assignments over the previous year.

Total revenue from bill of sale issuances and transactions was \$773,897.50 as compared with \$694,859.25 in 1941, an increase of 11 per cent.

During the year 317 new dealers' licenses were issued by the Division, making a total of 2,190 on the active dealers' list. At the same time the Division revoked 295 dealers' licenses for improper business operations and cessation of business activities.

The original intent of the Bill of Sale Law was to provide a uniform method of recording titles on automobiles and the elimination of stolen car sales. It has accomplished its purpose and at the same time is providing an excellent source of revenue at a minimum operating cost.

Following is an eleven-year record of new car sales and used car assignments:

Year	New Car Sales	Used Car Assignments
1931	5,668	29,458 (July to Dec.)
1932	58,628	324,730
1933	67,778	373,223
1934	75,995	400.068
1935	105,258	473,656
1936	131.829	571.499
1937	143,144	619,482
1938	83,854	503,406
1939	111.548	589,312
1940	144.219	678,377
1941	151,881	763,310

TYPES OF BILL OF SALE FORMS ISSUED

ORIGINAL BILLS OF SALE (BS-1) These forms are used by N. J. new car dealers only upon the sale of a new vehicle.	151,881 @ .50	\$75,940.50
ASSIGNMENTS (BS-2) These forms are used for the sale of a used car.	*763,310 @ .50	381,655,00
ABSTRACTS OF CONTRACT These forms are used in conjunction with forms BS-1 or BS-2 when vehicle is subject to a lien.	72,796 on BS-1	36,398.00
FORECLOSURE BILLS OF SALE	183,893 on BS-2	91,946.50
(BS-4) These forms are used in completing foreclosure transactions arising out of repossession of vehicles by virtue of conditional sales contracts, chattel representations of the proceedings.		
mortgages, garage lien proceedings, etc.	6,848 @ .50	3,424.00
PROOF OF OWNERSHIP CERTIFI- CATE (BS-5) These forms are used on vehicles		
purchased out of state, exchange of motors, correcting errors in the chain of title, etc. Duplicate titles.	94,578 @ 1.00 10,549 @ 1.00	94,578.00 10,549.00
DEALERS BILL OF SALE LICENSES R. S. 39:10-19 requires every person engaged in buying and selling auto- mobiles to be properly licensed.	317 @ 10.00	3,170.00
PENALTIES The law requires a penalty fee to be collected where bills of sale have not been filed within the required five day period.	7,036 @ 1.00	7,036.00
PHOTOSTATIC COPIES It is necessary to prepare photostatic copies of bill of sale records for court purposes for which a \$.50 fee is charged covering each print.		275.00
COLLECTIONS ON LIENS In accordance with R. S. 39:10-14 a fee is charged for the cancellation of recorded liens on record.	270,220 @ .25	67,555.00
INFORMATION ON LIENS In accordance with R. S. 39:10-14, a fee is charged for the issuance of statements regarding the status of liens as recorded in the files.	2,475 @ .25	618.75
SPECIAL COLLECTIONS These items represent collections on default of dealers bonds and other miscellaneous charges.		751.75
Total revenue from January 1, 1941 to December 31, 1941		\$773,897.50

^{*}The total figure on assignments is not to be construed as being the actual number of used cars sold in this State. This figure includes the deals covering cars sold between dealers as well as the trade-in and the subsequent resale to the new retail purchaser.

MULTILITH ROOM

The Department maintains its own bureau where applications, certificates, pamphlets and all forms used in the administration of the motor vehicle and traffic acts are printed, numbered, perforated, etc. During the year the Multilith Room handled 34,230,383 operations in the process of keeping the various divisions supplied with working material.

Following is a break-down of the activities and the divisions for which the work was performed:

						Total
			4	Items		Oper-
