OVERVIEW

The New Jersey Division of Highway Traffic Safety (DHTS) is responsible for the administration of the federally funded State and Community Highway Safety Program and coordination of highway safety activities. The State and Community Highway Safety Program originated under the Highway Safety Act of 1966, 23 U.S.C. 402.

DHTS is responsible for establishing goals to reduce motor vehicle crashes using performance measures based on assessments of the roadway environment. The New Jersey Highway Safety Plan (HSP) is required by federal law to serve as a framework for setting performance goals and measures for reducing traffic crashes, fatalities and injuries, and creating a safer and more efficient transportation system.

The Governor's Representative for Highway Safety is required to send the HSP to the National Highway Traffic Safety Administration (NHTSA) and the Federal Highway Administration (FHWA). NHTSA and FHWA approve the proposed activities and recommended expenditures eligible for federal funding.

MISSION STATEMENT

Pursuant to N.J.S.A. 27:5-F-18 et seq., DHTS is responsible for developing and implementing, on behalf of the Governor, the New Jersey Highway Safety Program. The mission of DHTS is the safe passage of all roadway users in New Jersey as we move towards zero fatalities. To achieve our mission, the DHTS promotes statewide traffic safety programs through education, engineering and enforcement activities. DHTS administers and coordinates funding for State and local projects.

EXECUTIVE SUMMARY

The annual plan is referred to as the Highway Safety Plan (HSP). The Federal Fiscal Year (FFY) 2020 HSP addresses the national priority program areas of NHTSA and FHWA. The following program areas will be addressed in FFY 2020: alcohol and other drug countermeasures, pedestrian and bicycle safety, occupant protection, police traffic services, younger and older drivers, community traffic safety programs, roadway safety, public information and paid media, traffic records, and motorcycle safety. The State and Community Highway Safety grant program, known as the Section 402 Program, is the primary source of funding for these initiatives. Federal law requires that 40 percent of these funds be used by or for the benefit of local government. Grants are also accepted from federally tax-exempt, nonprofit organizations that provide traffic safety services throughout the State. The Plan provides for a budget of 57 percent for projects that benefit local jurisdictions.

In addition to the Section 402 Program, several other funding sources in FFY 2020 will be used to continue the highway safety program. These include the Section 405(b) Occupant Protection grant, Section 405(c) Traffic Safety Improvements grant, Section 405(d) Impaired Driving grant, Section 405(e) Distracted Driving grant, Section 405(f) Motorcycle Safety grant, Section 405(g) Graduated Driver Licensing Laws grant and Section 405(h) Non-motorized Safety grant.

The FFY 2020 HSP includes a budget of nearly \$23 million that will be allocated as illustrated below:

FFY 2020 FEDERAL HIGHWAY SAFETY FUNDING		
SECTION 402	STATE AND COMMUNITY GRANT PROGRAM	\$8,983,000
SECTION 405(b)	OCCUPANT PROTECTION	\$1,400,000
SECTION 405(c)	TRAFFIC SAFETY INFORMATION SYSTEM IMPROVEMENTS	\$1,650,000
SECTION 405(d)	IMPAIRED DRIVING	\$4,500,000
SECTION 405(e)	DISTRACTED DRIVING	\$4,200,000
SECTION 405(f)	MOTORCYCLE SAFETY	\$ 200,000
SECTION 405(h)	NON-MOTORIZED SAFETY	\$1,700,000

The FFY 2020 HSP begins with a description of the planning cycle followed by the problem identification process, goal development and project selection. A statewide overview of fatalities and injuries is followed by a performance report describing the progress towards meeting performance targets from the previous fiscal year and in the upcoming HSP.

The Performance Plan includes the performance targets for each program area. This is followed by the identification of problems by program areas, countermeasure strategies, projects and funding and concludes with a description of the evidence-based traffic safety enforcement program.

A certification statement, signed by the Governor's Representative for Highway Safety, is found in the next part of the Plan and provides assurances that the State will comply with applicable laws and regulations and financial and programmatic requirements.

The last section of the Plan includes a detailed cost summary reflecting the State's proposed allocation of funds (including carry-forward funds) by program area.

DHTS manages and implements programs by region as illustrated on the chart. The regional supervisors and their staff are responsible for coordinating, monitoring and evaluating the activities and programs within these three regions.

NEW JERSEY DIVISION OF HIGHWAY TRAFFIC SAFETY REGIONS	
REGION I	ATLANTIC, BURLINGTON, CAMDEN, CAPE MAY, CUMBERLAND, GLOUCESTER AND SALEM
REGION II	HUNTERDON, MERCER, MIDDLESEX, MONMOUTH, OCEAN, SOMERSET AND UNION
REGION III	BERGEN, ESSEX, HUDSON, MORRIS, PASSAIC, SUSSEX AND WARREN

DHTS has a strong working relationship with federal, State and local agencies, as well as other transportation and safety planning organizations in the State. These agencies are active partners in assisting DHTS in promoting traffic safety throughout the year. They include, but are not limited to:

Division of Criminal Justice
Division of State Police
Division of Alcoholic Beverage Control
Department of Community Affairs
Center for Hispanic Policy and Development
Department of Transportation
Motor Vehicle Commission
Department of Health and Human Services
Office of Emergency Medical Services
Federal Highway Administration
National Highway Traffic Safety Administration
Metropolitan Planning Organizations
County and Municipal Traffic Engineer Association
Association of Chiefs of Police
Traffic Officers Association
AAA
New Jersey State Safety Council
Administrative Office of the Courts
MADD
Transportation Management Associations
Municipal Excess Liability Joint Insurance Fund
Partnership for a Drug-Free New Jersey
New Jersey Licensed Beverage Association
Rutgers University
NJ Institute of Technology
Kean University

FFY 2020 HIGHWAY SAFETY PLAN

Planning Cycle

- October**
1. Begin to close out projects.
 2. Reprogram carryover funds from the prior year into the current Highway Safety Plan.
 3. Grantees are reminded that final claims are due.
- November**
1. Receive program reports from DHTS staff and continue to receive final claims from grantees.
 2. Begin to prepare the Highway Safety Plan Annual Report.
 3. Utilize new monies and carryover funds to implement projects in current fiscal year.
- December**
1. Finalize close out and submit final voucher to the NHTSA.
 2. Carryover funds and reprogram into current Highway Safety Plan.
 3. Place notice of grant availability for next fiscal year into the New Jersey Register.
 4. Complete the Highway Safety Plan Annual Report and submit to the NHTSA.
- January**
1. Monitor current project performance.
 2. Make adjustment to the Highway Safety Plan as necessary.
 3. Receive applications from potential grantees.
- February**
1. Begin to review grant applications.
 2. Set up initial meeting with program staff to begin planning for the Highway Safety Plan.
 3. Monitor progress of current grantees.
- March**
1. Program staff completes the grant application review process.
 2. Second meeting is held to discuss Highway Safety Plan development.
 3. Monitor progress of current grantees.
- April**
1. Program staff meets with Director to finalize grant awards for the upcoming Fiscal Year.
 2. Highway Safety Plan continues to be developed.
 3. Monitor progress of current grantees.
- May**
1. The draft of the Highway Safety Plan is prepared and submitted to the Director for review.
 2. Monitor progress of current grantees.
- June**
1. A draft copy of the Highway Safety Plan is sent to the Office of the Attorney General for review and approval.
 2. The Highway Safety Plan is finalized and submitted to the NHTSA.
 3. Monitor progress of current grantees.
- July**
1. Notify representatives from selected grant applications and inform them of the intent to award a highway safety grant.
 2. Monitor progress of current grantees.
- August**
1. Grantees are contacted and reminded that no funds can be used for current grant activity after September 30.
 2. Monitor progress of current grantees.
- September**
1. Begin to prepare final reports for current year projects.

Problem Identification Process

DHTS uses two primary sources of crash data to identify and analyze traffic safety problem areas: the New Jersey Crash Records system maintained by the Department of Transportation (DOT), Bureau of Safety Programs, and the Fatality Analysis Reporting System (FARS), maintained by the Division of State Police. All reportable crashes in the State are submitted to DOT for entry into the statewide crash records system. The data contained in the New Jersey Crash Records System provides for the analysis of crashes within specific categories defined by person (i.e., age and gender), location (i.e. roadway type and geographic location) and vehicle characteristics (i.e. conditions), and the interactions of various components (i.e. time of day, day of week, driver actions, etc.). At both the State and local level, the DHTS Crash Analysis Tool is also used to analyze crash data. The Crash Analysis Tool is a support tool, maintained with the assistance of Rutgers University, which is used by county and local engineers, law enforcement agencies and other decision makers to help identify and assess the most cost-effective ways to improve safety on the State's roadways through a data driven approach.

The New Jersey Institute of Technology (NJIT) conducts the annual seat belt observational survey and provides usage rate data to DHTS. In addition, DHTS also requests information and data from other traffic safety groups. These include but are not limited to the following: Motor Vehicle Commission (licensing and motorcycle related data), Department of Transportation (crash data), and Administrative Office of the Courts (citation data).

Data sources are used to identify problem areas and to analyze the nature of the problem. Members of the program staff begin to meet in February to develop the Highway Safety Plan. An analysis of statewide crash data over a period of several years is conducted to identify the most significant problems and what projects should be funded to address them. Within the crash data, each of the following was reviewed as part of the problem identification process: crash severity, driver age, driver gender, time of day and where the crashes were occurring.

The problem identification process covers the following program areas: alcohol and other drug countermeasures, pedestrian and bicycle safety, occupant protection, police traffic services, younger and older drivers, community traffic safety programs, public information and paid media, motorcycle safety, traffic records and roadway safety.

Program staff established priorities for types of projects that would have the greatest impact on generating a reduction in traffic crashes, injuries and fatalities in the State. At the end of the planning sessions, it was the consensus of the group that certain types of projects were strategic in reducing the State's mileage death rate and the number of motor vehicle related injuries. Projects in the following areas will receive priority in FFY 2020:

- **Planning and Administration:** The planning, development, administration, and coordination of an integrated framework for traffic safety planning and action among agencies and organizations.
- **Alcohol and Other Drug Countermeasures:** Enforcement and education programs that are necessary to impact impaired driving.
- **Pedestrian and Bicycle Safety:** Development and implementation of education and enforcement programs that will enhance pedestrian and bicycle safety.
- **Occupant Protection:** Development and implementation of programs designed to increase usage of safety belts and proper usage of child restraints for the reduction of fatalities and severity of injuries from vehicular crashes.
- **Police Traffic Services:** Enforcement necessary to directly impact traffic crashes, fatalities and injuries. Comprehensive law enforcement initiatives and training opportunities for law enforcement officers will be pursued.

- **Younger and Older Driver Safety Programs:** Enforcement and education programs that are aimed at enhancing safety of drivers age 20 and younger, and mature drivers over 65.
- **Community Traffic Safety Programs:** Commitment and participation of various groups of individuals working together to solve traffic safety related problems and issues.
- **Public Information and Paid Media:** Designed to heighten traffic safety awareness and support enforcement efforts throughout the State.
- **Motorcycle Safety:** The development of programs that train motorcyclists and remind all motorists to safely “share the road” with motorcyclists and be alert.
- **Traffic Records:** The continued development and implementation of programs designed to enhance the collection, analysis and dissemination of crash data that will increase the capability for identifying problems.
- **Roadway Safety:** Professional and technical engineering services necessary for the improvement of the roadway system in order to reduce the incidence and severity of crashes.

Goal Development

The goals identified are determined in accordance with the problem identification process and are established for the various program priority areas and the specific thresholds.

Program managers review the statistical information which has been compiled. Program managers then examine the data from the past five years, review projects recommended for funding and how these projects will impact the identified problems. Crash data, vehicle miles travelled, and population are also used to establish goals for priority areas. In addition, past trends and staff experience are used in setting goals. The ability, willingness, and past performance of agencies seeking funding are also considered.

Additionally, the DOT is the lead agency in the development of the State’s Strategic Highway Safety Plan. Periodic meetings are held with a broad cross section of stakeholders that include engineers, planners, advocates, public health officials, law enforcement officers, educators and emergency response providers. These stakeholders provide input into the vision, mission and goals of the HSP. Members of the Highway Traffic Safety Policy Advisory Council which includes representatives from the Department of Education; Department of Health; DOT; Motor Vehicle Commission; Division of State Police; Administrative Office of the Courts; municipal law enforcement agencies (New Jersey Association of Chiefs of Police and New Jersey Police Traffic Officers Association); Governor’s Advisory Council on Emergency Medical Services; New Jersey State First Aid Council; private sector corporate representatives; and members of the general public are also included in the preparation of the plan and its goals. There is also a standing Traffic Records Coordinating Committee that is asked for its input. Recommendations from all the agencies represented are taken into consideration when developing goals.

The State has adopted the national vision for highway safety – *Toward Zero Deaths: A National Strategy on Highway Safety (Toward Zero Deaths)*. This calls for a national goal of reducing the number of traffic fatalities by half by the year 2030. New Jersey’s crash reduction goal will be achieved with the support of all safety partners. Toward that end, the Strategic Highway Safety Plan is linked to the division’s HSP, the Highway Safety Improvement Program and the Comprehensive Statewide Freight Plan, both of which are prepared by the DOT. The DHTS and the DOT, in collaboration with their safety partners, are committed to implementing both the Strategic Highway Safety Plan and the HSP.

The Plans identify key safety emphasis areas and the supporting strategies that are likely to have the greatest impact on improving safety on the roadways. Also, the HSP renews the State's commitment to direct resources to those safety strategies with a goal of reducing crashes, traffic fatalities and serious injuries.

It is required that both the Highway Safety Plan and the Strategic Highway Safety Plan agree on the core performance goals (number of traffic fatalities, number of serious injuries and fatalities/vehicle miles traveled). Meetings were held with agency representatives during the planning process to ensure that these goals are identical.

Overall fatalities in the State decreased in 2018, following four consecutive years where increases occurred. Though the mission at the DHTS is to reduce the number of fatalities occurring on the roadways through means of safety programing, the performance goals outlined in this Plan represent the trends of fatalities and crashes experienced on the State's roadways, and in some cases, represent increases. New Jersey has seen increases in pedestrian and motorcyclist fatalities, and the predicted values are based on these trends. The law enforcement community has also been collecting additional data-points pertaining to drugged and distracted driving as well as Child Passenger Safety, and because of increased detection, some predicted values reveal increases.

Project Selection

Projects are designed to impact problems that are identified through the problem identification process. Decisions on resource allocations are based on the potential for significant improvement in particular problem areas.

The process for funding State and local safety programs begins in December with a notification in the New Jersey Register containing a description of the purpose, eligibility, and qualifications of submitting a grant application for highway safety projects. State agencies and political subdivisions, including counties, municipalities, townships, and nonprofit organizations are eligible and must submit highway safety grant applications by a designated deadline.

The criterion DHTS uses to review and approve grant applications includes:

1. The degree to which the proposal addresses a State identified problem area. Primary consideration is granted to those projects addressing statewide traffic safety problems. Also, projects are considered if they are well substantiated through data analysis and support identified problem areas.
2. The extent to which the proposal meets the published criteria.
3. The degree to which the applicant is able to identify, analyze and comprehend the local or State problem. Applicants who do not demonstrate a traffic safety problem or need are not considered for funding.
4. The assignment of specific and measurable objectives with performance indicators capable of assessing project activity.
5. The extent to which the estimated cost justifies the anticipated results.
6. The ability of the proposed efforts to generate additional identifiable highway safety activity in the program area and the ability of the applicant to become self-sufficient and to continue project efforts once federal funds are no longer available.
7. Past performance by the grantee (such as achievement of stated objectives, meeting deadlines for project reporting and financial claims) is also considered.

The applications are rated for potential traffic safety impact, performance of previous grants received, and seriousness of identified problems. The review also reflects how well the grant application was written. Each individual considering the grant application is provided with a review sheet. The review sheet allows for

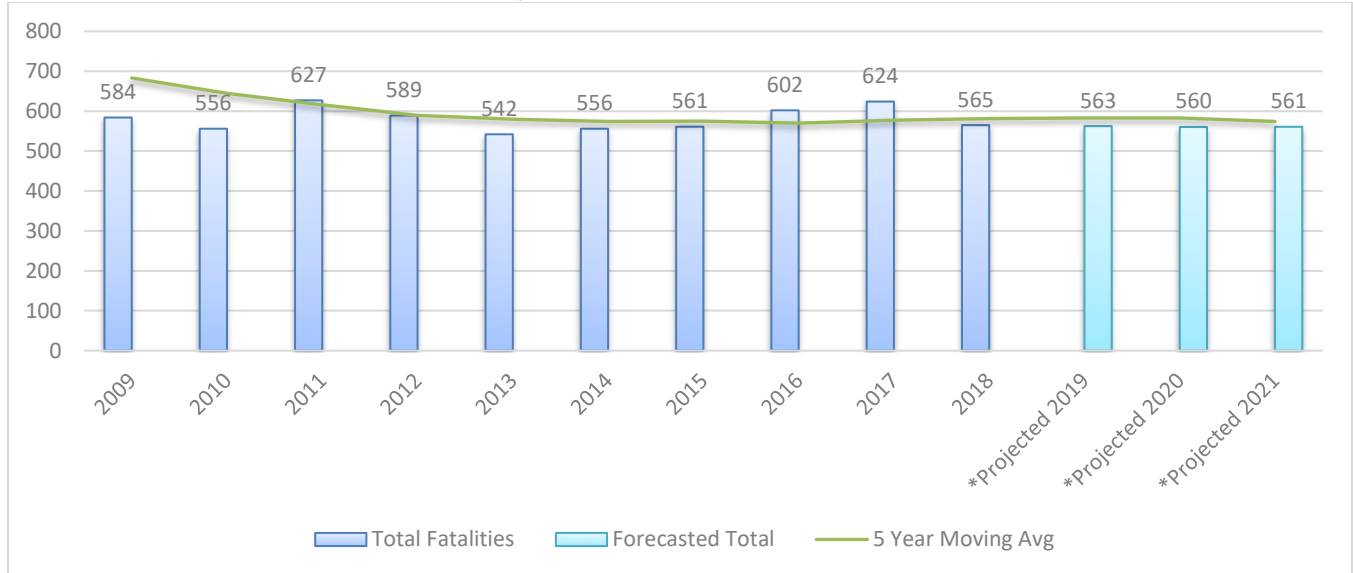

recommendations and comments on each section of the grant application. Priority for funding is given to grant applications which demonstrate a highway safety problem defined by NHTSA or DHTS.

It should be noted that continued efforts will be made in FFY 2020 to fund and offer resources to the areas most in need based on comprehensive research and empirical data in an effort to persistently migrate toward a truly evidence-based allocation of funding. Historical efforts have proven that some areas with great need may not be receptive to the constraints of funding. Nevertheless, the NJDHTS will continue efforts to work with all potential recipients as we move toward our goal of zero highway deaths.

STATEWIDE OVERVIEW

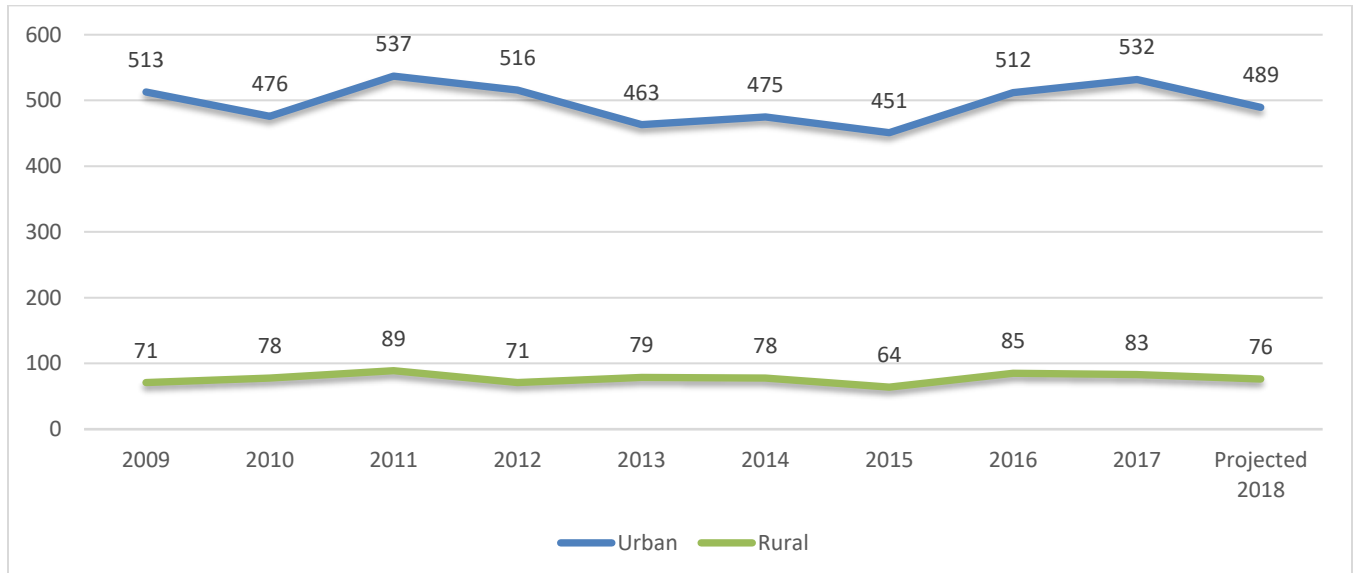

In 2018, the State experienced 565 fatalities on its roadways, the lowest total since 2015. This resulted in a 9.45 percent decrease in overall traffic fatalities from the previous year (2017). The graph depicts overall traffic fatalities in New Jersey as well as the 5-year moving average of those fatalities.

NEW JERSEY MOTOR VEHICLE FATALITIES, ANNUAL AND 5-YEAR MOVING AVERAGE

Fatalities by roadway function are shown in the chart below. The figures from 2018 are projections based on 2017 figures. Urban roadway fatalities in 2017 increased 3.8 percent from 2016 to 2017, and rural roadway fatalities decreased 2.4 percent from 85 in 2016 to 83 in 2017.

FATALITIES BY ROADWAY FUNCTION* – RURAL AND URBAN

* Excludes undefined Roadway Function.

Comparing fatalities by operator category in 2018, *Driver* (225 or 39.9% of total), *Motorcyclist* (51 or 9.0%) and *Pedestrian* (177 or 31.4%) fatalities decreased compared to the 2017 total fatalities (-13.1%, -37.0% and -3.3% respectively). *Passenger* fatalities (95 or 16.8%) increased by 11.8 percent from 2017. *Bicyclist* (16 or 2.8%) remained the same compared to 2017.

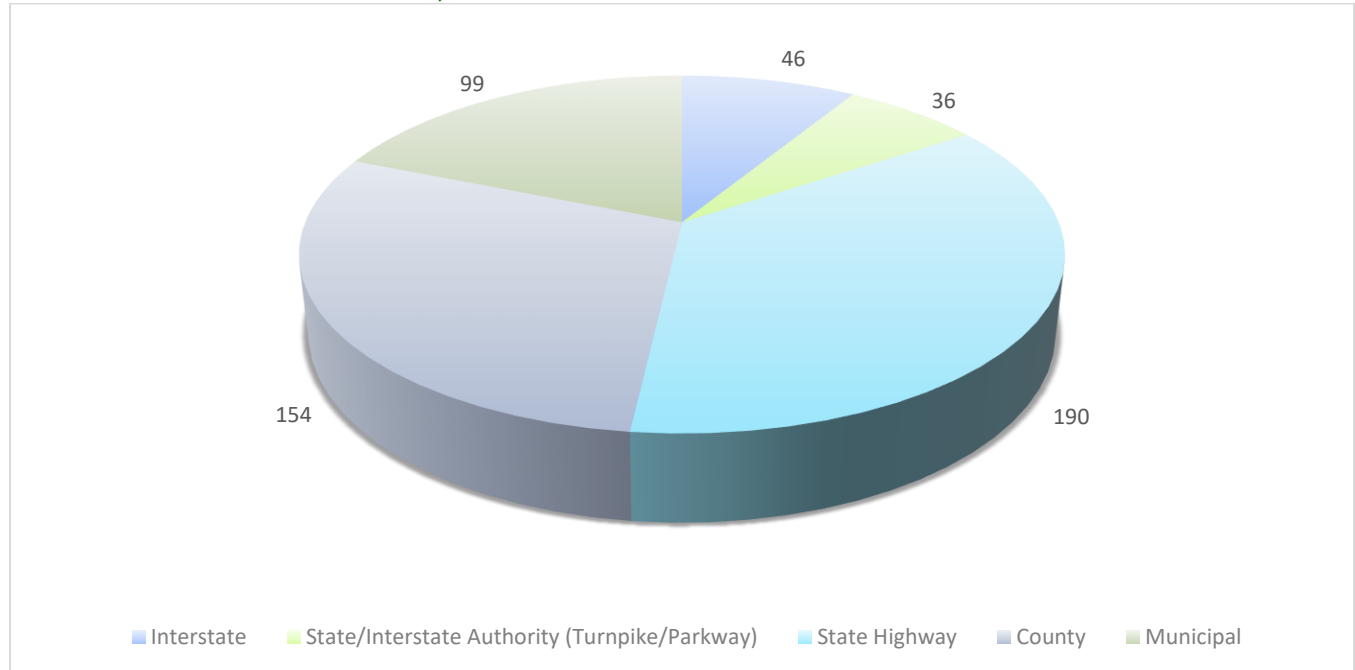

TRAFFIC RELATED FATALITIES BY CATEGORY, 2009 - 2018										
	2009	2010	2011	2012	2013	2014	2015	2016	2017	2018
DRIVER	249	233	270	239	248	235	226	268	259	225
PASSENGER	99	101	105	103	95	80	96	88	85	95
PEDESTRIAN	158	139	142	156	129	168	173	162	183	177
BICYCLIST	13	13	17	14	14	11	17	18	16	16
MOTORCYCLIST	65	70	93	77	56	62	50	66	81	51
NJ STATE TOTALS	584	556	627	589	542	556	562	602	625	564
FATAL CRASHES	550	530	586	553	508	523	521	570	591	526

In 2018, pedestrian fatalities were the most prevalent in Essex County (25) accounting for 14.1 percent of all pedestrians killed in the State, up from 12 percent in 2017. The County with the highest number of motor vehicle fatalities (50) was Middlesex County and was comprised mostly from driver fatalities followed by pedestrians. The most bicycle fatalities (3) occurred in Camden County followed by Essex County with 2 bicycle fatalities. Atlantic and Camden County had the highest number of motorcycle fatalities in 2018 (6).

2018 VICTIM CLASSIFICATION BY COUNTY							
	DRIVER	PASSENGER	PEDESTRIAN	BICYCLIST	MOTORCYCLIST	TOTAL	% CHANGE from 2017
ATLANTIC	11	7	6	0	6	30	-16.7%
BERGEN	5	3	19	1	4	32	18.5%
BURLINGTON	19	8	13	1	3	44	-8.3%
CAMDEN	22	8	8	3	6	47	6.8%
CAPE MAY	8	0	1	0	1	10	-37.5%
CUMBERLAND	13	2	2	1	1	19	-26.9%
ESSEX	10	5	25	2	3	45	12.5%
GLOUCESTER	17	12	6	1	2	38	-13.6%
HUDSON	3	4	14	1	0	22	-15.4%
HUNTERDON	2	0	1	0	0	3	-62.5%
MERCER	8	3	13	1	4	29	11.5%
MIDDLESEX	21	10	14	0	5	50	6.4%
MONMOUTH	15	3	9	1	1	29	-32.6%
MORRIS	13	7	5	1	2	28	-3.4%
OCEAN	16	12	8	1	2	39	-26.4%
PASSAIC	9	1	9	0	2	21	10.5%
SALEM	7	2	0	0	0	9	-47.1%
SOMERSET	7	4	9	1	2	23	-4.2%
SUSSEX	7	1	1	0	3	12	71.4%
UNION	7	2	14	1	3	27	-20.6%
WARREN	5	1	0	0	1	7	-36.4%
NJ STATE TOTALS	225	95	177	16	51	564	

State Highways experienced the highest total of roadway fatalities (190 or 36%) in the State followed by County roadways (154 or 29%).

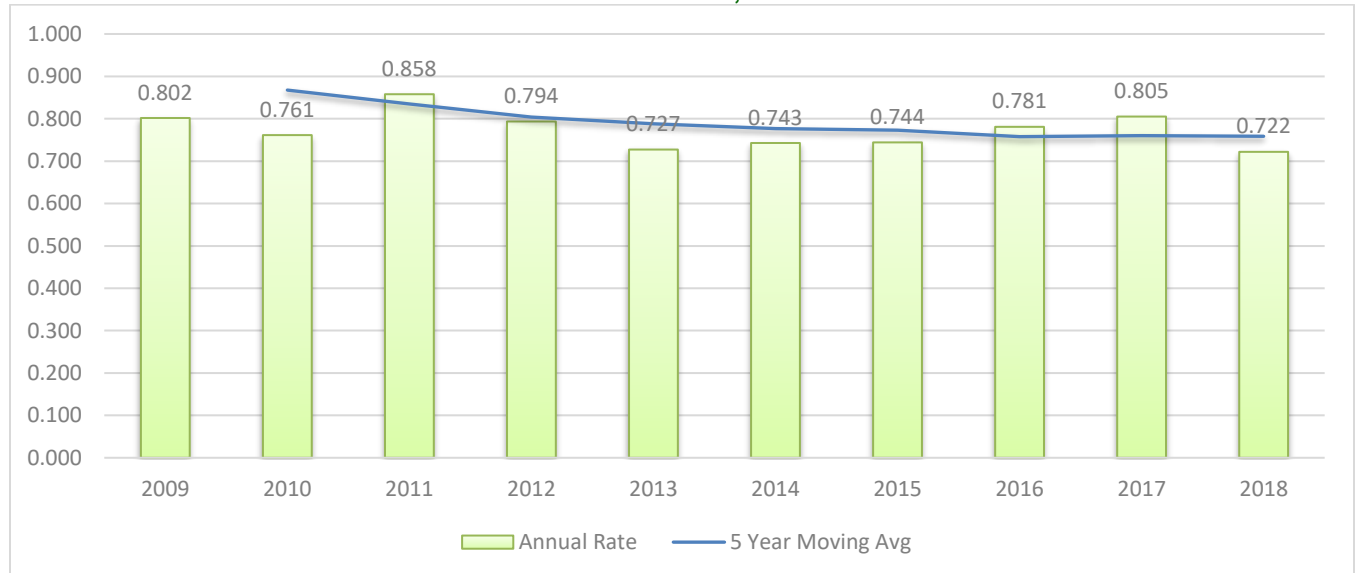

FATALITIES BY ROADWAY SYSTEM*, 2018

* Excludes undefined Roadway Function.

The statewide fatality rate per 100 million vehicle miles traveled decreased from 0.81 in 2017 to 0.72 in 2018. The fatality rate for 2018 was calculated using forecasted VMT totals based on historic trends.

FATALITY RATE PER 100 MILLION VEHICLE MILES TRAVELED, ANNUAL AND 5-YEAR MOVING AVERAGE

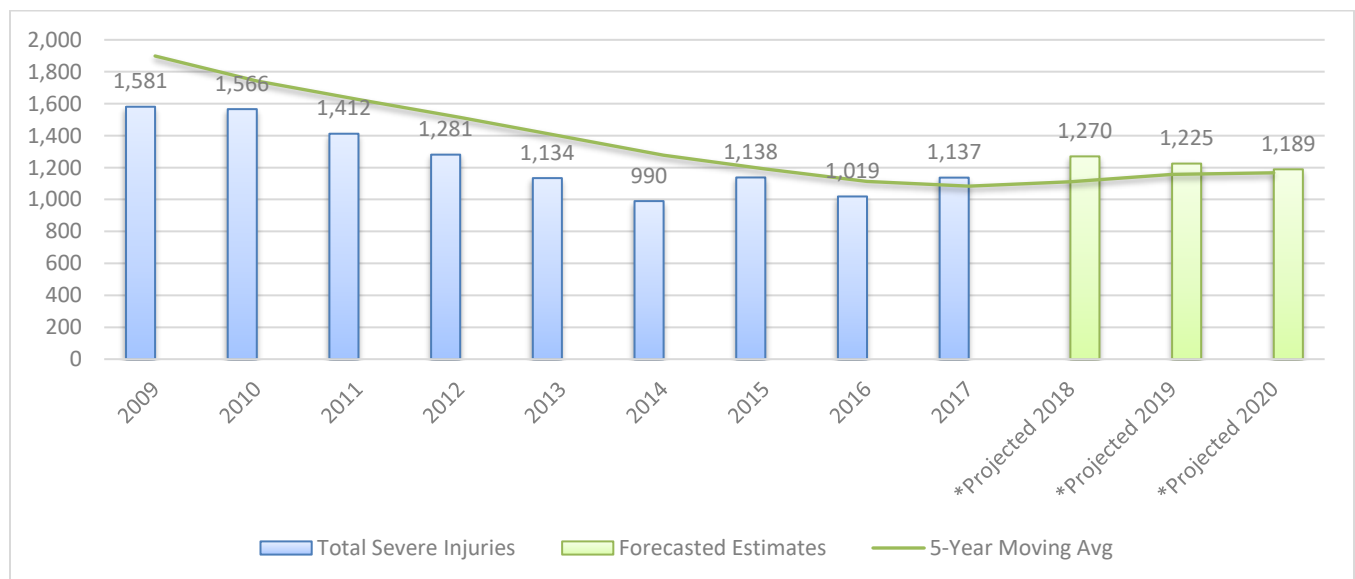

The overall number of motor vehicle injuries sustained in 2017 decreased 1.84 percent from 87,284 in 2016 to 85,729 in 2017. Preliminary numbers for 2018 injuries is showing a 3.44 percent decrease (82,729) at the time of this report.

TOTAL INJURIES SUSTAINED IN MOTOR VEHICLE CRASHES

Serious injuries sustained on New Jersey's roadways in 2017 (1,136) increased 11.5 percent from 1,019 in 2016. Preliminary figures are forecasting an increase in 2018 to 1,270 serious injuries.

SERIOUS INJURIES, ANNUAL AND 5 – YEAR MOVING AVERAGE

Most crashes on New Jersey's roadways had one or more contributing circumstances reported at the time of the crash. The contributing circumstance or causation factor can provide context to the types of reasons why crashes occur on the State's roadways. The Tables that follow depict a cumulative breakdown of Driver Actions, Vehicle Factors and Road/Environmental factors that contributed to motor vehicle crashes. The figures shown are the cumulative totals for each cited circumstance. Several additional contributing circumstances were added to New Jersey's Police Accident Report in 2017. The elements *Failed to Obey Stop Sign*, *Other Distraction Inside Vehicle*,

Other Distraction Outside Vehicle, Distracted – Hand Held Electronic Device, Distracted – Hands Free Electronic Device, Distracted by Passenger, Separated Load/Spill, Failure to Remove Snow/Ice, Traffic Congestion – Regular Congestion, and Traffic Congestion – Prior Incident were added to the report.

For Driver Actions, *Driver Inattention* is cited as the State’s largest contributing circumstance in crashes annually and was a cited reason in 30.2 percent of all vehicles involved in 2017, up from 29.8 percent in 2016. *Driver Inattention* can consist of a number of different factors, such as cell phone use, applying make-up, talking, eating, and attending to children. It remains a serious contributing factor of crashes on New Jersey’s roadways and efforts are in place to provide education and outreach to motorists on the importance of reducing distractions while operating their vehicle. Additional distracted driving elements aim to capture the specifics of inattentive driving behavior and education and clarification on the use of these elements will be provided to reporting officials. *Following Too Closely* was the second-most common circumstance in crashes. *Following Too Closely* can also be a factor in aggressive driving behavior as well as *Unsafe Speed* (4th). *Failure to Yield Right-of-Way to Another Vehicle or Pedestrian* was the third-most common circumstance in crashes.

Though Vehicle factors are the least common factors in motor vehicle crashes, they are important indicators to monitor each year. *Brake* and *Tire* failure were the most commonly cited circumstances in crashes, followed by *Steering* and *Wheel* malfunction.

Road and Environmental factors are the second leading factor in motor vehicle crashes statewide. *Animals in Roadway* was the leading Road/Environmental condition in 2017. *Road Surface Condition*, consisting of snowy, slushy, icy, wet, sandy and oily, was the second most Road/Environmental factor in crashes, and cumulatively (2013-2018) the leading factor.

TOP CONTRIBUTING DRIVER ACTIONS IN CRASHES, 2013 - 2017						
CONTRIBUTING DRIVER ACTION	2013	2014	2015	2016	2017	TOTAL
Driver Inattention	164,433	163,956	152,433	158,416	158,258	797,496
Following Too Closely	30,972	32,422	33,497	38,500	36,972	172,363

Improper Work Zone	37	40	36	27	50	190
Improper/Inadequate Lane Markings	46	33	56	39	30	204

Note: Contributing Circumstances are sorted on 2017 values.

Most crashes taking place on New Jersey's roadways occur between the hours of 7am and 6pm. Over the last five years, 76.2 percent of all crashes occurred between those hours. Compared to total crashes over the last 5 years, only 49.4 percent of fatal crashes took place between 7am and 6pm, the rest occurring during nighttime hours. Over the past 5 years, the most fatal crashes occurred during the 6pm to 8pm interval (18%).

NJ CRASH % VERSUS FATAL CRASH % BY TIME OF DAY, 2013 – 2017

Statewide motor vehicle crashes by crash type show that *Same Direction – Rear End* crashes remain the most common crash type, which is also most crash types when one is *Following Too Closely* (2nd most cited contributing circumstance).

TOP CRASH TYPES, 2013 - 2017						
CRASH TYPE	2013	2014	2015	2016	2017	TOTAL
SAME DIRECTION - REAR END	80,891	80,529	83,986	88,474	86,772	420,652

New Jersey monitors motor vehicle crash trends in several program areas to make assessments on overall crash circumstances on the roadways. Below is a list of areas that DHTS monitors from year-to-year to determine fluctuations within the program areas, which aids in targeting safety programing needed to make New Jersey's roads safer.

MOTOR VEHICLE CRASH TRENDS, 2013 - 2017						
CRASH RECORD TOTALS	2013	2014	2015	2016	2017	TOTAL
TOTAL CRASH RECORDS	289,460	289,873	271,445	279,874	275,925	1,406,577

PERFORMANCE REPORT

Outcomes from the Coordination of the Highway Safety Plan and Strategic Highway Safety Plan

Fatalities, Serious Injuries and Fatality Rate

The State did not meet its goal of reducing total fatalities by 2.5 percent from 553 to 539 by 2017 with a 5-year average of 577 fatalities. Total fatalities have increased in each of the prior four years (2014-2017) with the highest number of fatalities recorded at 624 in 2017. The last decrease in overall fatalities occurred in 2013 when there was an 8 percent decrease from the previous year (2012 to 2013). New Jersey saw a 9.5 percent reduction in roadway fatalities from 2017 to 2018. Driver fatalities accounted for over 39 percent of all fatalities in 2018 and 41.5 percent in 2017. The second largest category of fatalities is represented by pedestrians accounting for approximately 30 percent of all statewide fatalities in 2017.

Serious injuries (Suspected Serious Injuries) saw a slight increase from 2013 to 2017 with 1,134 in 2013 and 1,136 in 2017. Serious injuries are forecasted to be 1,270 in 2018. Though serious injuries have increased, the State met its goal of reducing serious injuries by 2.5 percent from 1,744 to 1,709 by 2017 with an average of 1,083.

The goal to reduce the fatality rate from 0.76 to 0.73 in 2017 was not met with a rate of 0.76 (2013-2017 average).

Programs offered in the 2020 HSP will target enforcement based on data indicating high crash locations and will continue to increase awareness of the negative effects of all traffic violations.

Occupant Protection

The State did not meet its goal of increasing seat belt usage rates from 89.98 percent to 91.98 percent by 2017 with a rate of 91.59 percent (2013-2017 average). The usage rate for front seat occupants in passenger motor vehicles was 94.47 percent in 2018, an increase of 0.4 percent from the previous year. Back seat occupant rates for adults decreased to 39 percent in 2018, and the overall rear-seat passenger usage rates declined 25 percent from 79 to 54 percent in 2018. The highest rear-seat usage rate observed was of children between 0-8 years of age at 77 percent, a decline from 93 percent in 2017. Passengers between the ages of 8-18 show a usage rate increase from 70 percent in 2017 to 60 percent in 2018.

The State also did not meet its goal of reducing unrestrained fatalities by 2 percent from 128 to 125 by 2017 with a total of 128 fatalities (2013-2017 average). Preliminary numbers for 2018 indicate a decrease in the number of unrestrained fatalities from 118 (2017) to 108 (2018); however, nearly 34 percent of occupants killed in crashes were unbuckled in 2017, down from 41.6 percent in 2016 and an additional 23 lives could have been saved if every occupant in a motor vehicle was using a belt at the time of the crash in 2017.

The 2020 HSP will continue to provide funds for the *Click It or Ticket* mobilization, with a special emphasis on counties with lesser seat belt usage rates. Year-round occupant protection enforcement efforts will also be expanded and will include nighttime enforcement programs when possible. Education programs will continue to be offered to help parents and caregivers get access to car seats and teach the importance of car seats and how to properly use and install them.

Impaired Driving

The State met its goal of reducing total alcohol related fatalities by 2.5 percent from 158 to 154 with a total of 135 fatalities (2013-2017 average). A reduction in the number of alcohol impaired driving fatalities from 125 in 2017 to 117 in 2018 is forecasted. The overall percentage of alcohol impaired driving deaths is decreasing; however, 22.1 percent of all fatalities in 2017 still involved alcohol.

Drug related fatalities account for approximately 20 percent of fatal crashes. Drivers from 16-35 years of age account for nearly 50 percent of all alcohol involved crashes and 51 percent of all drug related crashes (2013-2017).

The State did not meet its goal of reducing drug related crashes by 3 percent from 1,043 to 1,022 with a total of 1,147 (2013-2017 average). There was an average of 1,147 drug related crashes during the five-year period from 2013-2017. New Jersey added an additional Driver Physical Status element to the NJTR-1 in 2017 which enable the reporting officer to indicate more than one status at the time of the crash. As a result of this addition, New Jersey saw a 31 percent increase in drugged driving cases in 2017 compared to 2016.

High visibility enforcement campaigns will be conducted during national impaired driving mobilization periods to address these problem areas. Underage drinking initiatives will also be implemented by bringing undercover law enforcement establishments together in partnership to deter the sale of alcohol to underage individuals. Drug recognition and standardized training in the detection and apprehension of DWI offenders will also be provided to the law enforcement community. As per the Evidenced Based Enforcement section of this HSP, New Jersey has a robust DRE Call-Out Program, which will be expanded in FFY2020. The criminal justice system plays a critical role in deterring unsafe driving behaviors and assigning appropriate consequences for impaired driving and other traffic offenses. From arrest to prosecution to adjudication, it is important that all facets of the criminal justice system are aware of the efforts being made to reduce traffic fatalities. Programmatic efforts in FFY2020 will also include supporting the roll out of a new Alcotest breath test instrument in New Jersey.

Distracted Driving

The State did not meet its goal of reducing distracted driving related fatalities by 2.5 percent from 87 to 85 by 2017 with a total of 156 (2013-2017 average). The previous figures being used to determine distracted driving fatalities was only counting motor vehicle occupants and has been updated for the FFY20 plan to include all motorists as well as non-motorists. Goals set in the FFY18 and FFY19 Plans are also only counting motorists, therefore are not comparable to goals set from FFY20 forward. Crashes related to driver inattention decreased in 2017 to 141,130 from 147,572 (2016). Driver inattention remains the most significant cause of fatal and incapacitating crashes in New Jersey. The State did not meet its goal of reducing distracted driving related crashes 3 percent from 150,655 to 146,135 by 2017 with a total of 146,724 (2013-2017).

Programmatic efforts in FFY2020 will include a major enforcement blitz during the April national mobilization and beyond, in several high crash counties. In 2017, the State's #77 alert system, previously used for reporting aggressive driving, was expanded to allow for reporting all forms of dangerous driving, including drivers on a cell phone. Warning letters addressing the dangers of driving distracted are sent to drivers spotted talking or texting while driving. This initiative will continue to be implemented in 2020. and will include enforcement by State and local police and public awareness to promote the program.

Speed

The State met its goal of reducing speed related fatalities by 2.5 percent from 125 to 122 with a total of 119 fatalities (2013-2017 average). The State did not establish a goal for the number of speed related crashes in FFY17, therefore this target is in progress until FFY21.

Speeding is a factor in approximately 6 percent of all traffic crashes and over 21 percent of all fatalities. The 16-30-year-old driver is the most prominent age group involved in speed related crashes. The percentage of deaths involving speeding is generally higher on minor roads than on interstates or other major roadways and occurs about half the time on roads with speed limits lower than 55 miles per hour.

The 2020 HSP will continue to provide funds for enforcement and education programs to police departments in areas of the State that are overrepresented in speed related crashes as well as to NJ State Police for ongoing radar speed enforcement on major highways.

Motorcycles

The State did not meet its goal of reducing motorcycle fatalities by 5 percent from 56 to 53 with a total of 64 fatalities (2013-2017 average). Motorcycle deaths accounted for 13 percent of all motor vehicle crash deaths in the State in 2017 with a preliminary estimate of 9 percent of all fatalities in 2018. There was a 42 percent increase in motorcycle fatalities from 50 in 2015 to 71 in 2016, and a 17 percent increase from 2016 to 2017 (83 fatalities) which was higher than anticipated. In addition, the goal of reducing unhelmeted motorcycle fatalities by 25 percent from 4 to 3 was not achieved with a total of 4 fatalities (2013-2017 average). According to preliminary figures, the number of unhelmeted fatalities increased from 3 in 2017 to 7 in 2018.

In an effort to reduce motorcycle related crashes and fatalities, the 2020 HSP will include efforts to promote the *Share the Road* message to the general public and support the State's motorcycle safety education programs offered by the Motor Vehicle Commission.

Younger Drivers (16-20 Years of Age)

The State did not meet its goal of reducing young driver fatalities by 2.5 percent from 54 to 53 with total of 60 fatalities (2013-2017 average). Motor vehicle fatalities remain the leading cause of death among teenage males and females in the State. Young drivers were involved in 9 percent of total motor vehicle fatalities in 2018, down from 11 percent in 2017. Fatalities involving younger drivers increased from 59 in 2015 to 69 in 2016. The five-year moving average has declined each year from 2008 from 110 in 2008 to 60 in 2018.

New Jersey's strong Graduated Driver Licensing laws will be reinforced in FFY2020 through dedicated social media outreach, special programs on high school and college campuses, ongoing Parent/Teen Driver Orientation programs, and backed up by GDL enforcement efforts by NJ State Police.

Pedestrians and Bicycles

The State did not meet its goal of reducing pedestrian fatalities by 2.5 percent from 157 to 153 with a total of 162 fatalities (2013-2017 average). Reducing pedestrian injuries and fatalities continues to be a challenge in New Jersey. Efforts continue to promote safe driving as well as the use and practice of safe walking in and around the State. The overall number of pedestrian fatalities decreased in 2016 from 170 in 2015 to 163, however, New Jersey saw a 13 percent increase in pedestrian fatalities in 2017 (183). Preliminary figures are showing a 3 percent reduction in pedestrian fatalities in 2018 (177).

The State did not meet its goal of reducing bicyclist fatalities by 15 percent from 14 to 12 with a total of 15.6 (2013-2017 average). The overall number of bicycle fatalities decreased 17 in 2017 to 16 in 2018.

Enforcement grants from both State and Federal funding sources that target high pedestrian crash locations will continue to be funded in 2020 to increase the exercise of due care on the roadway and compliance with appropriate traffic laws by motorists, pedestrians, and cyclists. As per the Evidenced Based Enforcement section of this HSP, pedestrian crash weighting factors will be considered to target pedestrian safety enforcement and educational grant programs. Also, the Crash Analysis Tool will assist in new targeted pedestrian safety programs in locations including the City of Trenton. The DHTS will continue to partner with the New Jersey Bicycle and Pedestrian Advisory Council to advance bicycling and walking as safe and viable forms of transportation and will promote the NJTPA safety awareness Street Smart campaign.

Older Drivers (65+)

The State did not meet its goal of reducing older driver fatalities by 2.5 percent from 66 to 65 with a total of 67 fatalities (2013-2017 average).

Older drivers accounted for over 21 percent of all driver fatalities in the State in 2017 and preliminary estimates are showing nearly 26 percent of all driver fatalities in 2018. Older driver fatalities in 2017 increased 15 percent to 72

from 63 in 2016, preliminary estimates for 2018 are showing 71, a 1 percent decline. As the licensed driver population is likely to grow for this age group, the challenge will be to balance mobility for older drivers with safety for all road users while the goal is to enable older drivers to retain as much mobility through driving as is consistent with safety on the road for themselves, their passengers and other road users.

Programs in the 2020 HSP will include partnering with the Motor Vehicle Commission to provide educational materials in understanding how aging effects driving, the effects of medications and health conditions and guiding them in restricting their driving in more risky situations. Other efforts will include providing support for the AAA *Car Fit* Program.

Roadway Safety

The State met its goal of reducing work zone related crashes by 3 percent from 6,372 to 6,181 with a total of 5,372 (2013-2017 average).

Work zone safety continues to be a priority for traffic engineering professionals and highway agencies. With as many as 200 highway and bridge projects under way at any given time in the State, motorists are likely to travel through work zones on a regular basis. Roadway construction and maintenance activities result in significant safety and mobility issues for both workers and motorists. Awareness of proper work zone setup, maintenance, personal protection, and driver negotiation are all factors to be considered in establishing a safe work zone.

Work zone related crashes decreased by 9.4 percent from 2016 to 2017.

Social Media Engagements

The State met its goal of having at least 50 social media engagements in FY19. At the time of this report, preliminary figures indicate over 200 social media posts via Twitter, Facebook and Instagram. Each post receives hundreds of interactions and shares and reaches a sizable audience of over 20,000 followers.

Public information is the cornerstone of the work in highway safety. The primary function is to educate the public about traffic safety and to induce the public to change their attitudes and behaviors in a way that leads to greater safety on the roads. DHTS has active social media accounts that engage the public on traffic safety topics, safety awareness around holidays and special events, as well as safety related tips and tricks for our users of the roadways. These efforts have led to monthly increases in the audience base, thus broadening the exposure of targeted safety messages.

DHTS will look to expand its social media presence in FFY2020 with an eye towards getting important traffic safety messages out to all segments of the community and furthering the division's mission. Twitter, Facebook and Instagram pages will be used in such a way that the public will be engaged and informed about the division's campaigns and programs including major events such as the *Click it or Ticket*, *U Drive U Text U Pay*, and *Drive Sober or Get Pulled Over* campaigns.

Counties Supported in Community Traffic Safety Programs

New Jersey met its goal of supporting 21 counties with a Community Traffic Safety Program (CTSP). The CTSP members share a vision of saving lives and preventing injuries caused by traffic related issues and their associated costs to society. Each CTSP member establishes a management system which includes a coordinator and advisory group responsible for planning, directing and implementing its programs. Traffic Safety professionals from law enforcement agencies, educational institutions, community and emergency services organizations, injury prevention professionals, educational institutions, businesses, hospital and emergency medical systems, engineers, and other community stakeholders are brought together to develop county-wide traffic safety education programs based on analysis of their crash data.

DHTS will continue to provide resources to assist CTSPs in each of the 21 counties of New Jersey and will prioritize support based on analyses identifying those counties/communities with high crash and fatality rates and/or existence of traffic safety related challenges.

Police Accident Report Trainings

The State met its goal of conducting 12 Police Accident Report training events in FY19. Additional class are scheduled for FY20. The State PAR (NJTR-1) collects a large volume of data for all reportable crashes (270K+/Year). Needed training and education is provided to law enforcement agencies on the proper methods of collecting data to ensure the most accurate and complete reports are submitted. Police officers a 5 hour training session on how to properly complete the NJTR-1 Crash Report.

Registered Crash Analysis Tool Users

The State met its goal of reaching 250 Unique users within the Crash Analysis Tool. At both the State and local level, the DHTS Crash Analysis Tool is also used to analyze crash data. The Crash Analysis Tool is a support tool, maintained with the assistance of Rutgers University, which is used by county and local engineers, law enforcement agencies and other decision makers to help identify and assess the most cost-effective ways to improve safety on the State's roadways through a data driven approach.

PERFORMANCE GOALS

It is the ultimate goal of the NJ Division of Highway Traffic Safety to reduce the number of fatalities occurring on New Jersey's roadways through enforcement, education and encouragement through a variety of safety strategies. In some cases, the performance goals shown are reflected as increases over the moving average cycle, namely overall fatalities, drugged driving, pedestrian, bicyclist and distracted driving. The performance goals were driven on trend analysis and mirror the methodologies set forth in the Strategic Highway Safety Plan (SHSP) to establish realistic targets that can be achieved through safety programs.

CORE PERFORMANCE GOALS					
NUMBER OF TRAFFIC FATALITIES*					
BASELINE VALUE	577	BASELINE START YEAR	2013	BASELINE END YEAR	2017
TARGET VALUE	582.8	TARGET START YEAR	2016	TARGET END YEAR	2020
GOAL STATEMENT	Limit the forecasted increase of total fatalities to less than 1.0% from 577 (2013-2017 average) to 582.8 (2016-2020 average)				
JUSTIFICATION	The difference in fatalities from year-to-year was evaluated and a 10-year average of the annual fluctuations were calculated leading up to the base period. Using this method, the predicted figures for 2019 and 2020 were calculated using this reduction rate to determine 5-year rolling averages for the target years. With these forecasts, New Jersey expects a decrease in overall annual fatalities by 2.5 (from 2018 to 2019) and a decrease of 2.15 (from 2019 to 2020)				
NUMBER OF SERIOUS INJURIES*					
BASELINE VALUE	1,083.4	BASELINE START YEAR	2013	BASELINE END YEAR	2017
TARGET VALUE	1,167.9	TARGET START YEAR	2016	TARGET END YEAR	2020
GOAL STATEMENT	Limit the forecasted increase of total serious traffic injuries to less than 7.79% from 1083.4 (2013-2017 average) to 1125.9 (2016-2020 Average)				
JUSTIFICATION	The difference in serious injuries from year-to-year was evaluated and a 10-year average of the annual fluctuations were calculated leading up to the base period. Using this method, the predicted figures for 2018, 2019 and 2020 were calculated using this reduction rate to determine 5-year rolling averages for the target years. A -45.68 decrease is forecasted from 2018-2019, a -35.65 decrease is forecasted from 2019-2020.				
FATALITIES/VMT*					
BASELINE VALUE	0.760	BASELINE START YEAR	2013	BASELINE END YEAR	2017
TARGET VALUE	0.744	TARGET START YEAR	2016	TARGET END YEAR	2020
GOAL STATEMENT	Reduce the total fatalities/VMT to less by 2.10% from .760 (2013-2017 Average) to .744 (2016-2020 Average)				
JUSTIFICATION	VMTs for 2019 and 2020 were forecasted based on calculating the difference from year to year for the past 5 years and averaging those figures to determine a future rate. 2018 VMTs were used as a base for calculation purposes involving these years. The years 2008, 2012 + 2016 are adjusted for Leap Years (366 days).				
NUMBER OF UNRESTRAINED FATALITIES					
BASELINE VALUE	128.4	BASELINE START YEAR	2013	BASELINE END YEAR	2017
TARGET VALUE	115.1	TARGET START YEAR	2016	TARGET END YEAR	2020
GOAL STATEMENT	Reduce unrestrained passenger fatalities by 10.36% from 128.4 (2013-2017 Average) to 115.1 (2016-2020 Average)				
JUSTIFICATION	The change from year-to-year was evaluated and a 10-year average of the annual fluctuations were calculated leading up to the base period. Using this method, the predicted figures for 2018, 2019 and 2020 were calculated using this reduction rate to determine 5-year rolling averages for the target years. A -10 decrease is forecasted from 2017-2018, -6 decrease is forecasted for 2018-2019, and a -4 decrease is forecasted for 2019-2020.				

* These three performance measures are common in both the HSP and SHSP

CORE PERFORMANCE GOALS (Continued)

NUMBER OF ALCOHOL INVOLVED FATALITIES

BASLINE VALUE	135.6	BASLINE START YEAR	2013	BASLINE END YEAR	2017
TARGET VALUE	120.8	TARGET START YEAR	2016	TARGET END YEAR	2020
GOAL STATEMENT	Reduce total Alcohol related fatalities 10.91% from 135.6 (2013-2017 Average) to 120.8 (2016-2020 Average)				
JUSTIFICATION	The change from year-to-year was evaluated and a 10-year average of the annual fluctuations were calculated leading up to the base period. Using this method, the predicted figures for 2018, 2019 and 2020 were calculated using this reduction rate to determine 5-year rolling averages for the target years. A -8 reduction is forecasted from 2017-2018, -3 reduction is forecasted for 2018-2019, and a -3 reduction is forecasted for 2019-2020.				

NUMBER OF SPEED RELATED FATALITIES

BASLINE VALUE	119.4	BASLINE START YEAR	2013	BASLINE END YEAR	2017
TARGET VALUE	129.1	TARGET START YEAR	2016	TARGET END YEAR	2020
GOAL STATEMENT	Limit the forecasted speed related fatalities to less than -8.12% from 119.4 (2013-2017 Average) to 129.1 (2016-2020 Average)				
JUSTIFICATION	The change from year-to-year was evaluated and a 10-year average of the annual fluctuations were calculated leading up to the base period. Using this method, the predicted figures for 2018, 2019 and 2020 were calculated using this reduction rate to determine rolling averages for the target years. A +5.9 increase is forecasted for 2017-2018, a +5.99 increase is forecasted for 2018-2019, and a +3.69 increase is forecasted for 2019-2020. Large increases were seen from 2008-2011 and these large increases overshadow the smaller year-to-year decreases, thus deriving a negative decrease for future years. New Jersey expects the number of speed related fatalities to remain consistent, however the moving average is expected to increase over the next 3 years.				

NUMBER OF MOTORCYCLE FATALITIES

BASLINE VALUE	64.4	BASLINE START YEAR	2013	BASLINE END YEAR	2017
TARGET VALUE	61.1	TARGET START YEAR	2016	TARGET END YEAR	2020
GOAL STATEMENT	Reduce total motorcycle fatalities 5.12% from 64.4 (2013-2017 Average) to 61.1 (2016-2020 Average)				
JUSTIFICATION	The change from year-to-year was evaluated and a 10-year average of the annual fluctuations were calculated leading up to the base period. Using this method, the predicted figures for 2019 and 2020 were calculated using this reduction rate to determine rolling averages for the target years. Preliminary figures were used in 2018. A -2.8 decrease is forecasted for 2018-2019, and a -1.38 decrease is forecasted for 2019-2020. New Jersey experienced an increase in motorcycle fatalities over the last 2 years.				

NUMBER OF UNHELMETED MOTORCYCLE FATALITIES

BASLINE VALUE	4	BASLINE START YEAR	2013	BASLINE END YEAR	2017
TARGET VALUE	5.1	TARGET START YEAR	2016	TARGET END YEAR	2020
GOAL STATEMENT	Limit the forecasted increase in total unhelmeted motorcyclist fatalities to less than -27.49% from 4 (2013-2017 Average) to 5.1 (2016-2020 Average)				
JUSTIFICATION	The change from year-to-year was evaluated and a 10-year average of the annual fluctuations were calculated leading up to the base period. Using this method, the predicted figures for 2019 and 2020 were calculated using this reduction rate to determine rolling averages for the target years. Preliminary figures were used in 2018. A -0.4 decrease is forecasted for 2018-2019, and a -0.74 decrease is forecasted for 2019-2020. New Jersey forecasts the number of unhelmeted motorcycle fatalities to decline over the next two year, however the moving average is forecasted to increase.				

CORE PERFORMANCE GOALS (CONTINUED)

NUMBER OF YOUNG DRIVER INVOLVED FATALITIES

BASELINE VALUE	60.8	BASELINE START YEAR	2013	BASELINE END YEAR	2017
TARGET VALUE	53.8	TARGET START YEAR	2016	TARGET END YEAR	2020
GOAL STATEMENT	Reduce young driver involved fatalities 11.51% from 60.8 (2013-2017 Average) to 53.8 (2016-2020 Average)				
JUSTIFICATION	The change from year-to-year was evaluated and a 10-year average of the annual fluctuations were calculated leading up to the base period. Using this method, the predicted figures for 2019 and 2020 were calculated using this reduction rate to determine rolling averages for the target years. A -5.70 decrease is forecasted for 2018-2019, and a -3.37 decrease is forecasted for 2019-2020. New Jersey has made great progress in the area of young driver education and safety. Young drivers are mandated to participate in a Graduated Driver's License period (probationary) that limits the number of occupants riding in the vehicle and the hours in which they can operate the vehicle. These efforts have led to the reduction in the number of younger drivers involved fatalities, a trend that is forecasted to continue. Please note, the figures previously used were counting the number of fatal crashes involving younger drivers. New figures represent the total number of motorists and non-motorists fatally injured in crashes involving one or more younger drivers.				

NUMBER OF PEDESTRIAN FATALITIES

BASELINE VALUE	162.6	BASELINE START YEAR	2013	BASELINE END YEAR	2017
TARGET VALUE	177.5	TARGET START YEAR	2016	TARGET END YEAR	2020
GOAL STATEMENT	Limit the forecasted increase in total pedestrian fatalities to less than -9.16% from 162.6 (2013-2017 Average) to 177.5 (2016-2020 Average)				
JUSTIFICATION	The change from year-to-year was evaluated and a 5-year average of the annual fluctuations were calculated leading up to the base period. Using this method, the predicted figures for 2019 and 2020 were calculated using this reduction rate to determine rolling averages for the target years. Preliminary figures were used for 2018. A +4 increase is forecasted for 2018-2019, and a +2 increase is forecasted for 2018-2019. New Jersey experienced a 30% increase in pedestrian fatalities in 2013 to 2014 and a 12.27% increase from 2016 to 2017. These large increases overshadow the smaller year-to-year decreases, thus deriving a negative decrease for future years.				

NUMBER OF BICYCLIST FATALITIES

BASELINE VALUE	15.6	BASELINE START YEAR	2013	BASELINE END YEAR	2017
TARGET VALUE	16.5	TARGET START YEAR	2016	TARGET END YEAR	2020
GOAL STATEMENT	Limit the forecasted increase of total bicyclist fatalities to less than -5.77% from 15.6 (2013-2017 Average) to 16.5 (2016-2020 Average)				
JUSTIFICATION	The change from year-to-year was evaluated and a 5-year average of the annual fluctuations were calculated leading up to the base period. Using this method, the predicted figures for 2019 and 2020 were calculated using this reduction rate to determine rolling averages for the target years. Preliminary figures were used for 2018. No changes are forecasted from 2018 through 2020. New Jersey experienced a +7 increase in bicyclist fatalities in 2015 from 2014. These large increases overshadow the smaller year-to-year decreases, thus deriving a negative decrease for future years.				

SEAT BELT OBSERVATIONAL USE

BASELINE VALUE	0.9229	BASELINE START YEAR	2014	BASELINE END YEAR	2018
TARGET VALUE	0.9444	TARGET START YEAR	2016	TARGET END YEAR	2020
GOAL STATEMENT	Obtain a seatbelt observational usage rate of no less than 94%				
JUSTIFICATION	The change from year-to-year was evaluated and a 10-year average of the annual fluctuations were calculated leading up to the base period. Using this method, the predicted figures for 2018 and 2019 were calculated using this reduction rate to determine 5-year rolling averages for the target years. A +0.0027 increase is forecasted for 2018-2019, and a +0.0021 increase is forecasted for 2019-2020.				

NUMBER OF CITATIONS ISSUED OR ARRESTS MADE DURING GRANT FUNDED ENFORCEMENT ACTIVITIES 2018											
SEAT BELT		32,878	IMPAIRED DRIVING		4,178	SPEEDING		20,921			
ANNUAL TARGET GOALS ESTABLISHED FY2020											
SOCIAL MEDIA OUTREACH		100	CTSP SUPPORTED COUNTIES		21	PAR TRAININGS		12	REGISTERED CRASH ANALYSIS TOOL USERS		250
ADDITIONAL PERFORMANCE GOALS											
NUMBER OF DRUG INVOLVED FATALITIES											
BASELINE VALUE		96.4	BASELINE START YEAR		2013	BASELINE END YEAR		2017			
TARGET VALUE		83.8	TARGET START YEAR		2016	TARGET END YEAR		2020			
GOAL STATEMENT		Reduce total drug involved fatalities 13.07% from 96.4 (2013-2017 Average) to 83.8 (2016-2020 Average)									
JUSTIFICATION		The change from year-to-year was evaluated and a 10-year average of the annual fluctuations were calculated leading up to the base period. Using this method, the predicted figures for 2018, 2019 and 2020 were calculated using this reduction rate to determine 5-year rolling averages for the target years. A +6 increase is forecasted for 2017-2018, and a +4 increase is forecasted for 2018-2019 and a -2 decrease is forecasted for 2019-2020. New Jersey is actively training law enforcement personnel to better detect driver impairment through the DRE Program, and has resulted in higher accounts of drug use among drivers. Please note, previously reported figures were calculating the number of persons that were suspected of being under the influence of drugs in fatal crashes. The updated figures include only drivers that were suspected of drug use and the total fatalities contributing to the phenomena.									
NUMBER OF DRUG INVOLVED CRASHES											
BASELINE VALUE		1,147.8	BASELINE START YEAR		2013	BASELINE END YEAR		2017			
TARGET VALUE		1,477.2	TARGET START YEAR		2016	TARGET END YEAR		2020			
GOAL STATEMENT		Limit the forecasted increase of drug involved crashes of -28.7% from 1147.8 (2013-2017 Average) to 1477.2 (2016-2020 Average)									
JUSTIFICATION		The change from year-to-year was evaluated and a 10-year average of the annual fluctuations were calculated leading up to the base period. Using this method, the predicted figures for 2018, 2019 and 2020 were calculated using this reduction rate to determine 5-year rolling averages for the target years. A +48.8 increase is forecasted from 2017-2018, +52.08 increase is forecasted from 2018-2019, and a +58.59 increase is forecasted from 2019-2020. New Jersey is actively training law enforcement personnel to better detect driver impairment through the DRE Program, and has resulted in higher accounts of drug use among drivers. NJ also modified its police accident report to include a second driver physical status field. This allows reporting officers to indicate illicit drug or medication use in addition to other statuses. NJ expects to see an increase in detected impairment, therefore a slight increase in drug involved crashes are predicted.									

ADDITIONAL PERFORMANCE GOALS (CONTINUED)

NUMBER OF DISTRACTED DRIVING RELATED FATALITIES

BASELINE VALUE	156.2	BASELINE START YEAR	2013	BASELINE END YEAR	2017
TARGET VALUE	169	TARGET START YEAR	2016	TARGET END YEAR	2020

GOAL STATEMENT Limit the forecasted distracted driving related fatalities to less than -8.14% from 156.4 (2013-2017 Average) to 169 (2016-2020 Average)

JUSTIFICATION The change from year-to-year was evaluated and a 5-year average of the annual fluctuations were calculated leading up to the base period. Using this method, the predicted figures for 2018, 2019 and 2020 were calculated using this reduction rate to determine rolling averages for the target years. A +7 increase is forecasted for 2017-2018, a +12 increase is forecasted for 2018-2019 and a -4 decrease is forecasted for 2019-2020. Tracking distracted driving as a contributing circumstance in fatal crashes began in 2010. There have been large fluctuations in year-to-year trends, making the regression model difficult to predict. Distracted Driving data collection and detection has improved the past few years, deriving higher totals of occurrence. New Jersey expects the number of distracted driving related fatalities to remain consistent to trends seen since 2014, however the moving average is expected to increase over the next 3 years. Please note, previously reported figures were only calculating the number of motor vehicle occupants fatally injured in a crash where one or more drivers were distracted. The updated figures include motorists and non-motorists and will be used moving forward.

NUMBER OF DISTRACTED DRIVING RELATED CRASHES

BASELINE VALUE	146,724	BASELINE START YEAR	2013	BASELINE END YEAR	2017
TARGET VALUE	141,186	TARGET START YEAR	2016	TARGET END YEAR	2020

GOAL STATEMENT Reduce total distracted driving related fatalities by 3.77% from 146,724 (2013-2017 Average) to 141,186 (2016-2020 Average)

JUSTIFICATION The change from year-to-year was evaluated and a 10-year average of the annual fluctuations were calculated leading up to the base period. Using this method, the predicted figures for 2018, 2019 and 2020 were calculated using this reduction rate to determine rolling averages for the target years. A 752.1 decrease is forecasted for 2017-2018, a 1,297.3 decrease is forecasted for 2018-2019, and a 1,308.94 decrease is forecasted for 2019-2020.

NUMBER OF SPEED RELATED CRASHES

BASELINE VALUE	17,048.6	BASELINE START YEAR	2013	BASELINE END YEAR	2017
TARGET VALUE	15,137.9	TARGET START YEAR	2016	TARGET END YEAR	2020

GOAL STATEMENT Reduce total speed related fatalities by 11.2% from 17,048.6 (2013-2017 Average) to 15,137.9 (2016-2020 Average)

JUSTIFICATION The change from year-to-year was evaluated and a 10-year average of the annual fluctuations were calculated leading up to the base period. Using this method, the predicted figures for 2018, 2019 and 2020 were calculated using this reduction rate to determine rolling averages for the target years. A 749.4 decrease is forecasted for 2017-2018, a 685.5 decrease is forecasted for 2018-2019, and a 815.3 decrease is forecasted for 2019-2020.

NUMBER OF OLDER DRIVER FATALITIES

BASELINE VALUE	67.4	BASELINE START YEAR	2013	BASELINE END YEAR	2017
TARGET VALUE	70.1	TARGET START YEAR	2016	TARGET END YEAR	2020

GOAL STATEMENT Limit the forecasted increase in older driver fatalities to less than -4.01% from 67.4 (2013-2017 Average) to 70.1 (2016-2020 Average)

JUSTIFICATION The change from year-to-year was evaluated and a 10-year average of the annual fluctuations were calculated leading up to the base period. Using this method, the predicted figures for 2019 and 2020 were calculated using this reduction rate to determine rolling averages for the target years. Preliminary figures were used in 2018. A 1.39 increase is forecasted for 2018-2019, and a 0.17 decrease is forecasted for 2018-2019. New Jersey experienced an increase in older driver fatalities over the last 3 years with the largest occurring from 2016 to 2017. New Jersey expects the number of older driver fatalities to remain consistent, however the moving average is expected to increase over the next 3 years.

NUMBER OF WORK ZONE RELATED CRASHES

BASELINE VALUE	5,372.8	BASELINE START YEAR	2013	BASELINE END YEAR	2017
TARGET VALUE	3,881.9	TARGET START YEAR	2016	TARGET END YEAR	2020

GOAL STATEMENT Reduce Work Zone related crashes by 27.75% from 5372.8 (2013-2017 Average) to 3881.9 (2016-2020 Average)

JUSTIFICATION The change from year-to-year was evaluated and a 10-year average of the annual fluctuations were calculated leading up to the base period. Using this method, the predicted figures for 2018, 2019 and 2020 were calculated using this reduction rate to determine 5-year rolling averages for the target years. A -216.2 decrease is forecasted from 2017-2018, -158.02 decrease is forecasted for 2018-2019, and a -216.02 decrease is forecasted for 2019-2020.

PERFORMANCE PLAN

Planning and Administration

Project Name: **PLANNING AND ADMINISTRATION**

Sub-Recipient: **DIVISION OF HIGHWAY TRAFFIC SAFETY**

Total Project Amount: **\$598,000**

Project Description:

The DHTS is the lead agency tasked with the planning, development, administration, and coordination of an integrated framework for traffic safety planning and action among agencies and organizations in New Jersey. The successful implementation of traffic safety programs must involve the combined efforts of a number of organizations in order to be successful.

Although the primary responsibility for managing traffic safety lies with the DHTS, a number of State and local government agencies and other organizations must also play a role if the entire traffic safety system is to be effective.

Funds from this task include the salaries of the management, fiscal and clerical support staffs and division operating costs. Funds will also be used for the maintenance of the eGrants system SAGE (System for Administering Grants Electronically). In addition, funds will be used by DHTS personnel for travel related expenses to attend traffic safety seminars, workshops, and conferences as well as for Federal or State training related costs along with equipment, supplies, rent, and utility expenses to carry out the functions of the States' Highway Safety Office.

DHTS plans to add staffing in FFY2020 in the Fiscal and Program sections of the office as the result of recent attrition, in order to properly manage grant funds and office operations.

Funding Source: **SECTION 402** Local Benefit: **0**

ALCOHOL AND OTHER DRUG COUNTERMEASURES

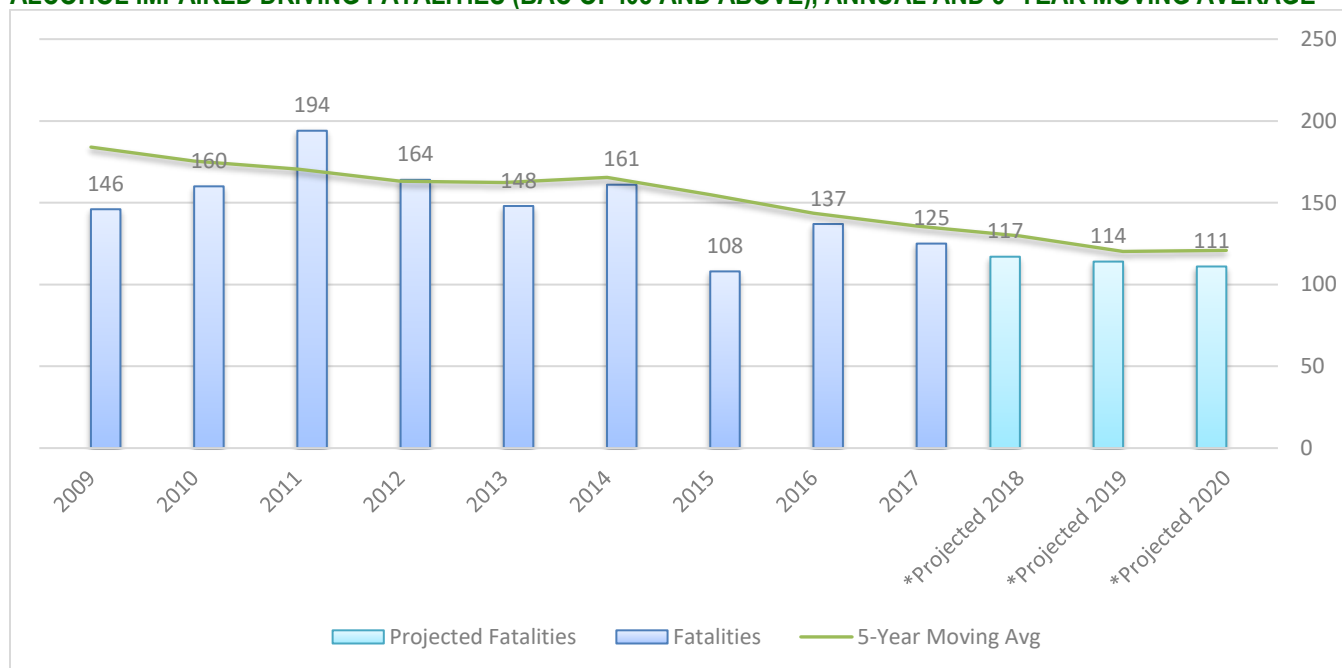

Alcohol Impaired • General Overview

Due to the large volume of alcohol related pending cases that remain open in 2018, the numbers analyzed in this area are based on 2017 fatal records and preliminary data from 2018. The change from year-to-year was evaluated and a 10-year average of the annual fluctuations were calculated leading up to the base period (2017). Using this method, the predicted figures for 2018, 2019 and 2020 were calculated using this reduction rate to determine 5-year rolling averages for the target years.

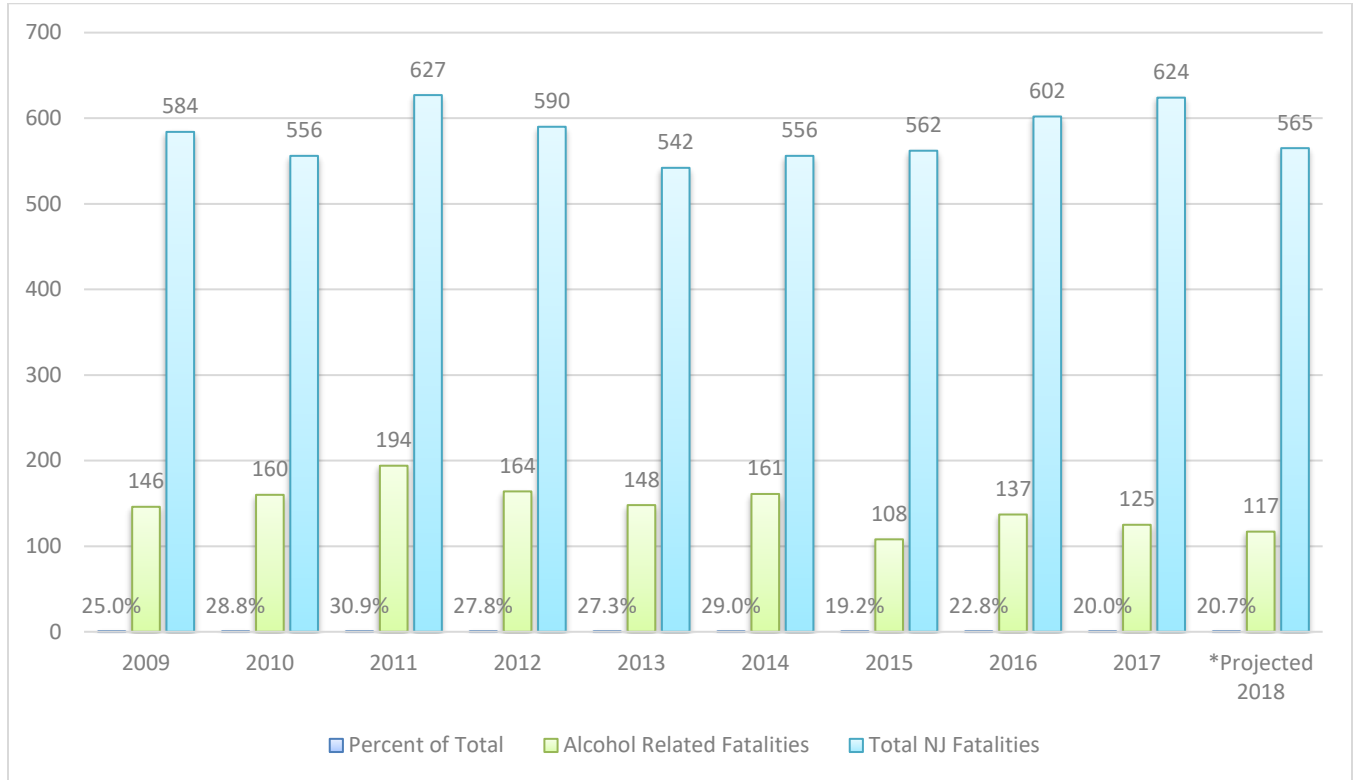

Alcohol involved crashes are defined as any crash where one or more drivers had a blood alcohol concentration level of 0.01 or greater, unless otherwise stated. **Alcohol impaired fatalities** are defined as any crash where one or more drivers had a blood alcohol concentration level of 0.08 or greater.

Over the past five years, New Jersey's roadways have experienced 36,778 alcohol involved crashes, resulting in 679 fatalities (2013-2017). Driving while intoxicated remains a major factor in contributing to fatalities, crashes and injuries on the State's roadways. Projected figures in 2018 show a decline in alcohol related fatalities statewide. In terms of alcohol related crashes overall, there was a 1.1 percent increase from 2016 to 2017 and a 8.8 percent reduction from 2013 to 2017, although alcohol impaired driving accounts for a large portion of fatalities occurring on the roadways (20% in 2017 and 20.7% in 2018 based on projected numbers).

ALCOHOL IMPAIRED DRIVING FATALITIES (BAC OF .08 AND ABOVE), ANNUAL AND 5-YEAR MOVING AVERAGE

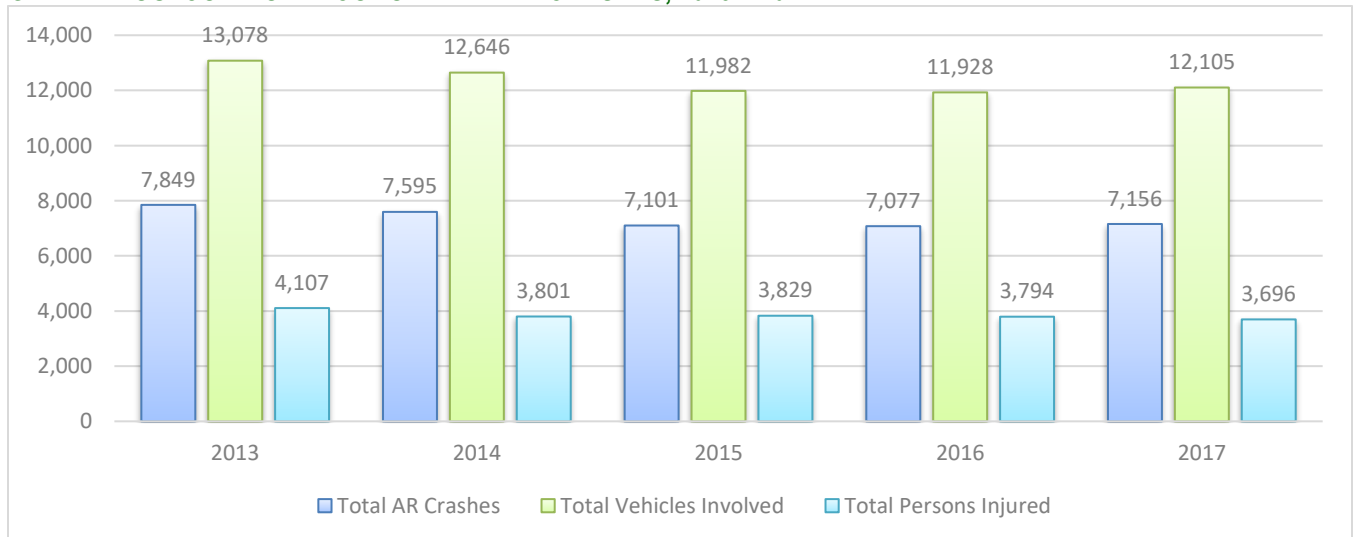

PROPORTION OF ALCOHOL RELATED FATALITIES VERSUS TOTAL NEW JERSEY MV FATALITIES

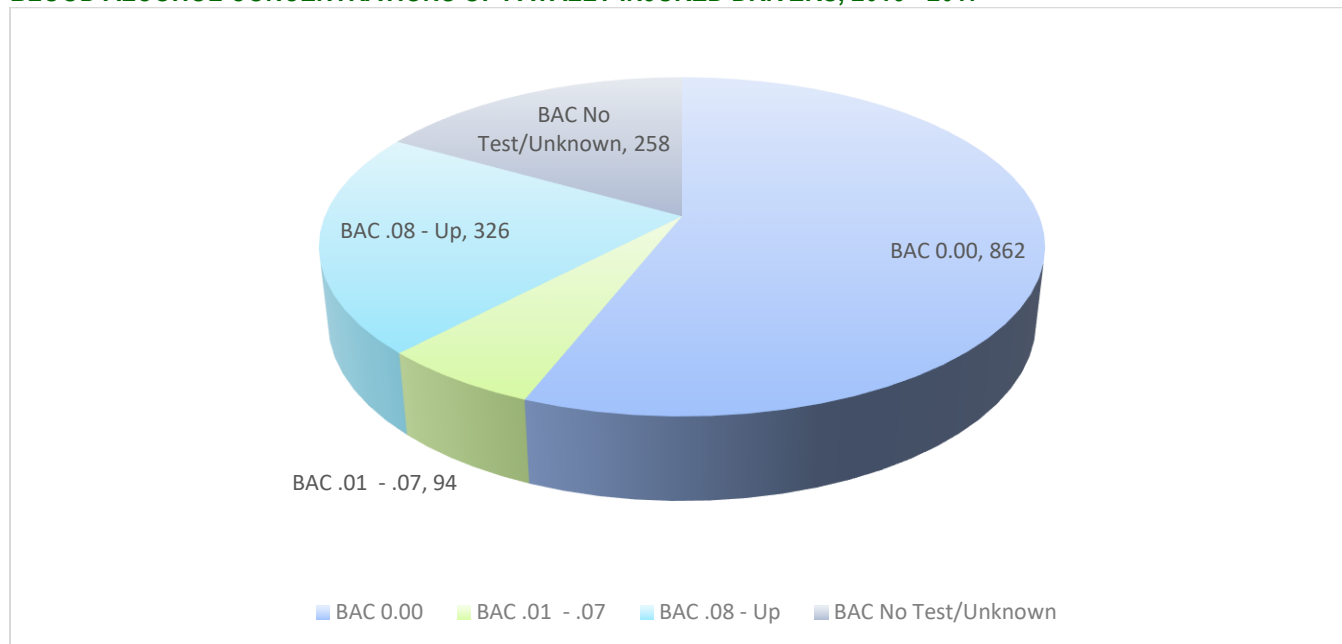

Over 44 percent of all crashes involving alcohol during the past five years (2013-2017) were single-vehicle crashes involving only one driver.

GENERAL OUTCOME OF ALCOHOL RELATED CRASHES, 2013 – 2017

One thousand five hundred twenty-two (1,551) drivers died in motor vehicle crashes on New Jersey's roadways between 2013 and 2017. Fifty-six percent (862) had no alcohol in their system. Just over six percent (94) had a BAC between .01 - .07, below the legal limit, and approximately 21.2 percent (326) had a blood alcohol concentration of .08 or higher. Almost eighteen percent (269) of drivers fatally injured were not tested for alcohol.

BLOOD ALCOHOL CONCENTRATIONS OF FATALLY INJURED DRIVERS, 2013 - 2017

There are many other circumstances present in alcohol involved crashes. Many of these circumstances are overlapping and aid in New Jersey's understanding of crash occurrences that have multiple causation factors. Below is a representation of crashes involving alcohol and how they combine with other performance areas. From 2013-2017, 15.4 percent of crashes involving alcohol also involved drug impairment. About 17 percent of crashes involving alcohol also involved speed, 6.6 percent involved a younger driver and 7 percent involved an older driver.

ALCOHOL INVOLVED CRASHES AND OTHER PERFORMANCE AREAS, 2013 - 2017								
ALCOHOL INVOLVEMENT AND...	2013	2014	2015	2016	2017	TOTAL	5 YR AVG	% OF 5 YR TOT
DRUG INVOLVEMENT	992	972	1,101	1,115	1,480	5,660	1,132	15.4%
DISTRACTED DRIVING	5,208	5,004	4,741	4,732	4,645	24,330	4,866	66.2%
UNSAFE SPEED	1,443	1,330	1,263	1,117	1,079	6,232	1,246	16.9%
YOUNG DRIVERS	540	526	504	457	393	2,420	484	6.6%
OLDER DRIVERS	517	518	505	480	540	2,560	512	7.0%
MOTORCYCLES	101	79	83	73	87	423	85	1.2%
PEDESTRIANS	291	302	260	273	303	1,429	286	3.9%
UNRESTRAINED PASSENGER	503	449	372	379	340	2,043	409	5.6%
TOTAL ALCOHOL INVOLVED CRASHES	7,849	7,595	7,101	7,077	7,156	36,778	7,356	100.0%

Alcohol Impaired • Analysis of Age/Gender

The difference in age and gender was a factor in the likelihood of an individual being involved in alcohol involved crashes. Notably, these demographic groups with elevated crash likelihoods are commonly referred to as “high-risk” drivers. In New Jersey, the particular age group that is the most susceptible to being involved in drug and alcohol related crashes are the 21-35-year-old drivers. This group represents 43.5 percent of drivers involved in alcohol related crashes for both male and female drivers from 2013-2017. Male drivers account for over 60 percent of all alcohol related crashes that occurred from 2013-2017.

% OF ALCOHOL RELATED CRASHES BY AGE GROUP AND GENDER, 2013 - 2017					
% OF ALL AGE GROUPS	AGE GROUP	----- AGE % OF TOTAL GENDER -----		----- GENDER % OF AGE GROUP -----	
		MALE	FEMALE	MALE	FEMALE
0.01%	0-15	0.02%	0.01%	83.3%	16.7%
4.92%	16-20	4.84%	5.05%	60.7%	39.3%
16.13%	21-25	16.18%	16.05%	61.9%	38.1%
15.15%	26-30	15.32%	14.89%	62.4%	37.6%
12.19%	31-35	12.38%	11.86%	62.7%	37.3%
10.23%	36-40	10.14%	10.37%	61.2%	38.8%
9.02%	41-45	8.96%	9.10%	61.4%	38.6%
9.17%	46-50	8.91%	9.59%	60.0%	40.0%
8.30%	51-55	8.28%	8.33%	61.6%	38.4%
6.27%	56-60	6.32%	6.19%	62.2%	37.8%
3.91%	61-65	3.98%	3.79%	62.9%	37.1%
4.70%	66+	4.66%	4.77%	61.2%	38.8%
100.00%	TOTALS*	-	-	61.72%	38.28%

* Excludes undefined driver age or gender type.

Essential characteristics of fatally injured drivers and their corresponding crash information are depicted in the table below. A total of 420 drivers with a blood alcohol concentration level of .01 or greater died on New Jersey's roadways from 2013-2017. The "high-risk" drivers, age 21-34, accounted 50 percent of all fatally injured drivers over the past five years. Of all fatally injured drivers in alcohol-involved crashes, the overwhelming majority, 85 percent, were male. More than half of alcohol involved driver fatalities were single-vehicle occurrences (64%). Over eight out of ten fatally injured drivers with a BAC of .01 or greater were New Jersey residents.

Approximately seven percent of fatally injured drivers with a BAC of 0.01 or greater from 2013 to 2017 had a previous DWI. In 2017, 21.2 percent of fatally injured drivers with a BAC of 0.01 or greater had no valid license (not licensed 5%, suspended 11.3%, or revoked license 2.5%).

CHARACTERISTICS OF FATALLY INJURED DRIVERS BY%, BAC > 0.00							
		2013	2014	2015	2016	2017	TOTAL
AGE	<21	2.3%	7.6%	6.3%	5.2%	3.8%	5.0%
	21-34	51.1%	40.2%	50.8%	59.8%	47.5%	50.0%
	35-49	23.9%	26.1%	27.0%	23.7%	26.3%	25.2%
	50+	22.7%	26.1%	15.9%	11.3%	22.5%	19.8%

Alcohol Impaired • Analysis of Occurrence

To assist in targeting the enforcement of drivers driving under the influence of alcohol, it is important to observe when alcohol involved crashes are most likely to occur. Not surprisingly, most alcohol involved crashes take place during the evening hours on weekends. Compared to when all crashes in the State are occurring, an overrepresentation of alcohol involved crashes can be seen starting at 7pm and ending at 5am. Sixty-six percent of all alcohol involved crashes take place during this ten-hour interval.

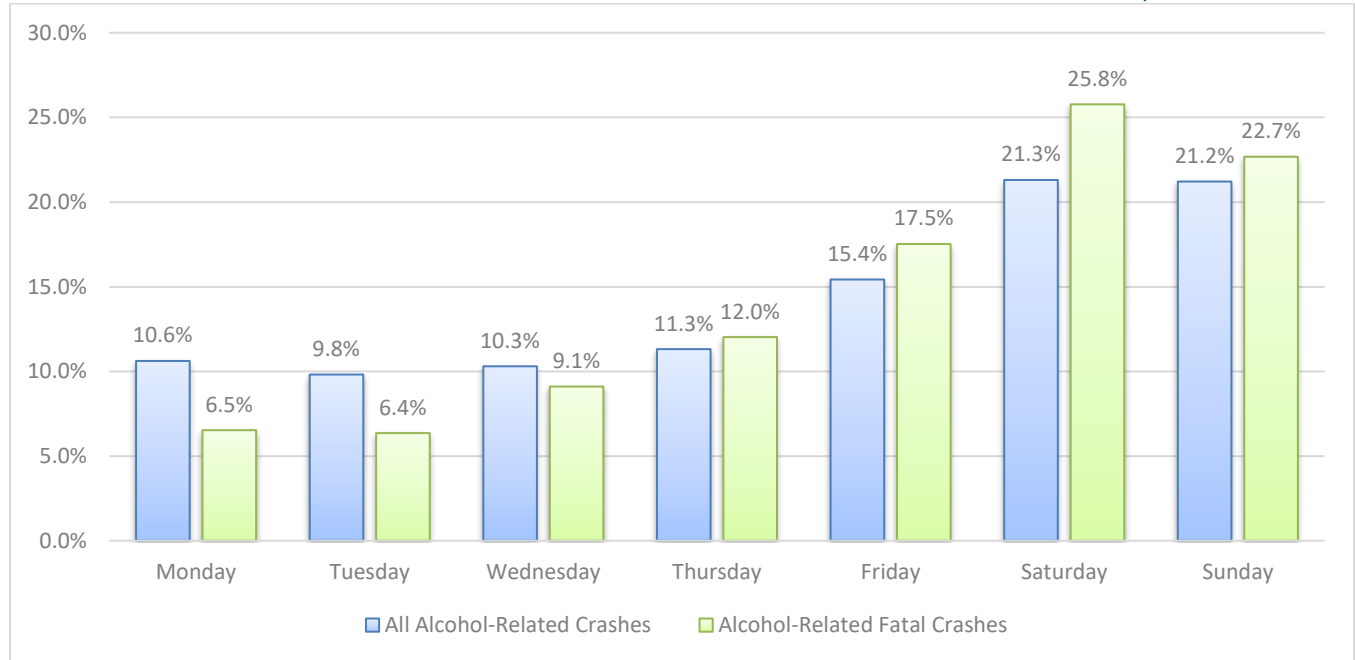

NJ CRASH % VERSUS ALCOHOL RELATED CRASH % BY TIME OF DAY, 2013 – 2017

Times of day occurrences are one of the more important indicators to help shed light on the issue of alcohol impaired driving. There is little difference between the day of week that alcohol involved crashes are taking place compared to all crashes. Similarly, there is little deviation among the day of week distribution of fatal versus non-fatal alcohol-involved crashes. It is important to note that elevated levels of alcohol involved crashes and fatal alcohol involved

crashes (58% and 66%, respectively) occur on Friday through Sunday, typically between the hours of 12am and 5am.

ALCOHOL RELATED CRASH % VERSUS ALCOHOL RELATED FATAL CRASH % BY DAY OF WEEK, 2013 - 2017

Similarly, there is not much of a deviation of frequency from month-to-month in alcohol involved crashes. A slight uptick in alcohol involvement is seen in the warmer months (May, June, July and August). December has historically been the month with the most alcohol involved crashes.

ALCOHOL RELATED CRASH % BY MONTH OF YEAR, 2013 - 2017

Alcohol Impaired • Analysis of Location

A breakdown of the year-to-year changes of total number of alcohol involved crashes by County reflects the percent change of alcohol involved crashes from the previous year, as well as a five-year cumulative trend. Most counties have experienced a slight decrease in the total number of alcohol involved crashes over the past five years. Cape May, Cumberland and Camden Counties experienced the highest increase in alcohol related crashes from 2016-2017 (28%, 24.4% and 20.6% respectively). It is important to note that the total number of alcohol involved crashes has reduced over the last five years.

	COUNTY	2013	2014	2015	2016	2017	2013 - 2017 CHANGE

Drugged Driving • General Overview

It is important to recognize and address the increase of dangers imposed by drivers under the influence of illicit drugs and prescription medications. The number of illegal drug and medication related crashes increased in 2017, from 795 in 2016 to 1026 and from 334 in 2016 to 534, respectively. The State is continuing to experience a surge in the number of illicit drug related crashes, accounting for nearly 70 percent of all drug impaired crashes (medication vs. illicit). Drugged driving involved (illicit or medication) crashes overall comprised 11.4 percent of motor vehicle fatalities in 2017, respectively. One of the reasons for the large increase in drugged driving in New Jersey is due to the addition of a secondary Driver Physical Status field. This enables reporting officers to indicate more than one physical status for each driver at the time of the crash.

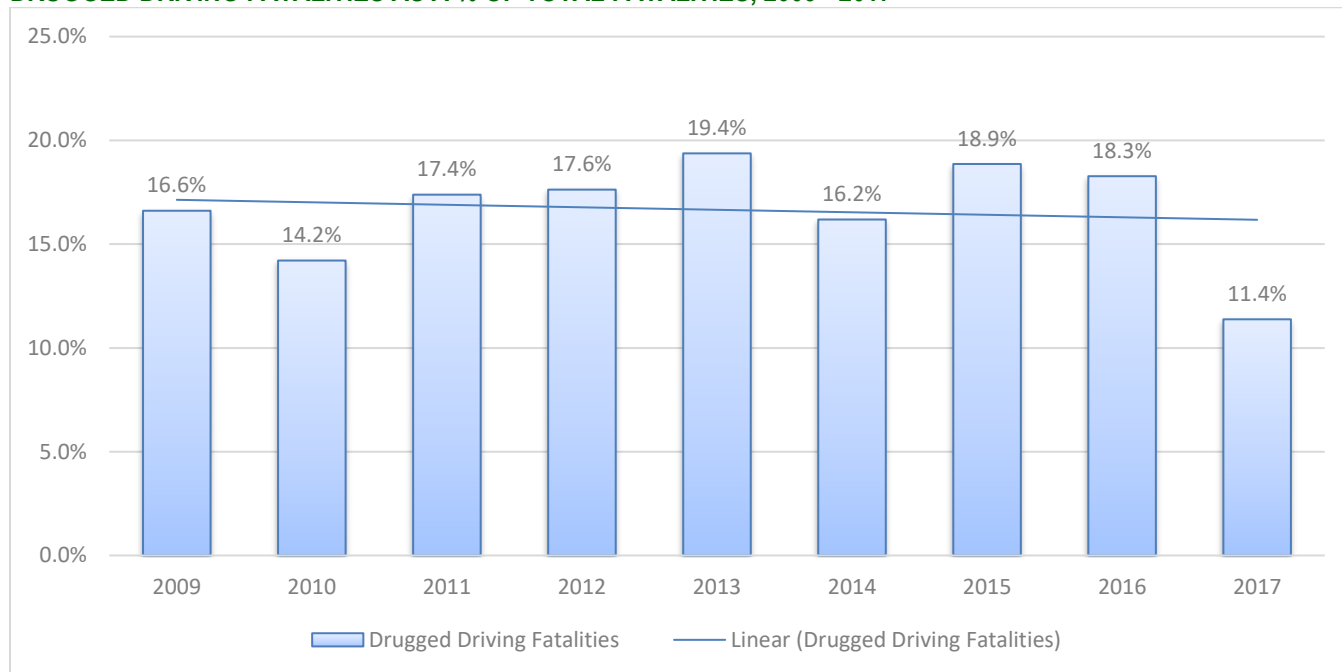

DRUG RELATED (ILLICIT & MEDICATION) CRASHES, 2013 - 2017

DRUG RELATED (ILLICIT & MEDICATION) CRASHES, 2013 - 2017

DRUGGED DRIVING FATALITIES AS A % OF TOTAL FATALITIES, 2009 - 2017

There are many other circumstances present in drug involved crashes. Many of these circumstances are overlapping and aid in New Jersey's understanding of crash occurrences that have multiple causation factors. Below is a representation of crashes involving drugs and how they combine with other performance areas. From 2013-2017, 98.7 percent of crashes involving drugs also involved alcohol impairment. About 12 percent of crashes involving drugs also involved speed, 9.9 percent involved an older driver and 7.6 percent involved an younger driver.

DRUGGED DRIVING CRASHES AND OTHER PERFORMANCE AREAS, 2013 - 2017								
DRUGGED DRIVING AND...	2013	2014	2015	2016	2017	TOTAL	5 YR AVG	% OF 5 YR

Drugged Driving • Analysis of Age/Gender

The difference in age and gender was a factor in the likelihood of an individual being involved in a crash where drugs are involved. The 21-35-year-old male driver accounted for over 32 percent of total drug-related crashes that occurred from 2013-2017, and male drivers overall accounted for 68.1 percent of all drugged driver involved crashes.

% OF DRUG INVOLVED CRASHES BY AGE GROUP AND GENDER, 2013 - 2017					
% OF ALL AGE GROUPS	AGE GROUP	----- AGE % OF GENDER -----		----- GENDER % OF AGE GROUP -----

* Excludes undefined driver age or gender type.

Drugged Driving • Analysis of Occurrence

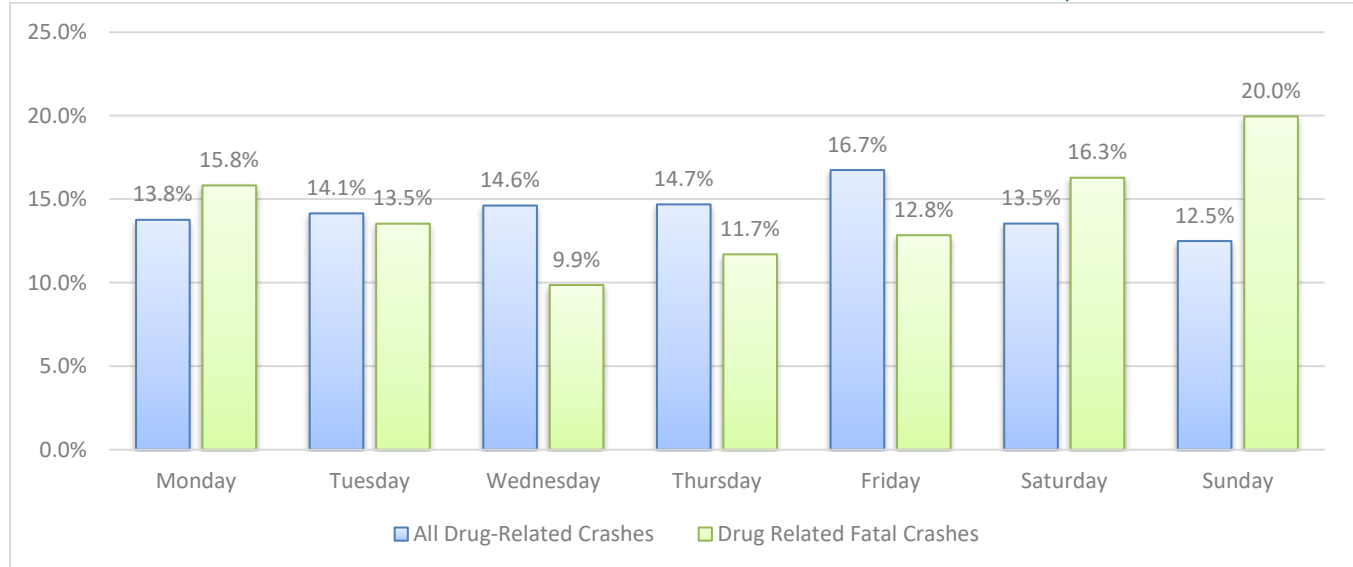

To assist in targeting the enforcement of drivers driving under the influence of drugs, it is important to observe when drug involved crashes are most likely to occur. Most drug involved crashes occur during the evening hours. Similar to trends seen in alcohol involvement, there is an overrepresentation of drug involved crashes beginning at 7pm and ending at 5am. However, only 33 percent of drug involved crashes take place during that time interval compared to 66 percent of alcohol involved crashes during the same interval. The data shows how drugged driving is mirrored in crash occurrences and is an inherent factor for crashes on the State's roadways. This creates a challenge for law enforcement in targeting likely intervals of drugged driving, similar to alcohol use.

NJ CRASH % VERSUS DRUG INVOLVED CRASH % BY TIME OF DAY, 2013 - 2017

Day-of-week occurrences are one of the more important indicators to help shed light on the issue of drug impaired driving. As seen in the graph, there is an overrepresentation of drug involved crashes and drug involved fatal crashes throughout the weekend. It is important to note that over 36 percent of all drug involved fatalities occur on Saturday and Sunday, typically between the hours of 7pm and 5am.

DRUG INVOLVED CRASH % VERSUS DRUG INVOLVED FATAL CRASH % BY DAY OF WEEK, 2013 – 2017

Similar to alcohol impairment, there is little deviation of frequency from month-to-month in drug involved crashes. The table depicts a slight uptick in drug involvement during the summer months in most years.

% OF DRUG INVOLVED CRASHES AS ANNUAL TOTAL BY MONTH, 2013 - 2017					
MONTH	2013	2014	2015	2016	2017
JANUARY	9.0%	8.1%	5.6%	5.9%	6.5%

Project Name: **ALCOHOL AND OTHER DRUG COUNTERMEASURES PROGRAM MANAGEMENT**

Sub-Recipient: **DIVISION OF HIGHWAY TRAFFIC SAFETY**

Total Project Amount: **\$600,000**

Project Description:

Funds will be provided for program managers to coordinate alcohol and drug countermeasure activities with local, State and community organizations. These include working with local, State and community organizations to develop awareness campaigns; supporting and assisting local, county and State task force initiatives and providing technical assistance to project directors. Funds will be used for salaries, fringe benefits, travel and other administrative costs that may arise for program supervisors and their respective staff.

Salary distributions are calculated by determining the percentage of grants program staff are responsible for administering in each program area. This is accomplished by comparing the total number of grants by program area to the total number of all approved grants. This percentage is then used to determine the distribution of salaries for each supervisor and their staff both in this program management area and those that follow.

Salaries and fringe benefits account for \$550,000 of the budgeted amount in the alcohol and other drug countermeasures program area. Additionally, another \$50,000 is budgeted for travel and other miscellaneous expenditures such as equipment, supplies, rent, and utility expenses necessary to carry out the alcohol and other drug countermeasures functions of the States' Highway Safety Office.

Funding Source: **SECTION 402** Local Benefit: **0**

Countermeasure Strategy: Law Enforcement Training

Effectiveness of Countermeasure

Officers have used Standardized Field Sobriety Tests (SFST) for more than 20 years to identify impaired drivers. The SFST is a test battery that includes the horizontal gaze nystagmus test, the walk-and-turn test, and the one leg stand test. Research shows the combined components of the SFST are 91 percent accurate in identifying drivers with BACs above the legal limit of .08 (Stuster & Burns, 1998).

As of August 2014, all 50 States and the District of Columbia had Drug Recognition and Classification programs, which are designed to train officers to become DREs. These programs have prepared approximately 1,500 instructors and trained more than 7,000 officers (National Sobriety Testing Resource Center, 2014). Several studies have shown DRE judgments of drug impairment are corroborated by toxicological analysis in 85 percent or more of cases (NHTSA, 1996).

Assessment of Safety Impacts

Providing training to members of the law enforcement community in detecting alcohol and drug impairment will ensure that officers possess the skills necessary to identify and apprehend impaired drivers and increase drunk driving arrests. Providing training and guidance to prosecutors who oversee court related prosecutions will also assist in increasing drunk driving conviction rates. Training law enforcement officers to identify drug related drivers and to categorize the type of impairing substance can assist in prosecuting cases of suspected drugged driving, due to the fact that there are limits in the availability and reliability of toxicology testing.

Driving under the influence of alcohol has been known to cause thousands of crashes, injuries and fatalities each year. Recently the magnitude of this problem has been complicated by drug impaired drivers. The increase of cases involving drug impaired drivers has created serious issues in several counties. Furthermore, the issue of drug impaired driving in NJ is likely to become even more prevalent in FFY20 and beyond as the state considers the legalization of recreational marijuana use. In light of these developments there is a need for an educational program to train local officers on drug related DWI investigations, the focus of which is a DRE program and systematic call list for certified DRE's. The call-out program provides law enforcement officers in the field at the municipal and county level the opportunity to contact a certified DRE when needed to gather evidence that is necessary to

substantiate or strengthen charges of drug influence in DWI cases. The DRE officers called out will be available to process individual offenders and follow through with the case and testify in court.

Linkage between Problem Identification and Performance Targets

Standardized field sobriety testing (SFST) and Drug Recognition Expert (DRE) training are the cornerstones to DWI enforcement. Giving officers the skills and proven methodologies are a critical investment in any DWI enforcement program. Officers who can follow a prescribed protocol and clearly describe an arrest are a critical element in obtaining DWI convictions.

The five-year average (2013-2017) for drugged driving related crashes was 1,147. In 2017, approximately 16 percent of all fatalities were drug related. There was a 32 percent increase in drug related crashes in 2017 from 1,129 in 2016 to 1,487 in 2017. The DRE call-out program will assist in helping to identify impairment in drivers under the influence of drugs other than alcohol. Increases in drug related crashes and the use of drugs while driving has resulted in the need to have additional law enforcement officers trained and made available for assistance to local police agencies.

Project Name: DWI TRAINING, DRUG RECOGNITION EXPERT PROGRAM & ADVANCED ROADSIDE IMPAIRED DRIVING ENFORCEMENT (ARIDE) TRAINING

Sub-Recipients: DIVISION OF STATE POLICE AND NEW JERSEY ASSOCIATION OF DRUG RECOGNITION EXPERTS

Total Project Amount: \$1,100,000

Project Description:

The Alcohol Drug Testing Unit (A/DTU) at the Division of State Police is the lead agency in the State that oversees the coordination and administration of the Drug Recognition Expert training program, along with issuing field certifications and validations to officers. In addition to DRE, state and municipal police officers will also be trained in DWI/Standardized Field Sobriety Testing. The course includes instruction in the detection, apprehension, processing, and prosecution of DWI offenders as well as standardized field sobriety testing and horizontal gaze nystagmus. Thirty DWI/SFST classes and forty DWI/SFST refresher courses are anticipated in FFY2020. Additionally, three DRE regional courses and one DRE Instructor course is expected to be conducted. The NJ Association of Drug Recognition Experts will be tasked with enhancing and streamlining the process by which field evaluations are reported by DRE's. These DRE program efforts come with the realization that recreational marijuana use might be legalized in New Jersey in FFY2020 or beyond.

The ARIDE program was created to address the gap in training between the SFST and DRE program by providing officers with general knowledge related to drug impairment and by promoting the use of DRE's. It is anticipated that 1,500 officers will be trained in ARIDE in FFY2020. The New Jersey Association of Drug Recognition Experts will also receive funds for training purposes.

Funds will also be used to obtain training in the latest trends in drug use and abuse, litigation and new resources. Under the authority of the Attorney General, the A/DTU also spearheads the on-going training and re-certification of police officers to operate approved chemical breath test instruments that recognize alcohol indicators present in suspects. Funds will be used to maintain breathalyzer related instruments used for training and testing. It is expected that a major focus and expense in this area in FFY2020 will be the statewide roll out of a new version of the Alcotest breathalyzer unit.

Funding Source: SECTION 405(d) Local Benefit: \$700,000

Project Name: DRE CALL-OUT PROGRAM

Sub-Recipients: COUNTY PROSECUTOR OFFICES

Total Project Amount: \$750,000

Project Description:

The DRE call-out program will be operational in eleven counties (Bergen, Atlantic/Camden, Monmouth, Morris/Sussex, Ocean, Somerset/Hunterdon, Middlesex, and Union). This is an expansion from FFY2019, and as shown in the Evidence Based Enforcement section of this plan, demonstrates the robust DRE Call-out

program that exists in the state. The Division of State Police will also participate in the program. DRE training will be provided to law enforcement officers. County and municipal prosecutors will be included in the implementation and expansion of the program to provide an understanding of the depth of the training and the expertise it creates for a successful prosecution. Chiefs of Police will also need to have an understanding of the training and what is required. Judicial outreach efforts targeting judges will also be carried out. Law enforcement officers in the counties with call out programs will be advised of the protocol so they can call on a DRE when needed. Funds will be used to pay for the overtime services provided by the DRE at the time of the call-out.

County agencies that receive funding for this program will be urged to make plans to continue the program with their own resources following the initial three year period of grant-funded support.

Funding Source: **SECTION 405(d)** Local Benefit: **\$750,000**

Countermeasure Strategy: High Visibility Saturation Patrols

Effectiveness of Countermeasure

At a sobriety checkpoint, law enforcement officers stop vehicles at a predetermined location to check whether the drivers are impaired. The purpose of a checkpoint is to deter driving after drinking by increasing the perceived risk of arrest. Checkpoints should be highly visible, publicized extensively, and conducted regularly, as part of a publicized sobriety checkpoint program.

The Centers for Disease Control and Prevention systematic review of 15 high-quality studies found that checkpoints reduce alcohol-related fatal crashes by 9 percent (Guide to Community Preventive Services, 2012). Publicized sobriety checkpoint programs are proven effective in reducing alcohol-related crashes among high risk populations including males and drivers 21 to 34 (Bergen et al., 2014).

A saturation patrol (also called a blanket patrol or dedicated DWI patrol) consists of a large number of law enforcement officers patrolling a specific area to look for drivers who may be impaired. These patrols usually take place at times and locations where impaired driving crashes commonly occur.

A demonstration program in Michigan, where sobriety checkpoints are prohibited by State law, revealed that saturation patrols can be effective in reducing alcohol-related fatal crashes when accompanied by extensive publicity (Fell, Langston, Lacey, & Tippetts, 2008).

Assessment of Safety Impacts

Within the pantheon of traffic safety countermeasures, enforcement is the most critical tool for controlling drinking drivers. Highly visible patrols resulting in arrests for driving while intoxicated, coupled with an effective public information campaign, can reduce the incidence of alcohol related crashes by increasing the perceived risk of arrest.

Linkage between Problem Identification and Performance Targets

A review of alcohol related crashes by county over a five-year period (2013-2017) reveals an overall decrease in crashes. However, over a one-year period, there has been an increase in alcohol involved crashes in 12 of New Jersey's 21 counties, with the greatest annual increase (2016-2017) occurring in Cape May, Cumberland and Camden Counties (28%, 24.4% and 20.6% respectively). The primary focus of the alcohol enforcement activities will be on respectively increasing the overall level of surveillance in the towns and counties that are identified as high-risk areas as identified in the above tables.

Project Name: **DWI ENFORCEMENT**

Sub-Recipients: **STATE, COUNTY AND MUNICIPAL LAW ENFORCEMENT AGENCIES**

Total Project Amount: **\$2,010,000**

Project Description:

The national drunk driving campaign, *Drive Sober or Get Pulled Over*, is a comprehensive impaired driving prevention program that combines high-visibility enforcement and public awareness. Nearly 300 State, county and local police agencies will partner with DHTS during each of the two statewide enforcement campaigns that will be conducted from December 6, 2019 – January 1, 2020 and from August 21 - September 7, 2020.

County-wide enforcement grants will be offered to conduct sustained year-long DWI enforcement efforts separate from the two crackdowns mentioned above. Funds will be provided for overtime enforcement. In addition to Federal funds being used for the enforcement efforts, the Alcohol Education, Rehabilitation and Enforcement Fund receives monies from a tax imposed on the sale of liquors. The Fund receives approximately \$11 million in annual deposits from alcohol beverage tax collections. Of the balances in the Fund, 75 percent is spent on alcohol rehabilitation initiatives, 15 percent on enforcement initiatives, and 10 percent on education initiatives.

The preceding tables show a five-year analysis of alcohol related crashes by county and are used to determine which counties are experiencing a high number of alcohol involved crashes. This information is used when selecting county participation in year-long impaired driving initiatives. Funds are provided to these counties to conduct sustained enforcement efforts through both impaired driving checkpoint programs and saturation patrols.

An analysis is also conducted to determine those municipalities that have the highest number of impaired crashes by county. Those that are overrepresented are invited to participate in the two *Drive Sober or Get Pulled Over* mobilizations to conduct high visibility enforcement during the 2-3 week campaigns.

To help spread the *Drive Sober or Get Pulled Over* message, a statewide press release is issued prior to the start of each crackdown. Police agencies also engage their communities through the dissemination of local press releases and public service announcements. Additional campaign awareness is generated by the use of variable message boards displaying campaign slogans.

The State's Drunk Driving Enforcement Fund (DDEF) also provides funds from a surcharge collected on each drunk driving conviction. Monies in this Fund are distributed to municipal, county, State, and interstate police agencies to increase enforcement of impaired driving laws. Every law enforcement agency whose officers make arrests leading to DWI convictions and imposition of the surcharge are entitled to grants representing its proportionate contribution to the Fund. At least 50 percent of the monies collected must be used on enforcement. The monies from this Fund are used on a statewide basis as a supplement to the federal funds and provide sustained enforcement throughout the year.

It is anticipated that (as in FY2019) approximately \$1.2 million in Sec. 405e funding will be flexed into this Alcohol Enforcement program area for FY2020 to support the national enforcement mobilizations.

Within this planned activity, the approximate breakdown for FY2020 funding will be:

\$1.1 million for the two DSOGPO crackdowns (Municipalities will be offered funding based upon the above data).

\$900,000 for sustained enforcement (\$275,000 to New Jersey State Police, \$625,000 to municipal agencies).

Funding Source: SECTION 405(d) \$810,000 SECTION 405(e) flexed \$1.2 million Local Benefit: \$1,860,000

Countermeasure Strategy: Underage Drinking Enforcement

Effectiveness of Countermeasure

Several studies document that well-publicized and vigorous compliance checks, in which law enforcement officers watch as underage people attempt to purchase alcohol and then cite the vendor for a violation if a sale is made, do

in fact reduce alcohol sales to youth; as an example, a review of eight high quality studies found that compliance checks reduced sales to underage people by an average of 42 percent (Elder et al., 2007).

Assessment of Safety Impacts

Compliance checks are most effective when they are frequent, well publicized and well designed; solicit community support and impose penalties on the licensed establishment. Frequent use of compliance checks can potentially decrease alcohol sales to minors and decrease alcohol availability and lead to a reduction in alcohol related problems and crashes in young drivers.

Linkage between Problem Identification and Performance Targets

Underage alcohol use remains a persistent problem with serious health and safety consequences. In addition to the age 21 minimum legal drinking age, zero-tolerance laws make it illegal for individuals under age 21 to drive after drinking with any alcohol in their system. Despite underage drinking laws and prevention programs, underage alcohol consumption remains at elevated levels. Drivers in New Jersey under the age of 21 are involved in 5 percent of all alcohol-involved crashes while drivers under age 25 account for 16 percent of the crashes.

Project Name: UNDERAGE ENFORCEMENT

Sub-Recipients: DIVISION OF ALCOHOLIC BEVERAGE CONTROL AND DIVISION OF STATE POLICE

Total Project Amount: \$450,000

Project Description:

The purchase and consumption of alcohol by underage persons, as well as the over-consumption of alcohol by patrons in licensed beverage establishments has been a long-standing problem. Using the resources provided by this task, the Division of Alcoholic Beverage Control will undertake efforts intended to result in administrative disciplinary charges against the offending license-holders as well as criminal charges against those who purchase and/or provide alcoholic beverages to underage persons.

Funds will be used to continue the *Cops In Shops* program for a seven-month period in municipalities with a college or university either within its borders or in a neighboring community. The program will be implemented in Atlantic, Bergen, Camden, Essex, Gloucester, Mercer, Middlesex, Monmouth, Morris, Ocean, Union and Warren Counties. Additionally, the same program will be implemented during the summer in the State's shore communities. The program will be conducted in various municipalities in Atlantic, Cape May, Monmouth, and Ocean Counties.

Training of municipal police officers in the *Cops In Shops* program is conducted by the Division of Alcoholic Beverage Control's Enforcement Unit. Two undercover officers are assigned to work four-hour shifts in the evening. One officer works undercover as an employee or patron in each establishment and stops any individual under the age of 21 attempting to purchase alcohol or use false identification. The second officer serves as a "backup" outside the establishment to determine if alcoholic beverages have been purchased by an adult and passed off to an underage drinker. A key ingredient for success of the program is public awareness. Signage and brochures are provided to promote the program.

Alcoholic Beverage Control acts and other related laws pertaining to underage alcohol use and/or intoxicated patrons will also be enforced. The use of undercover State and local police is intended to identify underage persons who order and/or consume alcoholic beverages as well as those who serve them. Appropriate criminal and/or administrative charges will be initiated against underage persons, those providing alcoholic beverages to underage persons as well as liquor licensees that allow this activity on their premises. This project reduces the purchase and consumption of alcohol by underage persons, while sending a strong message to the owners of licensed beverage establishments.

Funds will be provided for overtime salaries of police officers to work in an undercover capacity in liquor stores to identify and bring criminal charges against underage persons who purchase or attempt to purchase alcoholic beverages and adults who purchase alcoholic beverages for minors.

Funding Source: **SECTION 405(d)** Local Benefit: **\$350,000**

Countermeasure Strategy: Youth Programs

Effectiveness of Countermeasure

Alcohol use on college campuses has an impact on virtually all of the students at the particular institution, whether they drink or not (National Institute on Alcohol Abuse and Alcoholism, 2013). In light of this, it is important to address dangerous drinking behaviors and other cultural expectations, behaviors, and pressures that impact college students. Studies reveal that over 1,700 college student deaths each year are linked to alcohol, with a majority due to automobile crashes.

Binge drinking is a concern within the campus community. The 2014 Monitoring the Future Study found that 35.4 percent of college students reported binge drinking compared to 29.3 percent of their peers not enrolled in college. The National Council on Alcoholism and Drug Dependence in 2015 reported that four out of five college students drink alcohol and approximately half of those students binge drink.

Assessment of Safety Impacts

General alcohol awareness programs are a good starting point to remind students about the risks of driving after drinking, but the message requires constant reinforcement in new and creative ways. These general awareness programs work best when combined with other programs that focus on individual behavior change and enhanced enforcement.

Linkage between Problem Identification and Performance Targets

The 16-25-year-old age group in the State represents 21 percent of drivers involved in alcohol related crashes. According to an American College Health Association, National College Health Assessment conducted at several New Jersey colleges and universities, nearly two-thirds of college students consume alcohol and 19 percent drive after drinking.

Project Name: **COLLEGE CAMPUS INITIATIVES**

Sub-Recipients: **COLLEGE AND UNIVERSITIES**

Total Project Amount: **\$190,000**

Project Description:

The College of New Jersey (CNJ) will hold statewide events such as the Peer Institute to share ideas, methods, and strategies to create substance-free events on college campuses. The event trains students from New Jersey colleges and the tri-state area to become peer educators on their respective campuses. Programs will also be developed with the CNJ campus police force and Ewing Township Police Department to address alcohol and other drug-related issues. Police from both agencies will work collaboratively to patrol off-campus housing and popular student gathering spots.

Sussex County Community College will continue its grant program through which interactive online alcohol and substance abuse educational programs are offered to students. Periodic on campus special events and programs are also offered throughout the school year focusing on the dangers of alcohol abuse and driving.

Stockton University will sponsor alcohol/drug education workshops on campus emphasizing the risks associated with alcohol/drug abuse and driving. Personnel from local taverns and restaurants will be trained on how to prevent drunk driving by student customers. The prevention program will include an intensive, three-hour training session leading to certification from Stockton University and regular communication with local restaurants and taverns to offer confidential counseling programs to students who are experiencing problems

with drinking and driving. In addition, peer educators from the university will present alcohol and drunk driving awareness programs to local high school juniors and seniors emphasizing the consequences of intoxicated driving, peer pressure and decision making.

New Jersey City University will focus on training peer educators to present interactively on campus on various issues including alcohol use and abuse. Specialized workshops and information tables are also utilized on a regular basis. Skills and innovative ideas will be developed at two annual retreats for Peer Educators.

William Paterson University will provide creative and innovative ways to educate students about the negative consequences of drinking and driving and encourage the use of designated drivers. A multi-dimensional health educational program will promote positive, safe and healthy choices for William Paterson University students. The use of innovative technology, such as social media, will be used to promote and guide these educational awareness programs throughout the grant period. Funds will be used to strengthen partnerships with existing university Clubs, Greeks, Peer Health Advocates, Residence Life, Athletics, Administration, Faculty and Staff to continue to help promote the campaign.

In general, funds in this area will be used for educational materials that will be distributed at campus events, peer education trainings, and large on-campus special events regarding impaired driving.

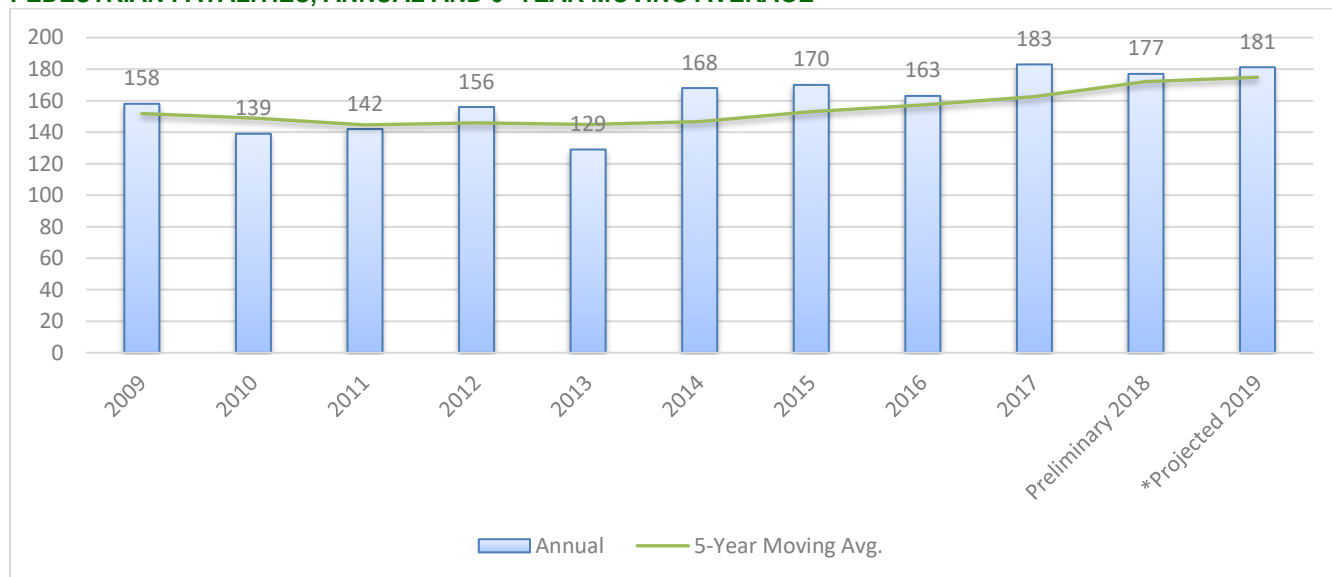

Funding Source: **SECTION 405(d)** Local Benefit: **\$190,000**

PEDESTRIAN AND BICYCLE SAFETY

Pedestrian Safety • General Overview

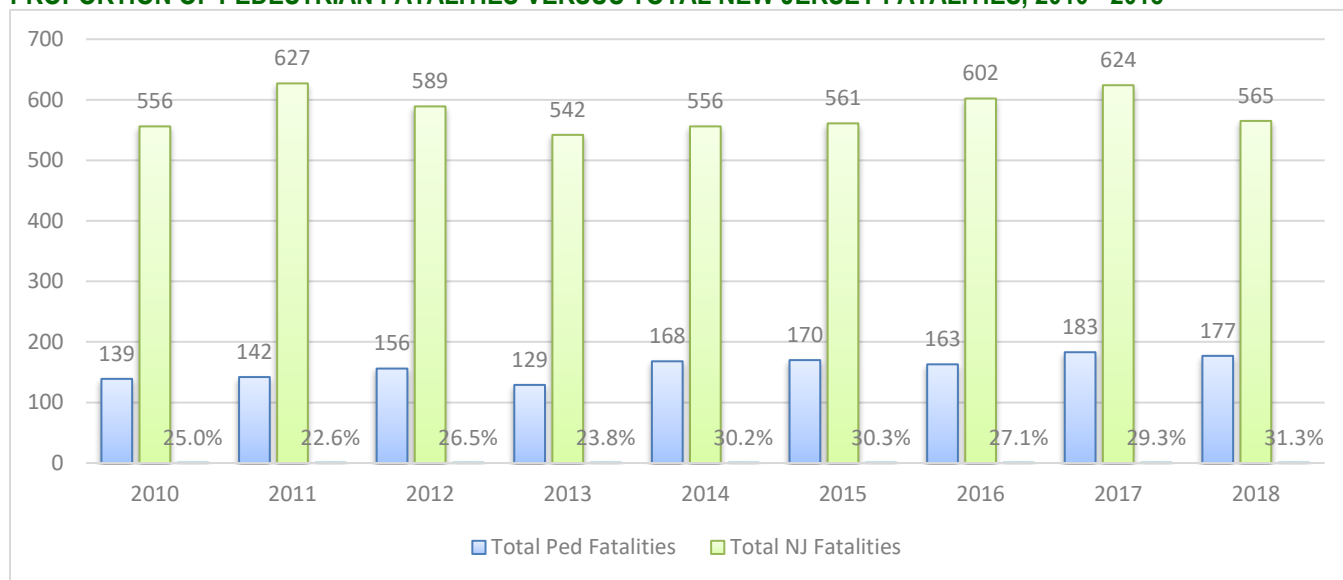

Over the past ten years, from 2009-2018, there have been a total of 1,585 pedestrian fatalities in the State. In 2017, 183 pedestrian fatalities occurred, representing a 12.3 percent increase from the previous year. However, in 2018, a preliminary total of 177 pedestrians were killed on New Jersey's roadways, resulting in a 3.3 percent decrease from 2017. Projected estimates are expected to increase in both 2019 and 2020.

PEDESTRIAN FATALITIES, ANNUAL AND 5-YEAR MOVING AVERAGE

Pedestrian safety remains a major focus of educational and enforcement programs in New Jersey. Pedestrian fatalities accounted for over 27 percent of total roadway fatalities in 2016, 29 percent in 2017, and 31 percent in 2018.

PROPORTION OF PEDESTRIAN FATALITIES VERSUS TOTAL NEW JERSEY FATALITIES, 2010 - 2018

The number of crashes between motor vehicles and pedestrians have increased over the past two years (2016 and 2017). Thorough outreach and education efforts have been made to enhance the awareness of pedestrians in roadways and the visibility of the most dangerous intersections as well as improvements to pedestrian infrastructure in “hot-

spot” locations. Despite an emphasized effort in outreach and education, New Jersey saw an increase in the non-fatal injury rate and fatal injury rates for pedestrians in 2017.

PEDESTRIAN INJURIES BY SEVERITY, 2013 - 2017					
	2013	2014	2015	2016	2017
KILLED	129	168	170	162	183
TOTAL INJURED	4,208	3,842	3,948	4,090	4,115
SUSPECTED SERIOUS INJURY (A)	195	173	175	171	186
SUSPECTED MINOR INJURY (B)	1,199	1,064	1,214	1,220	1,155
POSSIBLE INJURY (C)	2,814	2,605	2,559	2,699	2,774
FATALITY RATE PER 100,000 POPULATION	1.45	1.88	1.90	1.80	2.05
NON-FATAL INJURY RATE PER 100,000 POPULATION	47.22	42.98	44.07	45.56	46.19
TOTAL PEDESTRIAN CRASHES	5.649	5.214	4.709	4.840	5.008

Most pedestrians involved in crashes had one or more contributing factors reported. Forty-five percent of crashes with pedestrians occurred at an intersection. The most common factor for pedestrians was “Crossing Where Prohibited” (2,260 or 12.8%), followed by “Running/Darting Across Traffic” (2,090 or 11.8%).

PEDESTRIAN CRASH CONTRIBUTING CIRCUMSTANCES BY INTERSECTION INVOLVEMENT, 2013 - 2017				
CRASH CONTRIBUTING CIRCUMSTANCE	AT INTERSECTION	AT OR NEAR RAILROAD CROSSING	NOT AT INTERSECTION	TOTAL
Failed To Obey Traffic Control Device	957	249	1	1,207
Crossing Where Prohibited	460	1,800	0	2,260
Dark Clothing/Low Visibility to Driver	744	974	0	1,718
Pedestrian Inattentive	589	1,117	3	1,709
Failure to Yield ROW	133	236	0	369
Walking on Wrong Side of Road	17	98	0	115
Walking in Road When Sidewalk Present	96	390	0	486
Running/Darting Across Traffic	601	1,488	1	2,090
None	2,927	2,048	4	4,979
Other Pedestrian Factors	947	1,837	1	2,785

There are many other circumstances present in pedestrian involved crashes. Many of these circumstances are overlapping and aid in New Jersey’s understanding of crash occurrences that have multiple causation factors. On the following page is a representation of crashes involving pedestrians and how they combine with other performance areas. From 2013-2017, 5.6 percent of crashes involved drugs or alcohol impairment. About 11 percent of crashes involving pedestrians also involved older drivers, 4.5 percent involved a younger driver and 2.9 percent involved unsafe speed.

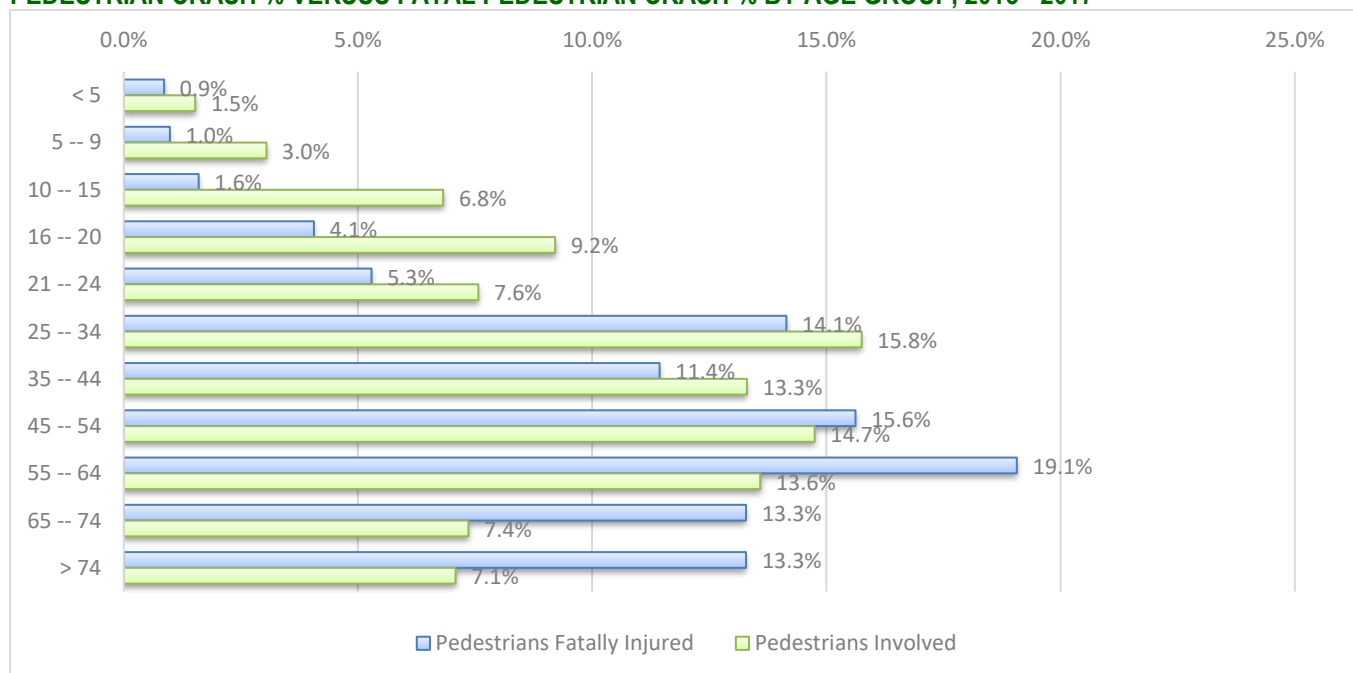

PEDESTRIAN CRASHES AND OTHER PERFORMANCE AREAS, 2013 - 2017								
PEDESTRIANS AND...	2013	2014	2015	2016	2017	TOTAL	5 YR AVG	% OF 5 YR
ALCOHOL INVOLVEMENT	291	302	260	273	303	1,429	286	5.6%
DRUG INVOLVEMENT	7	13	20	10	19	69	14	0.3%
DISTRACTED DRIVING	2,523	2,378	2,018	2,107	2,216	11,242	2,248	44.2%
UNSAFE SPEED	153	149	141	122	178	743	149	2.9%
YOUNG DRIVERS	261	257	201	186	229	1,134	227	4.5%
OLDER DRIVERS	76	756	643	705	691	2,871	574	11.3%
MOTORCYCLES	16	15	23	18	13	85	17	0.3%
TOTAL PEDESTRIAN INVOLVED CRASHES	5,649	5,214	4,709	4,840	5,008	25,420	5,084	100.0%

Pedestrian Safety • Analysis of Age

Pedestrian related crashes continue to be a concern for younger travelers, specifically the 0-15-year-old age group, representing 11.4 percent of total pedestrians involved in motor vehicle crashes up from 9.3 percent (2012-2016). The age group of 16–20 represented 9.2 percent of total pedestrians involved in crashes over the past five years (2013-2017). Pedestrian safety education is an important component for all genders and all age groups. Pedestrian safety is a concern for younger populations due to their lack of access to driving as a mobility option and inability of the youngest pedestrians to cognitively negotiate road traffic situations. Pedestrian safety is also a concern for older populations due to issues such as difficulty crossing at intersections with brief pedestrian signal intervals and being required to travel by foot in non-pedestrian friendly locations.

Over the past five years (2013-2017), the 55-64-year-old age group has represented the largest proportion of pedestrians being struck and killed (19.1%) in the State, followed by 45-54 years old (15.6%). The younger populations, 0-15 years old, represent 3.4 percent of total pedestrians being killed even though they are involved in 11.4 percent of pedestrian involved crashes.

PEDESTRIAN CRASH % VERSUS FATAL PEDESTRIAN CRASH % BY AGE GROUP, 2013 - 2017

Pedestrian Safety • Analysis of Occurrence

The time-of-day occurrence of pedestrian related crashes provides insight as to when crashes between motor vehicles and pedestrians occur. The graph below indicates that from 2013-2017 there was an overrepresentation of fatal pedestrian crashes from 7pm until 6am, consisting of 64.7 percent of all pedestrian fatalities. The highest volume of pedestrian fatalities over the last five years occurred during the 7pm hour, (10.7% of all pedestrian fatalities). During the early commute times of 7-9 am, 13.8 percent of crashes involving pedestrians occurred and 6.6 percent of pedestrian fatalities occur. Twenty-four percent (24.6%) of crashes involving pedestrians and 24.9 percent of fatal pedestrian crashes occurred during the afternoon commute times of 5pm until 8pm.

PEDESTRIAN CRASH % VERSUS FATAL PEDESTRIAN CRASH % BY TIME OF DAY, 2013 - 2017

During the colder months of the year, the amount of daylight dwindles. The months of October, November and December see the highest incidents of pedestrian fatalities, consisting of 35.6 percent of all fatal pedestrian crashes over the past five years (2013-2017). With primary and secondary schools resuming in September and October, the number of pedestrians walking increases and with less daylight the number of crashes tend to increase during these months.

PEDESTRIAN INVOLVED CRASHES BY MONTH, 2013 - 2017				
MONTH	----- FATAL PEDESTRIAN CRASHES -----		----- PEDESTRIAN CRASHES -----	
	CRASHES	PERCENTAGE	CRASHES	PERCENTAGE
JANUARY	68	8.5%	2,321	9.1%
FEBRUARY	48	6.0%	1,784	7.0%
MARCH	86	10.7%	2,004	7.9%
APRIL	46	5.7%	1,833	7.2%
MAY	50	6.2%	2,062	8.1%
JUNE	47	5.8%	1,965	7.7%
JULY	54	6.7%	1,738	6.8%
AUGUST	63	7.8%	1,857	7.3%
SEPTEMBER	56	7.0%	2,041	8.0%
OCTOBER	88	10.9%	2,538	10.0%
NOVEMBER	85	10.6%	2,576	10.1%
DECEMBER	113	14.1%	2,701	10.6%
TOTALS	804	100.0%	25,420	100%

PEDESTRIAN INVOLVED CRASHES BY DAY OF WEEK, 2013 - 2017				
DAY	----- FATAL PEDESTRIAN CRASHES -----		----- PEDESTRIAN CRASHES -----	
	CRASHES	PERCENTAGE	CRASHES	PERCENTAGE
MONDAY	107	13.3%	3,668	14.4%
TUESDAY	114	14.2%	3,947	15.5%
WEDNESDAY	105	13.1%	3,894	15.3%
THURSDAY	115	14.3%	3,891	15.3%
FRIDAY	127	15.8%	4,246	16.7%
SATURDAY	126	15.7%	3,299	13.0%
SUNDAY	110	13.7%	2,475	9.7%
TOTALS	107	13.3%	3,668	14.4%

Although improvements have been made and concerted efforts to educate all users of the roadways on pedestrian safety and awareness continue, more work is required. Education on behalf of motorists and pedestrians needs to be provided to all age groups and regularly conditioned in our young and impressionable populations.

Through education, enforcement and outreach, the DHTS will continue to strive towards reducing pedestrian injuries and fatalities in FFY 2020.

Pedestrian Safety • Analysis of Location

A table that represents the Top 15 municipalities and counties where pedestrian crashes have occurred over the last five years is seen below. The municipalities in which pedestrian crashes are the highest are some of the heaviest populated areas in New Jersey. These municipalities typically experience the highest annual totals of pedestrian crashes and injuries, mostly due to their urban environs, traffic volumes, volume of transient populations commuting, and abundance of high-volume intersections. Over the last five years; 9.48 percent of all pedestrian crashes in the State occurred in Newark, followed by Jersey City (6.08%) and Paterson (4.26%).

PEDESTRIAN INVOLVED CRASHES, TOP 15 MUNICIPALITIES AND TOP 15 COUNTIES, 2013 - 2017						
RANK	MUNICIPALITY	CRASHES	% OF TOTAL	COUNTY	CRASHES	% OF TOTAL
1	Newark City	2,411	9.48%	Essex	4,835	19.02%
2	Jersey City	1,546	6.08%	Hudson	3,731	14.68%
3	Paterson City	1,082	4.26%	Bergen	3,150	12.39%
4	Elizabeth City	509	2.00%	Passaic	2,295	9.03%
5	Irvington Township	486	1.91%	Middlesex	1,743	6.86%
6	Camden City	464	1.83%	Union	1,664	6.55%
7	Passaic City	417	1.64%	Camden	1,259	4.95%
8	East Orange City	401	1.58%	Monmouth	1,073	4.22%
9	Union City	430	1.69%	Ocean	992	3.90%
10	Lakewood Township	388	1.53%	Mercer	916	3.60%
11	Trenton City	369	1.45%	Atlantic	769	3.03%
12	Bayonne City	363	1.43%	Burlington	617	2.43%
13	Clifton City	344	1.35%	Morris	612	2.41%
14	North Bergen	319	1.25%	Somerset	478	1.88%
15	Hackensack City	317	1.25%	Cumberland	357	1.40%

The number of pedestrian crashes that have occurred over the past five years by county and the top three municipalities for each county that had the highest volume of pedestrian crashes as well as the percent of the county total is found on the next page. Essex County (4,835 crashes) had the highest 5-year total (2013-2017) of pedestrian crashes in the State consisting of 19 percent of all pedestrian crashes up from 18.7 percent in 2012-2016. Over 50 percent of all pedestrian crashes in Essex County over the past five years occurred in Newark, followed by Irvington with 11.3 percent.

Hudson County had the second highest number of pedestrian crashes over the past five years (2013-2017) with 3,731) consisting of 14.68 percent of all pedestrian crashes. Over 40 percent of all pedestrian crashes in Hudson County over the past five years occurred in Jersey City, followed by Union City with 10.8 percent.

Though a municipality or county may not have the highest, or even second-to-highest occurrence, it may be experiencing a pedestrian crash problem. For example, Lambertville City in Hunterdon County had a 33 percent increase in pedestrian crashes in 2013-2017 compared to 2012-2016. Elizabeth City in Union County experienced a 29.6 percent increase, and Princeton in Mercer County experienced a 20 percent increase from between the 2012–2016 and 2013–2017 five-year periods. Overall, most counties in New Jersey experienced a decrease in pedestrian crashes from 2012-2016 to 2013-2017 with the exceptions of Monmouth, Passaic and Union County. Further education and pedestrian awareness efforts should be enhanced to improve pedestrian safety, continue the decrease in pedestrian crashes overall, and avert future pedestrian fatalities.

Bicycle Safety • General Overview

Bicycling activity has increased in New Jersey in recent years, including for purposes of commuting to work, running errands, riding for leisure and fitness. Over the ten-year period from 2009-2018, there have been a total of 151 bicyclist fatalities in the State, 16 occurring in 2018 alone, one fewer than 2017. Bicycle fatalities represented 2.8 percent of total roadway fatalities in 2018. As indicated in the chart, the number of bicyclist fatalities has remained rather consistent over the 10-year period, despite there being a concerted effort throughout New Jersey to enhance bicycle safety and awareness. New Jersey identifies an area of cyclist education in the area of helmet use, as 75 percent of fatally injured bicyclists were not wearing a helmet in 2018, down from 88.2 percent in 2017.

BICYCLIST FATALITIES AND UNHELMETED FATALITIES, ANNUAL AND 5-YEAR MOVING AVERAGE

In 2017, bicycles were involved in 0.7 percent of all crashes in the State. Outreach and education efforts have been made throughout the state to enhance the awareness of cyclists riding in roadways. However, the non-fatal injury rate in 2017 is higher than the 5-year average (16.83 non-fatal injuries per 100,000 population in 2017 vs 15.14 5-year average). The fatal injury rate in 2017 is also higher than the 5-year average (0.19 fatal injuries per 100,000 population vs 0.17).

BICYCLIST INJURIES BY SEVERITY, 2013 - 2017						
	2013	2014	2015	2016	2017	AVERAGE
KILLED	14	11	18	18	17	16

TOTAL BICYCLE CRASHES	2,010	1,863	1,959	1,923	1,925	1,936

Most crashes with bicyclists had one or more factors reported. The most common factor for cyclists involved in crashes from 2013-2017 was “None (Driver/Pedalcyclist)” (3,632 or 36%) followed by “Driver Inattention” (1,790

or 17.7%). “Other Driver/Pedalcyclist Action” was cited next most frequently (1,468 or 14.5%), followed by “Failure to Yield the Right of Way to Vehicle/Pedestrian” (699 or 6.9%).

BICYCLIST CONTRIBUTING CIRCUMSTANCES, 2013 - 2017		
CONTRIBUTING CIRCUMSTANCE	BICYCLISTS CITED	% OF BICYCLISTS IN CRASHES

TOTAL BICYCLISTS INVOLVED IN CRASHES	10,096	100.00%

There are many other circumstances present in bicyclist involved crashes. Many of these circumstances are overlapping and aid in New Jersey’s understanding of crash occurrences that have multiple causation factors. A representation of crashes involving bicyclists and how they combine with other performance areas can be found below. From 2013-2017, 3.6 percent of crashes involved drugs or alcohol impairment. About 14 percent of crashes involving bicyclists also involved older drivers, 5.1 percent involved a younger driver and 35 percent involved a distracted driver.

BICYCLE CRASHES BY PERFORMANCE AREA, 2013 – 2017								
BICYCLES AND...	2013	2014	2015	2016	2017	TOTAL	5 YR AVG	% OF 5 YR

Bicycle Safety • Analysis of Age/Gender

Crashes involving bicycles continue to be a concern for younger travelers. Riders in the age group 0-15 years of age accounted for 13.2 percent of all bicycle related crashes from 2013-2017, the largest percentage of all age groups. Meanwhile, the 16-20-year-old rider accounted for the second largest age group, at 11.7 percent. A breakdown of age group and gender of bicyclists injured in crashes is depicted below. Male riders heavily outweigh the number of

female riders in every age group and accounted for at least 81 percent of all cyclists involved in crashes over the last five years. As seen in the table, younger cyclists experience the highest numbers of crashes with motor vehicles, mostly due to their lack of access to other modes of personal conveyance (i.e. driving), and the fact that younger people are still gaining experience bicycling in and around roadways and developing motor skills.

The younger the cyclist the more prone they are to have a conflict with a motor vehicle. According to the data, as the age of the bicyclist increases, there is a decrease in the number of crashes experienced. Overall, in 2018 bicycle fatalities represented roughly 2.8 percent of annual roadway fatalities in the State.

DHTS will continue to partner with law enforcement and transportation management agencies to promote safe and lawful riding practices, including the use of bicycle helmets (mandatory for all riders under 17 years of age), the importance of being highly visible while riding, and the need to share the road with all users.

% OF BICYCLISTS INVOLVED IN CRASHES BY AGE GROUP AND GENDER, 2013 - 2017				
AGE GROUP	% OF BICYCLISTS IN CRASHES	MALE	FEMALE	UNKNOWN

Bicycle Safety • Analysis of Occurrence

The occurrence of crashes involving bicycles by month and by day of week provides insight as to why crashes between motor vehicles and bicyclists occur. During the period from 2013-2017, the months that experienced the highest volume of bicycle crashes were July and August with 1,364 and 1,401 crashes, respectively. July and August each accounted for 14.1 and 14.5 percent, respectively of all crashes involving bicycles over the past five years. As expected, the warmer months accounted for the highest rates of occurrence, with May through September making up 63 percent of all crashes that occurred. According to the data, the Day of Week occurrence does not vary greatly from day-to-day, although Fridays have higher occurrences.

BICYCLE INVOLVED CRASHES BY MONTH, 2013 - 2017				
MONTH	----- FATAL BICYCLE CRASHES -----		----- BICYCLE CRASHES -----	
	CRASHES	PERCENTAGE	CRASHES	PERCENTAGE

WEDNESDAY	12	15.6%	1,448	15.0%
THURSDAY	7	9.1%	1,377	14.2%
FRIDAY	9	11.7%	1,496	15.5%
SATURDAY	12	15.6%	1,367	14.1%
SUNDAY	11	14.3%	1,163	12.0%
TOTALS	77	100.0%	9,680	100.0%

Similar to the trend seen in overall motor vehicle crashes, the majority of bicycle related crashes occur within the afternoon commuting times of 3pm – 6:59pm accounting for 36.8 percent of total bicycle related crashes from 2013-2017. This is due to the increased volume of both bicyclists and motor vehicles operating on the same roadways during those hours. Over the past five years, the deadliest times for bicycle riders have been the 6pm hour through the 10pm hour representing only 25 percent of the possible exposure hours, but 36.4 percent of all bicyclist fatalities.

BICYCLE CRASH % VERSUS FATAL BICYCLE CRASH % BY TIME OF DAY, 2013 - 2017

Bicycle Safety • Analysis of Location

The top ten municipalities have been identified where crashes have occurred over the last five years. Although there is a strong correlation between higher population and a higher number of bicycle crashes occurring in a given municipality, there are some additional towns that make the top ten list, such as Lakewood, Passaic, and Union City, which have higher levels of bicycle crashes than their population alone would dictate. Lakewood Township is the only suburban area that made the top ten list. Over the last five years, 5.74 percent of all crashes involving cyclists in the State occurred in Jersey City, followed by Newark (4.15%) and Camden (2.18%).

The number of bicycle crashes that have occurred over the past five years for each county along with the top three municipalities for each county by the highest volume of bicycle crashes can be found on the next page. Hudson County (1,209 crashes) had the highest five-year total of bicycle crashes in the State making up 12.49 percent of all bicycle crashes over the past five years. Forty-six percent of all bicycle crashes in Hudson County occurred in Jersey City, followed by Union City with 12.8 percent.

BICYCLIST INVOLVED CRASHES, TOP 10 MUNICIPALITIES AND TOP 15 COUNTIES, 2013 - 2017						
RANK	MUNICIPALITY	CRASHES	% OF TOTAL	COUNTY	CRASHES	% OF TOTAL
1	Jersey City	556	5.74%	Hudson	1,209	12.49%
2	Newark City	402	4.15%	Bergen	1,097	11.33%
3	Camden City	211	2.18%	Essex	858	8.86%
4	Lakewood Township	199	2.06%	Monmouth	781	8.07%
5	Paterson City	192	1.98%	Ocean	698	7.21%
6	Union City	155	1.60%	Middlesex	659	6.81%
7	Passaic City	141	1.46%	Union	596	6.16%
8	Elizabeth City	139	1.44%	Camden	590	6.10%
9	Atlantic City	138	1.43%	Passaic	554	5.72%
10	Hoboken City	119	1.23%	Atlantic	412	4.26%

Bergen County had the second highest number of bicycle crashes over the past five years (1,097) accounting for 11.33 percent of all bicycle crashes. Eight percent of all bicycle crashes over the past five years in Bergen County occurred in Hackensack, followed by Fort Lee (6.9%).

It is important to analyze trends occurring in municipalities throughout the State, not only for the highest volumes of bicycle crashes, but also the changes seen over time. Though a municipality may not have the highest, or even second-to-highest occurrences, it may be experiencing an increase in crashes. For example, Elizabeth City in Union County had a 40.4 percent increase in bicycle crashes over the last five years, increasing from a five-year cumulative total in 2012-2016 of 99 to 139 in 2013-2017. Further education and bicycle awareness efforts should be enhanced in these types of communities that are experiencing cumulative increases.

Project Name: **PEDESTRIAN/BICYCLE SAFETY PROGRAM MANAGEMENT**

Sub-Recipient: **DIVISION OF HIGHWAY TRAFFIC SAFETY**

Total Project Amount: **\$140,000**

Project Description:

Funds will be provided for program managers to coordinate, monitor and evaluate projects focused on pedestrian and bicycle safety at the local, county and State level. Funds will be used for salaries, fringe benefits, travel and other administrative costs that may arise for program supervisors and their respective staff. Salaries and fringe benefits represent \$100,000 of the budgeted amount and another \$40,000 is budgeted for travel and other miscellaneous expenditures.

Funding Source: **SECTION 402** Local Benefit: **0**

Countermeasure Strategy: Targeted Enforcement/Education

Effectiveness of Countermeasure

Targeted enforcement can be employed for a wide range of purposes in a wide range of circumstances, so effectiveness is context dependent. A carefully done before/after study with a comparison group examined the effects of sustained, enhanced high-visibility enforcement of motorist yielding to pedestrians, combined with publicity and other community outreach in Gainesville, FL (e.g., flyers given to stopped drivers, information sent home with school children, roadside feedback signs, and earned and paid media) (Van Houten, Malenfant, Blomberg, Huitema, & Casella, 2013; Van Houten, Malenfant, Huitema, & Blomberg, 2013). Driver yielding rose throughout the 1 year study period, which included four, two-week waves of enforcement, along with the other activities. Four of the six enforcement sites observed significant increases in yielding at the end of the period with a fifth experiencing a positive trend. Yielding also increased at the comparison sites, although not by the same degree. Driver awareness of the enforcement, especially awareness of the enforcement-related feedback signs, also increased to a high level (from 13% at baseline to 78% at the end of the year).

A follow up study, four years after the high-visibility enforcement program ended, found that yielding behavior actually increased at both the enforcement and comparison sites after the program had ceased despite there being no additional enforcement efforts (Van Houten, Malenfant, Blomberg, & Huitema, 2017). This suggests that there was a sustained change in the driving culture of the area.

In a NHTSA study by Savolainen, Gates, and Datta (2011), law enforcement officials in Detroit, MI implemented two pedestrian-oriented enforcement campaigns at Wayne State University aiming to educate campus pedestrians on proper use of crosswalks and the importance of obeying signals through the issuance of warnings. The study saw pedestrian violations (walking outside the crosswalk or against the signal) reduced 17% to 27% immediately after the campaign, with sustained reductions of 8% to 10% several weeks after active enforcement ceased. (Countermeasures That Work, 9th Edition, 2017).

The State Highway Safety Office can help ensure correct riding through communications and outreach campaigns and through training law enforcement officers about the laws, the safety benefits of obeying the laws and how to enforce bicycle safety-related laws. Law enforcement can also reinforce active lighting and helmet use laws in effect by stopping and educating offending bicyclists as well as writing citations if appropriate. (Countermeasures That Work, 9th Edition, 2017).

Assessment of Safety Impacts

Reducing pedestrian crashes, fatalities and injuries continues to be a challenge. Efforts to promote pedestrian friendly safe driving as well as the use and practice of safe walking in and around the State will be continued. Police agencies in New Jersey that have conducted comprehensive pedestrian safety programs have seen reductions in pedestrian crashes. In Jersey City, which has been conducting targeted grant funded pedestrian enforcement for 15 years, pedestrian crashes declined to an all-time recorded low (264) in 2017.

Because of the extent of the pedestrian problem in the State, there has been an increase in interagency coordination to address pedestrian safety as a shared problem. Collaborations between State and local governments and State and local law enforcement agencies have been productive.

Linkage between Problem Identification and Performance Targets

The State's pedestrian fatality rate consistently exceeds the national average. Although this number fluctuates, in a typical year approximately 30 percent of fatalities are pedestrian related. Pedestrian crashes represent the second largest category of motor vehicle fatalities and injuries in the State. Pedestrian fatalities decreased in 2018 by three percent. By working with all the State's safety partners, pedestrian safety measures in the three E's will continue to be implemented at identified problem areas throughout the State in an effort to reduce pedestrian crashes, fatalities and injuries.

Enforcement of laws related to bicycling is an important, but often overlooked task as it relates to police departments. A one-day training program has been developed in NJ ("Title 39: A Bike Eye's View") that instructs law enforcement in ways to enhance the safety of bicyclists, and feedback to this program has been positive.

Project Name: PEDESTRIAN ENFORCEMENT/EDUCATION PROGRAMS

Sub-Recipients: MUNICIPAL LAW ENFORCEMENT AGENCIES

Total Project Amount: \$1,550,000

Project Description:

Pedestrian crashes occur for a variety of reasons, including errors in judgment by pedestrians and drivers or shortcomings in traffic engineering. Funds will be provided to develop and implement pedestrian safety campaigns in communities that have a high incidence of pedestrian crashes, injuries and fatalities. Emphasis will be placed on citing those motorists who fail to stop for pedestrians in the crosswalk. Funds will be used for overtime enforcement and for printed materials to reinforce safety messages and campaign themes.

A list of the top 100 municipalities, which experienced the highest number of pedestrian crashes over the last five-year period, will be used to target programmatic efforts to decrease pedestrian crashes and injuries. Resources will be targeted into these municipalities, with the cooperation of other statewide partners who can assist in the effort. Annual pedestrian grants will be provided these local jurisdictions to allow for sustained enforcement, backed up by consistent awareness efforts and messaging.

As per the Evidenced Based Enforcement section of this HSP, pedestrian crash weighting factors will also be considered to target pedestrian safety enforcement and educational grant programs. Also, the Crash Analysis Tool will assist in new targeted pedestrian safety programs in locations including the City of Trenton.

To further support and enhance the enforcement efforts, the "Street Smart NJ" educational campaign will be the primary messaging to raise awareness for both pedestrians and motorists of the major rules for pedestrian safety. Grantees will also use earned and social media to promote the program.

Many of the grant funded law enforcement agencies will utilize the Pedestrian Decoy enforcement program to apprehend drivers who fail to stop for pedestrians at intersections and crosswalks. Police officers in plain clothes will pose as pedestrians in marked crosswalks, while other officers watch for violations. Drivers failing to stop will be issued a citation. Officers involved in the enforcement effort will also educate drivers about current pedestrian laws, requiring drivers to stop and remain stopped, and emphasize to pedestrians the need to use due care and not jaywalk or step into traffic outside the required crossing points.

In terms of partnerships, many statewide agencies have a stake in this important issue. DHTS will partner with the North Jersey Transportation Planning Authority, NJ Department of Transportation, Federal Highway Administration and the Transportation Management Associations in implementing the "Street Smart NJ" awareness program in communities that receive funding. In addition, the DHTS will receive assistance in project selection from the New Jersey Bicycle and Pedestrian Advisory Council (BPAC) which is coordinated by the Voorhees Transportation Center, in conjunction with the New Jersey Department of Transportation. The

BPAC advises on policies, programs, research, and priorities to advance bicycling and walking as safe and viable forms of transportation and recreation. Members of the Council include bicycle and pedestrian advocates, engineering and planning professionals, and members from local, county and State agencies representing the transportation, health, environmental, and enforcement fields.

Pedestrian safety overtime hours will be worked at the top pedestrian crash locations in Hudson County, specifically those in which Route 501 (JFK Boulevard) passes through, as part of ongoing evidence-based traffic enforcement effort. Extra enforcement patrols, both uniform and plain clothes, will be utilized at hotspot locations. The purpose of the extra patrols will be to focus on drivers who fail to stop for pedestrians within crosswalks and also to pedestrians who do not use proper cross walks when crossing the roadway.

Other resources include the Department of Transportation's Pedestrian Safety Improvement Program that identifies high risk locations. The program provides for the development and implementation of pedestrian safety elements at locations based on the frequency and severity of crashes. The safety improvements include engineering improvements such as crosswalks, sidewalks, and high-intensity activated crosswalk beacons. It is critical that the DHTS coordinate with DOT on these efforts by offering assistance to implement enforcement and education countermeasures.

The Department of Transportation also advances the *Complete Streets* policies that promote safety for pedestrians, bicyclists and other users of the roadways. This is accomplished through the planning, design, construction, maintenance and operation of new and rehabilitated transportation facilities.

The enforcement initiative previously discussed will be supplemented by the State Pedestrian Safety Enforcement and Education Fund which is a repository for monies provided pursuant to subsection c. of N.J.S.A 39:4-36. Under the statute, a motorist must stop for a pedestrian crossing in the roadway in a marked crosswalk. Failure to stop may result in a fine not to exceed \$200. A total of \$100 of such fine is dedicated to the Fund to be used to award grants to municipalities and counties with pedestrian safety problems. In addition to compensation for law enforcement officers, the monies from the Fund can be used for the following initiatives: engineering and design of traffic signs; purchasing and installing of traffic signs; educational or training materials or media campaigns concerning pedestrian safety; compensation for authorized crossing guards assigned to an intersection, crosswalk, or other roadway; and other commodities. The State Pedestrian Safety Enforcement and Education Fund monies are an important matching component of the DHTS pedestrian safety program efforts.

DHTS will continue to work with its Federal, State, local and non-profit partners as part of the Pedestrian Safety workgroup to develop a standardized training curriculum for law enforcement agencies to assist law enforcement officers in understanding the factors associated with pedestrian crashes, developing countermeasures and enforcement strategies, and recognizing the importance of complete and accurate crash reporting. In addition, the group will review the 2014 Pedestrian Action Plan and provide recommendations for revisions to the Plan.

Funding Source: **SECTION 405(h)** Local Benefit: **\$1,550,000**
Additional Funding Source: **\$ 475,000** (Pedestrian Safety, Enforcement and Education Fund)

Countermeasure Strategy: Youth Bicyclist Training

Effectiveness of Countermeasure

A Cochrane systematic review and meta-analysis of twenty-two studies evaluating non-legislative helmet promotion programs aimed at children under 18 years found the odds of observed helmet wearing were significantly greater among those receiving the interventions (Owen, Kendrick, Mulvaney, Coleman, & Royal, 2011).

One program of comprehensive education for preschool children and their parents, that included a skills and safety rodeo, led to a doubling of helmet use (Britt, Silver, & Rivara, 1998; Rivara & Metrik, 1998).

A school-based injury-reduction program targeting 13- and 14-year-olds incorporating opportunities for instruction, demonstration, rehearsal, feedback, social reinforcement and practice was associated with a 20% increase in observed rate of helmet use among this challenging target age group at 6 months follow-up (Buckley et al., 2009). In France, voluntary helmet use increased from 7.3% in 2000 to 22% in 2010. During that time period, national public awareness and informational campaigns were initiated and carried out promoting helmet use among youth, adults with children, and the general population (Richard, Thélot, & Beck, 2013).

A Canadian program, Operation Headway, involving enforcement of bike helmet legislation, education, rewards for wearing and economic penalties for non-wearing, and provision of helmets to low-income groups was evaluated by Lockhart, Fenerty, and Walling (2010). The researchers found the program increased wearing rates (based on observations pre- and post-intervention), increased knowledge and commitment to wearing a helmet, saw greater public awareness of the law through media tracking, and improved relationships between police and the public (based on anecdotal evidence).

Moreover, further efforts are needed to encourage parents and authority figures (e.g., law enforcement officers, school officials and staff, and health-care professionals) to reinforce and model desired behaviors including the use of a properly fitted bicycle helmet every ride (Maitland, 2013).

A Cochrane review of studies of pedestrian and bicycle conspicuity aids concluded that “fluorescent materials in yellow, red, and orange improved driver detection during the day...” (Kwan & Mapstone, 2004). Even low beam headlights can illuminate figures wearing florescent materials hundreds of feet away, much farther than figures wearing normal clothing (NCHRP, 2004, Strategy B5; NCHRP, 2008, Strategy F2). One study among a cohort of riders who had participated in a large mass bicycle event found results suggesting that consistent use of fluorescent colors provides a protective effect against crashes and injuries (Thornley, Woodward, Langley, Ameratunga, & Rodgers, 2008).

Assessment of Safety Impacts

Properly wearing a helmet significantly reduces the risk of head and brain injury for bicyclists of all ages. This makes helmets the most effective way to reduce head injuries and fatalities resulting from bicycle crashes. Education is most effective when supported by other interventions such as bicycle rodeos. Bike fairs, rodeos and skills training will make riders more aware of safe cycling behavior and encourage helmet usage.

Improving bicyclist conspicuity is intended to make bicyclists more visible to motorists and to allow motorists more opportunity to see and avoid collisions with bicyclists. A common contributing factor for crashes involving bicyclists in the roadway is the failure of the driver to notice the bicyclist, particularly at night.

Linkage between Problem Identification and Performance Targets

The overall number of bicycle fatalities in the state decreased by one in 2018 to 16, representing a 10 percent decrease since 2016. Riders in the age group 0-15 years of age accounted for 13.2 percent of all bicycle related crashes from 2013-2017, the largest percentage of all age groups. 75 percent of fatally injured bicyclists were not wearing a helmet in 2018, down from 88.2 percent in 2017.

Project Name: BICYCLE ENFORCEMENT/EDUCATION LOCAL PROGRAMS

Sub-Recipients: MUNICIPAL AND STATE LAW ENFORCEMENT AGENCIES

Total Project Amount: \$150,000

Project Description:

Funds will be provided to educate bicyclists about the dangers associated with not wearing a helmet while riding. Basic overall education, particularly to those under the age of 17, in the form of community wide education programs on the benefits of wearing a bicycle/safety helmet will be provided. Education and information will also be provided to bicyclists riding between the hours of sunset and sunrise when they are not conspicuous to motorists.

Community-wide education and enforcement efforts will be implemented in various communities to increase bicycle helmet usage. A media and public information campaign will coincide with several bicycle safety clinics in which properly sized and fitted bicycle helmets will be addressed. Education will also be provided on the importance of increasing the visibility of night-time bicyclists in an effort to increase the safety for this group of high-risk cyclists.

Funds will be used to pay for officer overtime, materials for use at safety talks, and printed material that will be handed out to participants at various training programs.

Funding Source: **SECTION 405(h)** Local Benefit: **\$90,000**

OCCUPANT PROTECTION

General Overview

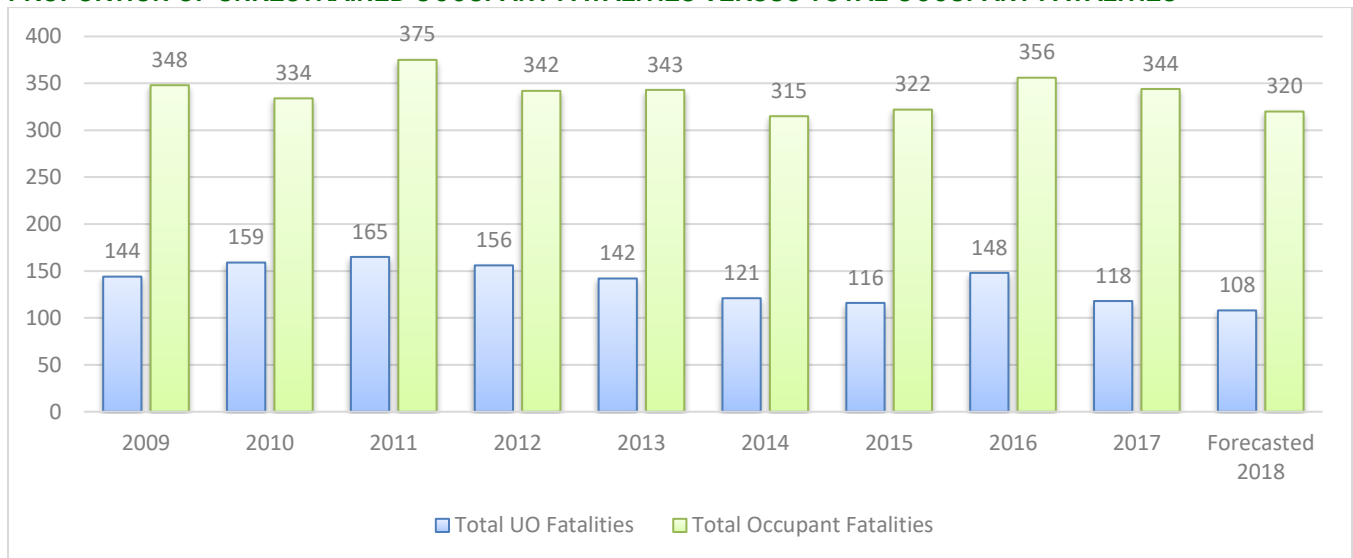

Proper use of seat belts by occupants within motor vehicles is one of the most effective ways of reducing traffic fatalities in motor vehicle crashes. According to NHTSA, approximately 15,000 lives are saved annually in the United States because an occupant was wearing their seatbelt at the time of the crash. Not wearing a seatbelt in motor vehicle crashes not only poses an enormous threat to one's own life, but to all other occupants within the vehicle. In 2017, New Jersey experienced over 3,400 crashes where an occupant was not wearing his or her seat belt, resulting in 118 fatalities.

UNRESTRAINED MOTOR VEHICLE OCCUPANT FATALITIES - ALL SEAT POSITIONS, ANNUAL AND 5-YEAR MOVING AVERAGE

Although final fatal counts are not available at this time, projections estimate 108 people died in motor vehicle crashes that were not wearing their seat belt in 2018, representing 33.8 percent of all occupant fatalities that occurred in the State. This represents a decrease from 2017 when 34.3 percent of fatally injured occupants were unbuckled.

PROPORTION OF UNRESTRAINED OCCUPANT FATALITIES VERSUS TOTAL OCCUPANT FATALITIES

NHTSA estimates that in 2017, the lives of 241 motor vehicle occupants in New Jersey were saved because of seat belt use at the time of the crash. It is also estimated that if every occupant within a motor vehicle is using belts at the time of the crash, 23 additional lives would have been saved in 2017.

Analysis of Usage in Crashes

The 2018 usage rate of 94.46 percent of front-seat occupants obtained in the annual seatbelt survey is 0.39 percent higher than the usage rate observed in 2017 and higher than the nationwide seat belt usage rate of 90 percent (2017).

FRONT-SEAT SAFETY BELT USAGE RATE, 1998 - 2018						
YEAR	NEW JERSEY			UNITED STATES		
	Front-Seat Usage Rate	Percentage Change	Reduction in Non-Use	Front-Seat Usage Rate	Percentage Change	Reduction in Non-Use

2016	93.35%	+ 1.99%	23.0%	90%	1%	9%
2017	94.07%	+ 0.72%	10.9%	90%	0%	-4%
2018	94.46%	+ 0.39%	6.6%			

Seat belt usage for rear-seat passengers in passenger motor vehicles was also observed in the 2018 survey. In total, 2,240 vehicles with a total of 7,275 drivers and occupants were observed in the survey. Of the occupants, 3,383 or 46.5 percent of the occupant observations made were of rear-seat passengers.

Usage rates for rear-seat passengers by seating position and age reveal that 54 percent of surveyed rear-seat passengers use a safety belt, down from 79 in 2017. Children between the age of 0 and 8 years of age had the highest usage rate of 77 percent, compared to a usage rate of 93 percent in 2017. Passengers between the age of 8 and 18 had the next highest usage rate of 60 percent, less than the observed rate in 2017 of 70 percent. The lowest usage rate occurred for adults greater than 18 years of age, having a usage rate of 39 percent, less than the observed rate in 2017 of 48 percent.

Restraint use was also determined for each vehicle type surveyed (passenger cars, pickup trucks, vans and sport utility vehicles). The table shows usage rates for drivers and passengers for each vehicle type. Sport utility vehicles had the highest overall usage rate of 96.3 percent, followed by passenger cars which shared a usage rate of 94.8 percent. Similar to national trends, pickup trucks had the lowest usage rate of 92.65 percent, although this rate is up from 90.51 percent in 2017.

⁴PC — passenger car, ⁵PUT — Pick-up Truck

Analysis of Age/Gender

Seat belt use is a good habit that all drivers and occupants should practice. The forming of this habit is important among younger drivers, as ages 0-30 are the populations with the highest rate of non-use, accounting for approximately 49 percent of all individuals not wearing a seatbelt at the time of a crash. Occupants age 21-25 made up 15 percent of those not wearing a seat belt during a crash event. As individuals age, their decision to wear a seatbelt increases and the volume of injuries sustained in motor vehicle crashes decreases simultaneously.

Males are the most likely to not wear a seatbelt while driving or riding as a passenger in a motor vehicle. Over 62 percent of those unbelted in a motor vehicle crash over the past five years were male and 37.9 percent were female.

UNRESTRAINED CRASH OCCUPANT PERCENTAGE BY AGE GROUP AND GENDER, 2013 - 2017		
AGE GROUP	FEMALE	MALE
0-15	5.0%	5.2%
16-20	5.1%	7.2%
21-25	5.4%	9.6%
26-30	3.7%	7.5%
31-35	3.0%	6.3%
36-40	2.4%	4.9%
41-45	2.5%	4.5%
46-50	2.4%	4.2%
51-55	2.3%	4.0%
56-60	1.7%	3.2%
61-65	1.4%	2.1%
66+	2.9%	3.3%
TOTAL	37.9%	62.1%

PROPORTION OF UNRESTRAINED OCCUPANTS BY AGE GROUP 2013-2017

According to the American Association of Pediatrics (AAP), infants and toddlers should ride in a rear-facing car safety seat as long as possible, until they reach the highest weight or height allowed by their seat. Most convertible seats have limits that will allow children to ride rear facing for 2 years or more.

Once they are facing forward, children should use a forward-facing car safety seat with a harness for as long as possible, until they reach the height and weight limits for their seats. Many seats can accommodate children up to 65 pounds or more.

When children exceed these limits, they should use a belt-positioning booster seat until the vehicle's lap and shoulder seat belt fits properly. This is often when they have reached at least 4 feet 9 inches in height and are 8 to 12 years old.

In 2017, New Jersey updated its Police Accident Report (PAR) per MMUCC recommendations to identify specific child restraint systems being used by our younger passengers. From 2013-2016, the PAR only had one safety equipment field dedicated to young passengers which was updated to three – Rear Facing, Forward Facing and Booster Seat. Below is a breakdown of child restraint systems used by respective age groups. NJDHTS will continue to monitor the trends of ages of our young passengers and the safety equipment used during the crash event to determine appropriate child passenger safety education and outreach programs.

CHILD RESTRAINT USE IN CRASHES 2013 – 2017, GROUPED BY AGE

CHILD RESTRAINT - ALL	2013	2014	2015	2016	2017
> 1	607	1,632	2,296	2,277	-

Analysis of Occurrence

The percentage of unrestrained motor vehicle crashes is consistently higher during the day than the night. In 2017, 80.4 percent of crashes involving unbuckled motorists occurred during the hours of 5:00am and 8:59pm. Night-time occurrences accounted for 19.6 percent of those not wearing a seat belt during a crash in 2017.

UNRESTRAINED CRASHES BY TIME OF DAY AND YEAR, 2013 - 2017										
DAY/NIGHT	----- 2013 -----		----- 2014 -----		----- 2015 -----		----- 2016 -----		----- 2017 -----	
	Unrestrained Crashes	%	Unrestrained Crashes	%	Unrestrained Crashes	%	Unrestrained Crashes	%	Unrestrained Crashes	%
DAY 5AM - 8:59PM	3,522	78.7%	3,504	80.1%	2,980	79.7%	2,924	79.9%	2,771	80.4%
NIGHT 9PM - 4:59AM	954	21.3%	872	19.9%	761	20.3%	737	20.1%	676	19.6%

Crashes involving an unrestrained occupant are relatively evenly distributed by weekday. Over the past five years (2013-2017), 15.72 percent of total unrestrained crashes occurred on a Friday, followed by Thursday with 14.84 percent. Over 27 percent of all unrestrained crashes occurred during the months of May, June and July combined, the top three highest months with unrestrained occupants.

The following graph shows the comparison of the time of day occurrence of unrestrained crashes and all motor vehicle crashes. It is important to note that unrestrained crashes become overrepresented between the hours of 7pm and 5am.

UNRESTRAINED CRASH % VERSUS NJ CRASH % BY TIME OF DAY, 2013 - 2017

Analysis of Location

Monmouth County had the most unrestrained fatalities in the State with 12 accounting for 41.4 percent of the county total of occupant fatalities in 2017. Passaic County had 9 unrestrained occupant fatalities, which made up 81.8 percent of the county's occupant fatalities.

OCCUPANT FATALITIES VERSUS UNRESTRAINED FATALITIES BY COUNTY, 2017							
COUNTY	OCCUPANT FATALITIES	UNRESTRAINED FATALITIES	COUNTY TOTAL %	COUNTY	OCCUPANT FATALITIES	UNRESTRAINED FATALITIES	COUNTY TOTAL %

MERCER	13	6	46.2%				

Data compiled from the 2018 seat belt survey conducted by the New Jersey Institute of Technology revealed an overall usage rate of 94.46 percent. Passaic County had the highest front seat occupant and driver seatbelt usage rates (97.77%) followed by Monmouth County with a rate of 97.44 percent. The lowest front seat occupant usage rate occurred in Essex County with a rate of 87.71 percent, down from 91.21 percent in 2017 (also lowest).

Project Name: **OCCUPANT PROTECTION PROGRAM MANAGEMENT**

Sub-Recipient: **DIVISION OF HIGHWAY TRAFFIC SAFETY**

Total Project Amount: **\$300,000**

Project Description:

Funds will be provided for program managers to coordinate and monitor projects addressing occupant protection with an emphasis on seat belt and child safety seat projects delivered by law enforcement agencies and other safety partners. Funds will be used for salaries, fringe benefits, travel and other administrative costs that may arise for program supervisors and their respective staff. Salaries and fringe benefits represent \$225,000 of the budgeted amount and another \$75,000 is budgeted for travel and other miscellaneous expenditures.

Funding Source: **SECTION 402** Local Benefit: **0**

Countermeasure Strategy: Observational Survey

Effectiveness of Countermeasure

Under the Occupant Protection Grant program (Section 405), an eligible State can qualify for grant funds as either a high seat belt use rate State or a lower seat belt use rate State. A high seat belt use rate State is a State that has an observed seat belt use rate of 90 percent or higher; a lower seat belt use rate State is a State that has an observed seat belt use rate lower than 90 percent. (U.S. DOT/NHTSA – Uniform Procedures for State Highway Safety Grant Program).

Assessment of Safety Impacts

In addition to determining how a State will qualify for Section 405 grant funds, the observational survey provides information on seat belt compliance within the State and reveals locations in the State where countermeasures may be required to increase usage rates.

Linkage between Problem Identification and Performance Targets

The State's front-seat belt usage rate in 2018 was observed at 94.46 percent compared to 94.07 percent in 2017. Passaic County had the highest front-seat belt usage rate at 97.77 percent while Essex County had the lowest rate at 87.71 percent. Overall, 54% of surveyed 2018 rear-seat passengers use a safety belt. This rate is 24% lower than what was observed in 2017. Children between the ages of 0 and 8 years old, had the highest usage rate of 77%, compared to a usage rate of 93% in 2017. Passengers between the age of 8 and 18 had the next highest usage rate of 60%, compared to a usage rate of 70% in 2017. The lowest usage rate occurred for adults, greater than 18 years of age, with a usage rate of 39%, compared to a usage rate of 48% in 2017. These rear seat survey results must be viewed through the understanding that collecting rear seat belt use data is very challenging.

Project Name: **SEAT BELT OBSERVATIONAL SURVEY**

Sub-Recipients: **NEW JERSEY INSTITUTE OF TECHNOLOGY**

Total Project Amount: **\$130,000**

Project Description:

Funds will be provided to perform the statewide seat belt usage rate observation survey to determine the annual front seat occupant seat belt usage rate for the State as per the approved methodology contained therein. The survey will be conducted by researchers from the New Jersey Institute of Technology during the spring and summer of calendar year 2020. Section 402 funds will be used to pay salaries and wages to conduct the survey and prepare the report for submittal to NHTSA.

Funding Source: **SECTION 402** Local Benefit: **0**

Countermeasure Strategy: Enforcement and Education

Effectiveness of Countermeasure

The Center for Disease Control’s systematic review of 15 high-quality studies (Dinh-Zarr et al., 2001; Shults et al., 2004) found that short-term, high-visibility enforcement programs increased belt use by about 16 percentage points, with greater gains when pre-program belt use was lower. Because many of the studies were conducted when belt use rates were considerably lower than at present, new programs likely will not have as large an effect. Following the enforcement program, belt use often dropped by about 6 percentage points demonstrating the ratchet effect typical of these programs (belt use increases during and immediately after the program and then decreases somewhat but remains at a level higher than the pre-program belt use).

Between 2002 and 2005, NHTSA evaluated the effects of *Click It or Ticket* campaigns on belt use in the United States. In 2002, belt use increased by 8.6 percentage points across 10 States that used paid advertising extensively in their campaigns. Belt use increased by 2.7 percentage points across 4 States that used limited paid advertising and increased by 0.5 percentage points across 4 States that used no paid advertising (Solomon, Ulmer & Preusser, 2002).

Hedlund et al. (2008) compared 16 States with high seat belt rates and 15 States with low seat belt rates. The single most important difference between the two groups was the level of enforcement, rather than demographic characteristics or the amount spent on media. High-belt use States issued twice as many citations per capita during their *Click It or Ticket* campaigns as low-belt-use States.

CDC’s systematic review observed that short-term, high-visibility enforcement campaigns also increased belt use more among traditionally lower-belt-use groups, including young drivers, rural drivers, males, African Americans, and Hispanics (Shults et al., 2004).

Nichols and Ledingham (2008) conducted a review of the impact of enforcement, as well as legislation and sanctions, on seat belt use over the past two decades and concluded that sustained enforcement is as effective as “blitz” enforcement (short-term, high-visibility enforcement) and unlike blitz campaigns, is not usually associated with abrupt drops in belt use after program completion.

California, Oregon, and Washington State, States that are reported to use sustained enforcement, have recorded statewide belt use well above national belt use rates since 2002 (California: 91 to 97 percent; Oregon: 88 to 98 percent; Washington: 93 to 98 percent) (Chen, 2014).

Assessment of Safety Impacts

The seat belt is an effective safety tool that not only saves lives, but also significantly reduces the severity of the injury that a vehicle occupant may have sustained if they were not wearing the device. Although the State’s seat belt usage rate (94.46% in 2018) was above the national average of 89.7 percent in 2017, additional rounds of high visibility enforcement backed up by public education are needed to increase seat belt use awareness and compliance.

Linkage between Problem Identification and Performance Targets

It is projected that 108 people died in motor vehicle crashes in 2018 that were not wearing their seat belt, representing 33.8 percent of all motor vehicle occupant fatalities that occurred in the State. NHTSA estimates that in 2017, the lives of 241 motor vehicle occupants in New Jersey were saved because of seat belt use at the time of the crash. It is also estimated that if every occupant within a motor vehicle was using belts at the time of the crash, 23 additional lives would have been saved in 2017. In terms of New Jersey rear seat belt usage, survey results from 2018 indicate that the lowest usage rate occurred for adults greater than 18 years of age, having a usage rate of 39 percent, less than the observed rate in 2017 of 48 percent.

Project Name: **SEAT BELT ENFORCEMENT/EDUCATION**

Sub-Recipients: **STATE AND MUNICIPAL LAW ENFORCEMENT AGENCIES**

Total Project Amount: **\$1,310,000**

Project Description:

The *Click It or Ticket* campaign will be conducted from May 18 – May 31, 2020 to increase seat belt use and educate the public about the impact belt use has on reducing injuries and fatalities in motor vehicle crashes. Funds will be provided to state and municipal law enforcement agencies to implement seat belt saturation and/or tactical overtime patrols at levels consistent with the need shown in the above tables. Approximately 125 state, county and municipal police departments will receive funds to participate in the enforcement efforts. All education-related occupant protection initiatives conducted at the local level will utilize DHTS' *Buckle Up — Everyone, Every Ride* materials. Special emphasis will be placed on rear seat belt usage and nighttime seat belt usage as evidenced by the above data.

New Jersey will also join peers in other States in a coordinated *Border-to-Border* seat belt enforcement campaign that will kick off the annual *Click It or Ticket* campaign. Law enforcement officers in New Jersey will join with colleagues from other States to set up checkpoints and roving patrols near border crossings to enforce seat belt usage. Media activities will also be conducted specific to this program.

A list of municipalities throughout the State that have a high percentage of unrestrained motor vehicle crashes will be utilized to select grant participants during the *Click It or Ticket* mobilization. The results of the annual seat belt survey are also used to target those counties that have the lowest occupant usage rates.

DHTS will rank and prioritize potential grantees based on the above mentioned criteria (ex. Unrestrained crashes, low surveyed belt use, etc.) and will target these agencies, by invitation, to participate in the campaign.

In an effort to employ strategies of “sustained seat belt enforcement” throughout the year, the Division of State Police will schedule personnel on an overtime basis to patrol major New Jersey highways as well as service areas and toll plazas. The purpose of these patrols will be to place an emphasis on the enforcement of the primary seat belt law, the secondary rear passenger law and the child passenger safety law.

Awareness and the importance of wearing a seat belt will be further enhanced by the distribution of education materials, earned media efforts, paid media conducted by NHTSA, *Click It or Ticket* banners and displays on dynamic message signs on major highways. Visibility is further heightened when local and state law enforcement agencies undertake their own earned media efforts and when they join forces with police departments from other states participating in the *Border-to-Border* initiative.

Within this planned activity, the approximate breakdown for FY2020 funding will be:

\$750,000 for *Click It or Ticket* (Municipalities will be offered funding based upon the above data).

\$160,000 to New Jersey State Police for *Click It or Ticket*.

\$150,000 to New Jersey State Police for Sustained Seat Belt Enforcement.

Funding Source: **SECTION 402 - \$810,000** **SECTION 405(b) - \$500,000** Local Benefit: **\$810,000**

Countermeasure Strategy: Child Passenger Safety Education and Enforcement

Effectiveness of Countermeasure

One study evaluated Safe Kids child restraint inspection events held at car dealerships, hospitals, retail outlets and other community locations (to provide as much local exposure as possible). The objective of the study was to measure parent confidence levels, skill development and safe behavior over a 6-week interval using checklists and a matching behavioral survey. Results showed that within the 6-week time period, the child passenger safety checkup events successfully and positively changed parents' behavior and increased their knowledge: children

arriving at the second event were restrained more safely and more appropriately than they were at the first (Dukehart, Walker, Lococo, Decina, & Staplin, 2007).

Another study evaluated whether a “hands-on” educational intervention makes a difference in whether or not parents correctly use their child restraints. All study participants received a free child restraint and education, but the experimental group also received a hands-on demonstration of correct installation and use of the child restraint in their own vehicles. Parents who received this demonstration were also required to demonstrate in return that they could correctly install the restraint. Follow-up observations found that the intervention group was four times more likely to correctly use their child restraints than was the control group (Tessier, 2010).

Inspection stations in urban communities may be effective in reaching households that improperly use child restraints. One study conducted in Los Angeles that reached out to parents and caregivers using advertisements found that vehicles visiting the inspection stations had a rate of child restraint misuse of 96.2% (Bachman et al., 2016). The Los Angeles inspection station study found that factors such as child age, child weight, and vehicle year led to systematic instances of child restraint misuse and should be considered when conducting inspections and addressing deficiencies in restraint use.

An evaluation of the child restraint fitting station network in New South Wales, Australia found that children whose parents attended a fitting station were significantly more likely to be properly restrained than children whose parents had not visited a fitting station. While specific to Australia, these results suggest similar benefits are possible in the United States (Brown, Finch, Hatfield, & Bilston, 2011).

Assessment of Safety Impacts

Children from 0-15 years of age account for approximately 10 percent of unrestrained occupants involved in a crash. The correct use of child safety restraints can have a positive effect on reducing injuries and fatalities in children. The challenge is to ensure that these restraints, whether a car seat or booster seat, are installed in a proper manner.

Linkage between Problem Identification and Performance Targets

Car crashes are the leading cause of death for children from 1-15 years of age. The estimated rate of car seat misuse observed at fitting stations in the State is 80 percent. Occupants required to be secured in car or booster seats have a non-compliance rate of approximately 10 percent based on observational surveys.

Project Name: CHILD PASSENGER SAFETY ENFORCEMENT/EDUCATION/TRAINING

**Sub-Recipients: STATE AND MUNICIPAL LAW ENFORCEMENT AGENCIES, STATE AGENCIES
AND NON-PROFIT ORGANIZATIONS**

Total Project Amount: \$900,000

Project Description:

The Child Passenger Safety (CPS) program, funded through the Division of Highway Traffic Safety (DHTS), will continue its efforts at reducing traffic injury and fatality rates through coordinated enforcement and education programs regarding the proper use of child restraints in motor vehicles. Child safety seat check events have been at the core of the CPS program. This effort will continue to be supported and will include work with the New Jersey Department of Children and Families (DCF) in an effort to reach a greater portion of the urban and disadvantaged population. The combined efforts are focused on several strategies and are designed to meet the National Highway Traffic Safety Administration (NHTSA) goal of reaching at least 70 percent of the state’s population of children under age 15.

During Fiscal Year 2019, grants were provided directly to agencies for CPS programs, technician training, re-training and program development. These grantees have directly worked one-on-one with over 28,000 parents and children and reached another several hundred children with the booster seat education program. Grants will continue to be awarded in 2020 to conduct child passenger safety programs and to conduct technician training and re-training classes.

The grant programs are focused on two major areas: Education programs targeting parents and students, and technician training and re-certification. Parent (or caregiver) education programs are typically conducted at a community event, where a parent or caregiver works in a one-on-one situation with a trained technician and is instructed on how to properly install child safety seats. These events are usually attended by individuals with children age 4 and under with either rear facing (infant) or forward facing (toddler) seats. There are also various educational seminars provided at the municipal and county level.

Enhancing the number and quality of trained New Jersey CPS Technicians involves offering initial certification courses, continuing education units (CEU) for recertification as well as LATCH manual updates (Lower Anchors and Tethers for Children) and regular opportunities for instructors to evaluate the skills of the technicians.

Public Information

The DHTS assists in providing safety messages and information to the motoring public. The *100%, Everyone, Every Ride* message is publicized at child passenger safety programs around the State. The DHTS also promotes National Child Passenger Safety Week each September by calling attention to the importance of safely transporting children and promoting NHTSA's "4 Steps for Kids" campaign. The most up to date standards, issued by NHTSA and based on the American Academy of Pediatrics Child Passenger Safety Technical Report and Policy Statement, are incorporated into all of the support materials. The DHTS website, which can be found at www.njsaferoads.com, educates New Jersey motorists about numerous highway traffic safety priority areas. The following child passenger safety information is available:

- New Jersey's Child Passenger Safety Law
- Child Passenger Safety County Contacts
- Regularly Scheduled CPS Inspection and Education Stations
- Child Restraint Product Recalls
- Child Passenger Safety Training and Technical Resources

Child Passenger Safety County Contacts

Child Passenger Safety Coordinators can be found in each county in New Jersey. Coordinators help the public locate technicians, assist technicians with re-certification needs and provide information on child passenger safety programs in their respective counties. The public may contact these county coordinators directly and arrange for child safety seat program presentations or receive information and guidance on proper installation techniques. In addition, these contacts are tasked to keep DHTS advised of the trends and needs for services within their respective areas.

Child Safety Seat Check Schedule

The DHTS website provides a list of regularly scheduled Child Safety Seat Inspection and Education activities listed by region and county. There are also three regional Child Passenger Safety Stations which are operated by the New Jersey State Police. The sites are located in Passaic (North Region), Neptune (Central Region), and Camden (South Region). Each operates at least once per month. CPS providers report activity conducted directly to NHTSA. This information is included on a searchable map of all CPS permanent stations and is located on the national NHTSA website at NHTSA.gov. The public is able to search by zip code or by state to find the nearest provider.

Permanent Child Safety Seat Inspection and Education Stations

There are permanent Child Passenger Safety Inspection and Education programs operating throughout the state covering all 21 counties. This includes the three Regional State Police stations. All are tasked with expanding their CPS educational outreach to include community education programs for all children age 15 and under in their respective areas. The current safety seat inspection and education stations can be found on the DHTS website.

Funds for personal services will be used to conduct child safety seat checks at these state, county and municipal programs. Child safety seat technicians will perform safety seat checks and conduct educational seminars to reduce the misuse and/or non-use of child safety seats and to provide correct information regarding child passenger safety. Funds will also be used to purchase a small number of child safety seats for distribution at seat check events and fitting stations.

NHTSA Standardized Child Passenger Safety Training Program

DHTS is the state training contact for CPS training and information and also supports the national child passenger safety certification program which provides a national certification to those that are successfully trained. There are now 1,148 individuals trained as certified technicians in the State working in public safety, health and injury prevention programs that remain certified. Forty of the technicians are certified as CPS instructors. In 2020, ten CPS training courses are expected to be held.

In FFY2020, DHTS will host a pair of one-day workshops for all New Jersey CPS technicians, to provide technical updates and CEU's for recertification. Unlike the Regional CPS Conferences that were held in previous years, these workshops will be open only to New Jersey technicians.

The Department of Children and Families (DCF) and its Division of Youth and Family Services (DYFS) will conduct CPS training for staff whose assigned duties include the transportation of children. Staff will be instructed on how to select the correct car seat and provide hands-on practice on installing child restraints into vehicles utilized within the DCF fleet so that children under the Department's supervision, custody or guardianship are safely secured. An additional benefit of this program is that the local offices of the DCF/DYFS will be open and available to provide CPS education and awareness programs to the residents within those respective communities, thereby, enhancing efforts to reach underserved and urban communities.

Within this planned activity, the approximate breakdown for FY2020 funding will be:

\$750,000 for seat check events and fitting station operational grants directly to State, County, and Municipal agencies, as well as integrated into several County CTSP grants.

\$150,000 for primarily education-related CPS grants such as the Central Jersey Family Health Consortium (Safe Kids) and the New Jersey Dept. of Child and Family Services.

Funding Source: **SECTION 405(b)** Local Benefit: **\$650,000**

POLICE TRAFFIC SERVICES

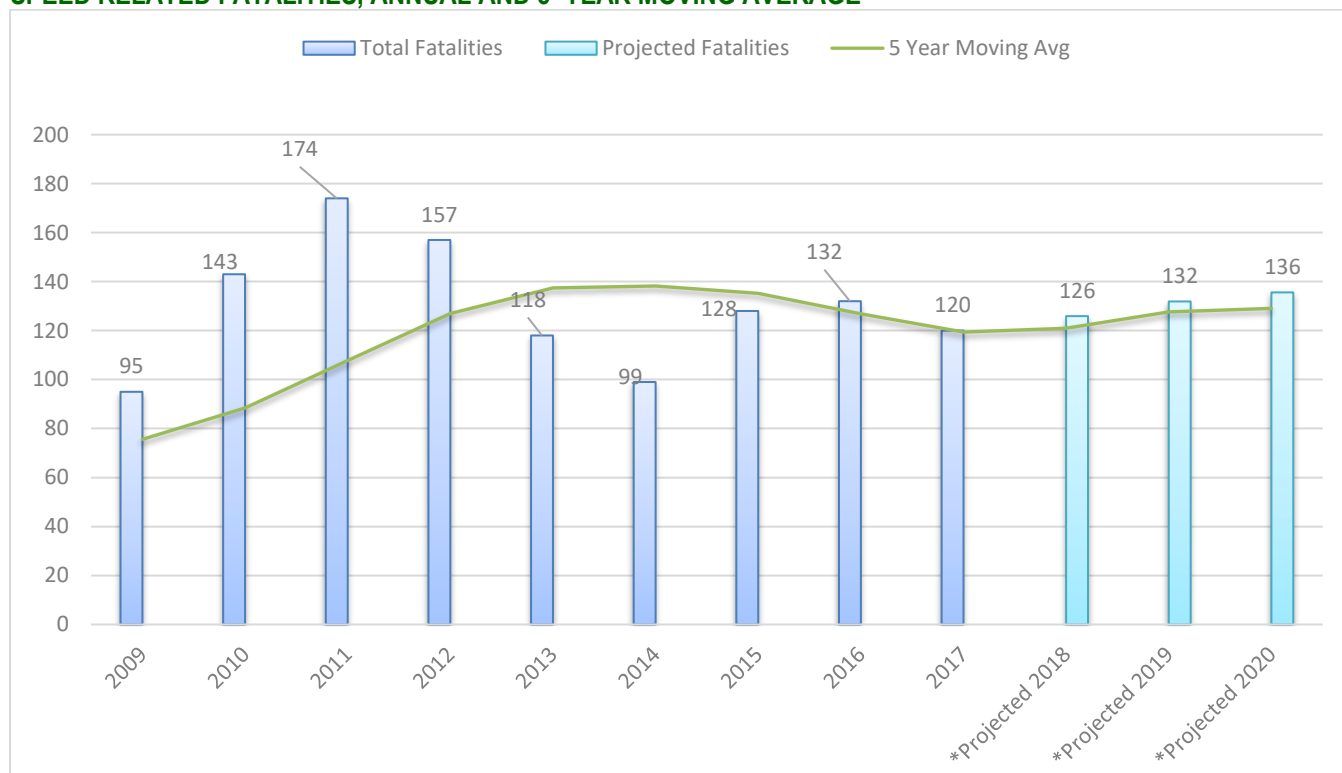

General Overview

Traffic law enforcement plays a critical role in deterring impaired driving, increasing seat belt usage, encouraging compliance with speed laws and reducing unsafe driving actions. Law enforcement agencies have been compelled to be selective in traffic enforcement efforts by providing maximum enforcement effort at selected times and in selected areas.

Traffic crashes occur for a variety of reasons. While some traffic laws are mainly supportive to the traffic system, several are directly and specifically tailored to prevent unsafe acts or to reduce conditions which may cause crashes. These are generally referred to as hazardous moving violations. Hazardous moving violations are identified as a contributing factor in fatal as well as non-fatal crashes. Two of the moving violations that contribute significantly to both fatal and non-fatal crashes and therefore require increased attention are speed and distracted driving infractions.

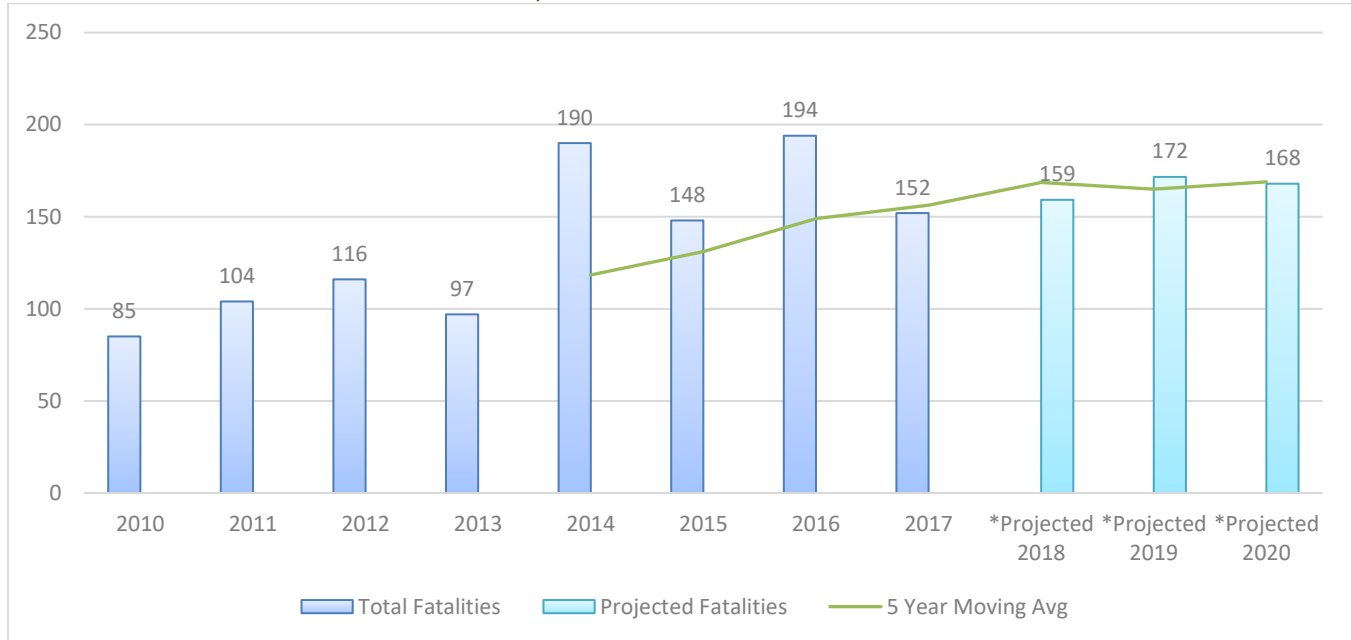

Speed is a major factor in fatal crashes regardless of road type or functional class. New Jersey experienced a significant increase in speed related fatalities from 2008-2011 followed by a decline from 2012-2014.

SPEED RELATED FATALITIES, ANNUAL AND 5-YEAR MOVING AVERAGE

Although speed is a primary contributing factor in fatal and incapacitating crashes every year, there are several other major contributing factors. Driver inattention has remained the most frequently cited cause of fatal and incapacitating crashes, over eight times higher than the total crashes cited for unsafe speed over the past five years (2013-2017). Unsafe speed was the contributing circumstance in 5.8 percent of all crashes in 2017, a slight increase from 5.7 percent in 2016. Driver inattention was a contributing circumstance in 51 percent of crashes in 2017, down from 52 percent in 2016.

DISTRACTED DRIVING RELATED FATALITIES, ANNUAL AND 5-YEAR MOVING AVERAGE

Note: Distracted driving fatalities not reported in FARS prior to 2010; five year moving averages not available prior to 2014.

There are many other circumstances present in distracted driving and unsafe speed involved crashes. Many of these circumstances are overlapping and aid in New Jersey's understanding of crash occurrences that have multiple causation factors. Distracted driving and unsafe speed crashes and how they combine with other performance areas are represented in the next two tables.

From 2013-2017, 3.8 percent of distracted driving crashes and 8.1 percent of unsafe speed crashes involved drugs or alcohol impairment. About 14 percent of distracted driving and 18.1 percent of unsafe speed involved crashes also involved young drivers. Almost 18 percent of distracted driving and 6.8 percent of unsafe speed crashes involved older drivers. Approximately 3.4 percent of distracted driving crashes also involved speed, but 29 percent of unsafe speed crashes involved distracted driving.

DISTRACTED DRIVING CRASHES BY PERFORMANCE AREA, 2013 – 2017								
DISTRACTED DRIVING AND...	2013	2014	2015	2016	2017	TOTAL	5 YR AVG	% OF 5 YR

Analysis of Age/Gender

The most prominent age group that operated a vehicle at unsafe speed is 16-25 years of age, with male drivers comprising 56.3 percent of the total drivers of vehicles cited with unsafe speed as a contributing circumstance over the past five years. Nearly 40 percent of all drivers cited for unsafe speed during a crash were between the ages of 16-30.

SPEED RELATED CRASHES BY DRIVER AGE GROUP AND GENDER, 2013 - 2017

Analysis of Occurrence

The occurrence of crashes involving unsafe speed and distracted driving aids decision makers in addressing the specific patterns that may be taking place on New Jersey's roadways. Being able to identify the time-of-day, day-of-week and month of the year occurrences helps narrow the window where enforcement efforts would become the most effective. The five-year cumulative total of fatal crashes and total crashes for unsafe speed and distracted driving occurrences is provided below.

UNSAFE SPEED AND DISTRACTED DRIVING CRASHES BY DAY OF WEEK AND MONTH OF YEAR, 2013 - 2017								
DAY / MONTH	UNSAFE SPEED				DISTRACTED DRIVING			
	Fatal Crashes	% of Total	Crashes	% of Total	Fatal Crashes	% of Total	Crashes	% of Total
MONDAY	51	9.5%	11,622	13.6%	94	12.6%	107,611	14.7%

OCTOBER	35	6.5%	6,587	7.7%	64	8.6%	65,461	8.9%
NOVEMBER	47	8.8%	6,659	7.8%	57	7.6%	61,869	8.4%
DECEMBER	51	9.5%	9,324	10.9%	72	9.6%	63,867	8.7%

Over the last 5 years, most of the fatal crashes where unsafe speed was a contributing circumstance occurred on the weekend. Saturday accounted for 22.8 percent and Sunday 20 percent of all fatal unsafe speed related crashes. Similar, trends are seen in distracted driving crashes: Fridays and Saturdays represent the highest occurrences of fatal crashes due to distracted driving (15.4% and 16.7%).

Fatal crashes caused by unsafe speed are overrepresented from 7pm-5am. During these hours the percentage of fatal crashes outnumbers the percentage of all crashes caused by unsafe speed.

UNSAFE SPEED CRASH % VERSUS FATAL UNSAFE SPEED CRASH % BY TIME OF DAY, 2013 - 2017

Fatal crashes caused by distracted driving are overrepresented from 7pm to 6am. Almost half of all fatal crashes due to distracted driving occur during those hours.

DISTRACTED DRIVING CRASH % VERSUS FATAL DISTRACTED DRIVING CRASH % BY TIME OF DAY, 2013 - 2017

Analysis of Location

Driver distractions or inattentive driving habits are perpetuated by the advancements in technology and hand-held devices. Studies have shown that using a cell phone while driving increases the chance of an individual being involved in a crash. Other distractions such as eating, drinking, attending to children, personal grooming, reading, and use of other electronic devices can also be distracting and contribute to crashes.

Bergen County experienced the highest number of distracted driving crashes by county, with 81,905. This represents 11.2 percent of statewide distracted driving crashes. Middlesex County (77,963, 10.6%) and Essex County (65,828, 9.0%) had the next highest frequency of distracted driving crashes by county over the past five years.

Project Name: **POLICE TRAFFIC SERVICES PROGRAM MANAGEMENT**

Sub-Recipient: **DIVISION OF HIGHWAY TRAFFIC SAFETY**

Total Project Amount: **\$400,000**

Project Description:

Funds will be provided for program manager expenses related to planning, developing, coordinating, monitoring and evaluating projects within the police traffic services program area. Funds will be used for salaries, fringe benefits, travel and other administrative costs that may arise for program supervisors and their respective staff. Salaries and fringe benefits represent \$365,000 of the budgeted amount and another \$35,000 is budgeted for travel and other miscellaneous expenditures.

Funding Source: **SECTION 402** Local Benefit: **0**

Countermeasure Strategy: Speeding and Distracted Driving Enforcement

Effectiveness of Countermeasure

High-visibility enforcement campaigns have been used to deter speeding and aggressive driving through specific and general deterrence. In the high-visibility enforcement model, law enforcement target certain high-crash or high-violation geographical areas using either expanded regular patrols or designated aggressive driving patrols. The objective is to convince the public that speeding and aggressive driving actions are likely to be detected and that offenders will be arrested and punished.

Several studies have reported reductions in crashes or reductions in speeding or other violations attributed to both general and targeted high-visibility enforcement campaigns. Although the evidence is not conclusive, the trends are promising. These efforts have included a substantial increase in general traffic enforcement in Fresno, California (Davis et al., 2006), and a neighborhood high-visibility speed enforcement campaign in Phoenix and Peoria, Arizona (Blomberg & Cleven, 2006).

A 2008 test of a 4-week, high-visibility enforcement campaign along a 6-mile corridor in London, U.K. with a significant crash history found significant reductions in driver speeding in the enforced area. There was also a halo effect up to two weeks following the end of the campaign (Walter, Broughton, & Knowles, 2011). The campaign was covered by print media as well as by billboards and active messaging along the enforced corridor.

In addition to high visibility enforcement campaigns and automated enforcement, a number of technologies have been recommended to address speeding and aggressive driving (NHTSA, 2001). Laser speed measuring equipment can provide more accurate and reliable evidence of speeding (NHTSA, 2001a) (Countermeasures That Work, 8th Edition, 2015).

Recently, NHTSA has examined whether the HVE model could be effective in reducing hand-held cell phone use and texting among drivers.

Results from the NHTSA HVE program suggest hand-held cell phone use among drivers dropped 57% in Hartford and 32% in Syracuse (Chaudhary et al., 2014). The percentage of drivers observed manipulating a phone (e.g., texting or dialing) also declined. Public awareness of distracted driving was already high before the program, but surveys suggest awareness of the program and enforcement activity increased in both Hartford and Syracuse. Surveys also showed most motorists supported the enforcement activity. In California and Delaware, similar reductions in cell phone use were observed following the campaign, although decreases were also noted in comparison communities (Schick et al., 2014).

Assessment of Safety Impacts

Noncompliance with traffic laws pertaining to speed and distracted driving cause many hundreds of crashes annually. The effectiveness of enforcement in reducing these crashes stems from the basic premise that drivers will adjust their behavior if they perceive there is a significant chance they may be cited for the violation and

given a ticket. Visible enforcement programs can increase drivers' perceptions of the enforcement-related risks of speeding and distracted driving and can be effective in deterring drivers from speeding and driving distracted.

Traffic law enforcement personnel need accurate and reliable equipment to monitor traffic speeds and provide evidence that meets the standards of proof needed to uphold a speed limit citation. The use of speed detection equipment provides a means of increasing enforcement effectiveness and permits police administration to make better use of scarce personnel.

Linkage between Problem Identification and Performance Targets

Both speed and distracted driving related fatalities have been noteworthy concerns over the past five years. Speed and distracted driving crashes account for nearly 6 percent and 51 percent of all crashes respectively. There is an over-representation of speed and distracted driving crashes in Bergen, Essex, Middlesex, and Monmouth Counties. Particular emphasis will be placed on implementing programs in high crash locations identified in these counties.

Speed is a contributing factor in 15 percent of all fatal and injury crashes in Division of State Police patrolled areas. The use of radar equipment assists law enforcement in both the detection and apprehension of motorists driving at excessive and unlawful speeds. The identification of high-speed related crashes on State Police patrolled roadways will dictate the allocation of resources in those areas.

Project Name: ENFORCEMENT PROGRAMS

Sub-Recipients: STATE AND MUNICIPAL LAW ENFORCEMENT AGENCIES

Total Project Amount: \$4,520,000

Project Description:

Funds will be provided to allow municipal and State law enforcement agencies to participate in high visibility enforcement efforts designed to deter speeding and aggressive driving. Saturation patrols will concentrate on the above (data-identified) problem areas, including main arteries into and out of towns, where speed is a major problem and roadways that have historically experienced high crash rates.

Speed detection is the backbone of traffic enforcement programs aimed at reducing crashes and injuries. Radar speed detection remains one of the most cost effective means of speed enforcement. Supplemental speed enforcement details will be targeted to enforce speeding violations exclusively through the use of radar speed detection devices. These details will be scheduled at targeted times in pre-determined areas where crashes involving unsafe speed as a contributing factor have been documented.

Funds will be used to deploy Division of State Police supplemental radar and laser team details dedicated to speeding violator enforcement.

On an overtime basis, funds will also be provided to police agencies to conduct special enforcement patrols targeting distracted drivers not complying with the state's cell phone/texting law. The initiative will also continue to promote the #77 alert system that will not only be used for reporting aggressive driving but also will be used to report drivers identified on cell phones while driving.

Further analysis of crashes will be performed to identify which regions, counties and towns are overrepresented in distracted driving crashes. Though generally pervasive and widespread, the most overrepresented communities will be contacted and offered grants to address the problems in their respective jurisdictions. The grant program will consist of offering funds to towns during National Distracted Driving Awareness Month in April. These grants will be implemented for approximately three weeks. In addition, county prosecutor offices and sheriff's departments in high volume/high crash counties will coordinate the distribution of funds to local towns on a year-round basis in those areas and regions of the State that have been identified with high distracted driving crash rates.

A list producing the occurrence of crashes involving distracted driving by region will be developed to assist in determining grantee participation in the annual *U Drive. U Text. U Pay* campaign. Those towns that are overrepresented in distracted driving crashes will be asked to participate in high visibility enforcement efforts to reduce cell phone use among drivers. Law enforcement officers will actively seek out phone users through special roving patrols or through spotter techniques.

It is anticipated that (as in FY2019) approximately \$1.2 million in Section 405(e) funding will be flexed into the Alcohol Enforcement program area for FY2020 to support New Jersey's participation in the national impaired driving crackdowns.

Funding Source: **SECTION 405(e) – \$4,200,000 • SECTION 402 – \$320,000**

Local Benefit: **\$4,000,000 (SECTION 405(e)), \$200,000 (SECTION 402)**

Countermeasure Strategy: Equipment

Effectiveness of Countermeasure

The investigation of traffic crashes using advanced technology equipment provides a substantial improvement over traditional procedures. The number of measurements obtained at a crash scene increases when equipment is used while the time required to collect the measurements decrease the number of man-hours. The increase in the number of measurements results in a more accurate and detailed investigation and crash diagram. The use of computer plotting results in a significant time savings when a detailed crash diagram is needed. (*Evaluation of Advanced Surveying Technology for Crash Investigation*, Kentucky Transportation Center Research Report, 1994).

Assessment of Safety Impacts

Technology today is constantly changing. Technology in regards to crash investigation and crime scene processing is routinely updating to reflect the latest investigative techniques. Updated equipment provides the necessary tools to conduct thorough and proper investigations to ensure a successful prosecution of traffic crashes.

Linkage between Problem Identification and Performance Targets

The Fatal Accident Investigation Unit (FAIU) of the Division of State Police performs many functions related to the investigation of fatal and serious injury motor vehicle crashes and the collection of statistical data related to fatal crashes. FAIU personnel investigate serious and fatal crashes that occur in the patrol areas of the State Police and respond to requests for technical assistance with on scene investigations and/or post collision investigation from county prosecutors' offices and municipal police departments. Proper documentation of crash scenes is a vital part of any investigation and is critical to the successful prosecution of any charges that result. FAIU personnel rely on their advanced training and technical expertise as well as their specialized equipment in order to effectively and efficiently perform these vital functions.

Technology used in crash investigation and crime scene processing routinely updates and changes to reflect the latest investigative techniques. Keeping the FAIU equipment current will allow personnel to effectively process crash scenes in a timely manner.

Project Name: **CRASH INVESTIGATION**

Sub-Recipients: **DIVISION OF STATE POLICE**

Total Project Amount: **\$65,000**

Project Description:

The Division of State Police and its Fatal Accident Unit performs many functions relating to fatal crash investigation. The unit not only investigates serious and fatal crashes that occur in the areas patrolled by the State Police but also responds to requests by county prosecutors and municipal police departments for on-scene investigation and post-crash technical assistance.

Proper documentation of crash scenes is a vital part of any investigation and is critical to the successful prosecution of any charges that result. There are many other benefits that result from the work of the FAIU, including better FARS reports and crash data, and enhancements to the overall Crash Investigation program in the state.

The FAIU and its operations are funded almost entirely through state monies. DHTS grant funding will support the purchase of equipment and software that will allow trained FAIU team members to ensure a complete investigation and assist them in completing reconstructions of serious and fatal motor vehicle crashes.

Funding Source: **SECTION 402** Local Benefit: **0**

Countermeasure Strategy: Traffic Safety Resource Prosecutor

Effectiveness of Countermeasure

Traffic Safety Resource Prosecutors facilitate a coordinated, multidisciplinary approach to the prosecution of impaired driving and other traffic crimes.

TSRPs are typically current or former prosecutors who provide training, education, and technical support to traffic crimes prosecutors and law enforcement personnel throughout their States. Traffic crimes and safety issues include alcohol and/or drug impaired driving, distracted driving, vehicular homicide, occupant restraint, and other highway safety issues. Each TSRP must assess the needs and demands unique to his or her own State and work in conjunction with many agencies to meet these needs. The National Highway Traffic Safety Administration, law enforcement agencies, judicial organizations, crime laboratories (including forensic toxicologists), medical examiners, local media, Governor's Highway Safety Offices' victim advocate groups, and resources available from the National District Attorneys Association's National Traffic Law Center should all be used to facilitate services to all prosecutors and law enforcement. (NHTSA, *Traffic Safety Resource Prosecutor Manual*, 2nd Edition, 2016).

Assessment of Safety Impacts

The TSRP provides training, education and technical support to prosecutors and law enforcement agencies throughout the State. These issues include but are not limited to: alcohol and/or drug impaired driving, vehicular homicide, occupant restraint and other highway safety issues.

Linkage between Problem Identification and Performance Targets

The TSRP is important to the law enforcement community in all traffic safety issues but is most needed and valuable in the field of the enforcement and prosecution of drunk driving offenses. Nearly every municipality in the State has its own Municipal Court, consisting of at least one Municipal Court Judge, a Municipal Prosecutor, a Municipal Public Defender, and associated court staff and personnel. In small jurisdictions and areas with smaller populations, joint or central Municipal Courts are utilized. There has evolved a great need for coordination, training, and support for these diverse entities. Additionally, there is a need for interaction between the courts, law enforcement and other traffic safety agencies.

Furthermore, the State will begin rolling out a new DWI chemical breath test instrument in FFY2020. The TSRP will play an integral part in facilitating this roll out and defending against any court challenges that occur.

Project Name: **TRAFFIC SAFETY RESOURCE PROSECUTOR**

Sub-Recipients: **DIVISION OF CRIMINAL JUSTICE**

Total Project Amount: **\$400,000**

Project Description:

The need for Deputy Attorneys General specializing in the area of prosecution and law enforcement has been underscored through experience developed within the Prosecutors Supervision and Coordination Bureau of the Division of Criminal Justice and in its statutory role over the county prosecutors and municipal prosecutors in the State. In performing this function, the Division of Criminal Justice has recognized the importance of having Deputy Attorneys General who are well versed in both the legal and technical issues associated with the enforcement and prosecution of traffic and motor vehicle violations and the statewide implications of those issues.

The areas of impaired driving, distracted driving, youthful drivers and speed management require coordination and training in the judicial, prosecutorial, and law enforcement fields. There have also been significant legal challenges in the area of chemical breath testing in the State and the need to be aware of the many legal challenges being brought statewide to ensure that a uniform response is taken by the many prosecutors throughout the State and to coordinate a uniform response when needed.

Funds will be used to pay the partial salaries (50% each) of three DAG's as well as travel expenses of these Traffic Safety Resource Prosecutors.

Key priorities for the TSRP's for FY2020 will be facilitating the rollout of the state's new chemical breath test unit for impaired driving enforcement and dealing with the litigation that will accompany the rollout. The TSRP's will also deal with ongoing legal challenges to the validity of drugged driving enforcement and detection programs (DRE).

Funding Source: **SECTION 402** Local Benefit: **\$400,000**

Countermeasure Strategy: Law Enforcement Training

Effectiveness of Countermeasure

The International Association of Chiefs of Police encourages specialized training for law enforcement officers in its publication, *Traffic Safety Strategies for Law Enforcement* (2003), to include traffic safety and related subjects in the battery of courses offered. Such courses should cover crash investigation and other courses with a focus on traffic safety. In the report it notes that both the public and the police agency itself are better served when officers are trained in the most up to date technologies and tools.

Assessment of Safety Impacts

Local police officers are required to conduct investigations immediately after a roadway crash occurs to preserve physical evidence before it is altered or disappears. Fatal crash investigations become more complex and require the scientific processing of data and documentation to contribute to the successful prosecution of criminal charges. Training can assist in helping both local and State police to become proficient in the handling of crash scene evidence. There are a number of other key traffic safety functions that also benefit from ongoing, enhanced training, such as Child Passenger Safety and Impaired Driving detection and apprehension.

Linkage between Problem Identification and Performance Targets

Traffic crashes can be extremely complicated events as they involve both human and mechanical factors. How they occur, who or what caused them, and why they occurred are facts that police must determine. Law enforcement officers generally get some degree of initial training in crash investigation while attending the police academy. This level of training is not adequate for tackling complex crash scenes requiring detailed analysis, especially if the information is needed for court presentations. A longer and more thorough crash investigation course is needed to properly equip police officers with the needed training. Ongoing training and refresher courses are beneficial in many other traffic safety areas as well.

Project Name: **CRASH INVESTIGATION AND SPECIALIZED TRAINING PROGRAMS**

Sub-Recipients: **KEAN UNIVERSITY, RUTGERS UNIVERSITY, DIVISION OF STATE POLICE, AND THE DIVISION OF HIGHWAY TRAFFIC SAFETY**

Total Project Amount: **\$1,325,000**

Project Description:

This task provides training to members of the Division of State Police in specific areas of highway traffic safety that will provide information useful in implementing and promoting new highway traffic safety programs in the State. Funds will be used to pay for travel and training expenses.

Basic crash investigation courses and crash data retrieval technician training (through grants with New Jersey State Police and Kean University) will be held for local and State law enforcement officers. Specialized training programs from the Institute of Police Technology and Management will also be made available. Classes are anticipated to be held in Traffic Crash Reconstruction, Pedestrian/Bicycle Crash Investigation and Motorcycle Crash Investigation and Event Data Recorder Use in Crash Reconstruction.

This task also funds State Police liaisons whose responsibilities include administering crash training programs and interfacing with DHTS along with the various units in the Division of State Police to develop new programs. Funds will be used for salaries of State Police liaisons and to pay instructors that teach the various crash investigation and special training courses to law enforcement officers. Funds will also be used for the purchase and printing of training materials.

In addition to its ongoing training programs relating to Work Zone Safety and NJTR-1 Crash Reporting, Rutgers University will receive funding to implement a new software reporting program for New Jersey DRE's, as well as a pilot program utilizing the emerging technology of Unmanned Aircraft Systems (drones) for crash investigation scene mapping.

Funding Source: **SECTION 402** Local Benefit: **\$1,325,000**

Countermeasure Strategy: Data-Driven Approaches to Crime and Traffic Safety (DDACTS)

Effectiveness of Countermeasure

DDACTS is a law enforcement operational model supported by a partnership among the NHTSA and two agencies of the Department of Justice: The Bureau of Justice Assistance and the National Institute of Justice. The model affords communities the dual benefit of reducing traffic crashes and crime. Drawing on the deterrent value of highly visible traffic enforcement and the knowledge that crimes often involve the use of motor vehicles, the goal of DDACTS is to reduce the incidence of crashes, crime and social harm in communities. (DDACTS Operational Guidelines, March 2014).

Assessment of Safety Impacts

Implementation of the DDACTS model is a starting point for achieving long-term change, where law enforcement professionals take a more evidence-based approach to the deployment of personnel and resources.

Linkage between Problem Identification and Performance Targets

Many police departments have experienced a reduction in funding and sworn officers. Reduced resources diminish departments' abilities to meet rising crime and crash rates. Furthermore, police departments that have not analyzed relevant data do not know if they are deploying available resources efficiently and effectively. A shortage of law enforcement resources is likely to continue, so finding innovative and cost-effective approaches to improving traffic safety in communities will remain a priority.

Project Name: **DDACTS**

Sub-Recipients: **COUNTY AND MUNICIPAL POLICE AGENCIES**

Total Project Amount: **\$125,000**

Project Description:

Funds will be used to implement the DDACTS crime and traffic safety model. In an effort to more appropriately and accurately deploy resources to combat the ongoing traffic and criminal related problems in a community, funds will be used for personnel to compile and analyze the data collected. It is anticipated that 2-3 local law enforcement agencies will participate in the DDACTS initiative. Analysts will be compensated and tasked with generating reports that support directed policing initiatives.

Funding Source: **SECTION 402**

Local Benefit: **\$125,000**

Countermeasure Strategy: Law Enforcement Liaison (LEL)

Effectiveness of Countermeasure

In the realm of traffic safety, law enforcement plays a critical role. As the “boots on the ground” of traffic safety, law enforcement officers are crucial in the effort to reduce crashes, injuries, and fatalities on the roadways. The National Law Enforcement Liaison Program was created by the NHTSA and the Governors Highway Safety Association to create State and regional LELs who can provide technical assistance, communication, motivation, and coordination to the local law enforcement community.

Assessment of Safety Impacts

New Jersey’s LEL serves as a vital link and conduit between DHTS and the State’s law enforcement community. LELs help promote and enhance state and national highway safety programs, initiatives and campaigns and perform a myriad of functions, including planning, organizing, networking, promoting, recruiting, implementing, reporting and evaluating law enforcement’s role in traffic safety projects, activities, and achievements.

Linkage between Problem Identification and Performance Targets

The LEL assists the DHTS staff in recruiting and encouraging State and local law enforcement participation in the national and state traffic safety mobilizations and works toward a culture of sustained and effective traffic enforcement programs. The involvement of the LEL will be used to increase the number of law enforcement agencies participating in traffic safety activities, and to increase the effectiveness of work they do, which will contribute to crash reductions.

Project Name: **LAW ENFORCEMENT LIAISON**

Sub-Recipients: **NEW JERSEY STATE ASSOCIATION OF CHIEFS OF POLICE**

Total Project Amount: **\$90,000**

Project Description:

The LEL Program is designed to enhance the relationship between the highway safety office, law enforcement community and other pertinent partners. The LEL position is funded from a grant to the New Jersey State Association of Chiefs of Police. The LEL will be called upon to solicit and support law enforcement participation in the drunk driving, distracted driving and seat belt mobilizations, training programs and many other traffic safety initiatives. The LEL will also provide information and expertise to the law enforcement community concerning traffic safety issues and will work in close cooperation with the NHTSA Region II Law Enforcement Liaison regarding training issues, enforcement campaigns and programs sponsored by NHTSA. Funds will be used to pay the salary of the LEL and other expenses relating to the responsibilities and duties of the position.

Funding Source: **SECTION 402**

Local Benefit: **\$90,000**

YOUNGER AND OLDER DRIVERS

Younger Drivers • General Overview

A younger driver is defined as an operator of a motor vehicle or motorcycle between 16-20 years of age. During the last ten years (2009-2018), there were 669 total fatalities in crashes that involved a younger driver behind the wheel. Preliminary 2018 figures show younger drivers have been involved in 9.4 percent of total motor vehicle fatalities (53 out of 565), up from 9 percent in 2017.

TOTAL FATALITIES IN CRASHES INVOLVING YOUNGER DRIVERS, ANNUAL AND 5-YEAR MOVING AVERAGE

A total of 18 drivers between the ages of 16-20 died on the State's roadways in 2018. Younger driver fatalities in 2018 accounted for 6.5 percent of total drivers killed, up from 5 percent in 2017. A comparison of the number of younger driver fatalities in relation to the total number of drivers killed is depicted in the table below.

PROPORTION OF YOUNGER DRIVER FATALITIES VERSUS TOTAL NEW JERSEY DRIVER FATALITIES

Although younger driver involvement accounted for 9.4 percent of all fatalities, they were involved in 12.4 percent of all crashes statewide, down from 13 percent in 2016. Compared to all drivers involved in crashes, younger drivers represented 6.9 percent of all drivers involved, down from 7.2 percent in 2016.

YOUNG DRIVER CRASHES VERSUS ALL CRASHES BY YEAR, 2011 - 2017							
	2011	2012	2013	2014	2015	2016	2017
ALL CRASHES	295,094	284,064	289,304	289,873	271,445	279,874	275,925
16-20 YO DRIVER INVOLVED CRASHES	41,468	38,951	37,959	36,040	35,942	36,352	34,261
YOUNG DRIVER CRASHES VS ALL CRASHES*	14.1%	13.7%	13.1%	12.4%	13.2%	13.0%	12.4%
DRIVERS INVOLVED IN ALL CRASHES	554,892	535,626	545,659	546,459	512,773	532,054	523,757
16-20 YO DRIVERS INVOLVED IN CRASHES	44,142	41,316	40,173	38,019	37,986	38,353	36,116
YOUNG DRIVERS VS ALL DRIVERS IN CRASHES*	8.0%	7.7%	7.4%	7.0%	7.4%	7.2%	6.9%

* Excludes undefined driver age.

Most younger drivers involved in crashes had one or more factors reported at the time of the crash. Over the past 5 years in which there were a total of 757,104 contributing circumstances cited, the most common factor for crashes involving younger drivers was “Driver Inattention” (114,329 or 15.1%), followed by “Following Too Closely” (31,200 or 4.22%).

TOP 10 CONTRIBUTING CIRCUMSTANCES IN CRASHES INVOLVING YOUNG DRIVERS, 2013 - 2017						
CONTRIBUTING CIRCUMSTANCE	2013	2014	2015	2016	2017	TOTAL
Driver Inattention	24,119	23,154	23,044	23,391	20,621	114,329
Following Too Closely	5,903	5,704	6,037	6,858	6,698	31,200
Failed to Yield Right of Way to Vehicle/Pedestrian	4,897	4,544	4,716	5,012	4,783	23,952
Unsafe Speed	3,753	3,217	3,349	3,065	2,960	16,344
Improper Lane Change	1,802	1,766	1,955	2,022	2,063	9,608
Road Surface Condition	2,070	2,129	1,815	1,481	1,512	9,007
Backing Unsafely	2,575	2,252	1,180	1,225	1,172	8,404
Failed to Obey Traffic Control Device (Driver/Pedcycle)	1,693	1,559	1,715	1,900	1,143	8,010
Improper Turning	1,518	1,486	1,415	1,607	1,424	7,450
Improper Passing	867	807	828	797	877	4,176

There are many other circumstances present in crashes, not only with young drivers but all users of the roadway. Many of these circumstances are overlapping and aid in New Jersey’s understanding of crash occurrences that have many causation factors. Below is a representation of crashes involving young drivers and how they relate to other performance areas. From 2013-2017, 8.5 percent of crashes involving a young driver also involved one or more drivers being cited for unsafe speed, 9.5 percent also involved an older driver and over 50 percent involved driver inattention.

YOUNGER DRIVER INVOLVEMENT IN CRASHES BY PERFORMANCE AREA, 2013 – 2017								
YOUNG DRIVERS AND...	2013	2014	2015	2016	2017	TOTAL	5 YR AVG	% OF 5 YR
ALCOHOL INVOLVEMENT	540	526	504	467	393	2,430	486	1.35%
DRUG INVOLVEMENT	69	87	91	94	96	437	87	0.24%
DISTRACTED DRIVING	21,126	20,405	20,313	20,818	18,953	101,615	20,323	56.28%
UNSAFE SPEED	3,547	3,034	3,137	2,911	2,822	15,451	3,090	8.56%

TOTAL YOUNG DRIVER CRASHES	37,959	36,040	35,942	36,352	34,261	180,554	36,111	100.00%

Younger Drivers • Analysis of Gender

Males between the ages of 16-20 accounted for 54 percent of younger drivers involved in crashes over the past five years, with females representing roughly 46 percent. Drivers between the ages of 16 and 20 accounted for 6.9 percent of all drivers involved in crashes in 2017. Over the last five years (2013-2017), only 1.15 percent of all crashes involving younger drivers involved alcohol, an area that is trending downward (1.4% in 2015, 1.28% in 2016).

% OF YOUNG DRIVERS INVOLVED IN CRASHES BY AGE AND GENDER, 2013 - 2017					
AGE	% OF 16-20 AGE GROUP	MALE	FEMALE	UNKNOWN	TOTAL
16 YEARS OLD	0.8%	0.4%	0.4%	0.0%	1,475
17 YEARS OLD	14.0%	7.2%	6.8%	0.0%	26,628
18 YEARS OLD	28.4%	15.2%	13.1%	0.1%	54,093
19 YEARS OLD	28.5%	15.8%	12.6%	0.1%	54,315
20 YEARS OLD	28.4%	15.6%	12.7%	0.1%	54,156
TOTAL	100.0%	54.2%	45.5%	0.3%	190,667

Younger Drivers • Analysis of Occurrence

The occurrence of crashes involving a younger driver helps decision makers in addressing the specific concerns that are facing inexperienced users of the roadways. Day-of-week representation does not vary greatly for younger driver involved crashes, Friday being the most dangerous day for younger drivers (17.1% of all crashes). Younger driver crashes where one or more person was killed mostly occurred on Saturday (19%).

YOUNG DRIVER INVOLVED CRASH % VS YOUNG DRIVER INVOLVED FATAL CRASH % BY DAY OF WEEK, 2013 - 2017

Crashes involving younger drivers from 2013-2017 compared to fatal crashes involving young drivers reveal the majority of young driver involved crashes take place between 2pm and 6:59pm (43.2% of total). There is an overrepresentation of younger drivers involved in fatal crashes from 7pm through 6:59am (51.3%). Over 11 percent of all fatal crashes involving younger drivers take place at 9pm compared to 5.5 percent of all fatal crashes in New Jersey (2013-2017).

YOUNG DRIVER INVOLVED CRASH % VS FATAL CRASHES INVOLVING YOUNG DRIVERS % BY TIME OF DAY, 2013 - 2017

The State has made great advances in creating laws to protect the inexperienced users of the roadways, younger drivers between 16 and 20 years of age. The law governing the rules for new drivers, known as Kyleigh's Law, became effective on May 1, 2010. The law limits the number of passengers allowed in the vehicle for new drivers, as well as limiting the hours in which they can operate a motor vehicle.

There has been a 9.74 percent reduction in crashes involving younger drivers from 2013 (37,959) to 2017 (34,261). In 2013, younger drivers were involved in 13.1 percent of all crashes statewide compared to a 12.4 percent involvement in 2017. Crashes during the permissible driving hours for a young driver possessing a probationary driver license (5am – 11pm) declined 8.83 percent from 2013 to 2017. More importantly, crashes during the restricted driving hours for a young driver possessing a probationary driver license

----- KYLEIGH'S LAW EFFECTS ----- YOUNG DRIVER CRASHES BY YEAR AND TIME PERIOD, 2013 - 2017			
YEAR	11:01PM - 4:59AM	5AM - 11PM	TOTAL
2013	2,463	35,496	37,959
2014	2,146	33,894	36,040
2015	2,118	33,824	35,942
2016	2,150	34,202	36,352
2017	1,901	32,360	34,261
2013 - 2017 Difference	-22.82%	-8.83%	-9.74%

(11:01pm – 4:59am) fell 22.82 percent over the same time period. Not only are the number of crashes involving young drivers declining, but the crashes taking place during the restricted time-period are declining exponentially.

Younger Drivers • Analysis of Location

Over the past 5 years (2013-2017), East Brunswick Township had the largest decrease of crashes involving younger drivers with a 38.1 percent reduction. Toms River and Hamilton Townships had the second and third largest reductions with 37.5 percent and 22.1 percent reductions respectively. Lakewood township stands out as having the largest increase in the number of younger driver involved crashes with a 17.5 percent increase from 2013 to 2017.

TOP 20 MUNICIPALITIES WITH CRASHES INVOLVING YOUNG DRIVERS, 2013 - 2017								
MUNICIPALITY	2013	2014	2015	2016	2017	TOTAL	2013-2017 % CHANGE	% OF STATE TOTAL
Toms River Township	902	849	765	676	564	3,756	-37.5%	2.1%
Woodbridge Township	663	661	651	642	603	3,220	-9.0%	1.8%

Older Drivers • General Overview

An older driver is defined as an operator of a motor vehicle or motorcycle who is 65 years of age and older. During the last ten years (2009–2018), there were 670 older driver (65+) fatalities, up from 662 between 2008-2017. In 2018, 71 drivers age 65 or older were killed compared to 72 in 2017.

OLDER DRIVER FATALITIES, ANNUAL AND 5-YEAR MOVING AVERAGE

Similar to younger drivers, older drivers are considered a higher-risk population on the roadways. The amount of crashes involving older drivers has experienced an upward trend in the total number of motor vehicle crashes since 2006. In 2017 alone, there were 46,305 crashes involving 49,429 older drivers. In 2018, older drivers accounted for 25.7 percent of all driver fatalities in the State and were involved in 16.8 percent of all crashes, both being an increase from 2017. The increasing population of older drivers in the State and involvement in crashes creates an important case for increased education, enforcement and outreach to this group.

PROPORTION OF OLDER DRIVER FATALITIES VERSUS TOTAL NEW JERSEY DRIVER FATALITIES

After a decline in older drivers involved in crashes from 2014 to 2015, New Jersey saw an increase in 2016 with 49,446 drivers. There was a 6.1 percent increase in crashes involving older drivers from 2015 (46,604) to 2016. Older drivers once involved in 14.8 percent of all crashes in 2010 now account for 16.8 percent in 2017, a 0.3 percent increase from 2016.

OLDER DRIVERS INVOLVED IN CRASHES, 2012 - 2017

Most crashes involving older drivers had one or more contributing factors reported at the time of the crash. From 2013-2017 the most common factor for crashes involving older drivers was “Driver Inattention” (142,125 or 26.9%), followed by “Failure to Yield Right of Way to Another Vehicle or Pedestrian” (32,856 or 6.1%), both increases from the 2012-2016 totals.

TOP 10 CONTRIBUTING CIRCUMSTANCES IN CRASHES INVOLVING OLDER DRIVERS, 2013 - 2017						
CONTRIBUTING CIRCUMSTANCE	2013	2014	2015	2016	2017	TOTAL
Driver Inattention	28,210	28,470	28,424	30,144	26,877	142,125
Failed to Yield Right of Way to Vehicle/Pedestrian	6,179	5,873	6,438	7,266	7,100	32,856
Following Too Closely	4,743	5,003	5,879	6,689	6,745	29,059
Backing Unsafely	4,769	4,225	2,006	2,155	2,004	15,159
Improper Lane Change	2,331	2,390	3,084	3,416	3,498	14,719
Failed to Obey Traffic Control Device	2,237	2,200	2,570	2,835	1,885	11,727

Older Drivers • Analysis of Gender

The gender make-up of older drivers involved in crashes shows that males age 65 and older accounted for 57 percent of older drivers involved in crashes while females represented 42 percent during the past five years. These percentages are nearly identical to the gender breakdown found among all New Jersey motorists. Drivers between the ages of 65-69 accounted for 38 percent of total older drivers involved, a slight increase from the previous 5-years (2012-2016 total).

% OF OLDER DRIVERS INVOLVED IN CRASHES BY AGE AND GENDER, 2013 - 2017					
AGE	% OF 65 - 85+ AGE GROUP	MALE	FEMALE	UNKNOWN	TOTAL
65 - 69 YEARS OLD	38.0%	22.5%	15.4%	0.1%	93,963
70 - 74 YEARS OLD	25.6%	14.8%	10.7%	0.1%	63,301

Older Drivers • Analysis of Occurrence

Day of week representation does not vary greatly. Sunday experienced the least volume of all crashes and fatal crashes, with 8 percent and 12.6 percent occurring, respectively. The day of the week that experienced the highest volume of all crashes involving older drivers was Friday which accounted for 17 percent of the total crashes. 16.5 percent of older driver involved fatal crashes occurred on Thursdays.

OLDER DRIVER INVOLVED CRASH % VS OLDER DRIVER INVOLVED FATAL CRASH % BY DAY OF WEEK, 2013 - 2017

Older drivers become overrepresented in motor vehicle crashes from 9am to 4pm, accounting for 65.9 percent of all older crashes over the past 5 years (2013 -2017) down from 66.5 percent from 2012-2016. Thirty seven percent occurred between 12pm and 3pm.

OLDER DRIVER INVOLVED CRASH % VS NJ CRASH % BY TIME OF DAY, 2013 - 2017

Older Drivers • Analysis of Location

New Jersey experienced a slight increase in overall older driver involved crashes from 2016 to 2017, and the chart below shows the Top 20 towns with the most older driver crashes over the last 5 years (2013-2017). Toms River Township experienced the largest decline in older driver crashes with a 28.4 percent decrease from 2013 to 2017, followed by Brick Township with a 20.4 percent decrease. The City of Newark has seen the largest increase in older driver involved crashes, increasing 35 percent from 2013 to 2017 followed by the City of Paterson with a 26.7 percent increase.

TOP 20 MUNICIPALITIES WITH CRASHES INVOLVING OLDER DRIVERS, 2013 - 2017								
MUNICIPALITY	2013	2014	2015	2016	2017	TOTAL	5-YEAR AVG.	2013-2017 % CHANGE
Toms River Township	1,136	1,141	848	855	813	3,657	914	-28.4%

Countermeasure Strategy: Enforcement and Education of Graduated Driver Licensing (GDL) Law

Effectiveness of Countermeasure

High visibility enforcement of GDL provisions should encourage compliance. One study investigated whether well publicized enforcement, including checkpoints near high schools, could increase compliance with seat belt laws and GDL provisions. The study found modest increases in seat belt use and compliance with the GDL passenger restriction, although levels of compliance prior to the enforcement efforts were already high (Goodwin, Wells, Foss & Williams, 2006).

Recent studies evaluating the effectiveness of vehicle decals in New Jersey have found increases in citations for violations of licensing restrictions and decreases in crash rates among intermediate license holders in the year after the requirement went into effect (Curry et al., 2013; McCartt et al., 2012).

Although evaluations of programs to assist parents have not yet shown reductions in younger driver crashes, there is still reason to be optimistic. Some programs have increased limit setting on the part of parents, and several studies show that teenagers whose parents impose stricter driving limits report fewer risky driving behaviors, traffic violations and crashes (Simons-Morton, 2007). Educational programs alone are unlikely to produce changes in behavior. However, education in combination with other strategies may deliver stronger results.

Assessment of Safety Impacts

Teen driving laws are most effective when law enforcement officers are armed with the tools and information necessary to enforce them. The police play a key role in enforcing GDL laws by sending a strong message that the GDL is taken seriously by the law enforcement community. Parents also play a key role in their teenagers' driving and are in the best position to enforce GDL restrictions and impose additional driving restrictions on the young drivers in their home.

Linkage between Problem Identification and Performance Targets

Motor vehicle crashes are the leading cause of death for teenagers. During the last ten years (2009-2018), there were 669 total fatalities in New Jersey in crashes that involved a younger driver behind the wheel. Preliminary 2018 figures show younger drivers were involved in 9.4 percent of total motor vehicle fatalities (53 out of 565), up from 9 percent in 2017. Inexperience makes certain circumstances more dangerous for younger drivers. In addition, immaturity increases the likelihood of young drivers putting themselves in risky circumstances. Areas of concern in relation to young drivers include passenger interaction, belt use, cell phone use, drinking and driving and nighttime driving.

Project Name: GDL ENFORCEMENT AND EDUCATION

Sub-Recipients: DIVISION OF STATE POLICE AND KEAN UNIVERSITY

Total Project Amount: \$100,000

Project Description:

The Division of State Police will conduct patrols in identified high crash areas involving young drivers to enforce the GDL laws and other related traffic violations. In addition, troopers will take part in GDL checks at various high schools throughout the State ensuring that the GDL driver decal is affixed to motor vehicles. Literature will also be distributed to younger drivers on the GDL statute. Funds will be used to compensate troopers for overtime worked on traffic details.

The New Jersey Parent/Teen Driver orientation program will continue to be offered in FFY2020. While the State's GDL is considered one of the most progressive and stringent in the country, it must be clearly understood and supported by parents. The orientation program is designed for parents and their teens in the pre-permit/permit stage of licensing and includes a resource guide containing materials that support parental involvement and safe driving behaviors. The DHTS will work in cooperation with both Kean University and

New Jersey Manufacturers Insurance Company to deliver the program. Funds will be used to compensate instructors for delivering the training program.

Funding Source: **SECTION 402** Local Benefit: **\$25,000**

Countermeasure Strategy: Communication and Outreach to Older Drivers

Effectiveness of Countermeasure

The overall goal of older-driver-related countermeasures is to enable older drivers to retain as much mobility through driving as is consistent with safety on the road for themselves, their passengers, and other road users. “Safe mobility for life” was the key phrase used in the U.S. Department of Transportation’s Safe Mobility for a Maturing Society: Challenges and Opportunities plan published in 2003 (U.S. DOT, 2003). The plan established a number of strategies to address safe mobility on the State or local level. Strategies included educating and training older drivers to assess their driving capabilities and limitations, and improving skills when possible.

Many organizations offer educational material for older drivers to inform them of driving risks, help them assess their driving knowledge and capabilities, suggest methods to adapt to and compensate for changing capabilities, and guide them in limiting their driving during potentially more risky times of day (National Cooperative Highway Research Program, 2004, Strategy D2). The limited information available suggests that some material may increase driver’s knowledge.

Assessment of Safety Impacts

There are several advantages that can be gained by older drivers attending and completing training programs. In addition to becoming aware of new laws and learning about the latest in car technology, defensive driving techniques are reviewed and the effects of medication while driving as well as other safety issues are discussed. In addition, older drivers show a need for self-assessment for age related concerns that limit driving ability. Self-assessment tools and programs assist in reducing the risk for crashes and crash related deaths for older drivers.

Linkage between Problem Identification and Performance Targets

Older drivers represent approximately 17 percent of licensed drivers in the State, but in 2018 older drivers accounted for 25.7 percent of all driver fatalities in the State and were involved in 16.8 percent of all crashes, both being increases from 2017. As drivers age, their physical and mental abilities, driving behaviors, and crash risks all change. Driving is a complex activity that requires a variety of high-level cognitive skills that can diminish through changes that occur with normal aging and/or as a result of other age-related factors.

Project Name: **EDUCATION FOR OLDER DRIVERS**

Sub-Recipients: **AAA**

Total Project Amount: **\$30,000**

Project Description:

Educating older drivers to assess their driving capabilities and limitations will be provided through a series of *CarFit* training programs that will be offered to senior adults. *CarFit*, a program aimed at helping mature drivers ensure that their vehicle “fits” them properly (i.e., mirror placement, distance seated from the steering wheel and gas and brake pedals, etc.), will be offered at AAA offices, senior housing units and community centers. Programs will be targeted for those areas of the State overrepresented in older driver crashes.

Funding Source: **SECTION 402** Local Benefit: **\$30,000**

COMMUNITY TRAFFIC SAFETY PROGRAMS

Countermeasure Strategy: Community Programs and Outreach

In 2018, pedestrian fatalities were the most prevalent in Essex County (25) accounting for 14 percent of all pedestrians killed in the State. The County with the highest number of motor vehicle fatalities (50) was Middlesex County and comprised mostly driver fatalities followed by pedestrians. The most bicycle fatalities (3) occurred in Camden County followed by Essex County with 2 bicycle fatalities. Atlantic and Camden County had the highest number of motorcycle fatalities in 2018 (6).

2018 VICTIM CLASSIFICATION BY COUNTY							
	DRIVER	PASSENGER	PEDESTRIAN	BICYCLIST	MOTORCYCLIST	TOTAL	% CHANGE from 2017

NJ STATE TOTALS	225	95	177	16	51	564	

For Driver Actions, *Driver Inattention* is cited as the State's largest contributing circumstance in crashes annually and was a cited reason in 30.2 percent of all vehicles involved in 2017, up from 29.8 percent in 2016. *Driver Inattention* can consist of a number of different factors, such as cell phone use, applying make-up, talking, eating, and attending to children. It remains a serious contributing factor of crashes on New Jersey's roadways and efforts are in place to provide education and outreach to motorists on the importance of reducing distractions while operating their vehicle. Additional distracted driving elements aim to capture the specifics of inattentive driving behavior and education and clarification on the use of these elements will be provided to reporting officials. *Following Too Closely* was the second-most common circumstance in crashes. *Following Too Closely* can also be a factor in aggressive driving behavior as well as *Unsafe Speed* (4th). *Failure to Yield Right-of-Way to Another Vehicle or Pedestrian* was the third-most common circumstance in crashes.

TOP CONTRIBUTING DRIVER ACTIONS IN CRASHES, 2013 - 2017						
CONTRIBUTING DRIVER ACTION	2013	2014	2015	2016	2017	TOTAL

Effectiveness of Countermeasure

Community Traffic Safety Programs (CTSPs) are locally based groups of highway safety advocates who are committed to solving traffic safety problems through a comprehensive, multi-jurisdictional, multi-disciplinary approach. Members include city, county, state and occasionally federal agencies, as well as private industry representatives and local citizens. The community boundaries are up to the individuals comprising the team, and can be a city, an entire county, a portion of a county, multiple counties, or any other jurisdictional arrangement.

Multi-jurisdictional means several agencies (cities, county and state) plus other groups and organizations working together toward a common goal of improving traffic safety in their community. Multi-disciplinary means integrating the efforts of the 3 “E” disciplines that work in highway safety, including Engineering, Enforcement, and Education/public information. By working together with interested citizens and other traffic safety advocates within their communities, the CTSPs help to solve local traffic safety problems related to the driver, the vehicle and the roadway. A common goal of each Community Traffic Safety Program is to reduce the number and severity of traffic crashes within their community.

The effectiveness of the Seminole County Florida Community Traffic Safety Team (*Best Practices, Florida Community Safety Teams*) effort is demonstrated by the commitment and participation of the various groups and individuals working together to solve traffic safety related problems and issues. By using a team approach, utilizing task forces and combining law enforcement, emergency medical services, public education and engineering efforts, the task force brought a variety of perspectives into play when solving mutual traffic safety problems.

Assessment of Safety Impacts

When a community takes ownership of their traffic safety problems, its members are in the best position to make a difference. Community Traffic Safety Program members share a vision of saving lives and preventing injuries caused by traffic related issues and their associated costs to the community. Their make-up is as various and unique

as the community they represent, but at a minimum include injury prevention professionals, educational institutions, businesses, hospital and emergency medical systems, law enforcement agencies, engineers, and other community stakeholders working together and in partnership with the DHTS.

Linkage between Problem Identification and Performance Targets

An analysis identifying those counties with high crash and fatality rates will be targeted for implementation of community traffic safety programs. Also included in the analysis are factors such as crashes and fatalities related to impaired driving, driver distraction, child passenger safety, occupant protection and pedestrian safety. These include the likes of Atlantic, Burlington, Bergen, Middlesex, Essex, Camden, Cumberland, Gloucester, Hudson, Morris, Ocean and Monmouth counties. Beyond data analysis, a Community Traffic Safety Program can only be implemented where there is local support from the elected and traffic safety community.

Project Name: COMMUNITY TRAFFIC SAFETY PROGRAMS AND OTHER STATEWIDE INITIATIVES

Sub-Recipients: DHTS, COUNTY AGENCIES AND NON-PROFIT ORGANIZATIONS

Total Project Amount: \$2,535,000

Project Description:

Funds will be provided to continue the Community Traffic Safety Programs (CTSPs), which address priority traffic safety concerns in the following counties: Atlantic, Burlington, Camden, Essex, Gloucester, Hudson, Middlesex, Morris, Ocean, Monmouth Somerset, and Union. The South Jersey Transportation Planning Organization will work with representatives from Cumberland, Cape May and Salem to develop and implement traffic safety initiatives in each of those counties. Each CTSP establishes a management system which includes a coordinator and advisory group responsible for planning, directing and implementing its programs. Traffic safety professionals from law enforcement agencies, educational institutions, community and emergency service organizations, and planning and engineering are brought together to develop county-wide traffic safety education programs based on their crash data. The CTSPs also share best practices, and provide information and training throughout their counties. CTSPs are encouraged to expand their partnerships to ensure diversity in membership and communities served. Funds will be used for training costs, program related expenses, printing of educational materials, enforcement activities, Project Coordinator expenses, and public outreach initiatives.

The Brain Injury Alliance of New Jersey (BIANJ) will advance its transportation safety messages with the most current information available, expanding its reach using community outreach, safety coalitions, media and technology. Education is delivered through in person presentations, participation in community events and conferences, and via website and multiple social media platforms, including Facebook, Twitter and Instagram. The program will target pedestrian, bike, motorcycle, teens and all aspects of driving safety in regions of the State that have been identified as having high crash and fatality rates. BIANJ will continue its community outreach by providing a minimum of 150 transportation safety related traveling workshops focused on helmet, pedestrian, motor vehicle and passenger safety issues to school age children, parents, seniors, other at-risk populations and the general public. These presentations are also available in Spanish. In an effort to continue to engage new drivers in safe driving practices, BIANJ will work with high schools across the State as part of the U Got Brains Champion Schools program. This statewide peer-to-peer safe driving program involves teams of students led by a faculty advisor from up to 65 high schools that create teen safe driving campaigns in their schools and communities. BIANJ will also reprise its role as the lead agency that coordinates and hosts the statewide Pedestrian/Bicycle Safety Coalition and Motorcycle Safety Coalition. In the area of motorcycle safety, BIANJ will plan for and host annual statewide trainings for Motorcycle Rider Coaches and oversee the MSF Quality Assurance Specialist Program for Rider Coaches. BIANJ's transportation safety website, JerseyDrives.com, will continue to be updated with the most current information presented in an engaging and informative format and serve as a state resource for drivers, parents and educators. BIANJ will continue to lead the state effort to promote NHTSA's priorities and messaging through a multimedia campaign that includes billboards, radio PSAs, advertising on bus shelters and at high profile events across the state, and through social media.

The State's eight Transportation Management Associations or TMAs (EZ Ride, TransOptions, goHunterdon, Greater Mercer, Cross County Connections, Ridewise, Keep Middlesex Moving, and Hudson), which serve all 21 counties in the State, will partner with local agencies, schools and businesses to conduct traffic safety outreach and education programs. Pedestrian safety will be addressed for all ages while bicycle safety for recreational riders as well as bicycle commuters will be covered with an emphasis on techniques for safely sharing the road. Funds will also be used to raise awareness of the rules of the road. In particular, laws pertaining to occupant protection, ice and snow removal, pedestrian safety, and the use of handheld devices will be addressed.

Funds will be provided to the AAA Clubs of New Jersey to conduct a variety of traffic safety initiatives focusing on child passenger safety, teen driving, motorcycle safety, and general awareness of highway safety. AAA will partner with child passenger safety technicians and hospitals to disseminate child passenger safety toolkits to local pediatricians to foster a greater awareness of proper restraint and free child safety seat checks. *Dare to Prepare* teen driving seminars will be offered for parents and teens at high schools, PTA/PTO meetings, community gatherings, and health fairs. In cooperation with existing public and private motorcycle safety organizations, education seminars will be conducted, and reflective safety vests will be made available to a select number of riders.

Safe Kids New Jersey will work with its network of local coalitions to reach parents, grandparents, healthcare providers, children and communities to promote motor vehicle, bicycle and pedestrian safety. The *Children In and Around Cars* program, designed to teach not only kids about occupant protection and vehicle safety, but parents and other adults as well, will be conducted. Safe Kids New Jersey will also support the child passenger safety certification process including recertification and senior checkers. Bicycle safety events will be held to promote the correct use of helmets. Pedestrian safety programs will strive to teach safe behavior to motorists and child pedestrians. Due to increased distracted driving and walking related incidences, Safe Kids New Jersey will incorporate this topic in all of the information sessions, publications and outreach activities.

The New Jersey Prevention Network coordinates an annual addiction conference that is attended by 800 to 1,000 professionals. These professionals include individuals working predominantly in substance abuse prevention agencies, schools, law enforcement and health care. Funds will be used to create a highway traffic safety track for the annual conference that will focus on reducing traffic fatalities by reducing drug and alcohol use. Providing this specialized track will allow professionals from a wide range of professions to gain new information on alcohol and drugs and how they relate to and impact driver safety.

New Jersey Transit will receive funding to promote traffic safety messages statewide through its rail and bus system and to conduct grade crossing enforcement at targeted high-risk locations to reduce instances of train/vehicle or train/pedestrian collisions.

Funds within this task (through the DHTS Training Grant) will be used for in-house staff training and travel, as well as the DHTS Traffic Safety Educational Symposium to be held in FFY2020. The first such seminar in many years, the event will offer educational and training tracks to be determined that will be beneficial to law enforcement partners such as Child Passenger Safety, Drug Impaired Driving/DRE, social media, data and traffic records management, and innovative enforcement strategies. A separate, one day Child Passenger Safety Technical Update Conference for New Jersey CPS Technicians will be held jointly with the Symposium. DHTS also plans to offer (through the DHTS Training Grant) a pair of Regional Grantee Workshops in FFY2020 to train new and existing grantees in project development, application, and reporting.

Within this planned activity, the approximate breakdown for FY2020 funding will be:

\$1.2 million to County CTSPs.

\$800,000 to non-profit CTSP grants (AAA, BIANJ, TransOptions, Safe Kids).

Funding Source: **SECTION 402** Local Benefit: **\$2,410,000**

PUBLIC INFORMATION AND PAID MEDIA

Countermeasure Strategy: Outreach

Effectiveness of Countermeasure

Public information/education projects are designed and executed to support specific enforcement activities. Both the enforcement and public information/education portions of a project are planned and coordinated at the same time so they are mutually supportive. By conducting enforcement and public information/education in a coordinated, concerted effort, the motoring public is made aware of the police enforcement activities and the perceived risk of being apprehended is increased. Either activity conducted in isolation does not create this same beneficial effect.

Assessment of Safety Impacts

Experience has shown that enforcement conducted in concert with well-planned public information and education is much more effective than when either activity is conducted in isolation. It is essential that public information and education be provided in support of major traffic safety law enforcement programs.

Linkage between Problem Identification and Performance Targets

Paid media efforts in conjunction with national enforcement mobilizations will provide outreach to the general public about impaired driving, distracted driving, and seat belt use as well as other traffic safety related areas. Outreach efforts will also include an additional emphasis on the Hispanic community. According to U.S. Census Bureau population estimates as of 2018, approximately 1.8 million Hispanics reside in the State which represents 20 percent of the population in New Jersey. In 2017, 107 Hispanics were killed in motor vehicle crashes which represented 17.2 percent of all fatalities in the State. Further analysis indicates that Hispanics account for 13 percent of alcohol related driver fatalities. In addition, individuals from Hispanic origin represent over 40 percent of all bicycle fatalities, 34 percent of all pedestrian fatalities and 15 percent of unrestrained occupant fatalities.

The Hispanic community in the state is at a distinct disadvantage in terms of traffic safety knowledge due to the language barrier. Generally concentrated in dense urban environments, these often-times recent immigrants to New Jersey have learned to walk, drive and ride bicycles in other countries with drastically different laws and habits. The Hispanic population in New Jersey greatly benefits from the Division's targeted Spanish language education and work with the media. This is accomplished through statewide paid and earned media.

TRAFFIC RELATED FATALITIES BY CULTURE, 2017

Project Name: **PUBLIC INFORMATION**

Sub-Recipients: **DHTS**

Total Project Amount: **\$620,000**

Project Description:

Public information is the cornerstone of the work in highway safety. The primary function is to educate the public about traffic safety and to induce the public to change their attitudes and behaviors in a way that leads to greater safety on the roads. Funds from this task will be used to support the division's priority programs with printed materials, educational items, media campaigns and special events. Priority areas to be supported include: seat belt usage, child passenger safety, pedestrian safety, bicycle safety, distracted driving, aggressive driving, and impaired driving and motorcycle safety. Funds will be used to print the various publications provided by the DHTS to the public. Brochures and banners will also be purchased and used by law enforcement agencies to supplement the enforcement efforts of the national mobilization campaigns.

DHTS will look to expand its social media presence with an eye towards getting important traffic safety messages out to all segments of the community and furthering the division's mission. Twitter, Facebook and Instagram pages will be used in such a way that the public will be engaged and informed about the division's campaigns and programs.

Funds will be used to place paid advertisements that address various traffic safety messages in an effort to reach the Latino community. This initiative will allow DHTS to continue its efforts to provide information that educates the community about traffic safety issues that will potentially decrease motor vehicle related crashes, injuries and fatalities. The newspaper advertisements are a component in the strategy to combine education and enforcement during the *U Drive. U Text. U Pay* campaign in April, *Click It or Ticket* campaign in May and the *Drive Sober or Get Pulled Over* campaign during Labor Day and between Thanksgiving and New Year's Day. Other highway safety messages will be included in the Spanish language publications including teen driver safety; sharing the road with motorcycles, bicycles, and pedestrians; and child passenger safety.

Funding Source: **SECTION 402** Local Benefit: **0**

MOTORCYCLE SAFETY

General Overview

Motorcycle fatalities have varied over the ten-year period from 2009-2018. The highest number of fatalities (93) occurred in 2011 while the lowest number (50) occurred in 2015. The ten-year average (2009-2018) of motorcycle fatalities is 68 fatalities per year, down from the 2008-2017 average of 71.

MOTORCYCLE FATALITIES, ANNUAL AND 5-YEAR MOVING AVERAGE

The decision to not wear a helmet when riding a motorcycle can mean life or death. Preliminary figures are showing 7 motorcyclists died on the roadways in 2018 without wearing a helmet at the time of the crash, accounting for 13 percent of motorcyclist fatalities (drivers and riders).

UNHELMETED MOTORCYCLE FATALITIES, ANNUAL AND 5-YEAR MOVING AVERAGE

NHTSA estimates that in 2017, 47 motorcycle riders lives were saved because they were wearing a helmet at the time of the crash. It is also estimated that if every rider involved was wearing a helmet at the time of the crash, it could have saved one additional life because of non-helmet use.

HELMET USE IN FATAL MOTORCYCLE CRASHES, 2015 - 2017						
	2015		2016		2017	
	FATALITIES	% OF TOTAL	FATALITIES	% OF TOTAL	FATALITIES	% OF TOTAL
DOT-COMPLIANT HELMET	39	78.0%	55	80.9%	62	74.7%
OTHER HELMET	1	2.0%	5	7.4%	14	16.9%
NO HELMET	5	10.0%	1	1.5%	1	1.2%
UNKNOWN	5	10.0%	7	10.3%	6	7.2%

Alcohol was involved in under 4 percent of all motorcycle crashes over the past five years and was a contributing circumstance in 2.6 percent of all crashes in 2017.

ALCOHOL INVOLVEMENT IN MOTORCYCLE CRASHES, 2013 - 2017						
INVOLVEMENT	2013	2014	2015	2016	2017	TOTAL
NO INVOLVEMENT	2,313	2,114	2,217	2,115	2,081	10,840
INVOLVEMENT	101	79	83	73	87	423
TOTAL	2,414	2,193	2,300	2,188	2,168	11,263
INVOLVEMENT PERCENT OF TOTAL	4.18%	3.60%	3.61%	3.34%	4.01%	3.76%

Motorcycle Driver Impairment is a serious issue among those fatally injured. In 2018, preliminary figures are showing an over representation of fatally injured motorcycle drivers compared to all fatally injured drivers that were under the influence of drugs or alcohol. Fatally injured motorcycle drivers in 2018 made up 9 percent of total killed on New Jersey's roadways, down from 13.3 percent in 2017. In 2018, 23.5 percent of fatally injured motorcycle drivers were under the influence of alcohol, as well as 23.5 percent were under the influence of drugs (illicit or medication). A staggering 62.7 percent of fatally injured motorcyclists were under the influence of alcohol OR drugs (32 of 51). Though 2018 figures are not available for all drivers at the time of this report, in 2017, 27.7 percent of all New Jersey fatalities involved alcohol OR drugs.

There are many other circumstances present in crashes, not only with motorcyclists but all users of the roadway. Many of these circumstances are overlapping and aid in New Jersey's understanding of crash occurrences that have many causation factors. Below is a representation of crashes involving motorcyclists and how they relate to other performance areas. From 2013-2017, 13.8 percent of crashes involving a motorcyclist also involved one or more drivers being cited for unsafe speed, 11.7 percent also involved an older driver, 8.4 percent involved a younger driver and 42.8 percent involved driver inattention.

IMPAIRMENT OF FATALLY INJURED MOTORCYCLE DRIVERS, 2018		
INVOLVEMENT	TOTAL	% OF TOTAL
ALCOHOL ONLY	12	23.5%
DRUGS ONLY (ILLICIT AND MEDICATION)	12	23.5%
ALCOHOL OR DRUGS (ILLICIT AND MEDICATION)	32	62.7%
TOTAL	51	100%
TOTAL KILLED IN NJ WHERE ALCOHOL OR DRUGS INV	173	27.7%

MOTORCYCLE INVOLVEMENT IN CRASHES BY PERFORMANCE AREA, 2013 – 2017								
MOTORCYCLE INVOLVED AND...	2013	2014	2015	2016	2017	TOTAL	5 YR AVG	% OF 5 YR
Distracted Driving	1,016	940	985	945	931	4,817	963	42.8%
Unsafe Speed	325	281	320	330	294	1,550	310	13.8%

Young Drivers	194	166	204	193	193	950	190	8.4%
Alcohol Involvement	101	79	83	73	87	423	85	3.8%
Drug Involvement	3	8	8	6	13	38	8	0.3%
TOTAL MOTORCYCLE INVOLVED CRASHES	2,414	2,193	2,300	2,188	2,168	11,263	2,253	100.0%

Analysis of Age/Gender

The difference in age and gender was a factor in the likelihood of an individual being involved in motorcycle crashes. The 21-35-year-old rider accounted for 40.7 percent of all riders involved in motorcycle crashes and the majority of motorcycle riders involved in crashes were male riders, accounting for over 96 percent of total riders involved in crashes that occurred from 2013-2017.

MOTORCYCLE FATALITIES (DRIVER AND PASSENGER) BY AGE, 2013 - 2017

Riders that operate a motorcycle without proper licensure are also at risk not only to other motorists on the road but also to themselves. Thirty-seven percent of motorcyclists killed on the roadways in 2017 did not have the proper license endorsement to operate that class of vehicle. Ten percent of motorcycle operators who lost their lives did not possess a valid driver license.

LICENSE COMPLIANCE IN FATAL CRASHES FOR MOTORCYCLE DRIVERS, 2015 - 2017						
	2015		2016		2017	
	FATALITIES	% OF TOTAL	FATALITIES	% OF TOTAL	FATALITIES	% OF TOTAL
NOT LICENSED	0	0%	4	6%	6	10%
NO VALID M ENDORSEMENT	10	20%	14	21%	22	37%
VALID ENDORSEMENT	41	80%	48	71%	51	85%
UNKNOWN	0	0%	2	3%	1	2%

Analysis of Occurrence

Motorcycle crashes are typically aligned with overall motor vehicle crash patterns, with the most dangerous hour of the day between 4pm and 5:59pm (18.1% of all motorcycle crashes and 15.2% of fatal motorcycle crashes) time period. Crashes that occur from 8pm–4am (night-time) account for approximately 21 percent of total motorcycle crashes and 35 percent of total fatal motorcycle crashes over the past five years.

MOTORCYCLE CRASH % VERSUS FATAL MOTORCYCLE CRASH % BY TIME OF DAY, 2013 – 2017

Most crashes occur during the warmer months of the year. The most active month for crashes over the past five years is August, accounting for 15 percent of all motorcycle crashes. Almost 69 percent of motorcycle crashes take place between the months of May and September.

PERCENTAGE OF MOTORCYCLE CRASHES BY MONTH, 2013 - 2017

Analysis of Location

An analysis of crashes by county over the past 5 years shows an overall reduction of 10.2 percent. During that same period, Salem, Ocean and Morris counties had the highest reduction in motorcycle-involved crashes at 35 percent, 32 percent, and 26 percent, respectively.

MOTORCYCLE CRASHES BY COUNTY AND YEAR, 2013 - 2017

Countermeasure Strategy: Communication and Outreach

Effectiveness of Countermeasure

A motorcycle is inherently more difficult to operate than a passenger vehicle because it requires more physical skill and strength. The relationship of motorcycle speed and stability is also a critical consideration when riding a motorcycle, as the stability of a motorcycle is relative to speed. As speed increases, the motorcycle becomes more stable, requiring less effort from the operator to maintain its balance, even as it becomes less maneuverable. At very low speeds, the motorcycle becomes less stable, requiring greater effort from the operator to balance it.

Motorcycle riders should be properly trained and licensed. They should be alert and aware of the risks they face while riding; in particular, they should not be impaired by alcohol or drugs. Another objective is to increase other motorists' awareness of motorcyclists by increasing the visibility of motorcyclists and educating drivers on the importance of sharing the road with motorcycles.

Kardamanidis, Martiniuk, Stevenson, and Thistlethwaite (2010) evaluated the results of 23 studies for a Cochrane Review and found conflicting evidence with regard to the effectiveness of motorcycle rider training in reducing crashes or offenses. Due to the poor quality of available studies, the authors were unable to draw any conclusions about its effectiveness.

Several States have conducted communications and outreach campaigns to increase other driver's awareness of motorcyclists. Typical themes are "Share the Road" or "Watch for Motorcyclists." Some States build campaigns around "Motorcycle Awareness Month," often in May, early in the summer riding season. Many motorcyclist organizations, including MSF, SMSA, the Gold Wing Road Riders Association, and State and local rider groups, have driver awareness materials available. Some organizations also make presentations on drivers' awareness of motorcyclists to driver education classes.

Assessment of Safety Impacts

Both Basic and Experienced Rider Courses are offered by the Motor Vehicle Commission in an effort to better prepare riders to recognize potentially hazardous riding situations and encourage riders to assess their own risks and limitations, and to ride within those constraints. More than 8,000 riders received this training in 2018.

Many drivers are not aware of how to safely share roads with motorcycles. Although there are limited empirical studies testing the effectiveness of public awareness campaigns, statewide awareness messages pushed out by shareholders cannot be ignored.

Linkage between Problem Identification and Performance Targets

The State experienced a spike in motorcycle fatalities in 2017 from 66 in 2016 to 83. 2018 preliminary figures show 53 motorcycle fatalities. Motorcyclists account for approximately 10 percent of all traffic fatalities in 2018. Although the younger rider (21-35 years of age) is overrepresented in fatalities, representing 40.7 percent of motorcycle fatalities (2013-2017), one trend that appears to be changing is that fatalities among older motorcyclists and passengers (51+ years of age) have increased. Motorcyclists over 50 years of age now account for 30 percent of motorcycle fatalities (2013-2017), out pacing the younger driver category.

Project Name: MOTORCYCLE TRAINING AND AWARENESS

Sub-Recipients: BRAIN INJURY ALLIANCE

Total Project Amount: \$200,000

Project Description:

The Motorcycle Safety Coalition is a committee of the Brain Injury Alliance of New Jersey and is comprised of stakeholders throughout the State. The Coalition is comprised of the following groups and agencies: AAA Clubs of NJ, ABATE of the Garden State, Backroads USA, NJ Motor Vehicle Commission, Rider Insurance, Sinister Steel Motorcycle Association, DHTS, Statewide TPA's and rider training entities including: Barb's Harley Davidson, Bergen Harley Davidson, Central Jersey Rider Training, Fairleigh Dickinson University,

Harley Davidson of Ocean County, Joint Base McGuire-Dix-Lakehurst (military training), Motorcycle Riding Centers, Motorcycle Rider Training Inc., Motorcycle Training Center, Rider Education of New Jersey, Rider Training of NJ at Camden County College and The Riding Academy of NJ. The accomplishments of the Coalition include educational and awareness programs geared towards the rider and general public, providing Rider Coaches with annual trainings, and development of printed materials. The programs are interactive and engaging and are promoted through the web, social and traditional media with the “Share The Road” message.

Recognizing the importance of training motorcycle riders, the members of the Coalition brought the Motorcycle Safety Foundations Basic Rider Course update (MSF-BRCu) to all the rider training programs. The MSF Quality Assurance Specialist (QAS) program has begun with twenty Rider Coaches trained. The Quality Assurance program will assist the rider training providers in maintaining consistent performance standards throughout the State using the QA evaluation form on the MSF website.

The Brain Injury Alliance of New Jersey will continue to promote the *Share the Road* message that will be targeted to automobile drivers and the general public to make them aware of motorcycles on the road and how they can contribute to motorcyclist safety. The *Smart Driver* website <https://njmsa.bianj.org/smart-driver/> focuses on a *Share the Road* message, including the importance of why to share the road and how to share the road safely. Social and traditional media will be utilized to promote the website.

Pursuant to existing statutory authority, P.L. 1991 c.451 (27:5F-36 et seq.), the Chief Administrator of the Motor Vehicle Commission established a motorcycle safety education program. The program consists of a motorcycle safety education course of instruction and training that meets or exceeds the standards and requirements of the rider’s course developed by the Motorcycle Safety Foundation. The course is open to any person who is an applicant or who has been issued a New Jersey motorcycle license or endorsement. Training was provided to 8,524 riders in 2018 in motorcycle education basic and experienced rider courses. The Motorcycle Safety Education Fund supports the program and is used to defray its costs. Five dollars of the fee collected by the Motor Vehicle Commission for the issuance of each motorcycle license or endorsement is deposited in the Fund. Funds will be used for motorcycle safety rider coach trainings and materials to promote the *Share the Road* campaign.

Funding Source: **SECTION 405(f)** Additional Funding Source: **\$500,000** (Motorcycle Safety Education Fund)
Local Benefit: **\$200,000**

TRAFFIC RECORDS

Countermeasure Strategy: Training and Data Improvements

Effectiveness of Countermeasure

High quality State traffic records data is critical to effective safety programming, operational management, and strategic planning. Every State, in cooperation with its local, regional and Federal partners, should maintain a traffic records system that supports the data-driven, science-based decision making necessary to identify problems; develop, deploy, and evaluate countermeasure; and efficiently allocate resources. (Traffic Records Program Assessment Advisory, NHTSA, 2012.)

Assessment of Safety Impacts

Traffic records data remains the basis for funding programs to transport people safely and to reduce motor vehicle crashes. Accurate data enables safety officials to know the who, what, when, where, and why in the transportation safety field so improvements can be implemented.

The crash data that will be received in the coming year will need to be analyzed to identify trends and problem causes for crashes. This information will be provided to managers in highway traffic safety program development and will be offered to other public and private agencies.

The NHTSA and the Governor's Highway Safety Association developed a methodology for mapping the data collected on the State Police Accident Reports (PARs) to the data elements and attributes in the Model Minimum Uniform Crash Criteria (MMUCC) Guidelines (5th Edition, 2017). This methodology is intended to standardize how States compare their PARs to MMUCC. New Jersey volunteered to pilot the mapping process and as a result, a list of compatibility ratings have been generated for each recommended Data Element and Attribute collected or derived from New Jersey's PAR. The mapping process has provided a straightforward roadmap for implementing the MMUCC into the data collection process in the State. By completing this mapping process, the State has determined and prioritized changes that have been implemented in a newly revised NJTR-1 crash report.

New Jersey modified the NJTR-1 to include criteria where data collection was lacking or needed to be enhanced. The new NJTR-1 went into use on January 1, 2017 and there have been ongoing training classes offered to address not only the additions/changes to the crash report form, but to also educate traffic safety officers on how to accurately fill out the form. Effective January 1, 2019, the serious injury reporting standards were updated to meet the FHWA's Safety Performance Management Measures Final Rule (23 CFR 490) and the National Highway Safety Grants Program Interim Final Rule (23 CFR 1300).

Linkage between Problem Identification and Performance Targets

New Jersey's primary crash information system is hosted and maintained by the DOT. With few exceptions, the statewide database contains records for all police-reported motor vehicle crashes resulting in \$500 or more of property damage. All crashes reported to the Motor Vehicle Commission undergo a process that relies heavily on the following characteristics: Timeliness, Accuracy, Completeness, Integration, and Accessibility.

TIMELINESS	FOR	CITATION SYSTEM
ACCURACY		DRIVER INFORMATION SYSTEM
COMPLETENESS		INJURY SURVEILLANCE
INTEGRATION		VEHICLE INFORMATION
ACCESSIBILITY		ROADWAY INFORMATION

Timeliness:

The transfer of motor vehicle crash data in an electronic format enhances timeliness facilitating a quick turnaround time from crash occurrence to entry into the system. The Division of State Police, NJDOT and the Office of Information Technology developed new procedures and protocols for the State Police to electronically transfer all crash records to both agencies for processing. The success of this operation enables the State to move forward in providing a way for law enforcement agencies to submit their records electronically in the future. Over the next few years, NJDOT will be developing a systematic way to allow for statewide participation and making sure the technical needs are met in order to do so.

Accuracy:

Despite there being geocoders responsible for identifying crash locations for unidentified crashes in the system, locating crashes remains problematic since not all police agencies use the same locating methodologies in reports.

Completeness:

The State crash report, the NJTR-1, collects a large volume of data on all reportable crashes. Training and education are provided to law enforcement agencies on the proper method of data collection to ensure the most accurate data is received.

Integration:

The State Traffic Records Coordinating Committee aims to integrate statewide crash data to the Motor Vehicle Commission's licensing information as well as Emergency Medical Service information.

Accessibility:

The DHTS Crash Analysis Tool is a decision support tool developed for Utah Department of Transportation by Numetric, a business intelligence company. Several states throughout the US also subscribe to this software for their data accessibility needs. This new multi-layered support program is made available to all law enforcement personnel and stakeholders of DHTS.

Project Name: TRAFFIC RECORDS PROGRAM MANAGEMENT

Sub-Recipients: DIVISION OF HIGHWAY TRAFFIC SAFETY

Total Project Amount: \$125,000

Project Description:

This management grant will provide funds for the administration of traffic records-related activities including participation on the Statewide Traffic Records Coordinating Committee (STRCC) and the coordination of projects under the Traffic Records program area. Funds will be used for salaries, fringe benefits, travel and other administrative costs that may arise for program supervisors and their respective staff. Salaries and fringe benefits represent \$75,000 of the budgeted amount and the remainder is budgeted for travel and other miscellaneous expenditures.

Funding Source: SECTION 402 **Local Benefit:** 0

Project Name: DATA ANALYSIS

Sub-Recipients: RUTGERS UNIVERSITY

Total Project Amount: \$125,000

Project Description:

The collection and detailed analysis of data is critical in reducing fatalities and serious injuries on New Jersey's roadways. Each year the DHTS is responsible for producing the Highway Safety Plan and Annual Report. These documents rely on data to develop and prioritize highway safety program areas and to analyze the effectiveness of programs previously implemented. The data analysis involved in the process is extensive and

involves several databases in order to ensure accuracy. The DHTS Crash Analysis Tool as well as the FARS database has been used to provide the data necessary for these reports. In order to efficiently and accurately provide this information to the State in a timely manner, dedicated individuals are assigned to this task to perform data analysis, maintain critical hardware and software, and assist in the preparation of the Highway Safety Plan and Annual Report. Funds will be provided to Rutgers University to pay for staff salaries and travel expenses.

Funding Source: **SECTION 405(c)** Local Benefit: **\$125,000**

Project Name: TRAFFIC RECORDS COORDINATING COMMITTEE

Sub-Recipients: **RUTGERS UNIVERSITY**

Total Project Amount: **\$450,000**

Project Description:

This task will continue to provide resources to lead the STRCC. Responsibilities will include facilitating STRCC meetings, recruiting new members and retaining current members, and updating the Strategic Plan in accordance with the recent traffic records assessment, preparing reports of the STRCC projects, and facilitating and/or participating in any subcommittees.

Funds will be used to pay for the salary of the STRCC Chairperson (approximately \$75,000). The bulk of the funds in this grant will go to the large annual maintenance contract and licenses for the Data Analysis Tool, as well as some significant planned upgrades in the system in FY2020.

The Committee will continue to review and act upon the recommendations of the traffic records assessment completed in fiscal year 2017. These recommendations include the need to improve the data dictionary and data quality control programs of the crash and vehicle data systems. Other recommendations include improving the description and contents of the driver data system and the data quality control program for both the driver and roadway data systems. In addition, recommendations were provided to improve the citation/adjudication and injury surveillance systems as well as improving the traffic records systems capacity to integrate data. Efforts will also be intensified to jump start automatic data transfer of crash reports for local police agencies.

Funding Source: **SECTION 405(c)** Local Benefit: **\$450,000**

Project Name: NJTR-1 TRAINING

Sub-Recipients: **RUTGERS UNIVERSITY**

Total Project Amount: **\$75,000**

Project Description:

The NJTR-1 crash report form is completed by law enforcement officers for any crash resulting in injury, death, or property damage of \$500 or more. Police officers receive only brief training on how to properly complete the NJTR-1 crash form through their police academy instructions or through in-service training. Funds from this task will be used to provide workshops for law enforcement that will address proper form completion and the importance of data accuracy. The revised NJTR-1 forms will be featured in these training sessions in FFY 2020. Funds will be used to pay for training materials and hourly wages of instructors.

Funding Source: **SECTION 402** Local Benefit: **\$75,000**

Project Name: TRAFFIC RECORDS INFORMATION SYSTEM

Sub-Recipients: **NJ OFFICE OF EMERGENCY MEDICAL SERVICES**

Total Project Amount: **\$1,075,000**

Project Description:

The projects listed below will be continued in 2020 and funds from this task will be used to implement projects under the traffic safety information system improvement grant program.

The Department of Health will continue to use funds to implement electronic patient care reporting to the state's advanced life support programs. The project will use real-time data management tools to provide stakeholders (Office of Emergency Medical Services, hospitals and advanced life support programs) with data needed to make decisions in the most efficient manner possible. With the electronic patient care program, patient and circumstantial data is collected through tablet personal computer devices by the Advanced and Basic Life Support providers who are the first responders. As the data fields are completed, the information is transferred via modem, in real-time, to the closest hospital so all relative data to the patient and their injuries are available upon their arrival for treatment. Simultaneously, data is also transmitted to the New Jersey Office of Information Technology data warehouse where EMS providers as well as the Division of State Police and Motor Vehicle Commission and other agencies can access the data for report purposes. In essence, all patient information is captured electronically as one chart at the site of the injury, shared with any treatment facilities, updated by those facilities and used by multiple state and federal agencies to produce their required reports. The Funds will again be used for contractual services to expand the current electronic patient care report project. This project will provide data sets and real-time surveillance with analysis reports/statistics that is tied to the NHTSA data set.

Funding Source: **SECTION 405(c)** Local Benefit: **0**

ROADWAY SAFETY

Countermeasure Strategy: Work Zone Safety Training

Effectiveness of Countermeasure

Training and administrative controls are vital in the process by which highways are built and maintained, in order to minimize the risk of crashes, injuries and fatalities within work zones. In a 2013 study conducted for FHWA, the NJ Institute of Technology analyzed work zone crashes in New Jersey and made a number of recommendations. While each work zone is unique and driver behavior is significantly impacted by the work zone configuration and roadway operation, speed-flow through the work zone is the critical factor. The time of day of the project, duration of the project, signage, and training of personnel are also important considerations (*Work Zone Safety Analysis, Final Report*. Daniel, Ozbay, Chien, 2013).

Assessment of Safety Impacts

New Jersey streets and highways are expected to safely and efficiently move millions of vehicles each year. A complex network of interstate and state highways, county roads and city streets require ongoing maintenance.

Challenges to the roadway network include growing and shifting populations that may cause some routes to become inadequate; aging infrastructure; increasing maintenance costs; increasing congestion; and a growing population causes drastic alterations in traffic flow patterns.

Responsibility for the design, construction and maintenance of the highway system falls on the public works departments at the state, county and local levels of government. There continues to be a need for advanced traffic engineering work to monitor highway operations, recommend improvements in the highway system and improve the safety of vehicle operators, pedestrians and bicyclists.

Local jurisdictions vary widely in the degree to which they are equipped to handle the roadway maintenance and operational review. Many lack basic programs such as sign and signal inventories, systematic traffic counts, or means and criteria for identifying and analyzing high crash locations. As populations increase, many do not have access to specialized expertise in traffic engineering to improve or maintain existing roadways.

Work zone safety continues to be a high-priority issue for traffic engineering professionals and highway agencies. Construction and maintenance crews, plus other groups working on the roadway require training on how best to protect themselves as well as the driving public in construction zones. Effective temporary traffic control must provide for the safety of workers, road users and pedestrians. Training in the proper set-up of a work zone by public works employees, utility workers, and police officers will allow drivers to clearly identify the proper travel lane and reduce the chances for a vehicle-vehicle or vehicle-worker conflict.

Linkage between Problem Identification and Performance Targets

Over the past five years from 2013-2017, there have been 26,864 reported crashes in construction, maintenance, and utility zones. On average, a little more than 2 percent of all crashes in the State occur in a work zone.

WORK ZONE CRASHES, 2008 - 2017

The table reveals that Hudson County (1,720) had the highest number of work zone crashes over the past three years accounting for over 12 percent of total work zone crashes.

WORK ZONE CRASHES BY COUNTY AND YEAR, 2015 - 2017								
COUNTY	----- 2015 -----		----- 2016 -----		----- 2017 -----		----- TOTALS -----

Project Name: **TRAINING**

Sub-Recipients: **RUTGERS UNIVERSITY**

Total Project Amount: **\$195,000**

Project Description:

Roadway construction and maintenance activities result in significant safety and mobility issues for both workers and motorists. Awareness of proper work zone set up, maintenance, personal protection and driver negotiation are all factors to be considered in establishing a safe work zone culture.

Funds will be used to support the 21st Annual Work Zone Safety Conference, to be held in conjunction with National Work Zone Safety Week in 2020. The conference agenda appeals to a wide variety of attendees – typically laborers, managers, law enforcement, engineers and maintenance personnel. Input from a diverse group of stakeholders is used to develop a comprehensive agenda. Partnering agencies also use this venue to distribute pertinent safety materials and offer assistance and resources to attendees.

Throughout the year there will be a variety of training programs offered that will vary from half-day overview courses that provide the basics for safe work zone operations to a comprehensive training program for police officers who will return to their organizations and in turn instruct their own personnel. Courses to be offered during the year include: Four-day police work zone safety train-the-trainer programs; One-day police work zone safety refresher courses; Half-day work zone safety awareness for local police courses; and Half-day work zone safety awareness for municipal and county public works/engineering courses.

Funds will be used to pay partial salaries for Rutgers' training staff, handouts and other training materials and conference related costs.

Funding Source: **SECTION 402** Local Benefit: **\$195,000**

EVIDENCE-BASED TRAFFIC SAFETY ENFORCEMENT PROGRAM

Overview of Methodology

Conducting evidence-based enforcement requires three main components. It begins with an analysis of relevant data to form problem identification. The second phase is deployment of proven countermeasures targeted at the problems identified during the analysis. Lastly, evidence-based enforcement relies on continuous follow-up and necessary adjustments to the plan. Correctly identifying roadways, jurisdictions and their law enforcement agencies to participate in enforcement initiatives requires a data-driven process and careful resource analysis. Selected police departments must have enforceable roadways with the best opportunity to effectively reduce crashes, injuries, and ultimately, deaths. Funding levels are also based on a jurisdiction's proportion of the overall contribution or piece of the problem within each safety focus area. For example, over the last five years (2013-2017), Essex County accounts for 19 percent of all pedestrian involved crashes reported by local police departments. Therefore, data shows they should receive approximately 19 percent of the pedestrian safety enforcement and education funding. This amount is used as a starting point, but the final award amount is determined by also evaluating past performance, ability to participate, and internal contributions to serve as matching efforts.

DHTS uses two primary sources of crash data to identify and analyze traffic safety problem areas: the New Jersey Crash Records system maintained by the DOT, Bureau of Safety Programs, and FARS, maintained by the Division of State Police. All reportable crashes in the state are submitted to DOT for entry into the statewide crash records system. The data contained in the New Jersey Crash Records System provides for the analysis of crashes within specific categories defined by person (i.e., age and gender), location (i.e. roadway type and geographic location) and vehicle characteristics (i.e. mechanical conditions), and the interactions of various components (i.e. time of day, day of week, driver actions, etc.).

At both the state and local level, the DHTS Crash Analysis Tool is also used to analyze crash data. The DHTS Crash Analysis Tool is a decision support tool developed for Utah Department of Transportation by Numetric, a Traffic Safety Analytics company, and maintained by both Rutgers University and NJ Division of Highway Traffic Safety. Several states throughout the US also subscribe to this software for their data accessibility needs. This new multi-layered support program is made available to all law enforcement personnel and other decision makers to help identify and assess the most cost-effective ways and improve safety on the state's roadways through a data driven approach. Data provided by NJDOT is used to clearly identify and target roadways and jurisdictions where crashes are occurring, through the Crash Analysis Tool.

New Jersey's entire FY2020 funding allocations are evidence-based as we identify and encourage municipalities and safety agencies to participate in our grant-funded activities. The three examples provided here are twofold: To identify the data-driven approaches to mitigating our worst safety related problems, as well as providing insight into how data-driven decision-making process operates.

Project Description – City of Trenton Pedestrian Safety

DHTS has been providing pedestrian safety technical and administrative support to several municipalities throughout the State and recently partnered with the North Jersey Transportation Planning Authority in the *Street Smart NJ* pedestrian safety campaign. *Street Smart NJ* is a public awareness and behavioral change pedestrian safety campaign. Since its creation in 2013, more than 80 communities have participated in *Street Smart NJ*.

Street Smart NJ emphasizes educating drivers, pedestrians and bicyclists through mass media, as well as targeted enforcement. Police officers focus on engaging and educating, rather than simply issuing citations. *Street Smart NJ* complements, but does not replace, other state and local efforts to build safer streets and sidewalks, enforce laws and train better roadway users.

The campaign is coordinated by the North Jersey Transportation Planning Authority (NJTPA) and is supported by federal and state funds, with additional funding/in-kind contributions from local partners, including the state's eight Transportation Management Associations.

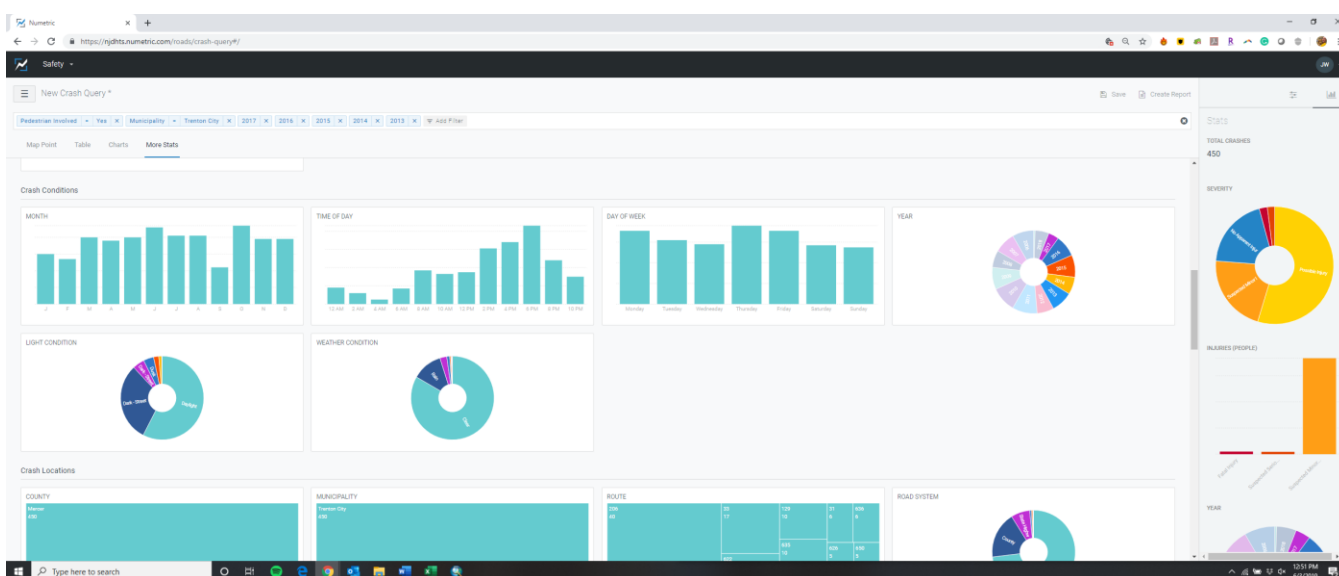

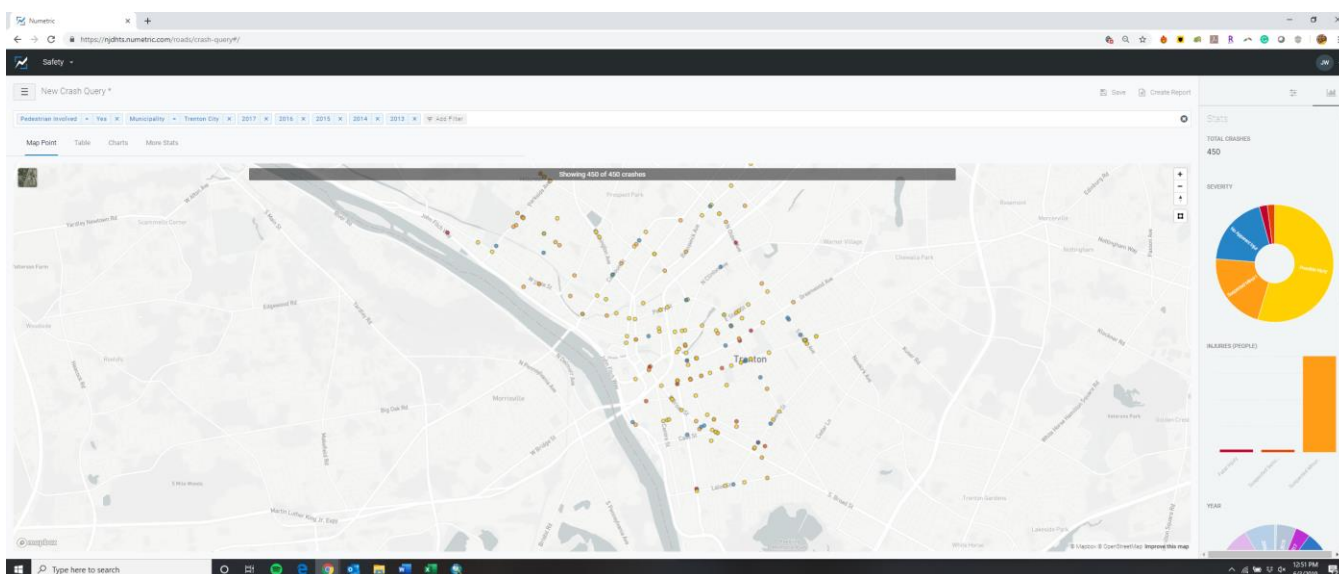

Beginning in FFY2020 a *Street-Smart NJ* campaign will be conducted in the City of Trenton.

The City of Trenton continues to be among the Top 10 municipalities in New Jersey for pedestrian crashes. Over the past 5 years (2013-2017) almost 2 percent of all statewide pedestrian crashes occurred in Trenton, and nearly half of all pedestrian crashes that occurred in Mercer County occurred in Trenton.

PEDESTRIAN RELATED CRASHES, TRENTON AS PERCENT OF TOTAL 2013 - 2017						
	2013	2014	2015	2016	2017	TOTAL
TOTAL NJ PEDESTRIAN CRASHES	5,649	5,214	4,709	4,840	5,008	25,420
TOTAL MERCER COUNTY PEDESTRIAN CRASHES	232	167	176	185	156	916
TOTAL TRENTON PEDESTRIAN CRASHES	103	84	108	104	51	450
MERCER COUNTY % OF STATE TOTAL	4.1%	3.2%	3.7%	3.8%	3.1%	3.6%
TRENTON % OF STATE TOTAL	1.8%	1.6%	2.3%	2.1%	1.0%	1.8%
TRENTON % OF MERCER COUNTY	44.4%	50.3%	61.4%	56.2%	32.7%	49.1%

To understand the pedestrian safety situation in Trenton, DHTS evaluated the circumstances pertaining to pedestrian crashes. An analysis was conducted to determine trends in the occurrence of pedestrian involved crashes throughout the City with a strong focus on the 'hot-spot' locations. Trenton, like many other cities in New Jersey, has more crashes taking place within intersections compared to the State as a whole. Enforcement efforts will target the top intersections where crashes with pedestrians are taking place and will include decoy enforcement operations. The Trenton Police Department will conduct community outreach meetings at senior citizen centers, community events, and schools to address and enhance the awareness of residents through educational, enforcement and engineering methods. A strong marketing presence will also be deployed throughout the city with the aid of supporting businesses and governmental entities.

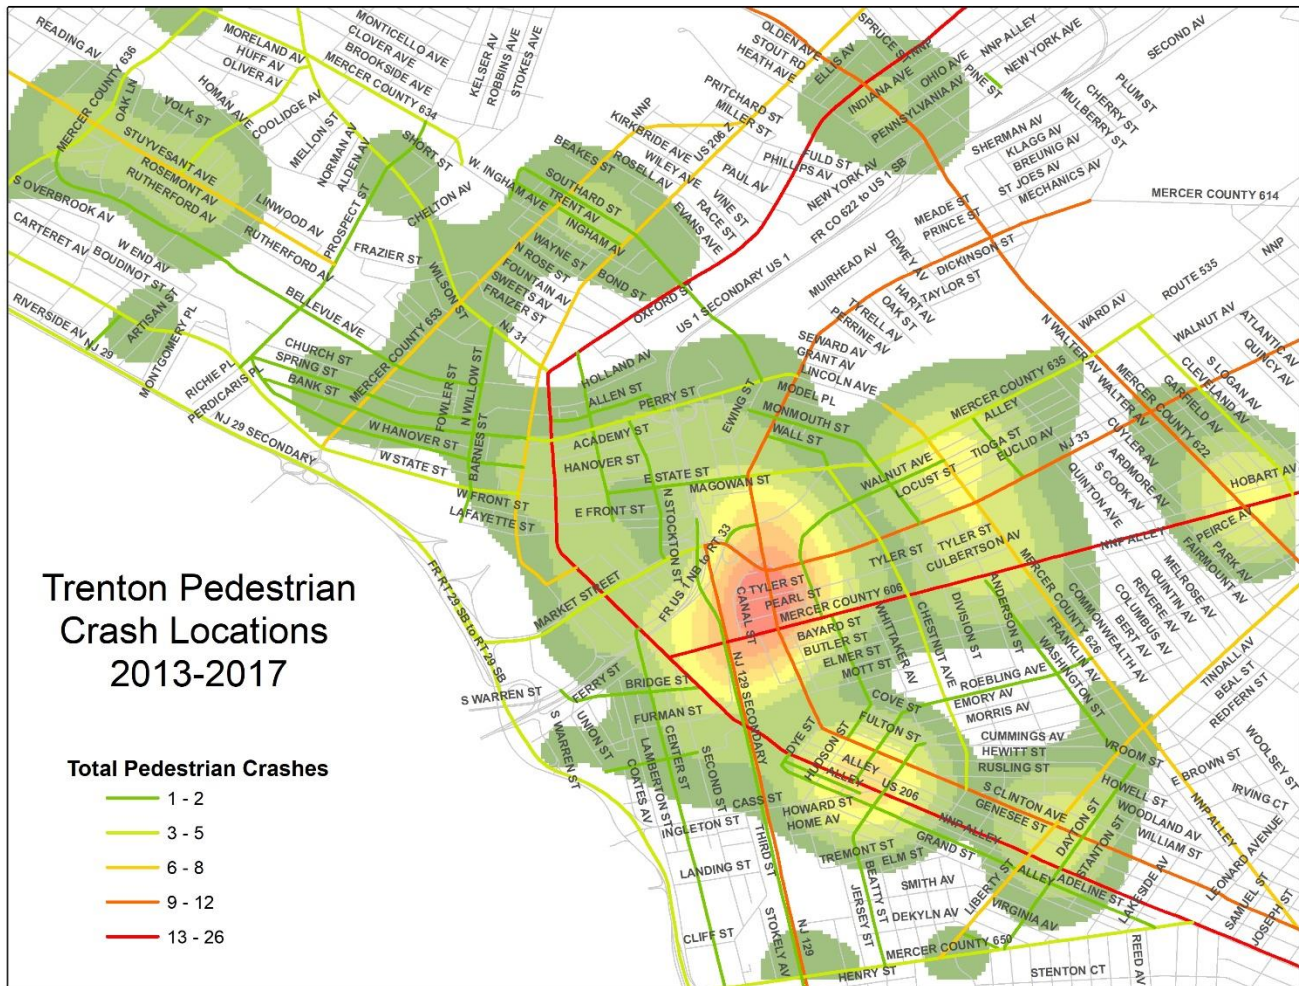

An analysis was conducted using the Crash Analysis Tool, which enabled DHTS as well as NJTPA and local law enforcement officials to quickly drill-down the data and visualize trends occurring on the roadways. Below are two examples from the Analysis Tool which highlight trend information. Access to the crash analysis tool was provided to law enforcement officials in Trenton, as well as individuals from NJTPA to facilitate further discussions on prioritizing locations for enforcement and community outreach. An analysis was conducted to determine the top roadways in Trenton where pedestrian crashes have been occurring over the past 5 years (2013-2017). This will ultimately drive high-visibility enforcement details and provide clarity on the ideal locations to target by the NJTPA for surveys and general outreach and education programs.

PERCENT OF CRASHES OCCURRING AT INTERSECTION, TRENTON VS NEW JERSEY 2013-2017

The map below represents the hot-spot locations of pedestrian involved crashes in Trenton over the past 5 years (2013-2017). A noticeable hot-spot for pedestrian crashes has been the area in and around the Trenton Transit Center and Light-Rail station. This map has been distributed as a starting point to the *Street-Smart NJ* campaign partners.

Project Description - New Jersey Pedestrian Weighting

Injury weight ranking is conducted to identify which municipalities have the most severe pedestrian related crashes, as opposed to those municipalities that experience the highest volumes. The methodology for weight-based ranking derives from an FHWA study: *Crash Cost Estimates by Maximum Police-Reported Injury Severity Within Selected Crash Geometries*. The weighted values are attributed to the injury severity as determined by the reporting police officer at the scene of the crash. A scale has been calculated to determine the weighted values for the KABCO (Killed, Suspected Serious Injury, Suspected Minor Injury, Possible Injury and No Apparent Injury) scale. Because survivability is random given external factors (ex. Travel time to hospital, response time to scene, age of victim, etc.) weights for incapacitations and fatalities are equal. Weighing the severity of injuries sustained in crashes assists in neutralizing the rural versus urban conflict. By attributing higher weights to severe injuries, it helps boost the rank of places that experience low volume, albeit, severe crashes compared to those that experience high volume/ low severity occurrences. For example, a rural municipality may experience a low volume of pedestrian crashes; however, the injuries sustained are typically severe. The chart provides an example of a weighted ranking list to target the Top 10 municipalities in NJ that had the most severe pedestrian related crashes over the past 5 years (2013-2017).

New to the list for FFY2020 is the City of Elizabeth, which went from 12th in the rankings (2012-2016 non-weighted list) to 5th in the 2013-2017 list below. Some other notable changes are Camden from 7th to 10th, Atlantic City from 9th to 8th, Bayonne from 8th to 11th, Union City from 10th to 12th, and Passaic jumped from 14th to 9th.

PEDESTRIAN RELATED CRASHES, TOP 10 MUNICIPALITIES (SORTED ON NON-WEIGHTED), 2013 - 2017					
MUNICIPALITY	TOTAL PED CRASHES	WEIGHTED SCORE	WEIGHTED RANK	NON-WEIGHTED RANK	WEIGHTED DIFFERENCE
NEWARK	2,187	18261.75	1	1	0
JERSEY CITY	1,372	10872.59	2	2	0
PATERSON	830	6679.16	3	3	0
IRVINGTON	477	3701.86	4	4	0
ELIZABETH	383	3422.80	5	5	0
EAST ORANGE	370	2761.59	10	6	-4
TRENTON	362	3082.76	8	7	-1
ATLANTIC CITY	357	3098.66	7	8	1
PASSAIC	345	2614.59	12	9	-3
CAMDEN	343	3263.04	6	10	4

After enforcement efforts are completed, DHTS analyzes the enforcement effectiveness by looking at crash data for reduction trends. Continuous analysis is conducted for all targeted enforcement efforts, comparing historical crash data at the targeted areas while monitoring incoming crash and citation data as the year progresses. Evaluation of funded programs is conducted, and adjustments are made according to the effectiveness of the enforcement effort and the value of its impact.

The evidence-based enforcement program will be continuously evaluated. Law enforcement agencies will be monitored to ensure that the project is moving forward as planned. Activity reports will be assessed against the latest crash data to identify crash reductions in targeted locations as well as any new risks that may be on the horizon. Program staff will meet with those agencies that are lacking in performance or failing to meet the objectives of the project. The State's LEL will also be utilized to assist in the monitoring process and play a greater role in working with law enforcement agency representatives where projects are falling short of meeting their goals, and partnerships will be developed and enhanced where possible to leverage additional support and capital.

Project Description – New Jersey DRE Program

The Drug Recognition Expert program in New Jersey is well-established and robust at the state, county, and local law enforcement level. The New Jersey Association of Drug Recognition Experts, a professional organization of DRE officers, works in conjunction with the New Jersey State Police Alcohol and Drug Test Unit to ensure that the DRE program in New Jersey effectively detects, identifies, and removes impaired drivers from New Jersey roads.

New Jersey's DRE program is highly productive compared to the national average in terms of its ability to conduct drug evaluations and identify drivers under the influence of drugs. In 2017, New Jersey DRE officers conducted 2,001 enforcement evaluations, over twice the national average of 608 evaluations, and an increase from 1,143 in 2015. More than half of the evaluations resulted in single drug recognition (1088 of 2001), and the number of poly drug use detections was more than four times the national average (913 vs 192).

2017 New Jersey DRE Statistics

	CATEGORY	NEW JERSEY	% OF NEW JERSEY	NATIONAL TOTAL	NATIONAL AVERAGE (per State)	NJ AS% OF NATIONAL TOTAL

Source: 2017 Annual Report of the International Association of Chiefs of Police Drug Evaluation and Classification Program.

New Jersey saw a 75 percent increase in the number of DRE evaluations from 2015 to 2017 (1,143 to 2,001). Notably, the Drug Recognition Experts found significant increases in the number of Poly-Drug users (89%), Cannabis users (177%), Narcotic Analgesic users (263%), Stimulant users (269%), and Depressant users (193%). Due to the success of the DRE program in New Jersey, NJDHTS will continue to support the effort to train additional officers to become DREs.

	CATEGORY	2015 NEW JERSEY	2017 NEW JERSEY	PERCENT CHANGE 2015 - 2017
EVALUATIONS	Enforcement	1,143	2,001	75.1%
	Training	221	390	76.5%
	Total	1,364	2,391	75.3%

	No Opinion of Impairment	120	209	74.2%
	Toxicology – No Drugs	25	36	44.0%
	Toxicology Refused	156	481	208.3%

Challenges remain in New Jersey related to the successful prosecution of drugged driving cases and admission of evidence collected by DREs in these cases. In-service training and better education of prosecutors and judges about the DRE training process, and the criteria used to determine impairment, will increase the acceptance of DRE evidence and testimony and will enhance conviction rates.

DRE Call-Out Program Comparison

The percentage of all drug-related crashes that have occurred in counties participating in the DRE Call-Out Program has grown in every category examined (illegal drug only, medication only, or alcohol and medication or illegal drugs). For example, whereas DRE Call-Out counties comprised only 38.1% of all drug-related crashes in 2006, in 2017 they accounted for 42.3% of all crashes – a 4% increase. Aside from Middlesex County, every County in New Jersey has experienced an increase in drug-related crashes since 2006.

The New Jersey State Police also participate in the DRE Call-Out program and in 2017 cited over 27 percent of all drug related crashes for drugged driving (414).

Beginning in FFY2020, two additional counties that currently account for more than 10% of the drugged driving crashes in the state will begin participating in the DRE Call-Out program: Middlesex and Union County. In 2017, 5.6 percent of New Jersey's drugged driving crashes occurred in Middlesex County and 4.8 percent in Union County.

Certifications and Assurances
for Fiscal Year 2020 Highway Safety Grants
(23 U.S.C. Chapter 4 and Sec. 1906, Pub. L. 109-59, as Amended)

[The Governor's Representative for Highway Safety must sign these Certifications and Assurances each fiscal year. Requirements that also apply to subrecipients are noted under the applicable caption, and must be included in agreements with subrecipients.]

New Jersey

State: _____

By applying for Federal grants under 23 U.S.C. Chapter 4 or Section 1906, the State Highway Safety Office, through the Governor's Representative for Highway Safety, agrees to the following conditions and requirements.

GENERAL CERTIFICATIONS AND ASSURANCES

In my capacity as the Governor's Representative for Highway Safety, I hereby affirm that—

- I have reviewed the information in support of the State's application for 23 U.S.C. Chapter 4 and Section 1906 grants, and based on my review, the information is accurate and complete to the best of my personal knowledge.
- In addition to the certifications and assurances contained in this document, I am aware and I acknowledge that each statement in the State's application bearing the designation "CERTIFICATION" or "ASSURANCE" constitutes a legal and binding Certification or Assurance that I am making in connection with this application.
- As a condition of each grant awarded, the State will use the grant funds in accordance with the specific statutory and regulatory requirements of that grant, and will comply with all applicable laws, regulations, and financial and programmatic requirements for Federal grants, including but not limited to—
 - 23 U.S.C. Chapter 4 – Highway Safety Act of 1966, as amended
 - Sec. 1906, Pub. L. 109-59, as amended by Sec. 4011, Pub. L. 114-94
 - 23 CFR part 1300 – Uniform Procedures for State Highway Safety Grant Programs
 - 2 CFR part 200 – Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards
 - 2 CFR part 1201 – Department of Transportation, Uniform Administrative Requirements, Cost Principles, and Audit Requirements for Federal Awards
- I understand and accept that incorrect, incomplete, or untimely information submitted in support of the State's application may result in the denial of a grant award. If NHTSA seeks

clarification of the State's application, I authorize the State Highway Safety Office to provide additional information in support of the State's application for a 23 USC Chapter 4 and Section 1906 grant.

SECTION 402 CERTIFICATIONS AND ASSURANCES

In my capacity as the Governor's Representative for Highway Safety, I hereby affirm that—

- The Governor is the responsible official for the administration of the State highway safety program, by appointing a Governor's Representative for Highway Safety who shall be responsible for a State highway safety agency that has adequate powers and is suitably equipped and organized (as evidenced by appropriate oversight procedures governing such areas as procurement, financial administration, and the use, management, and disposition of equipment) to carry out the program. (23 U.S.C. 402(b)(1)(A))
- The political subdivisions of this State are authorized, as part of the State highway safety program, to carry out within their jurisdictions local highway safety programs which have been approved by the Governor and are in accordance with the uniform guidelines promulgated by the Secretary of Transportation. (23 U.S.C. 402(b)(1)(B))
- At least 40 percent of all Federal funds apportioned to this State under 23 U.S.C. 402 for this fiscal year will be expended by or for the benefit of political subdivisions of the State in carrying out local highway safety programs (23 U.S.C. 402(b)(1)(C)) or 95 percent by and for the benefit of Indian tribes (23 U.S.C. 402(h)(2)), unless this requirement is waived in writing. (This provision is not applicable to the District of Columbia, Puerto Rico, the U.S. Virgin Islands, Guam, American Samoa, and the Commonwealth of the Northern Mariana Islands.)
- The State's highway safety program provides adequate and reasonable access for the safe and convenient movement of physically handicapped persons, including those in wheelchairs, across curbs constructed or replaced on or after July 1, 1976, at all pedestrian crosswalks. (23 U.S.C. 402(b)(1)(D))
- The State will provide for an evidenced-based traffic safety enforcement program to prevent traffic violations, crashes, and crash fatalities and injuries in areas most at risk for such incidents. (23 U.S.C. 402(b)(1)(E))
- The State will implement activities in support of national highway safety goals to reduce motor vehicle related fatalities that also reflect the primary data-related crash factors within the State, as identified by the State highway safety planning process, including:
 - Participation in the National high-visibility law enforcement mobilizations as identified annually in the NHTSA Communications Calendar, including not less than 3 mobilization campaigns in each fiscal year to –
 - Reduce alcohol-impaired or drug-impaired operation of motor vehicles; and
 - Increase use of seat belts by occupants of motor vehicles;

- Sustained enforcement of statutes addressing impaired driving, occupant protection, and driving in excess of posted speed limits;
- An annual Statewide seat belt use survey in accordance with 23 CFR part 1340 for the measurement of State seat belt use rates, except for the Secretary of Interior on behalf of Indian tribes;
- Development of Statewide data systems to provide timely and effective data analysis to support allocation of highway safety resources;
- Coordination of Highway Safety Plan, data collection, and information systems with the State strategic highway safety plan, as defined in 23 U.S.C. 148(a). (23 U.S.C. 402(b)(1)(F))
- The State will actively encourage all relevant law enforcement agencies in the State to follow the guidelines established for vehicular pursuits issued by the International Association of Chiefs of Police that are currently in effect. (23 U.S.C. 402(j))
- The State will not expend Section 402 funds to carry out a program to purchase, operate, or maintain an automated traffic enforcement system. (23 U.S.C. 402(c)(4))

**In my capacity as Governor's Representative for Highway Safety, I—
[CHECK ONLY ONE]**

☒ I certify that automated traffic enforcement systems are not used on any public road in the State;

OR

☐ I am unable to certify that automated traffic enforcement systems are not used on any public road in the State, and therefore the State will conduct a survey meeting the requirements of 23 U.S.C. 402(c)(4)(C) AND will submit the survey results to the NHTSA Regional Office no later than March 1 of the fiscal year of the grant.

OTHER REQUIRED CERTIFICATIONS AND ASSURANCES

In my capacity as the Governor's Representative for Highway Safety, I hereby provide the following additional certifications and assurances:

Intergovernmental Review of Federal Programs

The State has submitted appropriate documentation for review to the single point of contact designated by the Governor to review Federal programs, as required by Executive Order 12372 (Intergovernmental Review of Federal Programs).

Federal Funding Accountability and Transparency Act (FFATA)

The State will comply with FFATA guidance, OMB Guidance on FFATA Subaward and Executive Compensation Reporting, August 27, 2010, (https://www.fsrs.gov/documents/OMB_Guidance_on_FFATA_Subaward_and_Executive_Compensation_Reporting_08272010.pdf) by reporting to FSRS.gov for each sub-grant awarded:

- Name of the entity receiving the award;
- Amount of the award;
- Information on the award including transaction type, funding agency, the North American Industry Classification System code or Catalog of Federal Domestic Assistance number (where applicable), program source;
- Location of the entity receiving the award and the primary location of performance under the award, including the city, State, congressional district, and country; and an award title descriptive of the purpose of each funding action;
- A unique identifier (DUNS);
- The names and total compensation of the five most highly compensated officers of the entity if:
 - (i) the entity in the preceding fiscal year received—
 - (I) 80 percent or more of its annual gross revenues in Federal awards;
 - (II) \$25,000,000 or more in annual gross revenues from Federal awards; and
 - (ii) the public does not have access to information about the compensation of the senior executives of the entity through periodic reports filed under section 13(a) or 15(d) of the Securities Exchange Act of 1934 (15 U.S.C. 78m(a), 78o(d)) or section 6104 of the Internal Revenue Code of 1986;
- Other relevant information specified by OMB guidance.

Nondiscrimination

(applies to subrecipients as well as States)

The State highway safety agency will comply with all Federal statutes and implementing regulations relating to nondiscrimination (“Federal Nondiscrimination Authorities”). These include but are not limited to:

- **Title VI of the Civil Rights Act of 1964** (42 U.S.C. 2000d *et seq.*, 78 stat. 252), (prohibits discrimination on the basis of race, color, national origin) and 49 CFR part 21;
- **The Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970**, (42 U.S.C. 4601), (prohibits unfair treatment of persons displaced or whose property has been acquired because of Federal or Federal-aid programs and projects);

- **Federal-Aid Highway Act of 1973**, (23 U.S.C. 324 *et seq.*), and **Title IX of the Education Amendments of 1972**, as amended (20 U.S.C. 1681-1683 and 1685-1686) (prohibit discrimination on the basis of sex);
- **Section 504 of the Rehabilitation Act of 1973**, (29 U.S.C. 794 *et seq.*), as amended, (prohibits discrimination on the basis of disability) and 49 CFR part 27;
- **The Age Discrimination Act of 1975**, as amended, (42 U.S.C. 6101 *et seq.*), (prohibits discrimination on the basis of age);
- **The Civil Rights Restoration Act of 1987**, (Pub. L. 100-209), (broadens scope, coverage and applicability of Title VI of the Civil Rights Act of 1964, The Age Discrimination Act of 1975 and Section 504 of the Rehabilitation Act of 1973, by expanding the definition of the terms "programs or activities" to include all of the programs or activities of the Federal aid recipients, subrecipients and contractors, whether such programs or activities are Federally-funded or not);
- **Titles II and III of the Americans with Disabilities Act** (42 U.S.C. 12131-12189) (prohibits discrimination on the basis of disability in the operation of public entities, public and private transportation systems, places of public accommodation, and certain testing) and 49 CFR parts 37 and 38;
- **Executive Order 12898, Federal Actions to Address Environmental Justice in Minority Populations and Low-Income Populations** (prevents discrimination against minority populations by discouraging programs, policies, and activities with disproportionately high and adverse human health or environmental effects on minority and low-income populations); and
- **Executive Order 13166, Improving Access to Services for Persons with Limited English Proficiency** (guards against Title VI national origin discrimination/discrimination because of limited English proficiency (LEP) by ensuring that funding recipients take reasonable steps to ensure that LEP persons have meaningful access to programs (70 FR 74087-74100).

The State highway safety agency—

- Will take all measures necessary to ensure that no person in the United States shall, on the grounds of race, color, national origin, disability, sex, age, limited English proficiency, or membership in any other class protected by Federal Nondiscrimination Authorities, be excluded from participation in, be denied the benefits of, or be otherwise subjected to discrimination under any of its programs or activities, so long as any portion of the program is Federally-assisted;
- Will administer the program in a manner that reasonably ensures that any of its subrecipients, contractors, subcontractors, and consultants receiving Federal financial assistance under this program will comply with all requirements of the Non-Discrimination

Authorities identified in this Assurance;

- Agrees to comply (and require its subrecipients, contractors, subcontractors, and consultants to comply) with all applicable provisions of law or regulation governing US DOT's or NHTSA's access to records, accounts, documents, information, facilities, and staff, and to cooperate and comply with any program or compliance reviews, and/or complaint investigations conducted by US DOT or NHTSA under any Federal Nondiscrimination Authority;
- Acknowledges that the United States has a right to seek judicial enforcement with regard to any matter arising under these Non-Discrimination Authorities and this Assurance;
- Agrees to insert in all contracts and funding agreements with other State or private entities the following clause:

“During the performance of this contract/funding agreement, the contractor/funding recipient agrees—

- a. To comply with all Federal nondiscrimination laws and regulations, as may be amended from time to time;
- b. Not to participate directly or indirectly in the discrimination prohibited by any Federal non-discrimination law or regulation, as set forth in appendix B of 49 CFR part 21 and herein;
- c. To permit access to its books, records, accounts, other sources of information, and its facilities as required by the State highway safety office, US DOT or NHTSA;
- d. That, in event a contractor/funding recipient fails to comply with any nondiscrimination provisions in this contract/funding agreement, the State highway safety agency will have the right to impose such contract/agreement sanctions as it or NHTSA determine are appropriate, including but not limited to withholding payments to the contractor/funding recipient under the contract/agreement until the contractor/funding recipient complies; and/or cancelling, terminating, or suspending a contract or funding agreement, in whole or in part; and
- e. To insert this clause, including paragraphs (a) through (e), in every subcontract and subagreement and in every solicitation for a subcontract or sub-agreement, that receives Federal funds under this program.

The Drug-Free Workplace Act of 1988 (41 U.S.C. 8103)

The State will provide a drug-free workplace by:

- a. Publishing a statement notifying employees that the unlawful manufacture, distribution, dispensing, possession or use of a controlled substance is prohibited in the grantee's workplace and specifying the actions that will be taken against employees for violation of

such prohibition;

- b. Establishing a drug-free awareness program to inform employees about:
 - 1. The dangers of drug abuse in the workplace;
 - 2. The grantee's policy of maintaining a drug-free workplace;
 - 3. Any available drug counseling, rehabilitation, and employee assistance programs;
 - 4. The penalties that may be imposed upon employees for drug violations occurring in the workplace;
 - 5. Making it a requirement that each employee engaged in the performance of the grant be given a copy of the statement required by paragraph (a);
- c. Notifying the employee in the statement required by paragraph (a) that, as a condition of employment under the grant, the employee will –
 - 1. Abide by the terms of the statement;
 - 2. Notify the employer of any criminal drug statute conviction for a violation occurring in the workplace no later than five days after such conviction;
- d. Notifying the agency within ten days after receiving notice under subparagraph (c)(2) from an employee or otherwise receiving actual notice of such conviction;
- e. Taking one of the following actions, within 30 days of receiving notice under subparagraph (c)(2), with respect to any employee who is so convicted –
 - 1. Taking appropriate personnel action against such an employee, up to and including termination;
 - 2. Requiring such employee to participate satisfactorily in a drug abuse assistance or rehabilitation program approved for such purposes by a Federal, State, or local health, law enforcement, or other appropriate agency;
- f. Making a good faith effort to continue to maintain a drug-free workplace through implementation of all of the paragraphs above.

Political Activity (Hatch Act)

(applies to subrecipients as well as States)

The State will comply with provisions of the Hatch Act (5 U.S.C. 1501-1508), which limits the political activities of employees whose principal employment activities are funded in whole or in part with Federal funds.

Certification Regarding Federal Lobbying
(applies to subrecipients as well as States)

Certification for Contracts, Grants, Loans, and Cooperative Agreements

The undersigned certifies, to the best of his or her knowledge and belief, that:

1. No Federal appropriated funds have been paid or will be paid, by or on behalf of the undersigned, to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with the awarding of any Federal contract, the making of any Federal grant, the making of any Federal loan, the entering into of any cooperative agreement, and the extension, continuation, renewal, amendment, or modification of any Federal contract, grant, loan, or cooperative agreement;
2. If any funds other than Federal appropriated funds have been paid or will be paid to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress, an officer or employee of Congress, or an employee of a Member of Congress in connection with this Federal contract, grant, loan, or cooperative agreement, the undersigned shall complete and submit Standard Form-LLL, "Disclosure Form to Report Lobbying," in accordance with its instructions;
3. The undersigned shall require that the language of this certification be included in the award documents for all sub-award at all tiers (including subcontracts, subgrants, and contracts under grant, loans, and cooperative agreements) and that all subrecipients shall certify and disclose accordingly.

This certification is a material representation of fact upon which reliance was placed when this transaction was made or entered into. Submission of this certification is a prerequisite for making or entering into this transaction imposed by section 1352, title 31, U.S. Code. Any person who fails to file the required certification shall be subject to a civil penalty of not less than \$10,000 and not more than \$100,000 for each such failure.

Restriction on State Lobbying
(applies to subrecipients as well as States)

None of the funds under this program will be used for any activity specifically designed to urge or influence a State or local legislator to favor or oppose the adoption of any specific legislative proposal pending before any State or local legislative body. Such activities include both direct and indirect (e.g., "grassroots") lobbying activities, with one exception. This does not preclude a State official whose salary is supported with NHTSA funds from engaging in direct communications with State or local legislative officials, in accordance with customary State practice, even if such communications urge legislative officials to favor or oppose the adoption of a specific pending legislative proposal.

Certification Regarding Debarment and Suspension (applies to subrecipients as well as States)

Instructions for Primary Tier Participant Certification (States)

1. By signing and submitting this proposal, the prospective primary tier participant is providing the certification set out below and agrees to comply with the requirements of 2 CFR parts 180 and 1200.
2. The inability of a person to provide the certification required below will not necessarily result in denial of participation in this covered transaction. The prospective primary tier participant shall submit an explanation of why it cannot provide the certification set out below. The certification or explanation will be considered in connection with the department or agency's determination whether to enter into this transaction. However, failure of the prospective primary tier participant to furnish a certification or an explanation shall disqualify such person from participation in this transaction.
3. The certification in this clause is a material representation of fact upon which reliance was placed when the department or agency determined to enter into this transaction. If it is later determined that the prospective primary tier participant knowingly rendered an erroneous certification, in addition to other remedies available to the Federal Government, the department or agency may terminate this transaction for cause or default or may pursue suspension or debarment.
4. The prospective primary tier participant shall provide immediate written notice to the department or agency to which this proposal is submitted if at any time the prospective primary tier participant learns its certification was erroneous when submitted or has become erroneous by reason of changed circumstances.
5. The terms *covered transaction*, *civil judgment*, *debarment*, *suspension*, *ineligible*, *participant*, *person*, *principal*, and *voluntarily excluded*, as used in this clause, are defined in 2 CFR parts 180 and 1200. You may contact the department or agency to which this proposal is being submitted for assistance in obtaining a copy of those regulations.
6. The prospective primary tier participant agrees by submitting this proposal that, should the proposed covered transaction be entered into, it shall not knowingly enter into any lower tier covered transaction with a person who is proposed for debarment under 48 CFR part 9, subpart 9.4, debarred, suspended, declared ineligible, or voluntarily excluded from participation in this covered transaction, unless authorized by the department or agency entering into this transaction.
7. The prospective primary tier participant further agrees by submitting this proposal that it will include the clause titled "Instructions for Lower Tier Participant Certification" including the "Certification Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion—Lower Tier Covered Transaction," provided by the department or agency entering into this covered transaction, without modification, in all lower tier covered transactions and in all solicitations for lower tier covered transactions and will require lower tier participants to comply with 2 CFR parts

180 and 1200.

8. A participant in a covered transaction may rely upon a certification of a prospective participant in a lower tier covered transaction that it is not proposed for debarment under 48 CFR part 9, subpart 9.4, debarred, suspended, ineligible, or voluntarily excluded from the covered transaction, unless it knows that the certification is erroneous. A participant is responsible for ensuring that its principals are not suspended, debarred, or otherwise ineligible to participate in covered transactions. To verify the eligibility of its principals, as well as the eligibility of any prospective lower tier participants, each participant may, but is not required to, check the System for Award Management Exclusions website (<https://www.sam.gov/>).

9. Nothing contained in the foregoing shall be construed to require establishment of a system of records in order to render in good faith the certification required by this clause. The knowledge and information of a participant is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.

10. Except for transactions authorized under paragraph 6 of these instructions, if a participant in a covered transaction knowingly enters into a lower tier covered transaction with a person who is proposed for debarment under 48 CFR part 9, subpart 9.4, suspended, debarred, ineligible, or voluntarily excluded from participation in this transaction, in addition to other remedies available to the Federal government, the department or agency may terminate the transaction for cause or default.

Certification Regarding Debarment, Suspension, and Other Responsibility Matters-Primary Tier Covered Transactions

The prospective primary tier participant certifies to the best of its knowledge and belief, that it and its principals:

- (a) Are not presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from participating in covered transactions by any Federal department or agency;
- (b) Have not within a three-year period preceding this proposal been convicted of or had a civil judgment rendered against them for commission of fraud or a criminal offense in connection with obtaining, attempting to obtain, or performing a public (Federal, State or local) transaction or contract under a public transaction; violation of Federal or State antitrust statutes or commission of embezzlement, theft, forgery, bribery, falsification or destruction of records, making false statements, or receiving stolen property;
- (c) Are not presently indicted for or otherwise criminally or civilly charged by a governmental entity (Federal, State or Local) with commission of any of the offenses enumerated in paragraph (1)(b) of this certification; and
- (d) Have not within a three-year period preceding this application/proposal had one or more public transactions (Federal, State, or local) terminated for cause or default.

(2) Where the prospective primary tier participant is unable to certify to any of the Statements in this certification, such prospective participant shall attach an explanation to this proposal.

Instructions for Lower Tier Participant Certification

1. By signing and submitting this proposal, the prospective lower tier participant is providing the certification set out below and agrees to comply with the requirements of 2 CFR parts 180 and 1200.
2. The certification in this clause is a material representation of fact upon which reliance was placed when this transaction was entered into. If it is later determined that the prospective lower tier participant knowingly rendered an erroneous certification, in addition to other remedies available to the Federal government, the department or agency with which this transaction originated may pursue available remedies, including suspension or debarment.
3. The prospective lower tier participant shall provide immediate written notice to the person to which this proposal is submitted if at any time the prospective lower tier participant learns that its certification was erroneous when submitted or has become erroneous by reason of changed circumstances.
4. The terms *covered transaction*, *civil judgment*, *debarment*, *suspension*, *ineligible*, *participant*, *person*, *principal*, and *voluntarily excluded*, as used in this clause, are defined in 2 CFR parts 180 and 1200. You may contact the person to whom this proposal is submitted for assistance in obtaining a copy of those regulations.
5. The prospective lower tier participant agrees by submitting this proposal that, should the proposed covered transaction be entered into, it shall not knowingly enter into any lower tier covered transaction with a person who is proposed for debarment under 48 CFR part 9, subpart 9.4, debarred, suspended, declared ineligible, or voluntarily excluded from participation in this covered transaction, unless authorized by the department or agency with which this transaction originated.
6. The prospective lower tier participant further agrees by submitting this proposal that it will include the clause titled "Instructions for Lower Tier Participant Certification" including the "Certification Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion – Lower Tier Covered Transaction," without modification, in all lower tier covered transactions and in all solicitations for lower tier covered transactions and will require lower tier participants to comply with 2 CFR parts 180 and 1200.
7. A participant in a covered transaction may rely upon a certification of a prospective participant in a lower tier covered transaction that it is not proposed for debarment under 48 CFR part 9, subpart 9.4, debarred, suspended, ineligible, or voluntarily excluded from the covered transaction, unless it knows that the certification is erroneous. A participant is responsible for ensuring that its principals are not suspended, debarred, or otherwise ineligible to participate in covered transactions. To verify the eligibility of its principals, as well as the eligibility of any prospective lower tier participants, each participant may, but is not required to, check the System for Award Management Exclusions website (<https://www.sam.gov/>).
8. Nothing contained in the foregoing shall be construed to require establishment of a system of

records in order to render in good faith the certification required by this clause. The knowledge and information of a participant is not required to exceed that which is normally possessed by a prudent person in the ordinary course of business dealings.

9. Except for transactions authorized under paragraph 5 of these instructions, if a participant in a covered transaction knowingly enters into a lower tier covered transaction with a person who is proposed for debarment under 48 CFR part 9, subpart 9.4, suspended, debarred, ineligible, or voluntarily excluded from participation in this transaction, in addition to other remedies available to the Federal government, the department or agency with which this transaction originated may pursue available remedies, including suspension or debarment.

Certification Regarding Debarment, Suspension, Ineligibility and Voluntary Exclusion -- Lower Tier Covered Transactions:

1. The prospective lower tier participant certifies, by submission of this proposal, that neither it nor its principals is presently debarred, suspended, proposed for debarment, declared ineligible, or voluntarily excluded from participating in covered transactions by any Federal department or agency.

2. Where the prospective lower tier participant is unable to certify to any of the statements in this certification, such prospective participant shall attach an explanation to this proposal.

Buy America Act

(applies to subrecipients as well as States)

The State and each subrecipient will comply with the Buy America requirement (23 U.S.C. 313) when purchasing items using Federal funds. Buy America requires a State, or subrecipient, to purchase with Federal funds only steel, iron and manufactured products produced in the United States, unless the Secretary of Transportation determines that such domestically produced items would be inconsistent with the public interest, that such materials are not reasonably available and of a satisfactory quality, or that inclusion of domestic materials will increase the cost of the overall project contract by more than 25 percent. In order to use Federal funds to purchase foreign produced items, the State must submit a waiver request that provides an adequate basis and justification for approval by the Secretary of Transportation.

Prohibition on Using Grant Funds to Check for Helmet Usage

(applies to subrecipients as well as States)

The State and each subrecipient will not use 23 U.S.C. Chapter 4 grant funds for programs to check helmet usage or to create checkpoints that specifically target motorcyclists.

Policy on Seat Belt Use

In accordance with Executive Order 13043, Increasing Seat Belt Use in the United States, dated April 16, 1997, the Grantee is encouraged to adopt and enforce on-the-job seat belt use policies and programs for its employees when operating company-owned, rented, or personally-owned vehicles.

The National Highway Traffic Safety Administration (NHTSA) is responsible for providing leadership and guidance in support of this Presidential initiative. For information and resources on traffic safety programs and policies for employers, please contact the Network of Employers for Traffic Safety (NETS), a public- private partnership dedicated to improving the traffic safety practices of employers and employees. You can download information on seat belt programs, costs of motor vehicle crashes to employers, and other traffic safety initiatives at www.trafficsafety.org. The NHTSA website (www.nhtsa.gov) also provides information on statistics, campaigns, and program evaluations and references.

Policy on Banning Text Messaging While Driving

In accordance with Executive Order 13513, Federal Leadership On Reducing Text Messaging While Driving, and DOT Order 3902.10, Text Messaging While Driving, States are encouraged to adopt and enforce workplace safety policies to decrease crashes caused by distracted driving, including policies to ban text messaging while driving company-owned or rented vehicles, Government-owned, leased or rented vehicles, or privately-owned vehicles when on official Government business or when performing any work on or behalf of the Government. States are also encouraged to conduct workplace safety initiatives in a manner commensurate with the size of the business, such as establishment of new rules and programs or re-evaluation of existing programs to prohibit text messaging while driving, and education, awareness, and other outreach to employees about the safety risks associated with texting while driving.

I understand that the information provided in support of the State's application for Federal grant funds and these Certifications and Assurances constitute information upon which the Federal Government will rely in determining qualification for grant funds, and that knowing misstatements may be subject to civil or criminal penalties under 18 U.S.C. 1001. I sign these Certifications and Assurances based on personal knowledge, and after appropriate inquiry.
