PTM No. 1400.40

FOREWORD

Special Education, A Statistical Report for the 1995-96 School Year is the 14th in a series of reports on the status of special education in New Jersey. It contains statistics about pupils with educational disabilities, their programs, special education personnel and other special education data. It is designed as a reference book to assist New Jersey's special education community in planning and evaluating educational efforts for pupils with educational disabilities.

These data are based on five major collections. The **Special Education Plan** counts all pupils with educational disabilities, including those in special classes (public and private), resource rooms/centers, and those who receive supplemental instruction and/or speech correction services in both public and nonpublic schools. The **Special Education End of the Year Report** counts pupils exiting education, the number of pupils identified for child study team evaluation, new classifications, and declassifications as well as pupils on home instruction. The **Application for State School Aid (ASSA)** is used to count the resident enrollment. The **Fall Report** is used to determine enrollment rates by racial-ethnic-gender grouping. The **Certificated Staff Report** is used to report data on special education staff.

Special appreciation is extended to all the school districts and other education agencies in New Jersey that provided the information collected in this publication. Questions, comments and suggestions for future editions are welcome. Please call Dr. Mari Molenaar at 609-633-6972 with your inquiries and advice.

Barbara Gantwerk, Director
Office of Special Education Programs

TABLE OF CONTENTS

Foreword ii

Table of Contents iii

The Administration of Special Education Programs 1

Trends in Classification Rates 3

 * Actual and Projected Enrollments 6

 * Pupils with Educational Disabilities by Age and Classification
 in 1995 7

 * Total Enrollment and Percent of Pupils with Educational
 Disabilities in the Age 3-21 Census from 1978-1995 8

 * Number of Pupils with Educational Disabilities by Classification
 and County in 1995 9

 * Number and Percent of Public Pupils with Educational
 Disabilities by County in 1995 10

 * Graph of the Proportion of Pupils with Disabilities of Selected
 Classifications in 1995 11

 * Classification Rates by Different District Groupings
 1989-1995 12

 * Graphs of Speech and CST Classification Rates by
 District Size and District Factor Grouping in 1995 13

 * Trends in Speech Services 18

 * Projection of Preschool Disabled Pupils 19

Patterns of Placement of Pupils with Educational Disabilities 20

 * Number of Pupils with Educational Disabilities
 in Various Placements by Classification in 1995 25

* Number of New Classifications and Percent of Enrollment Newly Classified	55
Trends in Pupils with Educational Disabilities Exiting Education	56
* Pupils with Educational Disabilities Exiting Education 1987-1996	58

Appendix D - Number of Pupils Identified for Evaluation, Newly Classified or Reevaluated; CST and Speech-Language Specialist Ratios in Each District	114

New Jersey State Department of Education
Office of Special Education Programs

ADMINISTRATION OF SPECIAL EDUCATION PROGRAMS

The administration of special education by the New Jersey State Department of Education is governed by federal and state regulations. The Office of Grants Management and Development administers federal grants (Individuals with Disabilities Education Act - IDEA) for districts and state-operated programs. The Division of Financial Services administers state special education categorical aid for districts and state Chapter 207 for pupils in state facilities. The Office of Nonpublic School Services coordinates services to pupils in nonpublic schools under Chapters 192-193. Local districts provide special education programs for public and nonpublic pupils with educational disabilities using federal, state and local funds.

The Office of Special Education Programs administers federal and state mandates for special education for pupils with educational disabilities. The office develops and implements a State Plan for Special Education that is approved by the U.S. Office of Special Education and Rehabilitative Services. The office develops and interprets the rules and regulations regarding the provision of special education services in the state. The office also collects data, analyzes and reports on trends in special education.

The Office of Special Education Programs mediates, or transmits to the Office of Administrative Law, due process cases brought by parents or districts when there is no agreement on the identification, evaluation, classification or program for a pupil with educational disabilities. The office also conducts complaint investigations regarding the provision of special education and/or related services.

The Office of Special Education Programs approves special education programs in state facilities, private schools for the handicapped as well as clinics and agencies. The office provides technical assistance through three Learning Resource Centers and one satellite center. The office also develops and expands new programs, such as: inclusion programs, transition programs, preschool programs, programs for the hearing impaired, and the comprehensive system of personnel development (CSPD). The office also helps county supervisors of child study monitor, develop and interpret special education regulations through the Division of Field Services.

Pupils who have educational difficulties may be referred to school-based intervention and/or referral services. If a disability is suspected, they may be identified for a child study team (psychologist, learning disabilities teacher-consultant, social worker and others as indicated) evaluation of their eligibility for special education. If the team finds that the pupil is eligible, the pupil is classified according to one of the 17 categories provided in statute and regulations. An individualized education program

TRENDS IN CLASSIFICATION RATES

New Jersey provided special education for many years prior to the passage of the federal Education of the Handicapped Act (P.L. 94-142) in 1975. However, because of past problems related to record keeping, available data began with the year 1977. Until 1991, there was a steady increase in the numbers and classification rates of pupils classified as eligible for special education based on either enrollment or the ages 3-21 census. Since then, the state special education classification rate continued to increase, but more slowly. This chapter describes the methods used to calculate those rates and their trends in the state, counties and districts.

Comparison of State Classification Rates. Calculation of special education classification rates is done in two ways, depending on the comparisons that are being conducted. When comparing rates among the states, the classification rate is calculated dividing all pupils with educational disabilities by the total ages 3-21 census. It is reported in column g (p.7) and may be used to compare New Jersey with other states. The difficulty with this method is that the denominator, all children who are ages 3-21, is not available until two years after the fact based on revised census estimates. Similar census estimates are available for counties, but not for school districts; therefore, this percentage has limited utility. Calculated by this first method, the proportion of the ages 3-21 census that received special education increased from 5.4% in 1977 to 9.3% in 1991. There was no appreciable change from 1992 through 1995 in the proportion of the census that was classified (about 9.5%). The state special education classification rate appears to have leveled off at around 9.5%.

Classifications. The individual classification rates for the state were calculated using the same method described above for state comparisons (p. 9). Pupils found eligible for special education are classified according to one of 17 different categories (see Glossary). Since 1980, the EMR rate decreased; NI, PI, MH and PRE rates increased; while other classification rates stayed about the same. For example, from 1978 to 1995, the proportion of all children ages 3-21 classified as educable mentally retarded (EMR) decreased from .56% to .12%. The trainable mentally retarded (TMR) rate decreased from .17% to .07%. Some of these decreases occurred because the definitions of EMR and TMR became more restrictive during that period. The emotionally disturbed (ED) rate increased slightly between 1978 and 1981, remained stable at about .7% from 1981-1993, then dropped slightly to .63% in 1994 and 1995.

Four categories increased since 1978: neurologically impaired (NI: .47% to 1.09%), perceptually impaired (PI: 1.35% to 3.84%), multiply handicapped (MH: .15% to .59%) and preschool handicapped (PRE: .15% to .38%). Projections for preschool

(ASSA). The CST classification rate is calculated by dividing the number of public CST classified pupils by the public school enrollment. The Special Education Plan (source of the numerators) is reported in December, while the ASSA resident enrollment (denominator) is reported in October; however, the difference in dates for these two instruments is too small to substantially affect the classification rates.

Speech and CST classification rates for each district are reported in Appendix A for 1989 through 1995 along with various demographic data, such as, grade plan (e.g., Pre-K-8, K-12, 6-12, etc.), District Factor Grouping (DFG - a rough measure of socioeconomic level ranked on an eight point scale based on 1990 census data; A=lowest; J=highest), resident enrollment and community type (e.g., urban, suburban, rural, etc.). For comparison, the state averages over the same seven year period for speech (eligible for speech correction) and CST classification rates were reported according to the same district groupings (p. 12).

A series of scatter plots (pp. 14-18) permits comparisons of districts of similar size and DFGs. There was no relationship between speech classification rates and district size or DFG. There was no relationship between CST classification rates and district size; however, districts with high DFGs had slightly lower CST classification rates than those with lower DFGs.

The individual district speech and CST classification rates vary over time as well. Changes in total enrollment as well as special education enrollment affect the rates; e.g., if the total enrollment decreases and the special education enrollment stays the same, the classification rate would increase. The range of speech and CST classification rates are much larger for small districts than for larger districts. This is an artifact of district size and the calculation of percentages; e.g., one classified pupil who moves into a very small district impacts the classification rate much more than if he/she moves into a larger district.

Summary. The state special education classification rate appears to have leveled off at just about 9.5% of the ages 3-21 census (15.2% of enrollment, excluding nonpublic pupils). All counties had increased classification rates over the last 15 years, but most show the same leveling off seen at the state level. Since 1978, the EMR rate decreased; NI, PI, MH and PRE increased, while other classifications stayed about the same. Eligible for speech-language services first increased to a high in 1984 and then decreased. The overall proportion of pupils receiving speech (including eligible for speech-language services and speech as a related service) increased to 6.8% in 1995. District speech and CST classification rates for seven years are reported in Appendix A. The state averages for various district groupings are reported on page 12.

**PATTERNS OF PLACEMENT OF PUPILS
WITH EDUCATIONAL DISABILITIES**

Pupils with educational disabilities in New Jersey receive a variety of special education services through public schools or state facilities. In recent years, many educators have advocated that pupils with educational disabilities should receive more, if not most, of their education with their nondisabled peers. New Jersey is moving in that direction. Sixty-two percent of all pupils with educational disabilities are in regular classes and receive speech, supported regular education, supplemental instruction or resource center assistance. Pupils in special classes are reported in one of four settings a) in public regular education buildings for less than 60% of their school day, b) in public regular education buildings for more than 60% of their school day, c) in separate public school buildings, and d) in private schools for the handicapped (day or residential). Pupils in state-operated facilities are not included in these descriptions. The special education placement trends in New Jersey are described below by placement type, by county and by classification.

Placement Options. Pupils with educational disabilities have several placement options. Among these options are regular education placement with speech-language services (eligible for speech correction), supported regular education, supplemental instruction (SI), or resource center (RC). In 1995, the resource center program added an in-class option that brings the special education teacher into the regular class. In addition, pupils could attend the out-of-class resource centers for up to half the school day. In past years, special education instruction in resource rooms (RR) was limited to a maximum of two hours a day. Pupils in special classes (public and private) may also attend regular education classes for varying amounts of time. Home instruction may be used to provide special education as well. Pupils in nonpublic schools may also receive some public special education services.

Speech, supported regular education, SI and RC placements are provided in regular education buildings. Nonpublic pupils receive speech and SI in public facilities near the nonpublic regular education buildings. Special classes may be in public regular education buildings (Class I) run by districts or special services school districts, but also may be in schools without regular grades (Class II); such as, a) separate buildings within districts; b) special services school districts (SSSD); c) educational services commissions (ESC); d) jointure commissions (JC); e) regional day schools (RDS); f) private schools for the handicapped; or g) public college operated programs. Pupils reported by state facilities (2,277) are in various settings, but are not included in the following trends. The number and percentage of pupils in each of the various placements, other than state facilities, are reported in this book.

Placement Rates as a Percentage of the Total Public School Enrollment. The county and district placement rates were calculated by dividing the number of pupils in each setting by the total public school enrollment. This was done so that the sum of the placement percentages would add up to the classification rate in each county or district. As in previous years, the 1995 placement data revealed some variability among the various counties in the rates of placement of pupils in different placement settings. Receiving schools (special services school districts, educational services commissions, day training centers, jointure commissions, regional day schools and public college operated programs) serve pupils in more than one county; however, the placement rates discussed below were reported by the resident county.

Counties varied considerably in the proportion of pupils with disabilities placed in less restrictive settings, such as, supported regular education, supplemental instruction (SI) or resource centers (RC), compared with more restrictive special class placements. In 1995, the state average for placements in these less restrictive settings was 5.8% of total public school enrollment (Range: 2.7% in Hudson to 8.9% in Cape May). The counties with the highest proportion of their enrollment in these settings were Atlantic (8.0%), Cape May (8.9%), Hunterdon (7.9%) and Warren (8.4%). The counties with the lowest proportions were Essex (3.4%) and Hudson (2.7%). Counties in rural settings tend to utilize the less restrictive settings while the heavily urban counties use them less frequently.

The state average for placements in public classes in buildings with regular grades (Class I) was 4.6% of the total public school enrollment in 1995 (Range: 2.4% in Hunterdon to 7.8% in Cumberland). The counties with the highest proportion of their enrollment in Class I were Camden (6.8%), Cumberland (7.8%) and Mercer (7.0%). The counties with the lowest proportions were Bergen (2.9%), Cape May (2.8%), Hunterdon (2.4%) and Somerset (2.7%).

The state average for placements in public and private classes in buildings without regular grades (Class II) was 1.4% of the total enrollment in 1995 (Range: 0.6% in Sussex to 2.8% in Cape May). The counties with the highest proportion of their enrollment in Class II were Burlington (2.2%) and Cape May (2.8%). The counties with the lowest proportions were Cumberland (0.9%), Hunterdon (0.9%), Ocean (0.8%), Sussex (0.6%) and Warren (0.8%).

The public and private Class II settings in each county may be examined according to which entity runs them. A given county may have special classes run by either a special services school district or an educational services commission, but not both. Cumberland, Hudson, Ocean and Passaic counties have neither; however, Ocean County shares services with the Monmouth Educational Services Commission. Regional day schools are in about half the counties and are sometimes, but not always, run by special services school districts.

TRENDS IN CLASSIFICATION RATES BY RACE AND GENDER

In New Jersey, pupils with educational disabilities are classified either by a child study team (CST) or a speech-language specialist. The CST and speech classification rates each differ based on the racial-ethnic-gender grouping of the pupils. The CST and speech rates were examined separately over 11 years to determine the patterns of classification. Pupils in nonpublic schools were not included in the calculations since the nonpublic school enrollment was not available by resident district. The analysis of trends in classification rates omitted the American Indian/Alaskan Native group since the numbers were too small and the denominator too unreliable with which to generate stable trends.

Trends in Gender Classification Rates

In New Jersey, the differences between male and female classification rates are consistent and long-standing. The public school enrollment in 1995 for all pupils was 1,195,731, of which 615,347 were males and 580,384 were females. During that year, there were about 182,000 pupils who received special education and related services in public schools or private schools for the handicapped. Of these, 122,000 were male and just 60,000 were female. While the ratio was 1.1 males for every female enrolled in school, the ratio for pupils classified by a child study team (CST) was 2.1 males for every female. The ratio was somewhat smaller, 1.8 to 1, for pupils classified as eligible for speech-language services. These ratios were similar across the major racial-ethnic groups (Black, Hispanic and White) and were consistent from 1985-1995.

CST Classification Rates. Child study team (CST) classification rates differ widely according to gender. The CST classification rate for males was 12.5% in 1985 and gradually increased to 15.7% in 1995. The CST classification rate for females was about half the male rate for those same years (1985: 6.0%; 1994: 7.9%). The total female rate changed by the amount +1.9%, while the total male CST rate changed by the amount +3.2% during that time. From another perspective, the data showed that females constituted 49% of the enrollment, but only 32% of the pupils classified by a CST. On the other hand, males constituted 51% of the enrollment, but 68% of the CST classified pupils.

Speech Rates. Speech-language services were provided to about 83,000 public school pupils. Thirty-nine thousand were classified as "eligible for speech-language services." The remaining 43,500 received speech as a related service in addition to some other special education program. The eligible for speech correction classification rate for males exceeded that for females by a ratio from 1.5:1 in 1985 to 1.7 in 1995. The same was true for each of the major racial-ethnic groups over the last 10 years.

The ED rate did not change from 1985 through 1993 for any racial-ethnic-gender group, but did decrease slightly for black and white males in 1994 and 1995. The NI and MH rates continued to increase slowly for most groups, but somewhat more for blacks and Hispanics than whites.

Black CST classification rates increased more over the last 11 years than other racial-ethnic groups. Although the numbers of pupils were not large, the increases in rates were proportionally larger in the NI and MH categories than in the PI and ED categories as compared with the white and Hispanic rates. The ED rates were stable over the last 11 years, with the black rate consistently double the white and Hispanic ED rates. The black male MH rate is now almost double the white male rate, while the black male and female NI rates are holding fairly steady at 1.7 times the white rate.

For the last 11 years, the Hispanic rates were about the same as the white rates in three (NI, ED, MH) of the four major categories. However, the Hispanic PI rates were somewhat lower than the white rates. These rates may be slightly lower because some Hispanic pupils' perceptual impairments may be masked by their language differences.

Summary. The eligible for speech-language services classification rates for males exceeded that for females by a ratio of about 1.6:1 for each of the last 11 years. From 1985 to 1994, the eligible for speech-language services rates for whites stayed about the same. Then in 1995, there was a slight decrease. Speech rates decreased steadily for all other racial-ethnic groups over the last 11 years. In 1985, blacks, Hispanics, and whites were all classified eligible for speech correction at about the same rate. By 1994, however, minority group pupils were classified for speech at a rate substantially lower than their white counterparts. Some of the difference may be accounted for by the increase seen in speech provided as a related service to CST classified pupils for which there are no racial-ethnic-gender data.

The higher CST classification rates for males compared with females (about 2:1) was consistent over all racial-ethnic groups and is long-standing. Over the last 11 years, Hispanic PI rates were consistently lower than white rates, but were about the same for NI, ED and MH. During the same time, CST classification rates for black males were about 1.3 times the rates for whites (1.2 times for females). Much of the difference between black and white CST classification rates was in the ED category; however, differences are gradually increasing in the NI and MH categories as well. CST classification rates for all groups increased; however, the black male CST classification rates increased more than those for other groups during the same period.

TRENDS IN RELATED SERVICES

Related services include counseling, occupational therapy, physical therapy, speech and other services required for a pupil to benefit from education. For the past nine years, data have been collected on how many pupils with educational disabilities receive each type of service. The rates were calculated as a percentage of the public CST classified pupils.

Counseling. In 1995, counseling was provided to 19,139 CST classified pupils, mostly to PI (6,890) and ED (6,160) with NI (3,063) and MH (2,023) as the next most frequent categories. As a percentage of each CST classification, the ranking is somewhat different. Forty-seven percent of the ED and 27.1% of the SM pupils received counseling. Pupils with other classifications received counseling at lower rates: MH: 16.8%, NI: 13.8%, and PI: 9.2%. Less than 10% of the remaining pupils received counseling. These proportions were relatively consistent over the last five years, with 13.4% of CST classified pupils receiving counseling in 1995.

Occupational Therapy (OT). Out of the 13,133 pupils receiving OT in 1995, there were more PRE (2,834), MH (3,274), NI (2,315) and PI (1,820) pupils receiving OT than other classifications. As a percentage of each CST classification, pupils classified OH (60.1%), EDT (59.5%), PRE (36.7%) and AUT (36.0%) had the largest proportion of their numbers receiving OT. Next in line were MH (27.3%) and TMR (24.9%). The rest of the classifications had 15% or less of their numbers that received OT. The overall proportion of classified pupils receiving OT increased from 4.5% in 1987 to 9.2% in 1995.

Physical Therapy (PT). PT was provided to 6,879 pupils in 1995, of which 2,141 were MH and 1,633 were PRE. As a percentage of each CST classification, OH pupils (74.2%) had the largest proportion of their numbers receiving PT. Next were EDT (57.0%), PRE (21.2%), MH (17.8%), TMR (13.5%) and AUT (10.2%). The pupils in the remaining classifications had 10% or less of their numbers who received PT. The overall proportion of classified pupils receiving PT increased from 2.8% in 1987 to 4.8% in 1995.

Speech. Many pupils (43,500) received speech as a related service in 1995. Of those, 13,698 were PI; 7,967 were NI; 6,254 were PRE and 6,571 were MH. As a percentage of each classification that received speech as a related service, the largest proportion were in CH (83.3%) and PRE (81.1%). Next in line were TMR (68.3%), AH (72.7%), AUT (69.7%), EDT (56.1%), MH (54.7%) and EMR (48.1%). The pupils in all the other classifications had 36% or less who received speech. Except for a small decrease in 1994, overall speech as a related service increased from 23.2% in 1987 to 30.5% in 1995.

TRENDS IN SPECIAL EDUCATION STAFFING

Special Education Staffing Patterns. The number of district personnel serving special education in New Jersey increased from 17,174 in 1980 to 26,705 in 1995, an increase of 56%. At the same time, the total number of classified pupils increased by 30%. Although there is a long-term increase in the numbers of special education pupils and staff, the overall ratio of staff to pupils decreased from 1:8.8 in 1980 down to 1:6.6 in 1990. The ratio then increased to 1:7.3 in 1995; however, the staff increases were mostly in resource center teachers and teacher aides. All other staff types increased in number from 1980 to 1994, but then decreased in 1995.

There was a substantial decrease (75%) in supplemental instructors, while resource center (formerly resource room) teachers more than almost tripled (183%). Special class teachers increased from 3,879 to 6,038 (56%) while the number of pupils in public special classes increased by 11%. Preschool teachers increased from 281 in 1983 to 436 in 1995 (55%) while the number of preschool pupils more than doubled. Speech-language specialists increased from 1,226 in 1986 to 1,751 in 1994; then decreased in 1995 to 1,679, for an overall increase of 37%. At the same time, the number of public school pupils receiving speech during the same period increased from 71,577 to 82,559, a 15% increase.

The numbers of child study team members increased from 1980 to 1994. However, in 1995, the numbers decreased: School social workers -116; School psychologists - 85; Learning disabilities teacher-consultants - 99. Special education administrators also decreased (-101). These recent decreases in staff need to be examined along with the trends in the pupil-staff ratios described below.

Although the proportion of pupils with educational disabilities has leveled off, their numbers are expected to increase in proportion to increases in overall enrollment (from 9.6% in 1995 to 9.8% in 2004). If the past trends continue, there will be a need for increased numbers of special education personnel. The projections of future staff needs will consider the expected increases in numbers of pupils to be educated, trends in staff ratios, trends in the types of staff hired, current staff attrition and the number of college graduates and other educators who have special education certification.

Calculation of Ratios. The calculation of pupil-teacher ratios is complicated by the placement of pupils outside regular public districts in public receiving schools (special services school districts, educational services commissions, jointure commissions, regional day schools, day training centers and public college operated programs) and private schools for the handicapped. For example, pupils in receiving schools were included in the ratios, but their teachers were not due to difficulties in establishing

of the changes from 1992 on are a result in the change to collecting the data from the Certificated Staff Report. These trends in the ratios of CST members to enrollment were similar to the ratios of CST members to classified pupils. The ratio of psychologists to the CST classified pupils increased steadily from 1:107 in 1980 to 1:147 in 1995. The ratio of SW to CST classified pupils remained relatively stable at 1:115 from 1983 to 1991, dropping to 1:110 in 1993 and 1994, and then increasing sharply to 1:132 in 1995. The ratio of LDT-Cs to CST classified pupils increased from 1:85 in 1980 to 1:130 in 1995. The ratios compared with the number of CST classified pupils indicate an increasing case load for all CST members. A small part of the changes from 1992 on compared with previous years may be attributed to the change in reporting through the Certificated Staff Report.

Speech Ratios. Speech is provided both as a separate special education program (eligible for speech correction) as well as a related service for pupils classified by a child study team. The ratio of speech-language specialists (speech correctionists) to total enrollment dropped significantly from 1:1,170 in 1980 to 1:714 in 1995. The ratio of speech-language specialists to all pupils receiving speech-language services remained stable at about 1:57 from 1980 through 1987, decreased to 1:45 in 1994, then increased to 1:49 in 1995.

Special Education Administrators. The number of special education administrators was compared with the total enrollment, the total number of pupils with educational disabilities, the CST classified disabled and the total number of special education staff. The ratio to total enrollment decreased from 1:3,332 in 1980 to 1:1,970 in 1993, and then increased to 1:2,670 in 1995. The ratio to total disabled decreased from 1:402 in 1980 to 1:318 in 1993, and then increased to 1:435 in 1995. The ratio of special education administrators to CST classified pupils dropped from 1:242 in 1980 to a low of 1:201 in 1984, gradually increased to 1:236 in 1992, dropped slightly to 1:227 in 1993, and then increased to 1:331 in 1995. The ratio of special education administrators to total special education staff varied little (from 1:42 to 1:50) from 1980 to 1994, after which it increased to 1:59 in 1995.

District Staff Ratios. There is considerable variability among districts in staffing ratios within the state. The ratios described here are only state averages, not necessarily the ideal. Comparisons with the state average should be made with much caution since districts vary considerably in size, resources, pupil needs and other characteristics. Appendix D lists, for each district, the numbers of CST and speech staff as reported through the Certificated Staff Report for 1995. Also reported are the overall ratios of CST to resident enrollment as well as the average number of evaluations/reevaluations completed per CST. However, staff reported by district A might also serve district B. For example, the chart would suggest that district A's team ratios were very low and completed relatively few evaluations/reevaluations, while district B would show a very high ratio and many evaluations/reevaluations

Trends in Initial Evaluations, New Classifications, and Reevaluations

Identification. Data on initial evaluations, initial classifications, and reevaluations have been collected since 1980. The percentage of the enrollment that was identified for evaluation decreased slowly from 3.6% in 1980 to 2.2% in 1995. At the same time, the percent of those initial evaluations that was classified doubled, 43.6% in 1980 to 80.9% in 1995. The higher classification rate for those newly identified pupils suggests that the identification process has become more efficient with fewer pupils without educational disabilities being evaluated.

The percent of the enrollment that was newly classified each year remained stable from 1.6% in 1980 to 1.8% in 1995. Most districts identify between 1.8% to 3.4% of their enrollment for evaluation and classify between 62% to 84% of them. A substantial number of districts (164) classify all pupils who are identified for evaluation.

Reevaluations. Pupils with educational disabilities must be reevaluated at least every three years. It is expected that the number of reevaluations would increase parallel to the increase in the number of classified pupils. The number of reevaluations completed increased about fivefold since 1980, from 8,394 to a high of 42,816 in 1995. As the percentage of pupils with educational disabilities levels off, so should the number of reevaluations completed each year.

Total Evaluations. The average number of evaluations completed by each child study team may be calculated by adding the initial evaluations to the reevaluations and dividing by the number of CSTs. The number of CSTs were represented by the number of psychologists. This average varied between 48 to 69 evaluations per CST over the last 16 years.

Initial Classifications. The pattern of pupils classified for the first time predicts the future pattern of classifications. The rates of these newly classified pupils may be calculated by dividing the numbers of newly classified pupils in each classification by the enrollment. These rates were tracked since 1980. For example, the percent of newly classified EMR pupils dropped from .07% of the enrollment in 1980 to .02% in 1993 then increasing to .04% in 1995. The newly classified TMR rate declined from .02% in 1980 to less than .01%. New NI classifications were stable at .17% from 1985 to 1992; however, then it increased over the next few years to .24% in 1995. The newly classified PI rate also held steady at .97% from 1986 to 1991 and then declined to .76% in 1995. The new ED classification rate remained steady at about .20% for the last nine years. The MH rate remained steady at about .05% from 1982 to 1992 after which it increased to .11% in 1995. The preschool rate increased from .06% at its initiation to .35% of the enrollment for 1991-1993 with a

Trends in Pupils with Educational Disabilities Exiting Education

Pupils with educational disabilities exit special education by being declassified, graduating, moving, or dropping out. Because pupils may reenroll in the same district or another district or state, their mobility may affect the exiting reports due to difficulties in tracking and record keeping. For 10 years, data have been collected on the number of pupils with educational disabilities exiting the educational system according to reasons for exit: graduation, reached maximum age, dropped out or status unknown. In 1993, the "status unknown" category was divided and renamed as "Moved, known to be continuing," "Moved, known not to be continuing," and "Deceased." The first of these, "Moved, known to be continuing," was not included here because those pupils did not exit education, but remain in special education in another district.

The exiting data were based on a random sample of districts for the school years ending in 1987 and 1988 and a sample of districts stratified by enrollment (half the districts each year) for 1989 to the present. Some of the changes in numbers of pupils reported in the first few years were probably due, in part, to improved district record keeping. Some of the decrease in numbers reported for 1990 were due to an adjustment in the formula calculating the state totals from the sample. Corresponding 1989 figures would be approximately 8% lower than those recorded. The difficulties in retrieving the data precluded its recalculation. However, the overall proportions exiting did not change appreciably.

Percentage Exiting of All Pupils with Educational Disabilities Ages 16-21. One way of looking at pupils exiting is as a proportion of the total number of pupils with educational disabilities ages 16 through 21. These percentages were calculated by dividing the total number of pupils exiting, ages 16 - 21, reported on the district End of the Year Report by the number of classified pupils, ages 16 - 21, reported on the district Special Education Plan. These percentages are shown on an accompanying charts along with the numbers of pupils exiting by each reason for the years ending in 1987 through 1996.

There are some inconsistencies in reporting between the Special Education Plan and the End of the Year Report, especially for classifications that have relatively few pupils. These percentages may not be precise due to these inconsistencies. Also, since AH and VH pupils are reported by agencies other than districts, their numbers are underrepresented in the district Special Education Plan report. As a result, the exiting percentages are not complete for these two classifications. In addition, the exiting percentages do not take into consideration pupils who drop out and reenroll. Therefore, the data should be interpreted with some caution.

GLOSSARY OF SPECIAL EDUCATION CLASSIFICATIONS

Auditorily Handicapped (AH) means an inability to hear within normal limits due to physical impairment or dysfunction of auditory mechanisms characterized by i and ii below. Evaluations by a specialist qualified in the field of audiology and a speech and language evaluation by a certified speech correctionist or speech - language specialist are required.

- i. The pupil is impaired in processing linguistic information through hearing, with or without amplification; and
- ii. The loss of hearing may be permanent or fluctuating and adversely affects the pupil's education.

Autistic (AUT) means a pervasive developmental impairment characterized by i, ii, and iii below. An evaluation by a certified speech correctionist or speech-language specialist and an evaluation by a physician trained in neurodevelopmental assessment is required.

- i. Social-emotional and communication development impaired in ways that are not merely predictable from cognitive and/or sensory impairment(s);
- ii. Extreme aberrant responses to one or more aspects of the environment, such as insistence on sameness, resistance to change, stereotypic behaviors, lack of responsiveness to others or repetitive movements; and
- iii. Onset in infancy or childhood.

Chronically Ill (CI) means a health condition such as tuberculosis, cardiac condition, leukemia, asthma, seizure disorder or other medical disability which makes it impractical to receive adequate instruction through a regular school program. Evaluation by the school physician or his or her review and written acceptance of the medical report of another physician is required. The school nurse shall assist in the accumulation of the data necessary to determine eligibility.

Communication Handicapped (CH) means impaired native speech or language which is outside the range of acceptable variation, adversely affects a pupil's educational performance and is not due primarily to hearing impairment as defined under "Auditorily Handicapped." It is characterized by i or ii below. An evaluation by a certified speech correctionist or speech-language specialist is required.

- (2) The ability to function socially without direct and close supervision in home, school and community settings;
- (3) Performance on an individually administered test of intelligence that falls three standard deviations or more below the mean.

Eligible for Day Training (EDT) means a level of functioning profoundly below age expectations whereby on a consistent basis the pupil is incapable of giving evidence of understanding and responding in a positive manner to simple directions expressed in the child's primary mode of communication and cannot in some manner express basic wants and needs.

Multiply Handicapped (MH) means the presence of two or more educationally disabling conditions which interact in such a manner that programs designed for the separate disabling conditions will not meet the pupil's educational needs. All evident educational disabilities shall be documented. Eligibility for speech-language services as defined in this section shall not be one of the disabling conditions which forms the basis for the classification of a pupil as "multiply handicapped." Evaluations by all specialists required in this subsection for the separate disabling conditions being considered for the determination of "multiply handicapped" are required.

Neurologically or Perceptually Impaired) (NI/PI) means impairment in the ability to process information due to physiological, organizational or integrational dysfunction which is not the result of any other educationally disabling condition or environmental, cultural or economic disadvantage and is characterized by i or ii below.

- i. **Neurologically Impaired (NI)** means a specific impairment or dysfunction of the nervous system or traumatic brain injury which adversely affects the education of a pupil. An evaluation by a physician trained in neuro-developmental assessment is required.
- ii. **Perceptually Impaired (PI)** means a specific learning disability manifested by a severe discrepancy between the pupil's current achievement and intellectual ability in one or more of the following areas:
 - (1) Basic reading skills;
 - (2) Reading comprehension;
 - (3) Oral expression;
 - (4) Listening comprehension;
 - (5) Mathematic computation;
 - (6) Mathematic reasoning; and
 - (7) Written expression.

FEDERAL DEFINITIONS

Deafness (AH-D) - means a hearing impairment which is so severe that a child is impaired in processing linguistic information through hearing, with or without amplification, that adversely affects educational performance.

Hard of Hearing (AH-HH) - means an impairment in hearing, whether permanent or fluctuating, that adversely affects a child's educational performance but which is not included under the definition of "deafness" in this section.

Deaf-Blindness (D-B) - means concomitant hearing and visual impairments, the combination of which causes such severe communication and other developmental and educational problems that they cannot be accommodated in special education programs solely for children with deafness or children with blindness.

Traumatic Brain Injured (TBI) - means an acquired injury to the brain caused by an external physical force, resulting in total or partial functional disability or psychosocial impairment, or both, that adversely affects a child's educational performance. The term applies to open or closed head injuries resulting in impairments in one or more areas, such as cognition; language; memory; attention; reasoning; abstract thinking; judgment; problem-solving; sensory, perceptual and motor abilities; psychosocial behavior; physical functions; information processing; and speech. The term does not apply to brain injuries that are congenital or degenerative, or brain injuries induced by birth trauma.

Source: 34 CFR Part 300.7, effective September 29, 1992

APPENDIX A

DISTRICT SPECIAL EDUCATION DEMOGRAPHICS

The following formulae were used to calculate the accompanying district classification rates for the current year. Calculations for previous years used corresponding data from similar reports (table and line numbers differed):

CST Classified - Special Education Plan, Table 1, lines 20 plus 21 minus line 17;
Subtract nonpublic pupils from Table 6, lines 20 plus 21 plus line 17;
Divide by resident enrollment (ASSA);
Multiply by 100.

Speech - Special Education Plan, Table 1, line 17;
Minus nonpublic pupils, Table 6, line 17;
Divide by resident enrollment (ASSA);
Multiply by 100.

Both - Special Education Plan, Table 1, lines 20 plus 21;
Minus nonpublic pupils on Table 6, lines 20 plus 21;
Divide by resident enrollment (ASSA);
Multiply by 100.

Scatter Plots with DFG and Enrollment. This report also includes graphs (scatter plots) of speech (top) and CST classification (bottom) rates for districts of various enrollments and DFGs (pp. 14-18). These graphs show each district as a square. DFGs are reported as numbers rather than letters (A = 1; B = 2; CD = 3; DE = 4; FG = 5; GH = 6; I = 7; J = 8). For example, the square for a district with an enrollment of 800, a DFG of GH and a speech classification rate of 8.2% would be found on the top section of the page labeled "For Districts .5K - 1K," (k = 1000) at the top of column 6. The same district with a CST classification rate of 12.0% would be found on the bottom of the same page in the middle of column 6. These scatter plots may be used to compare the 1994 distribution of speech and CST classification rates of all districts according to the size of their total enrollments and DFGs.

APPENDIX C

PERCENT OF PUPILS WITH DISABILITIES BY PLACEMENT IN EACH DISTRICT

The data from each table of the Special Education Plan were used to calculate the proportions for each placement type. The number of pupils with educational disabilities in each placement type was used as each numerator. The total number of pupils with educational disabilities was used as the denominator. When the total number of pupils with disabilities is small (less than 100), the percentages in a given placement are somewhat inflated.

For reference, the CST and speech classification rates from Appendix A were included in Appendix B as well. These rates exclude nonpublic pupils and were calculated as a percentage of the public school enrollment.

NOTE: CALCULATED BY DIVIDING THE NUMBER OF PUBLIC PUPILS IN EACH PLACEMENT BY THE TOTAL ENROLLMENT
EXCLUDES NONPUBLIC PUPILS

SOURCE: SPECIAL EDUCATION PLAN; APPLICATION FOR STATE SCHOOL AID FOR ENROLLMENT

APPENDIX D

NUMBER OF PUPILS IDENTIFIED FOR EVALUATION, NEWLY CLASSIFIED, OR REEVALUATED AND CHILD STUDY TEAMS AND SPEECH-LANGUAGE SPECIALIST RATIOS IN EACH DISTRICT

The percentage identified (referred) was calculated from data on either the 1993 or 1994 End of the Year Report because only half the districts are sampled each year for this information. The number of resident pupils identified (referred) for CST evaluation was divided by the resident enrollment. In the case of sending-receiving arrangements where the receiving district contracts to provide the CST evaluation services, the identification (referral) rates may not reflect that service delivery system.

The percentage classified of those identified (referred) was calculated by dividing the number of newly classified pupils by the total number of pupils identified (referred). In some cases, the newly classified rate exceeds 100% because a newly classified pupil may have been identified in the previous year.

The numbers of CST and speech-language specialists were taken from the Certificated Staff Report. In some instances, the FTE may not have been reported accurately. When staff are shared across districts, the FTE in some districts may not have been reported, although they would have had assigned time in those districts. Some CST members may not have been reported if they also had administrative assignments.

The ratios of evaluations plus reevaluations to CSTs were calculated by dividing the number of pupils identified (referred) for CST evaluation plus the number of reevaluations by an estimate of the number of CSTs. The CST estimate was obtained by adding the number of psychologists, social workers and LDT-Cs and dividing by three. The result is an approximation of the number of evaluations completed per CST.

The ratio of the resident enrollment to the number of CSTs was calculated using the above estimate of the number of CSTs in each district. Given the limitations of the data and since CSTs conduct activities other than evaluations, the ratio data should be regarded as preliminary and interpreted with caution. Data on specific districts should be verified before any extensive use is made of them.
