EXECUTIVE SUMMARY

New Jersey's Ambient Air Monitoring Network Plan for 2021 provides a complete description of the air monitoring network operated by the Bureau of Air Monitoring (BAM), and summarizes any changes made in the previous year and those planned for the next year. The New Jersey Department of Environmental Protection (NJDEP) is required to submit a Network Plan to the U.S. Environmental Protection Agency (USEPA) each year. The primary purpose of the air monitoring program is to demonstrate compliance with the National Ambient Air Quality Standards (NAAQS) for specific pollutants. It also provides real-time air quality data to the public through its website, and measures concentrations of non-criteria pollutants for the protection of public health.

Changes to the monitoring network that occurred between March 2020 and March 31, 2021, include:

1. Camden RRF – the site was shut down after the PM₁₀ monitor was relocated to the Camden Spruce Street site.
2. Toms River - discontinued the filter-based PM_{2.5} sampling on January 31, 2021.
3. Trenton – installed a continuous PM_{2.5} monitor.

These changes are summarized in Table 1.

TABLE 1. Air Monitoring Network Changes, March 2020 – March 2021

| Monitoring Site | Parameter(s) | Action | Date |
|-----------------|-------------------|-----------------------------------|-----------|
| Camden RRF | PM ₁₀ | Shut down site | 3/16/2020 |
| Toms River | PM _{2.5} | Discontinued filter-based monitor | 1/31/2021 |
| Trenton | PM _{2.5} | Installed continuous monitor | 2/12/2021 |

Proposed Changes

The only change to the New Jersey air monitoring network proposed for the coming year is to remove the filter-based PM_{2.5} monitor at the Trenton Library site. A continuous PM_{2.5} monitor was installed on February 12, 2021, and is still being tested.

BAM will be proposing to replace more filter-based PM_{2.5} monitors with continuous real-time monitors. Monitors at Atlantic Cape Community College, the Paterson Health Department, and Union City High School are located in public buildings where access was restricted because of the Covid-19 shutdown, and data could not be collected at these sites. Continuous monitors would prevent such losses of data in the future, and the data would be available to the public through the BAM webpage.

REGULATORY REQUIREMENTS

NJDEP is required by 40 CFR Part 58 to submit an Ambient Air Monitoring Network Plan to the USEPA Region 2 Regional Administrator by July 1 of each year, and to have the Plan available for public inspection for at least 30 days prior to its submittal to the USEPA. The plan describes New Jersey's State and Local Air Monitoring Stations (SLAMS), National Core (NCore) stations, Chemical Speciation Network

(CSN) stations, Urban Air Toxics Monitoring Program (UATMP) stations, Special Purpose Monitor (SPM) stations, and Photochemical Assessment Monitoring Stations (PAMS).

This 2021 Network Plan contains information required by the regulations; descriptions of the air monitoring sites; large- and small-scale maps of the monitoring station locations; and a summary of the changes to the Air Monitoring Network that NJDEP expects to implement during the year. This document was posted for public comment on the Bureau of Air Monitoring website, <https://nj.gov/dep/airmon>, for thirty days until June 25, 2021. No comments were received. This document is available for download from the website, or as a hard copy by request from bamweb@dep.nj.gov.

THE NEW JERSEY AIR MONITORING NETWORK

NJDEP currently operates 30 air monitoring stations throughout the state. Table 2 lists all the monitoring sites, along with the pollutants, pollutant categories, or meteorological parameters that are measured at each site. Figure 1 shows the locations of the monitoring stations across New Jersey.

Data used for comparison to the National Ambient Air Quality Standards (NAAQS) must be measured by USEPA-approved real-time analyzers or USEPA-approved manual samplers. The real-time data is also used to generate a rating of current air quality called the Air Quality Index (AQI), which is updated hourly on the Bureau of Air Monitoring webpage.

Real-time sampling instruments collect and analyze data continuously, and transmit the data to a centralized computer system once every minute. Several parameters, including CO, nitrogen dioxide (NO₂), ozone (O₃), sulfur dioxide (SO₂), fine particulate matter (PM_{2.5}), and meteorological data are measured this way.

NJDEP also uses USEPA-approved manual particulate samplers for comparison to the PM NAAQS. Separately, three types of airborne particles can be collected on a filter over a 24-hour period: fine particulate (particles smaller than 2.5 micrometers in diameter, or “PM_{2.5}”); inhalable particulate (particles smaller than 10 micrometers in diameter, or “PM₁₀”); and PM_{coarse} (particles between 2.5 micrometers in diameter and 10 micrometers in diameter). At the end of the 24-hour collection period, the samples are manually retrieved and sent to NJDEP’s laboratory for gravimetric analysis (weighing).

NJDEP monitors other pollutants, some of which are grouped together into categories by their method of sampling or analysis. These categories are listed in the headings of Table 2. “Toxics” monitoring is part of the USEPA’s Urban Air Toxics Monitoring Program (UATMP), in which certain volatile organic compounds (VOCs) and carbonyls are analyzed using whole air samples or adsorbent media (see Appendices A and B). Pollutants in the “PM_{2.5} Speciation” category include trace elements, heavy metals, and carbon compounds (see Appendix C); they are analyzed using PM_{2.5} particles, under the USEPA Chemical Speciation Network (CSN) program. The site at Rutgers University that monitors for ozone precursors (pollutants that promote ozone formation in the atmosphere) is part of the national Photochemical Assessment Monitoring Station (PAMS) program. Ozone precursors (see Appendix D) are often referred to as PAMS pollutants. The PM_{2.5} speciation, VOC, and carbonyl samples are collected by NJDEP and sent to USEPA-approved contract laboratories for analysis. Five urban monitoring stations measure near-real-time benzene, toluene, ethylbenzene, and xylenes (with a “BTEX” analyzer), and black carbon (with an aethalometer). In addition, NJDEP also measures acid deposition, mercury, and visibility (using a nephelometer) at a number of sites.

* Indicates that there is a collocated monitor at the site (for quality assurance purposes, as required by USEPA).

Shaded cell indicates that the monitor is scheduled to be removed.

A – See Appendix C

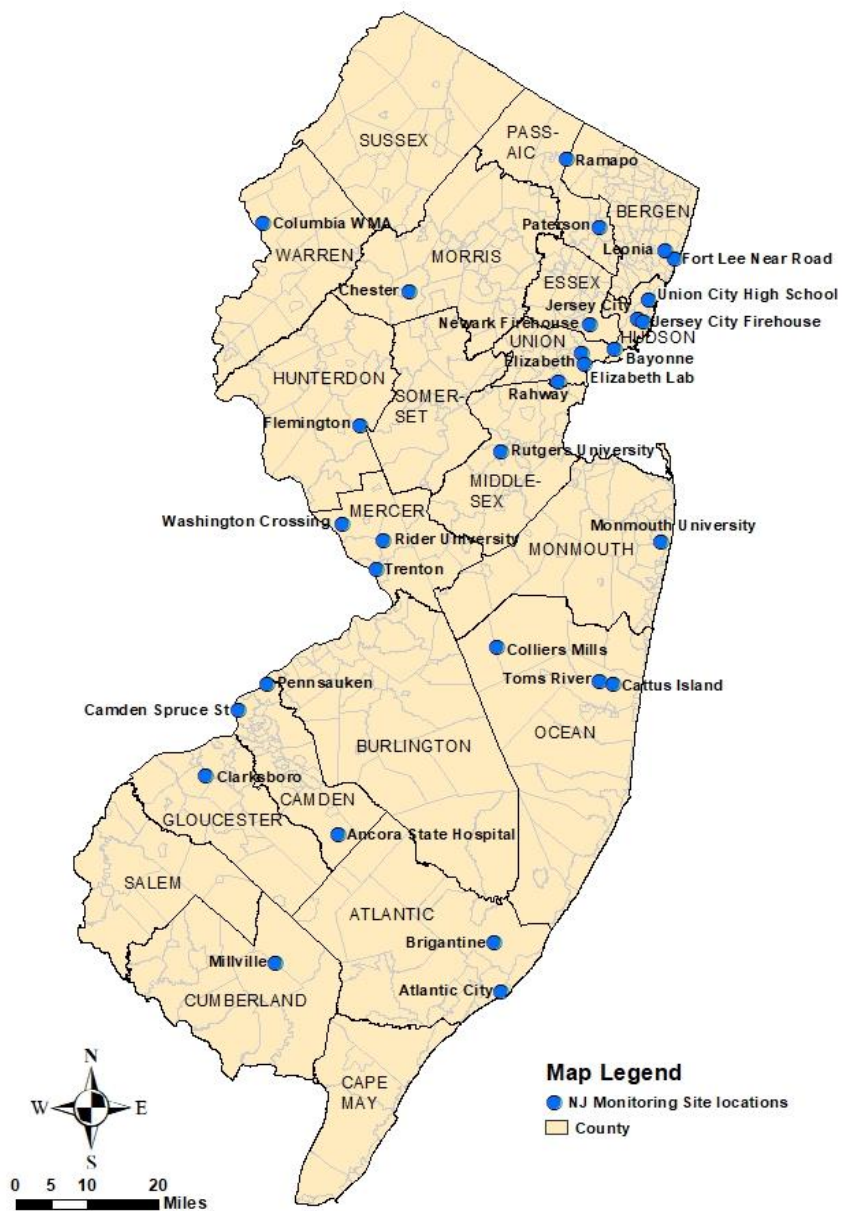

b – See Appendix D

c – See Appendices A and B

d – Urban pollutants include black carbon and select volatile organic compounds (BTEX compounds; see Appendix E).

e – Meteorological parameters include temperature, barometric pressure, relative humidity, rain, wind direction, and wind speed. Rutgers has additional parameters (see site description).

| Site Purpose | To measure background pollutant concentrations in a southern coastal area, and visibility in a Class I protected area. |
| Plans for the next 18 months | No changes. |
| Other Comment | SO ₂ is measured by a "trace-level" analyzer. Site is also an IMPROVE station, part of NESCAUM visibility network. Real-time PM _{2.5} nephelometer data is not submitted to USEPA's AQS database. The US Fish & Wildlife Service collects a weekly acid deposition sample which is sent to the National Atmospheric Deposition Program (NADP) for analysis. |

GLOSSARY OF ABBREVIATIONS AND TERMS

ABBREVIATIONS

AQS – Air Quality System, USEPA’s database for air quality data nationwide

CSA – Combined Statistical Area, defined by U.S. Office of Management and Budget as a geographic area having 2 or more Metropolitan Statistical Areas

CSN – Chemical Speciation Network

CFR – Code of Federal Regulations

CO – Carbon monoxide

CVAF Spectrometry – Cold Vapor Atomic Fluorescence Spectrometry, method for analyzing mercury

FEM – Federal Equivalent Method; monitoring method that is not FRM but is approved by USEPA

FRM – Federal Reference Method; primary monitoring method recommended by USEPA for a specific pollutant

DNPH cartridge – Di-Nitro-Phenyl-Hydrazine, an adsorbent for trapping carbonyls in air

auto GC-FID – automated gas Chromatograph Flame Ionization Detection

auto GC-PID – automated gas Chromatograph Photoionization Detection

Hg – Mercury

IC – Ion Chromatography, a method for analyzing for ionic compounds from fine particles

IMPROVE – Interagency Monitoring of Protected Visual Environments

NAAQS – National Ambient Air Quality Standard

NADP – National Atmospheric Deposition Program

NCore – National Core, a monitoring site required by USEPA to measure particles, O₃, SO₂, CO, NO_x and meteorology, for compliance with the NAAQS and to support research

NESCAUM – Northeast States for Coordinated Air Use Management

NJDEP – New Jersey Department of Environmental Protection

NO – Nitric oxide

NO₂ – Nitrogen dioxide

NO_x – Oxides of nitrogen

NO_y – Total reactive oxides of nitrogen

O₃ – Ozone

PAMS – Photochemical Assessment Monitoring Station; site which measures ozone precursors

Pb – Lead

PM_{2.5} – Fine particles, 2.5 micrometers in aerodynamic diameter or smaller

PM₁₀ – Inhalable particles, 10 micrometers in aerodynamic diameter or smaller

PM_{10-2.5} – Coarse particles, between 10 and 2.5 micrometers in aerodynamic diameter

PM_{2.5}-Speciation – a group of elements, ionic compounds and carbon compounds that are analyzed from fine particles

RRF – Resource Recovery Facility; trash incineration facility

SLAMS – State and Local Air Monitoring Station; designation for monitoring site or sampler from which data can be used for comparison to the National Ambient Air Quality Standards

SO₂ – Sulfur dioxide

SPM – Special Purpose Monitor; designation for monitoring site or sampler from which data are not used for comparison to the National Ambient Air Quality Standards

TLE – Trace Level Enhanced; type of analyzer which measures very low concentrations

TO-11A – a standard method approved by USEPA to analyze carbonyls

TO-15 – a standard method approved by USEPA to analyze volatile organic compounds

UAR – Urban Areas Represented; 1 or more counties having a population greater than 50,000

UATMP - Urban Air Toxics Monitoring Program

USEPA - United States Environmental Protection Agency

VOC – Volatile organic compound, a carbon-based chemical that is gaseous
XRF – X-ray fluorescence, a method for analyzing elements from fine particles

TERMS

Acid deposition – acid rain, the phenomenon by which air pollutants raise the acidity of rain and snow
Ambient air – air in areas that are accessible to the general public
Background – a monitor situated in an area which is not expected to be affected by specific air pollution sources
Canister – a stainless steel container used for collecting an air sample to be analyzed for VOCs
Capacitive sensor – an instrument used for measuring relative humidity
Carbonyls – a group of aldehydes, or a carbon chain with an oxygen molecule at one end
Chemiluminescence – the method used for analyzing for NO, NO₂ and NO_x
Coarse particles – also PM_{10-2.5}; particles between 10 and 2.5 micrometers in aerodynamic diameter
Collocated – two samplers operating side-by-side in order to collect data used for precision statistics
Continuous – an instrument that collects data instantaneously, without stopping, throughout the year, and transmits the data to a central data acquisition system every minute
Fine particles – also PM_{2.5}; particles 2.5 micrometers in aerodynamic diameter or smaller
Gravimetric – weighing a filter in a controlled environment by a highly accurate balance
Highest concentration – a monitor situated to measure the expected maximum concentrations of a pollutant in a given area
Inhalable particles – also PM₁₀; particles 10 micrometers in aerodynamic diameter or smaller
Ion chromatography – also IC, a method used for analyzing for ionic compounds
Manual sampler – an instrument that collects an air sample over a 24-hour filter on a filter, adsorbent cartridge or canister which is then manually retrieved for subsequent analysis
Met One – a manufacturer of PM_{2.5} speciation samplers
Microscale – the spatial scale of a monitoring site, up to 100 meters from the monitor
Middle-scale – the spatial scale of a monitoring site, from 100 meters to 0.5 km from the monitor
Neighborhood-scale – the spatial scale of a monitoring site, from 0.5 to 4 km from the monitor
Nephelometer – an instrument that measures fine particles through light scattering
Nondispersive infrared – the method used for analyzing for carbon monoxide
Ozone precursors – a group of volatile organic compounds that affect ozone formation and destruction in the atmosphere; also called PAMS pollutants
Population exposure – a monitor situated to measure typical concentrations of a pollutant in a densely populated area
Pulsed fluorescence – the method used for analyzing for sulfur dioxide
Pyrometer – the method used for measuring solar radiation
Real-time PM_{2.5} – PM_{2.5} concentrations that are measured continuously
Regional scale – the spatial scale of a monitoring site, from 100-1000 km around the monitor
Solar radiation – the intensity of energy from sunlight
Source-oriented – a monitor situated to measure the impact of significant sources or source categories
Ultraviolet – the method used for analyzing ozone
Urban Scale – the spatial scale of a monitoring site, from 4 to 50 km from the monitor

| 27 | Phosphorus | 88152 | Met One SASS Teflon | Energy Dispersive XRF | 811 |
| 28 | Potassium | 88180 | Met One SASS Teflon | Energy Dispersive XRF | 811 |
| 29 | Potassium IC | 88303 | Met One SASS Nylon | Ion Chromatography | 812 |
| 30 | Rubidium | 88176 | Met One SASS Teflon | Energy Dispersive XRF | 811 |
| 31 | Selenium | 88154 | Met One SASS Teflon | Energy Dispersive XRF | 811 |
| 32 | Silicon | 88165 | Met One SASS Teflon | Energy Dispersive XRF | 811 |
| 33 | Silver | 88166 | Met One SASS Teflon | Energy Dispersive XRF | 811 |
| 34 | Sodium | 88184 | Met One SASS Teflon | Energy Dispersive XRF | 811 |
| 35 | Sodium IC | 88302 | Met One SASS Nylon | Ion Chromatography | 812 |
| 36 | Strontium | 88168 | Met One SASS Teflon | Energy Dispersive XRF | 811 |
| 37 | Sulfate | 88403 | Met One SASS Nylon | Ion Chromatography | 812 |
| 38 | Sulfur | 88169 | Met One SASS Teflon | Energy Dispersive XRF | 811 |
| 39 | Tin | 88160 | Met One SASS Teflon | Energy Dispersive XRF | 811 |
| 40 | Titanium | 88161 | Met One SASS Teflon | Energy Dispersive XRF | 811 |
| 41 | Vanadium | 88164 | Met One SASS Teflon | Energy Dispersive XRF | 811 |
| 42 | Zinc | 88167 | Met One SASS Teflon | Energy Dispersive XRF | 811 |
| 43 | Zirconium | 88185 | Met One SASS Teflon | Energy Dispersive XRF | 811 |
