FOREWORD

Special Education, A Statistical Report for the 1996-97 School Year is the 15th in a series of reports on the status of special education in New Jersey. It contains statistics about pupils with educational disabilities, their programs, special education personnel and other special education data. It is designed as a reference book to assist New Jersey's special education community in planning and evaluating educational efforts for pupils with educational disabilities.

These data are based on five major collections. The **Special Education Plan** counts all pupils with educational disabilities, including those in regular class, special classes (public and private), resource rooms/centers, and those who receive supplemental instruction and/or speech correction services in both public and nonpublic schools. The **Special Education End of the Year Report** counts pupils exiting education, the number of pupils identified for child study team evaluation, new classifications, and declassifications as well as pupils on home instruction. The **Application for State School Aid (ASSA)** is used to count the resident enrollment. The **Fall Survey** is used to determine enrollment rates by racial-ethnic-gender grouping. The **Certificated Staff Report** is used to report data on special education staff.

Special appreciation is extended to all the school districts and other education agencies in New Jersey that provided the information collected in this publication. Questions, comments and suggestions for future editions are welcome. Please call Dr. Mari Molenaar at 609-633-6972 with your inquiries and advice.

Barbara Gantwerk, Director
Office of Special Education Programs

TABLE OF CONTENTS

Foreword	ii
Table of Contents	iii
The Administration of Special Education Programs	1
Trends in Classification Rates	3
* Actual and Projected Enrollments	7
* Number of Pupils with Educational Disabilities by Age and Classification in 1996	8
* Total Number and Percent of Pupils with Educational Disabilities by State Classifications from 1978 - 1996	9
* Total Enrollment and Percent of Pupils with Disabilities in the Age 3-21 Census by Federal Categories from 1978-1996	10
* Graph of Percent Disabled of the Age 3-21 Census by Federal Categories from 1980-1996	11
* Graph of Proportions of Pupils in Special Education	12
* Number of Public Pupils with Educational Disabilities by Classification and County in 1996	13
* Percent of Public Pupils with Educational Disabilities by Classification and County in 1996	14
* Graph of Classification Rates by County (PI, NI, MH, ED)	15
* Classification Rates by Different District Groupings 1989-1996	17
* Enrollment Projections of Preschool Disabled Pupils	18
* Trends in Speech Services	19

Patterns of Placement of Pupils with Educational Disabilities	20
* Graph of Percentage of Special Education Enrollment by Federal Special Education Placement Settings	26
* Number of Pupils with Educational Disabilities and Their Proportions in Various Placements 1986-1996	27
* Number of Pupils in Various Placements by Classification in 1996	28
* Percent of Each Classification in Each Placement in 1996	29
* Percent of Each Placement by Classification in 1996	30
* Number of Pupils with Educational Disabilities in Each Placement by County in 1996	31
* Percent of Enrollment in Each Placement by County in 1996	32
* Graph of Percent of Enrollment in Each County by Federal Special Education Placement Settings	33
Trends in Classification Rates by Race and Gender	34
* Number of Public Pupils by Classification, Racial-Ethnic-Gender Group in 1996	38
* Percent Classified of Public Enrollment by Classification and Racial-Ethnic-Gender Group in 1996	39
* Racial-Ethnic-Gender Classification Rates 1985-1996	40
* Ratios of Minority Rates to White Rates 1985-1996	41
* Ratios of Male/Female Classification Rates 1985-1996	42
* Racial-Ethnic-Gender NI, PI, ED and MH Classification Rates 1985-1996	43
* Racial-Ethnic-Gender NI, PI, ED and MH Classification Rates Divided by the Corresponding White Rates 1985-1996	44

Trends in Related Services	45
* Numbers and Percentages of CST Classified Pupils Receiving Each Related Service 1987-1996	47
Trends in Special Education Staffing	48
* Special Education Staffing Patterns 1980-1996	55
* Special Education Staff Ratios 1980-1996	56
Trends in Initial Evaluations, New Classifications, and Reevaluations . .	57
* Initial Identifications, New Classifications, and Reevaluations 1980-1996	59
* Number of New Classifications and Percent of Enrollment Newly Classified 1980-1996	60
Trends in Pupils with Educational Disabilities Exiting Education	61
* Percentage of Exiting Pupils with Educational Disabilities by Reason for Exit for the years ending 1990-1997	64
* Pupils with Educational Disabilities Exiting Education by Reason for Exit for the years ending 1990-1997	65

New Jersey State Department of Education
Office of Special Education Programs

SPECIAL EDUCATION PROGRAMS

Administration. The administration of special education is governed by federal and state regulations through the New Jersey State Department of Education. The Office of Special Education Programs has overall responsibility for the administration of special education for pupils with disabilities in the state. The office develops and implements a State Plan for Special Education that is approved by the U.S. Office of Special Education and Rehabilitative Services. The office develops and interprets the rules and regulations regarding the provision of special education services in the state. The office also collects data, analyzes and reports on trends in special education.

The Office of Special Education Programs mediates, or transmits to the Office of Administrative Law, due process cases brought by parents or districts when there is no agreement on the identification, evaluation, classification or program for a pupil with disabilities. The office also conducts complaint investigations regarding the provision of special education and/or related services.

The Office of Special Education Programs coordinates the review of special education programs in districts and state facilities. It also reviews and approves private schools for the disabled as well as clinics and agencies in the state. The office provides technical assistance through three regional Learning Resource Centers and one satellite center. The office expands and develops new programs, such as: inclusion programs, transition programs, preschool programs, programs for the hearing impaired, and the comprehensive system of personnel development (CSPD). The office also assists county supervisors of child study to monitor, develop and interpret special education regulations through the Division of Field Services.

The Division of Financial Services administers state aid for special education through categorical aid for districts and Chapter 207 for pupils in state facilities. The Office of Grants Management and Development administers federal grants (Individuals with Disabilities Education Act - IDEA) for districts and state-operated programs. The Office of Educational Support Services and Interagency Agreements coordinates services to pupils in state facilities. It also coordinates services for pupils with disabilities in nonpublic schools under Chapters 192-193. Local districts provide special education programs for public and nonpublic pupils with educational disabilities using federal, state and local funds.

Services. Pupils who have educational difficulties may be referred to school-based intervention and/or referral services. If a disability is suspected, the pupil may be identified for a child study team (psychologist, learning disabilities teacher-consultant,

social worker and others as indicated) evaluation of their eligibility for special education. If the team finds that the pupil is eligible, the pupil is classified according to one of the 17 categories provided in state statute and regulations. An individualized education program (IEP) is written and an appropriate placement is made in the least restrictive environment for that pupil. Pupils are to receive those special education programs and those related services needed to benefit from education. Related services include, but are not limited to, speech, counseling, occupational therapy, physical therapy and others.

In 1996, approximately 200,500 pupils with disabilities ages 3-21 attended special education programs in a variety of settings. Another 2,000 pupils were served by state-operated programs. Early intervention programs (EIPs), administered by the Department of Health, provided services for 3,700 infants and toddlers birth through age two. The special education programs for pupils ages 3-21 include supported regular education, supplemental instruction (SI), speech, resource centers, self-contained classes (public and private; day and residential) and home instruction. These programs are provided in public and nonpublic schools (SI and speech) as well as in state-operated facilities. A relatively small number of pupils, 111 statewide, were placed by districts in private residential special education programs for educational purposes for which the districts paid both the educational and residential costs. This book reports on the various trends in special education classification, placement and services provided to pupils with disabilities.

Questions regarding the administration of special education may be answered by school districts, the offices of the county superintendents of schools or the Office of Special Education Programs.

New Jersey State Department of Education
Office of Special Education Programs

TRENDS IN CLASSIFICATION RATES

The major trends in classification rates are as follows:

- The state special education classification rate appears to be leveling off at just about 9.6% of the ages 3-21 census or 15.3% of public school enrollment.
- All counties had increased classification rates over the last 15 years, but most show the same leveling off seen at the state level.
- Since 1978, the EMR and TMR rates decreased; NI, PI, MH and PRE rates increased, while other classifications stayed about the same.
- Eligible for speech-language services first increased to a high in 1984 and then decreased. However, the overall proportion of pupils receiving speech (including eligible for speech-language services and speech as a related service) has remained at 6.9% for the last eight years.
- Forty percent of all pupils in special education are classified as perceptually impaired, 24% as eligible for speech language services, 12% as neurologically impaired, seven percent as multiply handicapped, six percent as emotionally disturbed and 11% as all other classifications.

Background. New Jersey provided special education for many years prior to the passage of the federal Education of the Handicapped Act (P.L. 94-142) in 1975. However, because of past problems related to record keeping, available data begins with the year 1977. Until 1989, there was a steady increase in the numbers and classification rates of pupils classified as eligible for special education based on either the public school enrollment or the ages 3-21 census (p. 7). Since then, the overall state special education classification rate continued to increase at approximately 3% percent per year. Child study team (CST) classification rates increased by 3.5% each year for the last six years, while the eligible for speech-language services (excludes speech as a related service) decreased by 1% (p. 9). This chapter describes the methods used to calculate those rates and their trends in the state, counties and districts.

Comparison of State Classification Rates. Calculation of special education classification rates is done in two ways, depending on the comparisons that are being conducted. When comparing rates among the states, the classification rate is calculated dividing all pupils with educational disabilities by the total ages 3-21 census (p. 7). It is reported in the column entitled "Age 3-21 Disabled to Census" and may be used to compare New Jersey with other states. The difficulty with this

method is that the denominator, all children who are ages 3-21, is not available until two years after the fact based on revised census estimates. Similar census estimates are available for counties, but not for school districts; therefore, this percentage has limited utility. Calculated by this first method, the proportion of the ages 3-21 census that received special education increased from 5.4% in 1977 to 9.3% in 1991. There was no appreciable change from 1992 through 1996 in the proportion of the census that was classified (about 9.6%). The state special education classification rate may be leveling off at around 10%.

Classifications. The individual classification rates for the state were calculated using the same method described above (p. 9 - by state classifications; p. 10 - by federal classifications). Pupils found eligible for special education are classified according to one of 17 different categories (see Glossary). Of all pupils with disabilities, perceptually impaired (PI) is the most common classification (40%), eligible for speech-language services is next (SP 24%), followed by neurologically impaired (NI 12%), multiply handicapped (MH 7%) and emotionally disturbed (ED 6%). All other classifications are 11% of all the total (p.12 graph).

Since 1980, the educable mentally retarded (EMR) and trainable mentally retarded (TMR) rates decreased; NI, PI, MH and preschool handicapped (PRE) rates increased; while other classification rates stayed about the same (p. 11 graph). For example, from 1978 to 1996, the proportion of all children ages 3-21 classified as EMR decreased from .56% to .13%. The TMR rate decreased from .17% to .06%. Some of these decreases occurred because the definitions of EMR and TMR became more restrictive during that period. The ED rate increased slightly between 1978 and 1981, remained stable at about .7% from 1981-1993, then dropped gradually to .61% in 1996.

Four categories increased since 1978: NI: .47% to 1.15%, PI: 1.35% to 3.87%, MH: .15% to .64%, and preschool handicapped (PRE: .15% in 1983 to .38% in 1996). Projections for preschool handicapped suggest that these rates may be leveling off (p. 18). All other classifications combined remained about the same from 1984 on to the present.

Eligible for speech-language services first increased slightly from 2.54% in 1978 to 2.83% in 1984, and then gradually decreased to about 2.35% in 1995 and 1996. However, when speech as a related service is included, the overall proportion of pupils receiving speech has increased slightly (p.19). Speech as a related service increased from 2.0% of the public school enrollment in 1985 to 3.7% in 1996. Combining the numbers of pupils classified as eligible for speech correction with those receiving speech as a related service, the total proportion of pupils receiving speech services increased somewhat from 6.5% in 1986 to 7.0% in 1993, then decreased slightly to 6.6% in 1994. The proportion receiving speech then increased again to 6.9% 1995 and 1996.

Comparison of County and District Classification Rates. The percentage classified used to compare counties and districts is computed differently from that for state to state comparisons. It is calculated by dividing the public pupils with educational disabilities ages 3-21 (excluding pupils in nonpublic schools) by the public school enrollment. Since nonpublic school pupils are not evenly distributed throughout the state, comparisons among districts are more appropriate when the nonpublic pupils are excluded from the numerator (pupils with disabilities). This is also necessary because the nonpublic school denominator (pupils with and without disabilities) is not known by the resident district and, therefore, is unavailable for rate calculations. The resulting percentage is higher than the one used to compare states because the numerator includes pupils ages 3-21 while the denominator typically includes only pupils approximately ages 5-18. Calculated by this second method, the proportion classified was 15.2% in New Jersey in 1996 (p.7 - Ratio Public Disabled to Enrollment). This calculation is useful because the data are readily available and recognized as a reasonable index of the proportion of pupils with educational disabilities within a given county or district.

County Rates. All county classification rates increased over the last 15 years, but most show the same leveling off seen at the state level (pp. 13 & 14). County classification rates ranged from lows of 13.2% in Essex and Hudson Counties and 13.4% in Passaic County to highs of Cumberland County (18.3%), Cape May County (18.1%), Mercer County (17.8%) and Warren County (17.7%). Due to their large enrollments, the classification rates in Newark (Essex County) and Trenton (Mercer County) substantially affect the rates in their respective counties. The variation in PI classification rates among the counties is shown graphically on page 15 (Essex lowest at 3.7%; Warren highest at 8.6%). The variation in classification rates among counties is also found even when the more common classifications are combined (NI plus PI; ED plus MH; p. 16 graph).

District Speech and CST Classification Rates. The classification rates are calculated separately for speech (eligible for speech-language services) and child study team (CST), since these are the two different ways to be eligible for special education services. The speech classification rate is calculated by dividing the number of public school pupils who are eligible for speech-language services (excludes CST classified pupils who receive speech as a related service and nonpublic pupils) by the resident public school enrollment reported on the Application for State School Aid (ASSA). The CST classification rate is calculated by dividing the number of public CST classified pupils by the public school enrollment. The Special Education Plan (source of the numerators) is reported in December, while the ASSA resident enrollment (denominator) is reported in October; however, the difference in dates for these two instruments is too small to substantially affect the classification rates.

Five years (1992 -1996) of speech and CST classification rates for each district are reported in Appendix A along with various demographic data, such as, grade plan (e.g., Pre-K-8, K-12, 6-12, etc.), District Factor Grouping (DFG - a rough measure of socioeconomic level ranked on an eight point scale based on 1990 census data; 1=lowest; 8=highest), resident enrollment and community type (e.g., urban, suburban, rural, etc.). Data for 1989-1991 are available on request. For comparison, the state averages over the same six year period for speech (eligible for speech correction) and CST classification rates were reported according to the same district groupings (p. 17). Individual classification rates for each district for 1996 are in Appendix B.

The individual district speech and CST classification rates vary over time as well. Changes in total enrollment as well as special education enrollment affect the rates; e.g., if the total enrollment decreases and the special education enrollment stays the same, the classification rate would increase. The range of speech and CST classification rates are much larger for small districts than for larger districts. This is an artifact of district size and the calculation of percentages; e.g., one classified pupil who moves into a very small district impacts the classification rate much more than if he/she moves into a larger district.

Summary. The state special education classification rate appears to be leveling off at just about 9.6% of the ages 3-21 census (15.3% of enrollment, excluding nonpublic pupils). All counties had increased classification rates over the last 15 years, but most show the same leveling off seen at the state level. Since 1978, the EMR and TMR rates decreased; NI, PI, MH and PRE increased, while other classifications stayed about the same. Eligible for speech-language services first increased to a high in 1984 and then decreased. The overall proportion of pupils receiving speech (including eligible for speech-language services and speech as a related service) remained at 6.9% for the last eight years. Forty percent of all pupils in special education are classified perceptually impaired, 24% as eligible for speech language services, 12% neurologically impaired, seven percent as multiply handicapped, six percent as emotionally disturbed and 11% as all other classifications. District speech and CST classification rates for five years are reported in Appendix A. Their individual classification rates for 1996 are reported in Appendix B. The state averages for various district groupings are reported on by grade plan, DFG, enrollment and community type (p. 17).

SOURCES: FALL REPORT, SPECIAL EDUCATION PLAN, ESTIMATES OF THE CENSUS AGE 3-21; THE ASSA WAS USED FOR ENROLLMENT IN 1996.

NOTE: CENSUS FIGURES FROM 1990 ON WERE BASED ON ESTIMATES FROM THE 1990 CENSUS. PREVIOUS YEARS' DATA WERE BASED ON ESTIMATES FROM 1970 OR 1980 CENSUS.

NOTE: PUBLIC ENROLLMENT FIGURES FOR 1997-2005 ARE ESTIMATES

Ratio of disabled to the census is calculated by dividing the number of pupils with educational disabilities x 100 by the age 3-21 census. Pupils with educational disabilities in state facilities were not included.

Ratio of public pupils with educational disabilities to public enrollment is calculated by dividing the number of pupils educational disabilities (minus nonpublic & state facilities) x 100 by the resident public school enrollment from the Fall Survey or the ASSA.

It is higher than the census percent because it includes all disabled pupils, ages 3-21, enrolled in public schools (numerator), while the denominator excludes those children, ages 3-21, who are not enrolled in public school.

**PATTERNS OF PLACEMENT OF PUPILS
WITH EDUCATIONAL DISABILITIES**

The major trends in special education placements are as follows:

- Sixty-three percent of all public and nonpublic pupils with educational disabilities are in regular classes and receive speech, supported regular education, supplemental instruction or resource center assistance.
- Pupils are increasingly being placed in resource centers (in and out-of-class) instead of special class placements.
- In 1996, the state average for placements in regular classes with speech, supported regular education, supplemental instruction or resource center assistance was 6.0% of total public school enrollment.
- The counties with the highest proportion of their enrollment in regular classes with speech, supported regular education, supplemental instruction or resource center assistance were Atlantic (8.5%), Cape May (8.9%), Hunterdon (8.4%), Salem (8.6%) and Warren (8.5%). The counties with the lowest proportions were Essex (3.7%) and Hudson (2.9%).

Background. Pupils with educational disabilities in New Jersey receive a variety of special education services through public and nonpublic schools or state facilities. In recent years, many educators have advocated that pupils with educational disabilities should receive more, if not most, of their education with their nondisabled peers. New Jersey is moving in that direction. Sixty-three percent of all public and nonpublic pupils with educational disabilities are in regular classes and receive speech, supported regular education, supplemental instruction or resource center assistance (p. 27).

Federal special education placement settings include Regular Class (out less than 21% of the school day), Resource Room (out of the regular class more than 21%, but less than 60%), Special Class (out of the regular class more than 60% of the school day), Separate School, Private Day, Private Residential, Public Residential, and Corrections. The percentages of the special education enrollment in these federal settings are shown graphically on page 26. Pupils in the federal Regular Classes and Resource Rooms are 70% of all pupils with educational disabilities.

Pupils in special classes are reported in one of four settings: a) in public regular education buildings for less than 60% of their school day, b) in public regular education buildings for more than 60% of their school day, c) in separate public

school buildings, and d) in private schools for the handicapped (day or residential). Pupils in state-operated facilities, such as facilities operated by the Departments of Human Services, Corrections or the Juvenile Justice Commission, are not included in these descriptions. The special education placement trends in New Jersey are described below by placement type, by county and by classification.

Placement Options. Pupils with educational disabilities have several placement options. Among these options are regular education placement with speech-language services (eligible for speech correction), supported regular education, supplemental instruction (SI), or resource center (RC). In 1993, the resource center program added an in-class option that brings the special education teacher into the regular class. In addition, pupils could attend the out-of-class resource centers for up to half the school day. In past years, special education instruction in resource rooms (RR) was limited to a maximum of two hours a day. Pupils in special classes (public and private) may also attend regular education classes for varying amounts of time. Home instruction may be used to provide special education as well. Pupils in nonpublic schools may also receive some public special education services.

Speech, supported regular education, SI and RC placements are provided in regular education buildings. Nonpublic pupils receive speech and SI in public facilities near the nonpublic regular education buildings. Special classes may be in public regular education buildings (Class I) run by districts or special services school districts, but also may be in schools without regular grades (Class II); such as, a) separate buildings within districts; b) educational services commissions (ESC); c) jointure commissions (JC); d) Department of Education (DOE) regional day schools (RDS); e) Department of Human Services (DHS) regional day schools (RDS), formerly day training centers; f) special services school districts (SSSD); and g) public college operated programs. Private schools for the disabled are reported separately from public receiving schools. Pupils reported by state facilities (1,962) are in various settings as well, but are not included in the following trends. The number and percentage of public and nonpublic pupils in each of the various placements, other than state facilities, are reported on pages 27-30 in this book. County numbers and percentages are reported for public pupils (excluding nonpublic) in various placement settings on pages 31-32 (graph on p. 33). District percentages in each setting are reported in Appendix C.

Placement Trends. Placement rates were calculated by dividing the number of pupils in each placement setting by the total number of public and nonpublic pupils with educational disabilities, including those classified as eligible for speech-language services. These percentages are based on an unduplicated count of pupils. Pupils were reported in only one placement, even though they may have received special education in more than one setting. For that reason, the percentages may slightly under-represent the utilization of a given placement setting. The total number and percentage of pupils in each setting over 11 years are reported on page 27 with the numbers and percentages by each classification on pages 28-30 for 1996.

In the past, pupils with educational disabilities were placed in separate classes more often than in resource rooms/centers. However, since 1991, this trend has changed due to the availability of supported regular education and the broadened resource center concept. From 1986-1989, the percentage of pupils receiving supplemental instruction or attending resource rooms/centers dropped slightly from 26.6% to 26.2%. However, from 1990 on, the percentage increased substantially from 26.8% up to 36.6% in 1996. Included in the 1996 figures are the 2,304 pupils in supported regular education. The percentage of all disabled in nonpublic schools has increased slightly from 6.5% in 1986 to 7.1% in 1996. The trend toward less restrictive placements is expected to continue.

Special Classes. Special classes may be either public or private. Public special classes are conducted in buildings with regular grades (Class I; regular grades are K-12) or in buildings without regular grades (Class II). Almost all private school classes are in buildings with no regular grades. The number and proportion of pupils with educational disabilities in public special classes decreased from 36.9% in 1991 down to 31.2% in 1996. The proportion of pupils in private schools decreased slightly from a high of 5.6% in 1989 and 1990 down to 5.0% in 1996. These decreases in special class placements confirm the shift toward placements in less restrictive settings.

Of the 62,560 pupils in public special classes in 1996, over 90% were in buildings that also contain regular grades. Pupils who are in special classes may attend regular classes some of the time. These special classes were conducted primarily by districts (for 56,425 pupils) with a few run by four special services school districts and one jointure commission. The rest of the pupils in public classes were in buildings without regular grades.

Classes in separate buildings were conducted primarily by private schools (10,063) and public receiving schools (Class II: 6,135). Statewide, the proportion of pupils in these two placement settings has decreased slightly (from 9.1% to 8.1%) over the last six years.

Placement Rates as a Percentage of the Total Public School Enrollment. The county and district placement rates were calculated by dividing the number of pupils in each setting by the total public school enrollment (pp. 31-32; graph by federal placement settings p. 33). This was done so that the sum of the placement percentages would add up to the classification rate in each county or district. As in previous years, the 1996 placement data revealed some variability among the various counties in the rates of placement of pupils in different placement settings. Public receiving schools (educational services commissions, jointure commissions, DHS regional day schools, DOE regional day schools, special services school districts, and public college operated programs) serve pupils in more than one county; however, the placement rates discussed below were reported by the pupils' resident county.

Counties varied considerably in the proportion of pupils with disabilities placed in less restrictive settings, such as, supported regular education, supplemental instruction (SI) or resource centers (RC), compared with more restrictive special class placements. In 1996, the state average for placements in these less restrictive settings was 6.0% of the total public school enrollment (Range: 2.9% in Hudson to 9.8% in Cape May). The counties with the highest proportion of their enrollment in these settings were Atlantic (8.5%), Cape May (8.9%), Hunterdon (8.4%), Salem (8.6%) and Warren (8.5%). The counties with the lowest proportions were Essex (3.7%) and Hudson (2.9%). Counties in rural settings tend to utilize the less restrictive settings while the heavily urban counties use them less frequently.

The state average for placements in public classes in buildings with regular grades (Class I) was 4.6% of the total public school enrollment in 1996 (Range: 2.0% in Hunterdon to 7.4% in Cumberland). The counties with the highest proportion of their enrollment in Class I were Camden (6.6%), Cumberland (7.4%), Hudson (6.6%) and Mercer (6.7%). The counties with the lowest proportions were Atlantic (2.9%), Cape May (2.1%), Hunterdon (2.0%) and Somerset (2.8%).

The state average for placements in public and private classes in buildings without regular grades (Class II) was 1.4% of the total enrollment in 1995 (Range: 0.6% in Sussex to 2.8% in Cape May). The counties with the highest proportion of their enrollment in Class II were Burlington (2.2%) and Cape May (2.8%). The counties with the lowest proportions were Cumberland (0.9%), Hunterdon (0.9%), Ocean (0.8%), Sussex (0.6%) and Warren (0.8%).

The public and private Class II settings in each county may be examined according to which entity runs them. A given county may have special classes run by either a special services school district or an educational services commission, but not both. Cumberland, Hudson, and Ocean counties have neither; however, Ocean County shares services with the Monmouth Educational Services Commission. DOE regional day schools are in about half the counties and are sometimes, but not always, run by special services school districts. DHS regional day schools are in 16 counties.

Additionally, Atlantic, Bergen, and Gloucester counties have special services school districts that conduct classes in both regular education buildings (Class I) as well as separate buildings (Class II). Salem and Warren conduct classes only in regular education buildings. Two jointure commissions also conduct special classes (South Bergen: Class I and II; and Morris-Union: Class I). Some counties have other regional arrangements (e.g., Bergen and Burlington) that share Class I programs. Some counties have larger numbers of private schools than others. In Burlington and Cape May, pupils in classes in buildings without regular grades were in special services school districts, while in Essex they were primarily in private schools for the disabled. Because counties are not identical in the way classes in separate buildings are

conducted, comparisons in their collective public and private Class II rates are more appropriate than for comparisons of rates in each sponsoring agency. Further, a comparison of the placement rates in Class I and Class II combined still shows a substantial range among counties in the percentages of pupils so placed, from 2.8% in Hunterdon County to 8.5% in Cumberland County. Other counties with high percentages of pupils in Class I and Class II are Camden (8.1%), Hudson (7.9%), and Mercer (8.3%).

Classification and Placements. Pupils with educational disabilities are placed in a variety of special education programs and settings. Such placements varied depending on the classification of the pupil. There are two ways of looking at the distribution of placements: a) by classification, and b) by placement setting. The first method looks at pupils within a given classification. The placement rates by each classification were calculated by dividing the number of pupils in each placement type by the total number of pupils with that classification. The second method looks at all the pupils within a given placement type/location. The rates within each placement setting were calculated by dividing the number of pupils with each classification by the total number of pupils in that placement type. Examples of the two perspectives are described below.

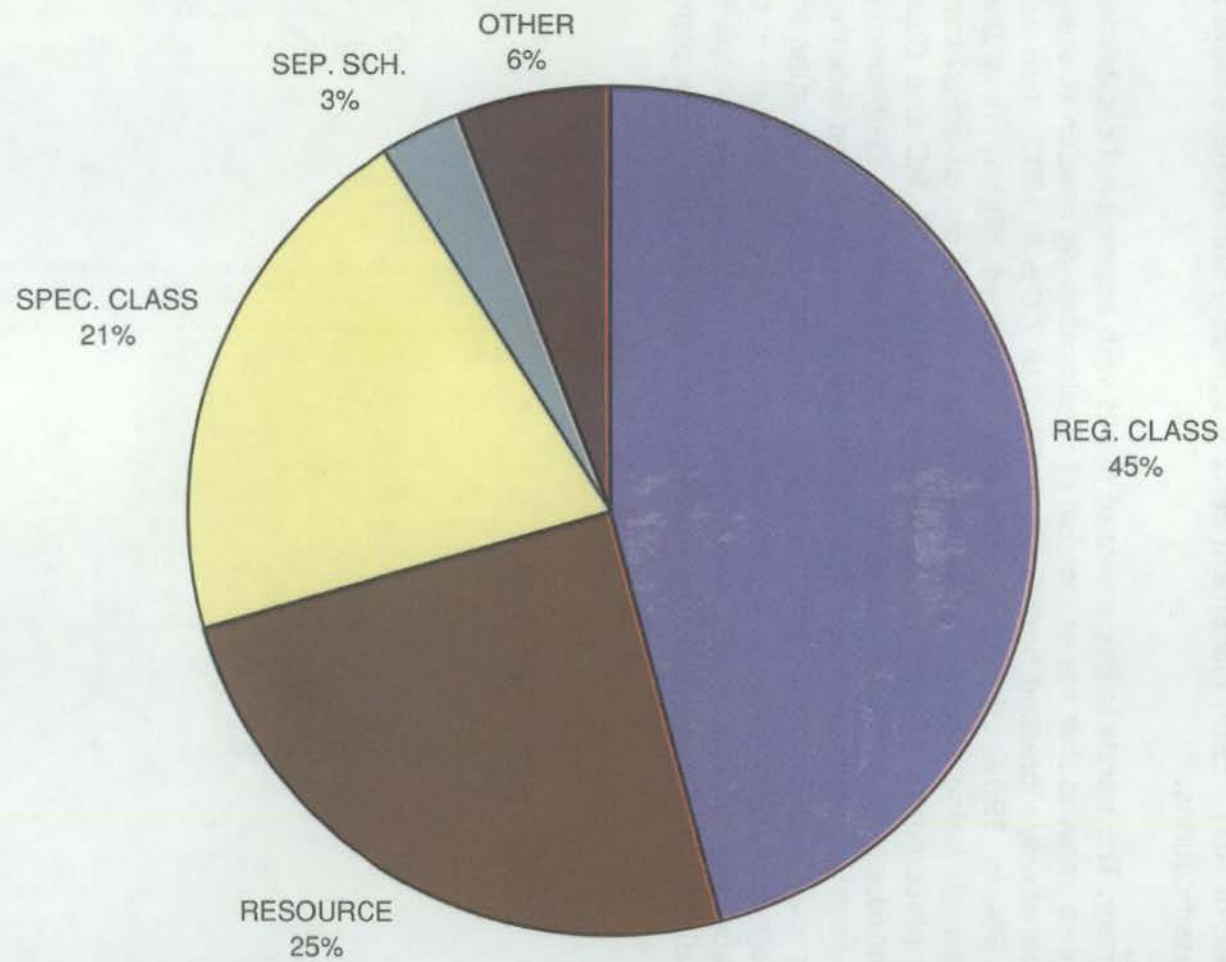

By Classification. The distribution of placements varies according to the classification of the pupils. In 1996, for all classifications taken together, the placement types that were used more often than others were public and nonpublic speech and supplemental instruction (27.3%). The next most common was Class I, greater than 60% of the school day (20.6%). Class I was the more common placement for 12 of the 20 reported classifications. Pupils classified as eligible for day training (EDT) pupils were most often placed in Class II (55.2%), a substantial drop from last year (62.7%). Pupils with emotional disturbance were most often divided between Class I, more than 60% of the school day (27.1%) and private day schools (25.5%) with the remainder in other settings. Pupils classified as perceptually impaired were provided services most often through resource centers (66.4%). Pupils with autism (AUT) were most often placed in private schools (45.3%), a substantial decrease from last year (54.7%).

By Placement. Each placement setting had a different distribution of classifications that it served. In 1996, PI was the most common classification in supported regular education (56.5%); SI and RC (75%-78%), the less restrictive placements. Nonpublic pupils received primarily supplemental instruction (PI-28.3%) or speech (69.1%). The pattern of classifications of the pupils in special classes varied according to location of the class. In regular education buildings, almost two-thirds of the pupils in special classes (Class I, more than 60% of the school day) were classified either PI (31.6%) or neurologically impaired (NI - 24.9%). The remaining third were mostly emotionally disturbed (ED - 8.3%), multiply handicapped (MH -11.1%), and preschool (PRE - 10.7%).

In separate public school buildings (Class II), 36.3% of the pupils were MH, 17.0% were ED and 12.6% were PRE. In private day schools, 32.0% were ED, 29.0% were MH, 14.0% were NI and 5.9% were PRE. Private residential placements (111 pupils) were most often MH (46.8%), ED (18.0%) or AUT (13.5%). Home instruction was mostly composed of pupils classified ED (36.1%) or PI (19.9%). Taken together, public and private classes in separate buildings had mostly pupils classified ED, MH, NI, PRE or AUT. Each placement setting served a somewhat different constellation of classifications.

Summary. The trends in placement of pupils with educational disabilities over the last ten years showed that the proportion of pupils receiving speech (alone or as a related service) slowly increased from 6.5% in 1986 to 7.0% in 1993, then went back down to 6.6% in 1994. In 1996, the rate increased slightly to 6.9%. Pupils are increasingly being placed in resource centers (in and out-of-class) instead of special class placements. Most pupils were in programs (SI, RC and Class I) located in regular education buildings; however, the rate of placement in different settings varied considerably among counties. The distribution of pupils varied whether examined by either classification or placement setting. Just as there is variation among states in the degree of restrictiveness in placement, there was also variation in the distribution of placement choices made among counties in New Jersey. Appendix C lists, for each district, the percent of the public school enrollment in each placement setting.

TRENDS IN CLASSIFICATION RATES BY RACIAL-ETHNIC-GENDER GROUP

The major trends in classification rates by racial-ethnic-gender group are as follows:

- The eligible for speech-language services classification rates for males exceeded that for females by a ratio of about 1.6:1 for each of the last 12 years.
- The CST classification rates were consistently higher for males than females (about 2:1) over all racial-ethnic groups.
- Hispanic PI rates were consistently lower than white rates, but were about the same for NI, ED and MH.
- CST classification rates for black males were about 1.3 times the rates for whites (1.2 times for females). Much of the difference between black and white CST classification rates was in the ED and MH categories.

Background. In New Jersey, pupils with educational disabilities are classified either by a child study team (CST) or a speech-language specialist. The CST and speech classification rates each differ based on the racial-ethnic-gender grouping of the pupils. However, the speech rates include pupils who receive only speech and not those who receive speech as a related service. The latter are included in the CST classified group. The CST and speech rates were examined separately over 12 years to determine the patterns of classification. Pupils in nonpublic schools were not included in the calculations since the nonpublic school enrollment was not available by resident district. The analysis of trends in classification rates omitted the American Indian/Alaskan Native group since the numbers were too small and the denominator too unreliable with which to generate reliable information.

Trends in Gender Classification Rates

In New Jersey, the differences between male and female classification rates are consistent and long-standing. The public school enrollment in 1996 for all pupils was 1,218,561, of which 626,876 were males and 591,705 were females (p. 38). During that year, there were about 186,385 pupils who received special education and related services in public schools or private schools for the disabled. Of these, 125,266 were male and just 61,119 were female. While the ratio was 1.1 males for every female enrolled in school, the ratio for pupils classified by a child study team (CST) was 2.0 males for every female. The ratio was somewhat smaller, 1.8 to 1, for pupils classified as eligible for speech-language services. These ratios were similar across the major racial-ethnic groups (black, Hispanic and white) and were consistent from 1985-1996 (p. 42).

CST Classification Rates. Child study team (CST) classification rates differ widely according to gender with males outnumbering females in ED and SM (3.6:1 each), NI (2.5:1), MH (2.1:1), CH (2.0:1), and PI (1.9:1). In all other classifications, the male-female ratio was the same or just slightly higher (p. 38). The overall CST classification rate for males was 12.5% in 1985 and gradually increased to 16.0% in 1996. The CST classification rate for females was about half the male rate for those same years (1985: 6.0%; 1996: 8.1%). The total female rate changed by the amount +2.1%, while the total male CST rate changed by the amount +3.5% during that time. From another perspective, the data showed that females constituted 49% of the enrollment, but only 32% of the pupils classified by a CST. On the other hand, males constituted 51% of the enrollment, but 68% of the CST classified pupils.

Speech Rates. Speech-language services were provided to about 84,000 public school pupils. Thirty-nine thousand were classified as "eligible for speech-language services." The remaining 43,500 received speech as a related service in addition to some other special education program. The eligible for speech correction classification rate for males exceeded that for females by a ratio from 1.5:1 in 1985 to 1.7 in 1996. The same was essentially true for each of the major racial-ethnic groups over the last 12 years (p. 42). Speech as a related service was also provided to 31% of those classified by a CST; however, there were no data available on the rates with respect to racial-ethnic-gender groups. It is expected that the overall male-female ratio for speech as a related service would be larger than for eligible for speech-language services alone. This is based on an observation that differences in CST classification rates between males and females were even greater than the male-female ratios for eligible for speech-language services alone.

Racial-Ethnic Classification Rates

Speech Rates. All racial-ethnic-gender groups had speech classification rates that were lower than they were 12 years ago (p. 40). Speech rates for blacks, Hispanics and Asian/Pacific Islanders were about the same as the white rate in 1985; however, the rates dropped to about slightly more than half (.6) times the white rate in 1993 through 1996. There are no data by racial-ethnic-gender group on the provision of speech as a related service. It is possible that the differences in rates would be reduced if racial-ethnic-gender data were known for those receiving speech as a related service. Most of the decrease in eligible for speech-language services classification rates over the past ten years came from reductions in the rates for other than white racial-ethnic groups; however, the decrease in rates for whites began to show in 1994 and 1996 as well (males 5.2% down to 4.7%; females 3.5% down to 2.7%).

CST Classification Rates. CST classification rates for Hispanics were the same as those for whites over the last 12 years, while black rates were consistently higher during the same time period (1.3 times the white male rate and 1.2 times the white female rate respectively) (p. 40). Similarly, the CST classification rate for Asian/Pacific Islanders was much lower than the white rate (.3 times the white rate). The rates for American Indian and Alaskan Native were based on very small numbers and uncertain reporting of denominators and are, therefore, unreliable indices. The higher CST classification rates for blacks and the lower rates for Asian/Pacific Islanders were consistent over the last 12 years.

Over the last 12 years, the CST classification rates were examined in the four major categories: neurologically impaired (NI), perceptually impaired (PI), emotionally disturbed (ED) and multiply handicapped (MH) for blacks, Hispanics and whites (pp. 43-44). The rates for American Indian or Alaskan Native and Asian or Pacific Islander were not examined because their low numbers precluded reliable analysis. PI rates increased most for white males, from 6.8% in 1985 to 8.8% in 1995 and 8.7% in 1996. The increase for white females was not as high, from 3.4% to 4.8%. The Hispanic PI rate was consistently .8 times the white rate for each of the last 12 years. The black PI rate increased about the same as the white rate, except for 1995 when the rate was .9 times the white rate. The ED rate did not change from 1985 through 1993 for any racial-ethnic-gender group, but did decrease slightly for black and white males from 1994 through 1996. The NI and MH rates continued to increase slowly for most groups, but somewhat more for blacks than for Hispanics and whites.

Black CST classification rates increased more over the last 12 years than other racial-ethnic groups. Although the numbers of pupils were not large, the increases in rates were proportionally larger in the NI and MH categories than in the PI and ED categories as compared with the white and Hispanic rates. The ED rates were stable over the last 12 years, with the black rate consistently double the white and Hispanic ED rates. The black male MH rate is now more than double the white male rate, while the black male and female NI rates are holding fairly steady at 1.7 times the white rate.

For the last 12 years, the Hispanic rates were about the same as the white rates in three (NI, ED, MH) of the four major categories (p. 44). However, the Hispanic PI rates were somewhat lower than the white rates. These rates may be slightly lower because some Hispanic pupils' perceptual impairments may be masked by their language differences.

Summary. The eligible for speech-language services classification rates for males exceeded that for females by a ratio of about 1.6:1 for each of the last 12 years. From 1985 to 1994, the eligible for speech-language services rates for whites stayed about the same. Then in 1995, there was a slight decrease. Speech rates decreased steadily for all other racial-ethnic groups over the last 12 years. In 1985, blacks, Hispanics, and whites were all classified eligible for speech correction at about the same rate. By 1994, however, minority group pupils were classified for speech at a rate substantially lower than their white counterparts. Some of the difference may be accounted for by the increase seen in speech provided as a related service to CST classified pupils for which there are no racial-ethnic-gender data.

The higher CST classification rates for males compared with females (about 2:1) was consistent over all racial-ethnic groups and is long-standing. Over the last 12 years, Hispanic PI rates were consistently lower than white rates, but were about the same for NI, ED and MH. During the same time, CST classification rates for black males were about 1.3 times the rates for whites (1.2 times for females). Much of the difference between black and white CST classification rates was in the ED category; however, differences have increased to about 2.0:1 in the MH category. Differences between the black and white rates are gradually increasing in the NI and MH categories as well, more for females than males. CST classification rates for all groups increased; however, the black male CST classification rates increased more than those for other groups during the same period.

SOURCE: SPECIAL EDUCATION PLAN; FALL REPORT

NOTE: 1988-1994 PUPILS IN PLAN TO REVISE DISTRICTS WERE NOT INCLUDED

AMERICAN INDIAN/ALASKAN NATIVE AND ASIAN OR PACIFIC ISLANDER GROUPS WERE OMITTED

FROM THIS CHART BECAUSE THE NUMBERS WERE TOO SMALL TO YIELD RELIABLE TRENDS.

CALCULATED BY DIVIDING THE PERCENT FOR EACH CLASSIFICATION

FOR EACH RACIAL-ETHNIC-GENDER GROUP BY THE CORRESPONDING WHITE-GENDER PERCENT.

New Jersey State Department of Education
Office of Special Education Programs

TRENDS IN RELATED SERVICES

The major trends in related services were as follows:

- Speech is the most common related service, received by 31% of all CST classified pupils, counseling is next at 14%, then occupational therapy (OT) at 9% and physical therapy (PT) at 5%. Five percent receive other related services.
- The numbers and percent of pupils receiving each of the related services has remained about the same for the past three years.
- The number and proportion of pupils receiving some other type of related service increased steadily from 1987 to 1996, almost doubling from 1993 to 1996.

Background. Related services include counseling, occupational therapy, physical therapy, speech and other services required for a pupil to benefit from education. For the past ten years, data have been collected on how many pupils with educational disabilities receive each type of service. The rates were calculated as a percentage of the public CST classified pupils.

Counseling. In 1996, counseling was provided to 20,188 CST classified pupils, mostly to PI (7,110) and ED (6,314) with NI (3,361) and MH (2,434) as the next most frequent categories (p. 45). As a percentage of each CST classification, the ranking is somewhat different. Fifty percent of the ED and 35% of the SM pupils received counseling. Pupils with other classifications received counseling at much lower rates: MH: 18.2%, NI: 14.2%, and PI: 9.3%. Less than 12% of the remaining pupils received counseling. These proportions were relatively consistent over the last eight years, with 13.7% of CST classified pupils receiving counseling in 1996.

Occupational Therapy (OT). Out of the 13,692 pupils receiving OT in 1996, most were MH (3,616), PRE (2,728), NI (2,622) and PI (1,867) (p. 44). As a percentage of each CST classification, pupils classified OH (59.7%), EDT (54.2%), PRE (34.6%) and AUT (39.6%) had the largest proportion of their numbers receiving OT. Next in line were MH (27.0%) and TMR (25.7%). The rest of the classifications had 15% or less of their numbers that received OT. The overall proportion of classified pupils receiving OT increased from 4.5% in 1987 to 9.3% in 1996.

Physical Therapy (PT). PT was provided to 6,858 pupils in 1996, of which 2,288 were MH and 1,507 were PRE (p.46). As a percentage of each CST classification, OH pupils (80.0%) had the largest proportion of their numbers receiving PT. Next were EDT (53.4%), PRE (19.1%), MH (17.1%), TMR (14.9%) and AUT (10.1%). The pupils in the remaining classifications had 10% or less of their numbers who

received PT. The overall proportion of classified pupils receiving PT increased from 2.8% in 1987 to 4.8% in 1995 and 4.6% in 1996.

Speech. Many pupils (44,997) received speech as a related service in 1996 (p. 46). Of those, 13,765 were PI; 8,405 were NI; 7,084 were MH; and 6,167 were PRE. As a percentage of each classification that received speech as a related service, the largest proportion were in CH (83.4%) and PRE (78.3%). Next in line were AH (72.1%), TMR (70.1%), AUT (69.6%), EDT (49.0%), MH (52.9%) and EMR (47.1%). The pupils in all the other classifications had 36% or less who received speech. Except for a small decrease in 1994, overall speech as a related service increased from 23.2% in 1987 to 30.5% in 1995 and 1996.

Other Related Services. These services may include personal aides, nursing services, assistive devices and others (p. 47). In 1996, 7,167 pupils received these other related services. The highest numbers were PI: 1,735, NI: 1,395, MH: 1,511, and PRE: 630. The numbers were too small in the other classifications with which to calculate reliable percentages. Overall about 5% of the CST classified pupils received some other type of related service in 1996.

Summary. Speech is the most common related service, received by 31% of all CST classified pupils, counseling is next at 14%, then occupational therapy (OT) at 9% and physical therapy (PT) at 5%. Five percent receive other related services. The numbers and percent of pupils receiving each of the related services has remained about the same for the past three years. The number and proportion of pupils receiving some other type of related service increased steadily from 1987 to 1996, almost doubling from 1993 to 1996.

TRENDS IN SPECIAL EDUCATION STAFFING

The major trends in special education staffing are as follows:

- The number of district personnel serving special education in New Jersey increased by 67% from 1980 to 1996, while the total number of classified pupils increased by 33% (CST classified pupils increased 67%; speech decreased 18%).
- Staff increases were mostly in resource center teachers, preschool teachers and teacher aides.
- The ratios of all CST members combined to public CST classified pupils increased from 1:33 in 1980 to 1:42 in 1995 and 1996.
- The ratio of speech-language specialists to all pupils receiving speech-language services remained stable at about 1:57 from 1980 through 1987, then decreased gradually to 1:45 in 1996.
- The proportion of administrative staff devoted specifically to special education is decreasing. The ratio of special education administrators to total special education staff varied little (from 1:42 to 1:50) from 1980 to 1994, then increased to 1:65 in 1996.

Special Education Staffing Patterns. The number of district personnel serving special education in New Jersey increased from 17,174 in 1980 to 28,733 in 1996, an increase of 67% (p. 55). At the same time, the total number of classified pupils increased by 33%. Although there is a long-term increase in the numbers of special education pupils and staff, the overall ratio of staff to pupils decreased from 1:8.8 in 1980 down to 1:6.6 in 1990. The ratio then increased to 1:7 in 1996; however, the staff increases were mostly in resource center teachers, preschool teachers and teacher aides. The numbers of child study team and speech-language specialists appeared to increase, but the increase is partly an artifact of better reporting of contracted part-time services rather than actual increases in these staff members. Most other staff types increased in number from 1980 to 1994, but stayed about the same or decreased slightly in 1996.

There was a substantial decrease (68%) in supplemental instructors, while resource center (formerly resource room) teachers more than almost tripled (211%) from 1980 to 1996. Special class teachers increased from 3,879 to 6,189 (60%) while the number of pupils in public special classes increased by 12%. Preschool teachers increased from 281 in 1983 to 492 in 1996 (75%) while the number of preschool pupils increased by 4,693 or 147%. Speech-language specialists increased from

1,226 in 1986 to 1,846 in 1996, for an overall increase of 51%. At the same time, the number of public school pupils receiving speech during the same period increased from 71,577 to 83,901, a 17% increase.

From 1992 on, most of the staff data were gathered from the Certificated Staff Report in contrast to the district summary reports used in previous years. The change in report forms affected the comparability of some figures with previous years. This was particularly true for OT and PT whose numbers dropped dramatically from 1993-1995. In 1996, the OT and PT numbers were again collected with district summary reports, thereby capturing the contracted part-time staff that were missed with the Certificated Staff Report.

The numbers of child study team members increased from 1980 to 1996. The apparent decrease in 1994 was due to an underreporting of contracted part-time staff. Special education administrators increased from 374 in 1980 to a high of 585 in 1993 and then decreased in 1995 and 1996 down to 445. These changes are examined along with the trends in the pupil-staff ratios described below.

Although the proportion of pupils with educational disabilities appears to be leveling off, their numbers are expected to increase in proportion to increases in overall enrollment (from 9.6% in 1995 to 10.4% in 2004). If the past trends continue, there will be a need for increased numbers of special education personnel. The projections of future staff needs will consider the expected increases in numbers of pupils to be educated, trends in staff ratios, trends in the types of staff hired, current staff attrition, retirements and the number of college graduates and other educators who have special education certification.

Calculation of Ratios. The calculation of pupil-teacher ratios is complicated by the placement of pupils outside regular public districts in public receiving schools (educational services commissions, jointure commissions, DHS and DOE regional day schools, special services school districts, and public college operated programs) and private schools for the disabled. For example, pupils in receiving schools were included in the ratios, but their teachers were not due to difficulties in establishing comparable numbers over the years in question. Pupils in private schools for the handicapped and their teachers are both excluded from these ratios. The resulting pupil-teacher ratios are only slightly higher than would be the case if receiving school teachers were included. The sacrifice in precision was made in order to secure comparable data through the years and facilitate comparable calculations among districts. The formulas used to calculate the ratios are described at the end of this chapter.

Class Ratios. The ratio of public special class teachers to special class pupils remained stable (about 1:10.4) from 1983 to 1991 (p.56). After 1991, the ratios decreased to 1:8.9 in 1996. This decrease may be partly due to the data collection method implemented in 1992. The ratio of preschool teachers to preschool pupils gradually increased from a low of 1:11.3 in 1983 to a stable 1:15.5 from 1987-1994, except for 1991 when the ratio was 1:16.1. In 1995, the ratio increased sharply to 1:17.7, but then decreased to 1:16.0 in 1996. Since preschool pupils usually attend only a half-day, the average instructional class size would be about 8 pupils.

The ratio of classroom aides to special class pupils from 1980 to 1987 centered around 1:17.8, with the exception of 1984 (16.3). The ratio gradually decreased to an average of 1:14.7 from 1988 and to 1:10.0 in 1996, indicating that aides are being used much more often. The ratio of teachers to pupils in resource rooms/resource centers (RR/RC) and supplemental instruction (SI) has remained stable from 12.1 to 12.9 from 1984 to 1996, except for the 1:13.3 ratio that occurred in 1992 and 1995.

Child Study Team Ratios. The total number of CST members increased steadily so that there are 813 more team members in 1,996 than there were in 1980. From 1994 to 1995, there appeared to be a decrease of almost 300 in CST; however, it was probably due to an undercounting of contracted services. Therefore, the ratios for 1995 may not be reliable and were not included in the following trends. For the past four years, the number of CST members has not changed.

Child study team (CST) ratios to total enrollment decreased considerably from 1980 through 1987 (p. 56). Except for 1995, the ratio of psychologists to enrollment has been relatively stable at just about 1:1,100. The ratio of SW to total enrollment ratio decreased from 1:1,445 in 1980 to 1:1,103 in 1988, then held steady at about 1,050 from 1988 to 1991. In 1992, the ratio dropped to 962 where it remained through 1996 (again excluding 1995). The LDT-C ratio to total enrollment decreased steadily from 1980 (1:1,172) through 1990 (1:901), after which it increased to 1:1,007 in 1996.

These trends in the ratios of CST members to enrollment were similar to the ratios of CST members to classified pupils. The ratio of psychologists to the CST classified pupils increased steadily from 1:107 in 1980 to 1:136 in 1996. The ratio of SW to CST classified pupils remained relatively stable at 1:115 from 1983 to 1991, dropping to 1:110 in 1993 and 1994, and then increasing sharply to 1:122 in 1996. The ratio of LDT-Cs to CST classified pupils increased from 1:85 in 1980 to 1:125 in 1996. The ratios of all CST members combined to public CST classified pupils gradually increased from 1:33 in 1980 to 1:38 in 1994, then jumped to about 1:42 in 1995 and 1996. A small part of the changes from 1992 through 1995 compared with previous years may be attributed to the change in reporting through the Certificated Staff Report versus the Special Education Plan.

Speech Ratios. Speech is provided both as a separate special education program (eligible for speech correction) as well as a related service for pupils classified by a child study team. The ratio of speech-language specialists (speech correctionists) to total enrollment dropped significantly from 1:1,170 in 1980 to 1:663 in 1996 (p. 56). The ratio of speech-language specialists to all pupils receiving speech-language services remained stable at about 1:57 from 1980 through 1987, then decreased gradually to 1:45 in 1996.

Special Education Administrators. The number of special education administrators was compared with the total enrollment, the total number of pupils with educational disabilities, the CST classified disabled and the total number of special education staff. Administrators whose assignments were not specifically special education were not included in the following ratios. The ratio to total enrollment decreased from 1:3,332 in 1980 to 1:1,970 in 1993, and then increased to 1:2,753 in 1996. The ratio to total disabled decreased from 1:402 in 1980 to 1:318 in 1993, and then increased substantially to 1:451 in 1996. The ratio of special education administrators to CST classified pupils dropped from 1:242 in 1980 to a low of 1:201 in 1984, gradually increased substantially to 1:236 in 1992, dropped slightly to 1:227 in 1993, and then increased to 1:342 in 1996. The ratio of special education administrators to total special education staff varied little (from 1:42 to 1:50) from 1980 to 1994, after which it increased to 1:65 in 1996. Each of these measures suggests that the proportion of administrative staff devoted specifically to special education is decreasing.

District Staff Ratios. There is considerable variability among districts in staffing ratios within the state. The ratios described here are only state averages, not necessarily the ideal. Comparisons with the state average should be made with much caution since districts vary considerably in size, resources, pupil needs and other characteristics. Appendix D lists, for each district, the numbers of CST and speech staff as reported through the Certificated Staff Report for 1995, but by the Special Education Plan in 1996. Also reported are the overall ratios of CST to resident enrollment as well as the average number of evaluations/reevaluations completed per CST. However, staff reported by district A might also serve district B. For example, Appendix D might suggest that district A's team ratios were very low and completed relatively few evaluations/reevaluations, while district B would show a very high ratio and many evaluations/reevaluations completed per team. But, because district A team serves district B's pupils too, the ratios are not accurate. Consequently, these receiving districts show higher staffing levels and their corresponding sending districts show lower staffing levels than are actually the case. To partially ameliorate some of the difficulty, the total number of child study teams was derived by adding the numbers of psychologists, social workers and LDT-Cs and dividing by three. The actual ratios from individual districts should be confirmed with those districts before any extensive use is made of the data. The data should be regarded only as preliminary and interpreted with caution.

The 1996 staff ratios were calculated from data reported on the Special Education Plan (SEP) as follows:

Special Class	=	<u>SEP Tables 4&5: Pupils in Public Class I & II (minus PRE)</u> Certificated Staff Report of Special Class Teachers
RC/SI	=	<u>SEP Tables 2,3&4: Pupils RC/SI (minus elig. for speech-lang.)</u> Certificated Staff Report of Resource Center and SI Teachers
Preschool	=	<u>SEP Table 1: Number of Preschool Handicapped</u> Certificated Staff Report of Preschool Teachers
Aides	=	<u>SEP Tables 4&5: Pupils in Public Class I & II (inc. PRE)</u> SEP Table 10: Number of Aides
CST/Speech- Lang. Spec./ Correctionist	=	<u>ASSA: Resident Enrollment</u> Certificated Staff Report of Child Study Team Members & Speech-Language Specialists/Correctionists
CST Classified	=	<u>SEP Total Disabled minus Speech & Nonpublic (from Table 7)</u> Certificated Staff Report of CST Members
Speech-Language	=	<u>SEP Speech (no nonpublic) + Speech as a Related Service</u> Certificated Staff Report of Speech-Language Specialists/ Correctionists
Special Ed. Admin.:Enrlmt.	=	<u>ASSA: Resident Enrollment</u> Certificated Staff Report of Special Education Administrators
Special Ed. Admin.:Disabled	=	<u>SEP Table 1: Total Disabled (public and nonpublic)</u> Certificated Staff Report of Special Education Administrators
Special Ed. Admin.: SE Staff	=	<u>Certificated Staff Report and Table 10</u> Certificated Staff Report of Special Education Administrators

Trends in Initial Evaluations, New Classifications, and Reevaluations

The major trends in initial evaluations, new classifications and reevaluations are:

- The identification process has become more efficient with fewer pupils being evaluated that were not found eligible for special education (from 44% of referrals found eligible in 1980 to 74% in 1996).
- The percent of the enrollment that was newly classified each year remained stable from 1980 to 1996 at about 1.7%.
- The average number of evaluations completed by each child study team varied between 48 to 69 evaluations per CST over the last 17 years.

Identification. Data on initial evaluations, initial classifications, and reevaluations have been collected since 1980 (p. 59). The percentage of the enrollment that was identified for evaluation decreased slowly from 3.6% in 1980 to 2.3% in 1996. At the same time, the percent of those initial evaluations that was classified doubled, 43.6% in 1980 to 80.9% in 1995, then dropped somewhat to 73.9% in 1996. The higher classification rate for those newly identified pupils suggests that the identification process has become more efficient with fewer pupils without educational disabilities being evaluated.

The percent of the enrollment that was newly classified each year remained stable from 1.6% in 1980 to 1.7% in 1996. Most districts identify 2-4% of their enrollment, classify between 65%-85% of them, resulting in an annual new classification rate of between 1%-3%. A substantial number of districts (149) classify all pupils who are identified for evaluation.

Reevaluations. Pupils with educational disabilities must be reevaluated at least every three years. It is expected that the number of reevaluations would increase parallel to the increase in the number of classified pupils. The number of reevaluations completed increased about fivefold since 1980, from 8,394 to a high of 42,816 in 1995, then dropped to 38,806 in 1996. As the percentage of pupils with educational disabilities levels off, so should the number of reevaluations completed.

Total Evaluations. The average number of evaluations completed by each child study team may be calculated by adding the initial evaluations to the reevaluations and dividing by the number of CSTs. The number of CSTs were represented by the number of psychologists. This average varied between 48 to 69 evaluations per CST over the last 17 years. CST members also act as case managers, consult with teachers and parents, conduct meetings, write individualized education programs in addition to conducting evaluations and writing reports.

Initial Classifications. The pattern of pupils classified for the first time predicts the future pattern of classifications (p. 60). The rates of these newly classified pupils may be calculated by dividing the numbers of newly classified pupils in each classification by the enrollment. These rates were tracked since 1980. For example, the percent of newly classified EMR pupils dropped from .07% of the enrollment in 1980 to .02% in 1993, then increasing to .04% in 1995 and dropping back to .02% in 1996. The newly classified TMR rate declined from .02% in 1980 to less than .01% from 1990 through 1996. New NI classifications were stable at .17% from 1985 to 1992; however, then it increased over the next few years to .24% in 1995 and 1996. The newly classified PI rate also held steady at .97% from 1986 to 1991, then declined to .76% in 1995 and increased slightly to .80% in 1996.

The new ED classification rate remained steady at about .27% from 1980 to 1986 and then dropped to .22% in 1988 after which it decreased slowly to .17% in 1996. With the exception of 1953 and 1995, the MH rate remained steady at about .06% from 1982 to 1996. The preschool rate increased from .06% at its initiation to .35% of the enrollment for 1991-1996. Newly classified SM pupils decreased steadily as a percentage of enrollment from 1980 to 1996. Overall, the percent of the enrollment that is newly classified gradually increased from 1.56% in 1980 to a high of 1.86% in 1991, then gradually dropped to 1.73% in 1996. Although there are differences among the percentages of newly classified pupils among the classifications, the overall newly classified rate substantiates the prediction that the classification rate is stabilizing.

Appendix D lists the number of pupils identified for evaluation, new classifications and reevaluations as well as the identification rates and new classification rates for each district. These data are based on either the 1995 or 1996 school year due to the sampling of half the districts in a given year. Also reported for each district are the number and ratios of child study team members and speech-language specialists, the average number of new evaluations and reevaluations completed per team, and the ratio of child study teams and speech-language specialists to enrollment. The data on CST and speech-language specialists must be interpreted with caution, since the reports do not accurately report staff shared among several districts. Similarly, per case CST services used to supplement district CSTs were not included in these counts in 1995. Therefore, some districts might show no CST or speech-language specialists when, in fact, they do provide those services in concert with another district. Ratios for these districts will not reflect these shared service arrangements. Consequently, the ratios in the districts hosting such shared service arrangements may appear lower than the actual ratio of services provided while the ratios in the districts receiving those services would show higher ratios than are actually present. It is recommended that these district data be verified before extensive use is made of them.

Trends in Pupils with Educational Disabilities Exiting Education

The trends in pupils with disabilities exiting education are as follows:

- Most pupils with educational disabilities, ages 16-21, who exit special education do so by graduating, (68%) or dropping out (24%).
- Very few pupils with disabilities (136 in 1996) exited special education by reaching the maximum age of 21, most of whom were ED (35) or MH (24).

Background. Pupils with educational disabilities exit special education by being declassified, graduating, moving, or dropping out. Because pupils may reenroll in the same district or another district or state, their mobility may affect the exiting reports due to difficulties in tracking and record keeping. For 11 years, data have been collected on the number of pupils with educational disabilities exiting the educational system according to reasons for exit: graduation, reached maximum age, dropped out or status unknown. Data from the last eight years (1990-1997) are reported in this volume. In 1993, the "status unknown" category was divided and renamed as "Moved, known to be continuing," "Moved, known not to be continuing," and "Deceased." The first of these, "Moved, known to be continuing," was not included here because those pupils did not exit education, but remained in regular or special education in another district.

The exiting data were based on a random sample of districts for the school years ending in 1987 and 1988 and a sample of districts stratified by enrollment (half the districts each year) for 1989 to the present. Some of the changes in numbers of pupils reported in the first few years were probably due, in part, to improved district record keeping. Some of the decrease in numbers reported for 1990 were due to an adjustment in the formula calculating the state totals from the sample. Corresponding 1989 figures would be approximately 8% lower than those recorded. The difficulties in retrieving the data precluded its recalculation. However, the overall proportions exiting did not change appreciably.

Percentage Exiting of All Pupils with Educational Disabilities Ages 16-21. One way of looking at pupils exiting is as a proportion of the total number of pupils with educational disabilities ages 16 through 21. These percentages were calculated by dividing the total number of pupils exiting, ages 16 - 21, reported on the district End of the Year Report by the number of classified pupils, ages 16 - 21, reported on the district Special Education Plan the previous December. These percentages are shown on accompanying charts along with the numbers of pupils exiting by each reason for the years ending in 1987 through 1997 (pp. 64-67).

There are some inconsistencies in reporting between the Special Education Plan and the End of the Year Report, especially for classifications that have relatively few pupils. These percentages may not be precise due to these inconsistencies. Also, since AH and VH pupils are reported by agencies other than districts, their numbers are underrepresented in the district Special Education Plan report. As a result, the exiting percentages are not complete for these two classifications. In addition, the exiting percentages do not take into consideration pupils who drop out and reenroll. Therefore, the data should be interpreted with some caution.

Reasons for Exiting from Education. Most pupils with educational disabilities, ages 16-21, who exit special education do so by graduating, 68% in 1996-1997 (p. 64). The next most common reason for exit is dropping out, 24% in 1996-1997. Moved, not known to be continuing (possible dropouts) is a small proportion of the pupils who exit, 6% in 1996-1997. Only a small number stay in education through age 21 (1% in 1996), even though all pupils with educational disabilities are entitled to an education through that age. About 400 pupils ages 16-21 were declassified (left special education), but continued in regular education programs.

Over the last ten years, the exiting rates measured as a percentage of all pupils with educational disabilities, ages 16 - 21, varied by classification (p. 64). Of all the SM pupils who exited, 24% did so by graduating and 60% by dropping out. On a smaller scale, 47% of the ED pupils who exited did so by graduating and 41% by dropping out. In 1996-1997, 33% of the pupils with disabilities, ages 16-21, exited education. This figure is at the low of the range (from 33%-43%) shown over the last ten years. The reasons for exiting education vary by classification as shown below.

Graduated. The number of pupils with educational disabilities who graduated in 1997 was 7,112, or 22% of all such pupils ages 16-21 (Range 22%-29% over the last ten years) (p. 65). The classifications with the highest graduation rates were AH (41%), and VH (42%). The classifications with the lowest graduation rates were TMR (15%), EDT (6%), MH (13%), CH (15%), AUT (4%) and SM (15%). Most of the pupils with disabilities who graduated were ages 17-19. However, for consistency, the denominator was kept at ages 16-21.

Dropped Out. The number of pupils with educational disabilities who dropped out in 1997 was 2,563, or 8% of all such pupils ages 16-21 (Range 8%-13% over the last ten years) (p. 65). The classifications with the highest dropout rates were ED (17%) and SM (35%). The classifications with the lowest graduation rates were TMR, EDT, AH, OH, VH, AH, OH, VH, and AUT, each with 2% or less.

Reached Maximum Age. Just 136 pupils with disabilities exited special education by reaching the maximum age of 21, most of whom were ED (35) or MH (24) (p. 66). About 15 pupils classified EMR, TMR, EDT and NI also remained in school through age 21.

Moved, Not Known to be Continuing. A relatively small number of pupils (618) were reported to have moved and their previous district could not confirm whether or not they were enrolled in an educational program (p. 66). In a national study, most pupils so reported were found to have dropped out without going through the formalities. No such follow-up study was done in New Jersey, but it expected that would be here as well. Most of these pupils were PI (249) or ED (220).

Summary. Pupils with educational disabilities who exit education do so by graduating, dropping out, moving or reaching maximum age. In addition, a small number of pupils are declassified and return to regular education. The numbers and proportions of pupils with educational disabilities, ages 16-21, who exit education have not changed appreciably since 1990.

New Jersey State Department of Education
Office of Special Education Programs

GLOSSARY OF SPECIAL EDUCATION CLASSIFICATIONS

Auditorily Handicapped (AH) means an inability to hear within normal limits due to physical impairment or dysfunction of auditory mechanisms characterized by i and ii below. Evaluations by a specialist qualified in the field of audiology and a speech and language evaluation by a certified speech correctionist or speech-language specialist are required.

- i. The pupil is impaired in processing linguistic information through hearing, with or without amplification; and
- ii. The loss of hearing may be permanent or fluctuating and adversely affects the pupil's education.

Autistic (AUT) means a pervasive developmental impairment characterized by i, ii, and iii below. An evaluation by a certified speech correctionist or speech-language specialist and an evaluation by a physician trained in neurodevelopmental assessment is required.

- i. Social-emotional and communication development impaired in ways that are not merely predictable from cognitive and/or sensory impairment(s);
- ii. Extreme aberrant responses to one or more aspects of the environment, such as insistence on sameness, resistance to change, stereotypic behaviors, lack of responsiveness to others or repetitive movements; and
- iii. Onset in infancy or childhood.

Chronically Ill (CI) means a health condition such as tuberculosis, cardiac condition, leukemia, asthma, seizure disorder or other medical disability which makes it impractical to receive adequate instruction through a regular school program. Evaluation by the school physician or his or her review and written acceptance of the medical report of another physician is required. The school nurse shall assist in the accumulation of the data necessary to determine eligibility.

Communication Handicapped (CH) means impaired native speech or language which is outside the range of acceptable variation, adversely affects a pupil's educational performance and is not due primarily to hearing impairment as defined under "Auditorily Handicapped." It is characterized by i or ii below. An evaluation by a certified speech correctionist or speech-language specialist is required.

- i. **Communication Handicapped (CH)** means a severe speech or language disorder which interferes with the ability to use oral language to communicate.
- ii. **Eligible for Speech-Language Services (Speech)** means a mild to moderate disorder in language, articulation, voice or fluency which requires instruction by a speech correctionist or speech-language specialist. The evaluation shall be conducted according to N.J.A.C. 6:28-3.4(h).

Emotionally Disturbed (ED) means the exhibiting of seriously disordered behavior over an extended period of time which adversely affects educational performance and shall be characterized by i or ii below. An evaluation by a psychiatrist experienced in working with children is required.

- i. An inability to build or maintain satisfactory interpersonal relationships;
- ii. Behaviors inappropriate to the circumstances, a general or pervasive mood of depression or the development of physical symptoms or irrational fears.

Mentally Retarded (MR) means cognitive, social and academic functioning which is seriously below age expectations. Such functioning is comprehensive in nature being demonstrated in home, school and community settings, and characterized by one of the following:

Educable (EMR) means a level of cognitive development and adaptive behavior in home, school and community settings that are moderately below age expectations with respect to all of the following:

- (1) The quality and rate of learning;
- (2) The use of symbols for the interpretation of information and the solution of problems;
- (3) Performance on an individually administered test of intelligence that falls within a range of two to three standard deviations below the mean.

Trainable (TMR) means a level of cognitive development and adaptive behavior that is severely below age expectations with respect to all of the following:

- (1) The ability to use symbols in the solution of problems of low complexity;

- (2) The ability to function socially without direct and close supervision in home, school and community settings;
- (3) Performance on an individually administered test of intelligence that falls three standard deviations or more below the mean.

Eligible for Day Training (EDT) means a level of functioning profoundly below age expectations whereby on a consistent basis the pupil is incapable of giving evidence of understanding and responding in a positive manner to simple directions expressed in the child's primary mode of communication and cannot in some manner express basic wants and needs.

Multiply Handicapped (MH) means the presence of two or more educationally disabling conditions which interact in such a manner that programs designed for the separate disabling conditions will not meet the pupil's educational needs. All evident educational disabilities shall be documented. Eligibility for speech-language services as defined in this section shall not be one of the disabling conditions which forms the basis for the classification of a pupil as "multiply handicapped." Evaluations by all specialists required in this subsection for the separate disabling conditions being considered for the determination of "multiply handicapped" are required.

Neurologically or Perceptually Impaired (NI/PI) means impairment in the ability to process information due to physiological, organizational or integrational dysfunction which is not the result of any other educationally disabling condition or environmental, cultural or economic disadvantage and is characterized by i or ii below.

- i. **Neurologically Impaired (NI)** means a specific impairment or dysfunction of the nervous system or traumatic brain injury which adversely affects the education of a pupil. An evaluation by a physician trained in neuro-developmental assessment is required.
- ii. **Perceptually Impaired (PI)** means a specific learning disability manifested by a severe discrepancy between the pupil's current achievement and intellectual ability in one or more of the following areas:

- (1) Basic reading skills;
- (2) Reading comprehension;
- (3) Oral expression;
- (4) Listening comprehension;
- (5) Mathematic computation;
- (6) Mathematic reasoning; and
- (7) Written expression.

Preschool Handicapped (PH or PRE) means those children ages three through five who have an identified disabling condition and/or a measurable developmental impairment who require and would benefit from special education and related services.

Orthopedically Handicapped (OH) means a condition which, because of malformation, malfunction or loss of bones, muscle or body tissue, necessitates special education and/or related services. An evaluation by a physician qualified to conduct an orthopedic evaluation is required.

Socially Maladjusted (SM) means a consistent inability to conform to the standards for behavior established by the school. Such behavior is seriously disruptive to the education of the pupil or other pupils and is not due to emotional disturbance as defined above. If determined necessary by the child study team, an evaluation by a psychiatrist experienced in working with children is to be obtained.

Visually Handicapped (VH) means an inability to see within normal limits as characterized by i or ii below. An evaluation by a specialist qualified to determine visual disability is required. Visually handicapped pupils eligible for special education and/or related services shall be reported to the Commission for the Blind and Visually Impaired.

- i. **Blind (VH-B)** means a loss of acuity or field restriction so great that a pupil cannot rely on sight to learn.
- ii. **Partially Sighted (VH-PS)** means a field restriction or loss of visual acuity which adversely affects a pupil's education, but which does not warrant classification of a pupil as "blind." A partially sighted pupil is able to use sight to learn.

Source: N.J.A.C. 6:28-3.5, effective May 1, 1995

FEDERAL DEFINITIONS

Deafness (AH-D) - means a hearing impairment which is so severe that a child is impaired in processing linguistic information through hearing, with or without amplification, that adversely affects educational performance.

Hard of Hearing (AH-HH) - means an impairment in hearing, whether permanent or fluctuating, that adversely affects a child's educational performance but which is not included under the definition of "deafness" in this section.

Deaf-Blindness (D-B) - means concomitant hearing and visual impairments, the combination of which causes such severe communication and other developmental and educational problems that they cannot be accommodated in special education programs solely for children with deafness or children with blindness.

Traumatic Brain Injured (TBI) - means an acquired injury to the brain caused by an external physical force, resulting in total or partial functional disability or psychosocial impairment, or both, that adversely affects a child's educational performance. The term applies to open or closed head injuries resulting in impairments in one or more areas, such as cognition; language; memory; attention; reasoning; abstract thinking; judgment; problem-solving; sensory, perceptual and motor abilities; psychosocial behavior; physical functions; information processing; and speech. The term does not apply to brain injuries that are congenital or degenerative, or brain injuries induced by birth trauma.

GLOSSARY OF ABBREVIATIONS

Classifications

EMR	-	educable mentally retarded
TMR	-	trainable mentally retarded
EDT	-	eligible for day training (severely/profoundly MR)
TBI	-	traumatic brain injured
NI	-	neurologically impaired
PI	-	perceptually impaired
ED	-	emotionally disturbed
MH	-	multiply handicapped
AH-HH	-	auditorily handicapped - hard of hearing
AH-D	-	auditorily handicapped - deaf
D-B	-	deaf-blind
OH	-	orthopedically handicapped
CI	-	chronically ill
VH-PS	-	visually handicapped - partially sighted
VH-B	-	visually handicapped - blind
CH	-	communication handicapped
SPEECH	-	eligible for speech-language services
PRE, PH	-	preschool handicapped
AUT	-	autistic
SM	-	socially maladjusted
P2R	-	Plan to Revise Special Education includes data from 15 districts which participated in the project

Ethnic\Groups

Am. Ind./Alkn. Natv. - American Indian or Alaskan Native
Asian or Pac. Isl. - Asian or Pacific Islander

Other :	ASSA	-	Application for State School Aid
	CST	-	Child Study Team
	EIP	-	Early Intervention Program
	ESC	-	Educational Services Commission
	FTE	-	Full Time Equivalent
	IDEA	-	Individuals with Disabilities Education Act
	IEP	-	Individualized Education Program
	LEA	-	Local Education Agency
	SSSD	-	Special Services School District

APPENDIX A

DISTRICT SPECIAL EDUCATION DEMOGRAPHICS

The following formulae were used to calculate the accompanying district classification rates for the current year. Calculations for previous years used corresponding data from similar reports (table and line numbers differed):

CST Classified - Special Education Plan, Table 1, lines 20 plus 21 minus line 17;
Subtract nonpublic pupils from Table 6, lines 20 plus 21 plus line 17;
Divide by resident enrollment (ASSA);
Multiply by 100.

Speech - Special Education Plan, Table 1, line 17;
Minus nonpublic pupils, Table 6, line 17;
Divide by resident enrollment (ASSA);
Multiply by 100.

Both - Special Education Plan, Table 1, lines 20 plus 21;
Minus nonpublic pupils on Table 6, lines 20 plus 21;
Divide by resident enrollment (ASSA);
Multiply by 100.

Scatter Plots with DFG and Enrollment. This report also includes graphs (scatter plots) of speech (top) and CST classification (bottom) rates for districts of various enrollments and DFGs (pp. 14-18). These graphs show each district as a square. DFGs are reported as numbers rather than letters (A = 1; B = 2; CD = 3; DE = 4; FG = 5; GH = 6; I = 7; J = 8). For example, the square for a district with an enrollment of 800, a DFG of GH and a speech classification rate of 8.2% would be found on the top section of the page labeled "For Districts with 500-1000 Pupils" second from the top of column 6. The same district with a CST classification rate of 12.0% would be found on the bottom of the same page in the middle of column 6. These scatter plots may be used to compare the 1996 distribution of speech and CST classification rates of all districts according to the size of their total enrollments and DFGs.

APPENDIX C

PERCENT OF PUPILS WITH DISABILITIES BY PLACEMENT IN EACH DISTRICT

The data from each table of the Special Education Plan were used to calculate the proportions for each placement type. The number of pupils with educational disabilities in each placement setting was used as each numerator. The total number of pupils enrolled in the district was used as the denominator. When the total number of pupils with disabilities is small (less than 100), the percentages in a given placement are somewhat inflated.

For reference, the CST and speech classification rates from Appendix A were included in Appendix B as well. These rates exclude nonpublic pupils and were calculated as a percentage of the public school enrollment.

DOES NOT INCLUDE SM PUPILS

Total Enrol. = Resident enrollment

Supp. Reg. Ed. = Supported regular education

Pub. Sp. = Public eligible for speech-language services. Does not include speech as a related service. Does not include speech in nonpublic schools.

Pub. SI = Public supplemental instruction. Does not include SI in nonpublic schools.

Resource Centers:

In-class = In-class support

Less than 21% or More than 21% of the school day

Class I = Special classes in buildings with regular grades

Less than 60% or More than 60% of the school day

Class II = Special classes in buildings without regular grades

Private Day = Special classes or residential programs for which the district pays only the day educational cost (DYFS or parent pays the residential costs).

Private Res. = Residential programs for which the district pays both the day and residential costs (not DYFS).

Home Inst. = Home instruction

Total = Public percent classified (speech and CST)

APPENDIX D

NUMBER OF PUPILS IDENTIFIED FOR EVALUATION, NEWLY CLASSIFIED, OR REEVALUATED AND CHILD STUDY TEAMS AND SPEECH-LANGUAGE SPECIALIST RATIOS IN EACH DISTRICT

The percentage identified (referred) was calculated from data on either the 1995-1996 or the 1996-1997 End of the Year Report because only half the districts are sampled each year for this information. The number of resident pupils identified (referred) for CST evaluation was divided by the resident enrollment. In the case of sending-receiving arrangements where the receiving district contracts to provide the CST evaluation services, the identification (referral) rates may not reflect that service delivery system.

The percentage classified of those identified (referred) was calculated by dividing the number of newly classified pupils by the total number of pupils identified (referred). In some cases, the newly classified rate exceeds 100% because a newly classified pupil may have been identified in the previous year.

The numbers of CST and speech-language specialists were taken from the Certificated Staff Report for 1995 or the Special Education Plan for 1996. In some instances, the FTE may not have been reported accurately. When staff are shared across districts, the FTE in some districts may not have been reported, although they would have had assigned time in other districts. Some CST members may not have been reported if they also had administrative assignments. In some cases contracted, per case staff may not have been reported. Therefore, use caution when interpreting the data.

The ratios of evaluations plus reevaluations to CSTs were calculated by dividing the number of pupils identified (referred) for CST evaluation plus the number of reevaluations by an estimate of the number of CSTs. For this analysis, it was assumed that all pupils who were identified were also evaluated, although this is not always the case. The CST estimate was obtained by adding the number of psychologists, social workers and LDT-Cs and dividing by three. The result is an approximation of the number of evaluations completed per CST. CST members also act as case managers, consult with teachers and parents, conduct meetings, write individualized education programs in addition to conducting evaluations and writing reports. There is no data available on the extent of these CST services.

The ratio of the resident enrollment to the number of CSTs was calculated using the above estimate of the number of CSTs in each district. Given the limitations of the data and since CSTs conduct activities other than evaluations, the ratio data should be regarded as preliminary and interpreted with caution. Data on specific districts should be verified before any extensive use is made of them.

* OR NA: DATA NOT AVAILABLE

ERR= COULD NOT BE CALCULATED DUE TO ZERO DENOMINATOR

PERCENT ID(REFER./ENROL.): CALCULATED BY DIVIDING THE NUMBER IDENTIFIED (REFERRED) BY THE RESIDENT ENROLLMENT.
PERCENT CLASSIF./ID(REFER.): CALCULATED BY DIVIDING THE NUMBER NEWLY CLASSIFIED BY THE NUMBER IDENTIFIED (REFERRED).
PERCENT OF ENROLLMENT CLASSIFIED: CALCULATED BY DIVIDING THE NUMBER NEWLY CLASSIFIED BY THE RESIDENT ENROLLMENT
EEVALS.+REEVALS./CST/3: CALCULATED BY DIVIDING THE NUMBER OF EVALUATIONS AND REEVALUATIONS BY 1/3 OF ALL CST MEMBERS.
THE CST/3 WAS USED AS AN ESTIMATE OF THE NUMBER OF CSTs IN THE DISTRICT.
RATIO ENROLL/CST/3: CALCULATED BY DIVIDING THE TOTAL ENROLLMENT BY 1/3 OF THE NUMBER OF CST MEMBERS.
RATIO ENROLL/SPEECH: CALCULATED BY DIVIDING THE TOTAL ENROLLMENT BY THE NUMBER OF SPEECH-LANGUAGE SPECIALISTS.

NOTE: THE REFERRAL DATA WERE TAKEN FROM EITHER THE END OF THE YEAR REPORTS FOR THE SCHOOL YEARS ENDING IN 1996 OR 1997
BECAUSE ONLY HALF THE DISTRICTS ARE SAMPLED EACH YEAR FOR THIS INFORMATION.

NOTE: THE PERCENT CLASSIFIED OF NEW REFERRALS MAY EXCEED 100%

IF SOME OF THE NEWLY CLASSIFIED PUPILS WERE IDENTIFIED (REFERRED) THE PREVIOUS YEAR.

NOTE: THE NUMBERS OF CST AND SPEECH-LANGUAGE SPECIALISTS WERE TAKEN FROM
CERTIFICATED STAFF REPORT. IN SOME INSTANCES, THE FTE MAY HAVE BEEN REPORTED IN ONE DISTRICT,
ALTHOUGH SOME OF THEIR TIME WAS SPENT IN ANOTHER DISTRICT.

SOME CST MEMBERS MAY NOT HAVE BEEN REPORTED IF THEY ALSO HAD ADMIN. ASSIGNMENTS.

CST MEMBERS HIRED PER CASE WERE NOT REPORTED.

THESE ARRANGEMENTS ARE NOT REFLECTED IN THE DATA NOR IN THE RATIOS.

NOTE: THE RATIOS OF IDENTIFICATIONS (REFERRALS) + REEVALUATIONS DIVIDED BY CST/3

ARE APPROXIMATIONS DUE TO DIFFICULTIES IN RETRIEVING PRECISE CST DATA FROM THE CERTIFICATED STAFF REPORT.

SINCE CSTs CONDUCT ACTIVITIES OTHER THAN REFFERALS + REEVALUATIONS, EMPLOYMENT AND RATIO DATA SHOULD BE REGARDED AS PRELIMINARY.

THE CST AND SPEECH STAFF RATIOS ARE SIMILARLY AFFECTED, THEREFORE, THESE RATIOS ALSO SHOULD BE INTERPRETED WITH CAUTION.

DATA ON SPECIFIC DISTRICTS SHOULD BE VERIFIED BEFORE ANY EXTENSIVE USE IS MADE OF THEM.

REPORT OF THE JOINT CHIEFS OF STAFF ON THE MILITARY ASPECTS OF THE CUBAN CRISIS

1962	59:00	Washington, D.C.	Joint Chiefs of Staff	Review of the Cuban Crisis
1962	60:00	Washington, D.C.	Joint Chiefs of Staff	Review of the Cuban Crisis

The Joint Chiefs of Staff have reviewed the Cuban Crisis and have concluded that the United States has a strong interest in the stability of the Western Hemisphere. The Joint Chiefs of Staff have recommended that the United States should take the following actions:

1. The United States should continue to support the Cuban people in their struggle for freedom.
2. The United States should continue to provide military and economic aid to the Cuban people.
3. The United States should continue to maintain a strong military presence in the Western Hemisphere.
4. The United States should continue to maintain a strong alliance with the other nations of the Western Hemisphere.
5. The United States should continue to maintain a strong alliance with the other nations of the Western Hemisphere.
