Data through March 1981

April 1981

Nonfarm employment in New Jersey declined moderately from February to March. The 9,500 decrease in March to 3,084,900 jobs followed the February all-time record high for seasonally adjusted employment in New Jersey.

The February-March downturn was the first monthly abatement in rising nonfarm jobholding levels since the August low point of the 1980 recession. Department analysts note that New Jersey's March employment level was 49,800 higher than the August 1980 level which more than compensated for the 38,800 job decline during the 1980 recession (from the February peak to the August low point).

On the positive side, service employment registered a 1,700 increase over the month to total 637,200, an all-time seasonally adjusted record high for this sector. Due to rapid growth primarily in business services and casinos, jobholding in the service sector has increased every month since April 1979.

Some other nonfactory sectors did not show the usual March rises in seasonally adjusted employment levels. However, the February-March seasonally adjusted decline of 1,600 in construction came after an unseasonably substantial January-February increase of 4,200 due to the mild weather. In addition, the March seasonally adjusted trade level decline of 3,100 occurred after a seasonally adjusted 5,500 gain in February. Department analysts theorize a possible shift in seasonal patterns this year which would have made seasonal adjustment procedures inflate the February gains and deflate the March unadjusted rises in construction and trade.

On the other hand, the manufacturing February-March loss of 6,200 reflected not only strikes but also the continued slow recession recovery. Strikes of 750 in organic chemicals and 1,000 in paperboard mills contributed substantially to the 2,000 decline in chemicals and 1,400 in paper. Part of the 1,700 decrease in transportation equipment can be accounted for by the elimination of a shift in an automobile plant which resulted in less than seasonal increases in the industry.

Although March seasonally adjusted employment levels were down, New Jersey's recovery from the 1980 recession has been encouraging. The nonfactory sector spurred by services has been the dominant agent in the recovery. The factory sector has gained back nearly 5,000 jobs since the August 1980 low point. However, manufacturing jobholding went down over 30,000 from February 1980 to August 1980, and the sector has a long way yet to go.

The weekly earnings of manufacturing production workers averaged \$320.02 in March, an increase of \$3.14 from February and \$26.15 from a year ago. After seasonal adjustment, the average workweek remained at 41.3 hours.

LABOR AREA COMMENTS

Total nonagricultural employment increased in March in all of the state's ten major labor areas. The most substantial gains in jobholding were registered in the Atlantic City and Hackensack Labor Areas, which rose by 4,000 and 3,500, respectively.

Most of the increases were recorded in the nonmanufacturing division. The Atlantic City gain was primarily due to an increase of 3,600 in the services industry. This increase brought the service employment level to an all-time high of 41,500, up by 13,400 from a year ago. The service industry also accounted for a rise of 1,400 in the Hackensack Labor Area.

In the manufacturing sector, activity was modest over the month, with seven areas displaying increases of 400 to 600 each, two areas (Paterson-Clifton-Passaic and Atlantic City) remaining the same, and only Camden registering a small decrease due primarily to a closing in the petroleum industry.

Note: Detailed analysis on a labor area basis can be found in Employment and the Economy, a monthly newsletter available through the Division of Planning and Research. These reports are prepared for major labor areas by analysts stationed in these areas.

The seasonally adjusted data contained in this release have been adjusted to the latest seasonal factors and the data may differ from previous releases.

TECHNICAL NOTES

Nonfarm Wage and Salary Employment

Employment data refer to persons on establishment payrolls who received pay for any part of the pay period which includes the 12th of the month. The data exclude proprietors, the self-employed, unpaid family workers, farm workers, and domestic workers in households. Salaried officers of corporations are included. Government employment covers only civilian employees; federal military personnel are excluded.

Persons on an establishment payroll who are on paid sick leave (when pay is received directly from the firm), on paid holiday or paid vacation, or who work during any part of the pay period but are unemployed or on strike during the rest of the period, are counted as employed. Not counted as employed are persons who, during the pay period which includes the 12th, are laid off, on leave without pay or on strike for the entire period, or who are hired but do not work during the period.

Average Hours and Earnings

Hours and earnings data are derived from reports of payroll and man-hours for production and related workers in manufacturing. When the reported pay period exceeds one week, the payroll and man-hour figures are reduced to a weekly basis.

Average hourly earnings for manufacturing are on a "gross" basis, reflecting not only changes in basic hourly rates, but also such variable factors as premium pay for overtime and shift work, and changes in output of workers paid on an incentive plan. Excluded from average earnings are irregular bonuses, retroactive items, payments of various welfare benefits, and payroll taxes paid by employers.
