MEMORANDUM

TO Mr. Frank S. ParkerFROM Mr. Edwin W. DaytonSUBJECT FHWA Transmittal
Standard Improved Culvert InletsDATE January 11, 1977

Reference is made to your referral of January 3, 1977, pertaining to the above subject.

A review of the transmitted material indicated several items that were in conflict with information presented in Hydraulic Engineering Circular No. 13, Hydraulic Design of Improved Inlets for Culverts. These items appear on the sheet entitled "Special Details Special Slope Tapered Inlet" prepared by the State of Nevada, Department of Highways.

The following items were found to be in conflict:

1. The height of the opening should be equivalent to the height of the culvert and measured perpendicular to the slope through the throat section.
2. The end of the throat section should be perpendicular to the slope of the throat and not the slope of the culvert.
3. There is no apparent need for the 11 inch step at the entrance.
4. The leading top edge is not beveled.

The first three of these conflicts were discussed with Mr. Clinton Jones of the Federal Highway Administration who indicated that it was not the intention of the FHWA to change the design criteria presented in Circular No. 13, and that if the Department wished to prepare details for the improved inlet the design should be based on Circular No. 13.

Attached for your information is a copy of the design as presented in Circular No. 13.

Floods in New Jersey, Magnitude and Frequency

by D. M. Thomas

INTRODUCTION

Engineers, designers, contractors, and planners often need information about flood magnitudes. Occasionally they need to know the largest flood discharge that is likely to occur because any flooding of a contemplated structure or project may cause loss of life. More often they need information about the magnitude and frequency of expected floods so that they can design on sound economic principles the bridges, diking systems, buildings and other structures along streams and rivers. Only by use of flood-frequency information can they compare costs of alternate designs or land use plans with expected occasional flood damage costs. This comparison leads to the most economical and practicable schemes for their projects.

Textbooks, handbooks, and technical journals present many formulas and procedures for estimating future flood discharges. However, many of these methods were developed from flood data obtained in other areas and their applicability to New Jersey streams is questionable. Some of the methods, particularly the simpler ones, require the user to estimate hydrologic variables while other methods are complicated and readily usable only by specialists.

A procedure for estimating peak discharges of future floods is presented in this report. This relatively simple procedure requires a minimum of hydrologic experience or judgment for successful use, and was developed from a regional analysis of flood records on rivers and streams in New Jersey and nearby areas of adjoining States. It can be used at any site on New Jersey streams where the drainage area above the site is larger than four square miles, and where flood flow is not significantly affected by upstream reservoir operation, by runoff from extensive urban areas, or by other manmade factors. Basic flood information used in the analysis is presented in two appendices.

Tice (1958) analyzed Delaware River basin flood records, including part of the New Jersey records, using the same regional analysis methods used for this report. Relationships developed by Tice are presented in this report, although some were revised where new or additional flood records showed that the accuracy could be improved.

Only flood peak discharges are considered in this report. Many people, especially engineers, municipal planners, contractors, and home builders are also interested in the height of floods. A procedure for estimating flood heights has been developed in another study published as Water Resources Circular 14 of this publication series.

This flood-frequency study was a part of a broad-scale water resources investigation program undertaken cooperatively by the U.S. Geological Survey and the New Jersey Department of Conservation and Economic Development. George R. Shanklin, chief engineer and acting director of the Division of Water Policy and Supply, has guided and coordinated the cooperative program. This report was prepared in the Trenton District office of the Geological Survey under the general direction of John E. McCall, district engineer, and with the technical guidance of Richard H. Tice, hydraulic engineer.

HYDROLOGIC DEFINITIONS

Hydrologists use terms and concepts that often are unfamiliar to others. A few used in this report are defined in this section.

Annual flood series.--A list of the highest peak discharge in each water year of record. A water year is the 12-month period October 1 through September 30 and is designated by the calendar year in which it ends.

Partial-duration flood series.--A list of all peak discharges that exceed a chosen base discharge, regardless of the number of peaks occurring in a year.

Recurrence interval.--The average interval of time within which a given flood will be equaled or exceeded once. Recurrence intervals determined from an annual flood series differ from those determined from a partial-duration flood series. Langbein (1949) determined the relation between recurrence intervals from the two series as shown in table 1.

Table 1.--Comparative values of recurrence intervals from annual flood series and from partial-duration flood series.

Recurrence intervals, in years

Annual flood series	Partial-duration series
1.16	0.5
1.58	1.0
2.00	1.45
2.54	2.0
5.52	5.0
10.5	10
20.5	20
50.5	50
100.5	100

Flood-frequency curve.--A graph showing the relation between recurrence interval plotted as abscissa, and flood-peak discharge plotted as ordinate.

Mean annual flood.--A flood discharge equal to the mean of the discharges in an annual flood series. In this report the mean annual flood is determined as the 2.33-year flood from a flood-frequency curve.

REGIONAL ANALYSIS

Many engineers and others contributed to the development of regional flood analysis methods used. Dalrymple (1960) reported in detail the theory and step-by-step procedures of the analysis. Only a brief summary is presented in this report.

Statisticians consider the average of several measurements of an item more reliable than any individual measurement. Regional analysis uses this strength of an average. It averages the past flood experience in a region of similar flood-frequency characteristics to provide the best possible estimate of future floods in the region.

Regional flood-frequency analysis consists of three basic parts. The first processes usable flood records. The second defines regions of similar flood-frequency characteristics and determines the average flood-frequency relation for each region. The third defines the average relation between mean annual floods and drainage basin characteristics.

Processing flood records

This analysis used flood records from 75 gaging stations in New Jersey and 13 gaging stations in nearby areas of adjacent states. Each record included 6 or more years of annual floods during the water years 1922-60, and each was judged to represent natural flood flows. Only those New Jersey flood records less than 6 years long or those affected by manmade factors were excluded. Figure 1 shows the New Jersey gaging-station locations and table 2 lists for each station the name and data used in the analysis.

An annual series flood-frequency curve representing the period 1922-60 was drawn for each of the 88 gaging stations. The first step in defining this curve was to estimate from correlations with nearby flood records figures representing annual floods for years of no record during the period 1922-60. A recurrence interval (T) was then computed for each annual flood by the formula $T = (n + 1)/m$, where n is number of years of record (39), and m is a flood's rank when the series is arranged in descending order of magnitude. Each flood discharge was then plotted on graph paper against its recurrence interval and, finally, a smooth curve was drawn through the plotted points.

For use in the analysis, indexes representing the slope of each flood-frequency curve were computed. These indexes, called the ratios to mean annual flood (or the flood ratios), were computed by dividing the discharges at several selected frequencies (1.1, 1.5, 5, 10, 15, 25, and 50-year) by the mean annual flood discharge.

Regional Frequency

Regions of similar flood-frequency characteristics were defined by

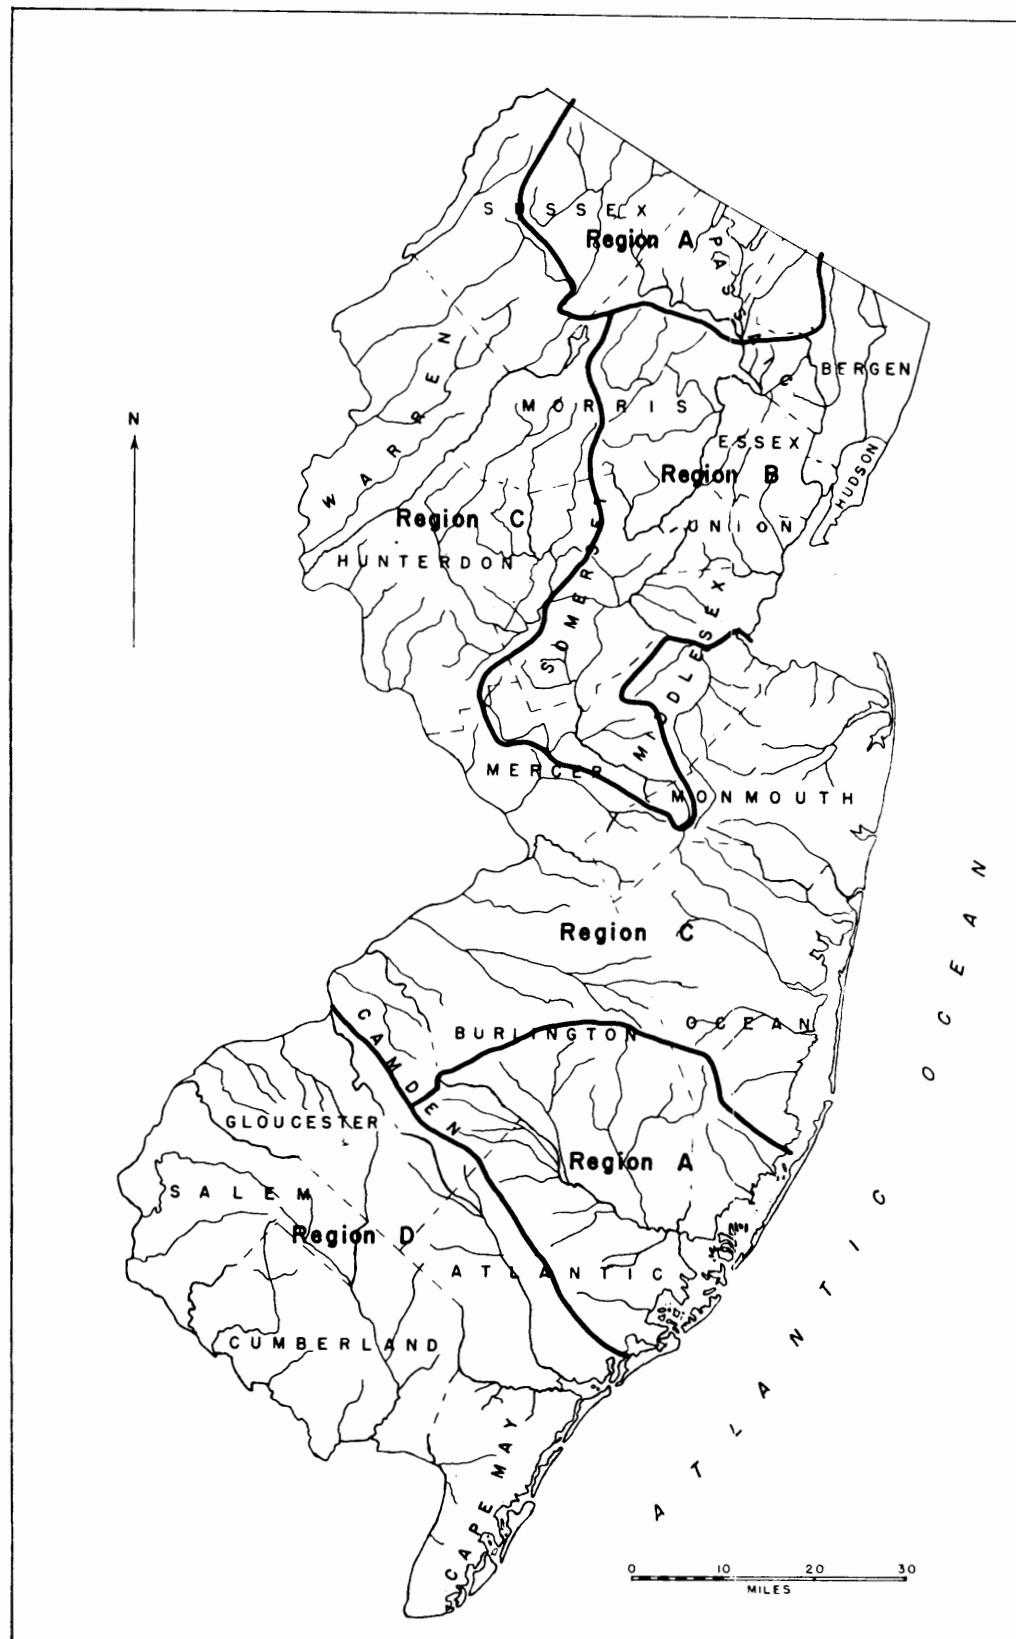

Figure 2.--Map showing flood-frequency regions.

areally grouping gaging-station frequency curves of about the same slope. In general, boundaries around the flood-frequency regions were drawn to follow drainage basin divides. Statistical tests indicated that the variation of slopes within each defined region was less than expected by chance. The regions are shown in figure 2.

The average flood-frequency curve for each region was computed from median values of the flood ratios. The median ratios were plotted on graph paper and a smooth curve was drawn through them, resulting in the dimensionless average frequency curves shown in figure 3. Use of the curve requires determination of the mean annual flood for the selected site.

Mean Annual Flood Relations

Graphical-multiple-regression techniques defined relations between mean annual flood discharge and topographic characteristics of the drainage basin. Data from only 84 gaging stations were used, because topographic information was not available for four New York stations. Variables found to significantly affect the mean annual flood were size of drainage basin, and percent of drainage area occupied by lakes and swamps.

Figure 4 shows the State divided into areas of similar hydrologic characteristics. These hydrologic areas were determined by areally grouping comparable deviations from a statewide average relation between mean annual flood

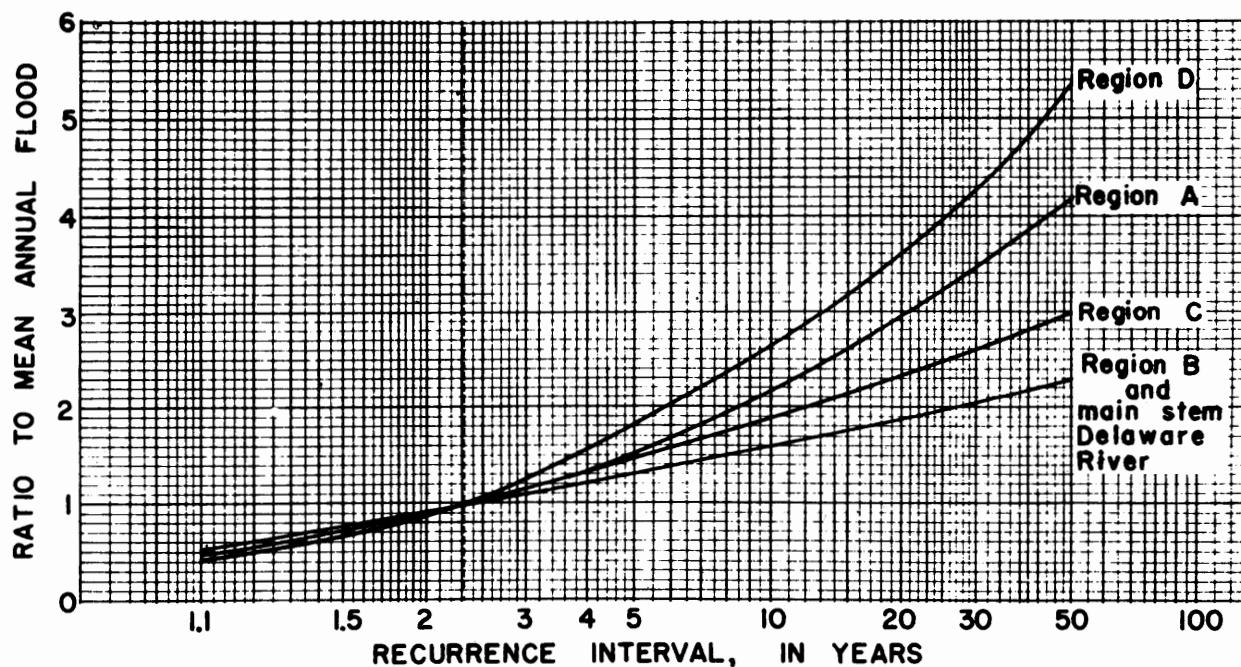

Figure 3.--Average frequency curves.

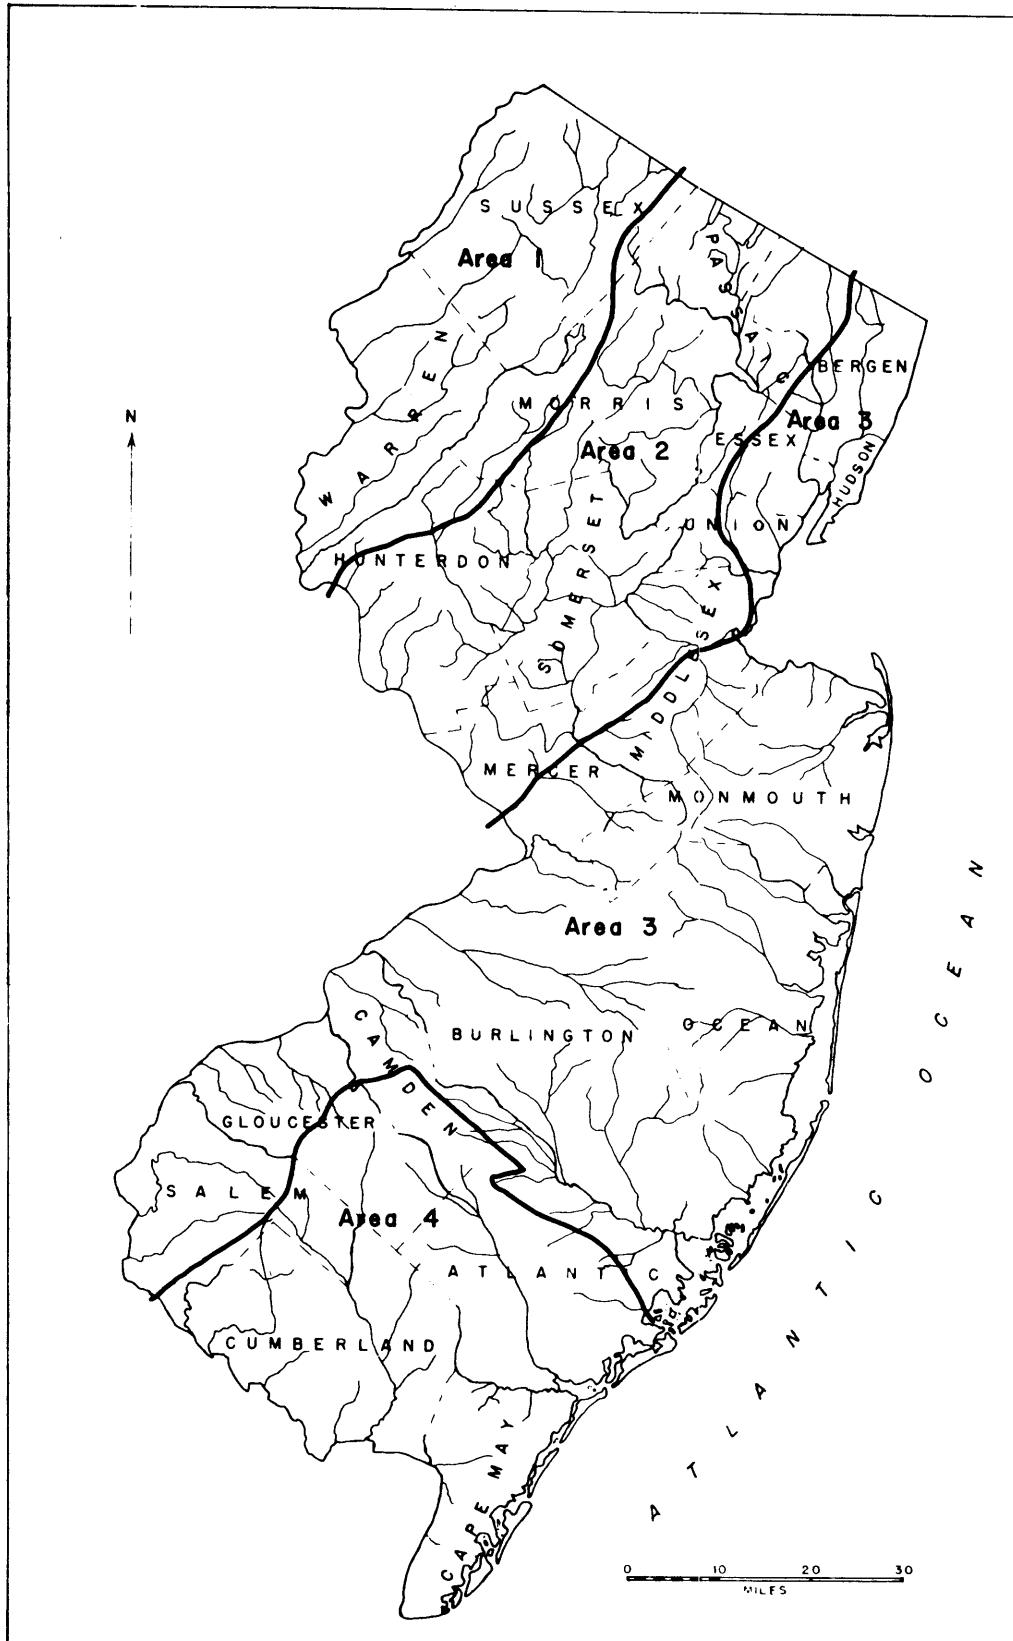

Figure 4.--Map showing hydrologic areas.

as the dependent variable, and drainage area and percent of drainage area in lakes and swamps as independent variables. Where possible, the boundaries of the hydrologic areas were drawn to follow soils map and geologic map boundaries, but in some places were arbitrarily drawn to follow drainage basin divides.

Figure 5 shows for each hydrologic area the relation between mean annual flood and drainage area for basins having 2 percent of the surface area in lakes and swamps. Data for some drainage basins smaller than four square miles were used to define the relation; however, the relation is not considered applicable for these small drainage basins because the plotted data showed significantly greater scatter than those for larger basins.

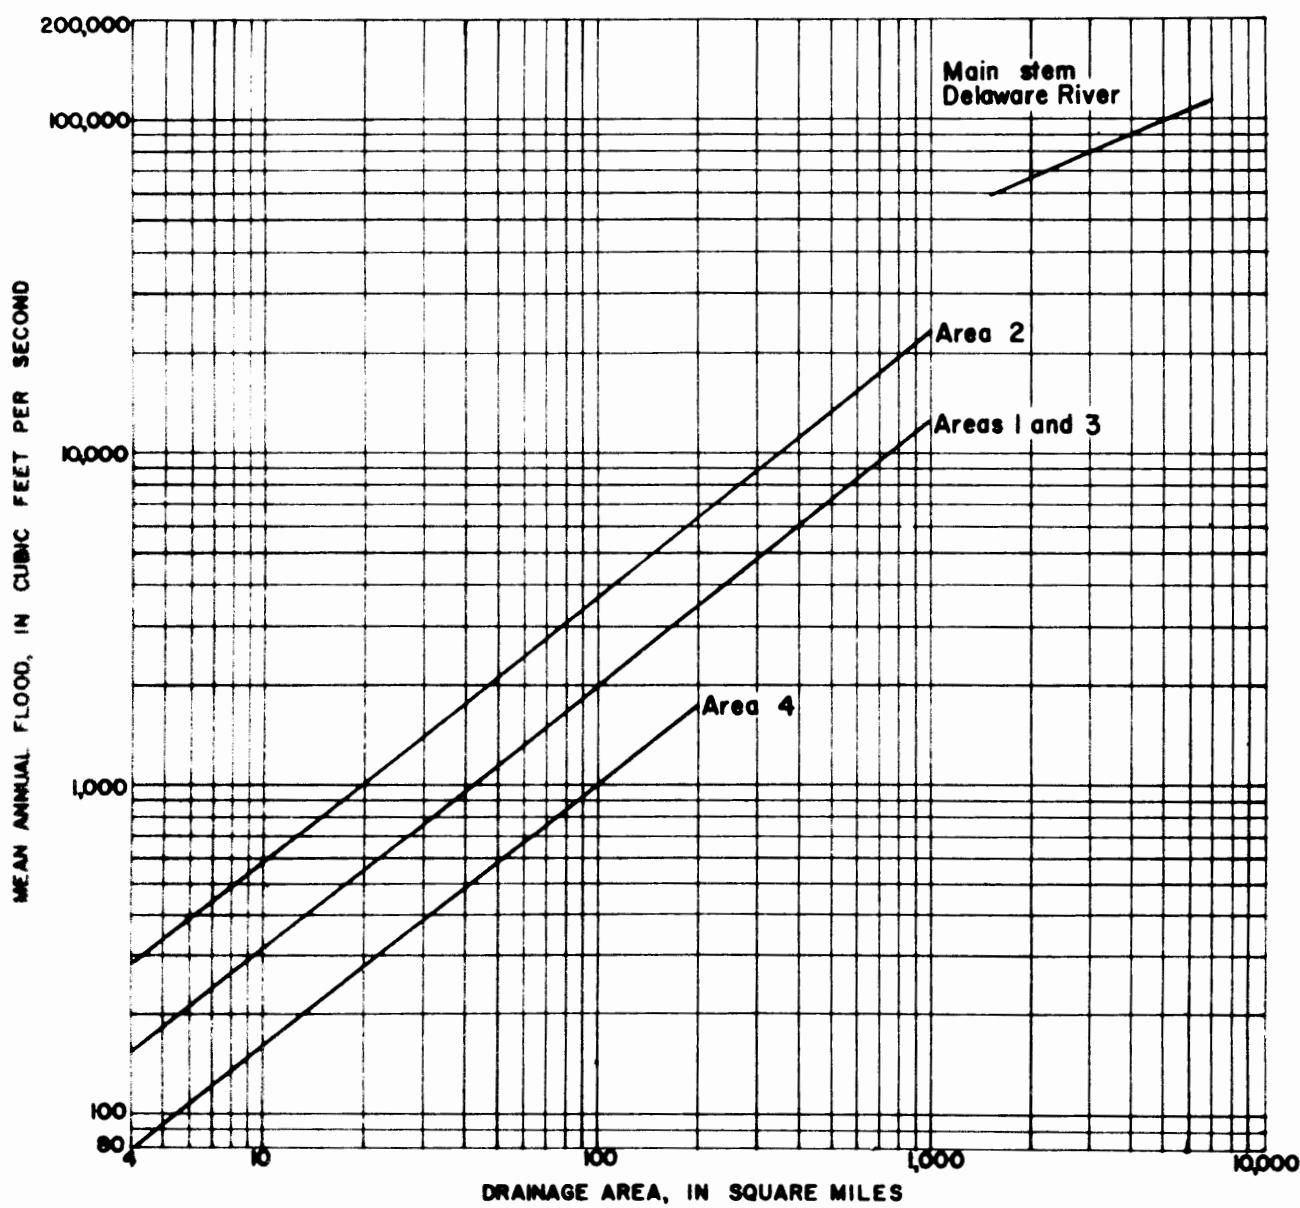

Figure 5.--Variation of mean annual flood with drainage area for basins containing 2 percent lakes and swamps.

Figure 6 shows the effects of storage in lakes and swamps on mean annual flood. A minimum value of 0.1 percent lake and swamp area was used to define the curve.

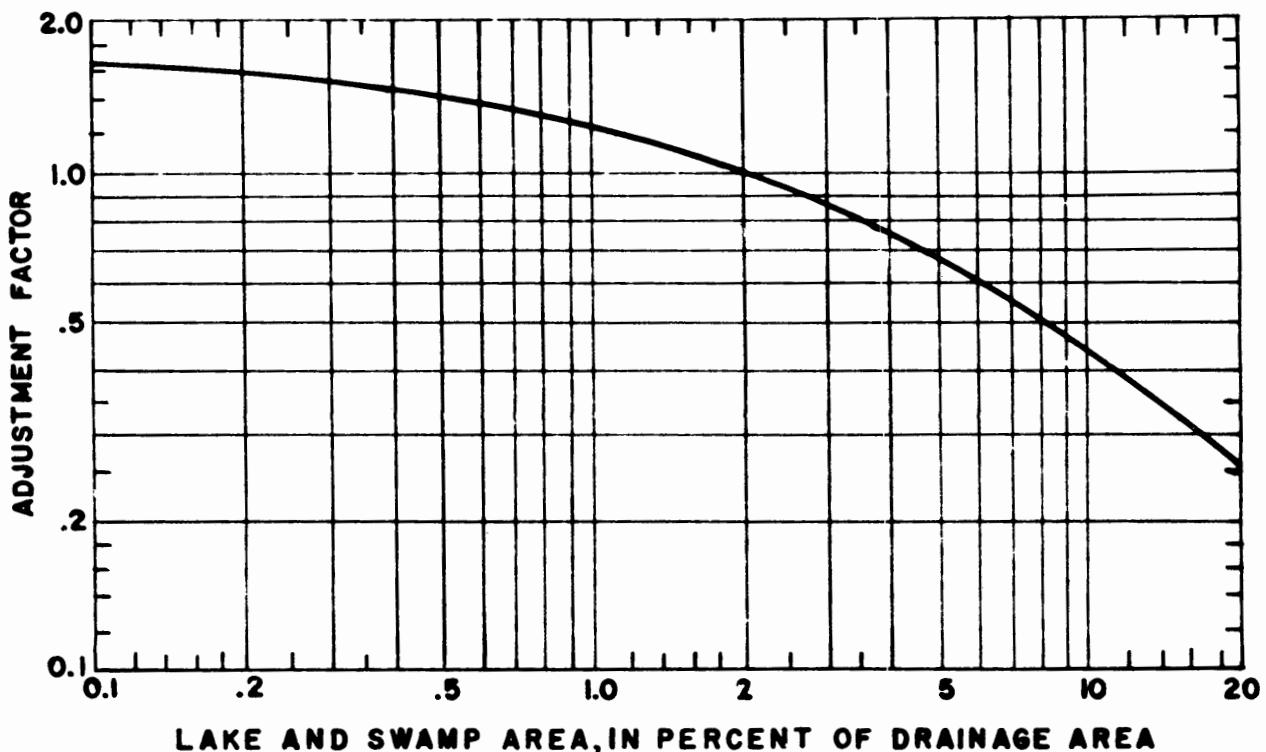

Figure 6.--Adjustment factor for effect of lakes and swamps.

Accuracy

The accuracy of relations and boundaries shown in figures 2 - 4 depend to a large extent upon the spatial density of flood records. The more dense the gaging stations, the more confidently the boundaries of flood-frequency regions and hydrologic areas can be defined, and the more accurately the average regional flood-frequency curves can be determined. A study of figure 1 will indicate the relative areal accuracies.

The accuracy of mean annual flood relations in figures 5 and 6 depends largely upon the range of hydrologic characteristics sampled in the gaging-station data used. Inspection of data in table 1 shows that the relations should be most accurate for drainage basins of 10 to 200 square miles having lake and swamp areas of 1.0 to 10 percent.

A measure of the overall accuracy of the defined relations was obtained by comparing discharges obtained from the regional curves to discharges

obtained from the gaging-station frequency curves. Two out of three times these comparisons were within ± 22 percent for the mean annual flood, within ± 26 percent for the 10-year flood, and within ± 33 percent for the 50-year flood. This range of accuracy compares favorably with theoretical forecast accuracies determined in a statistical study by Benson (in Dalrymple, 1960).

URBAN EFFECTS

Urban and suburban development can significantly affect flood magnitudes. Wiitala (1961) determined that urban development of a small drainage basin might double or triple flood peak discharges, and Carter (1961) found that modern-type, suburban development might increase mean annual flood discharges by as much as 80 percent. Two New Jersey gaging stations, Elizabeth River at Elizabeth, and Second River at Belleville, provide flood records from drainage basins that have been highly urbanized for the period of flood records. At these two sites the mean annual flood discharges are, respectively, 2.0 and 2.7 times as large as the mean annual floods estimated from the regional relations.

In New Jersey many drainage basins contain some urban or suburban development (hereafter called urbanization). To determine guidelines for the applicability of the regional flood relations on partially urbanized drainage basins, measured flood discharges from drainage basins urbanized to varying degrees were compared to flood discharges estimated by the regional relationships. The degree of urbanization was evaluated by estimating from available maps the percentage of total drainage area covered by a relatively dense road grid.

From this comparison it was concluded that the regional relations are applicable for drainage basins urbanized less than 25 percent. Although the regional relations provided reasonable discharge estimates for one 50 percent urbanized drainage basin (Rahway River near Springfield), estimates for other 30 percent to 50 percent urbanized basins were from 20 percent to 40 percent low. Flood discharges estimated by the regional relations for drainage basins urbanized more than 80 percent may be as much as 100 percent to 200 percent low.

Except in the northeastern part of the State, few drainage basins larger than four square miles are more than 25 percent urbanized. The regional relations are therefore considered applicable to most sites, but possible effects of upstream urbanization or development should always be considered before using the estimates.

ESTIMATING A FLOOD DISCHARGE

For sites in New Jersey above which the drainage area exceeds 4 square miles and the flood flow is not significantly affected by manmade factors, figures 2 - 6 and topographic maps can be used to estimate flood discharge for any selected recurrence interval between 1.1 and 50 years. Estimates

are made by the following 7-step procedure.

1. - Determine from topographic maps the drainage area above the site and the area of lakes and swamps in the drainage basin. For consistency with the data used in the analysis, the use of U.S. Geological Survey $7\frac{1}{2}$ minute quadrangle maps is recommended.
2. - From figure 4, determine the hydrologic area in which the drainage basin lies.
3. - Determine from the appropriate curve in figure 5 the mean annual flood for a comparable size drainage basin having 2 percent area of lakes and swamps.
4. - Adjust the mean annual flood value from step 3 for lake and swamp effects by the factor indicated in figure 6. Use a factor of 1.65 for drainage basins having less than 0.1 percent lake and swamp area.
5. - From figure 2, determine the flood-frequency region in which the drainage basin lies.
6. - Determine the ratio to mean annual flood for the flood of the selected frequency from the appropriate curve in figure 3.
7. - Multiply the flood ratio from step 6 by the mean annual flood value from step 4 to obtain the selected flood discharge. A complete flood-frequency curve for the site can be obtained by repeating steps 6 and 7 for several recurrence intervals.

The recurrence intervals in figure 3 are determined from the annual flood series. Users desiring flood-discharge estimates based on the partial-duration series should use the conversion values shown in table 1 before starting step 6.

The procedure outlined in this section estimates a flood discharge that has a 50-50 chance of being either high or low. Users may wish to reduce the chance of estimating discharge too low. On the basis of the determined accuracy of the relations, the chance of estimating too low can be reduced to about 1 in 6 if estimates are increased by an amount ranging from 25 percent for a mean annual flood to 35 percent for a 50-year flood.

SUMMARY

Future flood discharges having recurrence intervals ranging from 1.1 to 50 years can be estimated using information obtained from this report and from topographic maps. Because the estimates are based on a region-wide average of

past flood experience, they are considered more reliable than estimates from any single record of past flood events. Estimates can be made for any site on New Jersey streams above which the drainage area exceeds four square miles, and where flood flow is not significantly affected by manmade factors. It is believed that proper use of flood-frequency estimates will facilitate the economical development of New Jersey's streams and adjoining lands.

APPENDIX

Maximum known floods

Occasionally, designers and planners need information on the maximum floods expected to occur. To aid in such determinations, this appendix presents a list of maximum known discharges on New Jersey streams (table 3). The list includes the highest known discharge at each gaging-station site as well as discharges determined for unusual floods at miscellaneous sites. The sites are listed in a downstream order corresponding to that used in U.S. Geological Survey water-supply papers and in Special Reports of the State of New Jersey.

A plot of maximum known flood discharges expressed as cubic feet per second per square mile against drainage area is shown in figure 7. No attempt was made to relate these extreme flood discharges to drainage basin characteristics other than drainage area. The solid line in figure 7 represents an approximate enveloping curve at a slope recommended by Jarvis^{1/} and the broken line indicates the discharge equal to 50 percent of the enveloping curve.

Gaging-Station Flood Records

This section contains a compilation of flood records for all New Jersey gaging stations that had 5 or more years of flood record prior to 1963. The records of gaging stations located in adjacent States and used in the regional frequency analysis are also included.

A brief description including pertinent flood information is given for each station. A partial-duration series is given whenever the data are available and the flood flow was not materially affected by regulation; otherwise only annual peaks are given. Underlines in the tabular data have the following meanings:

1. Line in water year column means a break in continuous record.
2. Line from date column through discharge column means change in site and datum with no break in record.
3. Line in gage-height column only means change in datum only.
4. Line in date and discharge columns means change in site but no change in datum.

HUDSON RIVER BASIN

3680. Wallkill River near Unionville, N.Y.

Location.--Lat $41^{\circ}15'35''$, long $74^{\circ}32'55''$, on right bank at downstream side of highway bridge on the Quarryville-Milton road, 1 mile upstream from small tributary, 2 miles south of the New York-New Jersey State line, and 3 miles south of Unionville, Orange County.

Drainage area.--144 sq mi.

Gage.--Nonrecording prior to Nov. 16, 1949; recording thereafter. Altitude of gage is 390 ft (from topographic map).

Stage-discharge relation.--Defined by current-meter measurements.

Remarks.--Only annual peaks are shown.

Peak stages and discharges

Water year	Date	Gage height (feet)	Discharge (cfs)	Water year	Date	Gage height (feet)	Discharge (cfs)
1938	Sept. 22, 1938	11.2	3,120	1951	Nov. 26, 1950	10.20	2,210
1939	Dec. 7, 1938	10.55	1,960	1952	June 2, 1952	10.24	2,250

1949	Dec. 31, 1948	11.4	5,000				
1950	Mar. 10, 1950	8.62	1,160				

a Daily mean discharge.

b Occurred Nov. 10, 1943.

c Occurred Jan. 23, 1959; backwater from ice.

3685. Rutgers Creek at Gardnerville, N.Y.

Location.--Lat $41^{\circ}20'40''$, long $74^{\circ}29'10''$, on left bank 30 ft upstream from highway bridge at Gardnerville, Orange County, 1.7 miles southeast of Johnson, and 2.2 miles upstream from mouth.

Drainage area.--59.7 sq mi.

Gage.--Nonrecording prior to June 22, 1948; recording thereafter. Datum of gage is 404.48 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Defined by current-meter measurements below 2,200 cfs and extended above on basis of flow-over-dam measurement at gage height 8.88 ft and slope-area measurement at gage height 12.38 ft.

Remarks.--Only annual peaks are shown.

Peak stages and discharges

a Backwater from ice.

HUDSON RIVER BASIN

3690. Pochuck Creek near Pine Island, N.Y.

Location.--Lat $41^{\circ}16'30''$, long $74^{\circ}28'20''$, on right bank 15 ft downstream from highway bridge at Newport, 2.3 miles south of Pine Island, Orange County, 3 miles west of Edenville, and 4 miles upstream from mouth.

Drainage area.--98.0 sq mi.

Gage.--Recording. Datum of gage is 382.39 ft above mean sea level (levels by Corps of Engineers).

Stage-discharge relation.--Defined by current-meter measurements.

Remarks.--Only annual peaks are shown.

a Daily mean discharge.

HACKENSACK RIVER BASIN

3770. Hackensack River at Rivervale, N.J.

Location.--Lat $40^{\circ}59'55''$, long $73^{\circ}59'27''$, on right bank at Leslie Avenue, Rivervale, Bergen County, $1\frac{1}{2}$ miles upstream from Pascack Brook, 4.6 miles upstream from Oradell Dam, and 27.2 miles upstream from mouth.

Drainage area.--58.0 sq mi. Area of swamps, lakes, and reservoirs, 2.4 sq mi.

Gage.--Recording gage and concrete control. Datum of gage is 22.51 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Defined by current-meter measurements.

Bankfull stage.--5 ft.

Remarks.--Flow regulated after February 1956 at DeForest Lake about 11 miles upstream, capacity, 5,638,000,000 gal at top of Bascule gates. Base for partial-duration series, 500 cfs.

3775. Pascack Brook at Westwood, N.J.

Location.--Lat $40^{\circ}59'33''$, long $74^{\circ}01'19''$, on right bank 75 ft upstream from Harrington Avenue in Westwood, Bergen County, 500 ft downstream from Musquapsink Creek, and 2.3 miles upstream from mouth.

Drainage area.--29.6 sq mi. Area of lakes, ponds, and swamps, 0.9 sq mi.

Gage.--Recording. Datum of gage is 28.62 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Defined by current-meter measurements; shifts in relation occur.

Bankfull stage.--5 ft.

Remarks.--Flow regulated by Woodcliff Lake 3 miles above station, capacity at spillway level, 835,000,000 gal. Base for partial-duration series 330 cfs.

3785. Hackensack River at New Milford, N.J.
(Published as "at Oradell" 1908-13)

Location.--Lat $40^{\circ}56'52''$, long $74^{\circ}01'34''$, on right bank upstream from two masonry dams and two lift gates at pumping plant of Hackensack Water Co., New Milford, Bergen County, 0.6 mile downstream from Oradell Dam, 4.0 miles downstream from Pascack Brook, and 21.8 miles upstream from mouth.

Drainage area.--113 sq mi. Area of swamps, lakes, and reservoirs, 4.6 sq mi.

Gage.--Nonrecording prior to Nov. 23, 1923; recording thereafter. At same site above south dam at datum 0.05 ft lower prior to Sept. 25, 1934. Datum of gage is 6.25 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Defined by current-meter measurements.

Bankfull stage.--5 ft.

Remarks.--Flow regulated by Oradell Reservoir 1 mile above station, Woodcliff Lake 9 miles above station, and DeForest Lake (since February 1956) 17 miles above station (combined capacity of reservoirs, 9,320,000,000 gal). Water diverted at gage and at West Nyack, N.Y., for municipal supply, averaging about 90 cfs in 1958. Only annual peaks are shown.

a Occurred May 15, 1937, when waste gate channel closed.

b Occurred Sept. 21, 1938.

c Occurred Feb. 3, 28, 1939.

d Occurred Dec. 6, 1938, Feb. 3, 28, 1939.

e Occurred Jan. 22 and Mar. 1, 1958.

PASSAIC RIVER BASIN

3790. Passaic River near Millington, N.J.
 (Published as "at Millington" 1903-6)

Location.--Lat $40^{\circ}40'48''$, long $74^{\circ}31'45''$, on right bank 200 ft downstream from Davis Bridge, in Somerset County, 0.7 mile northwest of Millington, Morris County, and 1.8 miles downstream from Black Brook.

Drainage area.--55.4 sq mi. At site used Nov. 25, 1903, to July 15, 1906, 57 sq mi, approximately. Area of lakes, ponds, and swamps, 10.0 sq mi.

Gage.--Nonrecording prior to July 3, 1925; recording thereafter. At site 0.7 mile downstream at different datum prior to July 15, 1906; and at site 200 ft downstream at present datum Nov. 10, 1921, to Sept. 1, 1923. Datum of gage is 215.60 ft above mean sea level (New Jersey Geological Survey bench mark).

Stage-discharge relation.--For 1903-6 defined by current-meter measurements below 140 cfs and extended above on basis of area-velocity study. Since 1921, defined by current-meter measurements below 1,400 cfs and by slope-area measurement of 1,480 cfs.

Remarks.--Only annual peaks, from graph of twice-daily gage readings, are shown prior to 1926. Base for partial-duration series, 500 cfs.

3795. Passaic River near Chatham, N.J.

Location.--Lat $40^{\circ}43'31''$, long $74^{\circ}23'23''$, on left bank 150 ft downstream from Stanley Avenue Bridge in Chatham, Morris County, and 3 miles upstream from Canoe Brook.

Drainage area.--100 sq mi. Area of lakes, ponds, and swamps, 11.2 sq mi.

Gage.--Nonrecording 1904-11; recording since Dec. 15, 1937. On Stanley Avenue Bridge 150 ft upstream at different datum 1904-11. Concrete control since Sept. 19, 1938. Datum of gage is 193.51 ft above mean sea level, datum of 1929.

Stage-discharge relation.--For 1904-11 well defined by current-meter measurements below 600 cfs, but considered only approximate above 750 cfs. Since 1937, defined by current-meter measurements.

Bankfull stage.--8 ft.

Remarks.--Only maximum observed peaks are shown 1904-11. Base for partial-duration series, 800 cfs.

a Backwater from ice.

3800. Beaver Brook at outlet of Splitrock Reservoir, N.J.
(Published as "at outlet of Splitrock Pond")

Location.--Lat 40°57'38", long 74°27'43", on left bank 50 ft downstream from Splitrock Dam, 2 miles northeast of Hibernia, Morris County, and 3½ miles upstream from Hibernia Brook.

Drainage area.--5.50 sq mi.

Gage.--Recording gage and wooden weir. Altitude of gage is 790 ft (from topographic map).

Stage-discharge relation.--Defined by weir formula and verified by current-meter measurements below 40 cfs.

Remarks.--Some flood peaks affected by regulation of Splitrock Reservoir (capacity at spillway level, 3,310,000,000 gal). Base for partial-duration series, 50 cfs.

PASSAIC RIVER BASIN

3805. Rockaway River above reservoir, at Boonton, N.J.

Location.--Lat $40^{\circ}54'06''$, long $74^{\circ}24'40''$, on right bank at Morris Avenue, Boonton, Morris County, 1.8 miles upstream from Boonton Dam.

Drainage area.--116 sq mi. Area of lakes, ponds, and swamps, 7.8 sq mi.

Gage.--Recording gage and concrete control. Datum of gage is 364.47 ft above mean sea level (New Jersey Geological Survey bench mark).

Stage-discharge relation.--Defined by current-meter measurements below 2,400 cfs and extended above by logarithmic plotting.

Remarks.--Base for partial-duration series, 950 cfs.

PASSAIC RIVER BASIN

3810. Rockaway River below reservoir, at Boonton, N.J.
 (Published as "Rockaway River near Boonton" 1903-4,
 and as "Rockaway River at Boonton" 1906-37)

Location.--Lat $40^{\circ}53'47''$, long $74^{\circ}23'36''$, on right bank 2,000 ft downstream from dam of Boonton Reservoir, Boonton, Morris County.

Drainage area.--119 sq mi. At site used in 1904, 121 sq mi. Area of lakes, ponds, and swamps, 9.0 sq mi.

Gage.--Nonrecording prior to Sept. 30, 1924, recording thereafter. During 1904, at site 1.9 miles downstream at different datum; 1913-24, on Boonton Reservoir 2,000 ft upstream at datum 305.25 ft above mean sea level. Concrete control completed Nov. 5, 1936. Datum of gage is 195.68 ft above mean sea level (New Jersey Geological Survey bench mark).

Stage-discharge relation.--For 1904, defined by current-meter measurements below 900 cfs and extended above by logarithmic plotting; 1912-24, defined by weir formula; 1925-61, defined by current-meter measurements below 1,400 cfs and extended above by logarithmic plotting.

Remarks.--Flow regulated by Boonton and Splitrock Reservoirs. Prior to 1926 gage height and discharge are mean for day. Only annual peaks are shown.

a Prior to 1926 gage height and discharge are mean for day.

b Occurred Mar. 19, 1923.

c Occurred Feb. 16, 1925.

PASSAIC RIVER BASIN

3815. Whippanny River at Morristown, N.J.

Location.--Lat $40^{\circ}48'21''$, long $74^{\circ}27'22''$, on left bank at Morristown sewage-disposal plant, three-quarters of a mile downstream from Morristown, Morris County, and 9 miles upstream from mouth.

Drainage area.--29.4 sq mi. Area of lakes, ponds, and swamps, 0.3 sq mi.

Gage.--Nonrecording prior to July 16, 1930; recording thereafter. Concrete control since July 1, 1936. Datum of gage is 260.01 ft above mean sea level (New Jersey Geological Survey bench mark).

Stage-discharge relation.--Defined by current-meter measurements below 430 cfs and extended above on basis of slope-area and flow-over-dam measurement of 1,500 cfs.

Bankfull stage.--3 ft.

Remarks.--Regulation by Pocahontas Lake 2.5 miles above station may occasionally affect peaks. Only annual peaks from graph of twice-daily gage readings are shown prior to 1931. Base for partial-duration series, 450 cfs.

3835. Wanaque River at Awosting, N.J.
(Published as "at Greenwood Lake" prior to 1941)

Location.--Lat 41°09'31", long 74°20'00", on right bank 700 ft downstream from dam at outlet of Greenwood Lake at Awosting, Passaic County.

Drainage area.--27.1 sq mi. Area of lakes, ponds, and swamps, 3.6 sq mi.

Gage.--Nonrecording prior to Apr. 1, 1926; recording thereafter. Prior to Oct. 31, 1938, at site 100 ft upstream at same datum. Concrete control since Oct. 31, 1938. Datum of gage is 601.32 ft above mean sea level (New Jersey Geological Survey bench mark).

Stage-discharge relation.--Prior to Oct. 31, 1938, defined by current-meter measurements below 290 cfs and extended on basis of flow-over-dam measurement of 914 cfs. Since 1938, defined by current-meter measurements below 310 cfs and extended above by logarithmic plotting.

Bankfull stage.--3 ft.

Remarks.--Regulation by Greenwood Lake could affect some flood peaks. Base for partial-duration series, 200 cfs.

3840. Wanaque River at Monks, N.J.

Location--Lat 41°07'14", long 74°17'41", on left bank just upstream from Wanaque Reservoir, at Monks, Passaic County.

Drainage area--40.4 sq mi. Area of lakes, ponds, and swamps, 3.7 sq mi.

Gage--Recording gage and concrete dam. Datum of gage is 303.17 ft above mean sea level (New Jersey Geological Survey bench mark).

Stage-discharge relation--Defined by current-meter measurements below 1,000 cfs and extended above by logarithmic plotting.

Remarks--Base for partial-duration series, 400 cfs.

b Backwater from ice.

3845. Ringwood Creek near Wanaque, N.J.

Location--Lat $41^{\circ}07'36''$, long $74^{\circ}15'52''$, on right bank 500 ft upstream from Wanaque Reservoir, 0.7 mile downstream from Ringwood Mill Pond, and $6\frac{1}{2}$ miles north of Wanaque, Passaic County.

Drainage area--19.1 sq mi. Area of lakes, ponds, and swamps, 1.2 sq mi.

Gage--Recording gage and concrete control. Datum of gage is 302.67 ft above mean sea level (New Jersey Geological Survey bench mark).

Stage-discharge relation--Defined by current-meter measurements below 240 cfs and extended above on basis of laboratory rating and approximate discharge at gage height 3.18 ft.

Bankfull stage--2.5 ft.

Remarks--Base for partial-duration series, 230 cfs.

a Period Dec. 27, 1934, to Sept. 30, 1935. Maximum for year may have occurred on Oct. 7 or Dec. 2, 1934. b From floodmark. c About.

3850. Cupsaw Brook near Wanaque, N.J.

Location.--Lat $41^{\circ}06'32''$, long $74^{\circ}15'16''$, on left bank just upstream from Wanaque Reservoir, 0.3 mile downstream from Cupsaw Lake, and 5 miles north of Wanaque, Passaic County.

Drainage area.--4.38 sq mi. Area of lakes, ponds, and swamps, 0.3 sq mi.

Gage.--Recording gage and concrete control. Datum of gage is 304.52 ft above mean sea level (New Jersey Geological Survey bench mark).

Stage-discharge relation.--Defined by current-meter measurements below 200 cfs and extended above on basis of laboratory rating.

Remarks.--Regulation at Cupsaw Lake (capacity, 227,000,000 gal) may affect some flood peaks. Base for partial-duration series, 70 cfs.

a Period Dec. 27, 1934, to Sept. 30, 1935.

3860. West Brook near Wanaque, N.J.

Location--Lat $41^{\circ}04'16''$, long $74^{\circ}18'45''$, on right bank just upstream from Wanaque Reservoir, $2\frac{1}{2}$ miles northwest of Wanaque, Passaic County.

Drainage area--11.8 sq mi. Area of lakes, ponds, and swamps, 0.4 sq mi.

Gage--Recording gage and concrete control. Datum of gage is 326.79 ft above mean sea level (New Jersey Geological Survey bench mark).

Stage-discharge relation--Defined by current-meter measurements below 700 cfs and extended above by logarithmic plotting.

Bankfull stage--4 ft.

Remarks--Base for partial-duration series, 400 cfs.

a Period Jan. 1 to Sept. 30, 1935.

b Occurred Dec. 30, backwater from ice.

c Unknown, may have been maximum for year.

3865. Blue Mine Brook near Wanaque, N.J.

Location.--Lat $41^{\circ}03'04''$, long $74^{\circ}19'10''$, on left bank 0.2 mile upstream from Wanaque Reservoir, 1.8 miles northwest of Wanaque, Passaic County.

Drainage area.--1.71 sq mi. Area of lakes, ponds, and swamps, 0 sq mi.

Gage.--Recording gage and concrete control. Datum of gage is 319.94 ft above mean sea level (New Jersey Geological Survey bench mark).

Stage-discharge relation.--Defined by current-meter measurements below 80 cfs and extended above by logarithmic plotting.

Remarks.--Base for partial-duration series, 60 cfs.

3870. Wanaque River at Wanaque, N.J.

Location--Lat 41°02'33", long 74°17'36", on left bank 750 ft downstream from Raymond Dam in Wanaque, Passaic County, 50 ft upstream from bridge on State Highway 511.

Drainage area--90.4 sq mi (excludes above 4 sq mi on Post Brook above diversion to Wanaque Reservoir). Area of lakes, ponds, and swamps, 9.0 sq mi.

Gage--Nonrecording prior to Apr. 1, 1922; recording thereafter. Prior to Apr. 1, 1922, at site 200 ft downstream at different datum, and Apr. 1, 1922, to Mar. 14, 1931, at site 400 ft downstream at present datum. Datum of gage is 210.00 ft above mean sea level (New Jersey Geological Survey bench mark).

Stage-discharge relation--Prior to Mar. 14, 1931, defined by current-meter measurements. Since 1931, defined by current-meter measurements below 4,300 cfs and extended above by logarithmic plotting; shifts in relation occur.

Remarks--Regulation by Greenwood Lake and since 1928 by Wanaque Reservoir affects flood peaks. Only annual peaks are shown.

3875. Ramapo River near Mahwah, N.J.

Location.--Lat $41^{\circ}05'51''$, long $74^{\circ}09'48''$, on left bank 350 ft downstream from State Highway 17, 0.6 mile downstream from Mahwah River, and 1.0 mile west of Mahwah, Bergen County.

Drainage area.--118 sq mi. Area of lakes, ponds, and swamps, 5.4 sq mi.

Gage.--Nonrecording prior to July 31, 1914; recording since Sept. 1, 1922. At site on former bridge 250 ft downstream at different datum prior to July 31, 1914, and just downstream from former bridge at present datum from Sept. 1, 1922, to Dec. 23, 1936. Datum of gage is 253.10 ft above mean sea level, datum of 1929.

Stage-discharge relation.--For 1903-14, defined by current-meter measurements below 1,400 cfs and extended above by logarithmic plotting and shape of subsequent relations. For 1923-61, defined by current-meter measurements below 6,500 cfs and extended above by logarithmic plotting; shifts in relation occur.

Bankfull stage.--7 ft.

Remarks.--Gage-height record 1903-14, obtained by U.S. Weather Bureau. Only annual peaks as determined from graph of once-daily gage readings are shown 1903-14. Base for partial-duration series, 1,400 cfs.

3880. Ramapo River at Pompton Lakes, N.J.

Location.--Lat $40^{\circ}59'33''$, long $74^{\circ}16'44''$, on right end of dam at pumping station in borough of Pompton Lakes, Passaic County, 2.0 miles upstream from mouth.

Drainage area.--160 sq mi. Area of lakes, ponds, and swamps, 7.7 sq mi.

Gage.--Recording gage and concrete dam. Datum of gage is 201.08 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Prior to August 1939 discharge was obtained by adding flow through turbines and through waste gates to flow over spillway. Powerplant not operated since August 1939. Alterations to gage well in July 1938 resulted in changed stage-discharge relation for spillway. Prior to July 1938, spillway rating defined by current-meter measurements below 2,000 cfs and extended above by weir formula. Since July 1938, spillway rating defined by current-meter measurements.

Remarks.--Prior to August 1939 minor effect on peak flows by powerplant operations. Base for partial-duration series, 1,600 cfs. Only annual peaks are shown prior to 1940, except 1938 water year.

PASSAIC RIVER BASIN

3885. Pompton River at Pompton Plains, N.J.

Location.--Lat $40^{\circ}56'46''$, long $74^{\circ}16'44''$, 250 ft upstream from State Highway 23, three-quarters of a mile east of Pequannock, Morris County, 9,300 ft downstream from two gages used to determine low-flow records, and $4\frac{1}{4}$ miles upstream from mouth.

Drainage area.--358 sq mi. Area of lakes, ponds, and swamps, 22.6 sq mi.

Gage.--Nonrecording 1903-4; recording since Nov. 4, 1940. At site about 9,000 ft upstream at different datum 1903-4. Datum of gage is 160.00 ft above mean sea level, datum of 1929. Two additional recorders 9,300 ft upstream are used to obtain low-flow records.

Stage-discharge relation.--For 1903-4, poorly defined by current-meter measurements and computation of flow over dam based on laboratory experiments. Since November 1940, defined by current-meter measurements below 13,000 cfs and extended above by logarithmic plotting; shifts in relation occur.

Remarks.--Regulation by Oak Ridge, Canistear, Clinton, Echo Lake, and Wanaque Reservoirs (combined capacity, 46,278,000,000 gal) may affect peak flows. Base for partial-duration series, 2,200 cfs.

a Period Mar. 7 to Sept. 30, 1903. b Maximum observed. c Period Oct. 1 to Dec. 31, 1904. d Period May 21 to Sept. 30, 1940. e Obtained from two upstream gages.

PASSAIC RIVER BASIN

3895. Passaic River at Little Falls, N.J.
 (Published as "at Paterson, N.J." prior to October 1955)

Location.--Lat $40^{\circ}53'05''$, long $74^{\circ}13'35''$, on left bank 0.6 mile downstream from Beatties Dam in Little Falls, Passaic County, and 1 mile upstream from Peckman River. From 1898 to 1955, lat $40^{\circ}54'50''$, long $74^{\circ}10'51''$, on right bank 3 ft upstream from Spruce Street Bridge in Paterson, Passaic County, about 250 ft upstream from dam at hydroelectric plant of Plant Management Commission, and 500 ft upstream from Passaic Falls.

Drainage area.--762 sq mi. Area of lakes, ponds, and swamps, 67.1 sq mi. At site used prior to October 1955, drainage area was 785 sq mi.

Gage.--Nonrecording prior to Jan. 8, 1933; recording thereafter. Prior to Sept. 30, 1955, at site 3.7 miles upstream at mean sea level datum (New Jersey Geological Survey bench mark). Datum of present gage is 120.00 ft above mean sea level (Passaic Valley Water Commission bench mark).

Stage-discharge relation.--Prior to October 1955, discharge was sum of flow over dam computed from theoretical rating checked by current-meter measurements, computed flow through powerplant, metered flow through Dyers' pipe (prior to 1931), and estimated flow through raceway. Since October 1955, stage-discharge relation defined by current-meter measurements.

Bankfull stage.--5 ft.

Remarks.--Discharge records provided by Society for Establishing Useful Manufactures prior to 1933. Regulation by reservoirs in Rockaway, Pequannock, and Wanaque River basins affects flood flow. Discharge at site used prior to 1955 is considered equivalent to discharge at present site. Only maximum daily discharges are shown prior to 1933 and only annual peaks are shown 1933-45. Base for partial-duration series, 4,500 cfs.

3905. Saddle River at Ridgewood, N.J.

Location.--Lat 40°59'05", long 74°05'30", on left bank 15 ft upstream from bridge on State Highway 17 at Ridgewood, Bergen County, and 2½ miles upstream from Hohokus Brook.

Drainage area.--21.6 sq mi. Area of lakes, ponds, and swamps, 1.0 sq mi.

Gage--Recording. Datum of gage is 71.74 ft above mean sea level (New Jersey Geological Survey bench mark).

Stage-discharge relation.--Defined by current-meter measurements below 1,000 cfs and extended above by logarithmic plotting; shifts in relation occur.

Remarks.--Base for partial-duration series, 380 cfs.

PASSAIC RIVER BASIN

3910. Hohokus Brook at Hohokus, N.J.

Location.--Lat $40^{\circ}59'52''$, long $74^{\circ}06'48''$, on left bank 500 ft upstream from Maple Avenue Bridge in Hohokus Borough, Bergen County, and 3.5 miles upstream from Saddle River.

Drainage area.--16.4 sq mi. Area of lakes, ponds, and swamps, 0.9 sq mi.

Gage.--Recording gage and concrete control. Datum of gage is 120.09 ft above mean sea level (New Jersey Geological Survey bench mark).

Stage-discharge relation.--Defined by current-meter measurements below 750 cfs and extended above by logarithmic plotting.

Remarks.--Base for partial-duration series, 450 cfs.

3915. Saddle River at Lodi, N.J.

Location.--Lat $40^{\circ}53'25''$, long $74^{\circ}04'51''$, on left bank 560 ft upstream from Outwater Lane Bridge in Lodi, Bergen County, and 3.2 miles upstream from mouth.

Drainage area.--54.6 sq mi. Area of lakes, ponds, and swamps, 2.2 sq mi.

Gage.--Recording. At site 560 ft downstream at datum 2.54 ft lower, prior to Nov. 2, 1938. Datum of gage is 25.00 ft above mean sea level, datum of 1929. Concrete control since Nov. 2, 1938.

Stage-discharge relation.--Prior to Nov. 2, 1938, defined by current-meter measurements below 980 cfs and extended above on basis of shape of subsequent rating; shifts in relation occurred. Since 1938, defined by current-meter measurements below 2,600 cfs and extended above on basis of slope-area measurement of 3,480 cfs.

Remarks.--Base for partial-duration series, 600 cfs.

PASSAIC RIVER BASIN

3920. Weasel Brook at Clifton, N.J.

Location.--Lat $40^{\circ}52'12''$, long $74^{\circ}08'47''$, at right end of masonry dam at Jewett Street in Clifton, Passaic County.

Drainage area.--4.45 sq mi. Area of lakes, ponds, and swamps, 0 sq mi.

Gage.--Recording gage above masonry dam. Datum of gage is 68.52 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Defined by current-meter measurements below 120 cfs and extended above by logarithmic plotting.

Remarks.--Base for partial-duration series, 140 cfs to Sept. 30, 1956, and 200 cfs thereafter.

PASSAIC RIVER BASIN

3925. Second River at Belleville, N.J.

Location.--Lat $40^{\circ}47'17''$, long $74^{\circ}10'19''$, on right bank at Belleville, Essex County, 300 ft downstream from Hendricks Brook, 360 ft downstream from Franklin Avenue, 1,100 ft downstream from Hendricks Pond Dam, and 1.4 miles upstream from mouth.

Drainage area.--11.6 sq mi. Area of lakes, ponds, and swamps, 0 sq mi.

Gage.--Recording gage and concrete control. Datum of gage is 62.6 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Defined by current-meter measurement below 480 cfs and extended above on basis of critical-depth and contracted-opening measurements of 1,150 cfs and 3,300 cfs.

Bankfull stage.--8 ft.

Remarks.--Base for partial-duration series, 950 cfs.

a For period May 26 to Sept. 30, 1937.

ELIZABETH RIVER BASIN

3930. Elizabeth River at Irvington, N.J.

Location.--Lat $40^{\circ}44'10''$, long $74^{\circ}13'46''$, on right bank 135 ft downstream from Valley Avenue Bridge in Irvington, Essex County.

Drainage area.--2.91 sq mi. Area of lakes, ponds, and swamps, 0 sq mi.

Gage.--Recording. Altitude of gage is 132 ft (from river-profile map).

Stage-discharge relation.--Defined by current-meter measurements below 190 cfs and extended above on basis of index velocities at gage height 6.90 ft and by logarithmic plotting. Shifts in relation occurred after 1933, due to debris in channel.

Remarks.--Base for partial-duration series, 800 cfs.

	Sept. 8, 1934	8.57	1,080		Aug. 8, 1938	8.15	1,000
1935	June 27, 1935	7.41	847		Sept. 21, 1938	8.97	1,060

3935. Elizabeth River at Elizabeth, N.J.

Location.--Lat $40^{\circ}40'03''$, long $74^{\circ}13'09''$, on left bank 85 ft upstream from Westfield Avenue Bridge in Elizabeth, Union County, and 3.3 miles upstream from mouth.

Drainage area.--20.2 sq mi, of which 2.2 sq mi contributes to a storm sewer which has bypassed the station since December 1928. Area of lakes, ponds, and swamps, 0.1 sq mi.

Gage.--Nonrecording prior to May 18, 1923; recording thereafter. At datum 4.14 ft higher prior to Oct. 1, 1922. Datum of gage is 5.23 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Altered by changes in channel in February 1941. Prior to February 1941, defined by current-meter measurements below 1,100 cfs and extended above on basis of contracted-opening measurement of 2,720 cfs. Since February 1941, defined by current-meter measurements below 920 cfs and extended above on basis of culvert measurements of 2,230, 2,280 and 2,460 cfs.

Bankfull stage.--10 ft.

Remarks.--Base for partial-duration series, 700 cfs prior to Sept. 1, 1956, and 850 cfs thereafter.

RAHWAY RIVER BASIN

3940. West Branch Rahway River at Millburn, N.J.

Location.--Lat $40^{\circ}43'51''$, long $74^{\circ}18'26''$, on left bank 100 ft upstream from Diamond Mill Pond Dam, 1,000 ft upstream from Glen Avenue in Millburn, Essex County, and 1.9 miles upstream from confluence with East Branch.

Drainage area.--7.1 sq mi.

Gage.--Recording gage above masonry dam. Datum of gage is 173.04 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Defined by laboratory rating and verified by current-meter measurements below 100 cfs and by flow-over-dam measurement of 965 cfs.

Remarks.--Base for partial-duration series, 200 cfs.

a Annual maximum only.

3945. Rahway River near Springfield, N.J.

Location.--Lat $40^{\circ}41'11''$, long $74^{\circ}18'44''$, on left bank 50 ft downstream from bridge on U.S. Highway 22 (formerly State Highway 29), 100 ft downstream from Pope Brook, and $1\frac{1}{2}$ miles south of Springfield, Union County.

Drainage area.--25.5 sq mi. Area of lakes, ponds, and swamps, 0.1 sq mi.

Gage.--Recording gage above concrete control. Datum of gage is 66.17 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Defined by current-meter measurements below 900 cfs and extended above on basis of contracted-opening measurement of 1,880 cfs.

Remarks.--Base for partial-duration series, 500 cfs.

3950. Rahway River at Rahway, N.J.

Location--Lat 40°37'05", long 74°17'00", on left bank 100 ft upstream from St. Georges Avenue Bridge in Rahway, Union County, and 0.9 mile upstream from Robinsons Branch.

Drainage area--40.9 sq mi. Area of lakes, ponds, and swamps, 0.2 sq mi.

Gage--Nonrecording prior to Aug. 25, 1934; recording thereafter. At site 1,500 ft downstream at datum 2.77 ft lower prior to Aug. 25, 1934. Datum of gage is 8.77 ft above mean sea level, datum of 1929.

Stage-discharge relation--Prior to August 1934, defined by current-meter measurements below 970 cfs and extended above by logarithmic plotting. Since August 1934, defined by current-meter measurements below 770 cfs and extended above by logarithmic plotting.

Remarks--Prior to 1935, only annual peaks as determined from graph of twice-daily gage readings are shown. Base for partial-duration series, 600 cfs.

RAHWAY RIVER BASIN

3960. Robinsons Branch Rahway River at Rahway, N.J.

Location.--Lat $40^{\circ}36'20''$, long $74^{\circ}17'57''$, on right bank 200 ft upstream from Milton Lake Dam, 2,000 ft upstream from Madison Avenue in Rahway, Union County, 3,200 ft downstream from Middlesex Reservoir Dam, and 1.6 miles upstream from mouth.

Drainage area.--21.6 sq mi. Area of lakes, ponds, and swamps, 1.2 sq mi.

Gage.--Recording above Milton Lake Dam. Datum of gage is 19.99 ft above mean sea level (New Jersey Geological Survey bench mark).

Stage-discharge relation.--Defined by current-meter measurements below 250 cfs and extended above on basis of laboratory rating.

Remarks.--Possibly some effect on flood peaks from Middlesex Reservoir, capacity, 300,000,000 gal. Base for partial-duration series, 450 cfs.

RARITAN RIVER BASIN

3965. South Branch Raritan River near High Bridge, N.J.

Location.--Lat $40^{\circ}40'40''$, long $74^{\circ}52'45''$, on left bank 1.0 mile northeast of High Bridge, Hunterdon County, and 4.4 miles upstream from Spruce Run.

Drainage area.--65.3 sq mi. Area of lakes, ponds, and swamps, 1.1 sq mi.

Gage.--Nonrecording prior to Sept. 30, 1921; recording thereafter. Datum of gage is 282.10 ft above mean sea level (New Jersey Geological Survey bench mark).

Stage-discharge relation.--Defined by current-meter measurements below 1,600 cfs and extended above by logarithmic plotting.

Remarks.--Base for partial-duration series, 1,000 cfs.

d Backwater from ice.

3970. South Branch Raritan River at Stanton, N.J.

Location.--Lat 40°34'21", long 74°52'10", on right bank at downstream side of highway bridge at Stanton railroad station, Readington Township, Hunterdon County, 0.4 mile upstream from Prescott Brook.

Drainage area.--147 sq mi. Area of lakes, ponds, and swamps, 1.2 sq mi.

Gage.--Nonrecording prior to Aug. 17, 1925, recording thereafter. Datum of gage is 125.01 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Defined by current-meter measurements below 6,400 cfs and extended to 8,100 cfs on basis of flow-over-dam measurement at site 6.5 miles upstream, and to 18,000 cfs on basis of slope-area measurement 0.4 mile downstream, and contracted-opening measurement 1.7 miles downstream (discharges adjusted to gaging site).

Bankfull stage.--8 ft.

Remarks.--Base for partial-duration series, 2,600 cfs. Only annual peaks from graph of twice-daily gage readings are shown prior to 1926.

b Backwater from ice.

d Daily mean discharge.

e Unknown, believed to have exceeded base.

RARITAN RIVER BASIN

3975. Walnut Brook near Flemington, N.J.

Location.--Lat $40^{\circ}30'55''$, long $74^{\circ}52'52''$, on right bank 1.2 miles northwest of Flemington, Hunterdon County, and 2.3 miles upstream from mouth.

Drainage area.--2.24 sq mi. Area of lakes, ponds, and swamps, 0 sq mi.

Gage.--Recording gage above concrete control. Datum of gage is 267.33 ft above mean sea level, unadjusted.

Stage-discharge relation.--Defined by current-meter measurements below 120 cfs and extended above by logarithmic plotting.

Bankfull stage.--3 ft.

Remarks.--Base for partial-duration series, 100 cfs.

RARITAN RIVER BASIN

3980. Neshanic River at Reaville, N.J.

Location.--Lat $40^{\circ}28'18''$, long $74^{\circ}49'42''$, on left bank 50 ft downstream from highway bridge, 0.6 mile southwest of Reaville, Hunterdon County, 1.5 miles downstream from Third Neshanic River, and 2.2 miles upstream from Back Brook.

Drainage area.--25.7 sq mi. Area of lakes, ponds, and swamps, 0 sq mi.

Gage.--Recording. Datum of gage is 109.46 ft above mean sea level, unadjusted.

Stage-discharge relation.--Defined by current-meter measurements below 1,700 cfs and extended to 8,830 cfs on basis of slope-area measurement 0.7 mile downstream (adjusted to gaging site).

Bankfull stage.--9 ft.

Remarks.--Base for partial-duration series, 1,600 cfs.

RARITAN RIVER BASIN

3985. North Branch Raritan River near Far Hills, N.J.

Location.--Lat $40^{\circ}42'30''$, long $74^{\circ}38'11''$, on left bank 75 ft upstream from Ravine Lake Dam, 1.6 miles north of Far Hills, Somerset County, and 2.3 miles upstream from Peapack Brook.

Drainage area.--26.2 sq mi. Area of lakes, ponds, and swamps, 0.2 sq mi.

Gage.--Nonrecording prior to June 18, 1925; recording thereafter at sites above masonry dam. Datum of gage is 224.49 ft above mean sea level (New Jersey Geological Survey bench mark).

Stage-discharge relation.--Defined by current-meter measurements below 500 cfs and extended above on basis of weir formula.

Remarks.--Only annual peaks are shown prior to 1926. Base for partial-duration series, 700 cfs.

RARITAN RIVER BASIN

3995. Lamington (Black) River near Pottersville, N.J.
 (Published as "Black River" prior to October 1952)

Location.--Lat $40^{\circ}43'39''$, long $74^{\circ}43'50''$, on right bank 1.1 miles upstream from bridge on State Highway 512, 1.2 miles northwest of Pottersville, Somerset County, and 5.5 miles upstream from Cold Brook.

Drainage area.--32.8 sq mi. Area of lakes, ponds, and swamps, 1.6 sq mi.

Gage.--Nonrecording prior to July 1, 1922; recording thereafter. Concrete control since July 1, 1937. On downstream side of highway bridge at Pottersville, 1.1 miles downstream, at different datum prior to July 1, 1922. Datum of gage is 284.14 ft above mean sea level (New Jersey Geological Survey bench mark).

Stage-discharge relation.--Defined by current-meter measurements below 760 cfs prior to July 1937, and below 380 cfs thereafter. Both relations extended on basis of slope-area measurement of 1,700 cfs.

Bankfull stage.--5 ft.

Remarks.--Base for partial-duration series, 380 cfs.

4000. North Branch Raritan River near Raritan, N.J.
(Published as "at Milltown" prior to 1944)

Location.--Lat $40^{\circ}34'10''$, long $74^{\circ}40'45''$, on right bank 400 ft upstream from U.S. Highway 202, 1.4 miles upstream from confluence with South Branch, and 2 miles west of Raritan, Somerset County.

Drainage area.--190 sq mi. Area of lakes, ponds, and swamps, 1.9 sq mi.

Gage.--Nonrecording prior to Oct. 17, 1936; recording thereafter. Datum of gage is 50.43 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Defined by current-meter measurements below 6,000 cfs and extended above on basis of slope-area measurements of 11,900 and 16,500 cfs, and contracted-opening measurement of 20,700 cfs.

Remarks.--Only annual peaks are shown prior to Oct. 1, 1936. Base for partial-duration series, 5,000 cfs.

c Unknown, may have exceeded base.

4005. Raritan River at Manville, N.J.
(Published as "at Finderne" 1903-7)

Location.--Lat 40°33'18", long 74°35'02", on left bank at downstream end of highway bridge at Manville, Somerset County, 1.4 miles upstream from Millstone River.

Drainage area.--490 sq mi. Area of lakes, ponds, and swamps, 3.2 sq mi.

Gage.--Nonrecording prior to Aug. 15, 1923; recording thereafter. Datum of gage is 20.61 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Often affected by backwater from Millstone River. Prior to 1945, relation defined by current-meter measurements below 14,000 cfs and extended above on basis of slope-area measurements of 17,700 and 36,100 cfs. Since 1945, measured fall to station at Bound Brook used as a factor in computing discharge; relation defined by current-meter measurements below 18,000 cfs and extended above on basis of contracted-opening measurements of 27,100 cfs and 33,300 cfs.

Bankfull stage.--11 ft.

Remarks.--Only annual peaks are shown prior to 1924. Base for partial-duration series, 10,000 cfs.

b Occurred at different time than peak discharge.

4010. Stony Brook at Princeton, N.J.

Location.--Lat $40^{\circ}19'59''$, long $74^{\circ}40'56''$, on right bank 12 ft downstream from bridge on U.S. Highway 206, 1.6 miles southwest of Princeton, Mercer County, and 4 miles upstream from Lake Carnegie.

Drainage area.--44.5 sq mi.

Gage.--Recording. Datum of gage is 63.30 ft above mean sea level (New Jersey Geological Survey bench mark).

Stage-discharge relation.--Defined by current-meter measurements below 3,100 cfs and extended above by logarithmic plotting.

Bankfull stage.--8 ft.

Remarks.--Base for partial-duration series, 1,800 cfs.

a Period May 24 to Sept. 30, 1933.

RARITAN RIVER BASIN

4020. Millstone River at Blackwells Mills, N.J.

Location.--Lat $40^{\circ}28'30''$, long $74^{\circ}34'34''$, on left bank 30 ft downstream from highway bridge at Blackwells Mills, Somerset County, 0.3 mile downstream from Six Mile Run.

Drainage area.--258 sq mi. Area of lakes, ponds, and swamps, 4.9 sq mi.

Gage.--Nonrecording prior to Aug. 17, 1928; recording thereafter. Datum of gage is 26.97 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Defined by current-meter measurements below 6,900 cfs and extended above on basis of slope-area measurement of 18,300 cfs.

Bankfull stage.--6 ft.

Remarks.--Possible diversion to or inflow from Delaware & Raritan Canal above station. Only annual peaks, from graph of twice-daily gage readings, prior to 1929. Base for partial-duration series, 3,000 cfs.

RARITAN RIVER BASIN

Peak stages and discharges of Millstone River at Blackwells Mills, N.J.--Continued

Water year	Date	Gage height (feet)	Discharge (cfs)	Water year	Date	Gage height (feet)	Discharge (cfs)
1958	Feb. 28, 1958	11.05	7,990	1960	Sept. 13, 1960	11.07	8,030
	Apr. 7, 1958	8.44	4,250		Jan. 2, 1961	7.40	3,060
1959	Oct. 26, 1958	7.55	3,360		Feb. 20, 1961	8.15	3,720
	Aug. 9, 1959	7.67	3,460		Mar. 24, 1961	9.07	4,670
1960	Apr. 5, 1960	7.68	3,480		Apr. 14, 1961	9.03	4,630
	July 31, 1960	8.77	4,620		July 30, 1961	7.74	3,350

4030. Raritan River at Bound Brook, N.J.

Location.--Lat $40^{\circ}33'00''$, long $74^{\circ}33'05''$, on left bank 120 ft upstream from Calco Dam and Cuckold Brook, 1.0 mile downstream from Millstone River, and 1.3 miles southwest of borough of Bound Brook, Somerset County.

Drainage area.--779 sq mi. At site used 1904-9, 800 sq mi. Area of lakes, ponds, and swamps, 8.3 sq mi.

Gage.--Nonrecording prior to Jan. 1, 1945; recording thereafter. At site 1.4 miles downstream on highway bridge at different datum 1904-9. Datum of gage is 18.06 ft above mean sea level, datum of 1929.

Stage-discharge relation.--For 1904-9, defined by current-meter measurements below 6,000 cfs and extended above on basis of area-velocity study. Since 1945, defined by current-meter measurements below 17,000 cfs and extended above on basis of slope-area measurement of 30,800 cfs.

Bankfull stage.--4 ft.

Historical data.--Flood of Feb. 6, 1896, stage 18.3 ft (present datum), is highest since before 1800. Stage for this flood was determined by American Cyanamid Co. from surveys to mark in old barn near present gage site. At Fieldville Dam, 3 miles downstream, the highest floods of 1800-1900 (from information in Annual Report of the State Geologist for the years 1894 and 1896) are: Feb. 6, 1896, 32.2 ft; Sept. 24, 1882, 31.2 ft; Nov. 24, 1810, 8 inches to 3 ft lower than 1882; and July 17, 1865, somewhat lower than 1810. For comparison, more recent stages at Fieldville Dam are: Sept. 22, 1938, 27.4 ft; and Aug. 19, 1955, 26.4 ft.

Remarks.--Only annual peaks are shown prior to 1945. Peaks of 1904-9 determined from graph of twice-daily gage readings, and discharge is considered equivalent to present site. Peak stages 1936-42 determined by American Cyanamid Co. and discharge obtained by applying stage-discharge relation determined since 1945. Base for partial-duration series, 12,000 cfs.

4035. Green Brook at Plainfield, N.J.

Location.--Lat $40^{\circ}36'53''$, long $74^{\circ}25'55''$, on left bank 20 ft downstream from Sycamore Avenue Bridge in Plainfield, Union County, and 1.0 mile upstream from Stony Brook.

Drainage area.--9.75 sq mi. Area of lakes, ponds, and swamps, 0.1 sq mi.

Gage.--Recording. Datum of gage is 70.37 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Defined by current-meter measurements below 220 cfs and extended above on basis of contracted-opening measurement of 2,890 cfs.

Bankfull stage.--4 ft.

Historical data.--Flood of July 23, 1938, was largest since, and probably exceeded flood of Oct. 9, 1903. Flood of July 26, 1916 (estimated as 2,100 cfs at gage site and 2,200 cfs bypassing gage site) is believed the third largest, and flood of Sept. 21, 1938, is believed the fourth largest flood since at least 1896. This data obtained from a 1944 study by New Jersey Department of Conservation and Economic Development.

Remarks.--During extreme floods considerable flow bypasses gage by overflow from Green Brook basin to adjacent Cedar Brook basin. The overflow returns via Bound Brook to Green Brook 5.1 miles downstream from gage. Only data on flow at gage is shown in table. Estimates of overflow made by New Jersey Department of Conservation and Economic Development are based on flow-over-dam measurements at Lower Seely Dam 4.4 miles upstream from gage. Base for partial-duration series, .380 cfs.

Peak stages and discharges

4045. Lawrence Brook at Patricks Corner, N.J.

Location.--Lat $40^{\circ}25'20''$, long $74^{\circ}28'45''$, on right bank 150 ft upstream from Church Lane Bridge at Patricks Corner, Middlesex County, 0.4 mile downstream from Ireland Brook, 2.5 miles upstream from Farrington Dam, and 2.9 miles southwest of Milltown.

Drainage area.--29 sq mi, approximately.

Gage.--Recording. Altitude of gage is 50 ft (from topographic map).

Stage-discharge relation.--Defined by current-meter measurements below 500 cfs and extended above by logarithmic plotting.

Remarks.--Records not equivalent with station at Farrington Dam, N. J. Only annual peaks are shown.

Peak stages and discharges

Water year	Date	Gage height (feet)	Discharge (cfs)	Water year	Date	Gage height (feet)	Discharge (cfs)
1922a/	July 24, 1922	4.78	230	1926	Sept. 7, 1926	8.40	1,280
1923	Jan. 1, 1923	6.67	784	1927b/	Oct. 31, 1926	4.55	292
1924	Apr. 7, 1924	8.70	1,370				
1925	Feb. 11, 1925	6.57	751				

a Period June 21 to Sept. 30, 1922; peak for year probably occurred prior to July 24.

b Period Oct. 1 to Dec. 31, 1926; peak for year probably occurred after Dec. 31.

4050. Lawrence Brook at Farrington Dam, N.J.

Location.--Lat $40^{\circ}27'00''$, long $74^{\circ}27'05''$, on left bank 300 ft upstream from Farrington Dam, 0.7 mile southwest of Milltown, Middlesex County, and 5.4 miles upstream from mouth.

Drainage area.--34.4 sq mi. Area of lakes, ponds, and swamps, 1.6 sq mi.

Gage.--Recording gage above concrete dam. Datum of gage is 25.73 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Altered when dam spillway was raised in October 1938. Prior to October 1938, defined by current-meter measurements below 510 cfs and extended above on basis of weir formula. Since October 1938, defined by current-meter measurements below 1,100 cfs and extended above on basis of weir formula.

Remarks.--Minor effect from regulation of Farrington Dam blowoff gates. Base for partial-duration series, 450 cfs.

a Period May 6 to Sept. 30, 1927; peak of July 17, 1927, believed maximum for year.

RARITAN RIVER BASIN

4055. South River at Old Bridge, N.J.

Location.--Lat $40^{\circ}24'22''$, long $74^{\circ}22'08''$, on right abutment of Duhernal Dam, 0.6 mile south of Old Bridge, Middlesex County, 2.3 miles upstream from Deep Run, and 9.1 miles upstream from mouth.

Drainage area.--94.6 sq mi. Area of lakes, ponds, and swamps, 4.8 sq mi.

Gage.--Recorder above concrete dam. Datum of gage is at mean sea level, datum of 1929.

Stage-discharge relation.--Discharge is flow over spillway plus occasional flow through floodgates. Stage-discharge relation for spillway defined by current-meter measurements below 770 cfs and extended above on basis of laboratory rating. Discharge through floodgates computed from rate of change of stage of lake.

Remarks.--Flood peaks occasionally affected by operation of floodgates of Duhernal Dam. Capacity of Duhernal Lake, 138,000,000 gal. Base for partial-duration series, 700 cfs.

a Waste gate open.

RARITAN RIVER BASIN

4060. Deep Run near Brownstown, N.J.

Location.--Lat $40^{\circ}22'30''$, long $74^{\circ}18'14''$, on right bank 5 ft upstream from highway bridge, 0.7 mile downstream from Middlesex-Monmouth County line, and 1.8 miles south of Brownstown, Middlesex County.

Drainage area.--8.07 sq mi. Area of lakes, ponds, and swamps, 0 sq mi.

Gage.--Recording. Altitude of gage is 50 ft (from topographic map).

Stage-discharge relation.--Defined by current-meter measurements below 400 cfs and extended above arithmetically.

Bankfull stage.--4 ft.

Remarks.--Base for partial-duration series, 150 cfs.

4065. Tennent Brook near Brownstown, N.J.

Location.--Lat $40^{\circ}24'57''$, long $74^{\circ}19'08''$, on right bank 1.2 miles northwest of Brownstown, Middlesex County, 1.5 miles upstream from Tennent Pond Dam, and 2.6 miles upstream from mouth.

Drainage area.--5.25 sq mi. Area of lakes, ponds, and swamps, 0.2 sq mi.

Gage.--Recording. Datum of gage is 10.00 ft above mean sea level (New Jersey Geological Survey bench mark).

Stage-discharge relation.--Defined by current-meter measurements below 60 cfs and extended above by logarithmic plotting; shifts in relation occur.

Bankfull stage.--9 ft.

Remarks.--Base for partial-duration series, 60 cfs.

MATAWAN CREEK BASIN

4070. Matawan Creek at Matawan, N.J.

Location.--Lat $40^{\circ}24'53''$, long $74^{\circ}14'00''$, on right bank of Lake Lefferts, Ravine Drive, in Matawan, Monmouth County.

Drainage area.--6.11 sq mi. Area of lakes, ponds, and swamps, 0.2 sq mi.

Gage.--Recording gage above concrete dam. Datum of gage is 13.98 ft above mean sea level (New Jersey Geological Survey bench mark).

Stage-discharge relation.--Discharge is sum of flow over dam and flow through waste gates. Dam crest altered in August 1937. Prior to August 1937, stage-discharge relation for flow over dam defined by current-meter measurements below 160 cfs and extended above by logarithmic plotting. Since 1937, relation for flow over dam defined by current-meter measurements below 32 cfs and extended above on basis of computation of flow over dam, over road, and through waste gates totaling 1,000 cfs. Discharge through waste gates computed on basis of rate of change of storage in Lake Lefferts.

Remarks.--Peak flows sometimes affected by operation of waste gates in dam on Lake Lefferts. Only annual peaks are shown.

1943	Nov. 25, Dec. 30, 1942	2.61	385	1954	Sept. 11, 1954	3.74	732
				1955	Aug. 13, 1955	4.25	1,420

a Occurred July 2, 1942. b Occurred Oct. 27, 1943. c Occurred Mar. 3, 1947.
d Unknown, believed to have exceeded July 23, 1948, gage height of 2.86 ft and discharge
of 474 cfs. e Occurred Dec. 30, 1948.

NAVESINK RIVER BASIN

4075. Swimming River near Red Bank, N.J.

Location.--Lat $40^{\circ}19'03''$, long $74^{\circ}06'57''$, on right bank of Swimming River Reservoir, 3.4 miles southwest of Red Bank, Monmouth County, and 4.9 miles upstream from mouth.

Drainage area.--48.5 sq mi. Area of lakes, ponds, and swamps, 0.7 sq mi.

Gage.--Recording, above dam. Datum of gage is 12.33 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Changes in dam crest in October 1926, September to November 1938, and June 1956, plus changes in flashboards since 1956, have altered relation. Relations defined by current-meter measurements below 400 to 600 cfs and extended above by weir formula or logarithmic plotting. Sluice gate in dam is occasionally open and discharge through gate, computed from theoretical rating, is added to discharge over dam to obtain total discharge.

Remarks.--Base for partial-duration series, 600 cfs.

a Annual peak only.

b Backwater from construction on dam crest.

c Backwater from flashboards on dam crest.

d Approximate discharge caused by removal of flashboards.

MANASQUAN RIVER BASIN

4080. Manasquan River at Squankum, N.J.

Location.--Lat $40^{\circ}09'47''$, long $74^{\circ}09'21''$, on right bank 20 ft downstream from bridge on State Highway 547 (Squankum Park Road) in Squankum, Monmouth County, 0.4 mile downstream from Marsh Bog Brook.

Drainage area.--43.4 sq mi. Area of lakes, ponds, and swamps, 0.5 sq mi.

Gage.--Recording. Prior to Aug. 13, 1940, at site 80 ft upstream at same datum. Datum of gage is 18.82 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Prior to August 1940, defined by current-meter measurements below 720 cfs and extended above on basis of contracted-opening measurement of 2,940 cfs. Since August 1940, defined by current-meter measurements below 1,200 cfs and extended by logarithmic plotting; shifts in relation occur due to backwater from debris.

Bankfull stage.--7 ft.

Remarks.--Base for partial-duration series, 600 cfs.

TOMS RIVER BASIN

4085. Toms River near Toms River, N.J.

Location.--Lat $39^{\circ}59'10''$, long $74^{\circ}13'29''$, on left bank 1.9 miles downstream from Union Branch and 2.6 miles northwest of village of Toms River, Ocean County.

Drainage area.--124 sq mi. Area of lakes, ponds, and swamps, 16.9 sq mi.

Gage.--Recording. Datum of gage is 8.10 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Defined by current-meter measurements below 1,200 cfs and extended above by logarithmic plotting; shifts in relation occur.

Bankfull stage.--8 ft.

Remarks.--Base for partial-duration series, 450 cfs.

b Annual peak only.

CEDAR CREEK BASIN

4090. Cedar Creek at Lanoka Harbor, N.J.

Location.--Lat $39^{\circ}52'05''$, long $74^{\circ}10'06''$, on right bank 20 ft upstream from bridge on U.S. Highway 9 at village of Lanoka Harbor, Ocean County.

Drainage area.--56.0 sq mi. Area of lakes, ponds, and swamps, 6.9 sq mi.

Gage.--Recording. Prior to Oct. 14, 1933, at site 70 ft downstream. Datum of gage is at mean sea level, datum of 1929.

Stage-discharge relation.--Prior to 1938, defined by current-meter measurements below 380 cfs and extended above by logarithmic plotting. Since channel improvements in 1938 and 1939, defined by current-meter measurements below 410 cfs and extended above by logarithmic plotting. Relation occasionally affected by tides, and channel shifting.

Remarks.--Peak flows often affected by regulation of cranberry bogs. Only annual peaks are shown.

1944	Oct. 28, 1943	4.50	1,050				
1945	June 9, 1945	e3.17	340				

a Period July 1 to Sept. 30, 1932. b Backwater from ice and tide. c Not determined, exceeded 321 cfs. d Occurred Aug. 25, 1937, backwater from tide. e Occurred Nov. 30, 1944, backwater from tide. f Occurred Nov. 29, 1945, backwater from tide. g Occurred Nov. 25, 1950, backwater from tide. h Occurred Aug. 13, 1955, backwater from tide. i Occurred Oct. 15, 1955, backwater from tide.

MULLICA RIVER BASIN

4095. Batsto River at Batsto, N.J.

Location.--Lat $39^{\circ}38'33''$, long $74^{\circ}39'00''$, on right bank 30 ft downstream from highway bridge at Batsto, Burlington County, and 1 mile upstream from mouth.

Drainage area.--70.5 sq mi. Area of swamps, lakes, and bogs, 12.9 sq mi.

Gage.--Recording. Datum of gage is 1.4 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Defined by current-meter measurements below 930 cfs and extended above by logarithmic plotting. Tides cause backwater at times.

Bankfull stage.--3 ft.

Remarks.--Some flood peaks affected by regulation at pond 300 ft upstream, capacity, about 90 cfs-days. Because of regulation and effect of tides, only annual maximum stage and annual maximum daily discharge are shown.

Annual maximum stages and maximum daily discharges

4100. Oswego River at Harrisville, N.J.
(Published as East Branch Wading River 1931-55)

Location.--Lat $39^{\circ}39'47''$, long $74^{\circ}31'26''$, 50 ft downstream from highway bridge at Harrisville, Burlington County, and half a mile upstream from confluence with West Branch.

Drainage area.--64.0 sq mi. Area of swamps, lakes, and bogs, 9.5 sq mi.

Gage.--Recording. Datum of gage is 4.62 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Defined by current-meter measurements below 640 cfs and extended above by logarithmic plotting.

Bankfull stage.--4.5 ft.

Remarks.--Some flood peaks affected by regulation at pond 200 ft upstream (capacity, 50 cfs-days), and by ponds and bogs 5 to 10 miles upstream. Base for partial-duration series, 230 cfs.

					June 16, 1961	3.78	236

a Period June 23 to Sept. 30, 1939; peak of Aug. 20, 1939, believed maximum for year.
 b Backwater from West Branch Wading River.

ABSECON CREEK BASIN

4105. Absecon Creek at Absecon, N.J.

Location.--Lat $39^{\circ}25'45''$, long $74^{\circ}31'16''$, on right bank 30 ft downstream from Doughty Pond of Atlantic City Water Department, 1 mile west of Absecon, Atlantic County, and 3.4 miles upstream from mouth.

Drainage area.--16.6 sq mi.

Gage.--Recording above artificial control. Prior to May 1946, at same site at datum 0.16 ft lower. Datum of gage is at mean sea level, datum of 1929.

Stage-discharge relation.--Defined by current-meter measurements below 100 cfs and extended above by logarithmic plotting. Relation is affected by tides.

Remarks.--Flow regulated by Doughty Pond (capacity, 245,000,000 gal) for period of record, and since 1936 by Kuehnle Reservoir, $1\frac{1}{2}$ miles above station (capacity 250,000,000 gal). Only annual maximum daily discharges are shown.

Maximum daily discharges

GREAT EGG HARBOR RIVER BASIN

4110. Great Egg Harbor River at Folsom, N.J.
(Published as Great Egg River 1925-47)

Location.--Lat $39^{\circ}35'42''$, long $74^{\circ}51'06''$, on left bank 25 ft upstream from bridge on State Highway 54, 1 mile south of Folsom, Atlantic County, and 2 miles upstream from Pennypot Stream.

Drainage area.--56.3 sq mi. Area of swamps, lakes, or bogs, 7.8 sq mi.

Gage.--Recording, except nonrecording Mar. 6 to Oct. 5, 1941. Prior to Mar. 6, 1941, at site 100 ft downstream at present datum and Mar. 6 to Oct. 5, 1941, at site 145 ft downstream at datum 0.25 ft higher. Datum of gage is 53.32 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Defined by current-meter measurements. Shifts in relation have occurred due to construction and channel improvements.

Bankfull stage.--5 ft.

Remarks.--Base for partial-duration series, 200 cfs.

a Backwater from ice.

b Annual peak only.

MAURICE RIVER BASIN

4115. Maurice River at Norma, N.J.

Location.--Lat $39^{\circ}29'42''$, long $75^{\circ}04'38''$, on right bank just upstream from Almond Road Bridge at Norma, Salem County, three-quarters of a mile downstream from Blackwater Branch.

Drainage area.--113 sq mi. Area of lakes, ponds, and swamps, 10.0 sq mi.

Gage--Recording. Datum of gage is 46.94 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Defined by current-meter measurements below 3,000 cfs and extended above by logarithmic plotting; channel improvements in 1939 and 1940 altered relation.

Bankfull stage.--3.5 ft.

Remarks.--Base for partial-duration series, 380 cfs.

a Backwater from ice.

MAURICE RIVER BASIN

4120. Manantico Creek near Millville, N.J.

Location.--Lat $39^{\circ}25'12''$, long $74^{\circ}58'00''$, on right bank at upstream side of Millville-Milmay highway bridge, 4 miles northeast of Millville, Cumberland County, and 7 miles upstream from mouth.

Drainage area.--22.3 sq mi. Area of swamps, lakes, and bogs, 1.6 sq mi.

Gage.--Recording. Datum of gage is 36.63 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Defined by current-meter measurements below 300 cfs and extended above by logarithmic plotting. Relation altered by channel improvements in 1936.

Remarks.--At times regulation on lake above station affects peak flow. Base for partial-duration series, 125 cfs.

COHANSEY RIVER BASIN

4125. West Branch Cohansey River at Seeley, N.J.

Location.--Lat $39^{\circ}29'06''$, long $75^{\circ}15'33''$, on right bank 15 ft upstream from County Bridge H-31 at Seeley, Cumberland County, 450 ft upstream from mouth, and 4.1 miles northwest of Bridgeton.

Drainage area.--2.55 sq mi.

Gage.--Recording above concrete control. Datum of gage is 42.23 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Defined by current-meter measurements below 30 cfs and extended above by logarithmic plotting.

Remarks.--Base for partial-duration series, 25 cfs.

					Apr. 13, 1961	1.76	32

a Period May 1 to Sept. 30, 1951.

4130. Loper Run near Bridgeton, N.J.

Location.--Lat $39^{\circ}28'20''$, long $75^{\circ}14'55''$, on right bank of Silver Lake, 0.4 mile upstream from mouth and 4 miles northwest of Bridgeton, Cumberland County.

Drainage area.--2.34 sq mi.

Gage.--Recording above dam with two concrete siphon spillways. Datum of gage is 47.10 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Defined by laboratory study of full size model.

Remarks.--Maximum instantaneous discharge was 140 cfs each year except 1940 when both siphons were in operation and maximum instantaneous discharge was 280 cfs. Only maximum daily discharges are shown.

Maximum daily discharges

DELAWARE RIVER BASIN

4385. Delaware River at Montague, N.J.
(Published as "at Milford, Pa." 1936-39)

Location.--Lat $41^{\circ}18'30''$, long $74^{\circ}47'50''$, on right bank at downstream side of old bridge pier and 0.4 mile upstream from toll bridge at Montague, Sussex County, three-quarters of a mile downstream from Saw Kill.

Drainage area.--3,480 sq mi. Area of lakes, ponds, and swamps, 74.4 sq mi.

Gage.--Nonrecording prior to Feb. 9, 1940; recording thereafter. On upstream side of left span of bridge at datum 70 ft lower prior to Feb. 9, 1940. Datum of gage is 369.93 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Defined by current-meter measurements below 90,000 cfs and extended above on basis of flood-routing study.

Remarks.--Some effect on flood peaks from regulation by Lake Wallenpaupack, Toronto Reservoir, Swinging Bridge Reservoir, Cliff Lake Reservoir since 1940, Neversink Reservoir since 1953, Pepacton Reservoir since 1954, and other smaller reservoirs. Only annual maximum observed data is shown for 1936-40. Base for partial-duration series, 34,000 cfs.

a Present datum, from floodmark on left bank.

b Backwater from ice.

DELAWARE RIVER BASIN

4390. Delaware River at Dingmans Ferry, Pa.

Location.--Lat $41^{\circ}13'12''$, long $74^{\circ}51'40''$, on bridge at Dingmans Ferry, Pike County, and 103.1 miles upstream from Calhoun Street Bridge in Trenton, N.J.

Drainage area.--3,542 sq mi.

Gage.--Nonrecording. Datum of gage is 286.06 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Not defined.

Remarks.--Some effect on flood peaks from regulation by Lake Wallenpaupack since 1925, Toronto Reservoir since 1926, Swinging Bridge Reservoir since 1930, Cliff Lake Reservoir since 1940, Neversink Reservoir since 1953, Pepacton Reservoir since 1954, and other smaller reservoirs. Gage heights are maximum of hourly observations by Delaware River Joint Toll Bridge Commission. Only annual peaks are shown.

1942	May 23, 1942	89.45	-				

4395. Bush Kill at Shoemakers, Pa.

Location.--Lat $41^{\circ}05'15''$, long $75^{\circ}02'20''$, at highway bridge, 0.1 mile downstream from Saw Creek, 0.7 mile northwest of Shoemakers, Monroe County, and 2 miles southwest of Bush Kill.

Drainage area.--117 sq mi.

Gage.--Nonrecording prior to Aug. 12, 1938; recording thereafter. Datum of gage is 421.13 ft above mean sea level, unadjusted.

Stage-discharge relation.--Defined by current-meter measurements below 2,600 cfs and extended by logarithmic plotting.

Bankfull stage.--5 ft.

Remarks.--Base for partial-duration series, 1,100 cfs.

a Backwater from ice.

DELAWARE RIVER BASIN

4400. Flat Brook near Flatbrookville, N.J.

Location.--Lat $41^{\circ}06'24''$, long $74^{\circ}57'09''$, on right bank 1 mile upstream from Flatbrookville, Sussex County, and $1\frac{1}{2}$ miles upstream from mouth.

Drainage area.--65.1 sq mi. Area of lakes, ponds, and swamps, 1.0 sq mi.

Gage.--Nonrecording prior to Jan. 6, 1926; recording thereafter. Datum of gage is 347.73 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Defined by current-meter measurements below 1,400 cfs and extended above on basis of slope-area measurements of 2,780 and 9,550 cfs.

Bankfull stage.--5 ft.

Remarks.--Base for partial-duration series, 650 cfs.

b Backwater from ice.

c Unknown, believed maximum for year.

4410. McMichaels Creek at Stroudsburg, Pa.

Location--Lat 40°58'45", long 75°12'05", at dismantled railroad bridge, 0.25 mile upstream from Little Pocono Creek and three-quarters of a mile southwest of Stroudsburg, Monroe County.

Drainage area--65.3 sq mi.

Gage--Nonrecording. Datum of gage is 403.93 ft above mean sea level (preliminary levels of 1912).

Stage-discharge relation--Defined by current-meter measurements below 1,000 cfs and extended above by contracted-opening measurement.

Remarks--Base for partial-duration series, 930 cfs.

4430. Delaware River at Portland, Pa.

Location.--Lat 40°55'30", long 75°05'55", on highway bridge at Portland, Northampton County, and 72.5 miles upstream from Trenton, N.J.

Drainage area.--Not determined.

Gage.--Nonrecording. Datum of gage is 199.53 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Not defined.

Remarks.--Some effect on flood peaks from regulation by Lake Wallenpaupack since 1925, Toronto Reservoir since 1926, Swinging Bridge Reservoir since 1930, Cliff Lake Reservoir since 1940, Neversink Reservoir since 1953, Pepacton Reservoir since 1954, and other smaller reservoirs. Only annual maximums of hourly gage readings by Delaware River Joint Toll Bridge Commission are shown.

DELAWARE RIVER BASIN

4435. Paulins Kill at Blairstown, N.J.

Location.--Lat $40^{\circ}58'44''$, long $74^{\circ}57'15''$, on right bank 1,200 ft upstream from bridge on State Highway 94 in Blairstown, Warren County, 1,400 ft upstream from Blairs Creek, and 10 miles upstream from mouth.

Drainage area.--126 sq mi. At site used prior to Aug. 1, 1931, 128 sq mi.
Area of lakes, ponds, and swamps, 7.4 sq mi.

Gage.--Recording. Prior to June 24, 1931, 1,300 ft downstream at different datum. Since Aug. 1, 1931, at various sites up to 280 ft downstream at same datum. Datum of gage is 335.86 ft above mean sea level, datum of 1929.

Stage-discharge relation.--For 1922-31, defined by current-meter measurements below 1,300 cfs and extended above by logarithmic plotting. For 1931-61, defined by current-meter measurement below 6,100 cfs and extended above on basis of slope-area measurement at 8,750 cfs.

Bankfull stage.--5 ft.

Remarks.--Base for partial-duration series, 1,000 cfs.

4445. Delaware River at Delaware, N.J.

Location.--Lat $40^{\circ}53'55''$, long $75^{\circ}04'40''$, on highway bridge at Delaware, Warren County, 70.4 miles upstream from Calhoun Street Bridge in Trenton.

Drainage area.--Not determined.

Gage.--Nonrecording. Datum of gage is 200.00 ft above mean sea level (Pennsylvania Railroad bench mark).

Stage-discharge relation.--Not defined.

Remarks.--Some effect on flood peaks from regulation by Lake Wallenpaupack since 1925, Toronto Reservoir since 1926, Swinging Bridge Reservoir since 1930, Cliff Lake Reservoir since 1940, Neversink Reservoir since 1953, Pepacton Reservoir since 1954, and other smaller reservoirs. Gage heights are maximum of hourly observations by Delaware River Joint Toll Bridge Commission. Only annual peaks are shown.

4450. Pequest River at Huntsville, N.J.

Location.--Lat $40^{\circ}58'49''$, long $74^{\circ}46'38''$, on right bank 20 ft upstream from highway bridge in Huntsville, Sussex County, and three-eighths of a mile downstream from East Branch.

Drainage area.--31.4 sq mi. Area of lakes, swamps, and ponds, 1.3 sq mi.

Gage.--Recording gage and concrete control. Datum of gage is 553.81 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Defined by current-meter measurements.

Bankfull stage.--4 ft.

Remarks.--Base for partial-duration series, 130 cfs.

a Unknown; believed to have exceeded base.

b Backwater from ice.

DELAWARE RIVER BASIN

4455. Pequest River at Pequest, N.J.

Location.--Lat $40^{\circ}49'43''$, long $74^{\circ}58'45''$, on right bank at Pequest, Warren County, 100 ft upstream from Lehigh and Hudson River Railway bridge and 300 ft downstream from Furnace Brook.

Drainage area.--108 sq mi. Area of lakes, swamps, and ponds, 5.4 sq mi.

Gage.--Nonrecording prior to June 22, 1926; recording thereafter. Concrete control since Sept. 29, 1929. Datum of gage is 398.78 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Prior to Sept. 29, 1929, defined by current-meter measurements. Since 1929, defined by current-meter measurements below 1,200 cfs and extended above by logarithmic plotting.

Bankfull stage.--4 ft.

Remarks.--Only annual peaks are shown prior to 1927. Base for partial-duration series, 500 cfs.

a Backwater from ice.

4460. Beaver Brook near Belvidere, N.J.

Location.--Lat $40^{\circ}50'40''$, long $75^{\circ}02'48''$, on right bank 2,000 ft upstream from mouth and 2 miles east of Belvidere, Warren County.

Drainage area.--36.2 sq mi. Area of lakes, ponds, and swamps, 1.1 sq mi.

Gage.--Recording. Datum of gage is 303.36 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Defined by current-meter measurements below 990 cfs and extended above on basis of slope-area and contracted-opening measurements at 1,510 cfs.

Bankfull stage.--4 ft.

Remarks.--Base for partial-duration series 230 cfs.

a Backwater from ice.

DELAWARE RIVER BASIN

4465. Delaware River at Belvidere, N.J.

Location.--Lat $40^{\circ}49'36''$, long $75^{\circ}05'02''$, on left bank at Belvidere, Warren County, 500 ft downstream from Pequest River.

Drainage area.--4,535 sq mi. Area of lakes, ponds, and swamps, 113 sq mi.

Gage.--Nonrecording prior to Jan. 1, 1929; recording thereafter. At site 200 ft upstream at same datum prior to Jan. 1, 1929. Datum of gage is 226.43 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Defined by current-meter measurements below 170,000 cfs and extended above on basis of flood-routing study.

Remarks.--Some effect on flood peaks from regulation by Lake Wallenpaupack since 1925, Toronto Reservoir since 1926, Swinging Bridge Reservoir since 1930, Cliff Lake Reservoir since 1940, Neversink Reservoir since 1953, Pepacton Reservoir since 1954, and other smaller reservoirs. Only annual peaks are shown prior to 1929. Base for partial-duration series, 40,000 cfs.

4470. Delaware River at Easton, Pa.

Location--Lat 40°41'30", long 75°12'15", on lower highway bridge at Easton, Northampton County, and 48.9 miles upstream from Calhoun Street Bridge in Trenton, N.J.

Drainage area--4,717 sq mi.

Gage--Nonrecording. Datum of gage is 100.21 ft above mean sea level, datum of 1929.

Stage-discharge relation--Not defined.

Historical data--The following data were compiled by B. F. Fackenthal, Jr., ScD., LL.D., and presented in a paper at a meeting of the Bucks County Historical Society on Sept. 10, 1927.

Date	Stage above low water		Source of data
	(feet)	(inches)	
Oct. 27, 1777	23	8	Weaver's Collections, p. 186.
May 9, 1781	26	0	Do.

a From floodmark.

4520. Jordan Creek at Allentown, Pa.

Location.--Lat $40^{\circ}37'25''$, long $75^{\circ}29'00''$, on right bank 200 ft upstream from bridge on State Highway 145, 0.5 mile northwest of city limit of Allentown, Lehigh County, and 2.5 miles upstream from mouth.

Drainage area.--75.8 sq mi.

Gage.--Recording gage and crest-stage indicator. Datum of gage is 259.82 ft above mean sea level, datum of 1929 (Pennsylvania State Highway bench mark).

Stage-discharge relation.--Defined by current-meter measurement below 1,900 cfs and extended on basis of slope-area measurement.

Bankfull stage.--6 ft.

Remarks.--Base for partial-duration series, 1,300 cfs.

DELAWARE RIVER BASIN

4555. Musconetcong River at outlet of Lake Hopatcong, N.J.

Location.--Lat $40^{\circ}55'00''$, long $74^{\circ}39'55''$, on left bank at highway bridge, 300 ft downstream from Lake Hopatcong Dam in Landing, Morris County.

Drainage area.--25.6 sq mi. Area of lakes, ponds, and swamps, 4.9 sq mi.

Gage.--Recording gage and concrete control. Datum of gage is 904.99 ft above mean sea level (New Jersey Geological Survey bench mark).

Stage-discharge relation.--Defined by current-meter measurements below 340 cfs and extended above by logarithmic plotting. Gradual shift in relation has occurred.

Remarks.--Flow regulated by Lake Hopatcong, usable capacity below spillway crest, 7,459,000,000 gal. Only annual peaks are shown.

Peak stages and discharges

a Period July 1 to Sept. 30, 1928.

4560. Musconetcong River near Hackettstown, N.J.

Location.--Lat $40^{\circ}53'10''$, long $74^{\circ}48'00''$, on right bank 75 ft upstream from Saxton Falls Dam, half a mile upstream from Delaware, Lackawanna and Western Railroad bridge, and 3 miles northeast of Hackettstown, Warren County.

Drainage area.--70.0 sq mi. Area of lakes, ponds, and swamps, 7.2 sq mi.

Gage.--Nonrecording prior to Aug. 21, 1923, recording thereafter. At site 2,000 ft downstream at datum 26.97 ft lower prior to July 19, 1938. Datum of gage is 630.93 ft above mean sea level (New Jersey Geological Survey bench mark).

Stage-discharge relation.--Prior to July 19, 1938, relation was defined by current-meter measurements below 1,000 cfs and extended above by logarithmic plotting. Since 1938, defined by current-meter measurements below 600 cfs and extended above by logarithmic plotting.

Remarks.--Flood peaks may be affected by regulation of Lake Hopatcong, usable capacity below spillway crest, 7,459,000,000 gal. Base for partial-duration series, 350 cfs.

DELAWARE RIVER BASIN

4570. Musconetcong River near Bloomsbury, N.J.

Location.--Lat $40^{\circ}40'20''$, long $75^{\circ}03'40''$, just downstream from highway bridge $1\frac{1}{2}$ miles upstream from Bloomsbury, Hunterdon County, and $9\frac{1}{2}$ miles upstream from mouth.

Drainage area.--143 sq mi. Area of swamps, lakes, and ponds, 7.3 sq mi.

Gage.--Nonrecording at different datum prior to 1922; recording thereafter. Datum of gage is 274.83 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Defined by discharge measurements below 1,800 cfs and extended above on basis of slope-area measurement at 4,430 cfs and by logarithmic plotting.

Bankfull stage.--4 ft.

Remarks.--Peak flows may be affected by regulation at Lake Hopatcong, usable capacity, 7,459,000,000 gal. Only annual peaks are shown prior to 1922. Base for partial-duration series, 1,000 cfs.

a Backwater from ice

4575. Delaware River at Riegelsville, N.J.

Location.--Lat $40^{\circ}35'36''$, long $75^{\circ}11'17''$, on left bank 20 ft upstream from suspension bridge at Riegelsville, Warren County, and 600 ft upstream from Musconetcong River. Records prior to Oct. 1, 1931, do not include flow of Musconetcong River and those since do.

Drainage area.--6,238 sq mi since October 1931 (includes that of Musconetcong River). Area of lakes, ponds, and swamps, 143 sq mi. Prior to October 1931, 6,172 sq mi (does not include that of Musconetcong River).

Gage.--Nonrecording prior to Feb. 27, 1924; recording thereafter. Prior to Feb. 27, 1924, at site on bridge 20 ft downstream at same datum. Datum of gage is 125.12 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Defined by current-meter measurements below 160,000 cfs and extended above on basis of flood-routing studies and slope-area measurements of peaks on Mar. 19, 1936, and Aug. 19, 1955.

Bankfull stage.--26 ft.

Historical data.--Flood of 1841 believed largest for period 1692 to 1903, from information in Volume III, Final Report of the State Geologist, 1894, by Vermeule, and data for other sites. Major floods of the 1692 to 1894 period also occurred in 1786 or 1787, 1862, and 1869.

Remarks.--Some effect on flood peaks from regulation by Lake Hopatcong since 1828, Lake Wallenpaupack since 1925, Toronto Reservoir since 1926, Swinging Bridge Reservoir since 1930, Cliff Lake Reservoir since 1940, Wild Creek Reservoir since 1941, Neversink Reservoir since 1953, Pepacton Reservoir since 1954, and other smaller reservoirs. Only annual peaks are shown prior to 1924. Base for partial-duration series, 48,000 cfs.

DELAWARE RIVER BASIN

4580. Delaware River at Milford, N.J.

Location.--Lat $40^{\circ}34'00''$, long $75^{\circ}05'55''$, on upstream side of bridge 120 ft from New Jersey end, at Milford, Hunterdon County, and 33.1 miles upstream from Calhoun Street Bridge in Trenton.

Drainage area.--Not determined.

Gage.--Nonrecording. Datum of gage is 99.83 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Not defined.

Remarks.--Some effect on flood peaks from regulation by Lake Hopatcong since 1828, Lake Wallenpaupack since 1925, Toronto Reservoir since 1926, Swinging Bridge Reservoir since 1930, Cliff Lake Reservoir since 1940, Wild Creek Reservoir since 1941, Neversink Reservoir since 1953, Pepacton Reservoir since 1954, and other smaller reservoirs. Data prior to 1936 obtained from J. W. Mangan, 1942, Elevations of Major Floods along Pennsylvania Rivers: Commonwealth of Pennsylvania, Department of Forests and Waters. Since 1936, gage heights are maximum of hourly observations by Delaware River Joint Toll Bridge Commission. Only annual peaks are shown.

4595. Tohickon Creek near Pipersville, Pa.

Location.--Lat $40^{\circ}26'00''$, long $75^{\circ}07'00''$, on right bank at highway bridge, 1.5 miles northeast of Pipersville, Bucks County, and 4.5 miles upstream from mouth.

Drainage area.--97.4 sq mi.

Gage.--Recording. Datum of gage is 258.96 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Defined by current-meter measurements below 3,600 cfs and extended on basis of slope-area measurement.

Bankfull stage.--4 ft.

Remarks.--Base for partial-duration series, 3,100 cfs.

DELAWARE RIVER BASIN

4610. Delaware River at Lumberville, Pa.

Location.--Lat $40^{\circ}24'25''$, long $75^{\circ}02'20''$, on bridge at Lumberville, Bucks County, 20.9 miles upstream from Calhoun Street Bridge in Trenton, N.J.

Drainage area.--6,598 sq mi.

Gage.--Nonrecording. Datum of gage is 0.15 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Not defined.

Remarks.--Some effect on peaks from regulation by Lake Hopatcong since 1828, Lake Wallenpaupack since 1925, Toronto Reservoir since 1926, Swinging Bridge Reservoir since 1930, Cliff Lake Reservoir since 1940, Wild Creek Reservoir since 1941, and other smaller reservoirs. Gage heights listed prior to 1937 obtained from J.W. Mangan, 1942, Elevations of Major Floods along Pennsylvania Rivers, Commonwealth of Pennsylvania, Department of Forests and Waters, and were determined to mean sea level at Tinsmon's Lumber Mill, 0.2 mile upstream from gage. Gage heights since 1937 are maximum of hourly observations by Delaware River Toll Bridge Commission. Only annual peaks are shown.

4615. Delaware River at Stockton, N.J.

Location.--Lat $40^{\circ}24'10''$, long $74^{\circ}58'50''$, on upstream side of bridge in third span from New Jersey end, at Stockton, Hunterdon County, and 17.5 miles upstream from Calhoun Street Bridge in Trenton.

Drainage area.--Not determined.

Gage.--Nonrecording. Datum of gage is 0.04 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Not defined.

Historical data.--J. W. Mangan, 1942, in Elevations of Major Floods along Pennsylvania Rivers, Commonwealth of Pennsylvania, Department of Forests and Waters, lists the following mean sea level elevations for peaks at Smiths Mill, 0.5 mile upstream from gage: Dec. 11, 1878, 77.7 ft; April 1895, 77.7 ft; Dec. 16, 1901, 79.2 ft; March 1902, 80.1 ft; Oct. 10, 1903, 84.2 ft; and Mar. 18-19, 1936, 79.7 ft.

Remarks.--Some effect on flood peaks from regulation by Lake Hopatcong since 1828, Lake Wallenpaupack since 1925, Toronto Reservoir since 1926, Swinging Bridge Reservoir since 1930, Cliff Lake Reservoir since 1940, Wild Creek Reservoir since 1941, Neversink Reservoir since 1953, Pepacton Reservoir since 1954, and other smaller reservoirs. Gage heights since 1937 are maximum of hourly observations by Delaware River Joint Toll Bridge Commission. Only annual peaks are shown.

DELAWARE RIVER BASIN

4625. Delaware River at Washington Crossing, N.J.

Location.--Lat $40^{\circ}17'40''$, long $74^{\circ}52'10''$, on upstream side of bridge on fourth span from New Jersey end, at Washington Crossing, Mercer County, 7.4 miles upstream from Calhoun Street Bridge in Trenton.

Drainage area.--Not determined.

Gage.--Nonrecording. Datum of gage is 0.14 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Not defined.

Remarks.--Some effect on flood peaks from regulation by Lake Hopatcong, Lake Wallenpaupack since 1925, Toronto Reservoir since 1926, Swinging Bridge Reservoir since 1930, Cliff Lake Reservoir since 1940, Wild Creek Reservoir since 1941, Neversink Reservoir since 1953, Pepacton Reservoir since 1954, and other smaller reservoirs. Gage heights since 1936 are maximum of hourly readings by Delaware River Joint Toll Bridge Commission. Only annual peaks are shown.

4635. Delaware River at Trenton, N.J.

Location.--Lat $40^{\circ}13'18''$, long $74^{\circ}46'38''$, on left bank 450 ft upstream from Calhoun Street Bridge at Trenton, Mercer County, and 0.5 mile upstream from Assunpink Creek.

Drainage area.--6,780 sq mi. Area of lakes, ponds, and swamps, 144 sq mi.

Gage.--Nonrecording prior to Oct. 2, 1928; recording thereafter. Prior to Dec. 29, 1912, on upstream side near right bank end of Calhoun Street Bridge, and Dec. 29, 1912, to Oct. 2, 1928, on downstream side near left bank end of bridge at same datum. Datum of gage is 7.77 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Defined by current-meter measurements below 230,000 cfs and extended above by logarithmic plotting.

Historical data.--The flood of Feb. 27, 1692 (reported 12 ft above usual high-water mark) may have been as great or greater than that of August 1955. The flood of Jan. 8, 1841, was reported at that time to be greatest since 1692. The ice jam flood of Feb. 8, 1857, may have had a stage at Trenton equal to or higher than the ice jam flood of Mar. 8, 1904 (highest known stage at Trenton).

Remarks.--Some effect on flood peaks from regulation by Lake Hopatcong since 1828, Lake Wallenpaupack since 1925, Toronto Reservoir since 1926, Swinging Bridge Reservoir since 1930, Cliff Lake Reservoir since 1940, Wild Creek Reservoir since 1941, Neversink Reservoir since 1953, Pepacton Reservoir since 1954, and other smaller reservoirs. Peak stages 1904-28 obtained from graph of once-daily gage readings by U.S. Weather Bureau. Only annual peak data shown prior to 1929. Base for partial-duration series, 50,000 cfs.

a Backwater from ice.

DELAWARE RIVER BASIN

4640. Assumpink Creek at Trenton, N.J.

Location.--Lat $40^{\circ}13'27''$, long $74^{\circ}44'58''$, on left bank at Chambers Street Bridge in Trenton, Mercer County, $1\frac{1}{2}$ miles upstream from mouth.

Drainage area.--89.4 sq mi. Area of swamps, lakes, and bogs, 2.3 sq mi.

Gage.--Recording. Datum of gage is 24.76 ft above mean sea level (New Jersey Geological Survey bench mark).

Stage-discharge relation.--Defined by current-meter measurements below 1,800 cfs and extended above by logarithmic plotting.

Bankfull stage.--8 ft.

Remarks.--Base for partial-duration series, 800 cfs.

4645. Crosswicks Creek at Extonville, N.J.

Location.--Lat $40^{\circ}08'15''$, long $74^{\circ}36'02''$, on right bank upstream from highway bridge at Extonville, Mercer County, half a mile upstream from Pleasant Run and 0.7 mile downstream from Mercer-Monmouth County line.

Drainage area.--83.6 sq mi. Area of swamps, lakes, and bogs, 6.1 sq mi.

Gage--Recording. Datum of gage is 24.94 ft above mean sea level, datum of 1929.

Stage-discharge relation--Defined by current-meter measurements.

Bankfull stage--9 ft.

Remarks.--Base for partial-duration series, 750 cfs.

4655. Neshaminy Creek near Langhorne, Pa.

Location.--Lat 40°10'25", long 75°57'30", on left bank at bridge on State Highway 213, 0.3 mile downstream from Mill Creek and 1.7 miles west of Langhorne, Bucks County.

Drainage area.--210 sq mi.

Gage.--Recording gage. Datum of gage is 40.57 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Defined by current-meter measurements below 4,700 cfs and extended on basis of contracted-opening and slope-area measurement.

Bankfull stage.--7 ft.

Remarks.--Base for partial-duration series, 3,600 cfs.

a Backwater from ice.

b Annual maximum; discharge not determined.

4660. Middle Branch Mount Misery Brook in Lebanon State Forest, N.J.

Location--Lat 39°55'00", long 74°30'30", on right bank in Lebanon State Forest, Burlington County, 20 ft upstream from North Branch Road Bridge, 0.3 mile upstream from South Branch Mount Misery Brook, and 5.1 miles southeast of Browns Mills.

Drainage area--2.73 sq mi.

Gage--Recording gage above concrete control. Datum of gage is 99.71 ft above mean sea level (New Jersey Geological Survey bench mark).

Stage-discharge relation--Defined by current-meter measurements.

Remarks--Base for partial-duration series, 9 cfs.

DELAWARE RIVER BASIN

4670. North Branch Rancocas Creek at Pemberton, N.J.

Location.--Lat $39^{\circ}58'10''$, long $74^{\circ}41'05''$, on right bank at downstream side of highway bridge at Pemberton, Burlington County, 12 miles upstream from confluence with South Branch.

Drainage area.--111 sq mi. Area of swamps, lakes, and bogs, 15.5 sq mi.

Gage.--Nonrecording prior to June 9, 1923; recording thereafter. Prior to Aug. 9, 1951, at site 600 ft downstream at datum 6.54 ft lower. Datum of gage is 31.19 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Prior to 1952, defined by current-meter measurements below 1,300 cfs and extended above by logarithmic plotting; shifts in relation occurred. Since 1952, defined by current-meter measurements.

Bankfull stage.--6 ft at site used 1923-51.

Remarks.--Prior to 1942, most peaks below 7 ft stage regulated by mill just above station. Base for partial-duration series, 600 cfs.

a Backwater from debris.

4750. Mantua Creek at Pitman, N.J.

Location.--Lat $39^{\circ}44'14''$, long $75^{\circ}06'53''$, on left abutment of Wadsworth Dam, 0.9 mile east of Pitman, Gloucester County, and 2 miles upstream from Porch Branch.

Drainage area.--6.75 sq mi. Area of swamps, lakes, and bogs, 0.2 sq mi.

Gage.--Recording gage above concrete dam. Datum of gage is 68.51 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Defined by current-meter measurements below 63 cfs and extended above on basis of laboratory rating and flow-over-dam measurement of 4,200 cfs.

Remarks.--Base for partial-duration series, 50 cfs.

DELAWARE RIVER BASIN

4765. Ridley Creek at Moylan, Pa.

Location.--Lat $39^{\circ}54'10''$, long $75^{\circ}23'35''$, at Fox Bank Bridge at Moylan, Delaware County, and 1 mile south of Media.

Drainage area.--31.9 sq mi.

Gage.--Recording. Datum of gage is 87.36 ft above mean sea level (Pennsylvania Railroad bench mark).

Stage-discharge relation.--Defined by current-meter measurements below 1,300 cfs and extended on basis of contracted-opening measurement.

Remarks.--Base for partial-duration series, 750 cfs.

a Annual peak only.

DELAWARE RIVER BASIN

4766. Still Run near Mickleton, N.J.

Location.--Lat $39^{\circ}47'19''$, long $75^{\circ}15'27''$, on left bank at downstream side of county highway bridge, 1 mile west of Mickleton, Gloucester County, and 3.4 miles upstream from confluence with Pargey Creek.

Drainage area.--3.95 sq mi.

Gage.--Recording. Altitude of gage is 5 ft (from topographic map).

Stage-discharge relation.--Defined by current-meter measurements below 210 cfs and extended above by logarithmic plotting.

Remarks.--Base for partial-duration series, 65 cfs.

Peak stages and discharges

4775. Oldmans Creek near Woodstown, N.J.

Location.--Lat $39^{\circ}41'27''$, long $75^{\circ}19'09''$, on left bank at upstream side of Woodstown-Swedesboro highway bridge, 2 miles north of Woodstown, Salem County, and 16 miles upstream from mouth.

Drainage area.--19.3 sq mi. Area of swamps and lakes, 0.2 sq mi.

Gage.--Recording gage and concrete control. Altitude of gage is 13 ft (from topographic map).

Stage-discharge relation.--Defined by current-meter measurements below 400 cfs and extended above on basis of contracted-opening measurement at 8,100 cfs.

Bankfull stage.--3 ft.

Remarks.--Base for partial-duration series, 200 cfs.

DELAWARE RIVER BASIN

4790. White Clay Creek near Newark, Del.

Location.--Lat $39^{\circ}42'00''$, long $75^{\circ}41'10''$, on left bank 300 ft upstream from Baltimore & Ohio Railroad bridge, 0.4 mile downstream from Pike Creek, and 3.5 miles east of Newark, New Castle County.

Drainage area.--87.8 sq mi.

Gage.--Recording. Datum of gage is 11.6 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Defined by current-meter measurements.

Remarks.--Base for partial-duration series, 2,000 cfs.

a Period June 3 to Sept. 30, 1943.

4810. Brandywine Creek at Chadds Ford, Pa.

Location.--Lat $39^{\circ}52'10''$, long $75^{\circ}35'35''$, on left bank 27 ft upstream from Pennsylvania Railroad bridge at Chadds Ford, Delaware County.

Drainage area.--287 sq mi.

Gage.--Nonrecording prior to May 21, 1927; recording thereafter. Datum of gage is 150.45 above mean sea level, datum of 1929.

Stage-discharge relation.--Defined by current-meter measurements below 7,000 cfs and extended on basis of depth-area study.

Remarks.--Base for partial-duration series, 3,500 cfs.

4825. Salem River at Woodstown, N.J.
(Published as Salem Creek prior to 1953)

Location.--Lat $39^{\circ}38'36''$, long $75^{\circ}19'52''$, on right end of Memorial Lake Dam at Woodstown, Salem County, a quarter of a mile upstream from small brook and 0.3 mile downstream from Pennsylvania-Reading Seashore Lines bridge.

Drainage area.--14.6 sq mi. Area of swamps and lakes, 0.2 sq mi.

Gage.--Recording gage above concrete dam. Datum of gage is 29.49 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Defined by current-meter measurements below 220 cfs and extended above on basis of laboratory rating and slope-area measurement of 26,000 cfs at site half a mile downstream (adjusted to 22,000 cfs at gage site).

Bankfull stage.--4 ft.

Remarks.--Base for partial-duration series, 350 cfs.

4830. Alloway Creek at Alloway, N.J.

Location.--Lat $39^{\circ}33'55''$, long $75^{\circ}21'35''$, on right bank at Alloway Lake Dam at Alloway, Salem County, 0.8 mile upstream from Deep Run.

Drainage area.--21.9 sq mi.

Gage.--Recording gage above concrete dam. Datum of gage is 13.96 ft above mean sea level, datum of 1929.

Stage-discharge relation.--Defined by current-meter measurements below 600 cfs and extended above by logarithmic plotting.

Remarks.--Flood peaks occasionally affected by operation of Alloway Lake Dam. Base for partial-duration series, 250 cfs.
