HIGHLIGHTS

Population Trends

- New Jersey population aged 60 years and over grew by 3.5% since 1990 to a total of 1,443,782 in 2000. The largest population growth is among people aged 85 years and over (42.3%), followed by the age group between 80-84 years (30%). During the same period of time, population aged between 60-69 years decreased by 11.4%.
- The population over age 60 years is projected to grow substantially in the near future as the baby-boom generation (those born between 1946 and 1964) ages. In 2000, there were 1,443,782 New Jerseyans aged 60 years and over. By 2030, the population is projected to number two and one-half million in this age group.
- People aged 60 and over represented 17.2% of the New Jersey population in the year 2000. It is expected to grow to be 25.7% of the population by 2030.

Basic Demographics in 2003

- The population density for people aged 60+ years in New Jersey was 202 persons per square mile of land area in 2003. Hudson County had the highest population density for people aged 60+ years. It had 1,972 persons aged 60+ years per square mile of land area. The next three counties that were also densely populated are Essex (991 persons), Union (890 persons), and Bergen (759 persons).
- The counties that had the lowest population density for people aged 60+ years per square mile of land area in 2003 include Salem (37 persons), Sussex (40 persons), Hunterdon (48 persons), Cumberland (51 persons), and Warren (52 persons).
- 17.3% of New Jersey population were 60 years of age and older in 2003.
- Females significantly outnumbered males at ages over 60 years. Among people aged 60 years and over in New Jersey in 2003, 42.2% were male and 57.8% were female. Among those aged 85 years and over in New Jersey, 30.1% were male and 69.9% were female.
- Among those aged 60 years and over in New Jersey in 2003, 79.4% were non-Hispanic white, 9.8% were non-Hispanic black, 7% were Hispanic, and 3.7% were Asian and Pacific Islander. The population aged 60+ years has a

higher proportion of non-Hispanic whites than does the state population as a whole.

- + More than half (58%) of the New Jersey population 60 years of age and older in 2003 resided in seven counties: Bergen (177,672), Ocean (140,125), Essex (125,074), Middlesex (124,374), Monmouth (106,774), Hudson (92,031), and Union (91,871).
- + About 52% of the New Jersey minority population 60 years of age and older in 2003 resided in four counties: Bergen, Essex, Hudson, and Union.
- + Within counties, the percent of the total population 60 years of age and over that are racial and ethnic minorities ranged from 3.6% (Hunterdon) to 48.6% (Hudson). Essex (46.5%), Union (29.9%), and Passaic (27.7%) counties had the largest concentration of minorities after Hudson County.
- + Nearly 35% of Essex County's population aged 60 years and over were non-Hispanic blacks. Other counties that also had a high proportion of non-Hispanic black population were: Union (15.9%), Mercer (14.8%), Camden (13.2%), and Atlantic (13.0%).
- + Hudson County had the highest proportion of Hispanics among the population aged 60 years and over (32.2%), followed by Passaic (15.5%) and Union (11.4%).
- + Middlesex County had the largest proportion of Asian and Pacific Islanders among their senior population (8.5%), followed by Hudson (7.2%), Bergen (6.2%), and Somerset (6.0%).
- + In 2003, people aged 60 years and over exceeded 25% of the county total population in Ocean and Cape May counties.

Social and Economic Indicators

Marital Status

- + The majority of New Jersey adults aged 60 years and over were either married or widowed in 2000. Older men were more likely to be married than older women.
- + The gender difference became larger as age increased. Among those aged between 60 and 64 years, 81% of men compared with 64% of women were married. Among those aged 85 years and over, however, 54% of men were married, compared with only 18% of women.

- ✚ The percent of women widowed (41%) was more than three times of the percent of men widowed (13%) for New Jerseyans aged 60 years and over in 2000.

Income

- ✚ Median income for families with the householder aged 60 years and over was \$51,535 in 1999.
- ✚ Four counties had a median income higher than \$60,000. They are Morris (\$68,626), Somerset (64,007), Hunterdon (\$63,543), and Bergen (\$61,579).
- ✚ The median family income declined with the age of householders. The median income for families with the householder aged 85 years and over was about half that of families with the householder aged between 60 and 64 years.
- ✚ Nearly 27% of all households in New Jersey received Social Security Income that averaged \$12,274 in 1999. Only 3.5% of all households received Supplemental Security Income (SSI) averaging \$6,631 and 17.1% had other retirement income that averaged \$17,406.
- ✚ Ocean County ranked first for both the highest percentage of households among all households that received Social Security and other retirement income, 41.4% and 27.1% respectively. Cape May was second in both categories, with 37.6% receiving Social Security and 23.7% receiving other retirement income. Overall, percentages of households in counties that received different types of income are similar to state percentages.

Poverty

- ✚ In 1999, 7.7% of all individuals aged 60 years and over in New Jersey had incomes below the poverty level, which is lower than the proportion for the population as a whole. The poverty rates for counties ranged from 3.6% in Hunterdon County to 15.2% in Hudson County. Other counties that had poverty rates higher than 10% are Essex (12.5%), Cumberland (12%), and Atlantic (10.5%).
- ✚ Poverty rates for all racial and ethnic minority groups were higher than for non-Hispanic whites (5.8%) in New Jersey in 1999, although the poverty rate is only slightly higher (8.0%) for Asian and Pacific Islanders. The poverty rates were 16.5% for non-Hispanic blacks, 16.6% for American Indians and Alaska Natives, and 17.5% for Hispanics and Latinos.

- ✚ As shown in both Table 10 and Figure 3, lower income older New Jerseyans were more likely to be widowed than people of any other marital status.
- ✚ Approximately 75% of the households where the householder is 60 years of age and over were owner-occupied in 2000. Only one county in New Jersey showed home ownership rate for seniors to be below 50%. It was Hudson County, with a rate of 43%.
- ✚ In New Jersey, homeownership was closely connected with income level. Among households in which the householder was 60 years of age and over and the ratio of income to poverty level was above 2.00, 83% were owner-occupied. The proportion fell to 41% for households whose ratio of income to poverty level was below 1.00.

Living Arrangements

- ✚ Older men were much less likely to live alone than older women in every age group. Among all New Jersey people aged 60 years and over, 15% of the men lived alone compared with 31% of the women. For those aged 85 years and over, 27% of the men lived alone compared with 41% of the women.
- ✚ Among the New Jersey population aged 60 years and over, 94,310 were reported to be grandparents living with grandchildren under 18 years in 2000. 22% of the grandparents living with grandchildren were responsible for caring for their grandchildren.

Disability and Health Insurance

- ✚ Approximately 36% of the statewide non-institutionalized population aged 60 years and over claimed a disability in 2000. The rates did not differ much between men (34%) and women (37%).
- ✚ The prevalence of disability increased substantially with age in 2000. Within the 60-64 age group, 27% of men and 26% of women had a disability. Within the 85+ age group, about 64% of men and 73% of women had a disability.
- ✚ With older age, people were increasingly likely to have more than one type of disability. In 2000, among men aged 85 years and over, 42% of them had physical disability, 38% had go-outside-home disability that makes it difficult for them to go outside the home alone, 30% had sensory disability, 22% had mental disability, and 20% had self-care disability. Among women aged 85 years and over, 54% had physical

disability, 52% had go-outside-home disability, 33% had sensory disability, 28% had mental disability, and 29% had self-care disability.

- Among the five types of disability that were defined in the Census 2000, physical disability was more widespread than any other type of disability.
- In 2003, 60% of people aged 60 to 64 years depended primarily upon employment-related health insurance. 17% of people within this age group did not have any health insurance. The uninsured rate was reduced to 2% for people aged between 65 and 74 years, for whom 92% had Medicare as primary insurance. For people aged 75 years and over, 98% had Medicare as their primary insurance.
