## ANNUAL REPORT

April 1, 1947.

To His Excellency the Governor and the Legislature:

In accordance with sections 39:2–12 and 39:4–6 of the Revised Statutes, there is submitted herewith a report of the activities of the Motor Vehicle Department for the year 1946.

Total traffic accidents increased 34 per cent and fatalities 13 per cent over the previous year. During the same period there were 17 per cent more drivers licensed and 10 per cent more vehicles registered while vehicular travel, as reflected by taxable gasoline, was 36 per cent greater than in 1945. Vehicular travel, in fact, was within five per cent of the volume of the peak year 1941, yet 1946's total accidents were 22 per cent and fatalities 27 per cent below total accidents and fatalities in that pre-war year.

The mileage death rate, based on deaths per one hundred million vehicle miles of travel was 5.75. The 1945 rate was 7.27 and in 1941 the rate was 7.73.

Despite the continued improvement in the New Jersey traffic accident picture as measured by the death rate heretofore mentioned, the accident situation in the State is still a serious matter. There is no single solution of the problem. The answer is more and better enforcement, education and engineering.

Contemplated roadway improvements, particularly the primary roadway system of the State, will alleviate, to a large extent, some of the congestion and accident hazards as they affect the inter-city and the inter-state motorist. On the other hand, even with the completion of these major roadway facilities, the large percentage of important primary and secondary roads will remain for many years as they now exist. It is important therefore that the authorities give special attention to relieving congestion and eliminating hazards on this larger part of the State's roadway system through application of engineering techniques.

In this connection, it is reported that the present Number One highway transportation problem in the State is that of curb parking. Curb parking has reached such proportions, especially in the concentrated business areas, that the traffic congestion, traffic delay and accident hazards it causes threatens both public safety and business in such areas.

Present curb parking difficulties can be substantially corrected with the establishment of off-street parking facilities conveniently located and operated at reasonable cost to public users. Such facilities, which can be self-supporting would, without costly roadway construction, make available for moving traffic lanes now used for the storage of vehicles.

The financial and technical phases involved in providing off-street parking facilities are of such magnitude as to be beyond the reach of many municipalities. It is recommended, therefore, that the State assist in the solution of the parking problem through the establishment of a study committee, with sufficient appropriation and authority, to make a state-wide study of curb parking difficulties and the establishment of off-street parking facilities.

Traffic law enforcement, measured by total arrests for violations, increased 65 per cent over the previous year. Arrests totaled 93,663, more than half (53 per cent) of which were made by motor vehicle inspectors and state police netting, incidentally, the State \$358,176 in fines imposed.

The enforcement structure was noticeably weakened, however, by the mild penalties imposed upon offenders. Fining a speeder or flagrant violator a token penalty of \$3 or \$5 neither teaches the individual a lesson nor increases his respect for safety. Yet nearly half the fines imposed during the year were within this range.

Year after year the leading traffic violation and the principal cause of fatal accidents is speeding. The number of arrests for this offense in 1946 was 39,280, which was 54 per cent more speeding arrests than in the previous year. Thus it is evident that token fines have failed to curb this dangerous driving practice. In the interest of effective enforcement, therefore, it is recommended that a mandatory minimum penalty of \$25 be fixed by statute for all speed violations. Mandatory minimum penalties should be likewise considered for the other leading violations that cause accidents namely, driving on the wrong side of the road, following too closely, violating the right of way and improper turning.

Pedestrian accidents continued to be the leading source of traffic fatalities, although the record improved slightly over 1945. There were 360 pedestrian deaths from accidents, or 50.5 per cent of total traffic fatalities. As in former years, there were more fatal pedestrian accidents than any other accident type.

Despite wide efforts to educate the pedestrian into safer ways of crossing and walking the streets, investigation reveals little, if any, improvement in walking habits. It is recommended, therefore, that municipal officials begin enforcing the pedestrian laws by arresting those who cross against traffic signals, in the middle of the block or on the wrong side of the roadway. Only in this way will pedestrians be impressed with the fact that, under the law, they too are traffic the same as motor vehicles and subject to the same rules of safety as the latter.

Car owners and the public generally continued to benefit from state inspection of motor vehicles. Now in its tenth year, the necessity for car inspection is still evidenced by the continued large percentage of unsafe vehicles rejected on initial inspection. Inspections are again on a semi-annual basis, replacing the yearly inspection requirement that prevailed during the war years.

An important phase of the Department's activity was the promotion of safety education along the lines of informing the individual highway user, driver and pedestrian, about the traffic problem and the need for personal cooperation. This public information related to the causes and circumstances under which accidents occur; why the problem is important to the individual and what the individual driver and pedestrian can do to prevent accidents and aid traffic efficiency generally. For maximum effectiveness, this safety educational activity must be broad in scope, realistic in nature and continuous.

Traffic casualties affect everyone and the job of reaching all age groups effectively is a vast and complex undertaking. In addition to utilizing all possible media of public information on a state-wide basis, the program calls for the co-ordination of effort in three distinct areas, primarily at the local level:

County and municipal officials who share the responsibility for traffic safety
can assist the safety educational program in their jurisdictions.

2. The schools can contribute a most effective part on an immediate and long-term basis by inculcating the proper attitudes and habits concerning traffic safety at all school age levels.

3. Non-official organizations which have an interest in public safety can help the program through the dissemination of safety information.

Wide public interest was developed during the year in the oft-advocated subject of driver re-examination. The Department has for years urged some form of control over that important factor in accidents, the human element, and it again emphasizes periodic examination of drivers to be most vital to the cause of highway safety.

The Department contends that it takes far too much for granted to assume that because a person was found to be a fit driver on a certain occasion when he was examined for his initial license, he necessarily remains equally fit for the rest of his life. Just as periodic examination has often disclosed apparently fit machines to have dangerous faults, so periodic examination of drivers may disclose them to have dangerous faults.

There are many kinds of defective human mechanisms. There are the drivers who suffer from heart trouble, epilepsy, alcohol and drug addiction, certain types of insanity, certain forms of paralysis affecting muscular control, night blindness and other physical ailments—to say nothing of emotional instability—which make them unfit to sit behind the wheel. The question has been raised that if such strict control over drivers were put into practice, the State would be depriving many people of their means of livelihood. The answer is that a live man can find another job, but a dead one cannot find another life. The social interest is paramount.

The ideal set-up, naturally, would be one that brought in every driver, at regular intervals, for re-examination, but the fact that New Jersey has over 1,500,000 licensed drivers would make this such a vast and costly task that it is doubtful whether funds could be obtained for the purpose. It has been suggested, therefore, that a beginning be made with the age group most in need of re-examination. On the basis of medical advice this group is the one 40 years and over.

Normal vision, so important in safe operation of an automobile, is lacking, in an amazing degree, in men and women over 40. The Better Vision Institute reports that at forty, 40 per cent—nearly half the people—have impaired vision and that this condition grows progressively worse with age. At 50 and over, muscular and mental changes develop so gradually that many people do not notice them.

The high percentage of vision defects found in persons over 40, as reported by the Better Vision Institute, must have a direct connection with two of the leading causes of accidents in New Jersey, namely, driving on the wrong side of the road and following too closely. Detecting and correcting these defects in senior drivers would undoubtedly eliminate many accidents caused by their inability to bring into proper focus markings, objects and other vehicles on the road.

There are no data available as to the number of drivers physically unfit to drive. Granted that they are in the minority, these drivers nevertheless constitute a threat to highway safety. They should be singled out and their defects corrected, if possible, not only for their own individual safety but for the safety of others. If re-examination would save as few as ten lives a year. it would be worth the effort and expense.

It would be fitting, therefore, for the Department to embark upon a reexamination program that would require every driver, upon reaching the age of 40, to undergo an eye test and related visual tests; at 50 years, a complete driver test and at 60, 65, 70 and every two years thereafter a complete driver test together with a medical test.

Leading safety authorities have long emphasized the need for driver reexamination. Re-examination likewise has the support of the Eastern Conference of Motor Vehicle Administrators and the President's Highway Safety Conference. The latter, in session last Spring at Washington made the following recommendation:

"Thorough re-examination of those most obviously in need of it is much more desirable than hurried mass re-examination of dubious thoroughness or value. Public opinion warrants further extension of re-examination.'

Support will also be found in the Princeton Survey of a few years back in this recommendation to the Legislature:

"The principal purpose of the Department of Motor Vehicles today is to

maintain safety on the public highways.
"The existence of the department as an agency for registration of automobiles and collection of license fees is incidental to this end. The authority over licenses enables the department to scrutinize the motor vehicle and its driver before they are permitted on the highways, and also provides a means of regulation and control after the privilege is granted."

The Department expresses its thanks to the New Jersey Press Association and the newspapers of the State for their generous co-operation in carrying highway safety to the people. Several newspapers were exceptionally outstanding in their efforts, while all rendered voeman service to this worthy cause. The radio stations, too, were most co-operative.

## REVENUE, REGISTRATIONS, LICENSES.

The gross revenue of the Department for 1946 totaled \$24,819,573.67, an increase of 16.5 per cent over 1945.

Total motor vehicle registrations were 1,175,172, a rise of 9.4 per cent. Passenger vehicle registrations totaled 943,095 as compared with 876,172 in the previous year, an increase of 7.6 per cent, while commercial vehicle registrations were 166,653; an increase of 14.0 per cent.

The Department issued 1,538,270 driver's licenses, which figure was 15.0 per cent greater than the issuances of the preceding year.

#### **ACCIDENT STATISTICS**

With motor vehicle travel more than a third greater than the previous year, traffic accidents in New Jersey during 1946 increased 34 per cent, fatalities were 13 per cent higher and the number of persons non-fatally injured rose 30 per cent.

A	1946	1945	1944	1943	1942	1941
Accidents	38,321	28,521	24,120	22,007	33,597	48,734
Fatalities	712	630	609	682	771	971
Injured	21,908	16,893	15,252	14,176	20,384	30,415
Gasoline (mil. gals.)	910.4	666.1	609.	568.9	758.2	965.2
Mileage death rate	5.75	7.27	7.69	$9.22^{\circ}$	7.83	7.73

The average number of accidents daily rose from 78 in 1945 to 105. In 1941 there were 133 daily, on the average.

Fatalities averaged slightly less than two daily (1.9), while the average daily personal injury toll was 60. For every fatality during the year there were 31 persons injured.

## **Economic Loss**

In estimating the economic loss from traffic accidents, the formula used is \$11,500 for each death, \$450 for every personal injury and \$125 for each property damage accident.

1946		\$20,930,000
1945	***************************************	16,900,000
1944		15,150,000
1943		15,300,000
1942		
1941		27,000,000

## Light-Weather-Road Conditions

The majority of accidents, 67 per cent, occurred during daylight hours. Sixty-three per cent of the fatal accidents happened at night.

Clear weather prevailed at the time of 81 per cent of total accidents and 83 per cent of fatal accidents.

The extent to which road conditions figured is shown in the fact that 77 per cent of total accidents happened on dry pavement, 18 per cent on wet pavement and 5 per cent on snow and ice covered pavement.

### The Pedestrian

Although all accidents and total fatalities increased in number over the previous year, there was one bright spot in the State's accident picture. Pedestrian fatalities decreased from 378 in 1945 to 360 or nearly five percent.

Viewed from another angle—ratio—the improvement in pedestrian traffic deaths was far more impressive. During 1946, 50.5 per cent, or approximately one in every two traffic deaths was a pedestrian as compared with the year 1945 when 60 per cent, or three in every five fatalities were classified as pedestrians.

This improvement can be attributed, in large measure, to pedestrian safety activities sponsored by the Department and joined in by many municipalities during the year. The use of police warnings, sidewalk stencils, posters, safety films and safety speakers all contributed to making more people pedestrian safety conscious with the results heretofore shown.

Aside from the fatalities, there were 4,940 pedestrians injured in traffic accidents, or 22.5 per cent of the total injured in all accidents. In 1945, the number of pedestrians injured was 4,241, or 25 per cent of the total number injured.

The pedestrian toll during the past 15 years has been 7,446 fatalities and 94,609 injured in accidents.

Night time was danger time for pedestrians during the year, 60 per cent of the fatal pedestrian accidents having occurred during hours of darkness. Nearly seven in every 10 pedestrians killed contributed to their accidents by careless walking in or across the streets and highways. Eighty per cent of the fatalities were males.

Death struck heaviest among middle-aged and elderly pedestrians, 63 per cent of these killed being over 50 years of age.

Age Groups	Fatalities	Per Cent Fatalities
0 to 4 5 to 14 15 to 20 21 to 50 50-over	28 9 73	6.1 7.8 2.5 20.3 63.3
	360	100.0

The majority of fatal pedestrian accidents, nearly 60 per cent, occurred at points between intersections. Eight pedestrians were killed while on the sidewalk.

#### Pedestrian Casualties

	_		Fatalities—					-Injured-	
Year		Total Deaths	Pedestrian Deaths	Per Cent Pedestrian Deaths		Total Injured		Pedestrians Injured	Per Cent Pedestrians Injured
1946		712	360	50.5	2 TH	21,905	×	4,940	22.5
1945		630	378	60.		16,893		4,241	26.
1944		609	346	56:8		15,252		4,030	26.4
1943		682	382	56.		14,176	· .	4,480	31.4
1942		771	406	52.6		20,384		5,285	25.9
1941		971	. 472	48.6	. ,	30,415	•	6,219	20.4
1940	. `	811	436	47.8		27,718		6,162	22.2
1939		814	422	51.8		26,214 .		6,137	$\frac{-1}{24.3}$
1938	•	865	425	49.1		24,918		6,069	24.3
1937		1,278	691	54.		28,835		7,308	25.3
1936		1,107	607	54.8	•	26,185		7,207	27.5
1935		1,188	604	50.8		26,579		6,936	27.1
1934	•	1,227	661	53.8	•	27,754		7,991	26.7
1933		1.185	644	54.3		28,158		8,411	29.8
1932		1,180	612	51.8	٠.	31,246		9,213	29.4
15 Yrs.	. 1	4,130	7,446			364,612		94,609	

The pedestrian problem was particularly acute in the larger cities. In Bayonne, pedestrian deaths represented 91 per cent of total traffic fatalities; Paterson, 89 per cent; Atlantic City, 64 per cent; Camden, 76 per cent; Newark, 75 per cent; Irvington, 50 per cent; Jersey City, 63 per cent; Passaic, 83 per cent; Trenton, 79 per cent and Elizabeth, 78 per cent.

## Intoxicated Pedestrians

One in every four adult pedestrians killed in traffic during the year was under the influence of alcohol.

There were 76 such pedestrians killed and 250 non-fatally injured as compared with 57 deaths and 171 injured in the previous year.

In the past 14 years there have been 1,004 pedestrian fatalities reported in which there was evidence of alcohol on the part of the pedestrian.

#### Urban-Rural

Seven in every 10 residents of New Jersey live in urban communities (over 10,000 population). These urban communities were the scene of 69 per cent of total accidents during the year compared with 72 per cent in 1945. Fifty-one per cent of total fatal traffic accidents and 63.6 per cent of pedestrian fatalities likewise occurred in urban areas.

#### TOTAL ACCIDENTS

	1946	1945
Urban Rural	26,513 (69.1%) 11,808 (30.9%)	20,637 (72.3%) 7,884 (27.7%)

	360	378

## Fatalities-Vehicles-Drivers

In the year 1915, the first year in which traffic fatalities were recorded separately, there was one traffic death in New Jersey for every 324 cars registered. During 1946 there was one death for nearly every 1,600 registered vehicles.

.22	Traffic	Vehicle	Drivers :

## Manner of Collision

An analysis of the year's accidents according to the manner of collision shows that 26.8 per cent were right angle collisions; 12.1 per cent were opposite direction accidents and 27.6 per cent were of the same direction type of accident.

Collisions		. Per Çent 1946	Per Cent 1945	Per Cent. 1944	Per Cent 1943	Per Cent. 1942
Right angle		. 26.8	27.8	30.4	27.9	29.

## Day of the Week

Saturday was the most dangerous day of the week from the standpoint of traffic accidents. Monday was the day with the second highest number.

## Hour of Occurrence

The hour of 5 to 6 P. M. was the peak hour for all accidents and 6 to 7 P. M. for fatal accidents. Nine to 10 A. M. was the safest of daylight hours.

### Sex of Drivers

Male drivers were involved in 90 per cent of total accidents and 94 per cent of fatal accidents.

#### Residence of Drivers

Eighty-nine per cent of the year's accident drivers were residents of the State; 11 per cent were non-residents.

It is interesting to note that 39 per cent of the New Jersey drivers were residents of the communities where the accidents occurred (see Statistical Summary); 61 per cent were New Jerseyites but residents of communities other than where their accidents happened.

## Speed

Excessive speed was the leading violation reported in fatal accidents during the year. The second most frequently reported violation in fatal accidents was driving on wrong side of road.

In all accidents, the most frequently reported unsafe practice was following too closely, with violating the right of way second, speed third, driving on the wrong side of the road fourth, and improper turning fifth.

## Vehicle Types

Eighty-one per cent of the vehicles involved in the year's accidents were of the passenger car type and 13 per cent were commercial vehicles. The number of buses in accidents was 2,080, compared with 2,283 in the previous year.

#### Hit-and-Run Drivers

Hit-and-run driving increased over the previous year. There were 1,088 accidents involving this callous driver type as against 928 in 1945 and 747 in 1944. Fatalities resulted from 42 of the year's hit-and-run accidents.

## Classification of Victims

The leading victims of fatal accidents in New Jersey were pedestrians. In non-fatal injury accidents, more passengers were injured than drivers or pedestrians.

	Killed	Per Cent Killed	Injured	Per Cent Injured
Drivers Passengers Pedestrians Bicyclists Motorcycle drivers Others	. 24	21.3 21.9 50.6 2.8 3.4	5,636 10,526 4,940 433 333 37	25.7 48. 22.6 2. 1.5

	100.	100.	100.	100.

## Bicycle Accidents

There were 440 accidents during the year involving motor vehicles and bicycles resulting in the death of 20 cyclists and personal injury to 433 others. Following is the record of accidents and casualties for the past seven years:

Year	Ac	cidents Killed	Injured
			433
1944		299 9	313
		298 15: 495 22	286 4 <b>7</b> 4
1941 1940		813 24 810 18	762 748

## Railroad Crossing Accidents

The safeguards New Jersey has placed around 2,640 railroad grade crossings in the form of automatic or manual gates, watchmen, flashing red signals, bells and standard crossing signs are responsible for the relatively few collisions between motor vehicles and railroad trains. The record:

ż	Year	 	. A	cciden	ts	Killed	 Injured

#### Road Location—Surface

More than half (56.8 per cent) of total accidents occurred at street intersections, 3.6 per cent at alley or driveway intersections and 39.4 per cent between intersections. Reports showed the road locations of fatal accidents to be 42 per cent at street and alley intersections and 58 per cent between intersections.

Nearly 60 per cent of all accidents occurred on asphalt pavement and 28 per cent on streets paved with concrete.

### Insured Cars

A favorable trend of the times was the increase in the number of accident drivers financially responsible for damages incurred through accident. More than half the accident drivers (51 per cent) reported their cars covered by liability insurance, the highest percentage in the history of accident statistical compilations. Twenty per cent of the vehicles were reported as not insured while 29 per cent failed to indicate in their reports their financial responsibility status.

	Per Cent 1946	Per Cent 1945	Per Cent 1944	Per Cent 1943	Per Cent 1942
Cars insured	20.	46. 21. 33.	43.4 24.4 32.2	39.6 25.6 34.8	43.3 25.3 31.4
	100.	100.	100.	100.	100.

## Mileage Death Rate

Public Roads Administration computations indicate that the average miles per gallon for 1946 approximated 13.6 instead of 13 miles per gallon during and before the war years. The rate 13.6 miles per gallon, therefore, has been used for 1946 in translating gallons of gasoline used in motor vehicle travel to motor vehicle miles. The rate 13 miles per gallon was used in all previous year's computations cited here.

## Deaths per 100 Million Vehicle Miles

<sup>\*13.6</sup> miles per gallon nate used.

### **Alcohol-Accidents**

The extent to which alcohol was a factor in accidents is shown by the fact that one in 11 drivers in fatal accidents, on the average, was reported as "had been drinking." One in 43 drivers in all accidents was likewise reported under the influence of alcohol.

There were 1,596 accidents reported during the year in which a driver or drivers were under various degrees of intoxication. These accidents resulted in 80 deaths and 1,123 personal injuries as compared with 64 deaths and 714 injuries from this type of collision in 1945.

Year	Accidents	Deaths	Injured
1946		. 80	1,123
1945		64	714
1944		64 66	624 692
1942	2,038	96	1,628
1941		82	1,390
1940		89	1,285

More of these accidents happened on Sunday than any other day of the week and seven out of every 10 took place under cover of darkness.

The leading traffic violation was driving on wrong side of road, with speeding second. There were 126 hit-and-run drivers, six of whom were in fatal accidents.

Drivers in the age group 30 to 39 were involved in 25 per cent of these accidents and 15 per cent were middle-aged or older. There were 70 drivers under 21 years of age. Ninety-seven per cent of the drivers were males. Only 32 per cent of the vehicles were reported covered by liability insurance.

## Multiple Death Accidents

Multiple death accidents, usually the result of speed, increased nearly 52 per cent over the previous year. There were 41 such accidents compared with 28 in 1945.

	1946	1945
Two-death accidents	34	22
Three-death accidents	4	5
Four-death accidents	1	٠
Five-death accidents	1	
Six-death accidents	1 .	
*	·	<b>—</b> :
	41	. 27

Total casualties resulting from the year's multiple death accidents were 95 as against 59 in the year 1945.

Three in every four of these accidents occurred in rural areas (municipalities under 10,000 population).

## **Sledding Accidents**

Not a single fatality resulted during the year from the dangerous pastime of sledding in and across public thoroughfares. In the year 1945, however, there were eight youths killed in collisions with moving motor vehicles; in 1944, seven; in 1943, three and in 1942, five.

## Stricter Parental Control Over Youthful Drivers

The unusual number of fatal traffic accidents involving youthful drivers during the early morning hours suggests the need for stricter parental control over young drivers and their use of cars after midnight.

During the year there were 10 such accidents resulting in 13 fatalities. From the descriptions that follow, notice how frequently the element of fatigue figured in these accidents:

1:50 A. M., a 20-year-old driver fell asleep at the wheel and ran his car into a tree, killed a girl passenger, injuring himself and two others.

2:50 A. M., a 19-year-old college student, returning from a week-end visit with his family, *fell asleep* and ran into the rear of a truck, killing a fellow student-passenger.

1:19 A. M., a 17-year-old driver ran down and killed a pedestrian.

12:55 A. M., a 20-year-old driver drove into another vehicle, killing the other driver.

1:08 A. M., a 20-year-old driver ran his car into a railroad locomotive and was killed.

1:00 A. M., an 18-year-old driver fell asleep at the wheel, ran his car into a tree and was killed.

2:20 A. M., a 20-year-old driver fell asleep, drove into a pole killing a 20-year-old passenger and causing injury to three occupants.

- 3:15 A. M., a 19-year-old driver, apparently asleep and traveling at high speed, drove on the left side of the highway, collided head-on with another vehicle and caused death to himself and three others, all in their early twenties.
- 2:45 A. M., a 20-year-old driver ran off the road into a tree, killing a 20-year-old companion and causing critical injuries to himself.
- 12:30 A. M., a 19-year-old driver ran down and killed an elderly pedestrian.

## Holiday Deaths

Legal holidays, usually an occasion for increased pleasure driving, accounted for a total of 17 traffic accident fatalities during the year. There were 13 holiday deaths in 1945.

Easter Sunday and Thanksgiving Day each claimed four fatalities and there were three on New Year's Day.

## Manpower Loss

Traffic accidents each year impose a serious drain on the manpower reserves of the State. Unskilled labor headed the list of fatalities in 1946 with skilled labor running second. Included in the list of victims were 70 housewives and 53 in the retired status.

Occupations		Killed	<b>1</b> .

## State Highway Accidents

Twenty-six per cent of the State's total accidents, 37 per cent of total fatalities and 29 per cent of injuries occurred on state highways. Accidents on these routes totaled 9,884, fatalities 261, and injuries 6,340. The increase in accidents was 51 per cent, deaths 18 per cent and injuries 46 per cent.

The accident records on four of the heavier traveled State routes follow:

		ROUTE 25		
Year		Accidents	Fatalities	Injured
1946 1945		2,356 1,627	39 37	1,405 1,028
		ROUTE 6		
1946 1945		654 451	16 12	379 298
		ROUTE 4

# HEARINGS-LICENSE REVOCATIONS

The record of the first post-war year shows a 34 per cent increase in the number of driving privilege revocations. A total of 4,490 operators were affected during the year.

Over the period of the last 28 years, 107,454 license revocations have been ordered by the Department.

#### YEARLY RECORD OF REVOCATIONS

TOTAL	4,490	3,350	4,715	4,762	7,629

<sup>\*</sup>The cause for this revocation discontinued during early part of year 1945.

### DRUNKEN DRIVERS

Year after year the violation, "driving while under the influence of intoxicating liquor," is the leading cause for strong disciplinary action. Although revocations for this offense dropped considerably during the war years, the increase in car use since the cessation of hostilities has brought with it a rise in the number of drinking driver convictions. The 1946 increase over 1945 was 55 per cent.

New Jersey statute relating to the operation of auto vehicles by persons under the influence of intoxicants is one of the strongest in the country. The statute provides for a mandatory minimum fine of \$200 or a jail sentence of 30 days or both and the suspension of driving privileges for two years. In addition, violators are made subject to the Financial Responsibility Law.

Approximately 80 per cent of the offenders paid the mandatory \$200 fine and the remainder served jail sentences ranging from 30 to 90 days.

The severest feature of this law is the penalty that is imposed upon second offenders. During the year 1946 there were 52 such drivers who received mandatory jail terms of 90 days and the loss of their driving privileges permanently.

# HABITUAL VIOLATORS

Department procedure against the habitual violator was first started in 1933 on a small scale. Today it is one of the most important phases of disciplinary action undertaken by the Department.

The procedure consists of a warning letter to the operator when the records reveal his second conviction for a violation of the traffic or motor vehicle acts. A subsequent conviction results in the operator being served with a rule to show cause why his license should not be revoked.

The records collected over the years bring out the important fact that, as a general rule, the driver with a record of traffic convictions usually has a record of accidents.

Since 1933 the Department has sent out 32,777 warning letters; has conducted 10,174 hearings on rules to show cause and directed 7,529 license revocations.

A five-year record of activity follows:

•	1946	1945	1944	1943	1942
Warning letters Revoked following hearing Warned following hearing Revocation by default	3,420 475 134 238	1,810 358 126 193	1,747 300 75 191	4,156 553 142 291	7,996 1,184 179 554
	4,267	2,487	2,313	5,142	9,893

# FATAL ACCIDENTS

All fatal accidents are investigated by Department inspectors and where evidence is found of law violations that caused or contributed to the accidents, the operators responsible are brought for hearing before the Department. During the year 156 hearings were conducted. The number of licenses revoked after hearing, or by default, was 153.

A considerable number of the fatal accident investigations revealed evidence of flagrant carelessness in the operation of a motor vehicle, establishing reasonable grounds for license revocation.

# **HEARINGS**

Operators' hearings totaling 1,036 were held during the year by Deputy Commissioner William J. Dearden. This is a year round task that calls for many hours to be devoted to the hearing of cases involving fatal accidents, habitual violators, those seeking restoration of licenses previously revoked, physically unfit operators and those committing a crime with the aid of a motor vehicle as well as violators of other offenses coming within the jurisdiction of the Department.

The right of the Commissioner of Motor Vehicles to conduct hearings has been law since 1906, the year New Jersey adopted its first traffic Act. It has been a powerful influence over errant drivers and is one of the forces that help to maintain the State's fine safety record.

# INSPECTOR FORCE

The Inspector Force, consisting of 117 men including a chief inspector and eight deputy chief inspectors, kept pace with the great increase in motor vehicle travel and its added responsibilities during the year 1946. The Force performed these outstanding functions:

Examined 154,212 applicants for driver licenses.
 Supervised the issuance of 12,987 "for hire" driver licenses.

Traveled 2,310,094 miles on road patrol.

Traveled 2,310,094 miles on road patrol.
 Completed 9,370 investigations.
 Issued 9,536 warnings to drivers.
 Made 20,525 arrests of traffic violations.
 Netted the State \$168,504.50 in fines imposed on violators.
 Recovered 87 stolen cars having an estimated value of \$123,760.00.

There was one death in the Force during the year, one retirement, one resignation and six inspectors returned from service in the armed forces.

The driver examination in use during the year is the standard test approved by the American Association of Motor Vehicle Administrators. Although it includes a road, vision and color test, plus a written and oral examination, the present driver test is far from ideal. Conducted at high speed by a relatively small number of inspectors, the present test is strictly a production line operation that serves to screen out only those applicants with obvious defects. Inadequate quarters in most examination cities also hamper efforts to operate a satisfactory examination procedure.

The need for state-owned or leased permanent examination quarters cannot be stressed too strongly. With permanent and adequate quarters, it would be possible, to a degree, to conduct a more satisfactory examination of applicants on initial examination with more time devoted to each applicant. It would also provide facilities for the re-examination of drivers should this be decided in the future.

The improved examination under consideration would include a test of the applicant's reaction time, his ability to judge distance, his field of vision and, eventually, a test that would eliminate those with an unhealthy attitude toward safety. The improved test also contemplates the use of a discussion period through which applicants can be familiarized with good driving practices and advised against faulty habits which cause accidents.

Persons engaged in the transportation of passengers "for hire" are required each year to undergo a medical examination before receiving their special licenses. In supervising the issuance of these special licenses, the Force serves to screen out drivers with obvious physical defects.

Results from the re-examination of senior drivers who have been involved in accidents (see accompanying table) provide strong support for the idea of periodic re-examination of drivers.

One of the important responsibilities of the Force is that of highway patrol. In addition to a continuous coverage of heavily traveled State arteries, the Force patrolled other routes on week-ends and holidays during the year. The steady increase in travel points to the necessity for extending this coverage.

Close co-operation with other agencies in the matter of recovering stolen cars was continued during the year. Department activities in this regard have been a most effective deterrent to the professional car thief.

Inspectors furnished the only enforcement and supervision over the activities of automobile junkyard operators. At present, the law covers only junkyards on and visible from State highways.

Members of the Force investigated all fatal traffic accidents and instituted proceedings against the licenses of drivers found to have been operating their vehicles in violation of the law at the time of the accident. This system should be extended to include the investigation of all personal injury accidents as well but this added responsibility cannot be undertaken without additional personnel.

Inspectors were assigned regularly to full time duty with the Safety Education Division and one inspector devoted all his time to the Traffic Division.

The tables that follow constitute a statistical report of the work of the Inspector Force for the year:

### VEHICLE INSPECTIONS

Since motor vehicle inspection is a sequel to registration, the beginning of the inspection year coincides with the beginning of the registration year which is March 1. Hence, the ninth year of operation of the Testing Division has two months yet to run.

This year saw a return to semi-annual inspection replacing the war-time one-a-year frequency.

The plant continued to consist of 28 inspection stations with a total of 45 inspection lanes strategically located in the 21 counties. However, a plot of the indicated increase of registered motor vehicles in the immediate foreseeable future dictates that the inspection facilities be increased. Plans for the required increase are well advanced.

The change to two inspection periods required that the station personnel be brought up to full pre-war strength. This made it necessary to fill about 100 vacancies, with the advice of the Civil Service Commission, by the temporary appointment of veterans. Examinations were held later in the year after a high percentage of service men had been returned to civilian life. Soon all vacancies will be filled by permanent appointments.

This year, the postal inspection notices gave owners three weeks in which to present their vehicles for inspection instead of the 60 days in force when there was but one annual inspection period. Otherwise, there was no other significant change in inspection procedures.

When a vehicle is subject to the inspection law and its owner for some reason cannot present it for inspection, the Department requires that the registration card and license plate be surrendered by leaving them at any motor vehicle inspection station. A registration thus voluntarily surrendered is received without prejudice and filed at Trenton. A registration will be returned promptly upon request when and if the owner is ready to present the vehicle for inspection. Altogether, 23,029 registrations were surrendered during the period under report and 2,606 of these were returned upon request.

During the first inspection period under report, a distinctive stamped endorsement was placed on the reverse side of the registration certificate when a vehicle was approved. Another type of endorsement was used to indicate approval for the second inspection period. Such endorsements were not only informational but were also valuable for enforcement purposes when registrations were being renewed since renewal could be refused for a vehicle which had not been inspected and approved.

The revised requirements first made effective in 1944 were continued in force under the following classifications:

#### CLASS (A)

Requirements remaining unchanged because of their vital bearing on safety and the prevention of loss of life, limb and property. Rejections under these requirements require re-examination at an inspection station.

#### CLASS (B)

Requirements covering items required by law but which are something less than vitally important to safety. When a vehicle or its equipment does not comply with any such requirement, the resulting Class (B) rejection will not require that the vehicle be brought back for reinspection. However, the owner or driver is to be told that the vehicle will be operated in violation of the law if the requirement in question is not met by an adjustment, correction or repair.

Turning to the appended combination table of inspection results, it should be remembered that it is an interim report because the second inspection period had not been concluded when the table was prepared.

It is important to note that the table cannot be compared item by item with the published results of the inspection periods prior to 1944 because of certain differences in statistical reporting. A direct comparison can be made with the corresponding table for 1945. In the appended table, the accounting procedure pertaining to inspection cards issued, inspection fees collected and windshield decalcomania affixed made it necessary to omit from the table a large total of Class (B) rejections on vehicles approved on initial examination. By the end of the inspection year, the number of Class (B) rejections not shown will total more than 200,000 for each of the two inspection periods.

The appended table for the first inspection period shows 56.28 per cent of the vehicles approved on initial examination and 43.72 per cent rejected. The corresponding figures for 1945 were 61.23 per cent approved and 38.77 per cent rejected. This comparison seems to reflect the Department's findings that many mechanical failures, which some authorities expected in older cars during the war years, actually did not show an undue rise until this year with its greatly increased average mileage.

It is not surprising to note that the interim report for the second inspection period shows that 65.52 per cent of the vehicles were approved on initial examination. This percentage will be lower by the end of the period because it invariably develops that vehicles presented for inspection late in the period are usually in poorer-than-average condition.

Taking both Class (A) and (B) rejections into consideration, slightly over 50 per cent of the vehicles inspected were found to be in an illegal or unsafe condition for one or more reasons.

### SAFETY EDUCATION

The program of public education designed to reach all age-groups for the improvement of traffic efficiency and safety was based primarily upon the use of all possible media of public information and the co-operation of other official and non-official agencies in the dissemination of traffic accident facts and preventive procedures.

In this respect the following summary indicates the extent to which present safety education facilities were employed for the accomplishment of these objectives.

# I. State-local Co-operation.

An important part of the safety educational program was concerned with the co-ordination of effort at the State, county, and municipal levels. It is a matter of obtaining the views of local public safety officials, formulating an acceptable and uniform procedure, and providing local officials with educational materials which can be adapted to local conditions.

To this end, representatives of the Department made personal calls on public safety officials in 133 municipalities. The results of these interviews were analyzed for broadening the scope and effectiveness of the state-wide program. In addition, educational and engineering facilities were provided for many of these municipalities as a result of the surveys.

# II. Public Education and Information.

Traffic safety and efficiency is largely a matter of individual responsibility and co-operation on the part of all users of the public highways. The individual needs to be informed concerning the causes and circumstances under which accidents occur; why the problem is of importance to the individual; and what the individual driver and pedestrian can do about it:

The following media of public information was used to the extent indicated during the year:

#### Publications.

The co-operation of the 250 newspapers in the State was a most important factor in the safety educational program. Sixty-five releases from the Depart-

ment were carried by these newspapers during the year.

In support of the State's over-all traffic safety effort, the New Jersey Press Association contributed a most effective part with a 13 weeks campaign conducted from October 1 to December 31. The 250 newspapers comprising the membership of the Association used the following items each week during the campaign:

A. An article on the general traffic safety problem. B. Editorials.

Cartoons.

D. Miscellaneous safety stories of local interest.

E. Advertisements containing safety appeals.

In addition to the newspaper releases there were 15 magazine safety articles prepared by the Department.

#### Radio.

Through the co-operation of New Jersey radio stations, state-wide coverage was obtained in this medium of public education. In addition to the use of "spot" and special announcements, there were 25 "live" broadcasts presented for a total of six and one-half hours of radio time and 103 transcribed dramatizations of actual cases broadcast for a total of 39 hours of radio time.

The weekly schedule of broadcasts of the transcribed program, "Highways

to Safety," presented over 10 New Jersey stations, was as follows:

WAAT, Newark—Saturdays, 8:30 P. M. WAWZ, Zarephath—Fridays, 7:00 P. M. WCAP, Asbury Park—Saturdays, 3:30 P. M. WCTC, New Brunswick—Fridays, 8:00 P. M. WFPG, Atlantic City—Sundays, 1:00 P. M. WHOM, Jersey City—Santadys, 1:00 F. M. WHOM, Jersey City—Saturdays, 2:30 P. M. WPAT, Paterson—Sundays, 10:00 A. M. WSNJ, Bridgeton—Fridays, 7:45 P. M. WTTM, Trenton—Wednesdays, 1:15 P. M. WWBZ, Vineland—Sundays, 2:30 P. M.

### 3. Safety Meetings.

Representatives of the Department conducted over 200, safety meetings of adults during the year at which safety motion pictures were shown and safety talks presented. There were 30,000 persons in attendance at these meetings.

# 4. Motion Pictures and Film Library.

In addition to the actual showing of motion pictures at safety meetings, films were made available to other organizations for their own showings. There were 664 showings of Department films in this manner to a reported audience totaling 240,000 people.

Films were loaned to organizations outside the State of New Jersey, but no record was kept of audiences reached in this manner. Our films were

used by 29 other states during the year.

Organizations outside the State also purchased 31 copies of films made by the Department. The United States Army has purchased prints for worldwide distribution and purchases have been made by the countries of Canada and New Zealand as well as other states during the past year.

Motion picture theatres co-operated in the safety educational program by showing films on traffic safety subjects as a part of the regular theatre program. There were previews of such films held in theatres at Newark, Jersey City, Camden, Atlantic City and Trenton for public safety officials.

#### Direct Mail.

The medium of direct mail was used for the promotion of safety education and 20,000 such items were sent out during 1946.

#### Exhibits.

Safety exhibits of various types were displayed by the Department for a total of 264 days. An estimated 45,000 people viewed these exhibits.

#### 7. Safety Literature.

Printed safety materials distributed, other than to schools, totaled 170,000 items.

# III. School Programs.

Accidents of all types rank first as a cause of death among young people, aged 5 to 19, according to national statistics compiled by the recent President's Conference on Highway Safety. Traffic accidents are the leading cause of death and injuries in these accidents.

These facts point-up the immediate need for safety education for children of school age. Also, the necessity of safety instruction for young people in terms of long-range safety planning is obvious.

The Department carried on a co-operative program with the schools at the elementary, secondary, and college levels, as follows:

### 1. Elementary Schools.

Conferences	37	
Lectures	258	
Films shown or loaned	327	showings
Safety literature distributed		leaflets
Safety buttons		

The "1-2-3-Go" Clubs sponsored by the Department during 1946 was a very successful elementary school project and no doubt contributed to the remarkable reduction (37.7) in pedestrian fatalities among children of this age group, last year.

#### 2. Secondary Schools.

Conferences	139	
Demonstrations	27. (audience	
Lectures	12 (audience	1,593)
Textbooks distributed	1,816	
Teaching aids provided	32,000 items	
Films loaned	1,007 (audience	73,171) ~
Examinations conducted ,	103	
Student certificates issued	9,400	

The extension and intensification of driver education instruction in the high schools is in the process of development after a war-time hiatus.

#### 3. Teachers Colleges.

Teacher training courses were conducted by representatives of the Department at Montclair and Trenton State Teachers Colleges.

Four such courses were given during the past year for a total of 60 hours of instruction. The courses were designed to prepare prospective high school teachers to give courses in driver education. There were 92 teachers who completed such courses during the year.

# IV. Special Programs.

Special safety programs were conducted at 101 sessions for bus drivers, police and fire personnel, military personnel, Red Cross members and related groups during 1946. Instruction included demonstrations, lectures, motion picture showings and driver testing.

The job of reaching all age groups effectively in a state-wide educational program is a vast and complex undertaking. The procedures outlined above do not represent a complete and adequate education of drivers and pedestrians but are indicating of the manner in which the various media of public information have been used with present facilities.

# TRAFFIC ENGINEERING

With the abolition of war-time motor vehicle transportation conservation measures during the latter part of 1945, the year 1946 was the first post-war year during which there was no limitation or control of motor vehicle use, except for shortages of equipment and supplies.

Despite these shortages motor vehicle registration and use during 1946 approximated that of 1941, the previous peak year. For example, 1946 registration is within three per cent of the 1941 figure and gasoline consumption is within five per cent of the 1941 total.

It may be said, therefore, that highway traffic in New Jersey during 1946 was substantially comparable to that of the last pre-war year, New Jersey's biggest year in motor vehicle registration and highway travel.

These statistical facts substantiate the experiences of highway users. The old problem of traffic congestion and hazards at locations which existed prior to the war again appeared and in some instances in increasing intensity. In addition war-time changes in population density in some areas of the State brought about changes in traffic pattern at specific locations resulting in problems of congestion or hazards which did not exist heretofore.

The increase in highway travel during 1946 was further reflected in a comparison of official requests from State, county and municipal governments, made upon the Department for recommendations and assistance in the solution or curtailment of traffic difficulties. These requests included applications for approval of the installation and operation of traffic control signals or other regulatory devices, requests for investigations to determine the need for the installation and operation of regulatory devices, requests for investigations to determine the necessity of restrictive control measures, such as one-way streets, prohibited or time limited parking, controlled or prohibited turning movements, pedestrian control and other measures.

During the year 1946 the Department received 240 such requests subdivided into the following categories:

Traffic control signal applications	109
Traffic control signal investigations	47
Requests for investigations concerning traffic ordinances	20
Special traffic surveys	11
Miscellaneous studies, surveys, conferences, etc	53

During the year the Department, upon request of the authorities concerned, completed special studies and presented recommendations for the proper operation of traffic control signals along the Hudson County Boulevard; recommendations concerning the modernization of traffic control signals and their operation in Asbury Park; special studies concerning the alleviation of traffic congestion in the downtown business district of the City of Passaic; studies concerning modernization and improvement in the operation of traffic

control signals along Penn and Linden Streets in Camden (the two important access roads to the Camden-Philadelphia Bridge) and special studies concerning the improvement in traffic control at Bloomfield Center, in the Town of Bloomfield. The recommendations promulgated as the result of these special studies have either been adopted or plans are under way for adoption in the near future.

Comparing activities during the year with those of the previous year, it is determined there is an approximate 300 per cent increase in requests to the Department from governmental agencies for assistance. These demands, together with the nature of the requests, have placed a burden on the Department which is impossible to fulfill with existing technical, as well as clerical personnel. If, therefore, the Department is to continue to serve in the future as it has in the past as an agency of State government upon which governmental agencies, particularly governments of smaller municipalities, may call for assistance and advice in the correction or alleviation of highway traffic problems including congestion and hazards, it is necessary that additional personnel, including engineering technicians as well as clerks, be made available.

#### Recommendations

The responsibility for highway transportation improvement, including traffic congestion as well as safety, is twofold, that of government and the individual highway user.

Through proper and adequate engineering activities carried on by responsible governmental agencies, the problems of traffic congestion and delay, as well as traffic hazards can be materially curtailed.

Although streets and highways cannot be designed which are in all respects foolproof, modern roadways incorporating up-to-date design features will materially alleviate past difficulties. Of the total of 27,970 miles of roads in New Jersey, the majority—approximately 94 per cent—are under the jurisdiction of local municipal and county governments. It is this roadway system that represents the scene of most accidents in New Jersey, more than 70 per cent of the total and upon which, particularly in urban business and shopping areas, considerable of the present-day congestion occurs. To a large extent these roadways leave much to be desired in the way of physical features conducive to free flowing traffic and safe driving.

Despite these shortcomings, much can be done through the application of sound traffic engineering principles to correct or at least alleviate congestion, as well as accident hazards. This includes the determination and application of proper and adequate traffic control methods including the establishment of restrictive regulations, such as one-way streets, prohibited turning movements, prohibited and restrictive parking regulations, and many others. It is essential, however, that these control measures be determined through factual tech-

nical analysis. It is recommended, therefore, that the engineering facilities of the Department be increased commensurate with the growth of the problem and the demand for aid by governmental agencies.

The difficulties created by curb parking have reached such proportions, particularly in the urban business areas of the municipalities of the State, that it now ranks the *number one* highway transportation problem. Curb parking in such areas not alone causes traffic congestion and delay and, directly or indirectly, accidents, but is also an economic matter affecting the conduct of business as well as the State's real estate ratables.

The establishment of urban off-street parking facilities conveniently located and operated for reasonable parking fees will materially alleviate the present-day curb parking difficulties. Such off-street facilities will immediately make available lanes, now used for the storage of vehicles, for moving traffic, thereby providing increased roadway facilities without the expenditure of moneys otherwise required.

Off-street parking facilities when properly located and operated can be self-supporting.

Most municipalities, however, are unable to cope with this problem either from a financial or technical standpoint. It is therefore recommended that the State develop means to assist in the solution of the urban parking problem through the establishment of a study committee with sufficient appropriation and authority to study from an over-all state-wide standpoint urban curb parking difficulties and the method or methods of establishing off-street parking areas.

In recent years the Department has conducted research studies in the field of accident causes and their prevention, as well as the effectiveness of control measures, including highway design features. More extensive studies of this character are needed, including driver actions and habits as well as driver behavior. It is recommended, therefore, that adequate assistance be made available to the Department for the conduct of such research studies.

# FINANCIAL RESPONSIBILITY AND ACCIDENT REPORTING

Enforcement of the Financial Responsibility Law reveals that in a given year only a small percentage of drivers become involved in accidents or are convicted of traffic or motor vehicle law violations. It is this minority which is responsible for the accident record, and, incidentally, the target of the Financial Responsibility Law.

This minority class may include new and different drivers each year, but when it is considered that the Financial Responsibility Law is enforced on a three-year period basis—that these three-year periods interlock and form a continuous chain, each year adding to and eliminating the reckless, irresponsible drivers who cause accidents—it is evident that a good cross-section of this group is brought within the scope of the law.

By forcing most of the drivers and owners in this minority class to give evidence of their financial responsibility covering every vehicle that they will drive or have registered in the State of New Jersey, or by removing them from the highways, the Department is protecting the citizens and motoring public of the State from this group of motorists. Thus a protection is provided to persons injured in motor vehicle accidents by broadening their ability to collect damages.

Perhaps the outstanding feature of the Financial Responsibility Law is that it either removes from the highways the irresponsible motorists or else forces these motorists into a financially responsible position whereby they will be able to assure their obligations arising from their own negligence.

In order that the safety value of this law can be realized it is important that every driver be made familiar with its requirements and brought to the realization that persistent flaunting of the traffic and motor vehicle regulations will, through this law, directly affect his pocketbook, his livelihood and his privilege of owning and operating a motor vehicle in New Jersey. It can be made one of the law's strongest weapons in combating accidents. Then and only then will drivers see the wisdom of driving carefully and thus avoid being placed in the class affected by the application of this law.

Unsatisfied judgments totaling \$472,527.02 were reported to the Department. As a result of subjecting the defendants to the requirements of the Financial Responsibility Law, proof of payment was subsequently filed totaling \$235,723.60. Had it not been for the requirements of the law these judgments might have been uncollectible. In cases where the judgment debtor did not pay the judgment, the driver's license and registration privileges were revoked and the debtor will never again be permitted to own or operate motor vehicles in the State of New Jersey unless the judgment, caused by his negligence, is satisfied. In addition to the unsatisfied judgments actually reported, there were scores of cases in which the mere threat of revocation was suffi-

cient to force prompt settlements of claims and judgments. This information is gained from correspondence and interviews with attorneys and those who were concerned in accidents.

In 1938 the Department added to the regular accident reports the question, "Is your vehicle insured?" Of the accidents reported during the year 1938, only 27 per cent of the total vehicles involved were reported as insured. The statistics covering accidents reported during the year 1946 disclose that 51 per cent of the vehicles involved were insured. There is no authentic data as to the number of motor vehicles registered in New Jersey that are covered by insurance. However, the number of vehicles involved in accidents is a good sample and covers a fair cross-section of the total vehicles registered. It is interesting to note the increase in insured motor vehicles in the State of New Jersey.

	In All Accidents	In Fatal Accidents
Car insured		363 163
Car not insured		163 310
Insurance status thirmown	20,47	. 510
Total	70,358	836

#### Accidents:

Title 39, chapter 4, section 130, of the Revised Statutes of New Jersey, makes it obligatory for the driver of any vehicle involved in an accident resulting in injuries or death to any person or damage to property to the apparent extent of \$25 or more, to forward a report of such accident to the Department of Motor Vehicles within 48 hours.

Of the accident reports received, 6,845 were originally reported in letter form. Numerous accidents are reported over the telephone or by persons who call personally at the office. Upon receipt of these reports a regular report form is sent to each party concerned in the accident, requesting that the report be filled in and returned to the office.

During the year the Department answered thousands of inquiries regarding accidents, advising names and addresses, etc., of the applicants whose license numbers have been quoted, and explaining the legal procedure to be followed in order to make a complaint or to collect damages. Numerous inquiries over the telephone are answered daily, and persons are interviewed who desire information regarding accidents.

There were 742 accident reports which were received in letter form, the operators having failed to comply with a report on the regular accident report form. In numerous cases drivers involved in accidents report such accidents to the local police authorities, and, believing that such a report is sufficient, do not report to this office. In such cases, many of the reports are received direct from the police departments and would be included in the total accidents reported by the Traffic Division. Index cards for each driver concerned in every accident are filed in the Drivers' Record File. The original accident

reports are transferred to the Traffic Division, where detailed statistics covering accidents are compiled. Complete statistics covering these accidents will be found in the statistical report of accidents.

# HABITUAL VIOLATORS:

Habitual	violators	required	to comply	with	Financial	Responsibility	
Τ							713

## MAGISTRATE REPORTS:

Reports of magistrates received during 1946 covering single convictions under certain sections of the Motor Vehicle Law which are set forth by the New Jersey Financial Responsibility Law are classified as follows:

Title 39, chapter 4, section 96	1 733
Title 39, chapter 4, section 129	482
Title 39, chapter 4, section 50	998
Fatal accidents	153
Defendants made subject for other reasons originating in office of	
Commissioner	903
Three-year period extended because of conviction other than those	110
normally required under the law	110
	54
Total cases—evidence of financial responsibility requested as result of convictions where sufficient time has not elapsed for a certificate to be filed or case completedPending cases	54

### CANCELLATIONS:

Insurance companies are required to advise this office 10 days in advance of the cancellation of any policy for which a certificate is filed.

*Cancellation notices received and the parties notified of the require-	
ments of the law	2,877
Pending cancellation cases, where sufficient time has not elapsed to	
complete the cases	- 21

#### EXPIRATIONS:

This law requires that evidence of financial responsibility shall remain on file for three consecutive years after the date of the last accident or conviction which makes a party subject to the law. The Department maintains a chronological file where the duplicate copies of all certificates received are filed according to the expiration date of the policy. This file is checked daily and the expired certificates removed, the cases checked, and the parties advised of the necessity of having a renewal certificate filed.

# JUDGMENTS:

The law requires that the Department shall revoke the licenses of anyone who fails to satisfy a judgment in excess of \$25 within 30 days after the date that the judgment becomes final. Upon receipt of a certification from a court showing an unsatisfied judgment which comes within the scope of the law,

defendant is advised of the proposed suspension of all his licenses, unless he satisfies the requirements of the law within a reasonable length of time. The defendant must immediately satisfy the judgment in full or make satisfactory arrangements for the payment of the judgment in installments. He must also prove to this Department evidence of his financial responsibility for future accidents for a period of three years after the date he is made subject to the law. For failure to comply with these requirements, his licenses are revoked until he has complied with the law as explained heretofore.

Total judgment cases certified during 1946 Representing Judgments secured against New Jersey residents in another state New Jersey Judgments secured against non-residents *Judgments later paid Revocations Judgments satisfied, evidence of financial responsibility for	\$472,527.02 10 52 \$235,723.60

### TRAFFIC LAW VIOLATIONS

Traffic law enforcement, as reflected by reports of violations from municipal and county magistrates, increased 65 per cent over the previous year.

Year	•	•	 	Violators
1946		. s. <b>í.</b>	 	 93,663
1945	:		 	 56,859
		<i>.</i>	 <i></i>	 50,914
7.5			 	 50,845
				69,066
1941			 	 111,542
1940	,		 	 100,709

Speeding violations accounted for 39,280 arrests, or 42 per cent of all violations reported. This figure represents 54 per cent more speeding arrests than the previous year. The next most frequent violation was careless driving with a total of 13,711 offenses, or 15 per cent of all arrests. A total of 5,480 persons, or six per cent of all violators, were charged with ignoring traffic signals, while 4,673, or five per cent were accused of operating a motor vehicle without a driver's license. More traffic violations occurred between 2 and 4 P. M. than in any other two-hour period.

The five leading violations that showed up most frequently in the record for the year accounted for 72 per cent of total arrests. These violations, in the order of their frequency in the records, were as follows:

Violations	Number
Speeding	39,280
Careless driving	13,711
Ignoring traffic signal	
Driving without a license	
Parking	3,930
Total	67,074

Records show that 38,782 persons, or 49 per cent of those fined, received a penalty between \$3 and \$5, while 18,789, or 24 per cent, were fined between \$6 and \$10.

Route 25, the most widely used highway in the State, accounted for 12,022 arrests, or 21 per cent of total violations occurring on state highways and 13 per cent of the arrests on all streets and highways.

56,265 arrests, or 60 per cent of total arrests, were on state highways. 37,398 arrests, or 40 per cent of total arrests, were on municipal and county roads.

Motor vehicle inspectors and state police were responsible for 50,049 arrests, or 53 per cent of all arrests made for motor vehicle violations. (See Statistical Summary.) The total amount of fines turned over to the State Treasury from these arrests was \$358,176.25.

The records show that 47,630 offenders, or 56 per cent, were in the age group 25 to 44 years. Drivers between the ages of 45 to 64 numbered 13,782, or 16 per cent, and 7,882 violators were under 21 years of age, or 9 per cent.

## AGES OF VIOLATORS

Age Groups	Per Cent Licensed	1946 Per Cent Violators	1945 Per Cent Violators	1944 Per Cent Violators

New Jersey's geographical position, which results in a large part of the metropolitan district's through traffic transversing its highways, and New Jersey's extensive recreational facilities account for the high percentage of non-resident arrests. New Jersey residents were involved in 59,256, or 63 per cent, of all violations, while non-resident motorists accounted for 34,407 arrests, or 37 per cent.

## CERTIFICATES OF OWNERSHIP

Chapter 136, Laws of 1946, amending the Bill of Sale Law, became effective October 1, 1946. The new law requires automobile manufacturers to furnish a certificate of origin for each motor vehicle sold in the State, thereby establishing a complete chain of title from manufacturer to purchaser with all titles issued by the Motor Vehicle Department. It also provides that applicants for dealer's licenses meet certain minimum standards as to character and permanency of place of business.

More specifically, the amendment enables the Department to concentrate the execution of prescribed forms in the central office and its agencies rather than in the offices of 2,800 motor vehicle dealers as heretofore. This change in regulations has been welcomed by dealers because it relieves them of the responsibility of executing and accounting for forms that were furnished them under bond.

The history of ownership of a motor vehicle now begins with a manufacturer's or importer's certificate of origin rather than a dealer's bill of sale which was the practice under the old law. The new procedure is beneficial in several ways. It is a more convenient arrangement for the public; it facilitates the execution and issuance of certificate of ownership forms by agents; it permits a uniform procedure and appearance and greatly simplifies the central office accounting of forms by eliminating more than 2,800 dealers' accounts and concentrating the accounting of stock and fees collected, in the agencies. It is now possible, with one reference to the files, to extract the entire chain of title of a motor vehicle. Under the old Bill of Sale Law, certification of title required a separate search of each owner's name.

Previous to October 1, both seller and purchaser of a motor vehicle were required to appear at an agency in order to assign ownership. Now, only the purchaser is required to present his evidence of ownership.

The amendments became effective in time to title many of the 1946 vehicles sold in the State.

Due to the increase in fees for dealers' licenses and certificates of owner-ship made possible by the amendments, a sizeable increase in Division revenue is anticipated for the year 1947.

## BILL OF SALE LAW

# CHANGES IN TITLE 39, REVISED STATUTES, ENACTED BY THE 1946 SESSION OF THE LEGISLATURE

- CHAPTER 3—Gives servicemen 90 days after discharge, privilege of operating motor vehicle if such servicemen previously held operators' licenses and if they are attired in military uniform or have in their possession evidence of their discharge or release.
- CHAPTER 8—Changes maximum speed limit from 35 to 40 miles an hour and also provides a maximum of 45 miles an hour for passenger vehicles only within certain zones designated by the Commissioner and so marked.
- CHAPTER 45—Permits veterans who buy from surplus United States property to use temporary identification markers to drive such cars into New Jersey to be licensed here.
- CHAPTER 46—Changes the schedule of fees for commercial registrations. The present law has a scale ranging from \$10 to \$99. The scale of the new law ranges from \$10 to \$204. The law becomes effective April 1, 1947.
- CHAPTER 77—Raises to 18 years, age of offenders whose cases are cognizable in Juvenile Courts; permits Juvenile Court judge to refer to prosecutor cases of defendants between ages 16 and 18 charged as habitual offenders or accused of heinous crimes.
- CHAPTER 125—Defines term "auto bus" and includes taxicab service which is held to be regular service between stated termini. All other taxicabs are excluded from the definition of "auto bus" as contained in R. S. 48:4-1.
- CHAPTER 136—Amends the Bill of Sale Law and practically eliminates the term "bill of sale" for which the term "Certificate of Ownership" has been substituted. Requires manufacturers to furnish "Certificates of Origin" for each motor vehicle. Provides certain qualifications for motor vehicle dealers.
- CHAPTER 208—Gives to blind persons using a seeing eye dog the right of way in traffic.
- CHAPTER 219—Defines public utilities to include the term "auto bus."

## JUNK YARD SUPERVISION

Chapter 11 of Title 39 provides that motor vehicle junk yards adjacent to or visible from the state highways be under the supervision of the Motor Vehicle Department. There were 35 such yards licensed and supervised during the year and fees totaling \$1,825.00 were collected and turned over to the State Treasurer.

The object of the law is to insure junk yards being maintained in a clean and orderly manner; that their appearance shall cause no unreasonable depreciation of surrounding property.

Location of the 35 junk yards under Department supervision were as

follows:

County	*	Number
Atlantic		2
Bergen		5
Burlington	·	2

November			50.00
December	350.00		350.00
Totals	\$1.800.00	\$25.00	\$1,825,00

Fees collected during the past five years were as follows:

1942	1943	1944	1945	1946.
\$1,800.00	\$1,801.00	\$1,825.00	\$1,876.50	\$1,825.00

#### **BUS EXCISE**

Section 48:4–20 of the Revised Statutes provides for the payment of an excise by owners or operators of buses transporting passengers for hire in interstate operations. The tax is one-half cent for each mile operated within the State; however, the operator is exempt from the payment of the tax for the miles covered in municipalities to which there is paid a five per cent gross receipts tax.

Compared with 1945, there was an increase of approximately 36 per cent in the 1946 revenues. This sharp increase in the receipts may well be attributed to the return to peace-time operation, the accessibility of new equipment and the lifting of the general restrictions on the use of gasoline and tires. There is also the fact that bus operators are now permitted freedom in charter operations, being previously restricted to local operations in supplying the necessary transportation service to war workers.

It is anticipated that in 1947 there will be a further increase in the State's revenue from this source. Generally, bus transportation is being streamlined to meet demands upon it that were interrupted on Pearl Harbor Day.

#### INFORMATION SERVICE

An important public service rendered by the Department of Motor Vehicles is the Information Bureau through which data concerning registered motor vehicles, licensed drivers, etc., are supplied 24 hours a day. This service ties indirectly with the state and local police and has proved, through the years, of great value in connection with criminal and alien investigations.

An idea of the great volume of queries at the Information Bureau is seen in the fact that 507,643 requests for information were handled during the calendar year.

A breakdown showing the types of requests handled by the Bureau is as follows:

## TYPES OF REQUESTS HANDLED BY INFORMATION BUREAU DURING 1946

## **MULTILITH ROOM**

The Department maintained its own bureau where applications, certificates, pamphlets and all forms used in the administration of the motor vehicle and traffic acts were printed, numbered, perforated, etc. During the year the Multilith Room handled 32,372,132 operations in the process of keeping the various divisions supplied with working material.

Following is a breakdown of the activities and the division for which the work was performed:

A contract of the contract of				Items	•	Total ·
