Letter of Transmittal

TRENTON, N. J., Nov. 16, 1917.

To His Excellency, Governor Walter E. Edge:

Dear Sir:-Enclosed herewith the annual report of the Board of Managers of the New Jersey State Hospital at Trenton, together with the report of the Medical Director and Warden of that institution.

Very truly,

SCOTT SCAMMELL,
Secretary.

Report of Board of Managers

To His Excellency, Governor Walter E. Edge:

Dear Sir:-The Board of Managers of the New Jersey State Hospital at Trenton respectfully submits the Seventieth Annual Report which covers a period from November 1, 1916, to October 31, 1917. Attention is called to the report of the Medical Director and Warden in which are given detailed statements regarding the business and medical conduct of the institution during the year.

The work of the Medical Department continues as outlined in our last report and the amount of work being done in the line of research is shown by the fact that 7,800 examinations of blood, spinal fluid, urine, stools, etc., were made in the clinical laboratory during the year. We consider this field of our work very important in arriving at some conclusion as to the physical condition of patients admitted to the Hospital. When you consider the large number of admissions during the year you can see the amount of work entailed both by the clinical histories and work of the laboratory.

We would also call your attention to the report of the newly described disease process, the work of the Medical Director. Most of these cases were seen outside the institution in consultation and only one patient was admitted to the Hospital. The differentiation of any new type of mental disease, from the standpoint of laboratory findings, is a decided step forward. The finding of such a new condition...
which has not hitherto been described shows the value of our work and we can confidently look for such work to disclose a cause of some of the other obscure mental conditions.

The treatment of paresis has continued as in the last four years and the number of cases treated successfully in spite of the fact that a large number come to the Hospital too late for any treatment to be effective shows the value of persistent effort in these cases.

The exigencies of the War have disturbed our medical department as four members of the Staff are in the Medical Reserve Corps and serving the Army efficiently. The Medical Director was also called to service and although he was stationed at Camp Dix, Wrightstown, and was able to give part of his time to the Hospital, the Board felt that with the large number of the Staff in the service it was not wise to approve of this arrangement and the Surgeon General's Office agreed to return him to the Hospital.

It is gratifying to report the increase in the number of patients availing themselves of the voluntary admission. The number, 99, being an increase of 52 over the previous year, or 13 per cent. of the total admissions. We anticipate, when this method of admitting patients to the Hospital is fully understood by the profession and the people at large, more patients will avail themselves of this opportunity and do away with the cumbersome and expensive legal procedure necessary under the regular commitment act.

The question of obtaining attendants is becoming a very serious one and is giving the Board much concern. A readjustment of salaries has been made, but has not proved sufficient to hold our good attendants or to obtain new ones. The selective draft has taken several of our very good men and it is extremely difficult to fill the vacancies.

We would also call your attention to the fact that this year marks the tenth anniversary of the reorganization of the Hospital. We feel a justifiable pride in the work that has been accomplished during this time. The number of recoveries is increasing slowly but steadily and the proportion of recoveries to patients admitted is also larger than formerly.

We respectfully call your attention to the report of the Warden, whose efficient management of the finances of the institution is evident. In utilizing patients' labor on the farm and garden, as well as other departments of the Hospital, we are able to show a substantial profit to the State. The net profit of the garden for the year is $4,121.74. The profit from the dairy for the year is $12,302.08, and the pig-
modated at the State Hospital at Trenton if more land was provided and suitable buildings erected. What money is to be spent in new construction should, in our opinion, be devoted to the erection of acute hospitals, either on the grounds of the State Hospitals now existing or separate Psychopathic Institutes which principal function shall be the scientific study of mental diseases, their cure and prevention.

We commend to you the faithful services of the Warden during the past year. His position has been rendered more difficult, as we have stated, by the continued high cost of supplies and by the extra work entailed in opening the new departments. The work of the Medical Director and Staff deserves commendation for, in spite of the fact that our Staff has been depleted by the call for medical men for the Army those who have remained have rendered double service willingly and the work of the Hospital has not been materially affected.

Respectfully submitted,

LUTHER M. HALSEY, M.D., President.
ARTHUR D. FORST, Vice-President.
STEWART PATON, M.D.
JOSEPH E. RAYCROFT, M.D.
GEORGE T. TRACY, M.D.
JOSEPH H. MOORE.
WILLIAM L. BLACK.
H. V. M. DENNIS.

Medical Director’s Report

To the Board of Managers of the New Jersey State Hospital at Trenton:

GENTLEMEN:-I have the honor to submit the seventieth annual report of the operations of the Medical Department of the New Jersey State Hospital at Trenton for the year ending October 31, 1917.

At the beginning of the fiscal year there were present in the Hospital 1,688 patients, 896 men and 792 women. During the year 791 patients were admitted, 483 men and 308 women; 3 patients were admitted from escape; 67 patients returned from visit, 40 of which were nominally admitted for discharge at the end of their four months’ visit, making the total under care 2,479. Of this number we have dismissed during the year 648 patients, 386 men and 262 women, leaving the total number of patients under care November 1, 1917, 1,831, 993 men and 838 women, an increase of 143 in the daily average number of patients over the previous year. Of the total number of dismissals during the year, 386 men and 262 women, 225 total were discharged as recovered at the time of leaving the Hospital. The recovery rate computed upon the number of admissions is 30 per cent. This time we must take into consideration that 50 criminal insane were transferred from Morris Plains Hospital. The percentage based upon normal admissions, not including these 50 criminals, would be 33 per cent., about the same as last year.

There were 197 deaths during the year, 118 men and 79 women, which is 7 less than last year. The death rate computed upon the number of patients under treatment during the year is 7 per cent.

Of the number of patients on visit at the end of our fiscal year, 16 men and 24 women, total 40, were nominally admitted for discharge during the year. We have on visit at the end of this year 33 men and 22 women, total 55.

No suicides occurred during the year. We have been fortunate enough during the past year to escape any serious epidemics. We continue to immunize all new patients against typhoid which we hope will prevent any future epidemic.

VOLUNTARY COMMITMENTS.

It is gratifying to report that the number of voluntary
commitments is still increasing. In the past year we admitted 99 patients, 60 men and 39 women, on voluntary papers, which is an increase of 52 over the previous year, or 13 per cent. of the total admissions. Now that our new Psychopathic Building for female patients has been completed and occupied, we feel that we can care for this class of patients much better than we have ever done before. When the physicians and the community at large realize the advantage of this form of commitment over the regular method we feel that the number of patients so admitted will steadily increase.

MEDICAL STAFF.

We have had several important changes in the Medical Staff during the year largely due to the exigencies of the present War. At the present time we have four members of the Staff in the service of the Government. They are First Lt. R. P. Truitt, Jos. L. Gariss, James P. Sands and Harold I. Gosline. The Medical Director also was commissioned Major in the Medical Reserve Corps stationed at Wrightstown with the understanding that he could still supervise the work at the State Hospital, and Dr. E. B. Funkhouser, who was in the service, was returned to the Hospital by the Surgeon General of the Army. This arrangement having proved unsatisfactory the Surgeon General has agreed to release the Medical Director for duty at the State Hospital.

Dr. E. P. Corson White has been appointed pathologist vice Dr. Harold I. Gosline. Dr. A. G. Newell has been appointed assistant to Dr. White. She has had considerable experience in laboratory work in New York, especially under Dr. Hans Zinsser and Dr. Miriam P. Olmstead at the Presbyterian Hospital. Dr. Philip J. Dorety has been appointed assistant physician.

There have been no changes in the consulting staff and we again take the opportunity of extending thanks for the help these men have rendered in time of emergency.

NURSING STAFF.

The condition of the nursing staff of this Hospital deserves special mention at this time. During the last year, because of industrial conditions and the operation of the selective draft, our quota of nurses has been materially reduced until at present we have less than one-half our usual number. This has materially interfered with the care of the patients, but at present these nurses and attendants remaining on duty have responded to the extra work placed upon them in a gratifying manner. We found it necessary during the
streptococcus viridans or the Connellan-King diplococcus were positive in both blood and spinal fluid. This fact gave us a clue as to the nature of the disease and a search for focal infections found the teeth or tonsils, or in some cases both, the seat of infection.

Five cases of this group died as they were seen too late in the course of the process. In one case an autopsy was performed and the Connellan-King diplococcus was found in the cortex. This was the only case occurring in the Hospital as the disease process is usually rapid and the mental symptoms not severe enough to justify commitment to a State Hospital. Five cases have recovered after having infected teeth removed or diseased tonsils enucleated.

The symptom complex has not been dignified by a name as it is difficult to give a description in a word. They are undoubtedly infectious, toxic psychoses, due to the streptococcus viridans or the Connellan-King diplococcus, but the physical disturbances are far more prominent than the mental symptoms, which usually occur last and may be only in the terminal stage.

This newly described disease entity was the subject of papers given before the American Neurological Association and the American Psychopathological Association, during the summer. It has been designated "Cotton's Disease" in the statistical tables.

During the year, at the request of the Governor and the Prison Inquiry Commission, the work of examining the mental condition of the men admitted to the State Prison was undertaken by the members of the Staff of this Hospital under the direction of the Medical Director. The results of such work will form the basis of a separate report to the Governor.

Much of this work may be considered of pioneer character as we have occasionally departed somewhat from the traditional theories of etiology in certain groups of cases. We do not under-estimate the importance of psychogenic factors or the role of heredity, but we feel that these factors stand in the relation of contributory cause rather than the only cause of various psychoses. The clinical laboratory investigations would certainly lend support to the view that many of the patients are suffering from certain physical disorders as well as mental conditions and that until we have a better knowledge of the underlying physical disturbances our attempts at cure will not be successful.

Coupled with the clinical laboratory findings the autopsy furnishes valuable information regarding the existing physical disturbances and a correlation of the mental pic-

### CONCLUSIONS.

The Psychopathic Building for the female department has been completed and occupied since August, 1917. While this building was constructed primarily for the female department, the Board of Managers has decided that one floor can be used for the admission of suitable male patients. This building has been designated as the Dix Building in honor of Dorothy Dix who was instrumental in organizing the State Hospital at Trenton as well as many State Hospitals throughout the country. The House of Detention for criminal insane known as the Vroom Building in honor of Judge G. D. W. Vroom, for many years president of the Board of Managers of this Hospital, has been completed and is now occupied. Up to the present time we have received fifty criminal insane patients from the State Hospital at Morris Plains.

The Legislature, during its last session, appropriated $90,000 for a congregate dining-room at the Annex and quarters for the male attendants. This building we hope to see erected in the coming year. It will materially increase our capacity by doing away with the four dining-rooms present in the Annex and releasing at least 100 rooms for patients in the Main and Annex Buildings.

The contract for the remaining wing of the Criminal Insane Building, for which $110,000 was appropriated last year, has been awarded, but owing to the high price of construction only one-half of the wing can be built which will cost about $83,000.

We again respectfully request the Legislature to appropriate $100,000 for the construction of a Psychopathic Building for the male department. This is urgently needed as our present admission wards on the male side are entirely unfitted for treatment of acute patients. We also request an additional appropriation of $100,000 to complete the wing of the Criminal Insane Building. We again ask for $1,500 for laboratory supplies and $2,500 for research work.

The valuable assistance and support of the Board of Managers during the last year has been a source of gratification and encouragement to the Medical Director. The various committees which have acted in cooperation with the Medical Director and Staff have been of valuable assistance in the proper care and management of the Hospital. I also
commend the faithful, loyal and efficient work of the Medical Staff, their interest in not only the ordinary ward routine but in the many problems of research is a source of gratification. The Warden and members of his department have, as in the past, rendered valuable assistance to the Medical Department for which I wish to express my thanks. To the supervisors and especially the nurses and attendants who have remained loyal to the institution and willingly performed double duty many times I wish to express my thanks.

Respectfully submitted,

HENRY A. COTTON,
Medical Director.

Warden's Report

October 31st, 1917.

To the Board of Managers of the New Jersey State Hospital at Trenton:

GENTLEMEN:—Complying with the laws of the State of New Jersey, I beg to submit the annual report of the business department for the fiscal year ending October 31st, 1917, including amount of cash receipts and disbursements during the past year, also tabulated statements are appended giving in detail the products of the farm, garden, dairy, piggery, and bakery, the value of the different products and cost of producing same, work done in the sewing rooms and carpenter shop, also fruits and vegetables canned, preserved and pickled in our kitchens.

The cash receipts and payments have been as follows:

Balance in hands of Treasurer, November 1st, 1916, $71,524 47
Cash receipts from all sources, 473,647 20
Cash payments for the year, 443,238 16
Cash balance October 31st, 1917, 101,933 51

The average number of patients for the year of 1917 was 1,774, making the average cost of maintenance per patient, per annum, $259.54 or $4.99 per week.

INVENTORY.

The annual appraisement of the personal property of the institution was made during the month of October, and amounts to $338,831.82. Messrs. John W. Hendrickson and William S. Morris, who were appointed by the Board of Managers, assisted the Warden in making the appraisement, and deserve commendation for their services.

APPRAISEMENT.

Buildings, grounds, etc., valued at, $2,034,407 61
Personal property appraised as above, 338,836 82
